The showman glanced round to see if any one else were going into the show, when his eye fell on Marthe, who was still gazing up at the picture; and he smiled. She was such a comical figure with her hump and her four-feet of stature and her serious face with great upraised eyes; how quaint it was to see her just there admiring the portrait of Grandiosus. Why she looked as if she might belong to an exhibition herself, but for her poor dress and her darned shawl. If she were on show she would be better dressed.

There are authors who look on every one as so much "copy." A showman may be excused if he regards human beings from his special point of view.

"Ah, Mademoiselle," said M. Jean, "are you coming in? Only twenty centimes."

Marthe started.

"No," she stammered; "I'm afraid I can't afford it."

"Look here," said M. Jean, after he had beckoned her to him, "I'll let you in for nothing, only don't tell any one."

"But why should you do that?" asked Marthe, fumbling with her purse.

"Well, my dear," said the showman, patting her shoulder, and without the least intention of being unkind, "I feel I should like to see you together. I've got an eye to contrasts, you know. It's my profession. Don't blush, my dear. Why, you ought to go in for this line yourself. It's a paying one. Look at the thousands, the millions, that are straight; it's commonplace. But to be like you, that's an exception, that is."

"Yes," said poor little Marthe, and the tears stood in her eyes. She knew it too well, and she did not feel any pride in being "an exception." It was a new way of looking at the matter.

The showman, who was a good-hearted man, took her by her hand and led her inside.

"Grandiosus isn't quite what he is depicted there," he said, "but he's worth looking at. It's a pity to miss the chance."

Grandiosus was *not* what he was depicted. He had neither the florid complexion nor the grand

moustache of the gentleman in the picture, and he wore ordinary clothes. His air too was anything but pompous. He was very tall certainly, but he was not muscular, and he was as thin as a hop-pole. His expression was bored, and as he stood in the booth he yawned once or twice and his eyes had a far-away look. When any one evinced a desire to shake hands with him, he did so languidly, and answered his "Bonjour, Monsieur," in a mechanical tone. He did not seem to mind when the onlookers discussed him and pointed at him; he was used to that. Indeed, for what other purpose was he there than to be remarked upon? He had been through it so often that he paid no more attention to the men and women and children who were gazing round-eyed at him, than if they had been so many dummies.

But suddenly a little buzzing among them made him glance round.

M. Jean had entered, and close to him, shrinking back, yet with her eyes nervously fixed on him, was a dwarf.

"Ah, Grandiosus," said the showman, "you have a large attendance to-day. Have you shown them the length of your arm? If he went fishing he'd hardly need a rod, now, would he? Have you shaken hands with the ladies and gentlemen? That's right. Now here's another visitor come to see you!"

Most of the people thought this was part of the show. Those who had been on their way out of the booth stopped.

"You've got about the long and the short of it now, eh, showman?" some one remarked facetiously.

Marthe, who had desired to escape observation, was now the centre of it. She was confused, bewildered, wretched. The showman, to whom sensitiveness was an unknown quantity, and who had no idea he was torturing her, led Marthe up to Grandiosus.

"Shake hands with the lady," he said.

If Marthe was an ugly woman, she had at least beautiful eyes, for in them lay all the unspoken sadness of her life, all the resignation, the unclaimed love, the womanly power of sacrifice, and now as she perforce laid her little hand in that of the giant, and looked up at him with such pathos and awe, those eyes seemed to affect him as no other eyes had done. They roused the manhood in him, they thrilled him, they magnetised him. The people tittered, but he did not heed them.

"Are we comrades?" he said gently.

"No, no," Marthe answered. "I have but come as the others."

"Are you from Normandy?" he asked eagerly, for he recognised the accent of his province.

"I was born in Calvados," said Marthe, "but I live in Paris now."

"I am a Norman too," said Legrand.

It was a bond between them, another bond, for already there was the consciousness realised but unexpressed in the hearts of both, that all these ordinary people who were neither short nor tall beyond the common wont, who despised her and wondered at him, and would as soon pay money to see the one as the other, could not understand how either felt, that only the lonely giant could sympathise with the dwarf, and the lonely dwarf with the giant. The instinct of protection was roused in him, and in her the instinct of dependence.

It is sometimes thus in life, that one soul touches another in a moment's space of time, but the blind world does not note the kindling light.

These bourgeois saw only an amusing contrast in the meeting of these two freaks of nature, and the showman, calculating the effect of the surprise on them, made up his mind to do business. He turned to the onlookers.

"Now then, ladies and gentlemen," he said, "will you be so obliging as to pass out? There are crowds of others anxious to see the wonderful giant, and space is limited. All who wish to stay can pay an extra twenty centimes. Pass out! Pass out!"

He held up the curtain, and the people, laughing and well satisfied, moved away and betook themselves to the contemplation of other marvels. All the little boys thought it must be the grandest thing in the world to be a giant.

"Papa," said one small fellow, who had been beaten in a fight, "I would like to be tall. What will make me grow?"

"You must take exercise," said papa, who was five feet square.

"And eat a lot?" said the boy as they passed a stall where all sorts of seductive cakes were spread out.

But papa did not think it was necessary to eat to become a giant. He had tried that and failed. Yet if he had been rolled out he would have made two of Grandiosus.

Grandiosus (for he may as well be called by the name which had supplanted his baptismal appellation) was seven and a half feet high, and on that extra foot and a half of his he supported his mother and his brothers and his sisters. It stood to him in the place of intellect, of which he had little, and strength, of which he had not overmuch, and knowledge, of which he had none at all. It fed and clothed him, and gained him respect and admiration. But it also isolated him from his kind. But for that extra foot and a half Legrand would have been an ordinary agricultural labourer, with the hopes, the fears, the loves of his class; he would have drunk his cider or his beer at the Brasserie with his mates and given his views on politics; he would have sat in his low-roofed cottage opposite a young wife, and indulged in dreams of domestic bliss; and his life would have been the uneventful life of thousands, filled with ordinary joys and ordinary sorrows, till it ended in the stillness of death. But now, like any other man or woman who possesses something which others lack, whether it be the bitter-sweet gift of genius, or the fervour of religious faith, or an intense perception of any truth, he stood out from the crowd. He was great, but he was lonely. People thronged to look at him and to be astonished at him, but they did not interchange ideas with him, greet him as a comrade, take it for granted that he felt as they felt, thought as they thought, was as they were. Even if they shook hands with him, it was out of a sort of curiosity, and because they wished to say

they had shaken hands with a giant, and if in a manner they admired him, it was with that half-patronising admiration which the commonplace give to the exception, to whose position, with its penalties as well as its joys, they have no desire to attain.

Grandiosus did not quite realise this, partly because his knowledge of life was limited, partly because he lacked the power of analysis, his mind never having been trained to think, but he was dimly conscious of it and he was melancholy in consequence. He was weary of his existence, of being stared at, and criticised and commented on. Though he moved from place to place he did not get much interest from that, because he was shy of going about the streets alone; besides, he belonged to the showman, and the showman thought he was being defrauded if any one looked at Grandiosus without paying for it. At night the giant was too tired to care to take exercise. He needed a great deal of sleep. Indeed, M. Jean remarked facetiously that it was well sleep was inexpensive, or he would never make Grandiosus pay. He was rather flabby and energyless, this poor giant, who had been meant to labour in the fields, and to whom nature had denied many brains or much capacity. He had not half the possibilities in him of little Marthe, who might have been a poetess had she possessed the gift of expression as well as the power to feel, or a martyr had she been called upon to cast aside what seemed to her the right. If the spiritual part of a human being is superior to the animal, then was the dwarf worth a thousand times the giant.

They were left for a moment regarding one another shyly; then Marthe turned to follow the others out. The showman stopped her.

"How do you live?" he asked.

"I do embroidery for the church——"

"When you can get it?"

"Yes, sir."

"But it is bad pay?"

"Yes," said Marthe.

"Listen to me, my girl," said M. Jean, "I can help you to make your fortune. You'll be comfortable and well fed, and you'll see a bit of the world. I'm not a bad fellow. Ask Grandiosus there. Have you any parents?"

"I am alone in the world," said Marthe sorrowfully.

"Then you'd better accept my offer."

"Oh, I couldn't, sir," cried Marthe, as the full meaning of his words flashed upon her. "I would sooner starve than make money out of my misfortunes, and I could never bear to have people staring at me. Oh no, sir, don't speak of it. I should die of shame."

"Rubbish," said M. Jean, but his voice was kind.

"If I were beautiful or strong," said poor little Marthe, "I might be willing to be looked at, because I should be giving pleasure to people, but as it is——" She stopped, and brushed her hand across her eyes.

"Look here," said the showman, "think it over. We shall be here a bit yet; and the place is always open to you. If you like to come and have a chat with M. Grandiosus he'll be very pleased, and you'll have a chance of seeing what the life is like. You would like her to come again, wouldn't you, Legrand?"

"Yes," said the giant.

M. Jean took up his position beneath the boot again.

Marthe looked at Legrand. The big fellow smiled at her. He was dull and he would be glad of society, even that of such an ugly little thing. At least she would talk to him.

"You'd better come," he said.

Marthe shook her head. A lump rose in her throat. He did not understand why she refused. How could he?

The dwarf went away slowly, her queer figure conspicuous in the crowd. She had no heart for anything in the fête now. She walked through the people and out into the street and on till she came to the Bois de Boulogne, and then she sat down all alone. She folded her two hands on her heart and looked up at the sky, and sad thoughts came into her mind, and by-and-by the tears which she had kept back stole down her cheeks, and her little bosom heaved, and then she laid her face on the grass and cried. It seemed she had never despised herself so much as now, now that others had noticed her and laughed at her, now that M. Jean had praised her and wanted her to exhibit herself and make money out of her sorrow. She felt lonely enough as it was, and outcast; she would be more so then. Love could never be hers, though she yearned for companionship and sympathy, for something different from scorn or pity; but must she forfeit the esteem of those few who did respect her, ay, and her own modesty?

And then she saw the look in the eyes of Legrand. She did not know how little soul there was in the heavy ploughman, but she did know that it had shone out for a minute, that she had experienced a sympathy, a union, unknown before.

She felt strangely drawn to him, and with her awe and admiration was mixed another feeling which she could hardly have defined to herself. Only she knew that if he had been sitting by her in the wood there, she could have opened her heart to him and told him all her longings, and have felt more at ease with him than with the men and women who resembled one another. Extremes meet, they say. The dwarf did not know it, but in her heart the dawn of love had stolen unawares.

She vowed to herself she would not go near the booth again, but the next day she stood outside the curtain. The showman saw her and nodded.

"There's nothing going on just now," he said. "Step in."

He was pleased to see her. He thought it augured well for his plans. He had told M. Legrand to be very polite to her, that she might be encouraged to join his company.

Marthe was very shy at first, and consequently awkward. Legrand thought her quite the ugliest person he had ever seen, but because he was kind-hearted and sorry for her, he made efforts at conversation, and by degrees the dwarf grew to feel

more at home. She asked him questions about the life he led, and though he answered in such manner that he believed he was representing it as attractive, she was shuddering and sick at the thought of the publicity of it, and she said to herself again and again that she was sure she would never accept M. Jean's offer, though she should earn seventy times what she did now.

"Why should you mind it?" said Legrand. "True, it is dull, but when you have saved you can retire."

"I love my freedom," said Marthe.

"I've been on view at one place and another since I was seventeen," said the giant. "Sometimes I own I feel inclined to run away."

"Aren't you happy?" Marthe asked.

The giant shrugged his shoulders.

"Yet no one looks down on you," said Marthe, pensively.

"It's lonely," said Legrand.

At these words, the open sesame to a woman's heart, and above all to hers, Marthe looked at him with a renewed interest.

"Are you lonely?" she said. "You! Ah! I thought only people like me——" she paused. "Do you feel when you see them all laughing and talking that you would give anything to be just like them? Do you ever have such a longing on you that it is a pain to live, and you wish you could be dead and still? Do you ever in the evening, when the dusk comes and the stars are looking out, lift up your arms and cry to the skies to be less beautiful, less still, less crowded, because something *hurts* you, something says you are alone—alone—alone."

Her voice died away in a whisper; her shining eyes sought his face.

The giant did not answer her; but he leaned towards her and nodded his head slowly. She was saying what he had felt and yet could never have expressed, nay, had only been dimly, vaguely aware of. But as she spoke something within him seemed to answer her.

They heard the voice of the showman without.

"Behold," he said, "the boot of the world-renowned giant!"

Marthe sprang up.

"I must go," she cried; "I could never stay."

She ran to the exit. She peeped through and saw the people moving towards M. Jean. A great pity for poor Legrand swept over her.

"Why don't you give it up?" she said to him, with her hand on the opening.

"I earn," said Legrand. "I support my mother and my sisters."

"Ah," said Marthe softly, "I see. Yes, it might be tolerable if one did it for the sake of others. Besides," she added pensively, "no one ever laughs at you."

"Walk in, walk in!" cried M. Jean.

Marthe slipped away so quickly that she could not even say "good-bye" to Legrand, and the showman was disappointed when he followed the people in to find he had not another attraction to offer them. But nothing would have induced Marthe to stay and to have to endure the comments, and the whispers, and the curiosity of men and women who had paid twenty centimes to see a girl whom they thought unlike themselves because her body was misshapen.

But while the fête lasted she came every day to the booth to which M. Jean had given her admission, and sometimes she brought the giant a flower or some fruit which she could ill afford, and she talked to him as she had never talked to any one before, and if he did not understand her at least he listened. And in a way he grew to like these visits of hers, because they cheered him up and made an event in his day. And M. Jean grew hopeful, although, whenever he asked Marthe if she was going to cast in her lot with them, she shook her head and said "No." He noticed that she was changed, and he said to himself: "She will attach herself to any one who is kind to her, this poor little wretch. She has never had any one to make a fuss of her, and if my giant would pretend he liked her, she would throw over her scruples. Legrand is stupid, I fear."

But Legrand was not stupid. He was only honest. He did not see why he should pretend to feelings which he did not have. He liked her fruit and her flowers and her society, and he had a sort of respect for her because she talked so well; and he wished she were going to travel with them, but she certainly did not inspire him with love. Only in a sort of way he had grown to need the dwarf because she was to him what a book of poetry would have been to her. She expressed what he felt, and revealed him to himself. He liked to hear her talk. He was sometimes depressed, and then she cheered him.

"I have hopes," she would say, "that things will be made right in another world. They say God is good, you know, and that He makes it up to the people who have been unfortunate or afflicted here. Fancy having no one to disapprove of you, but walking with your head up and feeling you are just the same as the others. We shall be at home there, and happy. We shan't be exceptions."

It was a wonderful privilege, she thought, to be able to give even a moment's happiness to one who was so much her superior.

A day came when the giant said:

"We are going to move off the day after to-morrow."

"So soon?" said Marthe, and she sighed.

The giant sighed too.

"I shall miss you," he said; "we've had some nice talks together."

"Yes," said Marthe absently.

She rested her chin on her hand and gazed into space. She was thinking of her future, and wondering if it would be gladder or sadder for this friendship.

"I wish you were coming along," said the giant; "you make me feel a deal brighter."

Marthe did not speak. She was debating which would be the greater suffering, never to see Grandiosus again, or to be on view as his foil. Her soul revolted as keenly as ever from the latter course. Just because she cared for him she could not bear to have her peculiarities constantly recalled to him; he would come to feel scorn of her

too, perhaps. Or would he only pity her? Ah, she decided, it would be easier to drag on her life with a memory to sweeten it than to have her sensibilities wounded daily. She shrank back at the thought of the first day when M. Jean had led her into the show; and it would always be like that. She could not persuade herself that she would ever get used to it. She must suffer either way, but that way was the worse.

"I wish you were coming along," the giant repeated.

The words fell on Marthe's ears and gave a new direction to her thoughts. How selfish she had been. She had not thought of him. But then she had not believed it possible that she was really any use to him, she so worthless and stupid. Suppose she were—suppose she could make him the very least bit more contented—could enliven an hour in his life—be the recipient of his troubles! Some were made only to serve—perhaps this was her opportunity.

"Would it make you any happier?" she asked slowly, and her voice sounded very far away; "would you be really glad?"

"Of course I should," said the giant. "You and I are such contrasts it seems as if——" He paused, for a spasm of pain contracted the dwarf's face.

"As if I ought to show you up," she finished for him, and there was a passing bitterness in her voice.

"No, no," said Grandiosus, "I didn't mean that."

"But I do," said Marthe. "I am going to stay to-day to see if I can bear it."

M. Jean heard shouts of laughter and delight, and peeped into the tent. He was more than pleased when he saw the reason. The giant was standing up, his head in the air, and with more animation about him than usual, and by his side shrinking against the wall was the figure of the dwarf looking more absurdly small than usual, with the man towering above her. And on Marthe's cheeks burned a crimson spot and her lips were tight set.

"Now," said M. Jean when the onlookers had dispersed, "see what a success you've made. We can't do without you, can we, Legrand?"

"No," said the giant.

"I don't think Mademoiselle Marthe will be unkind enough to hold out any longer, eh?" said the showman to her.

The face of the dwarf was white now.

"M. Jean," she said, "I accept your offer."

"So you did not mind their laughing," said Legrand.

"I heard them praising you," the dwarf replied quietly.

Grandiosus looked at her, wondering.

IDA LEMON.

## STUDIES IN CHARACTER.

### HORACE.

IN the early spring of 43 B.C. the streets of Athens were filled with unwonted bustle. The sleepy little university town, for to that condition had sunk the city of the violet crown, found itself once more the centre, if not of political life, at least of political intrigue. Brutus, the tyrant-queller, had arrived. His mind, after what had happened on the Ides of the preceding March, needed bracing up. The times were thoroughly out of joint. The murder of Cæsar had broken down the keystone of the arch, and the whole fabric of state had crashed into ruin. Heartless cruelty, mean ambitious profligacy, the greatest and the smallest of bad passions, raged everywhere; and he, Brutus, alone erect a man among wild beasts, must quell the evil and establish the good. Pure, high-minded, living for the ideal, how had he suffered degradation in the arena of party politics; how bitter that experience which summed itself up in his dying words at Philippi: "Virtue, thou art an empty name!" But that was a year later. Here at Athens, in the quiet groves and porticoes where he joined the studious youths who listened to the lectures of their professors, or joined in discussions on high subjects of virtue, fate, and the end of living, there was rest and refreshing. The furrows on that noble brow smoothed themselves out; the pallor of those chiselled features grew less deathlike. There were many young Roman students in Athens at that time, and their hearty enthusiasm for liberty and fresh unselfish admiration for himself must have soothed the care-worn spirit of the man.

Among these students there was one deserving of more than a passing notice. A well-favoured, dark-complexioned youth of twenty-two, rather under the middle size, square-shouldered, with a well-knit frame, Horace might easily pass muster in a crowd. But when his full black eye sparkled with fun as he touched with kindly humour the foibles of his friends, or glowed with inspiration as he poured forth his quick-coming fancies, even a

statesman might have remarked him, and the fastidious Cinara herself might have thought him a lad of mettle well worthy of a lady's favour. Introduced to Brutus as a lover of liberty and letters, Horace soon rose high in his favour, and when the Liberator quitted Athens, accompanied him as a member of his staff, soon to be promoted to the command of a Roman legion—not without grumbling on the part of better-born but less gifted youths. For Horace's father had been a slave; not that this meant of necessity lowness of birth or degradation of being. It was the fortune of war, and during the conquest of Italy thousands of Italians, better men often than their conquerors, had been reduced to this condition. Horace's father had been a town slave of Venusia, a Roman colony on the Apulian border, where it touches Lucania, settled there in old times to bridle the wild Samnite.

Its citizens were enrolled in the Horatian gens of Rome, and hence the name Horace; for the freed slave took the Gentile name of his master, and Horace's father had gained his freedom before the birth of his first and only begotten. This was a point of some importance, for it enabled the poet to style himself *ingenuus*, freeborn.

We do not need to go back to ancient Rome to see how much, in the way of social distinction, may turn upon a trifle, but it is certainly curious to find Horace insisting upon the importance of this point. He can praise Mæcenas for admitting to his friendship men of merit of all ranks, provided only they were *ingenui*; while he has nothing but scorn for the libertine, the manumitted slave, whose ability as a sailor, soldier, or financier may have raised him to the rank of knight through the favour of Augustus. To Horace, the son of the freedman, such an one represents the vulgar *parvenu*—so much difference does one remove make. Yet Horace was proud of his father; he is never tired of telling us that he is proud, and flinging back the *libertino patre natus* in the teeth of his detractors. For at Rome the hunter-up of pedigrees failed not to supply the public with full information as to the antecedents of the poor man who became rich or famous. We can hear him now. "Yes, he is a clever poet, says some good things, and his style—well, perhaps that is the best thing about him, if it is not just a little too elaborated—the file too freely used has blunted the crispness. In any case it is much to his credit, considering his early opportunities. No doubt you are aware that this friend of Mæcenas and Augustus was the son of a slave who made money as an auctioneer, town crier, dealer in salt fish, or debt collector, for it's not very clear what he was," etc. Thus lisps and insinuates the Nasidienus of the day. But the ex-slave had the heart of a gentleman, was one of nature's nobility, and his son was worthy of him. Like father, like son. There is nothing finer in all literature than the manly tribute which Horace pays to his father's memory. To him was owing his careful education in letters, but above all his moral training. If, says the poet, my life is pure, and if I am dear to the first men of my time, to my father be the praise. Again and again does he recur to this theme. His mother died while he was still young, but his father supplied her place as well as man could do.

Nor was the early childhood of the poet without signs and prodigies portentous of future fame. Did he not one day stray beyond bounds and lose himself among the woods that clothe the skirts of Vultur, and, lying down to sleep, did not Venus' doves spread a soft coverlet of leaves over the venturesome boy already dear to the gods? His early surroundings developed a love of the country and country life which clings to him to the last. He does not enter into the spiritual and mysterious elements in nature as a modern poet would do; but he loves the country, if not quite as Wordsworth, yet certainly as Wordsworth's good peasants do. The scenes that familiarity has endeared never quit their grip of his heartstrings. The sounding Aufidus, leafy Vultur, the pure Bandusian font, the sturdy peasant with his modest wife, the daily life of honest toil, impressed themselves on his youthful mind and gave reality and local colour to some of his finest poems. The boy was of a warmly affectionate disposition and of an honesty of mind which directed his affections to those things in themselves worth loving. This bent, fostered by his father's training, remained to the last. But early he began to display signs of no ordinary ability, and his father resolved to send him to the best teachers at Rome. The country school, though attended by the consequential sons of the local magnates, was not good enough for the son of the freedman. Yet in Rome the dangers to which a boy so young would be exposed might well give an anxious parent pause; but no difficulty should stand in the way: the father would go himself.

It was the ancient custom for boys to be attended to and from school by a confidential slave, called a pædagogue. His own father became Horace's pædagogue. Lest his son might suffer any humiliation, the old man was careful to maintain such state as was kept by the best in Rome when they sent their boys to school. We can see the old man and his boy walking through the streets; at a little distance follow two slaves. As they go the worthy man neglects no opportunity of instruction. His practical wisdom is worth more than the learning of the schools. He enforces general principles by examples. "See Barus yonder: what a poor figure he cuts now, all his father's savings spent. See what profligacy has brought Trebonius to," and so on. Thrashing Orbilius, whose lectures Horace attended, never scourged as much sense into his pupils as the old freedman of Venusia instilled into his son. Orbilius was a stickler for the old writers of Rome. In literature his tastes were patriotic and antiquarian; but all his thrashings availed not to convert his pupil. Horace came from a district where Greek was spoken almost as freely as Latin, and his natural taste led him to the study of Greek literature. Of his other teachers we know nothing, nor is it much of a loss. The genius is his own teacher. What he wants is air and freedom, so that he may be able to absorb from his surroundings the nourishment congenial to his nature. And this his father's loving care secured for Horace. Uncontaminated by the great city, he learned to look

upon men and manners; and then, what holidays were there for them both when they returned to the fresh air of the Venusian highlands!

Horace seems to have attended school in Rome from his twelfth to his eighteenth year—six years full of impressive events. He had but just come to Rome when the news of the utter defeat of Crassus in the East hushed for a time the murmurs of the Forum. He was in Rome during that terrible suspense which preceded the crossing of the Rubicon by Cæsar. He took the *toga virilis* in the year of Pharsalia. The year after he proceeded to Athens, going, as it were, from a public school to a university, there to complete his studies. It was in the groves of the Academy that the news of the crushing blow of Thapsus and the death of Cato reached him. A couple of years later and fresh hopes thrilled through the breasts of the young Republicans in Athens, with the news of that terrible scene in the Senate House, when Cæsar fell. We know the side which Horace took, and we are glad that he took it. Youth and genius should ever be on the side of liberty. Let years bring with them that acquiescence in the inevitable which is called the wiser mind. Horace, when he sailed from the Piræus with Brutus and watched the Athene of the Acropolis setting like a golden star on the horizon, his heart aflame with generous emotion, could little anticipate the evil days in store for him, and still less that across those evil days would come the time of repose and honour bestowed by his present enemies. By-and-by he will look back upon these days of youthful enthusiasm with a quiet joke at his own expense—how his wings had been clipped, and how he had thrown away his shield and only escaped from the field in a haze specially raised for his benefit by Mercury, the friend of flighty poets. But he never, to his honour be it said, turns round upon his old friends or his old party. He ever speaks of them with respect and makes no secret of it. Brutus is still his old captain; Cato died nobly; and he goes wild with joy when his friend Pompeius Varus returns from the wars long years after he himself had made good his footing with those whom they used to call the tyrants of Rome.

We have in his ode to the said Pompeius a slight glimpse of his campaigning life. It was not all marching and countermarching. There were nights when, under the Syrian sky, the tent of the tribune resounded with merriment. Those little banquets in which young officers of crack regiments delight were not wanting to their life, and Horace's lyre was often strung to ease the lovesick fancies of some brother-officer, or perchance his own. Little sketches, too, such as the dispute between Rupilius Rex and Persius, half comic, half satirical, were handed about the camp, to the delight of those who knew the parties and the no small titillation of the young poet's vanity. But there was plenty of hard work too, and, as the end approached, privations to be endured, which left permanent traces on his constitution. The campaign in Macedonia, terminated by the disastrous defeat of Philippi, fatal to liberty, quenched for ever the hopes of the Republicans. Horace did his part manfully. No enemy's voice ever reproached the son of the freedman with disgraceful flight. How he escaped we know not. Probably the remains of his legion was part of the forces which Messala was able to rally, and he was included in the terms of composition which that general was able to arrange. Be that as it may, he found his way back to Rome the year after the battle. Changed himself, he found all changed around him. His father dead, his estate confiscated, whither shall he turn? There was nothing for it but to woo the thankless Muse. Hunger compels birds and poets to sing. Occasional poems, *vers de société*, satires, all showing a peculiar felicity of expression, began to be handed about and bring his name into notice.

Already in B.C. 40, in the twenty-fifth year of his age, he is the friend of the recognised leaders in poetry of the day. Through two of these, Varius and Virgil, he is by-and-by introduced to Mæcenas—a name famous for ever as the patron of literature. Mæcenas at this time, though holding no official rank, not even that of senator, is yet, as the confidential adviser of Augustus, one of the most influential men in Rome.

It was a curious interview between the eminently aristocratic descendant of Etruscan kings and the Republican colonel who had lately scraped enough together to purchase a poor writership in the Treasury. Little passed that promised the beginning of a lifelong friendship. There was no fawning on the one side, nor offered patronage on the other. Horace told a plain off-hand story—his past history, his present condition, his future prospects, concisely summed up with a proud humility. Mæcenas says but little. The poet leaves the presence of the great man as wise as when he entered it, and nine months elapse before he is again sent for. In the interval, Mæcenas has thoroughly taken the measure of his man, and this time there is no hesitation. Horace is enrolled in the circle of intimate friends who meet at the great man's table and discuss everything but politics and their host's poems. For the great man, though a thorough connoisseur in all branches of art, poetry included, had yet the misfortune to be himself one of the worst poets of the day. His productions took the form of trifles, elaborately frilled and curled, of an intolerable insipidity. Horace never alludes to them, nor could he have given a greater proof of his friendship. The temptation to make fun of them must have been at times almost irresistible, for chaff was the order of the day, and the bard had to stand his share of it. If his toga dragged, or his undershirt was not of the regulation material, or in some not unfrequent fit of philosophical abstraction he was guilty of some left-handed stroke, the fine gentlemen of the Esquiline were ready with their witticisms. Does not the great Augustus himself condescend to call our bard "dear little potbelly?" and in thanking him for the small volume of his poems, ironically inquires whether he had made the measure of his own person the measure also of his poems?

The freedom, at least in manners, of the Republic still lingered on, and the time had not arrived when the informer would lie in wait to catch and twist into treason the free laughter of convivial hours.

These banquets at the Esquiline were delightful—veritable nights and suppers of the gods. Horace is now thoroughly happy. His position is secure. The best and brightest in Rome are proud of his society. Has he not the truest of friends in Varius and Plotius and Virgil? and, above all, is he not independent? His patron makes no claims upon him but those of friendship. He is not expected to fawn upon the prime minister, the dispenser of patronage whose wealth is boundless. It is the man Mæcenas whom he respects and loves. He accompanies Mæcenas, who is going to Greece on a confidential mission, as far as Brundisium, and gives us an account, in one hundred lines, of the fortnight's journey. The greasy inns, the crowded canal boat, the bad water, the excellent bread, the gnats and the mosquitos, the varied humours of the road, are all there; but not one word of serious business. Officious busybodies wish to make use of his influence, but Horace quietly excuses himself; he is only the friend of Mæcenas' idle hours, who sometimes

> "Would take me in his coach to chat
> And question me of this and that,
> As 'What's a-clock?' and 'How's the wind?'
> 'Whose chariot's that we left behind?'
> Or gravely try to read the lines
> Writ underneath the country signs."

These excuses are usually sufficient, unless when our bard meets such a portentous bore as the one pilloried in the Ninth Satire of the First Book, from whose clutches only the providential interposition of Apollo could save him. The son of the Venusian freedman has become an important person, there is no denying it. As he lounges through the Velabrum and the Tuscan street, or works his way through the Forum and the Suburra, on his road to the Esquiline, a passer-by will nudge his companion and whisper, "There goes the great satirist and the friend of Mæcenas." The poet has changed a little. He is no longer so thin as when he served under Brutus—not corpulent as yet, but on the fair way to it. His eyes are as black and bright as ever, but the rims of the eyelids are bleared with red, the result of study and old privations, which have also left behind traces in a squeamish stomach. His raven locks are beginning to show a suspicion of grey. How he enjoys the life of the town! The booths of the Suburra, the fish and meat shops of the Velabrum, the book shops at the corner of the Forum, and the motley groups, the varied life of the great city—all are food for his delighted eye. Here he gets his spendthrifts, his misers, his fops, his long-bearded stoics; here he sees Demetrius paring his nails in the empty barber's shop; now he has to make way for a funeral, now for a wedding; a crane threatens with uplifted beam on the one side, a poet approaches to recite his latest on the other. What beauty is this who bows from her litter and shoots a glance that might kindle a less susceptible heart?—Barine herself, who drives the prettiest pair of ponies on the Appian Way, the admired of all the gilded youth of Rome. She wishes to be celebrated in one of those exquisite trifles in which the poet can embalm his own or his friends' lady-loves. She beckons him to her side. "Come to-night to our little symposium," we can hear her say across 2,000 years; "Pollio, Mesalla, all the set will be there, and Myrtale with her zither to sing a certain poet's songs, a poet who leaves poor Barine, of all his lady friends, alone uncelebrated." Horace bows. Barine is borne off, all smiles, showing those white teeth, speckless in spite of a thousand perjuries, which, thanks to the poet's praise, still glimmer through the mists of time. Horace never married. His love poems, inimitable *vers de société*, are not the poetry of passion. It was not a marrying age. Augustus found it necessary to have a law passed to compel men to marry—the senators passed it and paid their fines. The ladies whom the young Romans loved they could not marry, and the ladies whom they could marry they did not love. Horace would have been happier, no doubt, if a *placens uxor* had fallen to his lot, and if he had had a son to whom he could have passed on his father's instruction; but he makes no complaint.

To the practical philosophy of Horace, sufficient for the day is the good thereof—a way of looking at things which requires to be inborn, depending as it does upon natural constitution rather than teaching. Hence his ethics of everyday life are enjoyed most by those congenial spirits who do not stand in need of it, or by those whom advancing years have made vastly wise by taking away the inducements to be foolish. Still it is worth growing old to enjoy the Epistles of Horace. We have seen how he enjoyed town life—not Johnson nor Lamb did so with keener zest; but he loves the country also, and when the sun has entered Leo, and the dogstar rages, see him mounted on his bobtailed mule, with valise slung behind and legs dangling in front, making his quiet peregrination to Tibur Baiæ or Tarentum. By-and-by he receives from his patron the gift of that for which he longed above all things—a little bit of earth which he might call his own. The Venusian farm is restored to him, in the shape of sloping fields and rugged woodlands among the healthy Sabine hills.

The site of his villa, the slope of Lucretilis, the sacred fountain, the brook Digentia, the shaggy wood in which the wolf, subdued by the awe of divine poetry, gazed and turned tail,—all have been identified. The credit of discovery is due to a worthy Frenchman, or to his nag. For the Abbé Capmartin de Chaupy's old horse was generally supposed to be as great an Horatian as himself, and to have quite as keen a scent for antiquarian remains. Be that as it may, one fine morning the worthy pair, after having trotted over all suggested sites, found themselves on the Valerian road about thirty miles from Rome, and took the right turn where the town of Vicovara stands near the entrance of the only valley which for miles breaks the continuity of the Sabine hills. Here a brook called the Licenza comes tumbling down to join the Anio; further up comes the village of Bardela. As these names corresponded exactly to the Varia, Digentia, and Mandela of Horace, the clue was found. The temple of Vacuna came next more *putre*

than ever, then the villa and the fountain stood revealed. Mandela, wrinkled with cold, was true to its character, for did not our Abbé sit down there to sketch and catch cold? we suspect that he must have chosen a damp spot on purpose.

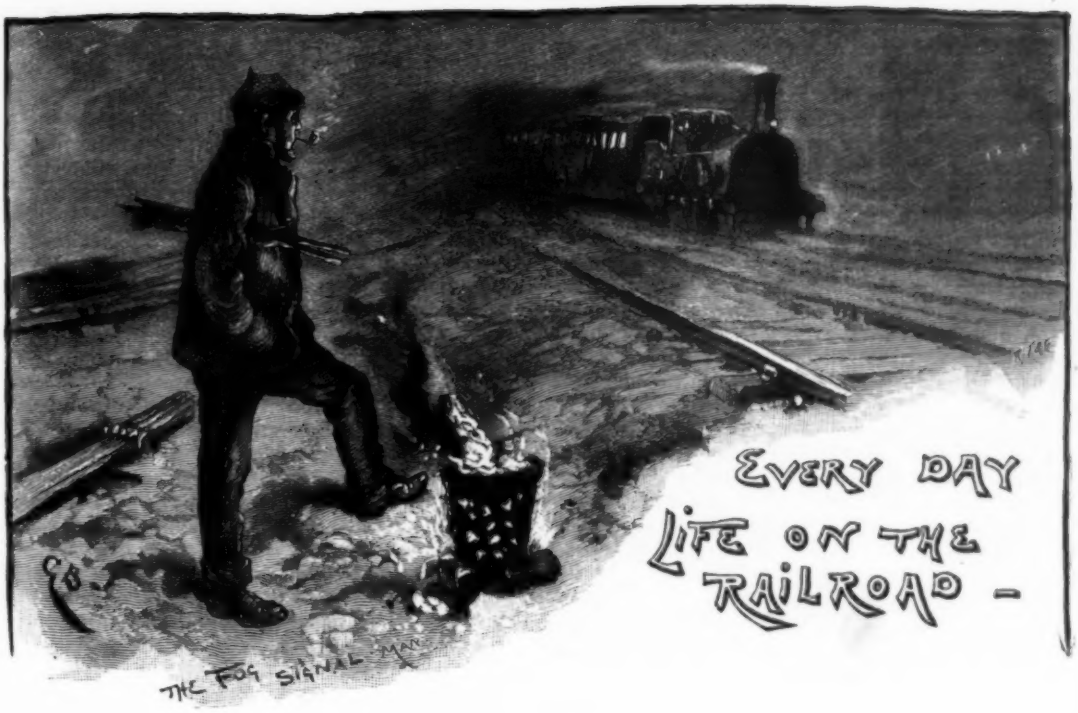
Varia had still its senators, only some Circe had changed them into swine, which occupied the market-place in grunting and wallowing solemnity.

Once discovered, the site of Horace's farm became an object of pilgrimage to scholars. So many Englishmen have visited the shrine that the simple sons of the Sabines have come to the conclusion that Horace must himself have been an Englishman.

After the acquisition of the Sabine farm the life of Horace was complete. Town and country were equally delightful to him, and the contrast heightened the pleasure. As soon as the season of the malaria approaches, see him eager for the hills, much more eager than his slave Davus, who grumbles, as he packs his master's books, at the prospect of a change which will land him more than four miles from the nearest tavern. See our poet arrived; how he hurries to examine the new library which he has added to the old cottage; here he stays to see his books unpacked, Cratinus, Aristophanes, and Plato in their places.

And now for a stroll up to the woodlands and through the pastures and down to the riverside where the dyke has burst. Finally he throws himself on the soft grass by the side of his beloved fountain, sends for a bottle of the vintage that was laid down in the year of the Consul Manlius, as old as himself, and feels that now he is truly happy—"the world forgetting, by the world forgot," "he lives and reigns"! It was a noble gift on the part of Mæcenas, and kindly meant. It was valued by the poet more for the friendship it showed than for its actual worth. And he lets Mæcenas know plainly enough that he cannot consider himself under an obligation which will interfere with his perfect independence. He will resign it at once if he is not to continue his own master. The fact is, that Horace might have had much more had he cared to ask for it. It was a golden age for poets. Varius received £8,000 for his tragedy of "Thyestes," and Virgil, who was a careful liver, died worth £80,000.

Augustus would have done much for the poet who, along with Virgil, had most contributed to give a kind of sanctity to his rule by presenting it as a summing up of the very spirit and ideal of Rome, and as the beginning of an epoch of peace and goodwill on earth. The old tribune of Brutus had become reconciled to what was the absolute rule of one man, though veiled under the forms of the Republic. He acquiesced in the only solution of the perplexed political problem of the day, and gave up liberty for well-being. It was perhaps better that the empire should waste slowly away than that it should be destroyed at once. There will always be those who prefer a consumption to the guillotine.



The relations of Augustus and Horace, at first shy, became more and more confidential, till we find the emperor proposing to take him from the position of Mæcenas' parasite and make him his own private secretary. But Horace declines. His own relations with Mæcenas have become more and more close and affectionate. Besides, the great man needs his sympathy and help. The marble halls of the Esquiline, with their plashing fountains and soft sweet music of viol and flute, cannot give ease to the mind or sleep to the body. Even friendship fails to soothe. After three years of constant sleeplessness, the outworn body of the great chancellor parts with its guest, and the greatest Roman of his time, Augustus alone excepted, becomes a name, an empty shade. Of all his great works none concern us now. The empire that he mainly helped to build up has long since crumbled into dust.

Not as the maker of treaties, not as the builder of palaces or the founder of an empire, does Mæcenas still live on in the recollection of men, but as the patron of letters and as the friend of Horace. It is the little, fat, blear-eyed poet who, in return for the dole of bread and wine, has conferred immortality. Never was kindness better laid out or bestowed upon a more grateful subject. Mæcenas was afraid of death, and Horace, to strengthen his courage, had assured him, in one of his noblest odes, that he would not tread the path to Hades alone—"*ibimus, ibimus*, together we shall go!"

The last words of Mæcenas had recommended Horace to Augustus—"Bear Horace in thy mind as if he were myself." The recommendation was unnecessary. Our poet was ready for the road. He had seen Varius, Tibullus, Virgil, depart. String after string had been loosened from his heart. And now the last and best of all. His prophecy was fulfilled. The shade of Mæcenas had not to wait long in Charon's boat for the company of his friend. The fall of the year 8 B.C. saw two fresh graves side by side on the Esquiline. The friends were lovely in their lives, and in death they were not divided.

ADAM RANKINE.

*** Every generation gives fresh accent to the poet's famous line, *Exegi monumentum ære perennius*. But it is interesting to note that as we send this page to press another memorial has been discovered. In the course of the works for the embankment of the Tiber, a column is said to have been found bearing an inscription commemorating the games held every hundred years to celebrate the foundation of the city, and on this pillar is inscribed an ode written for the occasion by Horace.—ED. L. H.

## IN THE SIGNAL-CABIN.

WHY does a railway man wear a red neckerchief? Answer No. 1, because he likes it; answer No. 2, because it comes in handy as a danger signal. Many a fatal accident has been averted by the timely use of one of those "two red neckerchiefs yearly," which form part of the porter's outfit. But there are times when the wisp of red is of no avail, and of such we had many examples during the last winter.

Riding one day in the front brake into Waterloo, we were suddenly startled by the flash and report of a fog-signal. "Bang goes tuppence!" said the guard. And on inquiry we found that that was the value he put on these fireworks of the line. As several other twopenny bangs occurred before we passed under the famous A signal-box, we felt sufficient interest in the matter to undertake a small investigation, and as most of our fog-signals come from Kynoch's, of Birmingham—who are better known than loved among the grouse and partridges, except by those who appreciate sudden death—it was to Kynoch's that we applied.

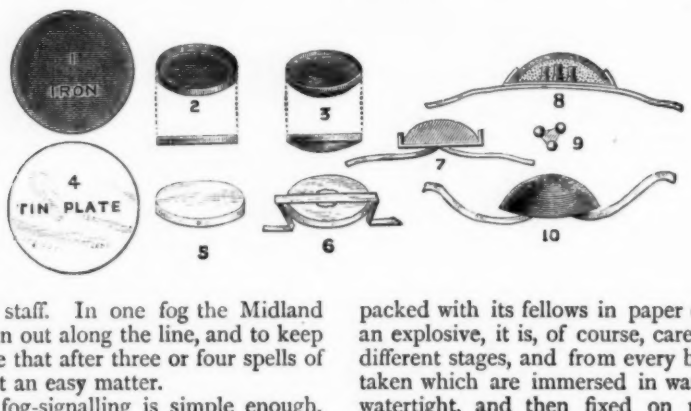
"How many fog-signals do you make in a year?" "Many thousands of gross are used by some of the great railway companies in the course of a winter. But the variation in the demand makes it difficult to give you the exact figures. We should say between one and two millions." "And this year?" "It must have been nearer two millions than one!"

Two million rounds of ammunition! Nearly enough to mark out the entire equator in a series of cricket pitches, eighty to the mile. If the Flying Scotchman were to explode a signal at every revolution of her driving wheel she would have to run on the Edinburgh road unceasingly for a whole week from Sunday morning to Saturday night before she had got through this little heap of detonators.

At the same time our guard was wrong in his estimate. Signals do not cost twopence each, but a pound a gross at the outside; but even at that price the total cost is considerable. A fog is an expensive incident to a railway company. In November and December 1890 there were 118,760 signals used on the South-Western. In January 1888 there was a fog on the M. S. and L. which used up 360 gross of signals, and cost £1,250, including of course the men's wages and food, for a "fogger" on duty is fed at the company's charge. In the same fog the North-Western had men at 2,462 signal-posts doing nothing but attending to the fog-signals on the line.

As soon as a fog comes on the platelayers go off duty. Even if they could see the small patch of permanent way at their feet, it would be too dan-

gerous for them to attempt to work. And so the platelayer appears in another character in the railway programme, and, in a thicker overcoat than usual, comes forth as a "fogger." A miserable occupation is his, but it is wonderful how cheery he can be under the circumstances. The fire, which as a rule he makes in a bucket, seems to give no more heat than a tinker's, and the shelter, when he has one, is rarely as wind-tight as a wattled hurdle; but as you pass in the fog you may just get a glimpse of him smoking his pipe with commendable placidity, his only task being to interpret the sign language of the semaphore into the sound language of the detonator.



After three hours of duty he will get a cup of cocoa, or tea, or coffee, and occasionally something else. Then for six hours he will continue his gloomy watch until a meal arrives of bread and meat, and hot drinks as before. Then another three hours, and the relief man will come to let him go home to bed. It is great fun to let off one fog-signal or even two—but twelve hours of it!

No wonder that every fog means more deaths among the foggers than among those who run the trains. It is not every man who can be trusted to do the work, and a lasting fog is a severe tax on a company owing to the difficulty in finding reliefs from the ordinary staff. In one fog the Midland have had 4,000 men out along the line, and to keep up a number like that after three or four spells of twelve hours is not an easy matter.

The system of fog-signalling is simple enough. The man for the time acts as a semaphore. When the arm is up he clips a detonator on to the rail so that the train will explode it as it runs over it; when the arm is down and the line is clear he picks up the detonator so that the train passes without a report. Sometimes two detonators are used, so that if one should miss fire the other may not; sometimes one report means one thing, two reports another, three another. But under any circumstances there should be nothing more soothing to the railway traveller than the bang of the fog-signal. It is the fogger's "All's well!" and shows he is at his post and alive to his duty.

The signal he clips on to the top of the rail looks like a large button. It may be described as a gigantic percussion-cap, but it is really much more complicated. As a matter of fact it has three caps besides the powder. There are four parts in a fog-signal: the dome, which is of sheet iron; the base, which is of tinplate; the anvil, which is of malleable iron; and the clip, which is of lead. The dome is stamped out of the sheet, and first appears as a two-and-a-quarter-inch disc, which is then cupped into the shape of a canister lid, and further developed into a basin. The base is stamped out of the tinplate and begins as a rather larger disc, which becomes a canister lid, and then a lid with a deeper edge and just large enough for the little iron basin to fit into. On to the back the lead clip is soldered (fig. 7). The anvil (fig. 9), a triangle with a nipple at each corner, is cast in malleable iron and tinned so as to prevent deterioration of the powder by the chemical action which would otherwise be set up between the powder and the iron.

The parts are then ready for loading. The dome or basin, which is painted inside in order to further isolate the charge, is filled with powder specially prepared for the purpose. The anvil on which the three percussion-caps have been fixed is placed in the powder, and the base is fitted on and the whole pressed so firmly together under an ingenious machine that it is impossible for any of the carefully fitted parts to shift. All that the signal now requires is a little waterproofing and decoration. In the painting department it receives a coat of waterproof paint, and when that is dry it has another coat, and then it gets its label and finds itself packed with its fellows in paper cylinders. Being an explosive, it is, of course, carefully examined at different stages, and from every batch samples are taken which are immersed in water to prove them watertight, and then fixed on rails in a siding, where an engine and trucks are run over them to ascertain if they explode quickly and with a sufficiently alarming report. One curious custom of the trade is that the companies make it a condition that the manufacturers should keep a large quantity in stock so as to be prepared in case of a fog of long duration, and to keep this stock up during last December was no easy task. Fog-signals are not always used in fogs. Not long ago a railway man was married, and twenty-one fog signals were laid on the line as a salute to the bride at the "going away."

And now we are out of the fog we may as well return to that red neckerchief which we forgot to say was the first railway signal. As to which was the second there are several claimants, the most promising being the tallow candle which the Stockton and Darlington station-master stuck in his window when he wished the train to stop. On the Liverpool and Manchester in 1830 that candle

had become a lamp and the kerchief had become a flag. In 1834 the pointsman's flag and hand lamp had found a resting-place on a post about five feet high. In three years the posts grew seven feet, and developed into twelve-foot standards with a disc instead of a flag and a piece of red glass in one of the lamp's faces.

Four years afterwards—that is, just fifty years ago—the present system of railway signalling may be said to have begun. We have seen that 1891 is the jubilee of the railway ticket ; it is also the jubilee of the semaphore as applied to railway work. And, curiously enough, at the time it was so applied it had been in existence about fifty years. It was, in fact, the old original telegraph which gave its name to the numerous Telegraph Hills about the country. There is one of these telegraphs still at Portsmouth Dockyard ; there used to be one on the Admiralty in Whitehall, and on every prominent hill between the two points ; there was a series of semaphores all the way to Dover ; there was a series to the north. In short, the semaphore was the telegraph, and we still talk of the "electric telegraph" to mark the distinction between the old fashion and the new. It was at New Cross, of all places in the world, that the first railway semaphore was introduced, by Sir Charles Gregory, in 1841.

To this signal there were no wires ; the pointsman had to stand at the post and work the lever with his hands. But five years afterwards one of those wonderful labour-saving Scotsmen, who have done so much for the world, found an opportunity of distinguishing himself. This particular Scot was a porter at Meadowbank, on the North British. He had two signals to attend to, and, finding it fatiguing to be continually walking from one signal to the other, he brought from home a length of wire and a pulley, and fixing on to the lever a broken chair as a counterweight he hooked one end of the wire to the lever, and passing the other through the pulley he led the other into his hut and worked the signal by pulling and slackening it. Nothing could be simpler or more effective. Henceforth it was clear that a man could work a railway signal without going out of doors.

By-and-by Sir Charles Fox, whose enviable fate it was to drive the "Novelty" at Rainhill and build the Exhibition building of 1851 and the Crystal Palace, invented the switch in replacement of the old sliding rail, and thus gave us the "points" with which our signals now interlock. Interlocking really began about 1843, but it was not until Saxby's arrangement concentrated and interlocked the levers of points and signals at Bricklayers' Arms in 1856 that it can really be said to have come into practical use. On its further development we need not dwell.

Speaking generally, there are now two kinds of railway signals : those with a square end and those with a swallow-tail ; the square-enders are "homes," the swallow-tails are "distants." The distant is merely a caution. When a home is against a driver he must stop ; when a distant is against him he must be prepared to stop if he finds the home bars the road. By this arrangement there are saved in a year a good many minutes and a good many tons of coal, the caution being always given in time for the driver to get his engine in hand. On a level road a distant is a thousand yards from a home, on a rising gradient it is closer, but it is always far enough away for a train to pull up between the two.

There is only one side of a signal to which attention is necessary, and that is the side which faces the direction from which the train comes. Except on the Greenwich line and a very few others in this country, the rule of the road is the rule of the railroad—the paradox quite in which by keeping to the left the trains keep right. The signal arm therefore faces the driver on the left side of the post, and its face is painted red. It is the red side which clears or blocks the line, not the white. Another fact worth noting is, that for the purposes of safety it is assumed that danger is the normal state of things. Consequently, when a signal is at danger it is at rest. Then it is that the lever is down ; to clear the line the lever has to be pulled up, and the result is that down drops the signal to danger if the machinery breaks.

Railway signal making is a trade by itself, but of late the larger companies have been taking the matter into their own hands, and the visitor to Derby or Crewe with a general permit will find himself duly introduced to the semaphore in its different stages. At Crewe there is a shop nearly a hundred yards long and about thirty wide, entirely devoted to signal fitting. Down one side are the posts in preparation, some of them fifteen inches square at the bottom end, with some seven feet of the timber left in the rough, charred in a furnace and soaked with gas tar to preserve it from premature decay in the ground. Some signals are seventy feet high with a five-feet arm, but when the height is over forty-five feet there is generally an arm lower down so as to be visible from the rail level in thick weather. The arm is of wood or corrugated steel, and on it is fixed the pair of spectacles with a green eye and a red one which, working in front of the lantern, give the colours that at night make our great junctions look like drug-shops.

A signal-box has been compared to a great church organ. We have been inside the organs at the Albert Hall and Crystal Palace, and we are inclined to think the state of affairs in a signal-box, and under a signal-box, is more complicated, though it is simple enough when understood. The general appearance is familiar—a row of iron levers on one side ; a row of telegraphic instruments on the other ; a clock, a desk, an open book ; a man or men at work with a boy or boys, amid a constant ringing of bells, clicking of keys, and jolting of springs ; the levers like a set of teeth, complete when all are at danger, broken here and there when a few are at "line clear." Where the levers are not bright they are painted of different colours : black, perhaps, distinguishing the point levers ; blue, the down signals ; red, the up signals ; green, the distants ; and in a large cabin the groups of these colours are perhaps the most conspicuous feature. The signal-levers, it is hardly necessary to note, have wires to work, the point-levers have rods either of iron piping or, as on the North-Western,

of rods painted red. A signal, as we have seen, may be worked a thousand yards from the cabin; points are never worked at a greater distance than the eighth of a mile. When the points "face"—that is, when the train runs on to another line in continuation of the direction in which it has come—the length of the point-rods is not allowed by the Board of Trade to exceed 150 yards. When the train has to back, the points are said to "trail," and then the rods may be of the full length of 220 yards.

Every lever is numbered, and on every lever is a series of numbers showing those that are in inter-dependence with it. This is the key to the interlocking apparatus, which is under the floor, and consists of a sort of gigantic tumbler lock with sliding and vibrating bars working into notches on the lever. The signalman is by this arrangement prevented from opening the points to one line and giving a safety signal to a line that crosses it. He can probably send a train on to any one line, but he has to do so in a systematic manner. Once a train is beyond his signals he has no control of it, and he is powerless when the train is travelling through the points, for, owing to the "detector bar," he would then have to lift the whole weight of the train. One would think that with all this mechanism collisions would never happen; but happen they do, the accident being brought about, not by one pull of a lever, as is popularly supposed, but by the pull of half-a-dozen, all in due order and strictly according to rule. The truth is that all men are liable to make mistakes, and the man most liable to do so is he who works long hours, week in, week out, at the one monotonous occupation. At the Waterloo A cabin already mentioned, there are 209 levers making as many movements in a twelve-month as there are people in London, and averaging twenty-two movements for each train. To work these there are ten signalmen, four on duty from 7 A.M. to 2 P.M., four from 2 P.M. to 10 P.M., and two to complete the round; but in the country boxes—and on other lines—the hours are much longer and the work less incessant, so that the man has time to think of other things, while he becomes too jaded to pull himself together at a moment's notice. Hence mistakes, and elaborate mistakes, and disasters: very few though, fewer than in any other country in the world, but still too many. Signalmen are worked too long and paid too little, even in view of the future, when further automatic machinery will have further simplified their work. Like the great majority of railway men, they have no chance of receiving that gratuity for taking which they would never be "instantly dismissed"; and, like them, they suffer indirectly from a system by which the porters before the scenes add so largely to their incomes. If the passengers, instead of "tipping" the porters, would put their twopences into a superannuation-box it would improve the position of the railway man all along the line.

The earlier signalmen were policemen, and as a survival from the old times a signal inspector is still known amongst railway men as a P.C. To maintain the North-Western signals in order there are eleven of these inspectors, with a staff of 500 foremen, chargemen, and artisans. Every fortnight every cabin on the line is inspected and has all its fittings cleaned and oiled and repaired, should repairs be necessary. There are eleven districts each under an inspector, and these are divided into lengths, each under a chargeman, and in every cabin there is posted up the name and address of the chargeman responsible for it, so that he can be sent for should any accident happen during the intervals between his regular visits. The steel rodding these gangs deal with in a fortnight would extend from Land's End to John o' Groat's, and the wires would span the Atlantic from Liverpool to New York. To protect the 1,800 miles of line they have to visit some 1,400 signal-cabins, controlling 16,000 signals and containing 30,000 levers. Crewe turns out nine signals complete a week, including bracket and gantry posts, some of which carry as many as twenty-four arms, and the largest interlocking apparatus it had completed up to last year was that at Rugby South Junction, which contains 180 levers.

But we have by no means done with our signal-cabin. We have said nothing of the "compensator," which automatically makes allowance for the expansion or contraction of the rods from heat or cold; nor have we mentioned the "adjuster," by which the signalman can tighten or slacken his wires if they do not work easily; and we have omitted the "key interlocker," which is the most ingenious of the three. This is used when the points are too far from the cabin to be worked by rods, or when it is not thought worth while to go to the expense of rodding. The signals are worked by a frame of levers having a number of keys, and when the siding or branch line is to be used, a key withdrawn from the frame locks the signals, and when carried to the junction unlocks the points. Once the key is in it cannot be taken out till the points are closed, and the signals cannot be moved till the key is taken back to the signal-box and replaced in the frame.

Then there are the "starting" signals at the platform, to permit the train to enter the next section into which the line is divided; and there are "advanced starting" signals at the end of the furthest siding to stop the train going too far; and then there are the disc signals for the shunters and other supernumerary signals, which are often of a different colour at night to those on the through track.

One difficulty in signalling remains unsolved. When there are two lights on a post, and one goes out, how is a driver to know which it is? The signalman knows; he can see the signal front or back from his box, and if he cannot, electricity comes to his aid. When a signal is out of his sight, he has a model of it in his box electrically connected with it so as to mimic every movement. Below the model semaphore is a small disc marked "Light in;" above the invisible signal-lamp is a brass and steel tongue which, so long as the lamp is burning, keeps hot, and owing to the unequal contraction of the metals remains bent. When the lamp goes out the tongue cools and straightens,

and touching a binding screw, makes an electrical current which rings a bell in the signal-box, and changes the "Light in" disc to a red one marked "Light out."

And thus we have reached the telegraphic branch of signalling, to which the safety of our trains is chiefly due. The block system, now generally adopted, has been so often described that we can be brief. The line is divided into sections by signal-cabins. The signalman at any one cabin receives a "Be ready," consisting of so many strokes on a bell according to the sort of train that is coming. If the line be clear he repeats the signal back, and in reply he receives "Train on line." The train passes the other signal-box and enters the section between the two. As soon as he receives "Train on line," the signalman sends on "Be ready" to the cabin next in advance, gets back the repeat, signals "Train on line" and clears his bit of the road until the train passes, when he signals back "Line clear" to the first cabin. In this way no two trains can be on the same section at the same time. In the "permissive block" system two trains may be on the same section at the same time, but usually under such conditions as to make accident improbable.

Those who have listened outside a country signal-box can pretty well tell what the different rings mean. On different lines they vary, but on one line, at any rate, one stroke of the bell means "Attention;" two, "Train on line;" three, "Be ready for goods;" four, "Be ready for passenger;" five, "Be ready for express goods." But telegraphic signalling will take us very far afield; suffice it to say that every company has its code-book, just the same as a cable company or any great mercantile house, and by the code much time is saved. When a station-master telegraphs that "A hat-box and umbrella have been left in the net of the fourth first-class compartment from the end of the train," he does not stop to spell out all these words, but "codes" them up into something short, which would considerably astonish the excited owner of the lost property if he saw the telegram as received.

On the outer wall of many signal-cabins there will be noticed an elliptical or diamond-shaped piece of wood hung on a nail. By the way this is hung the drivers, and others interested, know if the signals are working properly or improperly. Like the points and semaphores, the telegraphs are under constant inspection, but a failure in them is more quickly known. As a rule, the telegraph superintendent of a railway company knows the state of the whole of the line under his charge before ten o'clock every morning. And the line is rather long if the wires be placed end to end. We know of one section of line on which there are sixty-one wires, but let us be moderate and take ten as the average. That would give us 170,000 miles of telegraph wire on the railroads of Britain. Allowing six cells to a mile, we should have over a million cells to work them by, most of them Daniells, with Leclanchés for the bells, and Bichromates for the repeaters. It is curious how much the expectation of life for telegraph wire will vary. In the pure air of Anglesey a wire lasts thirty-five years; in the foul atmosphere of Widnes and St. Helens it lasts but three.

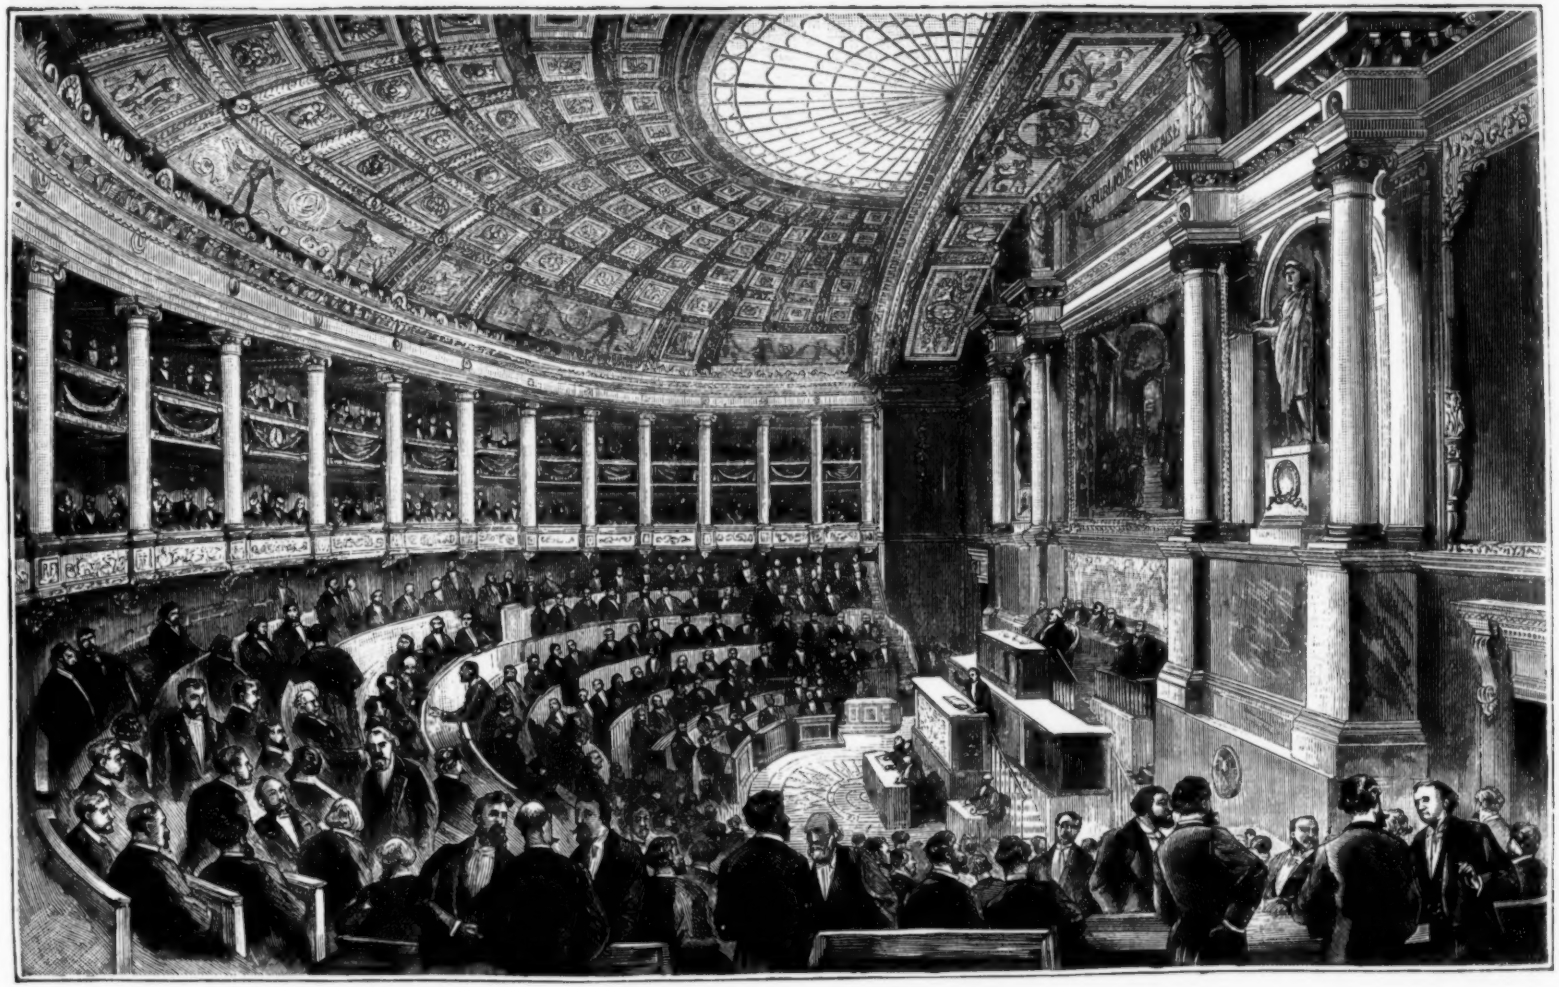
## Song of the Oak.

Look, birdie, look out of your nest,
  Look forth at the glittering home
That the wind and the sun in the west
  Have built of the soft air-foam.
Sun lifted the clouds from the land,
  Wind gather'd their masses to mould
And carve with a cunning hand,
  Sun tinged them with purple and gold.

But change seems fair to their eyes,
  And the palace is never the same;
Turrets sink and pinnacles rise,
  Now black, now fervid in flame.
Their bases are dim in the mist
  That floats on the sleeping sea,
And I think that their peaks are kist
  By the stars that are hidden from me.

And the sun sinks soon, but I know
  That the wind still stirs from the sea;
O the gracious wind! he will blow
  The cloud and the rain to me.



—— What is this
On a leaf up aloft?
It is warm, it is soft
  As a kiss!

Now again!
And another, and fast
They fall; here at last
  Is the rain.

Fall, fall
Each leaf is a thirsty lip.
  Fall, fall!
Till leaf and bud and twig
Are bent, and glistening all
With rain-drops clear and big,
That gather and poise and grow,
And quiver and overflow,
  And drip
Upon the grass below.

Fall, fall!
Thy falling music makes.
  Fall, fall!
Only where cowers my bird,
Thither no drop at all
Shall reach, nor she be stirred,
Until at early day
Sunward she bursts her way,
  And shakes
The hanging drops to spray.

THE CHAMBER OF DEPUTIES, PARIS.

# STATESMEN OF EUROPE.

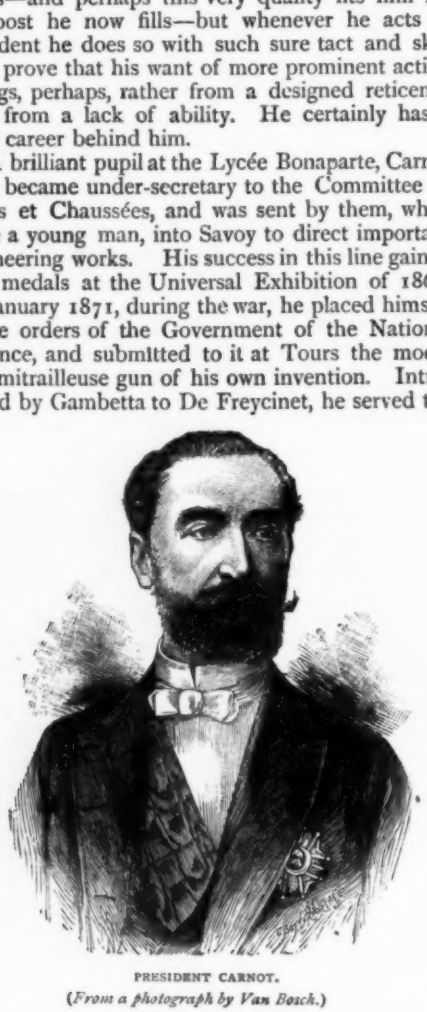
## FRANCE.

### PART I.

THE political history of France during the past decade seems to superficial foreign observers as a constant change and shuffle of Ministers and Ministries without stability or influence, apparently bearing out the popular prejudice that the French are a restless and volatile nation. A more profound study of the subject may prove that this axiom, like most such popular dicta, is hasty, and hence erroneous, or at least tells but half the truth. The French, since they cast off the corrupt and corroding yoke of the Second Empire, have been searching for the best methods of government suitable to their national idiosyncrasies. The task their rulers have had before them would have been no easy one, even if they had been men of rare merit. This, unfortunately for the land, has not been the case in a single instance during these past twenty years. As for the people, their political education had to be begun anew, and the crisis found them, moreover, involved in a disastrous war, provoked by this very Empire. With the enemy still upon their soil, a Government of National Defence was hastily formed, and not till the war was over was it possible to think seriously of giving a constitution to France.

The first step was the election, by universal suffrage, of a National Assembly, which had to conclude peace with Germany. In the clever meridional historian and statesman, M. Thiers, was vested the supreme power, first as head of the Executive, and then as President of the Republic, assisted by a responsible Ministry. After the evacuation of the territory Thiers was overthrown, to be replaced by Marshal MacMahon, who, it was thought, might be counted on to favour a restoration of the monarchy. But there was but one throne, and three pretenders to it—an Orleans, a Bonaparte, a Bourbon—and among these three pretenders no understanding was possible. Hence, after many futile efforts, even the Monarchist section of Frenchmen abandoned their hopes, and joined the Republican party in the Assembly, in order to vote the Constitution of 1875—that which now governs the country. In consequence, France, republican and democratic, possesses parliamentary institutions, an irresponsible President, responsible Ministers, and two Chambers.

These institutions are by no means a part of the Republican traditions, they are rather a legacy from the Monarchists; but they became a necessary condition of the assistance rendered by the latter to the foundation of the Republic of 1875. Obliged to live in a house built by their enemies, the Republicans have little by little become accustomed to it. They have recognised that there is a great advantage in being protected against their own impulses by the complications of the parliamentary machine, and a large majority of them would not willingly abandon it to-day.



The working of this republican, democratic, and parliamentary institution, however, suffers from great difficulties, arising from the very succession of events which led to its establishment; for each of the Governments overthrown during the last century has still its partisans, and is still represented in the French Chamber. Thus we find there Legitimists, Orleanists, Bonapartists, all of whom alike would desire to overthrow the Republic, though not one party is agreed as to what they would put in its place. The Republican majority, too, which exists in both Chambers is much subdivided, and hence weakened in force. Certainly the education of the democracy in France is as yet far from complete. It is only very recently that this democracy has been given the instruments necessary to their education—freedom of press and freedom of public meeting. France does not yet possess freedom of combination; and one may say that all that concerns the strong organisation of parties, their discipline, the strict definition of their programmes, and the concentration of their forces, is still unknown in that country, or very nearly so. Consequently, the French Parliament commonly presents a spectacle rather of coalition for particular purposes than of combined action for a comprehensive policy.

Thiers, as we have said, was succeeded by the victor of Magenta. Seven years is the legal term of office for a French President, but the Marshal resigned ere it had expired. He was accused of conspiring to use his opportunities for the restoration of the monarchy, and the strength of the Republican Opposition, led by Gambetta, left him no alternative. He was succeeded by Grévy, an ex-barrister, whose moderation and firmness were believed to be a guarantee for the Republic, but who at the end of 1887 had to resign on account of a criminal prosecution which was brought against his son-in-law, Wilson, for utilising for his own financial ends information he was able to procure thanks to the official position of his father-in-law The circumstances of the case showed at least culpable weakness on Grévy's part. "Ah, quel malheur que d'avoir un gendre!" sang the gamins of Paris for the space of some weeks. The air was full of this street-ballad, and, as usual in France, dignity could not be maintained against ridicule. The old man had perforce to quit office. M. Carnot, who succeeded him, bears one of the greatest names of the Republican party, as grandson of the

THE CHAMBER OF DEPUTIES, PARIS.

illustrious War Minister of the Revolution. Carnot may not exactly be defined as a man of deeds—and perhaps this very quality fits him for the post he now fills—but whenever he acts as President he does so with such sure tact and skill as to prove that his want of more prominent action springs, perhaps, rather from a designed reticence than from a lack of ability. He certainly has a good career behind him.

A brilliant pupil at the Lycée Bonaparte, Carnot early became under-secretary to the Committee of Ponts et Chaussées, and was sent by them, when quite a young man, into Savoy to direct important engineering works. His success in this line gained him medals at the Universal Exhibition of 1867. In January 1871, during the war, he placed himself at the orders of the Government of the National Defence, and submitted to it at Tours the model of a mitrailleuse gun of his own invention. Introduced by Gambetta to De Freycinet, he served the

PRESIDENT CARNOT.
(*From a photograph by Van Bosch.*)

latter for a short time as secretary, helping him to organise the army of the defence in the valley of the Lower Seine. He was among those who protested against the fatal armistice signed by the Government of Paris, and, when the peace took place, Carnot, who had been a member of the *guerre à outrance* party, resigned his post with a dignified protest, winding up thus: "In coming here, charged with the mission of organising our forces of defence, I was accepting a militant post, the only *raison d'être* of which lay in a fierce and resolute Chamber such as Gambetta dreamed of, excluding partisans of peace at any price. To remain faithful to the line of conduct which I had traced out for myself, I hand over my function and beg you to accept my resignation."

Elected deputy, he voted against the peace of Frankfort, although his own father voted for it. Both sat in the Republican Left, of which Sadi Carnot was secretary. In 1878 Carnot was appointed Under-Secretary of Public Works by M. de Freycinet, and, after the latter had been obliged to resign on account of his action in the matter of the religious bodies (Carnot is openly anti-clerical), he still continued to hold his post. His task was to modify, as far as possible, the gigantic and disastrous schemes of De Freycinet, who was engaged in organising immense projects of engineering reform all over the country. It was Carnot's endeavour to condense and simplify these schemes.

When Gambetta came into power in 1881, Carnot became again a simple deputy. Despite his attitude during the war, he was never really a friend of Gambetta. Carnot was more moderate than the Gambetta party when it was radical, and remained more liberal when it joined hands with Ferry and became domineering. He never formed a part of the "Union Républicaine." For a short time he was a member of the "Union Démocratique;" but when the non-radical elements of the Chamber, in 1885, fused under the name of "Union des Gauches," Carnot remained outside all groups. Temperate in all things, he generally voted with the Ministry, but kept himself aloof from the too absorbing influence of leading men.

When the De Freycinet Ministry was formed, Carnot for the second time became Minister of Finance, with the difficult task of presenting the budget of 1887 to the Chamber. The Chamber would none of it, yet this budget had one great merit—that of sincerity. Carnot had frankly faced the situation, and did nothing to hide the huge deficit, which he was prepared to meet by a loan and by a tax on alcoholic drinks. But the Chamber had had enough of loans; it clamoured for economy in the various administrative branches. The Ministry of Finance was first passed in review; Carnot hid nothing, and quietly pointed out various possible economies. He spoke, as he always did, calmly and coldly, with no waving of arms, no gesticulations or elaborate phrases. Certain proposed economies, however, he would not hear of; and his plans were defeated by a large majority. Nevertheless, after the Ministry had fallen, when a new commission was named to examine the budget of Carnot's successor, so deep was the impression of absolute trustworthiness which Carnot had inspired in the Chamber that he was elected first on the list of the commission.

A few months later, during the Wilson scandal, a fact came to light which paved the way to Carnot's future presidentship. M. Rouvier, Minister of Finance and President of the Council, was discussing a motion as to the appointment of the commission to examine into the recent scandals. One of the facts alleged was that President Grévy had given directions that his friend Dreyfus was to get back from the Treasury all the taxes he had paid. M. Rouvier, wishing to draw a contrast between the Minister who had ordered this restoration and an upright functionary, said: "Yes, it is clearly shown by the documents that one of my predecessors, M. Sadi Carnot, refused to make the restoration asked of him." At these words the whole Chamber rang with loud applause and cheers for Carnot.

Then followed Grévy's resignation and the preparation for the presidential election. The four

prominent candidates were Ferry, De Freycinet, Floquet, and Brisson, of whom we shall have more to say. There were objections to all. Ferry's election would have broken up the Republican party, driving away the Reds, and bringing about a coalition between the remainder and the reactionaries. De Freycinet's disastrous policy in Egypt and his Public Works scheme were too fresh in men's minds. Floquet had insulted the Czar by crying in his face, "Vive la Pologne!" Brisson had had the misfortune to be in power when a strong Conservative minority had been returned at the elections. Carnot was a Moderate, independent of all groups. The only question was—Could he be induced to stand? On December 1 three members of the Chamber waited on him at his house and laid before him the proposal, which Carnot accepted under the condition that he should have to take no steps whatever in canvassing or soliciting his candidature. If France chose to elect him for this high post, he should think it his duty to accept; but he would not appear to thrust himself upon the nation. He was elected by an overwhelming majority. News of his selection for the post of President came like oil on the troubled waters, for at Belleville and Montmartre the Reds were already gnashing their teeth, and preparing to go "down into the streets."

Since he has been President, Carnot has, both socially and politically, acted with the greatest tact and discretion, and proved himself more than ever a man of unimpeachable integrity. In his social duties he is ably seconded by his wife, a daughter of the political economist Dupont-White, who was Secretary-General of Justice in 1848.

Although Léon Gambetta is no longer one of the living, it is not possible to speak of French statesmen of the last decade without mentioning him. Indeed, his influence over public affairs has been so important, that for a proper comprehension of the state of parties in actual France it is necessary to cast a rapid survey over the career of the man who for a time dominated the whole situation with all the *prestige* of a veritable dictator. Gambetta, who was a true *parvenu*, belonged to a family of the Riviera of Genoa, and was a meridional in every sense and acceptation of that term. His father came to Cahors, where he set up a cheap bazaar for the sale of Southern products—that is to say, vegetables, fruits, and groceries—and here Léon was born on April 2, 1838. He studied for the Bar, and was first remarked in the conferences of the young lawyers for the active part he took in the electoral meeting of 1863. In the courts he seemed to shun rather than seek occasions for speaking. Like many a Southerner, he was nursing his force for use when the moment should be ripe, waiting for a political trial to occur. This occasion came to him in 1868, when an action was brought against certain newspapers which had opened a subscription for Baudin's monument. The "Réveil," which had headed the subscription, confided its cause to Gambetta. It was on this occasion that the future tribune spoke his magnificent philippic against the Second of December. "This anniversary," he said, addressing his enemies of the Imperial party, "which you fain would not have had, we claim, we take it for our own, we will keep it eternally. Every year it shall be our All Souls' Day, till that day comes when the country, once more its own master, shall have executed a great national expiation in the name of Liberty, Equality, and Fraternity." Turning directly to the Imperial advocate, he continued, "You may shrug your shoulders; let me tell you that I fear neither your conduct nor your threats. You can strike us, but you can neither dishonour nor vanquish us."

With this speech Gambetta laid the foundation of his personal influence. He had brought together in it, in the most able way, civilians and soldiers, Liberals and Conservatives. It was a prelude to his dominating idea—the union of all on the ground of practical

LÉON GAMBETTA.

liberty, the concert of all forces in a Republican State vigorously organised, resting on the national consent. Scarcely six months later Gambetta was elected with an enormous majority as deputy for Paris. He soon became the real head of the Democratic party. A foreshadowing of his future programme is found in a private letter. He writes: "I think I can sum up my whole policy in two lines—to bring about the triumph of the policy engendered by universal suffrage, both in internal affairs and in the management of external affairs; in a word, against the existing circumstances, to prove that the republic is henceforth the primary condition of salvation for France internally, and of the equilibrium of Europe."

In September 1870 Gambetta was one of the Ministers of the National Defence, and it was on that occasion, for the purpose of rousing up the zeal of the country, that he made his famous balloon journey in order to escape from the siege of Paris. His appeal to provincial France to co-operate in defence of Paris was eloquent in the extreme; no less vigorous was his reorganisation of the military forces and of the civil administration. It was thanks to him that the first Army of the Loire was set on its feet again; thanks to him, too, that the French armies gained a few victories, though

they were unimportant and too late to be of real service. He himself looked forward to an indefinite prolongation of the war, and believed that France would eventually succeed. Notwithstanding that he had drained the resources of the country to the uttermost, he was everywhere greeted, if not with enthusiasm, at least with implicit obedience.

Gambetta's last act as head of the Government was the decree calling upon the citizens to vote the election of a National Assembly, charged to decide for peace or war, and declaring ineligible all who under the Empire had been Ministers, Senators, or Councillors of State. This proclamation gave a pretext to Bismarck for interference. The German Chancellor protested in the name of the liberty of election stipulated by the armistice. France was obliged to yield, and Gambetta to recall his decree. But in doing so he resigned his office. He refused to vote the treaty of peace. When Alsace and Lorraine were ceded to Germany he quitted the Chamber, together with the deputies for those Departments.

For eleven years Gambetta laboured indefatigably to increase the influence of republican ideas, and it may be said of him that the one great peculiarity which distinguished him was "that he widened the limits of the field of action in which all Frenchmen could meet to work together under the flag of the Republic." When the Constitution of 1875 was voted, Gambetta made his famous speech, in which he pointed out how he and his party had made every concession possible to the reactionaries, and warned them not to miss perhaps the only chance of founding a firm, legal, and moderate republic.

It was after this that Gambetta frankly adopted an opportunist policy. In one of his speeches he openly stated: "I make my policy square with my philosophy. I deny the absolute in everything; so you will quite understand that I am not likely to introduce it into my political beliefs. I belong to a school which believes only in the relative, in analysis, in observation, in the study of facts, in the comparison and combination of ideas; to a school which takes into consideration surroundings, race, tendencies, prejudices, and enmities. A political creed never is, never can be, always the same. The policy of to-day, in 1876, will not be the policy of 1877, nor of 1878, nor of 1880. It will change with our interests, with our needs, with our enmities, with what will happen in Europe, in such-and-such a market, in the face of such-and-such economical, financial, and military conditions which may displace the axis of this policy. And thus I say that it is expedient to modify our political conduct according to the changes through which the world passes. You see, therefore, that politics require tact, study, observation, and exactitude."

The importance of the above speech lies in its negativing the assertions of some of Gambetta's biographers, who represent him as being all of one piece, which he certainly was not. He was a series of incarnations, not a full-fledged prophet.

Again and again, but in vain, Gambetta attempted to reconcile the republican parties of all shades in the Chamber; no easy task, for each of these men had an idea of his own as to what a republic should be, and they were not willing to merge their personal fancies for the purposes of patriotic unity. He next attacked clericalism. Speaking in the Chamber of the election of M. de Mun, the well-known clerical deputy, he said: "It is no question here of defending religion, which no one is attacking or threatening; and when we speak of the clerical party we mean neither religion, nor sincere catholicism, nor the national clergy. What we want to do is to bring the clergy back into the Church, and not allow the pulpit to be made a political rostrum; it is to have the liberty of the elector recognised, it is to insure a fair field for political opinions which have nothing to do with clerical questions." He summed up the clerical question in the words, "Le péril social le voilà."

Accused, later, of dictatorship, he defended himself at Belleville by declaring that he had twice helped to overturn despotism, by which he referred to Napoleon III and MacMahon. But his own government much resembled a despotism wielded in the name of Liberty. He himself, perhaps, became aware of this later, for, when speaking of the moral condition of the democracy and bourgeoisie, he said: "This is what inspired me to break with the past, and to say to myself, 'Your life must be consecrated to doing away with the spirit of violence which has so often led democracy, to keep it from making a fetish of absolute formulas, to direct it towards the study of facts, to teach it to take into consideration traditions, customs, prejudices, which are forces only to be overcome by persuasion. You must endeavour to remove the incentives to fear which might push the bourgeoisie into reactionary measures; you must present yourself as a kind of peacemaker between the interests of both parties; and, if you can succeed in obtaining this alliance of the people and the bourgeoisie, you will have founded a republic on an immutable basis.'"

In 1881 Gambetta was charged to form a Ministry. Most of the men whom he would have selected to form a Cabinet refused to serve under him, with the result that he had to select minor men, and was then charged with having made a Ministry of his own followers. His programme, among other matters, aimed at freeing the administrative functionaries from personal influence and local rivalries. Members who had been accustomed to ask for places and favours for their electors and *protégés* were up in arms. The word "dictatorship" was heard both on the Left and Right of the Chamber. The Ministry was doomed, and when Gambetta further expounded his programme, which included a revision of the Constitution, the project set the whole Chamber in a blaze. He had been but four months in office when he saw himself obliged to resign. The excitement in France at the fall of the Ministry was great, for Gambetta was very popular throughout the provinces. The most notable of his political schemes and the one that survived him was the introduction of the system of voting known as the "scrutin de liste."

He was succeeded by De Freycinet. The Minister and Dictator became once more a

simple deputy. He was, however, not inactive, and showed himself especially eager as a partisan of an alliance with England. He wished France to act in concert with her in Egypt, and clearly foretold the future which has come about, if she did not do so.

On November 28, 1882, the news went forth that Gambetta, who was at that time staying in his country house, had wounded himself in the hand with a revolver. The bulletins issued announced that the accident was of no consequence, and that the wound was healing, but on December 16 fever declared itself, and on the last day of the year the Dictator died. How did the accident happen? By the overloading of a pistol? Such was the official version. No one believed it. By the hand of a woman? All France believed it. Anyhow, no judicial investigation was made, and the matter was hushed up as far as might be.

When Gambetta died there was in office one of those mushroom Ministries, surviving but a few weeks, of which France, to her misfortune, has seen but too many during the last two decades. Early in the year, M. Fallières was succeeded by M. Ferry, who found himself thus for the second time in office, and who was to hold the reins for the next two years.

Will M. Ferry's hour ever come again? This is a question that is often asked in France. He is recognised on all sides as a political force, but the extent to which he has pushed his anti-clerical views has made him a dangerous man in the eyes of many, while on the other hand his foreign policy has brought him much opprobrium. The "Tonkinese," as he was called in disdain, became an object of popular loathing. For, with the ready ignorance and forgetfulness of the past that distinguishes nations, the people disregarded the fact that, though M. Jules Ferry conquered Tonquin, it was not he who first suggested the war, but rather those who reproached him with it at a later period. Recently there has been a slight reaction in favour of Tonquin—affairs there being so much more prosperous. In any case the lesson taught by that difficult conquest has not been lost; and for the present the French nation, wiser by experience, no longer listens to the insinuating voice of those who recommend distant adventures.

Ferry's name is not, as some people have tried to make out, of Italian origin; Ferry is merely, in the *patois* of the Vosges, a contraction of Frederick, for from time immemorial his family have inhabited the little town of Saint Dié. His father was a lawyer of considerable means, who devoted himself to the education of his two sons, bringing them up as pugnacious Republicans. Jules was destined for the Bar, and was educated at the Lycée of Strasburg; hence he has, besides that tie of patriotism which appears to bind every Frenchman to Alsace now they have lost it (for before the war it was no offence to hear Alsace spoken of as Germany), the added one of a personal love for Strasburg, where in his youth he made many friendships to which he has remained true in later years. He also married an Alsacienne of a highly respected family.

After the death of his father, Ferry, finding himself possessed of a fair income, left the Bar to enter upon the domain of politics. He soon grouped around him a number of men of merit, such as Floquet, Émile Ollivier, Hérold. The Empire was in those days in its full tyrannical power, and these men, all discontented, discussed ways and means of opposing the Government. The press was shackled; but, nevertheless, here and there, in articles of a literary form, this group managed to criticise the Government of the Third Napoleon. They wrote for Émile de Girardin's paper "La Presse," and Clément Duvernois' "Courrier de Paris." Émile Ollivier and Duvernois soon after abandoned the opposition party, and went over to the Imperial camp; but Ferry stuck to his colours, and in 1863 published a book which involved him in a political trial. It consisted of a series of revelations about the means employed in official candidature, and was denounced by the Government party as a Republican manifesto. Soon after this Ferry began to write in "Le Temps," and there

JULES FERRY.
(*From a photograph by Pirou.*)

published his remarkable onslaught on the Prefect of the Seine, entitled "Comptes fantastiques de Haussmann." Elected deputy for the sixth arrondissement of Paris in 1869, he continued in the House his double campaign against official candidature and the administration of Baron Haussmann. All his efforts at amendment were thwarted by a servile majority. But he soon became one of the most formidable antagonists of his aforetime colleague Émile Ollivier, and, in the frequent struggles between them in the House, Ferry generally got the better of the arguments.

In 1870 came the war—that war upon which Émile Ollivier embarked so light-heartedly, and which was to prove so utterly disastrous to his party and to France. Ferry took an active part in the opposition made by the little group of the Left to the Government project, whose criminal foolishness led the country to Sedan. When the Empire fell, on September 4, Ferry, as deputy for Paris, took his place in the Government of National

Defence, and subsequently became mayor of the capital. He showed great courage during the time of the Commune, and, had he been listened to, it is probable that many of the horrors of that time might have been avoided. He resisted to the end, and, as Mayor of Paris, only left his post when he saw all was lost. For one whole day, from 6 in the morning till 10 at night, he sent telegram after telegram to the Governor of Paris, to the Minister of War, and to M. Thiers, endeavouring in vain to persuade them not to give up the Hôtel de Ville to the mob. His last telegram ran thus: "The troops have evacuated the Hôtel de Ville; all the employés are leaving; I shall leave the last. The insurgents have made a barricade and are firing." He only escaped the fury of the mob by flying through the court of the Presbytery of Saint Germain l'Auxerrois. The next day he rejoined the Government at Versailles.

Soon came the gloomy moment of the siege of Paris, and provisions grew scarce. Jules Ferry, not hesitating to sacrifice his popularity, proposed in a plenary meeting of mayors and vice-mayors the rationing of the people. A great hubbub ensued. "For how long have you bread?" asked some one of the audience. "I could tell you that to a day," answered Ferry; "but you will cut out my tongue before I will tell you, for that is the secret of the Government of the Defence, and none but the Government must know it." Absurd as it seems to non-French readers, Ferry was never forgiven for the courage and energy he displayed on this occasion. Had he not managed to escape, he would most certainly have been killed.

From that time forward Jules Ferry's name is found connected with every great public event. He took an active part in the National Assembly as a prominent member of the Left against the reactionary party. He helped to construct and vote the new constitution. Returned for his native town by a large majority, in the new Chamber he spoke and acted with increased influence, becoming the acknowledged leader of the Left. In their name he violently attacked the Government, in the important debate which followed the events of May 16, for what he called its cowardly persecution of the weak, its war against the poor and helpless—that is to say, the clergy and the schoolmasters. This speech counted not a little for Ferry's rehabilitation in the eyes of the French people.

In 1879, after Grévy became President, Ferry accepted the portfolio of Minister of Public Instruction. Almost immediately he brought forward the two famous Bills which set all France, clerical and anti-clerical, in a blaze, and with which his name will ever be connected. He ejected the entire clerical element which formed the majority of the old Conseil Supérieur, and planned education on such absolutely "unsectarian" and extreme principles that the very name of God was forbidden to be pronounced. The veteran Jules Simon justly reproached the Minister for this measure, maintaining that the instruction of children in the primary ideas of duty towards God was perfectly compatible with unsectarian aims. Simon wished that this simple method should be retained among the compulsory subjects. Ferry replied to his speech: "I do not wish to drive God out of the schools, but to introduce real neutrality on this point." And by the famous Article 7 he prohibited any member of an unauthorised religious community from teaching. In substance these Bills were passed, and Ferry then brought forward two others, for compulsory and gratuitous primary education, and for accepting the principle of laicisation. These decrees were soon put into execution, and legal proceedings were taken against all unauthorised communities, and notably against the Jesuit schools.

These changes at home were followed abroad by the conquest of Tunis, towards which the German press certainly pushed on France. Time has since revealed that Bismarck was anxious to make use of this question in order to bring France and Italy to loggerheads.

When Ferry, in his turn, was accused of arbitrary conduct because he would not listen to the proposals for a revision of the Constitution, he said: "We exclude no one from our majority; but we leave on one side those who do not wish to enter it, for the Government ought to be a guiding lantern, not a kind of twilight in which all opinions are lost." He certainly acted in an unconstitutional manner during the Tonquin campaign, representing the war, which was going on at full swing, as mere skirmishes. He lied over and over again concerning the despatches that arrived from the seat of hostilities, and never told the truth until the news published in the English papers obliged him to do so. From that day he became a marked man, and, though he is still re-elected for the Chambers, it is uncertain whether he will ever for a third time find himself head of the Government, though he regained a certain amount of popularity as one of the principal suppressors of Boulanger, whom he called in a public speech, "Saint Arnaud de café concert." For that epithet, indeed, he was challenged by the General, but, owing to the seconds differing, the duel did not take place.

After a brief interval, during which M. Brisson held the reins of office, there followed a Cabinet presided over by M. de Freycinet.

Charles de Freycinet, who finds himself for the fourth time at the head of the French Cabinet, comes of an old family of the department of La Drôme. His forefathers were distinguished navigators, several of whom enjoyed a high reputation for pluck and *sang-froid*, and in their present descendant we may distinguish more than one of the characteristic traits of his ancestors. He has stood more than one parliamentary broadside without giving in; and, like his great-uncle, he too has been an explorer, and in his cruise around the political globe has discovered, so say his detractors, two groups of islands, one in the Centre and the other on the borders of the Extreme Left. With great skill he has steered just clear of political shipwreck, and managed to rise to the highest ranks in the Government.

Educated for an engineer, he became, in 1850, the manager of the railways of the South. In this post his admirable administrative genius showed itself, and many of the regulations drawn up by

him then are still in force. He also published some valuable mathematical works, as well as a study on the sanitation of towns. Unlike most mathematicians, M. de Freycinet's genius is a mobile one. His career contains three or four sharp turns. After throwing up his post in the railway, he entered the Government service, and was employed on foreign missions to England, Belgium, and Germany. When the Empire fell, M. de Freycinet offered his service to the Government of the National Defence, and, although he had no special qualification for military affairs, he distinguished himself, and stood well in the breach, literally creating two regiments a day. Gambetta, with his keen eye for men, was struck by De Freycinet's talent, clearheadedness, and self-confidence, and bestowed upon him a post of importance.

After the peace De Freycinet retired back into private life, and dedicated his days to study, but he resumed his public career in 1876, when

M. DE FREYCINET.
(*From a photograph by Nadar.*)

he stood for a seat in the Senate, warmly supported by Gambetta. His profession of political faith he couched on this occasion in the following words :

"Politically, I date from 1870 ; if I entered the Republic late, I came in by the front-door, and received a baptism not of water but of fire, for it was in the fiery furnace of the National Defence that for five months I wrestled for my country with all my might and main. What I did it would ill become me to tell, but my master and friend, M. Gambetta, will tell you if I did my whole duty. . . . Side by side with great geniuses there are men who apply themselves to questions of administration and organisation entailed by the application of a new order of ideas. I am one of those men, and, to sum up everything in one word, I would wish to be called by you to form one of the scientific phalanx of the Republic."

M. de Freycinet was duly elected, and he sat in the Chamber with the Republican Left, always voting in the Senate in harmony with the Republican majority of the Chamber of Deputies. The cause and the explanation, as he himself had said, of his political career was the National Defence, and the man in whom that National Defence was incorporated—namely, Gambetta. Soon, however, M. de Freycinet could stand before the Senate and the public on his own merits. When he arose to address the Senators for the first time, it was evident that a new orator and a new kind of eloquence were revealed in him. From that moment, slowly but surely, by paths curiously tortuous, De Freycinet climbed the political mountain. In 1882 he nearly missed being re-elected for the Senate. Paris had, in the meantime, become ferociously Radical, and De Freycinet was not fierce enough for its taste. When, after a few brief weeks of existence, "le Grand Ministère," as Gambetta's Cabinet was nicknamed, fell under the weight of its chief, M. de Freycinet took in hand the reins of government. The programme he put forth was the exact contrary of Gambetta's. There were to be no constitutional questions, no *scrutin de liste*, no policy, no reforms, or rather, there were to be reforms, but of a strictly practical character. Nevertheless, his Cabinet, too, did not live long. After a brief six months M. de Freycinet had to resign and wait another three years before he once more resumed office.

Into his place stepped M. Duclerc, to be succeeded almost immediately by M. Fallières, succeeded in his turn by the Ferry Cabinet, which managed to live for two years, struggling on bravely till the defeat of Lang-Son gave it its death-blow. M. Grévy, who had been charmed by De Freycinet's manner and abilities, as had been Gambetta and Marshal MacMahon, immediately sent for him to come to the help of the Ministry. He was, however, unable to form a Cabinet, and had to content himself with the Ministry of Foreign Affairs, given to him by M. Brisson, who proved more successful. When Brisson resigned, after eight months of office, the Minister of Foreign Affairs was quite ready to be made President of the Council.

At the present moment M. de Freycinet is Minister of War, which realises his lifelong dream. Several Cabinets have succeeded each other and he is still in office. He has even again become President of the Council, for it is now M. Carnot's turn to be fascinated. Indeed, De Freycinet narrowly missed being made President himself, and would have been probably elected had he not been thrown over at the last by M. Clémenceau. As to the practical reforms promised by him in 1882, as yet nothing has been seen of them. His critics say that he chops and changes with the times, and these are always changing in the uneasy sea of French politics. The bark of the Republic has often been in imminent danger during the last decade, thanks to the raging Radical sea, the fierce hurricane of Boulangism, the current of opinions constantly swaying and changing. Now, for a moment, all seems calm, and it is possible that De Freycinet may sit long on the Ministerial bench, and that his shrill but harmonious voice, with something of the pan-pipe or the flute in its quality, will often be heard in the Chamber. His small head and slender body are conspicuous

objects when he stands up delivering his clear-cut arguments, which sparkle like prisms, catching votes with them, it is said, as larks are caught by mirrors. Sir Charles Dilke has nicknamed him "The White Mouse"; one of his colleagues in the Senate "The Syren." He certainly has the gift of managing men, and is clever and astute.

The measure with which M. de Freycinet's name will ever be associated is the military law, passed in 1889, which makes three years' military service compulsory for all adult Frenchmen, even for seminarists and students of the École Normale—that is to say, it includes young men preparing for the priesthood or an educational career. The measure was regarded as highly tyrannous by the Church, and forms one of its chief grievances against the Republic. It contends that by obliging seminarists to pass through the barracks there is a danger of their being diverted from their clerical vocation.

It has been said that there are three kinds of mathematicians—those in a straight line, those in an angle, and those in a circle. M. de Freycinet belongs to the last category. He rounds his back, his arms, his fingers; he is fond of elegant solutions and demonstrations. He can pass a budget of seven hundred millions with ease and grace. Even when he is ironical, which is not seldom, there is always in his speech a preponderance of honey for the gall.

Undoubtedly not the least important result of Boulangism has been the fact that it led indirectly to the appointment of a civilian as Minister of War—a very important, and most people think advantageous, change, a civilian Minister being above and outside the jealousies which so often exist between generals. The latter, by the time they are fit to be Ministers of War, are in France as a rule physically and mentally worn out.

## LONDON SIXTY YEARS AGO.

### SOME PERSONAL RECOLLECTIONS.

THE "Athenæum," announcing the publication of a new edition of Cunningham's well-known "Handbook to London," said that "the immense changes that have taken place since the work was issued, in 1850, have made it necessary for the great part of it to be re-written," as has been done well by Mr. Wheatley. If the changes in the aspect of London since 1850 have been so great, it may be of interest to give some recollections of a period twenty years earlier, when the contrasts with the London of to-day were much more marked. Without attempting detailed descriptions or formal statistics, I propose to set down a few desultory notes, as they occur to memory.

My first visit to London was in the autumn of 1829, the year of the accession of William IV. I had a longer holiday that year than usual, the classes of the Edinburgh Academy, where I had been at school for six years, closing at the end of July, and the classes at the University not opening till November. To see London was a treat looked forward to with feelings beyond the Scottish experiences of previous holiday seasons. The opportunity came through invitation of two old Indian comrades and friends of my father, who had been in the service of the Honourable East India Company in the good old times when George the Third was King.

There were several ways of getting to London from Edinburgh in the year 1829. Railways, as yet, were unknown north of the Tweed, in fact the first English locomotive for passenger traffic was seen in October of that year, a date memorable for the tragic and lamented death of Mr. Huskisson, on the occasion of the opening of the Manchester and Liverpool line. By land there was no way of travelling but by coach, except walking, as many a Scotchman did in those days, besides pedlars and cattle drovers. Within the memory of men then living the stage coaches had taken the best part of a week to make the journey from Edinburgh to London. It is true that the time had gradually been lessened and the speed accelerated, till the Royal Mail had brought the time down to less than forty-eight hours. But the journey was fatiguing and costly, and comparatively few passengers were carried by the mail or other coaches. The most common and still the favourite method of transit was by sea, and the celebrated Leith Smacks took hundreds every year from the Forth to the Thames at moderate charge, and in time varying according to wind and weather. Fortunately the General Steam Navigation Company had some few years before put two steamboats on the east coast for the Scottish passenger traffic, and in one of these, the Soho, I made my voyage to the south, returning in due time by the companion vessel, the James Watt.

The Soho started, as far as I remember, from Granton, and in about forty-eight hours cast anchor

off Blackwall. Why it had to stop there I did not then know, but was afterwards told it was on account of the crowded ships, barges, and boats on the busy stream higher up, chiefly in connection with the building of the new London Bridge.

The passage from the steamer at Blackwall to the landing-place at Chelsea, close to Old Chelsea Bridge, was made in a Thames waterman's wherry. Captain Peevor, whose house in Church Street was my first destination, had brought the Chelsea waterman all the way to Blackwall, and the return voyage was now made, with two boys and their luggage added to the weight. In those times there were regulated fares for watermen to every point on either side of the river, both above and below London Bridge. The regulation fare to Chelsea Bridge was half-a-crown for a pair of oars and fourpence for each person carried. Of course it was a larger sum by agreement to go and return the longer distance of Blackwall, but the fare was small compared with what the journey would have been by land. The watermen on the river were then almost as numerous as the coachmen on the streets, and the tables of fares for oars or scullers were as detailed as the cab fares of subsequent times, when wherries for passengers had gradually become few. The traffic can hardly be imagined by those who know the Thames only since steamboats plied above London Bridge and granite embankments lined the banks, causing the gradual disappearance of most of the old "stairs" and landing-places on both sides of the river.

The name of Captain Peevor I have mentioned because he was well-known in Chelsea, where he was for a long period one of the resident officers at Chelsea Hospital, respected by his colleagues, and much loved by the old pensioners, to whose welfare he devoted himself. At the time of which I am writing he had just retired from the army, and opened an establishment for receiving pupils sent home from India, one of whom was my companion in the steamer, and in the boat from Blackwall.

But we must go back to the arrival of the steamer at Blackwall and the voyage in the waterman's boat up the river. The first thing that struck the eye was the immense number of ships moored in the midstream, a large proportion of them being colliers, far more than were ever seen afterwards, when coal began to be carried by rail and by steamboats. There were long rows of collier vessels, and the transfer of the coal to barges alongside was done in a rough manner. Gangs of grimy black labourers stood on a raised platform above the hold, and when the big baskets below were filled, they were brought to the surface by the men jumping all together from the stage down to the deck. A crane turning the load to the barges seemed the only machinery for helping the muscular labour. It was as rude a process as the pavior's work in the streets in these same times, whose loud chest-grunts were painfully audible.

As we advanced up the river, our attention was directed to Greenwich Hospital and Deptford, and the crowded masts of ships in the several docks, and past the Tower, till we were warned to prepare for "shooting London Bridge." This was no trivial or easy affair in 1829. The piers of the new Bridge stood out with grand effect, but the chief peril was in passing under one of the many arches of Old London Bridge, which was left standing until the opening of the new Bridge. Altogether the "shooting the rapids" was a skilful piece of management by our steady waterman. The various points of interest on both sides, after the first view of St. Paul's and the Monument, and the many church spires of the City, need not be enumerated, nor the successive bridges—Southwark, old Blackfriars, Waterloo, finished only twelve years before, and reckoned the finest in the world, and old Westminster Bridge, after which came the Abbey, and Lambeth Palace, and so to Chelsea. Suffice it to say that the first sight of London and the journey up "the silent highway" was a romantic introduction to the metropolis, such as no traveller nowadays can have in approaching by train to the great termini of the railways, or by any entrances to London by road.

I forget whether there was any boarding of the steamer by Custom House officials, or any examination of cargo; but I do remember, years after, in passing the Border by coach, the passengers' baggage was searched for contraband whisky; probably because there were differential duties in those days upon English and Scotch spirits.

The old house in Church Street to which we were going was a spacious mansion, with a good garden and playground. Occasionally, during the past half century, I have gone to look at the place, and on my last visit found it in possession of the General Omnibus Company, whose offices and workshops and stables would have made the house almost unrecognisable but for the fine brick frontage still unchanged.

Church Street, so called from its leading to Chelsea Church, with its old massive tower, was for a long time little altered compared with adjacent districts. The greater part of the ground now covered by streets and squares was at that time open and sparsely peopled. There was one portion known as Chelsea Fields, an unenclosed common. Large old mansions stood here and there, having extensive pleasure-grounds and gardens. Many years afterwards I saw at the end of a long garden in Beaufort Street, a portion of the massive brick wall which had bounded the domain of Sir Thomas More. Cheyne Row, famous in connection with Thomas Carlyle, and a few other streets, are little changed, but the whole space from the river to the King's Road has been built upon in more recent times. The Embankment has changed the aspect of the old riverside road, with its pleasant wooded banks, where Turner studied the glorious English sunsets. Don Saltero's Museum was broken up years before, but remained as the name of a public-house, at the beginning of the village street, with its china shops, and bunshops, and the primitive public-houses, much frequented by Londoners on Sundays and holidays.

On the south side of the Thames, between Nine Elms and Lambeth, there was a wider tract of desolate land, then called Battersea Common or

Battersea Fields, with few houses, the most notable being the Red House, where boatloads of revellers used to assemble, and where frequent sounds of gun and pistol shots were heard, due to pigeon matches, and occasionally, in early morning, to duels fought in the neighbourhood. Railway works and gas works hastened the occupation of regions almost unpeopled sixty years ago.

After a day's rest, and rambling in the neighbourhood of Chelsea, the business of sight-seeing commenced. Our host was a great pedestrian. We walked to St. Paul's as the first place of interest to be seen, and we saw it thoroughly, from basement to the cross on the top, an expedition never again made by me in the sixty years that have intervened. There were fees demanded for each section of the building, admission to the Cathedral itself, except at service hours, being only on payment of twopence each person. There were comparatively few statues to be seen in those days, but we saw those of the heroes of the great war, and at the entrance of the chancel the figures of Johnson and of Howard, the first statues erected in St. Paul's, and were told of the story of the foreigner who supposed these were figures of St. Paul and St. Peter, the prison keys in Howard's hand causing him to jump at that conclusion.

On many celebrated occasions I have since been in St. Paul's, but never had inclination to ascend again to the ball and cross, even when the Royal Engineers had their "crow's nest" there while taking the metropolitan survey. Once, during a dense brown London fog, I got a young friend to go up, and at the upper gallery he had risen above the dark fog, but the air was still beclouded by white mist. The hope of seeing blue sky and sunshine above the fog was disappointed. Another time, a messenger, special permission being given by the Dean, ascended during the night, in order to witness daybreak and "sunrise from the summit of St. Paul's," and gave a graphic account of his experience in the pages of the "Leisure Hour."

The sight of St. Paul's was the great feature of that first day in London, but many other things and places were observed. We walked through Chelsea Hospital, and by the Duke of York's Military School, and along what is now the busy Chelsea Road, the buildings of which were not continuous as now, for I remember a long reach of dead wall, where birds in cages and rows of rude pictures and ballads were exhibited for sale. After St. James's Park, we saw on the parade ground, behind the Horse Guards, the identical two pieces of ordnance, a long gun and a winged bomb, trophies of the great war, which are still, or lately were, on the same spot.

In Whitehall the front of the Horse Guards and the Admiralty looked then as now, mounted Life Guardsmen and the beribboned recruiting sergeants astonishing us as they have successive generations of boys. Then came Charing Cross, in everything different from what it now appears. We stood before the long frontage of the court of Northumberland House, with the lion over the gateway, and rustics waiting to see the erect tail wag. There were real live lions to be seen at Exeter Change, not far off, as there were also at the Tower, before the Zoological Gardens, then recently opened, concentrated such attractions. Trafalgar Square did not then exist, nor the National Gallery, the annual show of the Academy pictures being at Somerset House. Pall Mall was not then a row of palace-like edifices, the finest of the clubs being then unbuilt. We went up Regent Street as far as the Quadrant, then (and long after) marked by the heavy-pillared arcades covering the pavement on both sides of the roadway. The shop of Swan and Edgar was traversed from Piccadilly to Regent Street, then considered an emporium of unique magnitude, the pioneer of the vast marts and stores by which its fame has been superseded. The costumes in Bond Street were n the "Regency" epoch. From Piccadilly Circus all the way eastward, especially by the line known now as New Oxford Street, all is changed from what then met the view, the most marked changes having been in our own time. London maps of different dates since the accession of Victoria will show at a glance the alterations in this region, which our space forbids us to specify in detail.

On subsequent days expeditions were made in various directions. That to Westminster took in the Abbey, with its chapels and its monuments, the whole of the interior and surroundings greatly different from what it became after Stanley was Dean. Westminster Hall was then as grandly imposing as it is now, but it was not the vestibule to the Houses of Parliament, with their magnificent buildings and towers. The incongruous accretion of what were called the New Courts of Law still defaced the site. In Old Palace Yard stood the House of Lords and the House of Commons, the former containing among its ornaments the historic tapestry representing the defeat of the Spanish Armada, the latter known as St. Stephen's Chapel, used as the people's Parliament house ever since the time of Edward VI. These venerable chambers and the Speaker's House were destroyed by fire nearly ten years after I saw them. From the Horse Guards down Whitehall to Westminster Bridge everything remained in 1829 as in the old days of Addison and Chatham, of Pitt and Fox. Of the old Whitehall Palace the only part remaining was the Banqueting House, the masterpiece of Inigo Jones's architecture, and happily still standing, one of the grandest buildings of the London of our own day. In later times, since George I, it has been known as the Chapel Royal, but its chief interest to a stranger was its being associated with the execution of Charles I, who passed through the Hall to the scaffold erected in the front towards Whitehall. The Hall is to be now transferred to the United Service Institution, but with provision that no change is to be made in the building, and that the painted ceiling by Rubens is to be protected.

Although all our excursions, far or near—one of them to Harrow-on-the-Hill—were made on foot, it was not for lack of public conveyances. To Chelsea itself, described in the guide-books of the period as "a village on the Thames, two miles from

London," there were coaches running from the Strand, from Charing Cross, and Leadenhall Street. Brief reference to some of the many coaches running at that time to various suburban villages will give better idea than detailed descriptions of the spaces sixty years ago, now absorbed in the vast metropolis, and densely populated. Hackney was then known as "a populous village about two miles from Shoreditch Church." It included what were then styled the "hamlets" of Upper and Lower Clapton, Dalston, and Homerton. Coaches ran several times daily from the Royal Exchange, the Flower Pot in Bishopsgate Street, and from Snow Hill. A more curious entry in the same suburban guide-book calls Islington "an extensive village about two miles from London, with a church and several chapels." This village was said to be "remarkable for the salubrity of its air and the number of its chalybeate springs." Islington was likewise "noted for supplying a great portion of the metropolis with milk." Coaches ran to Islington from Holborn Bars, from Fleet Street, and Cheapside.

Touching the supply of milk to London, there is a curious reference in a letter of the celebrated Edward Irving, then in the zenith of his popularity. It is dated in August 1828, from Mornington Terrace, Hampstead Road. He says, "It is just striking twelve upon the Somers Town church, which is almost right opposite my window, with a green grass park full of milch cows between, which I overlook on this sweet autumn day." Whether the church clock was that of Somers Town or of Old St. Pancras, this description of the open pasturage and the cows will surprise the present dwellers in these crowded regions.

Turning to other suburbs of sixty years ago, Kensington, "the old Court suburb," then occupied a very circumscribed area, and was reckoned a village, while Earl's Court was "a hamlet in Kensington parish." Further to the west was Hammersmith, "a populous village four miles from London, with many ancient houses and villas," to which coaches ran at stated times from St. Paul's Churchyard and the White Cellars. Peckham was wholly rural. So we might recall other suburbs and "villages"; Greenwich, Kew, Hampstead, and many more, even Paddington itself being spoken of as "a village about a mile from London." A favourite excursion was to travel in "express boats" on the canal from Paddington towards the west. Bayswater, with its dense population and multitudinous omnibuses, was hardly known by name sixty years ago. Ten or twelve years later, what is now known as "Westbourne Grove" was literally a wooded rural region with a few small houses.

There were "stands" for hackney coaches, whether two-horse chariots or one-horse chaises, few in number compared with our modern cab-stands, but under strict regulations as to fares and other matters. The fares were not high, a shilling for the first mile, and sixpence for every half mile further. By time, the charge was a shilling for each half hour after the first hour, or five shillings for two hours. The fare by distance from Hyde Park Corner to St. Paul's was three and sixpence, and to Islington Church five and sixpence. The table of fares "to places of amusement" was very limited compared with such tables nowadays. There were only three licensed theatres in London proper; the Opera House, Drury Lane, and Covent Garden. The other "places of amusement" fares were to Vauxhall, Sadler's Wells, Astley's, and the Circus. The hackney-coachman of those days was a more imposing personage than most of our cabmen, generally with broad-brimmed hat and many-caped coat. "Lost property" had to be taken to the Hackney Coach Office "and deposited with one of the clerks," before the times of the police and of Scotland Yard.

Sedan chairs were no longer in public use for hire, though still favourite conveyances in quiet West-end squares and streets, in some of which the railings still show the pendent iron extinguishers for the torch-bearer's convenience.

Another curious vehicle still in use sixty years ago was the brewers' sleigh, a sledge without wheels, on which a single cask was dragged along by a showy dray horse. The same kind of sledge is in common use in Madeira, but there drawn slowly by oxen, the driver standing on the front of the plank with goad in hand, a very different figure from Barclay and Perkins's drayman of the old song and old times.

Part of my time in London was spent in a visit to Captain Lynn, who had commanded one of the splendid armed ships of the Honourable East India Company, and on retiring had an institution for training pupils for naval service. His house was in Leadenhall Street, near the East India House and Leadenhall Market. Over the door was a figure in uniform, holding up a sextant, such as Dickens described. From this centre my expeditions were made to the Docks, the Tower, the Custom House, the Mint, the Bank, and Royal Exchange, and other places of interest in central and eastern London. The changes have not been so remarkable here as in the western and northern parts of the metropolis, but many places besides the old Exchange and the India House which I knew in 1829, have disappeared, and many new buildings and streets now occupy the sites of that period, especially between St. Paul's and the Monument, Cannon Street and Queen Victoria Street being among the most notable "improvements." On the river side I also remember the strangely different aspect when Billingsgate was supplied through fleets of fish smacks and deep sea boats instead of by huge steamers as in after days. The coal traffic by steam has also revolutionised the appearance of this part of the Thames. The greatest of all contrasts is that in the shipping itself, both in the docks and the river, the proportion of steamers sixty years ago being scarcely worth reckoning in the traffic and commerce of the port of London.

The street cries and street noises of London have continued much the same as they were in the middle of the fifteenth century, when John Lydgate wrote his quaint old ballad of the country yokel Lackpenny, who was bewildered by all he saw and heard among the salespeople. Flowers

and fruits, fish, fowl, milk, and all articles of diet, and many sorts of dress are loudly advertised as for sale, while O' Clo' and other cries are heard from buyers. Among the street noises of sixty years ago, the horn of the newsvendor is heard no more, and the loud bell of the dustmen and nightmen. The mention of the last recalls the dangers that threatened to bring the Plague or the Black Death again to London while the population was becoming so vast. No general system of sewage had as yet been attempted, and the dead were still buried under churches and in the midst of the living. The opening of cemeteries, and the system of sewage, had not begun in the time of which we are speaking.

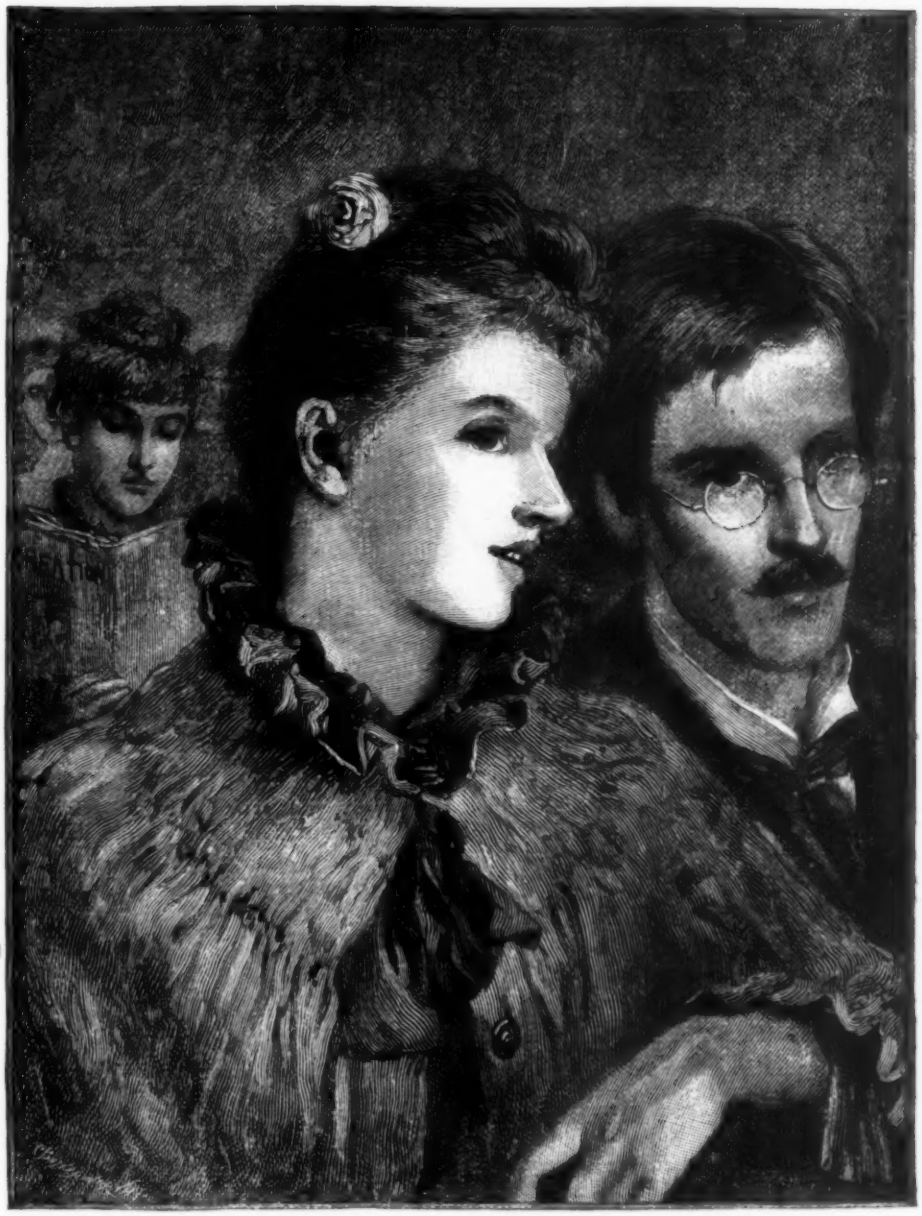
Such are some slight recollections of London sixty years ago, when the Royal Exchange, built in 1668 to replace that which perished in the Great Fire, yet remained, and Old London Bridge was not yet removed; when watermen's wherries plied on the unembanked Thames, undisturbed by bustling steamboats and tugs; when the old British Museum (Montague House), and St. Stephen's Chapel, and old Blackfriars and old Westminster Bridges yet stood; when Paddington, and Islington, and Chelsea were still suburban townships, and districts now densely peopled were green pasturages; when the City and Metropolitan police force had not been organised; when gas lighting was only beginning to be general, and no railway stations yet existed, nor railway bridges spanned the river; when mail coaches carried a few bags of stamped newspapers and heavily rated or franked letters to the country and provincial towns; when the space covered with houses and streets was not one half, and the population not one third, of what it was in the Jubilee year of Queen Victoria's reign.

JAMES MACAULAY, M.D.

# At Haydn's "Creation."

DEEP rumble the notes which the master set wild in their order chaotic, confusion of birth,
Till, sonorous and strong, comes a voice, setting forth the beginning of things for the heavens and the earth;
And delicate harmonies move to tell how the Spirit of God brooded over the dearth.

And the chorus of angels proclaim, in rapture outpouring their throats—that jubilant band,
In the bliss of their worship embodied, and clad in the joy of their service, they wait at God's hand,
Proclaim to His honour and praise, how a world new-created springs up at the Maker's command;



How the hand which had opened to give out the light opened freely again with munificent dower
Of life for the bird and the beast, and the fish of the stream and the sea, and the herb and the flower.
Oh, great is the Lord, and the praise of His strength shall be sung, and the praise of His love and His power.

Then they tell of the glorified glory, they tell of the splendour ensplendoured, the work that began
With order and light, and went on a-thrill with the rapture of life, its rest and its motion, and ran
Through the herb and the flower and the tree, and the fish and the bird and the beast, to God's image, the man.

O God, Thou hast given unto us, the sons of Thy love and Thy care, of Thy honour and state,
Not to find ready-made, but to make; to begin, and go on, and achieve, yea, indeed, to create!
Oh, well to be born and to live, and greater to quicken and urge, as the Greatest of great.

We bless Thee and praise Thee because Thou hast made us, and given us to make, in deed and in art
And now, as the notes die away of the wonderful music that's o'er, and the crowd goes apart,
Bless we too the creator-musician, who made for the world such a music, with brain and with heart.

EMILY H. HICKEY.

## INDIVIDUAL OR ORGANISED ACTION?

BY THE AUTHOR OF "VOICES FROM THE HIGHWAYS," ETC.

I THINK it is Mr. Ruskin who says that when once our attention is directed to any subject, that subject seems to present itself to us at every point. And certainly, after Pleasance and I had once turned our regards towards what, in the phraseology of the present day, is called "Individualism" versus "Socialism" or "Organisation," there did seem something very like Fate in the revelations we received of the extent to which the world has of late tended in the direction of the latter. The morning posts brought us prospectuses of limited liability companies for every conceivable object, from the supply of firewood to the distribution of news and "leading articles." Nearly every caller brought tidings of some new club or guild, for which either our patronage or our co-operation was asked, or to whose festivities we were invited, while our subscriptions were solicited for a wonderful variety of societies, the aims of some seeming in flat contradiction to the aims of others, though in many such instances we noticed the same names to appear as supporters of both!

Pleasance recalled to my mind a remark which we had of late heard from two or three acquaintances, to the effect that they had been asked to give their support to this society or that association, and "as its object seemed good" they had not withheld their names, but "really did not know anything more about it, nor how it was getting on." Indeed, we ourselves had been actually asked to give similar "countenance," it being added as an inducement "that we need take no further trouble!"

Lastly, on Pleasance's birthday somebody sent her the gift of a volume setting forth the aims and aspirations of socialism pure and simple, according to the endeavours and dreams of its own advocates.

We both read the book carefully. It was certainly crammed with facts worthy of the gravest considerations, and one or two of its suggestions Pleasance promptly put into our own personal practice. We spoke of it a little to one another, but we did not really discuss the subject till we had a visit from its donor, Horace Penrith, who is really one of the finest young fellows we know. By birth he has had every advantage, by which I do not mean you to infer that he has had that blessing rather dubiously described as "blue blood," or that there are dukes or even bishops to be found in his pedigree. No, but there is a long record of respected, thoughtful people, with no legend of wickedness nor taint of moral weakness among them,—the record brought up to date in his own father and mother, our friends, both now dead. You can see Horace is well born, just as you can recognise a noble dog or a fine horse. You can see it in the grand head, with its perfect development, both of brow and chin, in the upright, well-placed ear, and the rectangularly disposed features, in the sensitive skin, in the fine sweeps of the delicate hair. His very hands, as I once heard a sculptor say, are "alive."

Then Horace is thoroughly well-bred. By which again you must not understand that he is filled with all the formalities of a finical etiquette. Nay, perhaps he is but too ready to sweep such aside as mere conventionality, often but the thin mask of something base enough. But Horace has had the advantage of being reared by strong and gentle people, who looked right and wrong in the face, "proved all things," and "held fast that which was good." No appetite was pampered, no just development was withheld. The secret of the sea and of the mountain, the stress of crowded cities and the love of dumb animals have all wrought their share in him. He is responsive to every fine feeling and subtle emotion, quick to the most delicate impulses of honour and loyalty and consideration for others.

Finally, he has the best of good fortune. Does

that mean that he is wealthy? Far from it; it means that, having received the best equipment for the battle of life, he has now got to fight it. Standing on the summit of a Past which could scarcely be bettered, he has now to prove himself worthy of it by the Future, which remains in his own hands.

We, and others of his parents' friends (especially the childless ones), regard Horace Penrith with a loving, yearning interest. He makes the things which are to be, in the long years after we are laid in our graves, seem less shadowy to us. By his hand we reach out towards that misty future; through his heart, which will not lightly forget, we feel that we may play some part in the affairs of men long after our own forms have vanished from mortal scenes.

"I feel as if I could leave messages for posterity with Horace Penrith," says Pleasance, in her playful way.

But I remark: "He will have to go through terrible disappointments and disillusions before he can acquire the wisdom that will teach him that, though his duty will always remain 'to do unto others as he would that they should unto him,' yet he must not expect to find many natures capable of understanding or appreciating such a course of action, or of reciprocating it on any plane that would give him much satisfaction."

"Horace Penrith as he is in the world as it is," said Pleasance, "seems to me something like a St. Bernard dog in a cage of tigers and snakes. How is such a one to defend himself from creatures that tear and sting?"

"Your simile is not true, Pleasance," I said. "For, after all, Horace Penrith and the worst man in the world are creatures of the same nature, and all he is they may become."

Pleasance gave a sniff. "They may begin to become," was all she would admit. "They may turn round towards good and make such a start that a hundred generations hence their descendants may be where Horace is to-day. The grace of God itself does not alter the shape of one's head or the texture of one's skin. It only makes the best of one as one is, instead of the worst."

Well, when Horace came to spend the evening with us he saw his gift lying at the top of Pleasance's work-basket, and so with eager confidence he asked: "Now won't you own that socialism offers grand prospects to our race? I only wish I could hope to see it all come true in my time, but it can scarcely come so soon as that, though events do move very quickly nowadays."

"Remember that events, like vehicles, only go very quickly—downhill," said Pleasance, drily. There is always much discussion when Horace comes.

"Oh, Miss Pleasance," he cried, "you cannot think there is anything of going downhill in the new order of things which every day is setting before us. Think how Labour begins to be honoured! Think how Combination is learning to defeat the tyrant Capital! It is not always victorious yet, but it will be; and all along its march to victory, think what a grand idea it inculcates, that the strong must refuse to use their strength to gain any advantage over the weaker, for that is the principle really underlying socialist dreams or trades-union rules, even in such details as the number of working hours and the uniformity of wages, though some people seem to think them so selfish and shortsighted. Why, they are of the very heart of Christianity!"

"I don't deny the principle," answered Pleasance, "but would not the same end be achieved in a more natural way, if the strong used their strength to give advantage to the weaker? Let me illustrate what I mean. There is a crowd in which there are a tall man and a boy. There is a pressure and a hustle, and the boy cannot see nor push so well as the man. Shall the man crouch down to put himself on the boy's disadvantageously low level; or shall he stand up in his full height and strength, and lift the boy upon his shoulder?"

"Without answering your parable," said Horace, "allow me to say that what has hitherto gone on in the world is that the 'tall man,'—by which, of course, we understand the man of rank and wealth—has pushed aside and trampled the 'boy,' who represents the poor and helpless, and that if that boy manages to keep his footing it has been hitherto merely in the hope, and with the determination, of some day 'growing up' to push and trample in his turn!"

"Pardon me, Horace," I remarked, "but I do believe that God has been with our world from the beginning, ever bearing it onwards as fast as it can follow His will. If we do not believe that, how shall we believe that He is beginning to do so to-day?"

"Now don't misunderstand us," pleaded Pleasance. "We are the very last to deny that from time to time some new idea, which has been gradually brightening on the horizon of humanity, suddenly bursts forth in full radiance, revealing to us new heights for our souls' climbing. But those only are prepared for these further ascents who have already come thus far. I think I can see the light flashing on the mountain peaks of human life that lie before us, and I think, too, that I see them quite as fair as you can. But what a telescope will show us in a moment's revelation may, nevertheless, be only attainable after many weary steps and grievous falls, and even fatal accidents. I fear that you and some of your friends are given to imagine that a few Acts of Parliament can bring about in a year or two that golden age for which all creation has been patiently waiting and preparing since the beginning—that manifestation of the sons of God which we old-fashioned folk mean when we pray, 'Thy Kingdom come.'"

"I am going to utter a paradox," I said. "It is this. I am inclined to believe in socialist theories put into individualist practice. As for a man to say 'There should be no such thing as private property. Nobody should possess anything for himself. Now I can earn five hundred a year (we will state a modest middle-class case, instead of always aiming at the millionaires!) and it is my bounden duty to see that the whole of that five hundred pounds is distributed for the good of the community, and not one penny diverted towards

its detriment. If I myself am doing good work, then the food and clothing necessary for me is due to me as a servant of the community, and it shall be a point of honour with me to take less rather than more of my just right. And I must take care that my wife is also doing her share of life's work, and not merely employing other people to do it for her. And I must do the same in the case of my sons and daughters, being careful that I put them into the avocations for which they are really suited, and not merely those which my pride or ambition may desire ; nor will I waste a University education on my boy who is not suited for it,—but I will do justice to him in whatever station he is fit for,—and be ready to help with my means in the development of gifts and powers which Providence has bestowed elsewhere, feeling that I do my best for "my own" only by doing the best for all. Then if my income of five hundred changes into six hundred or a thousand, that will be so much more for me to distribute for the good of the community, or if it dwindle to three hundred or one hundred, I shall be none the poorer myself, nor miss anything save the charge of the stewardship thereof.' Now, it seems to me, Horace, that wherever one man is awakened to see his own life from this standpoint, the human race has made a longer step forward than it can accomplish by any mere legislative adjustment of rights and wrongs. For you may make perfect Acts of Parliament, but they cannot be better than the men who have to put them in force."

"I have often heard it said," observed Pleasance, "that our statute-books already contain remedies for many evils which exist among us quite unchecked, the true crux being how to get such remedies rightly and vigilantly applied. And the story of Ananias and Sapphira may show us that, even apart from any legislative pressure, human nature yields to the temptation to try to conciliate a high public opinion with its own low self-interests."

"One may organise, and legislate, and regulate as much as one likes," I said ; "but if such proceedings are above the level of the humanity to which they are directed, it will still pass under them and go on its own way, though possibly in some fresh disguise. Tyranny, the oppression of others for that 'private profit' which is nobody's real benefit, was once personified in an absolute monarch, then in a feudal baron or a slave-holder, now in a capitalist, presently perhaps in a labourer. Please to observe that every one of these personalities, if developed by a good man, would have been no evil at all—nay, would have seemed, each in its own period, to be the one form through which blessings could be handed to the body politic ; and as fast as goodness fades behind each form, so fades its vitality, and when it is all gone its extinction is assured."

"It does seem to me," said Pleasance, "that anything which tends to produce a dull uniformity in the ways and means of life must also tend to produce a dull commonplaceness in human nature. Is it not possible that there will be presently some sort of moral embargo laid on too much heroism, or romance, or self-sacrifice, as tending to impose too severe a strain on mere average human nature? If one man is absolutely forbidden to work more than others, why should he be allowed to love more than they? We are already beginning to laugh at whatever we call 'romantic' or 'unpractical' or 'high-flown.'"

"I grant all you say---up to a certain point," returned Horace. "But then let me tell you that Socialists of to-day are less apt than those of an earlier stage to dream of Utopias and perfected commonwealths. Even their enthusiasm has learnt to recognise the mysterious operations of the Time-Spirit, which seems so often to lead men by ways that they know to ends which they could not foresee. Has not the laureate of socialism told us 'how men fight and lose the battle, and the thing that they fought for comes about in spite of their defeat, and when it comes turns out not to be what they meant, and other men have to fight for what they meant under another name'?"

"What you call the Time-Spirit I should call the Spirit of God, greater than our own hearts—the Comforter gathering up our efforts and aspirations, and leading us by them unto all good," said Pleasance parenthetically.

"Yet I think you will be the last to say that the existence of this incalculable Power, call it what you will, would justify our sitting down and playing no active part of our own," returned Horace. "Our efforts are at least the material with which it works, and therefore to cease these would stultify it. Socialist schemes, even the wildest, are all experiments on the grand idea of brotherly combination to secure the good of all. It is a very well-worn adage that 'union is strength.'"

"Which, like all proverbs, is but one facet on the diamond of truth," said I, "for remember there is another saying—'A chain is no stronger than its weakest link.'"

"Do you mean to say," cried Horace, with some vehemence, "that you would set your face against combination for desired ends? Why, then, all nature and human nature is against you. For even those who reject socialistic ideas introduce socialistic institutions. Capitalists combined in limited liability companies before labourers combined in trades unions. It was aristocratic Civil Servants who first gave wide impetus to co-operative distribution."

"We don't decry combination," said I. "We only ask you not to expect too much from it, but to remember its special weaknesses. Sometimes, I own, my heart is inclined to sink at the sight of that wave of 'organisation' which seems sweeping over society just now, and almost threatening to swamp all that is original and vital in the individual. But I take courage again by remembering the weak points of the more individualistic state of things which it replaces. Something had got to efface these, and this may well be that something. For it was an individualism which shut up the ordinary man's duty within his own family, finding its logical utterance in that awful saying of the old Scotchman, 'What do I care though all the world greet, if my ain bairns smile?' It shut up the duty of a craftsman to the profit of his own craft, so that every question was approached from that standpoint, as

in the case of the Ephesians of old. It shut up the duty of a citizen to the glory and aggrandisement of his own country or his own race. People did not see beyond this. They did not merely yield thus to expediency ; they thought these things were right. Survivals of them crop up even among the advanced labour problems and struggles of to-day, when the Londoner turns in wrath on the poor foreign Jew, or the Australian or American on the persevering and penurious Chinese. We have laughed too much at cosmopolitanism, presenting it in an epigram about a man who loved all the world—except his own wife. But we have got to learn somehow the solidarity of humanity—the brotherhood of man as man simply. And any width of organisation which helps us to realise this is a step in the right direction, however futile it may be in some of the immediate aims it proposes to itself. For the individualism of the future must rise to that great ideal by which a man dare not take joy in the love of wife, or brother, or child, while he is aware of a single wrong unrighted within his own reach, or suspects that any course of action of his may breed wrong somewhere, however well hidden out of his sight."

"That last clause would make many people reconsider their investments and shrink from their dividends," said Horace.

Pleasance sat thoughtful. "I can't help dwelling on one remark of yours," she observed, glancing at me. "You alluded to the selfishness which had permeated too much the old-fashioned ideal of Home. I cannot help regretting that its Nemesis has come in the form of new ideals, which tend, at least for the present, to damage and destroy Home itself. The right ideal of Home is, that it should exist to open wide its door for the homeless, and to offer them its brightest smile and its warmest corner. It failed to do this. The homeless were shut out. And presently in their outer darkness they raised such a woful clamour, that all sorts of hospitable schemes were formed for their benefit and cheer. And by-and-by, these attracted not only those for whom they were intended, but some for whom homes were open, and actually others who had homes of their own ! How seldom does a perfect family circle now gather round an evening hearth, working or reading ? No. There is always a son or a daughter away at club, or guild, or class ; often two or three. Nay, frequently the father and mother, or even one of them, are left alone. Then, too, the old homely reunion is dying out, when the few neighbourly families, known to each other through and through, met for some pleasant games, some cheery music, or a little chat, vying with kindly emulation in the warmth of welcome extended to any stranger brought into their midst. This was the culmination, the natural blossom, of the quiet home evenings ; but it is now supplanted by the soirée, the conversazione, which is the necessary outcome of wide associations. There hundreds meet in place of tens. There is no really responsible host or hostess ; or if such appear, it is but as the figure-head of an unwieldy 'committee.' It would alarm some of those good people who are not much given to search closely into things, if they could be made to realise that such gatherings, despite most edifying names and objects, often approximate to that 'promiscuous assemblage' at which the wise of all ages have always looked askance. 'The thing must be made a success !' Alas, 'at any cost.' For instance, if there happens not to be a good singer among the members or genuine friends of some young men's association for the promotion of temperance and other allied virtues, then, responsibility being vaguely distributed, the temptation is strong to wink just a little and avail ourselves of the attractive services of somebody who is no example of the qualities we profess to promote."

"Ay, I think I noticed what you mean when I was at college," cried Horace. "While I was there there were some new movements towards securing some more corporate social life for the benefit of our students. It struck me as very odd that many of those who became prominent figures in those movements and their resulting social life—the heroes of the occasion as it were—were precisely those who utterly failed to come up to any conceivable ideal of good students, or steady men, or valuable citizens ! Many of these schemes seemed to me to be the discovery of a direct method of forming the most dangerous type of acquaintance under the best auspices ! They became, as it were, a pit dug on the open high road, to catch those unwary who were not likely to frequent the forbidden paths where such pits are known to abound. I saw some queer results." And the expression on Horace Penrith's face showed that he indulged in some personal reminiscences which he did not choose to confide to us.

"I remember," said I, "that I felt some such problem was presented to me a year or two ago, when I visited a club founded for girls of the humblest classes. The aim of the institution was admirable, namely, to provide cheerful and improving evenings for factory hands and other similar lasses. There was the long bright room—such a pleasant contrast to the dreary streets. There was a kindly superintendent, and two or three helpful ladies. There were games and facilities for needlework or reading. And yet—I will tell the true story of that evening. There were about thirty girls present. Out of these only two 'settled down.' These looked like decent labourers' daughters ; the one got to sew, the other took up a magazine. The rest, many much smarter in appearance, rampaged about, treating the superintendent and her suggestions with ill-disguised scorn ; too impatient to keep silence even while a merry story was read to them. Every now and then there was a mutter of evil language, and there were perpetual outbursts of that horrible laughter which one hears so often in the streets. Many faces were marked with wild passion and vile propensity. One girl, a slip of fourteen, little better than a skeleton, produced from among her rags a pretty little silver watch, which she displayed to her companions. Such were the associates to whom the club introduced the children of honest working parents, perhaps fresh from the country, and trusting to the Club-arrangements where they might mistrust their own judgment.

And I thought that my little friends with the needle-work and the magazine would have been safer sitting at their mothers' firesides though the fire might not have been so blazing nor the light so brilliant! The superintendent herself owned that her heart sometimes beat very low. Somebody asked her if she had marked any improvement—could report anything really done; to which she replied that during the year of the club's existence they had come across one hard-working sewing-girl who was dying for want of proper rest and food, and they had secured her a holiday which had saved her life, for the time at least. It seemed to me that if something had not gone very wrong at the root of society, so much machinery need scarcely have been set at work to bring forth that claim for succour. It might surely have been discovered in some simpler way."

"I recollect Penelope Boughton telling me that she had heard (mind, only heard—take it for what it is worth," warned Pleasance) "that the children of some sweet secluded village suffered sore damage to their morals and manners through the inroad of a band of City arabs sent down from the slums for a fortnight's holiday."

"And yet what is to be done?" mused Horace. "There are my profligate fellow-students, and those poor lost girls, and the neglected little ones. Careless ignorance or selfishness somewhere has made them what they are. We dare not leave them to themselves. I am not quite sure whether I am a Christian; but I dare not do this, by the bond of our common humanity."

"That is the problem," I said—"how to help these without injuring those—how to seek and to save the lost without injuring those whom God has given us to keep. And I maintain that the problem can only be worked out on lines of individual loving service, as tender and patient and discriminating as the skill and self-denial with which a mother discharges her duty to her fever-stricken child, while warding off the infection from those who have as yet escaped it. In time of pestilence we realise that we owe prevention to the healthy as to the sick every effort to cure. We do not mingle the inmates of the lazar-house with the wholesome residents at home, but the strong and well-established and fully equipped take their own lives in their hands—mind, not the lives of others—and go down into the places of darkness and fight with the dragons there. I think we may easily carry the analogy into the sphere of morals."

"It seems to me," said Pleasance, "that everything is valuable precisely as it bears the distinct stamp of individuality. It is this which makes the sketch worth more than the lithograph, the sculpture worth more than the cast. And surely this worth must be pre-eminent in the sphere of social action and feeling. Works of love may be as numerous as they may, but they change their nature when they are turned off, wholesale, by machinery."

"Yet I am sure there are many organised bodies whose good works you would not undervalue," observed Horace. "Think of all the great societies, missionary societies, book agencies, teaching unions."

"Still, their worth remains in the individuals who work them," I persisted. "If they fail, or if they allow their efforts to become stereotyped, without regard to the changing needs of the world, what happens? Why, as we have so often seen, some organisation which at the beginning did incalculable good, lies fossilised in the path of progress and becomes a stumbling-block instead of a stepping-stone. Think of the old monastic institutions, which undoubtedly accomplished good work before they stagnated into corruption! And I must say that I think the best work done in the palmiest days of any organisation is not so much what it does itself as the principles it lays down, the standard it sets, and the ideal it proposes, to be applied by the individual in those thousand-and-one varieties of circumstance which no organisation could meet. For example, the work of Temperance has advanced not so much through the pledges gathered in by the Total Abstinence party, as by the universal attention it directed to the subject, and the light it threw on the influence and result of ordinary drinking customs. And the highest function of the agencies for the dissemination of pure literature has been to provoke lively outside competition on their own lines."

"In attempting to do good," said Pleasance, "it seems to me that the first endeavour should be to do nothing that may destroy good already existing, or induce greater evils than those we would allay. Now, free education looks like an undoubted blessing: and the feeding and clothing of ill-fed and ill-clad children seems a distinct social duty. But so, pre-eminently, is the maintenance of the sense of parental responsibility. No temporary benefit bestowed on some will atone for the permanent damage done to the whole community if that is weakened. For the best care of the State is but a cold substitute for the warmth of watchful love. Rather, indeed, might many of the most crying and bitter social problems be solved for ever, if that sense of parental responsibility was individually pressed home as it never has been yet, and its acceptance insisted on as the only basis of any parental rights."

"If we each took consideration of our own duty and the interests of our fellows as closely to heart as most of us do our own comfort and the security of our investments," said I, "I think we should presently find that, by a myriad different ways, we should be all drawing nearer to the same goal! It has been well said that 'the building of the Kingdom of God is like the building of Jerusalem in Nehemiah's time, when they who wrought, wrought each at the portion of the wall that was opposite himself: there they repaired the breach; there they set a guard against the foe, and the issue was the gradual steady and symmetrical growth of the whole, without friction and without pause, along the lines of its appointed circuit, up to the measure of its destined height.' And we well know from Whom we get a hint that the children of this world are wiser than the children of light, and that the latter would do well to study the methods by which the former advance their objects! Now is there any Society for the Promotion of Vice? And yet vice is promoted—by the magic might of

evil principles only 'organised' in the tremendous individual sincerity and energy of the evil-doers! The giant Drink Traffic, with its vested interests and its subtle ramifications of profit, is perhaps the nearest approach to evil 'organisation' which exists; and, precisely for that reason, one cannot help feeling that the days of this giant, strong as it is, are numbered, and that it will readily go down when the right sling and stone are directed to some vital point. Far different is it with other social curses, spirits of the air as it were, pervading everything, poisoning art, poisoning literature, utilising the unwary services of some who little dream to what they minister, sometimes, alas! even turning those who would fain attack these evil forces into their unconscious missionaries. Only by many an experience which has been revealed to me since I have been a middle-aged woman, have I learned to realise with what ceaseless zeal and vigilance the crusade of sin is carried on: how the unwary are inveigled and the innocent pounced on, and with what foresight one generation of sinners sows the seed which shall bear the desired crop in the next! What artificial social organisations, however well intended and however wise, can cope with force like this? It can only be opposed by a similar force on the side of God and goodness—to wit, by the unflagging, unswerving energies of individuals who are made members of one body by the Spirit of Christ."

"Yet for hundreds of years the churches and religious bodies have gone on dealing with individuals,—and what progress have they made towards the world's salvation?" asked Horace, as one asks a question he believes to be unanswerable.

"Yet such progress as the world has made has been achieved by individuals," I said. "Ay, in things spiritual, moral, and physical. A modern philosopher (and one, too, who had had his own socialist dreams) boldly says that at the root of everything which is good, in science or art, in politics and in social life, one will find the thought and the action of some single individual. But then he also claims—and I agree with him—that there is no royal road of human progress—that all sound advance is slow. 'Every true man,' says he, 'is a cause, a country, and an age: requires infinite spaces and numbers and time fully to accomplish his design.' And further I will go on to add that what you call 'the churches and religious bodies' have themselves often been too prone to forget or to neglect the value of individuals, to bury the living Christ beneath creeds and confessions, and to offer Him temples of stone and brick instead of the reasonable service of human beings in living sacrifice."

"I do think, however," said Pleasance, thoughtfully, "that special organisation is needed to meet what we may call artificial evils, *i.e.* evils not growing so much out of human nature itself as out of certain transitory conditions of society. For instance, the pernicious influences which have created overgrown cities have resulted in great crowds of destitute and difficult people, whose real history and character are known to nobody who is able and willing to help. An individual going down blindly among these—say, for instance, giving charity to a beggar in the street—would be almost sure to do more harm than good. He must put himself under the direction of some agency which has wider experience and greater facilities of knowledge than he has himself. Well and good. This will not be the best thing—will not be that sweet charity which is twice blessed, to him that gives and to him that takes. Yet it is the best thing under the circumstances. But what if this person began to think that he might surrender all individual interest in his benefactions, and, instead of personally looking after his mother's old nurse and his own sick clerk, should expose those worthy and honourable persons to unnecessary visitations and inquiries, and to a final appearance before a strange committee through whom alone his donations are allowed to filter? I can assure you, Horace, that I have known associations and organisations to be misused in this way. It is as absurd as if the restriction and regimen found necessary in a fever ward were applied to a household of healthy people."

"And too much of that sort of blunder is going on throughout Great Britain," I observed. "Great schemes, which may be rightly enough devised to meet the present frightful necessities of such places as London and Liverpool, are imitated in quiet corners, where they can only demoralise, because if the evils with which they purpose to cope exist there at all, they exist only in such narrow limits that they could be easily dealt with by unobtrusive individual action."

"It is odd," said Pleasance, "that while easy-going popular morality has long ago accepted the axiom that 'companies have no consciences,' there should be such a tendency to put unlimited faith in the social saving power of associations and committees."

"But," said Horace Penrith, "I do see there is a great deal in what you said just now about artificial combination being well directed against temporary artificial wrong conditions. While capital and labour are apart, as they so generally are just now, the great aggregations and combinations of capital involve the combination of labour, till strike and arbitration and concession shall have gradually restored the balance of power, which a slowly purified public opinion and improving standards of life's true honour and dignity will tend to maintain."

"Exactly," said I, "and that is why we need look with no dismay or disgust at the wave of 'organisation' which is passing over society at the present time. I use the word 'organisation' rather than 'socialism,' because I see the same spirit at work in quarters where the idea of 'socialism' would be regarded with horror! The general individualism of the past has been a selfish individualism. To return to my parable: it has been the tall men of the crowd, neither abasing their own stature nor lifting up the little ones, but rather pushing them aside and trampling them under foot. Therefore the crowd has risen *en masse* against them, and in the struggle, humanity may be for a while in danger of being treated like those prisoners of Procrustes, whose

limbs were stretched if they were too short for his famous bed, and whose feet were cut off if they were too tall. But meanwhile the 'little ones' themselves will be growing up and learning by experience (some of which they could have scarcely had without first binding the 'tall men') that there is more harmony in variety than in uniformity, and that, exactly for the sake of other people, each man should only be free that he may be bound by a noble inward compulsion, to do all and be all that he possibly can.

> 'The soldier when he lets his whole self go,
> Lost in the common good, the common wrong,
> Strikes truest, even for his own self.'"

"I'll give you another illustration," said Pleasance; "not a parable, but a metaphor made out of a real bit of some of the problems we puzzle over to-day, and I think it will show the probable course of their working out. People who have been used at home to man-servants and maid-servants and all the luxuries of the flesh, go out to new countries. Hardly any such hired labour to be had, so scarce as to be invaluable. Nobody can afford it. Everybody very miserable. Brilliant idea! Let us club together and have an associated home and a co-operative cook. A decided change for the better, but a constant terror lest this too should fail us, and we find also a great deal we don't like. We lose some of our old luxurious habits, and our children grow up. Let us live apart again, and do our work among ourselves or with the kindly interchanged help of equals. Thus the 'organisation,' much of which we naturally deplore (and which we should certainly try to control and minimise), may yet be better all round than that which went before, though not so good for everybody as that which shall follow after."

"And, after all, we need join in none except where we intend to work as heartily as if we were doing everything ourselves," said Horace Penrith.

I closed our little talk by dreamily repeating Whittier's beautiful verses—

> "Oh, sometimes glimpses on my sight
> Through present wrong the eternal right;
> And step by step since time began
> I see the steady gain of man.
>
> For still the new transcends the old
> In signs and tokens manifold:
> Slaves rise up men, the olive waves
> With roots deep set in battle graves.
>
> Through the harsh noises of our day
> A low, sweet prelude finds its way:
> Through clouds of doubt and creeds of fear
> A light is breaking calm and clear.
>
> Henceforth my heart shall sigh no more
> For olden time and holier shore,
> God's love and blessing, then and there,
> Are now and here and everywhere."

"But what one cannot help feeling," observed Pleasance thoughtfully, "is, that while home is falling into abeyance, life goes on, and must often proceed on rather dangerous paths!"

That was the chord our talk had left vibrating in her heart. I knew what she was thinking about, wondering over the prospects and the possibilities of the homes that are to be—the great questions which surround the subjects of falling in love and marrying!

## A LONG LOOK OUT.

BY THE REV. THOMAS S. MILLINGTON.

IN the cuddy of a merchant ship, homeward bound, a small party, consisting of two or three passengers, the skipper, and another, were sitting together round the stove one evening towards the close of the year. The conversation turned, as was natural, upon the weather, the wind, and the ship's reckoning, with regard especially to the probability of a safe arrival at their homes before Christmas Day. The sea was high and it was blowing hard, but they did not mind that, for the wind was favourable and the ship was scudding through the water.

Presently the cuddy door was opened and the first mate entered, shaking the spray from his hat. Then he stood still, looking about him with a strange dazed expression, and once or twice opened his lips to speak but said nothing.

"What's up?" one of the company said, half joking, half earnest. "You look as if you had seen a ghost."

"Ghost! No," said the mate with a forced laugh. "Though I have had a bit of a fright, true enough."

"Fright! You look like it, though I shouldn't have thought it of you; anxious you might be if anything was wrong, but not easily frightened."

"Nothing wrong," said the mate, "and yet—frightened—that's the word, just like a child, or a woman."

"How was it?"

The mate laughed and seemed to throw off by an effort the alarm, whatever it was, which had troubled him.

"Only this," he said; "I came suddenly upon a man dressed up in my macintosh and sou'-wester. It was Johns, who had borrowed them for a moment, being handy. He is just my height and build, as

you know, and looked so like myself in the dusk that I thought at first sight it was myself and no one else."

"How could that be?"

"Ah, how indeed? when you come to think of it. It gave me a turn though, and if he had not spoken to me as he passed me on the deck I don't know what I should have thought of it."

There was a seriousness in the tone and manner of the speaker which checked the remarks which might otherwise have followed this confession, and presently, after seating himself upon a locker, he broke the silence.

"You'll think it strange," he said, "but I have a sort of belief in such things, second sight or whatever you may call it—and not without good reason. I met with a curious instance of it some years back, and it made an impression upon me which I could never overcome."

"Tell us about it."

"All right, if you won't laugh at me; it is not a laughing matter, I can tell you; not like Johns dressed up in my togs, though that brought it back with a force that you could hardly understand to my memory."

After a pause the mate, observing the serious and attentive attitude of those present, spoke as follows:

"The first voyage I ever made to sea was on board a man-of-war, a seventy-four gun ship of the old sort, low between decks, close in quarters, round in the bows, and round in the stern. There were no ironclads in those days, and no steam; wood and canvas like the ship we are now sailing in. They used to build Her Majesty's navy by the mile and cut them up into lengths as wanted—so the sailors said. There were forty of them, so the story went, all of the same pattern. They called them the forty thieves, and ours was one of them. I was a young man then before the mast. I don't care who knows it. There are as good men before the mast as aft. I am not speaking of myself in that connection; self-praise is no commendation: all I mean to say is that there were some good steady chaps among those A.B.'s, and I owe a debt of gratitude to one of them who is gone to his rest long ago for the good advice he gave me and the friendship he showed me: and if it had not been for him I should, likely enough, have been before the mast still. And it's him I am going to tell you about, and I wish he were here to spin his own yarn; though he is better off where he is, that's certain.

"It was blowing pretty hard one night when we were out at sea, off the coast of North America. It was our watch below, and Mac and I were in our hammocks, which were slung together, close alongside of one another; they always called him Mac for short; MacGregor was his name. He was from Aberdeen, and had a wife and two young children there, and was very fond of talking about them. Well, the wind didn't trouble us much, for we had shortened sail before turning in and the ship was made snug; and I was fast asleep as usual in spite of the creaking and groaning of the old "timber" as she pitched and strained, when suddenly I heard a cry close to my ear which woke me up in an instant.

"There was a lantern hanging near, with a purser's dip in it, and a sentry keeping watch over it; and the light fell upon Mac's hammock so that I could see that he was awake, with his eyes wide open, staring at something. Yes, he was staring; he might have been looking through the ship's side over the sea and right across the Atlantic. I believe he was too. Then he began to gasp and tremble. Nobody ever saw Mac tremble before; so I knew directly that there must be something wrong with him.

"'What's the matter, Mac?' I cried. 'Rouse up,' I said; 'you've been dreaming!'

"He took no notice at first, and I reached out my hand and shook him; then he turned to me with the same far-off look in his eyes, but presently seemed to come back to himself—if I may so speak—and, to my surprise, burst out all of a sudden, gasping and sobbing. After a few moments he seemed to pull himself together by a great effort, and clasping his hands over his eyes, lay for some time breathing hard, and murmuring something which I could not understand.

"Presently I spoke to him again, and then, instead of answering me, he asked in a low, quiet voice, 'Have you said your prayers to-night, Joe?'

"'All right, Mac,' says I; and very glad I was to be able to say it. Sailors don't do a great deal in that way perhaps, as a rule, and I was no better than others. You can't kneel by your bedside when it's slung up over your head amongst a lot of others as close together almost as herrings in a barrel, but there's a goodly number of the men in every ship who never close an eye without having first thought a prayer, if they do not put it exactly into words, after they are rolled up in their blanket, you know. And you can do a deal of praying in a short time when you *mean* it. So I was able to answer Mac when he asked me, 'Have you said your prayers to-night, Joe?' 'All right, I have.'

"'Say them again,' says he, 'and think of me, Joe,' he went on after a bit. 'Joe, I've had a call, a warning! I've seen something!'

"'You've been a-dreaming,' I said again.

"'Dreaming? Maybe I have, but if it was a dream there was a meaning in it—it was sent for a purpose. I should like to tell you about it, and to give you a message—a message, you know, for——'

," His voice seemed to choke up, and he stopped there.

"But I understood him. If it had been anybody else, I might have argued with him, and perhaps chaffed him a bit for having such fancies. But Mac was too much in earnest, and I had not the courage to say a word. So I lay still with my face close to his as he leaned over the side of his hammock, and whispered in my ear—

"'I don't know how it began,' he said, 'but there seemed to be a sort of pale white mist before my eyes, moving about, waving this way and that till it settled, still, quiet, and solemn. I knew there was something behind it, something that concerned me and seemed to fill my heart with anxious thoughts; and I waited, watching and expecting. The mist grew thinner and thinner, and I could see

through it, dimly, though indistinctly at first, but afterwards as clearly as ever I saw anything in my life.'

"'What did you see, Mac?' I asked, for his eyes were fixed again, as if the spectacle were still before him.

"'I saw,' he said, 'my wife and children in their home at Aberdeen. Everything in the room was just as I left it. Polly was busy with her needle, as she always is almost, and the two boys, bless 'em, were sitting at the table, one with his books getting his task for school, the other busy with his pocket-knife, hollowing out a ship that he was making. I saw Polly raise her head with a startled sort of look and turn her eyes towards the door. I looked in the same direction, and—and——'

"'Well, what happened?'

"'The door opened, Joe, and some one came in!'

"'Some one that you knew?'

"'Yes, Joe. I ought to know him, if I don't.'

"'Who was it?'

"'I, myself!'

"'You saw yourself?'

"'I saw myself enter the room. Polly saw me too, and started up, leaning with her hands upon the table. I saw her lips open, but she did not speak. She moved as if she would have run to meet me, but stopped with a look upon her face such as I had never seen before; not fear, nor wonder, nor joy, but such as you might suppose if any one was to see a spirit.

"'She stood so for a moment, and I stood looking at her; then she clasped her hands together and fell back in her chair, sobbing. And then, after a minute or so, the whole thing faded away, and I was here lying in my hammock, wide awake.'

"'A dream, Mac, a dream, of course!' I cried; but I couldn't feel it so myself, even while I spoke, it seemed so real and solemn. 'Was that all you saw?' I asked, trying to make light of it.

"'Not quite all. The clock was hanging on the wall, the pendulum swinging, and the hands pointing, the short one to seven, the other to five; twenty-five minutes past seven. I seem to see the clock face now with the hands in that position. At the moment when the door opened and I entered the room, the pendulum slowed, and after two or three feeble swings, stopped altogether. Twenty-five minutes past seven, Joe. I know what it means. The warning didn't come for nothing. I know what it means, Lord help me!'

"I said what I could to quiet him, and he soon grew calm; but he lay awake all the rest of the night, only speaking now and then to give me some last words for his wife and children, telling me also what to do with his chest and all that it contained, and so on.

"When the watch was called, Mac turned out in a minute, and was one of the first on deck, just as if nothing had happened, and seeing him so ready to his duty, I thought he had got rid of his dream, and hoped that I should never hear any more about it.

"The wind had increased during the night, and it was blowing hard, almost a gale, when we went on deck together. The sea was running high, and the watch had to shorten sail twice before daylight broke. We could see the clouds driving overhead with just a rift here and there letting the light down upon us, dim and uncertain, but enough to show us what the sea was like. I was laying out on the foretop-sail yard, and we had just finished taking a reef, when I heard a cry from the deck and then a heavy thud. It went to my heart; it seemed to chill my blood. I almost lost my hold, and if I had not clung on natural like, and, as I might say, by instinct, I should have fallen off the yard. When I looked down, I could see a group of men, officers and bluejackets, stooping over something on the deck. I knew what it was, and when I got down my worst fears were confirmed. There, sure enough, was poor MacGregor lying upon his face, stunned and bleeding."

"Was he dead?" one of the company asked.

"Not quite. His eyes were wide open, and there was a strange far-off look in them, gazing, as it seemed, at some distant object, passing over everything near, just as I had observed them when he first called out from his hammock in the night. There was a smile, too, upon his lips, which quivered and worked as if he would have spoken. He was gazing on his poor wife and the two bairns in his house at Aberdeen. I make no doubt he saw them at that moment and that she saw him. His eyes were fixed upon them. It was a long look out; the round world rose up betwixt them, thousands of miles of ocean rolled between, but they could not hide them from each other's view. Distance is nothing at such times; it is the mind, the spirit, that sees and feels. And so poor Mac's eyes turned where his heart directed them, right away to the home that he loved, and to them that he longed for, and lingered there with a last fond look until the light went out of them for ever. There was nothing more to be done then but to shut down the eyelids and carry the poor lifeless body down below, with the Union Jack hung up as a screen to hide it from curious or careless eyes, until it should be committed to the deep, looking for the resurrection of the body (when the sea shall give up her dead) and the life of the world to come."

The speaker paused reverently; but after a few moments spoke again.

"Nothing else to be done, did I say? Yes, there was though; for we found, when we tried to lift him, that he was fastened somehow to the deck. The arm was broken, and the splintered bone was stuck fast in the plank, driven into it by the violence of the fall. The carpenter cut the plank away from it with his chisel; and when he had done that and had repaired the place by letting a bit of wood neatly into it, whether by accident or design I couldn't say, the piece inlaid was just in the form of a cross; and there it was, as long as the ship was in commission, to mark the spot where poor Mac breathed out his spirit, and an emblem, at the same time, of the faith by which, through the grace of our blessed Lord, his soul was saved.

"I wrote to his poor wife at Aberdeen, giving her an account of the accident, and telling her what a good Christian her poor husband had been, and how all his messmates respected him and mourned

for him ; but that he was gone to a better world, and she must think of him in heaven and bid the children follow in his steps and hope to meet him there. And I sent her an exact tracing of the cross on the old ship's deck, which I made no doubt she would be glad to look upon, and it might help her a little in her sadness by reminding her where to look for consolation. 'Leave there thy fatherless children, I will preserve them alive, and let thy widows trust in me.' Those are words of promise from Him who gave His own Son to die upon the cross for us. You'll excuse me, gentlemen, I'm not a-preaching. I'm only telling you the thoughts that come into my head whenever I recall those solemn circumstances.

"There's only one thing more to be observed. While we were carrying the lifeless body down below, seven bells sounded : half-past seven, you know. So it was just at the time that he had told me of—twenty-five minutes past seven, when poor Mac drew his last breath.

"I went down to Aberdeen as soon as the ship was paid off, and saw the poor widow and the children, and the room, just as he had described it. I never could make out for certain whether the clock stopped as Mac had seen it in his dream ; but I believe it did, myself. It was an old clock, and had a trick of stopping at odd times I was told ; so they couldn't be quite sure ; but an old woman who lived next door recollected it perfectly, and would have it that she herself had set it going again. Twenty-five minutes past seven, she said ; but when I came to think of it, it ought to have been three or four hours later, allowing for the difference of longitude ; otherwise it could not have stopped at the time of the accident. I don't know how that is to be accounted for. But the facts are as I have told you."

There was silence for some moments after the mate had finished his story ; and he was himself the first to interrupt it.

"So you see I have good reason to believe in second sight, or whatever it may be called. You'll allow that, won't you ?"

"It was a remarkable coincidence, at all events," said the skipper ; "but it may have been nothing but a dream, as you suggested."

"But how do you account for its coming true ?"

"I don't pretend to account for such things," was the answer ; "but I daresay your friend had been thinking a great deal about his wife and children. It was Christmas time, you said, and his thoughts would naturally turn towards home at that season. It was no wonder, therefore, that he should dream about those who were so dear to him, and whom he longed so much to see."

"Well, but that would not cause his death, that would not make him fall from the yard-arm where he was always as safe and comfortable as I am sitting on this locker. And that would not make the clock stop thousands of miles away."

"It is not certain," one of the passengers remarked, "that the clock did stop ; and if it did, it must have stopped, as you sensibly observed, some hours earlier than the event with which it was supposed to synchronise. The dream, if it was a dream, may have been indirectly the cause of his fall. The impression it produced upon his mind would naturally make him a little nervous."

"Nervous ! Oh no ; you didn't know MacGregor. Mac was not one of the nervous sort, not he."

"I beg his pardon—and yours. I have no doubt he was as bold and sound-hearted a seaman as ever went aloft. But we are only flesh and blood, my good friend, and the thought of his wife and children, whom he felt persuaded he should never see again in this world, had disturbed him. Then, just at the hour, the very hour which he had been looking forward to with apprehension—I beg his pardon again—with a man of tender feeling like your friend, it could not well be otherwise—just at that very hour, I say, he had to go aloft in a heavy gale. He could hardly help being a little shaken at that moment, and that may have helped to bring about the catastrophe ; so that the dream would, in a manner, lead to its own fulfilment."

"I don't hold with it," said the mate ; "I am not going to believe that anything would make Mac nervous. You wouldn't say it yourself if you had ever known him."

"You have described him so well," said the other, "that I feel almost as if I did know him. He reminds me of poor Tom Bowling—

> 'His form was of the manliest beauty,
> His heart as woman's, soft,
> Faithful on earth he did his duty,
> But now he's gone aloft.'"

"That's him all over," cried the mate ; "that's MacGregor ; he wasn't nervous, not a bit, not he."

"It's a strange coincidence, at any rate," the skipper said again.

"Call it so if you like," said the mate ; "the facts are as I have told them."

# Varieties.

**M. Meissonier.**—Numerous have been the *éloges* on the painter Meissonier, whose death lately, at an advanced age, removed one of the most illustrious of French artists. His popularity has always been great in this country, where his pictures were first widely known at the Exhibition of 1862 at Kensington. The strength of this master was best shown in his smallest productions; on panels hardly exceeding a hand's breadth he contrives to tell his story eloquently, and at the same time to exhibit the qualities of freedom and vigour of handling, breadth of drawing, contrast of light and shade, purity of colour, power of expression, and vivid discrimination of character. It was not uncommon for a picture small enough almost to go into a card-case to be priced at 40,000 francs. For some of his larger pictures, yet small compared with those of other historical painters, enormous sums have been given. The famous picture of Napoleon and his staff of marshals and generals, which we recently engraved, was bought for 500,000 francs, and again sold, to M. Cauchard, Manager of the Magasins du Louvre, for 850,000 francs, or about £34,000.

**Atlantic Waves.**—In the last week of January there were storms rarely exceeded in the worst records of the Atlantic. The Hamburg-American liner Polaria, Captain Busch, narrowly escaped. During a gale on January 27, a wave of enormous height struck the deck with tremendous force, clearing it of most of the bulwarks and boats, and snapping the foremast just below the deck. When the ship's speed was reduced, and the men were able to clear away the wreckage, the crests of the seas were smoothed by suspending bags of oil from the bows.

**Krakatoa Reclothed with Vegetation.**—In the terrible catastrophe in the Straits of Sunda in the year 1883, half of the island of Krakatoa was swallowed up in the sea, and the remainder was overwhelmed with lava, stones, sand, and ashes, completely obliterating every trace of vegetation. Dr. Treub, the director of the Botanic Garden at Buitezorg, near Batavia, has paid the ruined island two visits, and reports that vegetation has reappeared and seems to progress. At his first visit, in 1886, three years after the catastrophe, he found that algæ had spread all over the new formations. He counted eleven different species of ferns, and saw a few scattered flowering plants in bloom. This revival must be due to birds or the winds, or the sea-currents bearing seeds; for the place is uninhabited, and all vestiges of original vegetation had been destroyed.

**The Watch Trade of Switzerland.**—From the last Consular official report from Switzerland it appears that next to the textile industry that of watch-making is the most important there. Its chief centre is at Geneva, where it took its rise some three centuries ago, and there are also important branches in the Cantons of Neuchatel, Berne, and Vaud. Owing to the activity of trade during the past year, and to the greater demand for skilled workmen, the trades-unions succeeded in obtaining a rise in wages. The increase thus caused in the cost of production was not, however, followed by any sensible rise of prices, and the profits of the manufacturers consequently suffered. They appear, however, to think that prices will now gradually rise, and that the increased cost of production will have eventually to be borne by the purchaser. Some anxiety is felt lest the interests of the trade may suffer seriously from the fact that the United States and England are every year becoming more dangerous rivals in this field of industry, and that the demand for Swiss watches is falling off considerably in certain countries, notably in the United States and France. The returns for last year, however, taken as a whole, are very satisfactory. The value of the watches, etc., exported amounted to £3,949,728, showing an increase of £592,156 on 1888. The principal purchasers were Germany, £1,059,460, an increase of £400,000; Great Britain, £564,653, an increase of £112,225; and Austria-Hungary, £394,441, an increase of £37,895. The cheap import of Waterbury and other American watches does not seem to have greatly affected the Swiss trade in England.

**Frost in England.**—Among the many records of the low temperature during the wintry season of December 1890, one of the most noteworthy is that reported by Mr. W. W. Sowerby, of the Royal Botanic Gardens, Regent's Park. The glass fell in the night of December 19 to 15° in the air—a lower figure than any registered for ten years. In other places lower temperature was noted, as at Esher −5°—but the care and accuracy of Mr. Sowerby's observations make them useful for comparison.

**Millet's "Angelus."**—M. Cauchard, the millionaire partner of Major Heriot, who bought back the "Angelus" of Millet from its American purchaser, gave a dinner to celebrate its entrance into his picture gallery. One of the features of the entertainment was that each guest found in his napkin a commemorative medal in silver. On the obverse there was a fine engraving in the Russian style of the painting, and on the reverse the date of the dinner, and an inscription stating its object and giving the names of the guests.

**Openings for Women in the Colonies.**—At no time have the prospects of women in the Colonies been brighter. Work abounds at good wages. Their reception on arrival and their protection on the voyage is in large measure due to the successful organisation of the United British Women's Emigration Association. This Association has raised the standard of female emigration by pledging itself to send out only capable women of irreproachable character. The confidence inspired by its fidelity to this pledge has secured in all the English colonies warm reception, kindly care and help, for the women it sends out. Committees of ladies have been formed at the principal centres, who keep an eye on the young girl, and lessen her sense of loneliness at the outset of her career in a new country. The Association has secured most satisfactory arrangements in the sailing vessels. Carefully selected parties of domestic servants, and of companion helps, are sent out from time to time under the care of an experienced matron. At the present moment, owing to the recent personal visit of its Vice-President, the Hon. Mrs. Joyce, to the Dominion, the Association has been asked to send out to Canada 800 women of respectable character during the present season. The sailings commenced in April, and will continue till October. The dates for the departure of the protected parties are duly announced, and full particulars given about outfit and journey. The Association has, during the eleven years it has been at work, sent out some 1,400 single women, many of whom are now happily married in prospering homes, and who have sent, in numberless instances, for their relations and friends to join them. The majority of these women have not been highly trained domestic servants (of whom there is a deficient supply in England), but orphan girls who have had few home ties in the old country, and little prospect of rising above the somewhat depressed condition

of the maid-of-all-work. The Association also sends out women of their own position in life to settlers in the Colonies as "Companion Helps." These ladies must understand domestic work and be willing to use their hands in practical matters, but they will on arrival have nothing but cultivated companionship in situations already secured for them through the correspondents of the Association. Application should be made to the secretaries of the Association. Address, c/o the Hon. Mrs. Joyce, St. John's Croft, Winchester, or Miss Lefroy, 17 Eldon Road, Kensington.

**Oyster Beds Damaged by the Frost.**—Since the disappearance of the frost it has been found that serious damage has been done by the severe weather to the oyster beds at Whitstable, the damage sustained by the two companies being estimated at £15,000. The French and Dutch sorts have suffered most, and these have almost all been killed by the effects of the prolonged frost. Nearly one hundred vessels are engaged in the oyster trade at Whitstable. The oyster beds are two miles long by one mile wide, and are laid in different sections according to the kinds of the oysters. The average depth below the surface is about 16 ft., but at low water there is in some places not more than 2 ft. over the beds. During the intensely cold weather the sea was frozen over, the frost reaching the oyster and causing it to swell and open the shell and so cause death. As it takes from three to five years for an oyster to become marketable from the time the spat is laid, it will be nearly this length of time before the beds will recover from the loss that has been sustained.

**International Comity.**—M. Herbette, the French Ambassador at Berlin, has sent the following letter to the members of the organising committee of the Berlin International Art Exhibition: "Gentlemen,—I have received your letter, dated January 22, in which you express the wish that distinguished French artists should participate in the Berlin Art Exhibition to be opened in May. The Government of the French Republic has accepted with thanks this kind invitation, which I hastened to lay before it. If the Government cannot take part officially in a private undertaking, it will be greatly pleased if French artists comply with the request, and hopes, notwithstanding that exhibitions will be held at the same time in Paris, Munich, and Moscow, that French artists will be able to send a collection of works of art worthy of the Berlin Exhibition." It is said that many French artists had already communicated their intention to take part in the Exhibition. The visit of the Empress-Dowager Frederick to Paris ought to have contributed much to create more friendly feeling between France and Germany, but the Parisian newspapers have made an outcry, and the artists are afraid to offend their critics!

**Moxon's Publishing Firm and Tennyson.**—The recent death of Mrs. Moxon, widow of Edward Moxon, of Dover Street, the "poets' publisher," recalls some interesting literary associations. Mrs. Moxon's maiden name was Emma Isola, daughter of an Italian teacher of languages in London. Being left in early life an orphan and destitute, she was adopted, and with help of friends provided for, by Charles Lamb and his sister. She always called Lamb "her uncle." At his house she met Edward Moxon, a friend of the Lambs, then an aspiring young poetaster and sonnetteer. On his marriage with Emma he wisely abandoned the art of poetizing, and entered on the business of publishing the productions of better poets. The works of Wordsworth and of Tennyson would alone have brought to him a competency, but he published the poems of many others. After his death the business was carried on with diminished energy and skill till at last a crisis came, and the affairs were in the hands of executors and trustees.

At this period, or in that of Moxon's successor, an incident occurred which we mention to the honour of Alfred Tennyson. The trustees were very properly watchful over the copyrights, and sharp in detecting infringements of them. In a book on "The Months, illustrated by pen and pencil," a large volume with selections from numerous poets, the compiler, guiltless of injurious intent, used three short extracts from Tennyson, one, on Christmas Bells, only of twelve lines. The Moxon representatives sent a demand for the payment of £75, and the publishers of the book, the Religious Tract Society, paid the money, not disputing a legal claim, though surprised at the demand of so large and inequitable a sum for the unintentional injury.

On the next statement of accounts laid before Tennyson, he saw this entry of £75, and as he recognised the difference between incautious and fraudulent use of his property, he at once generously sent a cheque for the amount to the Society, the objects of which were well known to him.

It remains to say of the Moxon affairs that Messrs. Ward and Lock had sufficient faith in the value of the stock, connection, and copyrights then remaining that they took them over under an arrangement to pay fifteen shillings in the pound to all creditors, and to pay to the widow of Edward Moxon a handsome annuity, which she enjoyed until her decease in the early part of this year.

Tennyson has had other publishers since the death of Moxon, who probably first had his patronage through the introduction of Wordsworth. The very earliest of Tennyson's poems appeared anonymously, and then, in conjunction with his brother Charles Turner, came the volume "Sonnets by two brothers." The first volume issued in his own name, "Poems, chiefly Lyrical," was published by Effingham Wilson, Royal Exchange. This was in 1830, when he was only twenty-one. Two years later, in 1833, came out a small volume, "Poems by Alfred Tennyson. London: Edward Moxon." To the publisher of Dover Street Tennyson steadily adhered long after he had become famous and was regarded as the great poet of his time. On the death of Wordsworth in 1850 his appointment to be Poet Laureate was universally approved, and it was an honour eclipsed by no subsequent titles or privileges. In 1845, five years before his death, in his eightieth year, Wordsworth wrote to Moxon: "Tennyson is decidedly the first of our living poets, and I hope will live to give the world still better things."

**A Windfall for Cardinal Lavigerie.**—The French papers state that the aged Marquise de Brives has settled on Cardinal Lavigerie her fortune of above half a million sterling in return for an annuity of a thousand a year. She is about ninety-six years of age, and without heirs. For old domestics and poor friends she has also reserved small annuities, but the vast sum is given to the African prelate, who, it is to be hoped, will use it for slavery abolition, this being the cause of the interest taken by the aged Marquise.

**Regent's Canal and the Zoological Gardens.**—A curious incident of the great frost of 1890-91 was the capture of countless multitudes of fish in the canal passing through the Zoological Gardens. Mr. Bartlett caused a blow-hole to be pierced in the thick ice, and to this hole the fish came to get the necessary supply of air. Tons of fish were thus obtained. One of the nets let down into the hole, which was five or six feet in diameter, had almost a "miraculous draught," and it was with the utmost difficulty it could be hauled up. The fish furnished food for many weeks. The London Zoo had few losses compared with the Jardin of Paris, where many valuable animals perished. The losses at Regent's Park were few, through the watchful care of Mr. Bartlett and his assistants.

**Salmon in the London Market.**—In the annual statement given in the "Times" by Mr. Ffennell, instances of large salmon, weighed and measured by him in Mr. Grove's shop, are given. They include an Esk salmon of 63 lbs., a Tay fish of 54½ lbs., and a fish of 51⅓ lbs. taken in the Blackwater at Lismore. An Irish trout weighed 13¼ lbs.

**Silicates.**—A discovery of unusual value is reported from Kamouraska, in Lower Canada. A Quebec correspondent states that an entire mountain has been found composed of silicates, otherwise known as vitrifiable stone, of a purity certified by the Provincial Engineer to average 98 per cent. This material is used for the manufacture of the finest glass, and is believed to exist nowhere else on the American continent in such purity. The Provincial Government has been asked to develop the new industry by guaranteeing interest for ten years to a company undertaking the work by subscribed capital.

**National Drink Bill for 1890.**—Dr. Dawson Burns publishes an annual summary of the amount spent in drink in the United Kingdom, which was, in round numbers, 139½ millions sterling. This is equal to an average expenditure per head of £3 13s., or per family of five persons £18 5s. Comparing the expenditure upon alcohol in 1890 with other great national accounts, we find that it was one-twelfth of the estimated incomes of all persons in the United Kingdom, and one-fifth of the National Debt. It was between one-fifth and one-fourth of the annual value of all the property and profits on which income-tax was levied in the year ending April 5, 1890. It was 32 millions more than the whole capital of the Post Office Savings Banks and other savings banks in 1889, and 4½ times the amounts deposited in both kinds of savings banks. It was 11 times the capital of all the industrial and provident societies of the country. It was 4½ times the gross receipts from passenger traffic on all the Railways of the United Kingdom in 1889, and 3½ times the gross receipts from their goods traffic, or nearly as much again as the receipts from both species of traffic combined.

If we were to compare the drink expenditure in 1890 with the income of all Christian churches for all purposes of maintenance and extension, including their benevolent institutions, we should find that, as the latter expenditure does not probably exceed 18 millions yearly, the nation spends on drink nearly 8 times more than it does on religion.

Had the 139 millions not been expended in 1890 upon intoxicating drink, they would have been expended on other articles, and for other objects tending to increase the comforts, convenience, and general elevation of the people. It is equally certain that, had they not been expended upon strong drink, the crime, poverty, lunacy, vice, disease, and mortality of the country would have been greatly lessened; and that, could such an annual expenditure be arrested, the whole social and moral status of the nation would be raised to a point which it is impossible for it to reach so long as the expenditure continues. The report of Dr. Dawson Burns will be found in the "Times" of February 12.

**Third-Class Passenger Traffic.**—The report of the South-Western Railway states that in 1890 there was a great increase in third-class passenger traffic, whilst the other classes had suffered in numbers and money. This was probably owing to the good appointment and convenience of the third-class coaches, and to the fact that third-class passengers were conveyed by all express trains. There was a decrease of £2,983 on the first-class, of £4,507 on the second-class, and an increase of £41,047 on the third-class passenger traffic receipts; and in the number of passengers (exclusive of season ticket holders) carried there was an increase of 1,231,256 in the third-class, and a decrease of 9,776 and 18,449 in the first and second-class respectively.

**Japanese Statesmanship.**—In an eloquent speech before the lower House of Parliament the Viscount Aoki said there were more important international questions to consider than mere "treaty revision," of which they heard so much. He discussed the effects of the most-favoured-nation clauses in the later treaties made by Japan with certain Western countries, which, he said, were most serious for the legislative and commercial autonomy of Japan. He then referred in detail to the various efforts made since 1872 to conclude treaties on new bases. Attempts to this end were made in 1871, when a special mission came to Europe, in 1875, in 1878, when a special treaty was signed with the United States, in 1880, 1882, 1886, and finally in 1888. The Minister drew special attention to the fact that the treaties were not permanent. The Government had in no wise abandoned the work; it had been established for twenty years past as one of the national duties, and no Government could give it up. At the same time other duties fell on the Foreign Office; they could not be devoting themselves day and night to treaty revision only, and it was a popular mistake to suppose that the foreign relations of the country were all summed up in those two words. Speaking of foreign commercial relations, he said that at their doors sat a nation of 270,000,000 people ready to take their manufactures and products, and to give its own in return. The Chinese were the proper partners of Japan in trade and industry. In olden times the Japanese manned their boats and harried the coasts of China; the descendants of those hardy mariners ought to have something better to do than lose themselves in contemplation of the two words "treaty revision." Large spheres of activity and of national development lay before them; and when the treaties were revised those would become much larger.

**Nameless Celebrity.**—To be nameless in worthy deeds exceeds an infamous history. The Canaanitish woman lives more happily without a name than Herodias with one; and who had not rather have been the good thief than Pilate? The inequity of oblivion blindly scattereth her poppy, and deals with the memory of men, without distinction, to merit of perpetuity. Who can but pity the founder of the Pyramids? Herostratus liveth that burnt the temple of Diana; he is almost lost that built it. Who knows whether the best of men be known? Or whether there be not more remarkable persons forgotten than any that be remembered in the known account of time? Oblivion is not to be hired. The greater part must be content to be as though they had not been; to be found in the Register of God, not in the record of man.—*Sir Thomas Browne.*

**Manhattan Island.**—In the "Leisure Hour" Varieties for 1890, p. 429, in reference to the statement that the purchase money of Manhattan Island in 1626 was 24 dollars, or little more than £5, which would make at compound interest in 1890, £2,178,000, a correspondent writes to say that the sum is much understated, being nearly what would be the increase at 5 per cent. But in former times the rate of interest was 8 or 10 per cent. often, and never under 6 per cent. Our correspondent sends various calculations of different rates of interest, very curious in result, but too long to transcribe. These are sufficient. If at 6 per cent. compound interest, the £5 of 1626 would give £28,341,480; or at 24 dollars, £27,207,821. At 10 per cent. the £5 becomes £704,515,840,948, say $\frac{7}{10}$ of a billion!

**A Family Group.**—The following anecdote from "A Century of Painters of the English School," reminds one of the famous family group in the "Vicar of Wakefield." Hoppner related it to a friend. "A wealthy stockbroker drove up to his door, whose carriages emptied into his hall in Charles Street a gentleman and lady, with five sons and seven daughters, all samples of *Pa* and *Ma*; as well fed and as city bred a comely family as any within the sound of Bow Bells. 'Well, Mr. Painter,' said he, 'here we are, a baker's dozen.; how much will you demand for painting the whole *lot* of us, prompt payment for discount?' 'Why,' replied the astonished painter, viewing the questioner, who might be likened to a superannuated elephant; 'why, that will depend upon the dimensions, style, composition, and——' 'Oh, that is all settled,' quoth the enlightened broker. 'We are all to be touched off in one piece, as large as life, all seated upon our lawn at Clapham, and all singing "God save the King."'"

**Capital and Labour.**—At the meeting of the Council of Labour, on opening this session, M. Roche, Minister of Commerce, made important proposals on the part of the Government by which the Council had been instituted. Referring to the interest now taken in social problems, and to the altered conditions resulting from the universal use of machinery in factories, M. Roche said that it was necessary to abandon the old system of leaving all matters between capital and labour to individual contract. When disputes occurred, it was no longer possible to leave the decision to private judgment without intervention of public authority. Much had been achieved by the pacific labours of arbitration, especially by the "Conseils des Prudhommes," consisting jointly of capitalists and workmen; but it is thought now expedient to enact that the decisions of these voluntary Courts of Conciliation should acquire legal enforcement. To this purpose laws would be introduced, as had already been successfully done in other countries. The chief matter was to give legal authority to decision of arbitrators. Besides this, there were questions of payment in kind instead of in money (the Truck system), against which British workmen are protected; also public "Registration Offices" for those seeking employment, thereby saving the commission

exacted by private bureaux. The Labour Office would be under the department of the Ministry of Commerce. It would undertake collecting information and preparing statistics on all affairs affecting the working classes. Four sub-committees were appointed to have charge respectively of subjects of arbitration, the protection of salaries and wages, the placing of workmen, and the Labour Office; the presidents being M. Barhaut, Jules Simon, Challemel Lacour, and Léon Say, names which command public confidence.

**Lord Albemarle.**—The veteran Earl of Albemarle has at last passed away, at the age of ninety-two. He carried the regimental colours of the 14th Foot at Waterloo. The old colours, when new ones were given to the regiment, were taken by Sir Harry Verney, Bart., of Claydon, Bucks, and are among the relics in the Hall of that fine old mansion.

**A Mary Stuart Relic.**—A correspondent at Brighton describes an interesting relic of the unfortunate Queen Mary, which might well have appeared in the Stuart Exhibition. It is a satchel, of violet velvet, with very beautiful embroidery, the Queen's own work, which she wore on the day of her execution at Fotheringhay. Taking out her handkerchief as she passed to the block, she handed the satchel to her attendant, Lady Jane Douglas. It has been kept at Douglas Castle ever since, till it recently came into the possession of a member of the family of Sir W. Watkin Wynn, Bart., by whom it was given to Mr. Germain, dentist, of Grenville Place, Brighton, who has it in a glass case, with a descriptive and historical note.

**Lucifer Matches.**—In 1829, when the first railway was opened, the invention of lucifer matches was one of the minor incidents of the year. The inventor was Isaac Holden, M.P., then a working engineer in Glasgow, who has since, as a great manufacturer, risen to honour and affluence, and is now the "father of the House of Commons." Mr. Holden took no patent, else he might in more easy way have amassed a fortune, as Sir David Brewster might have done when he invented the unpatented Kaleidoscope. Personal recollections by Isaac Holden would be interesting reading.

**The Power of Destruction Favourable to Peace.**—In addressing a meeting of the Chamber of Commerce, Mr. Forwood, M.P., gave a most reassuring statement as to the condition of the Navy, and of National defence by sea. Not only were seventy ships of war being rapidly built, but numerous swift armed ships, now in mercantile service, were available on immediate notice for protection of commerce. The long dispute as to the superiority of attack or of defence in regard to armed vessels seems to be closed, as a gun lately tried at Shoeburyness sent a bolt of 2,000 lbs. clean through armour plate of 2 feet 4 inches of steel and iron, and in another case a trained gunner sent from one gun five bolts of 100 lb. each weight, within a minute. The peace of the world is likely to be promoted by the existence of such terrible implements of destruction. One word of caution, however, must be added. Steel and iron do not form the best protection, as Todleben proved by his rope mantelets at Sebastopol. There are substances which deaden the impulse of the swiftest and strongest bolts, better by yielding throughout the substance than by resisting at the surface.

**Clearing House in Post Office Court, Lombard Street.**—The recent clever and daring robbery of some thousands of pounds at the counter of a London bank, shows the risk of carrying money in the streets, and also the safety as well as convenience for bankers of the Clearing House. The aggregate value of drafts or cheques paid at the Clearing House is not far from £7,000,000,000 a year. This vast amount is split up into tens, hundreds, and even thousands of items, and transferred without the payment of a single coin. It would require a large number of waggons or carts to convey seven millions of money, but for this civilised method of transfer. The non-clearing banks might devise some method of dealing with daily drafts, so as to avoid the risk of money being sent by hand, in the wallets of clerks. Usually it is a junior clerk, "walk clerk" he is called, entrusted with this important transfer. Even country banks take better precaution in transferring. We remember many years ago, when cash was sent by Smith (of Smith, Payne & Co.) from Nottingham to the branch at Derby, the bags were sent in custody of the head clerk, a powerful man, Mr. Chowler (brother of the redoubted Chowler who threatened to head the Yeomanry at the time of the Corn Law Repeal), and Mr. Chowler went armed with a trusty blunderbuss and pistols. There was less danger by the road in those days than in the streets of London forty years later, if we may judge by the recent robbery of a walk clerk, in the city itself, and at the counter of a bank!

# Household Queries.

**Cleaning Gilt Frames.**—*Could you tell me of any method of cleaning gilded picture frames?*—There are now so many kinds of gilding that it is rather unsafe for an amateur to meddle, as the same process does not suit all. The "washable" gilt mouldings will clean with soap and water. Mere fly marks can be removed from many ordinary frames by ordinary soap and water, used very gently on a piece of rag held over the end of the finger, rinsing off with clean water and drying gently with chamois leather. Most frames are best cleaned by applying either spirit of turpentine or hot methylated spirit, on a bit of soft Turkey sponge moistened with it, leaving them to dry, and not wiping dry after. In all cases brush loose dust off first with a soft brush. Some gold, again, is best cleaned by dabbing gently all over it a weak solution of salt of tartar, and after a few minutes syringing it off with a jet of water. Some of the cheaper modern frames will not bear cleaning at all.

**Cleaning Ivory and Coral.**—*Will you kindly inform me how to clean coral, also ivory?*—The kind of coral should have been specified, also if smooth worked articles, or rough natural coral. Failing these particulars, we can only safely advise you to scrub with a tooth-brush and some whiting and water, which will clean a large class of work. Ivory is best cleaned in general by leaving on it for a day or two a thin paste of fresh-slaked lime and water, then brush well out with clean water and a tooth-brush. In some cases a little chloride of lime added is a great assistance, but plain lime is best if it will suffice. Dry gently near a fire.

(2) *Can anyone tell me how to get ink stains out of an ivory paper-knife?*—First wet with water, then apply a solution of oxalic acid in boiling water, about a tablespoonful to half a pint, rinse with clean water. We cannot ensure success in removing ink, as it often sinks in to a considerable depth, also inks vary a great deal in chemical character. If any polish is removed by either of the above, it is easily restored by rubbing with putty-powder and water on flannel.

**Bleaching Straw.**—*Would you kindly tell me if there be any simple means of taking the sunburn off white straw hats?*—It is better to have them dipped some colour, bleaching being more trouble than it is worth. You would, however, probably succeed by steeping in a weak solution of either chloride of lime or of oxalic acid, both of which are used in bleaching straw goods. The hat must, however, first be cleansed from dirt, grease, or varnish by a preliminary steep and wash in soda.

**Candied and Dried Fruit.**—*Will you be so kind as to give me a receipt for candying and drying fruit, such as plums, cherries, or pears?*—England is not a very good country for drying fruit; but in good seasons fair results may be had. Cherries and plums should be treated before they change colour, being done in a slow oven heated not over 240° F., then stored by hanging up in bunches in a dry place. Should the weather be warm, they dry still better under a glass frame in the sun, with a little ventilation; but in our climate the heat is seldom enough so late in the year. Pears may be dried in slices in the same way. Cherries may also be done by putting them in a preserving pan with about one third their weight of loaf sugar crushed, and simmering till the fruit shrivels, when they are strained out of the syrup and dried in a very slow oven. Candied fruit is first boiled gently till soft enough to absorb the sugar, then put for a week to a fortnight in hot sugar syrup, then dried on sieves in a room heated to 100° F., and candied by dipping into boiling clear syrup, and leaving to drain over the pan; finally again dried in a hot chamber. The process is too complicated and delicate to be successful in the hands of most amateur housekeepers, to say nothing of the long heat required.

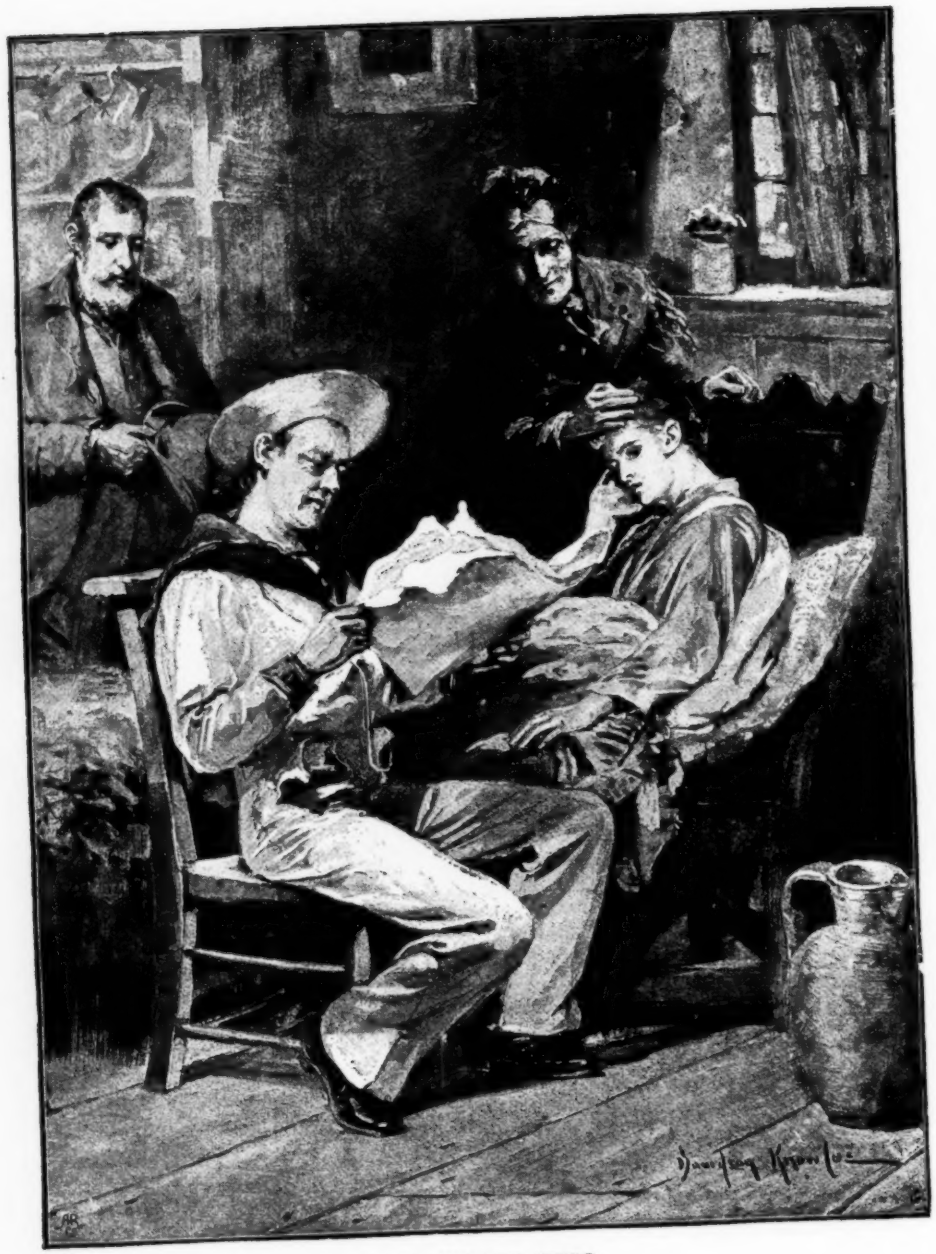
**Oil Stoves.**—*Can a room be satisfactorily warmed by an oil stove? Is there any sort of oil suited to the purpose which is free from smell?*—Stoves are made by Rippingille and others which will warm an ordinary room. Avoidance of smell depends upon no form of lamp, but on cleanliness and care. All paraffin oils have the property of gradually "sweating" over the surfaces of the lamps; and if these are not regularly and scrupulously wiped dry from it, there will be smell when the lamp is warmed. Secondly, the wicks need always to be kept trimmed, and turned up very gradually, burning for a minute or two quite low before the full power is gradually reached. Unless this precaution is taken, they smoke, and that makes smell enough for one day. The same lamp will always smell under one servant's management, and never under another's. The cheaper oils, however, are worst, and the best should always be used, being safer as well.

**Parrot Featherless.**—*Could you tell me what the reason is for a small parrot having no feathers for the last year and a half. It is a young bird, and feeds well; we fear it sucks its feathers?*—Surely you can find out by observation whether the bird does pluck itself or not. The usual cause for either this habit or simple baldness is giving the bird meat or pastry, or too many oily nuts or seeds. They are fond of all, but meat and pastry should never be given, and rich nuts only sparingly. Bread and milk also does not suit many of them, the proper food being grain (especially in the ear, such as wheat or barley or Indian corn ears), also maize boiled, sponge cake, green food, and ripe fruit. Give the bird a cuttle-fish bone always to gnaw at and cool the blood, and some growing shoots of willow, elder, or even a stick of firewood to work the bill upon. These simple expedients will often mend the state of affairs. Apply to the skin now and then a very little toilet vaseline.

**Rusty Ornaments.**—*Could you tell me the most effectual way of removing rust from steel ornaments?*—If simple enough in form to admit of rubbing with fine emery flour and oil, this is much the best plan. If not, immerse them for a few minutes in a solution of cyanide of potassium, half an ounce to a wineglassful of water, then take out, and clean with a toothbrush used briskly, and a paste made about as thick as clotted cream, of powdered cyanide of potassium, Castile soap, whiting, and a little water. When clean, dry very quickly to avoid more rust, and either grease very slightly, or apply with another brush a very little mercurial ointment, the merest trace. Take care not to get the cyanide paste or solution into the slightest abrasion of the skin.

**Cleaning Brushes and Gloves.**—"*Mite*" *would like to know in what way she can clean metallic hair-brushes, and also how to clean white kid gloves?*—It is best to confine yourself to patient use of the comb and another brush. Some soap or soda will apparently enable you to cleanse the wires easily; but however careful you are to dry them at once, water generally remains under the bottom ends of the wires and rusts them. Benzol also will clean the wire rapidly, and does not rust, but attacks the india-rubber if it touches it. If plain working of two brushes together will not do, the safest plan is to get another bristle brush, wet this in soda solution and lay down with bristles upwards; then brush the wire one over this with the bristles down, and when clean, dry quickly, and work over a cloth very slightly greased. Lay the glove on a towel folded fourfold, dip a flannel in a saucer of milk, and rub it on brown Windsor or glycerine soap. Holding the glove with left hand, rub it towards the ends of the fingers till clean, when it will probably appear a dingy yellow. Pull out and lay to dry. The French clean gloves by putting them on, and working them just as if washing the hands, with spirits of turpentine; but we never dared try the experiment on *white* kids; we know it answers for others, and the smell is only a question of time.

**Fritters.**—*Can you give the recipes for making currant and apple fritters?*—For apple fritters, pare and core some large apples, and cut into slices about a quarter of an inch thick. After covering these with pounded sugar and letting them lie two hours, throw them into batter made stiff and smooth, say of ½ lb. flour, a pinch of salt, a little clarified butter, three eggs, ¼ pint of milk, and a tablespoonful of beer improves the flavour for most persons. Fry in plenty of hot fat—about eight minutes as a rule—drain the grease on blotting-paper, and serve with powdered sugar. For currant fritters, whisk three eggs up, and mix in six tablespoonfuls of flour and a pinch of salt; when smooth add a pint of milk. Put some lard or dripping in your pan, and when hot stir a handful of picked and dried currants into the batter, and drop it in the pan in quantity to make a small fritter, putting no more in at once than you can keep separate. When light brown on one side turn them. Serve as the others. For those who cannot eat eggs, very fair fritters may be made by mixing a pint of mild ale with flour to a thick batter, adding with the currants a little sugar and grated nutmeg. It may be well to add that any alcohol used in these kinds of *hot* cookery is to all intents and purposes evaporated by the heat, the ale being chiefly used for its glutinous properties and hop flavour.



**British Birds.**—*What book of a moderate price can you recommend, describing the habits and notes of English song-birds?*—As near to what you want as we can think of would be Stanley's "British Birds" in Longman's Silver Library, 3*s.* 6*d.*

**Aviary.**—*I propose making an aviary in a conservatory facing due south. Can you kindly tell me if it will be too hot in the summer?*—There would probably be some difficulty with British birds; but tropical kinds, of which many are now to be had cheaply, should thrive very well if the ventilation is good, and the heat in winter is kept comfortable. If you mean an ordinary cold greenhouse without heat, hardy birds will thrive provided ample ventilation is secured.

THE VILLAGE HERO.

# THE STORY OF FRANCIS CLUDDE.

BY STANLEY J. WEYMAN, AUTHOR OF "THE HOUSE OF THE WOLF," ETC

## CHAPTER XIII.—A WILFUL MAN'S WAY.

SURRENDER? TO WHOM? I SAID.

ONLY to feel that we were moving was a relief, though our march was very slow. Master Bertie carried the child slung in a cloak before him, and, thus burdened, could not well go beyond a smooth amble, while the guides, who were on foot, and the pack-horses, found this pace as much as they could manage. A little while, and the exhilaration of the start died away. The fine morning was followed by a wet evening, and before we had left Emmerich three miles behind us Master Bertie and I had come to look at one another meaningly. We were moving in a dreary silent procession through heavy rain, with the prospect of the night closing in early. The road, too, grew more heavy with each furlong, and presently began to be covered with pools of water. We tried to avoid this inconvenience by resorting to the hill slopes on our left, but found the attempt a waste of time, as a deep stream or backwater, bordered by marshes, intervened. The narrow road, raised but little above the level of the swiftly flowing river on our right, turned out to be our only possible path; and when Master Bertie discerned this his face grew more and more grave.

We soon found indeed, as we plodded along, that a sheet of water which palely reflected the evening light was taking the place of the road; and through this we had to plash and plash at a snail's pace, one of the guides on a pack-horse leading the way, and Master Bertie in charge of his wife coming next; then, at some distance, for her horse did not take kindly to the water, the younger woman followed in my care. The other guide brought up the rear. In this way, stopped con-

stantly by the fears of the horses, which were scared by the expanse of flood before them, we crept wearily on until the moon rose. It brought, alas, an access of light, but no comfort! The water seemed continually to grow deeper, the current on our right swifter; and each moment I dreaded the announcement that further advance was impossible.

It seemed to have come to that at last, for I saw the Duchess and her husband stop and stand waiting for me, their dark shadows projected far over the moon-lit surface.

"What is to be done?" Master Bertie called out as we moved up to them. "The guide tells me that there is a broken piece of road in front which will be impassable with this depth of water."

I had expected to hear this; yet I was so dumb-foundered—for, this being true, we were lost indeed—that for a time I could not answer. No one had uttered a word of reproach, but I knew what they must be thinking. I had brought them to this. It was my foolish insistence had done it. The poor beast under me shivered. I struck him with my heels. "We must go forward!" I said desperately. "Or what? What do you think? Go back?"

"Steady! steady, Master Knight-errant!" the Duchess cried in her calm, brave voice. "I never knew you so bad a counsellor before!"

"It is my fault that you are here," I said, looking dismally round.

"Perhaps the other road is as bad," Master Bertie replied. "At any rate, that is past and gone. The question is, what are we to do now? To remain here is to die of cold and misery. To go back may be to run into the enemy's arms. To go forward——"

"Will be to be drowned!" Mistress Anne cried with a pitiful sob.

I could not blame her. A more gloomy outlook than ours, as we sat on our jaded horses in the middle of this waste of waters, which appeared in the moonlight to be boundless, could scarcely be imagined. The night was cold for the time of year, and the keen wind pierced our garments and benumbed our limbs. At any moment the rain might begin afresh, and the moon be overcast. Of ourselves, we could not take a step without danger, and our guides had manifestly lost their heads and longed only to return.

"Yet, I am for going forward," the Duchess urged. "If there be but this one bad place we may pass it with care."

"We may," her husband assented dubiously. "But suppose when we have passed it we can go no farther. Suppose the——"

"It is no good supposing!" she retorted with some sharpness. "Let us cross this place first, Richard, and we will deal with the other when we come to it."

He nodded assent, and we moved slowly forward, compelling the guides to go first. In this order we waded some hundred yards through water which grew deeper with each step, until it rose nearly to our girths. Then the lads stopped.

"Are we over?" said the Duchess, eagerly.

For answer one of them pointed to the flood before him, and peering forward I made out a current sweeping silently and swiftly across our path—a current with an ominous rush and swirl.

"Over?" grunted Master Bertie. "No, this is the place. See, the road has given way, and the stream is pouring through from the river. I expect it is getting worse every minute as the banks crumble."

We all craned forward, looking at it. It was impossible to say how deep the water was, or how far the deep part might extend. And we had with us a child and two women.

"We must go back!" said Master Bertie, resolutely. "There is no doubt about it. The flood is rising. If we do not take care, we shall be cut off, and be able to go neither backwards nor forwards. I cannot see a foot of dry land, as it is, before or behind us."

He was right. Far and wide, wherever our eyes could reach, the moonlight was reflected in a sheet of water. We were nearly up to our girths in water. On one side was the hurrying river, on the other were the treacherous depths of the back-water. I asked the guide as well as I could whether the road was good beyond. He answered that he did not know. He and his companion were so terrified that we only kept them beside us by threats.

"I fear we must go back," I said, assenting sorrowfully.

Even the Duchess agreed, and we were in the act of turning to retrace our steps with what spirit we might, when a distant sound brought us all to a standstill again. The wind was blowing from the quarter whence we had come—from Emmerich; and it brought to us the sound of voices. We all stopped and listened. Yes, they were voices we heard—loud, strident tones, mingled now with the sullen plash of horses tramping through the water. I looked at the Duchess. Her face was pale, but her courage did not fail her. She understood in a trice that the danger we had so much dreaded was upon us—that we were followed, and the followers were at our heels; and she turned her horse round again. Without a word she spurred it back towards the deep part. I seized Anne's rein and followed, notwithstanding that the poor girl in her terror would have resisted. Letting the guides go as they pleased, we four in a moment found ourselves abreast again, our horses craning over the stream, while we, with whip and spur, urged them on.

In cold blood we should scarcely have done it. Indeed, for a minute, as our steeds stumbled, and recovered themselves, and slid forward, only to draw back trembling—as the water rose above our boots or was flung by our fellows in our eyes, and all was flogging and scrambling and splashing, it seemed as if we were to be caught in a trap despite our resolve. But at last Master Bertie's horse took the plunge. His wife's followed; and both, partly floundering and partly swimming, set forward snorting the while in fear. To my joy I saw them emerge safely not ten yards away, and, shaking themselves, stand comparatively high out of the water.

"Come!" cried my lady, imperatively, as she turned in her saddle with a gesture of defiance. "Come! It is all right."

Come, indeed! I wanted nothing better, for I was beside myself with passion. But, flog as I might, I could not get Anne's brute to take the plunge. The girl herself could give me no aid; clinging to her saddle, pale and half-fainting, she could only beg me to leave her, crying out again and again in a terrified voice that she would be drowned. With her cry there suddenly mingled another, the hail of our pursuers as they sighted us. I could hear them drawing nearer, and I grew desperate. Luckily they could not make any speed in water so deep, and time was given me for one last furious effort. It succeeded. My horse literally fell into the stream; it dragged Anne's after it. How we kept our seats, how they their footing, I never understood; but, somehow, splashing and stumbling and blinded by the water dashed in our faces, we came out on the other side, where the Duchess and her husband, too faithful to us to save themselves, had watched the struggle in an agony of suspense. I did but fling the girl's rein to Master Bertie; and then I wheeled my horse to the stream again. I had made up my mind what I must do. "Go on," I cried, waving my hand with a gesture of farewell. "Go on! I can keep them here for awhile."

"Nonsense!" I heard the Duchess cry, her voice high and shrill. "It is——"

"Go on!" I cried. "Go on! Do not lose a moment or it will be useless."

Master Bertie hesitated. But he too saw that this was the only chance. The Spaniards were on the brink of the stream now, and must, if they passed it, overtake us easily. He hesitated, I have said, for a moment. Then he seized his wife's rein and drew her on, and I heard the three horses go splashing away through the flood. I threw a glance after them over my shoulder, bethinking me that I had not told the Duchess my story and that Sir Anthony and Petronilla would never—but, pish! What was I thinking of? That was a thought for a woman. I had only to harden my heart now, and set my teeth together. My task was very simple indeed. I had just to keep these men—there were four—here as long as I could, and if possible stop Clarence's pursuit altogether.

For I had made no mistake. The first man to come up was Clarence—Clarence himself. He let fall a savage word as his horse stopped suddenly with its fore feet spread out on the edge of the stream, and his dark face grew darker as he saw the swirling eddies, and me standing fronting him in the moonlight with my sword out. He discerned at once, I think, the strength of my position. Where I stood the water was scarcely over my horse's fetlocks. Where he stood it was over his horse's knees. And between us it flowed nearly four feet deep.

He held a hasty parley with his companions. And then he hailed me. "Will you surrender?" he cried in English. "We will give you quarter."

"Surrender? To whom?" I said. "And why—why should I surrender? Are you robbers and cutpurses?"

"Surrender in the name of the Emperor, you fool!" he answered sternly and roughly.

"I know nothing about the Emperor!" I retorted. "What Emperor?"

"In the Queen's name, then!"

"The Duke of Cleves is queen here!" I cried. "And as the flood is rising," I added scornfully, "I would advise you to go home again."

"You would advise, would you? Who *are* you?" he replied in a kind of wrathful curiosity.

I gave him no answer. I have often since reflected, with a fuller knowledge of certain facts, that no stranger interview ever took place than this short colloquy between us, that no stranger fight ever was fought than that which we contemplated as we stood there bathed in the May moonlight, with the water all round us and the cold sky above. A strange fight indeed it would have been between him and me had it ever come to the sword's point!

But this was what happened. His last words had scarcely rung out when my horse began to quiver under me and sway backwards and forwards. I had just time to take the alarm, when the poor beast sank down and rolled gently over, leaving me bestriding its body, my feet in the water. Whatever the cause of this, I had to disentangle myself, and that quickly, for the four men opposite me, seeing me dismounted, plunged with a cry of triumph into the water, and began to flounder across. Without more ado I stepped forward to keep the ford.

The foremost and nearest to me was Clarence, whose horse began halfway across to swim. It was still scrambling to regain its footing when it came within my reach, and I slashed it cruelly across the nostrils. It turned in an instant on its side. I saw the rider's face gleam white in the water; his stirrup shone a moment as the horse rolled over, then in a second the two were gone down the stream. It was done so easily, so quickly, it amazed me. One gone! hurrah! I turned quickly to the others, who were about landing. My blood was fired, and my yell of victory as I dashed at them scared back two of the horses. Despite their riders' urging, they turned and scrambled out on the side from which they had entered. Only one was left, the farthest from me. He got across indeed. Yet he was the most unlucky of all, for his horse stumbled on landing, came down heavily on its head, and flung him at my very feet.

It was no time for quarter—I had to think of my friends—and while with one hand I seized the flying rein as the horse scrambled trembling to its feet, with the other I lunged twice at the rider as he half tried to rise, half tried to grasp at me. The second time I ran him through, and he screamed shrilly. In those days I was young and hot-headed, and I answered only by a shout of defiance, as I flung myself into the saddle and dashed away through the water after my friends.

*Væ victis!* I had done enough to check the pursuit, and had yet escaped myself. If I could join the others again, what a triumph it would be! I had no guide, but neither had those in front of me; and luckily at this point a row of pollard willows defined the line between the road and the river. Keeping this on my right, I made

good way. The horse seemed strong under me, the water was shallow, and appeared to be growing more so, and presently across the waste of flood I discerned before me a dark solitary tower, the tower seemingly of a church, for it was topped by a stumpy spire which daylight would probably have shown to be of wood.

There was a little dry ground round the church, a mere patch in a sea of water, but my horse rang its hoofs on it with every sign of joy, and arched its neck as it trotted up to the neighbourhood of the church, whinnying with pleasure. From the back of the building, I was not surprised, came an answering neigh. As I pulled up, a man, his weapon in his hand, came from the porch, and a woman followed him. I called to them gaily. "I fancied you would be here the moment I saw the church!" I said, sliding to the ground.

"Thank heaven you are safe!" the Duchess answered, and to my astonishment she flung her arms round my neck and kissed me. "What has happened?" she asked, looking in my eyes, her own full of tears.

"I think I have stopped them," I answered, turning suddenly shy, though, boylike, I had been longing a few minutes before to talk of my victory. "They tried to cross, and——"

I had not sheathed my sword. Master Bertie caught my wrist, and lifting the blade looked at it. "So, so!" he said, nodding. "Are you hurt?"

"Not touched!" I answered.

Before more was said he compelled his wife to go back into the porch. The wind blew keenly across the open ground, and we were all wet and shivering. When we had fastened up the horse we followed her. The door of the church was locked, it seemed, and the porch afforded the best shelter to be had. Its upper part was of open woodwork, and freely admitted the wind; but wide eaves projected over these openings, and over the door, so that at least it was dry within. By huddling together on the floor against the windward side we got some protection. I hastily told what had happened.

"So Clarence is gone!" My lady's voice as she said the words trembled, but not in sorrow or pity as I judged. Rather in relief. Her dread and hatred of the man were strange and terrible, and so seemed to me then. Afterwards, I learned that something had passed between them which made almost natural such feelings on her part, and made natural also a bitter resentment on his. But of that no more. "You are quite sure," she said—pressing me anxiously for confirmation—"that it was he!"

"Yes. But I am not sure that he is dead," I explained.

"You seem to bear a charmed life yourself," she said.

"Hush!" cried her husband, quickly. "Do not say that to the lad. It is unlucky. But do you think," he continued—the porch was in darkness, and we could scarcely make out one another's faces—"that there is any further chance of pursuit?"

"Not by that party to-night," I said grimly. "Nor, I think, to-morrow."

"Good!" he answered. "For I can see nothing but water ahead, and it would be madness to go on by night without a guide. We must stay here until morning, whatever the risk."

He spoke gloomily—and with reason. Our position was a miserable, almost a desperate one, even on the supposition that pursuit had ceased. We had lost all our baggage, food, wraps. We had no guides, and we were in the midst of a flooded country, with two tender women and a baby, our only shelter the porch of God's house. Mistress Anne, who was crouching in the darkest corner next the church, seemed to have collapsed entirely. I remembered afterwards that I did not once hear her speak that night. The Duchess tried to maintain our spirits and her own; but in the face of cold, damp, and hunger, she could do little. Master Bertie and I took it by turns to keep a kind of watch, but by morning—it was a long night and a bitter one—we were worn out, and slept despite our misery. We should have been surprised and captured without a blow if the enemy had come upon us then.

I awoke with a start to find the grey light of a raw misty morning falling upon and showing up our wretched group. The Duchess's head was hidden in her cloak; her husband's had sunk on his breast; but Mistress Anne—I looked at her and shuddered. Had she sat so all night? Sat staring with that stony face of pain, and those tearless eyes, on the moonlight, on the darkness which had been before the dawn, on the cold first rays of morning? Stared on all alike, and seen none? I shuddered and peered at her, alarmed, doubtful, wondering, asking myself what this was, what had happened to her. Had fear and cold killed her, or turned her brain? "Anne!" I said timidly. "Anne!"

She did not answer nor turn; nor did the fixed gaze of her eyes waver. I thought she did not hear. "Anne!" I cried again, so loudly that the Duchess stirred, and muttered something in her sleep. But the girl showed no sign of consciousness. I put out my hand and touched her.

She turned sharply and saw me, and in an instant drew her skirt away with a gesture of such dread, loathing repulsion as froze me; while a violent shudder convulsed her whole frame. Afterwards she seemed unable to withdraw her eyes from me, but sat in the same attitude, gazing at me with a fixed look of horror, as one might gaze at a serpent, while tremor after tremor shook her.

I was frightened and puzzled, and was still staring at her, wondering what I had done, when a footstep fell on the road outside and called away my attention. I turned from her to see a man's figure looming dark in the doorway. He looked at us—I suppose he had found the horses outside—gazing in surprise at the queer group. I bade him good-morning in Dutch, and he answered as well as his astonishment would let him. He was a short stout fellow, with a big face capable of expressing a good deal of astonishment. He seemed to be a peasant or farmer. "What do you here?" he continued, his guttural phrases tolerably intelligible to me.

I explained as clearly as I could that we were on the way to Wesel. Then I awoke the Duchess

and her husband, and, stretching our chilled and aching limbs, we went outside, the man still gazing at us. Alas! the day was not much better than the night. We could see but a very little way, a couple of hundred yards round us only. The rest was mist—all mist. We appealed to the man for food and shelter, and he nodded, and, obeying his signs rather than his words, we kicked up our starved beasts and plodded out into the fog by his side. Anne mounted silently and without objection, but it was plain that something strange had happened to her. Her condition was unnatural. The Duchess gazed at her very anxiously, and, getting no answers, or very scanty ones, to her questions, shook her head gravely.

But we were on the verge of one pleasure at least. When we reached the hospitable kitchen of the farmhouse it was joy indeed to stand before the great turf fire, and feel the heat stealing into our half-frozen bodies; to turn and warm back and front, while the good wife set bread and hot milk before us. How differently we three felt in half an hour! How the Duchess's eyes shone once more! How easily rose the laugh to our lips! Joy had indeed come with the morning. To be warm and dry and well fed after being cold and wet and hungry—what a thing this is!

But on one neither food nor warmth seemed to have any effect. Mistress Anne did indeed, in obedience to my lady's sharp words, raise her bowl to her lips. But she set it down quickly and sat looking in dull apathy at the glowing peat. What had come over her?

Master Bertie went out with the farmer to attend to the horses, and when he came back he had news.

"There is a lad here," he said in some excitement, "who has just seen three foreigners ride past on the road along with two Germans on pack-horses; five in all. They must be three of the party who followed us yesterday."

I whistled. "Then Clarence got himself out," I said, shrugging my shoulders. "Well! well!"

"I expect that is so," Master Bertie answered, the Duchess remaining silent. "The question arises again, what is to be done?" he continued. "We may follow them to Wesel, but the good man says the floods are deep between here and the town, and we shall have Clarence and his party before us all the way—shall perhaps run straight into their arms."

"But what else can we do?" I said. "It is impossible to go back."

We held a long conference, and by much questioning of our host learned that half a league away was a ferry-boat, which could carry as many as two horses over the river at a time. On the farther side we might hit a road leading to Santon, three leagues distant. Should we go to Santon after all? The farmer thought the roads on that side of the river might not be flooded. We should then be in touch once more with our Dutch friends and might profit by Master Lindstrom's advice, on which I for one was now inclined to set a higher value.

"The river is bank full. Are you sure the ferry-boat can cross?" I asked.

Our host was not certain. And thereupon an unexpected voice struck in.

"Oh dear, do not let us run any more risks!" it said. It was Mistress Anne's. She was herself again, trembling, excited, bright-eyed; as different as possible from the Anne of a few minutes before. A great change had come over her. Perhaps the warmth had done it.

A third course was suggested, to stay quietly where we were. The farmhouse stood at some little distance from the road; and though it was rough—it was very rough, consisting only of two rooms, in one of which a cow was stalled—still it could furnish food and shelter. Why not stay there?

But the Duchess wisely, I think, decided against this. "It is unpleasant to go wandering again," she said with a shriver. "But I shall not rest until we are within the walls of a town. Master Lindstrom laid so much stress on that. And I fancy that the party who overtook us last night are not the main body. Others will have gone to Wesel by boat perhaps, or along the other bank. There they will meet, and, learning we have not arrived, they will probably return this way and search for us."

"Clarence——"

"Yes, if we have Clarence to deal with," Master Bertie assented gravely, "we cannot afford to lose a point. We will try the ferry."

It was something gained to start dry and warm. But the women's pale faces—for little by little the fatigue, the want of rest, the fear were telling even on the Duchess—were sad to see. I was sore and stiff myself. The wound I had received so mysteriously had bled afresh, probably during last night's fight. We needed all our courage to put a brave face on the matter, and bear up and go out again into the air, which for the first week in May was cold and nipping. Suspense and anxiety had told in various ways on all of us. While I felt a fierce anger against those who were driving us to these straits, Master Bertie was nervous and excited, alarmed for his wife and child, and inclined to see an enemy in every bush.

However, we cheered up a little when we reached the ferry and found the boat could cross without much risk. We had to go over in two detachments, and it was nearly an hour past noon before we all stood on the farther bank and bade farewell to the honest soul whose help had been of so much importance to us. He told us we had three leagues to go, and we hoped to be at rest in Santon by four o'clock.

But the three leagues turned out to be more nearly five, while the road was so founderous that we had again and again to quit it.

The evening came on, the light waned, and still we were feeling our way, so to speak—the women tired and on the verge of tears; the men muddy to the waist, savage, and impatient. It was eight o'clock, and dusk was well upon us before we caught sight of the first lights of Santon, and, in fear lest the gates might be shut, pressed forward at such speed as our horses could compass.

"Do you go on!" the Duchess adjured us. "Anne and I will be safe enough behind you. Let

me take the child, and do you ride on. We cannot pass the night in the fields."

The importance of securing admission was so great that Master Bertie and I agreed; and cantered on, soon outstripping our companions, and almost in the gloom losing sight of them. Dark masses of wood, the last remnants, apparently, of a forest, lay about the road we had to traverse. We were passing one of these, scarcely three hundred paces short of the town, and I was turning in the saddle to see that the ladies were following safely, when I heard Master Bertie, who was a bow-shot in front of me, give a sudden cry.

I wheeled round hastily to learn the reason, and

"ONE OF THE TOWN-GUARD! WE ARE LOST, MAN!"

was just in time to see three horsemen sweep into the road before him from the cover of the trees. They were so close to him—and they filled the road—that his horse carried him amongst them almost before he could check it, or so it seemed to me. I heard their loud challenge, saw his arm wave, and guessed that his sword was out. I spurred desperately to join him, giving a wild shout of encouragement as I did so. But before I could come up, or indeed cross half the distance, the scuffle was over. One man fell headlong from his saddle, one horse fled riderless down the road, and at sight of this, or perhaps of me, the others turned tail without more ado and made off, leaving Master Bertie in possession of the field. The whole thing had passed in the shadow of the wood in less than half a minute. When I drew rein by him he was sheathing his sword. "Is it Clarence?" I cried eagerly.

"No, no, I did not see him. I think not," he answered. He was breathing hard and was very much excited. "They were poor swordsmen for Spaniards," he added—"very poor, I thought."

I jumped off my horse, and, kneeling beside the man, turned him over. He was badly hurt, if not dying, cut across the neck. I looked hard at him by such light as there was, and did not recognise him as one of our assailants of the night before.

"I do not think he *is* a Spaniard," I said slowly. Then a certain suspicion occurred to my mind, and I stooped lower over him.

"Not a Spaniard?" Master Bertie said stupidly. "How is that?"

Before I answered I raised the man in my arms, and, carrying him carefully to the side of the road, set him with his back to a tree. Then I got quickly on my horse. The women were just coming up. "Master Bertie," I said in a low voice, as I looked this way and that to see if the alarm had spread, "I am afraid there is a mistake. But say nothing to them. It is one of the town-guard you have killed!"

"One of the town-guard!" he cried, a light bursting in on him, and the reins dropping from his hand. "What shall we do? We are lost, man!"

### CHAPTER XIV.—AT BAY IN THE GATEHOUSE.

WHAT was to be done? That was the question, and a terrible question it was. Behind us we had the inhospitable country, dark and dreary, the night wind sweeping over it. In front, where the lights twinkled and the smoke of the town went up, we were like to meet with a savage reception. And it was no time for weighing alternatives. The choice had to be made, made in a moment; I marvel to this day at the quickness with which I made it for good or ill.

"We must get into the town!" I cried imperatively. "And before the alarm is given. It is hopeless to fly, Master Bertie, and we cannot spend another night in the fields. Quick, madam!" I continued to the Duchess as she came up. I did not wait to hear his opinion, for I saw he was stunned by the catastrophe. "We have hurt one of the town-guard through a mistake. We must get through the gate before it is discovered!"

I seized her rein and flogged up her horse, and gave her no time to ask questions, but urged on the party at a hand gallop until the gate was reached. The attempt, I knew, was desperate, for the two men who had escaped had ridden straight for the town; but I saw no other resource, and it seemed to me to be better to surrender peaceably, if that were

possible, than to expose the women to another night of such cold and hunger as the last. And fortune so far favoured us that when we reached the gate it was open. Probably, the patrol having ridden through to get help, no one had thought fit to close it; and, no one withstanding us, we spurred our sobbing horses under the archway and entered the street.

It was a curious entry, and a curious scene we came upon. I remember now how strange it all looked. The houses leaning forward in a dozen quaint forms, clear cut against the pale evening sky, caused a darkness as of a cavern in the narrow street below. Here and there in the midst of this darkness hung a lanthorn, which, making the gloom away from it seem deeper, lit up the things about it, throwing into flaring prominence some barred window with a scared face peering from it, some corner with a puddle, a slinking dog, a broken flight of steps. Just within the gates stood a brazier full of glowing coal, and beside it a halbert rested against the wall. I divined that the watchman had run into the town with the riders, and I drew rein in doubt, listening and looking. I think if we had ridden straight on then, all might have been well; or, at least, we might have been allowed to give ourselves up.

But we hesitated a moment, and were lost. No doubt, though we saw but one, there were a score of people watching us, who took us for four men, Master Bertie and I being in front; and these, judging from the boldness of our entry that there were more behind, concluded that this was a foray upon the town. At any rate, they took instant advantage of our pause. With a swift whirr an iron pot came hurtling past me, and, missing the Duchess by a hand's breadth, went clanking under the gatehouse. That served for a signal. In a moment an alarm of hostile cries rose all round us. An arrow whizzed between my horse's feet. Half a dozen odd missiles, snatched up by hasty hands, came raining in on us out of the gloom. The town seemed to be rising as one man. A bell began to ring, and a hundred yards in front, where the street branched off to right and left, the way seemed suddenly alive from wall to wall with lights and voices and brandished arms, the gleam of steel, and the babel of a furious crowd—a crowd making down towards us with a purpose we needed no German to interpret.

It was a horrible moment; the more horrible that I had not expected this fury, and was unnerved as well as taken aback by it. Remembering that I had brought my companions here, and that two were women, one was a child, I quailed. How could I protect them? There was no mistaking the stern meaning of those cries, of that rage so much surpassing anything I had feared. Though I did not know that the man we had struck down was a bridegroom, and that there were those in the crowd in whose ears the young wife's piercing scream still rang, I yet quailed before their yells and curses.

As I glanced round for a place of refuge, my eyes lit on an open doorway close to me, and close also to the brazier and halbert. It was a low stone doorway, beetle-browed, with a coat of arms carved over it. I saw in an instant that it must lead to the tower above us—the gatehouse; and I sprang from my horse, a fresh yell from the houses hailing the act. I saw that if we were to gain a moment for parleying we must take refuge there. I do not know now how I did it, but somehow I made myself understood by the others and got the women off their horses and dragged Mistress Anne inside, where at once we both fell in the darkness over the lower steps of a spiral staircase. This hindered the Duchess, who was following, and I heard a scuffle taking place behind us. But in that confined space—the staircase was very narrow—I could give no help. I could only stumble upwards, dragging the fainting girl after me, until we emerged through an open doorway at the top into a room. What kind of room I did not notice then, only that it was empty. Notice! It was no time for taking notice. The bell was clanging louder and louder outside. The mob were yelling like hounds in sight of their quarry. The shouts, the confused cries, and threats,

ON GUARD.

and questions deafened me. I turned to learn what was happening behind me. The other two had not come up.

I felt my way down again, one hand on the central pillar, my shoulder against the outside wall. The stair-foot was faintly lit by the glow from outside, and on the bottom step I came on some one, hurt or dead, just a dark mass at my feet. It was Master Bertie. I gave a cry and leaped over his body. The Duchess, brave wife, was standing before him, the halbert which she had snatched up presented at the doorway and the howling mob outside.

Fortunately the crowd had not yet learned how few we were; nor saw, I think, that it was but a woman who confronted them. To rush into the low doorway and storm the narrow winding staircase in the face of unknown numbers was a task from which the bravest veterans might have flinched, and the townsfolk, furious as they were, hung back. I took advantage of the pause. I grasped the halbert myself and pushed the Duchess back. "Drag him up!" I muttered. "If you cannot manage it, call Anne!"

But grief and hard necessity gave her strength, and, despite the noise in front of me, I heard her toil panting up with her burden. When I judged she had reached the room above, I too turned and ran up after her, posting myself in the last angle just below the room. There I was sheltered from missiles by the turn in the staircase, and was further protected by the darkness. Now I could hold the way with little risk, for only one could come up at a time, and he would be a brave man who should storm the stairs in my teeth.

All this, I remember, was done in a kind of desperate frenzy, in haste and confusion, with no plan or final purpose, but simply out of the instinct of self-preservation which led me to do from moment to moment what I could to save our lives. I did not know whether there was another staircase to the tower, nor whether there were enemies above us; whether, indeed, enemies might not swarm in on us from a dozen entrances. I had no time to think of more than just this: that my staircase, of which I did know, must be held.

I think I had stood there about a minute, breathing hard and listening to the din outside, which came to my ears a little softened by the thick walls round me—so much softened at least that I could hear my heart beating in the midst of it—when the Duchess came back to the door above. I could see her, there being a certain amount of light in the room behind her, but she could not see me. "What can I do?" she asked softly.

I answered by a question, "Is he alive?" I muttered.

"Yes; but hurt," she answered, struggling with a sob, with a fluttering of the woman's heart she had repressed so bravely. "Much hurt, I fear! Oh why, why did we come here?"

She did not mean it as a reproach, but I took it as one, and braced myself more firmly to meet this crisis—to save her at least if it should be any way possible. When she asked again "Can I do anything?" I bade her take my pike and stand where I was for a moment. Since no enemy had yet made his appearance above, the strength of our position seemed to hold out some hope, and it was the more essential that I should understand it, and know exactly what our chances were.

I sprang up the stairs into the room and looked round, my eyes seeming to take in everything at once. It was a big bare room, with signs of habitation only in one corner. On the side towards the town was a long, low window, through which—a score of the diamond panes were broken already—the flare of the besiegers' torches fell luridly on the walls and vaulted roof. By the dull embers of a wood fire, over which hung a huge black pot, Master Bertie was lying on the boards, breathing loudly and painfully, his head pillowed on the Duchess's kerchief. Beside him sat Mistress Anne, her face hidden, the child wailing in her lap. A glance round assured me that there was no other staircase, and that on the side towards the country the wall was pierced with no window bigger than a loop-hole or an arrow-slit; with no opening through which even a boy could enter. For the present, therefore, unless the top of the tower should be escaladed from the adjacent houses—and I could do nothing to provide against that—we had nothing to fear except from the staircase and the window I have mentioned. Every moment, however, a missile or a shot crashed through the latter, adding the shiver of falling glass to the general din. No wonder the child wailed and the girl sank over it in abject terror. Those savage yells might well make a woman blench. They carried more fear and dread to my heart than did the real danger of our position, desperate as it was.

And yet it was so desperate that for a moment I leant against the wall dazed and hopeless, listening to the infernal tumult without and within. Had Bertie been by my side to share the responsibility and join in the risk, I could have borne it better. I might have felt then some of the joy of battle, and the stern pleasure of the one matched against the many. But I was alone. How was I to save these women and that poor child from the yelling crew outside? How indeed? I did not know the enemy's language; I could not communicate with him, could not explain, could not even cry for quarter for the women.

A stone which glanced from one of the mullions and grazed my shoulder roused me from this fit of cowardice, which I trust and believe had lasted for a few seconds only. At the same moment an unusual volley of missiles tore through the window as if discharged at a given signal. We were under cover, and they did us no harm, rolling for the most part noisily about the floor. But when the storm ceased and a calm as sudden followed, I heard a dull regular sound close to the window—a thud! thud! thud!—and on the instant divined the plan and the danger. My courage came back, and with it my wits. I remembered an old tale I had heard, and, dropping my sword where I stood, I flew to the hearth, and unhooked the great pot. It was heavy: half full of something, broth most likely; but I recked nothing of that, I bore it swiftly to the window, and just as the foremost man on the ladder had driven in the lead work before him with his axe, flung the whole of the contents—they were not scalding, but they were very hot—in his face. The fellow shrieked loudly, and, blinded and taken by surprise, lost his hold and fell against his supporter, and both tumbled down again more quickly than they had come up.

Sternly triumphant, I poised the great pot itself in my hands, thinking to fling it down upon the sea of savage upturned faces of which I had a brief view as the torches flared now on one, now on another. But prudence prevailed. If no more

blood were shed it might still be possible to get some terms. I laid the pot down by the side of the window as a weapon to be used only in the last resort.

Meanwhile the Duchess, posted in the dark, had heard the noise of the window being driven in, and cried out pitifully to know what it was. "Stand firm!" I shouted loudly. "Stand firm. We are safe as yet."

Even the uproar without seemed to abate a little as the first fury of the mob died down. Probably their leaders were concerting fresh action. I went and knelt beside Master Bertie and made a rough examination of his wound. He had received a nasty blow on the back of the head, from which the blood was still oozing, and he was insensible. His face looked very long and thin and death-like. But, so far as I could ascertain, the bones were uninjured, and he was now breathing more quietly. "I think he will recover," I said, easing his clothes.

Anne was crouching on the other side of him. As she did not answer I looked up at her. Her lips were moving, but the only word I caught was "Clarence!" I did not wonder she was distraught; I had work enough to keep my own wits. But I wanted her help, and I repeated loudly, "Anne! Anne!" trying to rouse her.

She looked past me shuddering. "Heaven forgive you!" she muttered. "You have brought me to this! And now I must die! I must die here. In the net they have set for others is their own foot taken!"

She was quite beside herself with terror. I saw that she was not addressing me; and I had not time to make sense of her wanderings. I left her and went out to speak to the Duchess. Poor woman! even her brave spirit was giving way. I felt her cold hands tremble as I took the halbert from her. "Go into the room awhile," I said softly. "He is not seriously hurt, I am sure. I will guard this. If any one appears at the window, scream."

She went gladly, and I took her place, having now to do double duty. I had been there a few minutes only, listening with my soul in my ears to detect the first signs of attack, either below me or in the room behind, when I distinguished a strange rustling sound on the staircase. It appeared to come from a point a good deal below me, and, probably, whoever made it was just within the doorway. I peered into the gloom, but could see no one as yet. "Stand!" I cried in a tone of warning. "Who is that?"

The sound ceased abruptly, but it left me uneasy. Could they be going to blow us up with gunpowder? No! I did not think so. They would not care to ruin the gateway for the sake of capturing so small a party. And the tower was strong. It would not be easy to blow it up.

Yet in a short time the noise began again; and my fears returned with it. "Stand!" I cried savagely, "or take care of yourselves!"

The answer was a flash of bright light—which for a second showed the rough stone walls winding away at my feet—a stunning report, and the pattering down of half a dozen slugs from the roof. I laughed, my first start over. "You will have to come a little higher up!" I cried tauntingly, as I smelt the fumes. My eyes had become so accustomed to the darkness that I felt sure I should detect an assailant, however warily he might make his approach. And my halbert was seven feet long, so that I could reach as far as I could see. I had had time, too, to grow cool.

After this there was comparative quiet for another space. Every now and then a stone or, more rarely, the ball of an arquebuse would come whizzing into the room above. But I did not fear this. It was easy to keep under cover. And their shouting no longer startled me. I began to see a glimpse of hope. It was plain that the townsfolk were puzzled how to come at us without suffering great loss. They were unaware of our numbers, and, as it proved, believed that we had three uninjured men at least. The staircase was impracticable as a point of assault, and the window, being only three feet in height and twenty from the ground, was not much better, if defended, as they expected it would be, by a couple of desperate swordsmen.

I was not much astonished, therefore, when the rustling sound, beginning again at the foot of the staircase, came this time to no more formidable issue than a hail in Spanish. "Will you surrender?" the envoy cried.

"No!" I said roundly.

"Who are you?" was the next question.

"We are English!" I answered.

He went then; and there for the time the negotiations ended. But, seeing the dawn of hope, I was the more afraid of any trap or surprise, and I cried to the Duchess to be on her guard. For this reason, too, the suspense of the next few minutes was almost more trying than anything which had gone before. But the minutes came at last to an end. A voice below cried loudly in English, "Holloa! are you friends?"

"Yes, yes," I replied joyfully, before the words had well ceased to rebound from the walls. For the voice and accent were Master Lindstrom's! A cry of relief from the room behind me showed that there, too, the speaker was recognised. The Duchess came running to the door, but I begged her to go back and keep a good look-out. And she obeyed.

"How come you here? How has it happened?" Master Lindstrom asked, his voice, though he still remained below, betraying his perplexity and unhappiness. "Can I not do something? This is terrible, indeed."

"You can come up, if you like," I answered, after a moment's thought. "But you must come alone. And I cannot let even you, friend as you are, see our defences."

As he came up I stepped back and drew the door of the room towards me, so that though a little light reached the head of the stairs he could not, standing there, see into the room or discern our real weakness. I did not distrust him—heaven forbid!—but he might have to tell all he saw to his friends below, and I thought it well, for his sake as well as our own, that he should be able to do this freely, and without hurting us. As he joined me I held up a finger for silence and listened keenly.

But all was quiet below. No one had followed him. Then I turned and warmly grasped his hands, and we peered into one another's faces. I saw he was deeply moved: that he was thinking of Dymphna, and how I had saved her. He held my hands as though he would never loose them.

"Well!" I said, as cheerfully as I could, "have you brought us an offer of terms? But let me tell you first," I continued, "how it happened." And I briefly explained that we had mistaken the captain of the guard and his two followers for Clarence and the two Spaniards. "Is he dead?" I continued.

"No, he is still alive," Master Lindstrom answered gravely. "But the townsfolk are furious, and the seizure of the tower has still further exasperated them. Why did you do it?"

"Because we should have been torn to pieces if we had not done it," I answered drily. "You think we are in a strait place."

"Do you not think so yourself?" he said somewhat astonished.

I laughed. "That is as may be," I answered with an affectation of recklessness. "The staircase is narrow and the window low. We shall sell our lives dearly, my friend. Yet, for the sake of the women who are with us, we are willing to surrender if the citizens offer us terms. After all, it was an accident. Cannot you impress this on them?" I added eagerly.

He shook his head. "They will not hear reason," he said.

"Then," I replied, "impress the other thing upon them. Tell them that our swords are sharp and we are desperate."

"I will see what I can do," he answered slowly. "The Duke of Cleves is expected here to-morrow, and the townsfolk feel they would be disgraced for ever if he should find their gate held by a party of marauders, as they consider you."

"The Duke of Cleves?" I repeated. "Perhaps he may be better affected towards us."

"They will overpower you before he comes," Master Lindstrom answered despondently. "I would put no trust in him if I were you. But I will go to them, and, believe me, I will do all that man can do."

"Of that I am sure," I said warmly. And then, cautioning me to remain strictly on the defensive, he left me.

Before his footsteps had ceased to echo on the stairs the door beside me opened, and Mistress Anne appeared at it. I saw at once that his familiar voice had roused her from the stupor of fear in which I had last seen her. Her eyes were bright, her whole frame was thrilling with excitement, hope, suspense. I began to understand her; to discern beneath the disguise thrown over it in ordinary times by a strong will the nervous nature which was always confident or despairing, which felt everything so keenly—everything, that is, which touched itself. "Well?" she cried, "well?"

"Patience! patience!" I replied rather sharply. I could not help comparing her conduct with that of the Duchess, and blaming her, not for her timidity, but for the selfishness which she had betrayed in her fear. I could fancy Petronilla trembling and a coward, but not despairing nor utterly cast down, nor useless when others needed her, nor wrapped in her own terrors to the very exclusion of reason. "Patience!" I said; "he is coming back. He and his friends will do all they can for us. We must wait awhile and hope, and keep a good look-out."

She had her hand on the door, and by an abrupt movement she slipped out to me and closed it behind her. This made the staircase so dark that I could no longer distinguish her face, but I judged from her tone that her fears were regaining possession of her. "Clarence," she muttered, her voice low and trembling. "Have you thought of him? Could not he help us? He may have followed us here, and may be here now. Now! And perhaps he does not know in what danger we are."

"Clarence!" I said, astonished and almost angry. "Clarence, help us? Go back, girl, go back. You are mad. He would be more likely to complete our ruin. Go in and nurse the baby!" I added bitterly.

What could she mean, I asked myself, when she had gone in. Was there anything in her suggestion? Would Clarence follow us hither? If so and if he should come in time, would he have power to help us, using such mysterious influence, Spanish or English, as he seemed to possess? And if he could help us, would it be better to fall into his hands than into those of the exasperated Santonese? I thought the Duchess would say "No!"

So it mattered not what I answered myself. I hoped, now Master Lindstrom had appeared, that the women would be allowed to go free; and it seemed to me that to surrender to Clarence would be to hand over the Duchess to her enemy simply that the rest of us might escape.

Master Lindstrom returned while I was still considering this, and, observing the same precautions as before, I bade him join me. "Well?" I said, not so impetuously, I hope, as Mistress Anne, yet I dare say with a good deal of eagerness. "Well, what do they say?" For he was slow to speak.

"I have bad news," he answered gently.

"Ah!" I ejaculated, a lump which was due as much to rage as to any other emotion rising in my throat. "So they will give us no terms? Then so be it! Let them come and take us."

"Nay," he hastened to answer. "It is not so bad as that, lad. They are fathers and husbands themselves, and not lanzknechts. They will suffer the women to go free, and will even let me take charge of them if necessary."

"They will!" I exclaimed, overjoyed. I wondered why on earth he had hesitated to tell me this. "Why, that is the main point, friend."

"Yes," he said gravely, "perhaps so. More, the men may go too, if the tower be surrendered within an hour. With one exception, that is. The man who struck the blow must be given up."

"The man who struck the blow!" I repeated slowly. "Do you mean—you mean the man who cut the patrol down?"

"Yes," he said. He was peering very closely at me, as though he would learn from my face who

it was. And I stood thinking. This was as much as we could expect. I divined, and most truly, that but for the honest Dutchman's influence, promises, perhaps bribes, such terms would never have been offered to us, by the men who two hours before had driven us to hold as if we had been vermin. Yet give up Master Bertie? "What," I said, "will be done to him? The man who must be given up, I mean?" Master Lindstrom shook his head. "It was an accident," I urged, my eyes on his.

He grasped my hand firmly, and, turning away had come over the room since I had left it. The moon had risen and was flinging its cold white light through the twisted and shattered framework of the window, to fall in three bright panels on the floor. The torches in the street had for the most part burned out, or been extinguished. In place of the red glare, the shouts and the crash of glass, the atmosphere of battle and strife I had left, I found this silvery light and a stillness made more apparent by the distant hum of many voices.

Mistress Anne was standing just within the threshold, her face showing pale against the gloom,

'OH NO, NEVER!" CRIED THE DUCHESS. "WE WILL NOT GIVE YOU UP."

his face, seemed for awhile unable to speak. At last he whispered: "He must suffer for the others, lad. I fear so. It is a hard fate, a cruel fate. But I can do no more. They will not hear me on this. It is true he will be first tried by the magistrates, but there is no hope. They are very hard."

My heart sank. I stood irresolute, pondering on what we ought to do, pondering on what I should say to the wife who so loved the man who must die. What could I say? Yet, somehow I must break the news. I asked Master Lindstrom to wait where he was while I consulted the others, adding, "You will answer for it that there will be no attack while you are here, I suppose?"

"I will," he said.

I knew I could trust him, and I went in to the Duchess, closing the door behind me. A change

her hands clasped. The Duchess was kneeling by her husband, but she looked up as I entered.

"They will let us all go," I said bluntly; it was best to tell the tale at once—"except the one who hurt the patrol, that is."

It was strange how differently the two women received the news: while Mistress Anne flung her hands to her face with a sobbing cry of thankfulness, and leaned against the wall crying and shaking, my lady stood up straight and still, breathing hard but saying nothing. I saw that she did not need to ask what would be done to the one who was excepted. She knew. "No," she murmured at last, her hands pressed to her bosom, "we cannot do it! Oh, no, no!"

"I fear we must," I said gently—calmly too, I think. Yet in saying it I was not quite myself. An odd sensation was growing upon me in the

stillness of the room. I began on a sudden, I did not know why, to thrill with excitement, to tremble with nervousness, such as would rather have become one of the women than a man. My head grew hot, my heart began to beat quickly. I caught myself looking out, listening, waiting for something to happen, something to be said. It was something more terrible, as it seemed to me, than the din and crash of the worst moments of the assault. What was it? What was it that was threatening my being? An instant and I knew.

"Oh no, never!" cried the Duchess again, her voice quivering, her face full of keenest pain. "We will not give you up. We will stand or fall together, friend."

Give *you* up! Give *you* up! Ha! The veil was lifted now, and I saw what the something with the cold breath going before it was. I looked quietly from her to her husband; and I asked—I fancy she thought my question strangely irrelevant at that moment, "How is he? Is he better?"

"Much better. He knew me for a moment," she answered. "Then he seemed to sink away again. But his eyes were quite clear."

I stood gazing down at his thin face, which had ever looked so kindly into mine. My fingers played idly with the knot of my sword. "He will live?" I asked abruptly, harshly.

She started at the sudden question. But, brutal as it must have sounded, she was looking at me in pity so great and generous that it did not wound her. "Oh, yes," she said, her eyes still clinging to me. "I think he will live, thank heaven!"

Thank heaven! Ah yes, thank heaven!

I turned and went slowly towards the door. But before I reached it she was at my side, nay, was on her knees by me, clasping my hand, looking up to me with streaming eyes. "What are you going to do?" she cried, reading, I suppose, something in my face.

"I will see if Master Lindstrom cannot get better terms for us," I answered.

She rose, still detaining me. "You are sure?" she said, still eyeing me jealously.

"Quite sure," I answered, forcing a smile. "I will come back and report to you."

She let me go then, and I went out and joined Lindstrom on the staircase.

"Are you certain," I asked, speaking in a whisper, "that they will—that the town will keep its word and let the others go?"

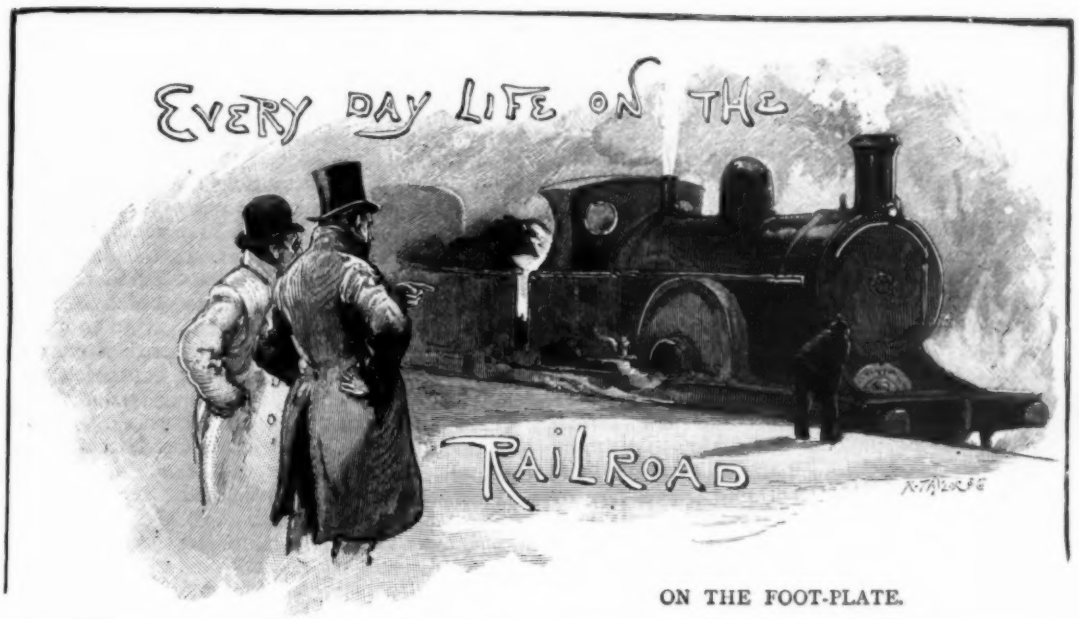
"I am quite sure of it," he replied, nodding. "They are Germans, and hard and pitiless, but you may trust them. So far I will answer for them."

"Then we accept," I said gravely. "I give myself up. Let them take me."

## Night and Morning.

Sleep, baby, sleep!
The greeny glow-worms creep,
  The pigeons to their cote are gone,
And to their fold the sheep.

Rest, baby, rest,
The sun sinks in the west;
  The daisies all have gone to sleep,
The birds are in the nest.



Sleep, baby, sleep!
The sky grows dark and deep,
  The stars watch over all the world;
God's angels guard thy sleep.

Wake, baby, dear!
The good glad morning's here.
  The dove is cooing soft and low,
The lark sings loud and clear.

Wake, baby, wake!
Long since the day did break;
  The daisy buds are all uncurled,
The sun laughs in the lake.

Wake, baby, dear!
Thy mother 's waiting near,
  And love and flowers and birds and sun
And all things bright and dear!

E. NESBIT.

ON THE FOOT-PLATE.

THERE are as many vehicles on the railroad in Britain as there are people in Gloucestershire, and as many engines to move them as—well, we cannot for the moment think of a town with 16,000 inhabitants, unless it be Taunton, which is not sufficiently well known for our purpose. These 16,000 engines, besides drawing over 50 tons a day apiece of minerals and goods, have each to drag some 1,300 passengers a day to or from duty, grief, or pleasure, and this they do with such safety and control that only one traveller in more than 90,000,000 is killed in a railway accident in the course of a year. Taking it as 90,000,000, and multiplying by the number of days in the year, we find that, when we trust ourselves to a British railroad, the chances that we reach our journey's end alive are as 32,849,999,999 to 1.

What the average speed may be can only be estimated, but it is remarkable that the faster we go the safer we are. Trains have been classified into expresses and otherwise; expresses being such as average over forty miles an hour. Into the express group come more and more trains every year. All years are not as free from accidents as 1889, yet there is a general tendency to decrease among the casualties as there is a tendency to increase in the average speed.

How fast does a train travel? To average it is easy enough—so many miles from station to station, so many minutes running the distance; nothing can be easier. But this gives no clue to the speed at any portion of the journey, the laborious toiling uphill, the free running on the level, the flying down the incline.

Last time we came out of the Box tunnel, a fellow-passenger informed us we were going 60 miles an hour. We were going fifteen. In about half an hour he again told us we were doing a mile a minute. So we were, and rather more, for we were going 65 miles an hour. It is curious what a charm there seems to be in this mile a minute, which is the rarest of speeds to run exactly. When the Midland engines are tried in the silence of the night, they are worked up to 75 miles an hour, and on the North-Eastern there is one engine at least which has accomplished 86 miles an hour; but of course no train is run at this rate from stop to stop. If we want speed we must try the Great Northern, and even on that, our fastest line, the average is but 54; though the 54 is obtained by an alternation of spurts and slows varying with the gradient of the road. Second in point of general speed is the North-Western, and third is the Midland. Let us take our example of running from the Midland, so as to have something in reserve in case we are accused of exaggeration. Here is the run of the Glasgow up-mail between Leicester and Bedford on a certain day last year, as checked by the watch. In this section of the line there are fifteen stations—Wigston, Glen, Kibworth, Langton, Market Harborough, &c.—and working out the time between each with the distance between each, the rate of travelling between each came out at 34⅘, 50, 55, 66⅔, 72, 47½, 58, 72, 79½, 75, 78, 57, 52, 64, 63 miles an hour; total, 49½ miles, done in 52 minutes 50 seconds, at an average of 57 miles per hour. This is not given as a best on record; it is probably a common achievement, and is merely a

sample of what is done in every-day work on what figures show to be the third fastest line in Britain.

The driver knows the time he has to pass certain places on the line, not necessarily stations or stopping stations; and he gets his rate from his speed indicator or from the quarter-mile posts. Take the number of seconds you are travelling from quarter-mile post to quarter-mile post, and divide 900 by it to find the number of miles you are travelling per hour. If the train takes 30 seconds between the posts, then 900 divided by 30 gives 30 miles an hour; if it takes 15 seconds between the posts, then 900 divided by 15 gives 60 miles an hour. The reason for this being that there are 3,600 seconds in an hour, which, divided by the number of seconds occupied in running a mile, will give you the rate; and therefore a quarter of 3,600 divided by the seconds occupied in a quarter of a mile will also give you the rate, with the use of fewer figures.

It is an exciting moment when the steam is first let into the new cylinders, and the completed engine is asked the question, "Will you go?" Oftenest she does go, and, being found to run all right on the loose pulleys, out of the shop she comes, one of the ugliest objects that enter the world. The patchwork of bright and dull and rusty metal, the daubs of lead colour and pink and white smears make her seem about twice the size she does when decently clothed in her many coats of paint. And of coloured vestments she has to don not a few before she appears in her professional costume at a public platform. First comes a coat of lead colour; then two coats of filling; then she is stopped and hard stopped, and rubbed down; then she has two more coats of lead colour faced with pumice stone between; and then she has two coats of the black, green, brown, yellow, or whatever it may be which is the distinguishing colour of the company to which she belongs. And with every coat she seems to get smaller and gain in good looks, until she becomes graceful enough to gratify the critical eyes of a Stirling, a Johnson, or a Webb.

An engine is essentially a combination of fire-grate, heating-surface, and cylinders; and on the proportion which these bear to one another depends her power and efficiency. Being the outcome of at least as much practice as theory, her construction offers a wide field for individual opinion. No two builders make an engine alike in either design or material. A visit to a company's works, as at Doncaster, and then to other companies' works, as at Derby, or Gateshead, or Swindon, or Crewe, and then to a private establishment, such as Beyer's or Kitson's, will considerably open the reader's mind as to the number of changes that can be rung in a railway engine on steel, cast iron, forged iron, sheet iron, galvanised iron, copper, bricks, gun-metal, asbestos, indiarubber, and wood. Yes, wood! and not oak, or ash, or elm for the framework, but unmistakable deal; and that inside the engine.

Go to Swindon, and you will learn that to keep the boiler and dome shielded from the outer air it is necessary for it to wear a jacket of non-conducting material, and that the non-conducting material there used is a cage of deal battens; so that at a certain stage in its growth a Great Western engine is "bound in boards," and looks as if it were packed for exportation. Over these battens comes the outer skin of sheet iron, which bears the paint, and which to most people is the boiler itself. The use of deal is not confined to the Great Western; but go to Derby, and you will find the boiler coated with galvanised iron, and lagged with asbestos or silicate cotton under the outer barrel; and elsewhere you will find something different again.

In one corner of Derby yard there is a store of what look like bell-topper hats; these are cast-iron chimneys upside down, with the wind-guard doing duty as a brim. In other works you will find that chimneys do not have wind-guards or caps, the idea that they turn aside the wind being laughed at; and probably you will find that the chimney is not made of cast iron at all. But you must not believe all you hear. One company has the reputation of making its engines entirely out of cast iron and lamp-black; but these materials are, of course, of the best quality, and, being mixed with brains, do remarkably well. Really, there is no engine which has not at least a dozen varieties of metal in its construction.

There are two chief kinds of railway engines—the simple and the compound. In the simple engine the cylinders are of the same size, and the steam is used only once; in the compound engine the cylinders are of different sizes, and the steam, after being used in one, passes into the other and is used again. In the Worsdell compounds there are two cylinders; in the Webb compounds there are three. The Webbs are used on the North-Western; the Worsdells on the Great Eastern and North-Eastern. A Webb is recognisable at a glance by the huge base of its low-pressure cylinder between the main frames in front, the connecting rod working on to a single-throw crank in the middle pair of wheels; the high-pressure cylinders being outside the frames, between the leading and middle wheels, with the connecting rods working on the trailing wheels. A Worsdell has the two cylinders in the usual position, either inside or outside the frame, though when they are inside one is generally higher than the other. In the engine we spoke of just now as doing her 86 miles an hour, the cylinders are of 20 and 28 inches diameter respectively, and the driving wheel is 7 feet 7½ inches in diameter; when she ran her 86 she had eighteen 6-wheeled coaches behind her, and was working at a pressure of 170 lb. per inch. The older engines have 18- and 26-inch cylinders. It was one of these (No. 117) which in the race to Scotland in 1888 did the last and fastest run, working up at times to 76½ miles an hour, and averaging over 57. The North-Western did not use their compounds to Edinburgh, the West Coast train being a light one; but they used them, and are using them still, on the Glasgow train, which is twice as heavy. It may be worth while to note that neither Mr. Worsdell nor Mr. Webb was the first to build a compound locomotive; as far back as 1852 there were two such engines running on the old Eastern Counties, designed by John Nicholson, a driver in the employ of that railway; and although Mr. Worsdell is now identi-

fied with the North-Eastern, it was at the Great Eastern works at Stratford, when under his management, that the new compounds first appeared.

It is claimed for the compound engine that it is economical to work and gives greater power. The new Worsdells are said to save 14 per cent. of fuel; the Webbs are said to save 16 per cent., which is a consideration to a company like the North-Western, using over 1,000,000 tons of coal a year. Not only is there a saving in fuel, but there is a saving in water; and as an engine travels with over 2,000 gallons in her tender, and annually evaporates 8,000,000 gallons, the smallest percentage is appreciable economy. Even the saving of scale from these millions of gallons is of enough importance to warrant the Great Northern stopping its trains at Grantham, where there is the finest engine-water in the world.

A Webb compound, such as the "Marchioness of Stafford," has a curious appearance broadside on, owing to the long slide, which looks like a new sort of coupling rod, though, of course, the wheels are uncoupled. The coupling rod, it may be well to point out, is the bar that works outside on two or more wheels and always remains horizontal—the bar, in fact, which the artist of a certain "family remover" invariably paints as a fixture on the axle-boxes, and which to many people is the most characteristic part of a locomotive's motion. When an engine has none of its wheels coupled it is said to be a "single"; when it has two pairs of wheels coupled it is said to be "four-coupled"; and a large number of engines, chiefly used for goods traffic, are "six-coupled." And, while we are on this point, it may be as well to say that "light engines" are simply engines without a train; "tank engines"—a very different thing—are engines without a tender, which carry their own water and coals, and are chiefly used for local work and station-to-station traffic. Long-journey engines have a tender which carries from 2,000 to 3,000 gallons of water and about five tons of coal. An express engine will weigh about 45 tons, the tender about 35—say, 80 tons the two—and as to cost, we can take the tender at £400 and the engine at five times as much. No wonder that the locomotive account runs into large figures, particularly at a place like Crewe, where a new engine comes out in replacement of an old one every fifth day; and where an engine can be erected complete, from the selection of the frame-plates to the going out under steam ready to work a train, all within 25½ working hours.

The travelling weight of engines and tenders has increased so much of late owing to the distances it is now found convenient to travel without a rest. In 1888 the North-Western ran its Scotch mail from London to Crewe, 158 miles, without a stop, and the Caledonian took the West Coast trains on from Carlisle to Edinburgh, 100¾ miles, from Carlisle to Glasgow, 102 miles, from Carlisle to Larbert, 110 miles, all without stops. At the same time the Great Northern was running the East Coast mail between London and Grantham, 105¼ miles, and the North-Eastern was running the 124½ miles between Newcastle and Edinburgh, as, indeed, it is doing now. This is at present the longest run in Britain; the longest run in England alone being the 124 miles between Nottingham and St. Pancras, on the Midland route.

The Midland engines travel this 124 miles in 152 minutes, taking 200 tons over a ruling gradient of 1 in 120 at a consumption of coal of 20 lb. per mile, which is one of the notable things in our railway work. Last time we were at Derby one of the "singles" to run this road was in the shop, brand-new, and just ready to move off to business. The contrast between her and the one we described when remarking on the ugliness of the thing of wheels and patches before she was passed as fit for service, was startling. New railway engines are familiar objects in exhibitions; here was one just ready to go to an exhibition, if needful, with all the latest improvements—steam-blast to drive the sand on to the track, side-lubricators with steam-blast so as to be oilable from the foot-plate, &c.—the metal as bright as a new gold watch, and the paint as brilliant as a sheriff's carriage.

But for a thoroughly workmanlike, elegant engine there is nothing to beat a new Great Northern. She rises so well on her bogie in her black and green livery; her 8-foot driving-wheel (it is 97 inches really) seems not an inch too large for her length, and, with the trailing-wheel, completes the curve so as to make her stand firm and light, and as though she would never leave the rail even when flying along it like the wind. Our engines get longer and higher in order to enlarge the boiler-capacity for long-distance steaming; and the longer and higher they get the better they stand these huge driving-wheels.

There was a time when the driver worked by contract, and found his own coal and oil. The driver of the Flying Scotchman would smile at the suggestion now, although not the least of his objects are to keep time and save the coal and oil—prosaic duties for the man in command of the East Coast Flyer. And he is the responsible man, notwithstanding all the theories and respectabilities about the importance of the guard. How often does the guard of the mail touch the brake in these quick days? Hardly ever. How often is he "sorting" when anything goes wrong? Generally always. As a matter of fact, the modern system of long runs and few stations throws all the responsibility on the driver.

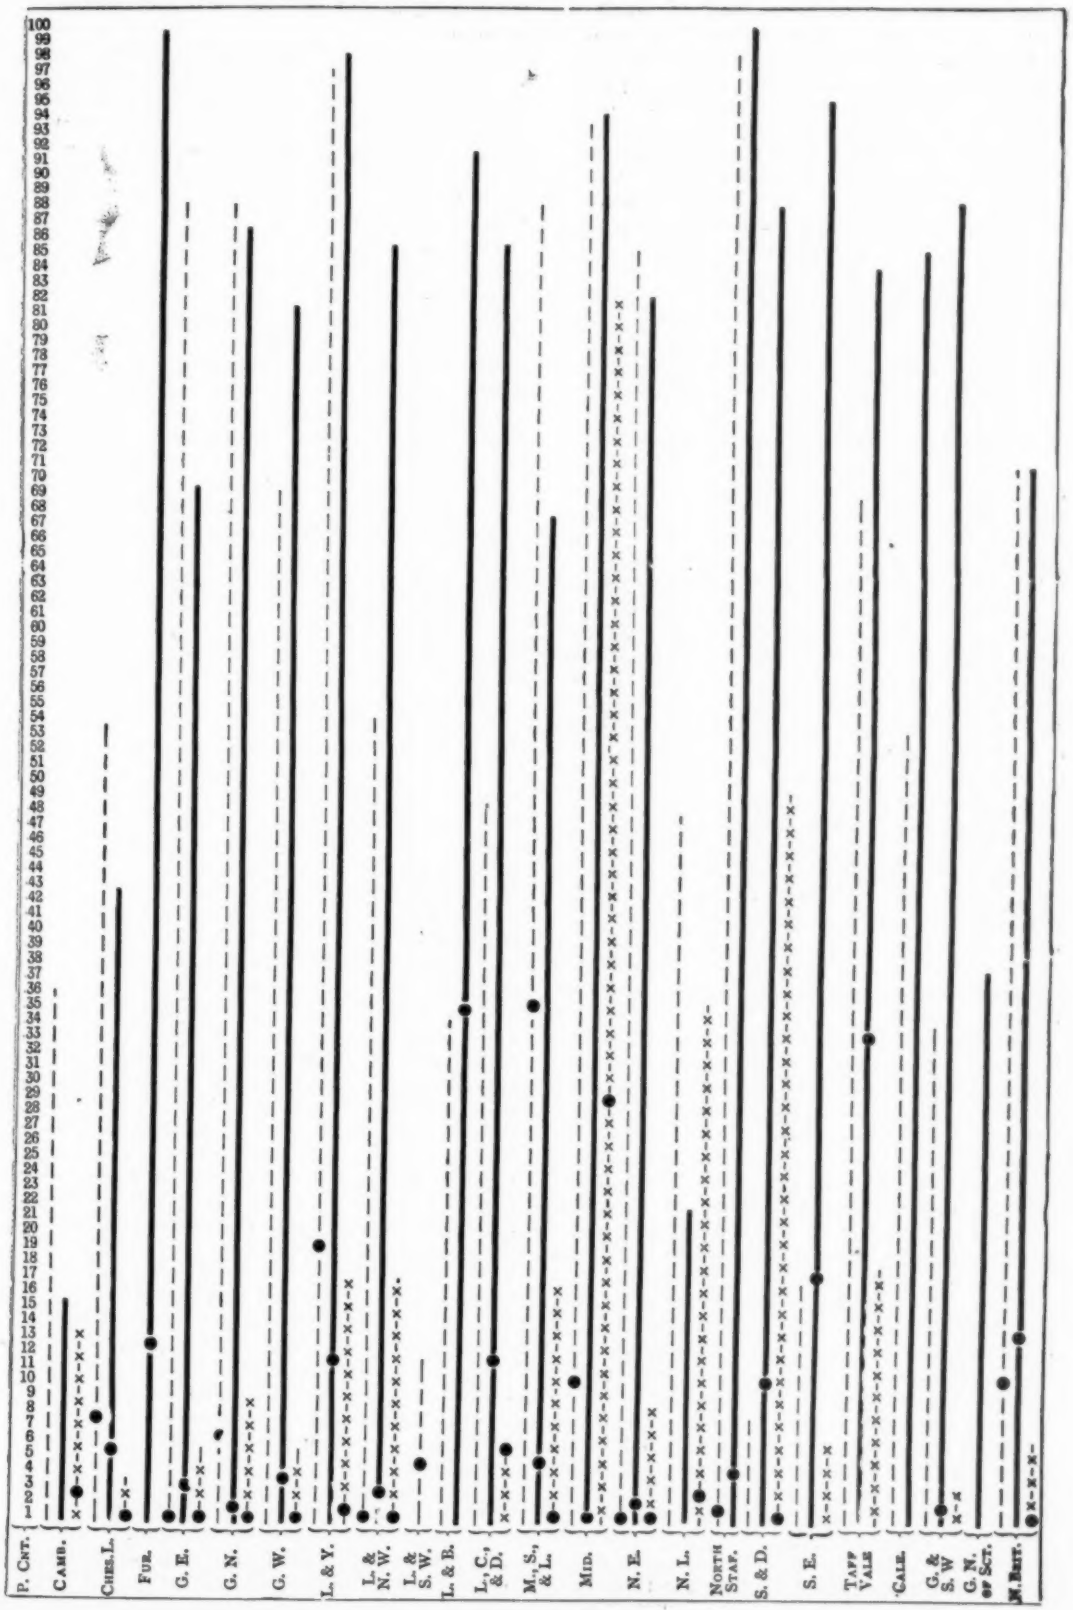
He must travel by sight and sound. Every bridge and tunnel and bank and cutting has its peculiar note, and what the bells are to the signalman these sounds must be to him. Above the piston's rhythmical beat, and amid the roar of the wind and the hiss of the rain, he must hear the whiff or rattle or clangour or boom that tells him where he is and the speed at which he runs. The rail may be damp, the coal may be poor, the wind may be high, but he must keep time. And his eyes must be all round him—on his indicators and gauges, on the road, on the signals ahead. It is no light responsibility to be in charge of a body of 200 tons moving at the rate of 90 feet per second!

And yet it all comes in the day's work; but what that work is, and the overwork, it is not so easy to say. Any statement as to the hours a railway man works requires as much qualification as one regarding the wages of the agricultural labourer. We

have to consider this thing and that thing and the other thing until we have whittled the statistics down almost to worthlessness. As throwing some light on the subject, a paper was recently issued by the Board of Trade, showing the general results in the case of certain classes of railway men who were on duty during the months of September 1889 and March 1890 for more than twelve hours at a time, or who, after being on duty more than twelve hours, were allowed to resume work with less than eight hours' rest. We have taken these results so far as they affect this island during one of the months, and arranged them graphically in the accompanying diagram, which, be it clearly understood, is not founded on private information or newspaper reports, but solely on the Government returns, obtainable by any one through any bookseller at the very moderate price of fivepence-halfpenny.

In this diagram we have dealt only with the more important lines employing more than a hundred engine-drivers each ; and we have taken only three classes of servants—goods guards, engine-drivers and firemen, and signalmen, the instances in which the passenger guard is worked more than twelve hours at a stretch being hardly numerous enough to warrant his inclusion. So far as the signalman is concerned, it is, we believe, generally admitted that he works all the hours he is booked for. He is in his box at work in the sight of all men. But in the case of the guards and enginemen a different state of affairs exists. In their case hours of "duty" are not neeessarily hours of "work," nor, on the other hand, are hours of "work" the same as hours of "duty." Every train sent out has to come back again—there can be no "up" without a "down"—and the interval spent in the sidings, terminal and otherwise, is not seldom a long one on an ill-managed line.

There are many who reasonably contend that these intervals should be deducted in any consideration of duty hours. As a case in point we have Mr. Hardy's excursion train introduced by him to the notice of the House of Commons. This train was three hours going to the seaside, nine hours in the sidings while the passengers enjoyed themselves by the sea, and three hours coming back—total, fifteen hours on duty, during which the driver had really nothing to do most of the time, and, like a sensible man, went off and enjoyed himself with the passengers. That is one case of "intervals" ; now for another on the other side. There are lines on which stopping goods trains are stated in the time-tables to be so many hours on the road, while as a matter of fact they are frequently hours and hours after time. It might be thought that the men would be paid for the time they are on the journey. Not so ; they are paid for the number of hours authorised in the time-table ; these are the "hours of duty," and it is these hours, and not the actual hours, which appear in the official returns. Here are two common disturbing elements in the matter of railway labour statistics ; there are others, but these will suffice.



Let us turn to our diagram and assume, for our present purposes, that the considerations balance each other so as to leave the official figures unshaken. Our first line is the Cambrian. Here, during March 1890, there worked for more than twelve hours at a stretch, 35·29 per cent. of the goods guards, 15·79 per cent. of the engine-drivers and firemen, and 13·88 per cent. of the signalmen. Of these signalmen 2·78 per cent. returned to work after less than eight hours' rest. In the case of the Furness line we have neither guards nor signalmen working more than twelve hours at a time ; but, curiously enough, all the enginemen work more than twelve hours, and 12·74 per cent. of them return to duty with less than an eight hours' interval, one man of the 204 doing two spells with only an hour's rest between them. On the Lancashire and Yorkshire we have 96·79 per cent. of the goods guards, 98·83 per cent. of the enginemen, and 18·72 per cent. of the signalmen working over the twelve hours ; and of them we have one signalman doing two spells with only an hour's rest. The London and South-Western has no engineman or signalman working over the twelve hours ; and only 11 per cent. of its goods guards come within the record. The Metropolitan possesses but three goods guards and does not overwork them ; in fact no member of its staff returns to duty with less than eight hours' rest ; the District is in the same category, with the exception that it has no goods guards at all ; we have, therefore, omitted them from our diagram. The Midland returns make matters out much worse than they really are so far as the signalmen are concerned, the hours over twelve being the night hours, which the men prefer to work straight on end, so as to get the advantage of shorter hours on the next shift of day duty ; and the instances of resumption of work at less than eight hours' interval occurring solely when the change is made from night shift to day shift, at which change the interval is five hours. The same remark applies to the Somerset and Dorset results.

Considering the statements which were made during the recent strike north of the Tweed, it cannot be said that the five great Scottish lines compare so very unfavourably with the lines in England and Wales. The Highland has no man working more than twelve hours at a time, and consequently does not appear on our diagram; the Great North works but 37 per cent. of its enginemen over the twelve-hour limit, and of these there are none recalled to duty after less than eight hours' rest ; the Glasgow and South-Western has only 13 signalmen out of 385 working over twelve hours a day, and but a third of the goods guards exceed the limit, and 89·61 per cent. of the enginemen, though only 2 per cent. of these last are deprived of their eight hours off duty. The Caledonian had only 3 men out of 3,021 returning to duty in less than eight hours, and of these 2 returned after six hours and one after seven; of signalmen there were none exceeding the twelve-hour period, but 85 per cent. of the enginemen, and 53 per cent. of the goods guards come within the record. The North British has a different story to tell. Of its 645 goods guards 455 worked

*** In the diagram on the next page Goods Guards are shown thus — — — —; Engine-Drivers and Firemen thus ▬▬▬; Signalmen ×–×–×–×–; and the percentage resuming work after less than eight hours' rest is shown thus ●.

# HOURS OF LABOUR ON CERTAIN BRITISH RAILWAYS.

**Percentage of Goods Guards, Drivers, and Signalmen Working over 12 Hours a Day in March 1890.**

more than the twelve hours, and of these 1 returned after two hours' rest, 1 after three hours, 4 after four hours, 11 after five hours, 37 after six hours, and 71 after seven hours. Of its 1,593 enginemen, 1,121 worked over twelve hours at a time; and of these 2 returned to duty after one hour's rest, 7 after four hours' rest, 36 after five hours, 156 after six hours, and 295 after seven hours. Of its 1,028 signalmen, 61 were at work for more than twelve hours; and of these 3 returned to duty after an hour's rest, 3 after two hours' rest, 6 after six hours' rest, and 25 after seven hours' rest. But under the recent scheme much of this will be altered.

Of Ireland we have said nothing in the diagram, as we have said nothing in these articles. It is the land of railroad curiosities. As a sample we will be content with the delightful line on which, according to our official returns, "traffic is suspended for one hour daily to allow men to get dinner."

But we left our Northern driver on the foot-plate, ready for his ride to York. There he will take his engine into siding to make room for the North-Eastern compound, which will continue the run to Edinburgh, where the North Britisher will come into possession and distribute the train beyond the bounds of punctuality. Of course there is much to be said in excuse of this inability to keep time north of the Tweed; there are difficulties, but the difficulties being of regular occurrence, and not of the nature of catastrophes, might surely have been dealt with before now. The general policy seems to be the making of it as difficult as possible to get out of Scotland, and the taking of the varnish off all the good work done south of Berwick and Carlisle. The wicked baronet who found the word Basingstoke so soothing to his agitated mind, would have appreciated the tale of those mushrooms at Waverley. When waiting wearily for the move, what hundreds have been told of the disused tunnel in which those mushrooms grow, and how thankful they have felt that so unexciting a subject of conversation should be provided by the forethought of the railway company!

But let us be off to Perth, and after a trial of its baths and dressing-rooms, enjoy the famous salmon breakfast, and then go out on the platform and watch the start of the Highland express. This is the most astonishing train in the island, and the strangest of monsters to meet as it comes climbing round a hillside with two engines in front and one behind. The way in which trains are made up south of the Tweed—on the London and South Western, for instance—is puzzling enough; but how the Highland "harlequin" gets together is a mystery. Here are from thirty to forty vehicles, representing, perhaps, a dozen companies—vehicles of all sorts, horse-boxes, carriage-vans, luggage-vans, saloons, composites, sleepers, all higgledy-piggledy—North-Eastern and North-Western and Great Western, North British and Midland and Brighton, Chatham and Dover and M. S. and L., North Stafford and Highland and London and South-Western, as if the agent of a firm of carriage-builders had come travelling north and brought his samples with him. No wonder that the Scottish trains are late when the staff to handle all this is insufficient; and no wonder that the three great north-going English lines are held accountable for the delay.

One great line we have that to a certain extent is independent of connections, and can consequently keep its own time. That line is the Great Eastern, and its punctuality is proverbial. It is a rising line—it had a good depth to rise from—and it is going ahead in many ways. Its introduction of the compound engine we have noted; now it is experimenting on fuel, and drives its engines with petroleum. And thereby hangs a tale. In making the oil-gas for lighting the carriages a thinnish tar is left as a waste product. This tar was run off by the Company into a Stratford stream. Down came the local authorities on the polluters, and the tar had to be got rid of in another way. How? Mr. Holden, the present locomotive superintendent, took to burning it in stationary fires, and from step to step advanced until he could use ordinary oil and run a "liquid fuel express." In this new kind of firing a thin layer of coals is kept on the bars, and on to this the petroleum is squirted in spray from steam injectors; the tender having two tanks, one for water, one for oil—with another to come, perhaps, as an extinguisher, when the first collision has revived the horrors of Abergele. But the Great Eastern is at the moment most talked about, not for these economies, but for the introduction of a superannuation system, to which all wish well.

A railway strike rarely succeeds because, in the first place, however low may be the wages and long the hours, the work is constant; the man knows what his work and pay are to be before he joins, and on every line are certain funds and superannuation allowances which put the service on much the same footing as the police and army and navy. On the North-Western, for instance, the salaried officers and clerks have their fund, the members paying sixpence in the pound on their salaries, and the company contributing the same amount as the members; the workmen at Crewe have a society of their own, and the engine-drivers and firemen and others of the running department have another society, and as the membership of these two societies exceeds 15,000, the locomotive branch is amply provided for; there is also the General Insurance Society to which every member of the wages staff except those mentioned above has to belong, the boys with wages under twelve shillings a week paying a penny a week, the passenger guards and brakesmen paying threepence, and the rest of the men twopence, the company adding five-sixths of the sum subscribed by the men, so that its income exceeds £30,000 a year; and there are the Provident and Pension Societies, now amalgamated, also with an income of £30,000 a year, due to the company's contributions and the penny or twopence a week from the men. As with the North-Western so is it with all the other lines, but as a rule the funds are special to different departments. The locomotive men have always their fund, but porters and more or less unskilled labourers are occasionally left out in the cold, not seldom owing to a percentage of them being of too limited a mental capacity to support anything but a "fighting" organisation.

One of these lines with no general fund for the rank and file was the Great Eastern, which employs over 16,000 men over twenty years of age at weekly wages ; but during the last few months a scheme has been introduced amongst them which gives a £5 pension for every penny a week subscribed, returns the money with 3 per cent. interest if the man retires, gives it him back with 4 per cent. interest and 75 per cent. bonus if he is ill, and doubles it, also out of the company's funds, if he dies.

But enough ; and yet one sentence more. Over and beyond these private funds there is a society which deals with all railway men irrespective of their employers, and is open to public support ; this is the Railway Benevolent Institution, on the Board of which are all the leading officials of the different lines, and which distributes over £14,000 a year in pensions and gratuities ; and if any readers have been indebted to these papers for taking some interest in those who earn their living on the railroad, they cannot more appropriately clear themselves of that indebtedness than by sending a guinea for the fund to the secretary, at 57 Drummond Street, Euston Square.

W. J. GORDON.

## SIR WALTER SCOTT AND HIS LITTLE FRIENDS.

ALL who have read the late Dr. John Brown's charming story of "Pet Marjorie" will remember the great Sir Walter's love and tenderness for children ; anything weak and helpless appealed to his noble and kindly heart. There is no more charming lesson book in the world than Scott's "Tales of a Grandfather," written originally for his little grandson, the delicate "Johnnie," of whom we have such frequent mention in Sir Walter's Journal, recently given to the public. The two following anecdotes may serve to illustrate his kind and fatherly way with children.

My great-grandfather's property was situated a short distance from Ashestiel, where Sir Walter lived before he built Abbotsford, and the two families were on very intimate terms. One of my grand-aunts, after a lapse of sixty years, loved to speak of his beaming smile, and the charming stories he used to tell her.

One day he came upon her unexpectedly as she was climbing a paling to cross a field on her way to visit her little friend, Sophia Scott.

"Trespassing, Maggie !" he cried. "What will the Shirra say !" (he was sheriff of the county at the time) ; then, seeing her dismayed look, he added with a smile, "But you ken that your father's bairns can never come by a wrong road to my house !"

My next anecdote belongs to a younger generation. Sir Walter was then settled at Abbotsford, and his name had become a household word throughout the land.

One day, my mother, then a little girl of seven, and her sister, were told that their aunts were going to take them over to Abbotsford, where a great man lived, one who wrote books. That was in itself sufficient, one would think, to strike awe into their childish minds ! And their grandmother gave them parting injunctions to remember what the great man said.

One can imagine the state of trembling excitement which they were in as they drove along in the great "chariot," all in their "best becomes," and how weary the little mites were before the eventful drive was ended, and the great building of Abbotsford came in sight ; and how awestruck they must have been when the "great man" came out to greet them, his noble head bowed down with age and trouble, and the weary toil after wealth, which always seemed to slip from his grasp just as he reached it ; and the two little girls in their short-waisted frocks and big bonnets, clinging to their aunt's kind hand, listening for the words of wisdom which were to fall from the great man's lips.

"And what did Sir Walter say, dears ?" asks grandmamma, on their return.

"He said 'that it was a fine year for the grass to grow,'" answers eleven-year-old Mary Anne, while the other little voice cheeps out—

"Oh, no, Mary Anne ; he said 'it was such a beautiful day, *Fine Ear* might hear the grass grow !'"

Sir Walter had alluded to some fairy tale, so little seven-year-old's memory was the best of the two !

Perhaps the true secret of Sir Walter's popularity with children was that his was such a pure and childlike nature, that children, always good judges of character, did not fear him, but found a reflection of their own natures in that of the great Wizard of the North.

# THE HANDWRITING OF OUR KINGS AND QUEENS

BY W. J. HARDY F.S.A

SECOND SERIES.

WITHOUT occupying much further space—for the matters treated of in the examples of royal handwritings to be given, naturally become of less historic interest as time goes on—we propose to resume [1] and complete in the present volume our series of illustrations of English royal handwriting.

## WILLIAM III AND MARY.

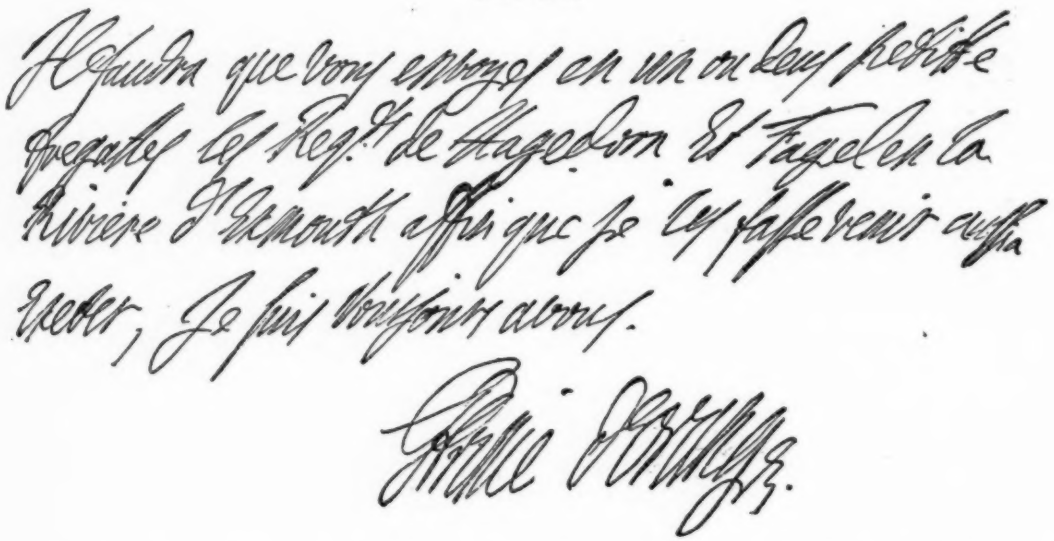
In the specimen which we gave of James II's handwriting, penned in August 1685, we saw him writing to his son-in-law with an evident absence of anything like suspicion. Whether or not that fearlessness was then well-founded, or at what particular time William of Orange began first to contemplate the invasion of England, are matters which would occupy too much time to discuss. No doubt the birth of James's son in June 1688, finally resolved him on hazarding the attempt.

William, accompanied by a considerable fleet and some 14,000 men, landed at Torbay from Helvoetsluys on the 5th of November following the date of the Prince's birth. The letter from which the extract below is taken is written in a firm bold hand. It is dated "Au camp de Torbay," on the day after landing, and is addressed to William's Admiral, Arthur Herbert, afterwards created Earl of Torrington, who tarried behind in Holland. William announces his safe arrival and intention of marching without delay upon Exeter, whither, as shown by the extract, he desires reinforcements from Holland to be sent.

*Translation. Original in French. British Museum. Egerton MSS. 2621, folio 39. See facsimile A.*

It is necessary that you send the regiments of Hagedorn and Fagel in one or two small frigates to the Exmouth River, in order that I may cause them also to come to Exeter.

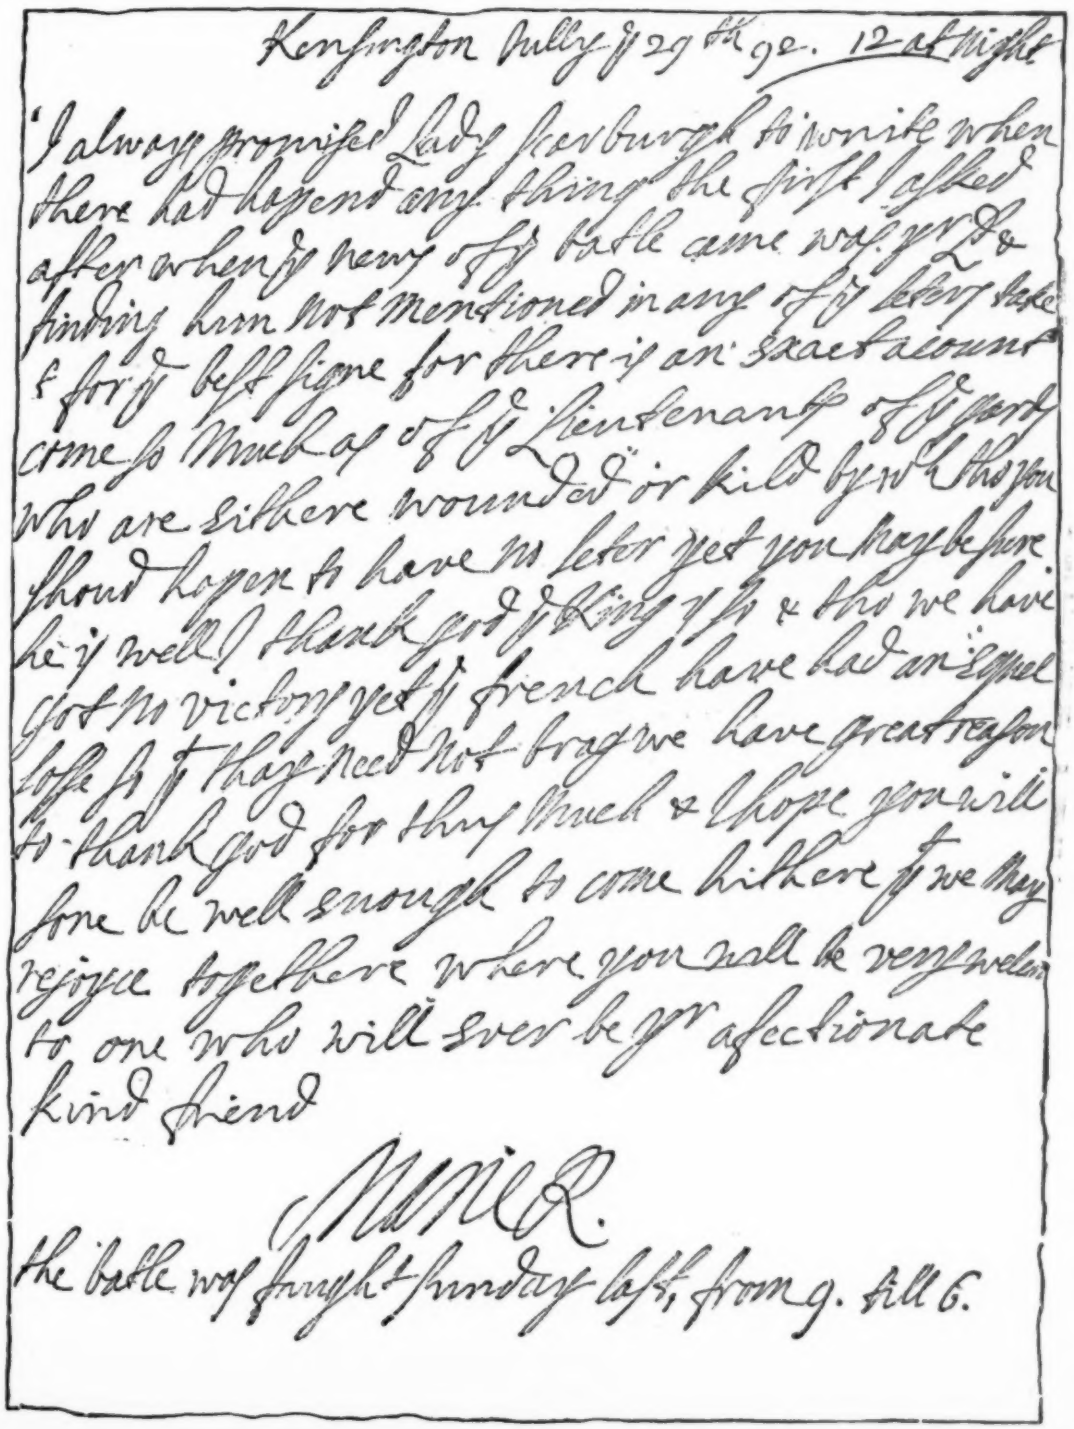
I am always yours,



GUILLAUME PRINCE D'ORANGE.

Below is William's signature as King of England. It is attached to a warrant dated at the commencement of the year 1689.

Early in 1692 William embarked for Holland to follow up the campaign against the French, which for some time he had been carrying on with but indifferent success. Affairs in England were, during his absence, left in the hands of the Queen, who gave evidence of her capacity for government by conducting them with tact and ability. The incidents of the year's campaign were equally unfortunate. At Steinkirk [or Enghein] William



*Facsimile A.*

[1] See "Leisure Hour" for 1889.

was defeated on Sunday, July 24, after nine hours' fight. The news reached the Queen at Kensington late on the following Friday, and she hastened to convey to her friend Lady Scarborough tidings of Lord Scarborough's safety. The letter, which is in the Queen's writing throughout, is interesting as an account of the defeat as it first reached England, and shows that the writer's mind was prepared for the possibility of a more serious disaster to her husband's forces: "tho we have got no victory yet y^e^ french have had an equal losse so y^t^ thay need not brag."

*Facsimile C.*

Kensington July ye 29th 90. 12 at night

'I alway promised Lady Scarburgh to write when there had happend any thing the first I asked after when ye news of ye battle came wch yr L^d^ finding him not mentioned in any of ye letters sent for ye best signe for there is an exact account come so much as of ye Lieutenants & Ensigns who are either wounded or kild by wch thos you should hopen to have no leter yet you may be sure he is well I thank God for it & tho we have got no victory yet ye french have had an equel losse & thay need not brag we have great reason to thank God for thy much & hope you will soone be well enough to come hithere & we may rejoyce togethere where you shall be very welcom to one who will ever be yr affectionate kind friend

M R.

the battle was fought Sunday last, from 9. till 6.

*Holograph. Original at the British Museum. Additional MSS. 20,731, folio 2. See facsimile C.*

Kensington Jully y^e^ 29^th^ 92. 12 at Night.

I always promised Lady Scarburgh to write when there had hapen'd any thing. The first I asked after when y^e^ news of y^e^ battle came, was y^r^ L^d^ and finding him not mentioned in any of y^e^ letters, take it for y^e^ best signe, for there is an exact acount come so much as of y^e^ Lieutenants of y^e^ Gards who are either wounded or kild by w^ch^ tho you should hapen to have no letter yet you may be sure he is well. I thank God y^e^ King is so, and tho we have got no victory yet y^e^ french have had an equal losse so y^t^ thay need not brag. We have great reason to thank God for thus much, and I hope you will sone be well enough to come hither y^t^ we may rejoyce together where you will be very welcom to one who will ever be y^r^ afectionate kind friend.

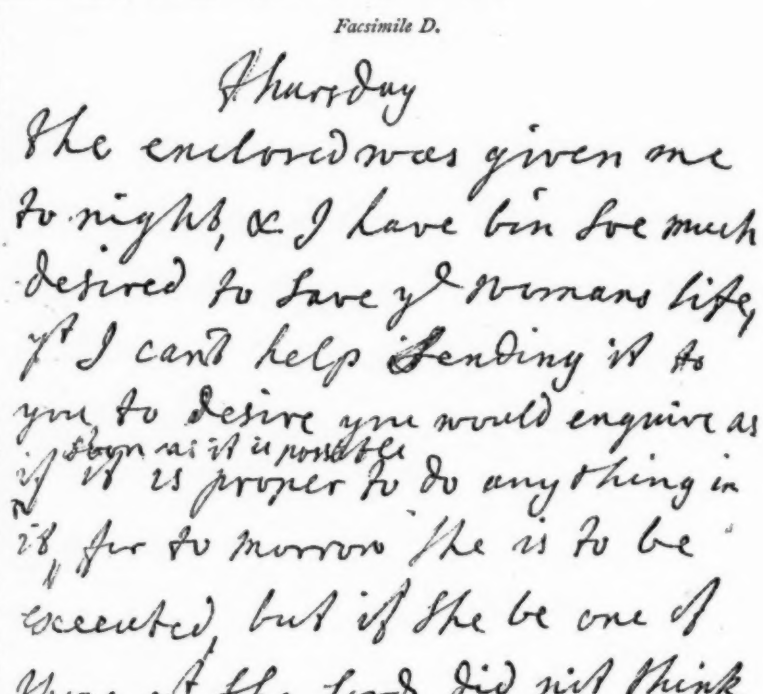
MARIE R.

The battle was fought Sunday last, from 9 till 6.

## ANNE AND GEORGE OF DENMARK.

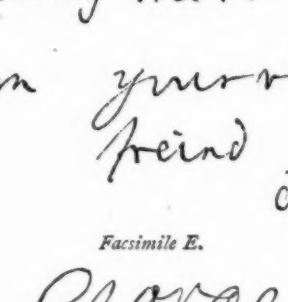
Hume tells us that the middle-statured lady whose effigy presides at the top of Ludgate Hill earned for herself the title "Good" as much from indolence and weak understanding, as from "any active principle of benevolence." Be that as it may, in the following letter, written in 1703 to the Earl of Nottingham, we see her bestirring herself in the interests of some poor woman who on the morrow was going to pay the penalty of the law. The Queen's appreciation of her Secretary of State's sound judgment is shown in this letter:

*Holograph. Original at the British Museum. Additional MSS. 29,548, folio 37. See facsimile D.*



Thursday

The enclosed was given me to night, and I have bin soe much desired to save y^e^ woman's life, y^t^ I cant help Sending it to you to desire you would enquire as soon as it is possible if it is proper to do anything in it, for to morrow she is to be executed, but if she be one of those y^r^ the Lords did not think a fitt object of mercy, when Mr. Recorder made his report, I have nothing more to say for her, I am your very affectionett freind



ANNE R.

Queen Anne, at the instigation of her uncle, Charles II, married, in 1683, George, Prince of Denmark; he died in 1708. His signature appears below (Facsimile E).

*Facsimile E.*

*British Museum. Additional MSS. 28,094, folio 184^d^.*

# LEAH AHLBORN, THE SWEDISH ENGRAVER.

AMONG the remarkable women whom Sweden has produced during the present century, few stand higher than Leah Ahlborn.

Her maiden name was Leah Lundgren; her father was a distinguished engraver, who held the position of Engraver to the Royal Mint in Stockholm. Her mother was originally a Jewess, and suffered great persecution from her own people when she embraced the faith of "Christ crucified" and forsook that of ancient Israel. She also was a person of great talent and intelligence, and her children all inherited the tastes and talents of their parents.

Leah Ahlborn's brother, Peter Lundgren, was a young man of great artistic ability, and had prepared himself in every way to succeed his father as Engraver to the Royal Mint. He was fired with the noble ambition to excel in his art, and spent some years in Paris, studying under the guidance of the first artists. During this time he produced a medal of the famous singer, Jenny Lind, which gained a first prize at the Paris Exhibition of 1856. To the great sorrow of all his friends, he died at an early age. The award of the Paris prize was made after his decease.

The Royal Mint in Stockholm is picturesquely situated on the shores of Lake Mälar. It covers a considerable area, and is surrounded by lofty trees. Several houses occupied by the officials of the Mint stand within the enclosure.

The place possesses peculiar charms for the writer, as a considerable portion of her early life was spent there, when her father held the post of Chief Director. It is only natural, therefore, for her to bend her steps thither on every occasion of visiting Sweden, and the same gate-keeper keeps watch and ward at the entrance. She never has failed to salute me by the old name once so familiar to her, forgetful of the fact that it has been changed many a year ago.

Leah Ahlborn was born in Stockholm on February 28, 1826. After her preliminary studies were finished, she attended the Academy of Arts in Stockholm by the special permission of Professor Quarnström, the director. The Academy of Arts in Stockholm was not at that time open to female students.

She received, even in those early days, much encouragement from the writer's father, who recognised her genius, and urged her to persevere in her studies. He helped her in many of the details of an engraver's art. She has ever expressed herself thankful for his kindness at that critical period, and has frequently stated how her success was due altogether to encouragement then afforded. It was in those days a novel idea for ladies to have any aspirations beyond household duties and family life.

When Professor Quarnström moved to Paris in the year 1850, he invited Leah to follow him there in order to continue her studies under his guidance. She followed his advice, and went to Paris the following year, 1851. In that great capital she had peculiar opportunities to improve herself, under

the instruction of such artists as M. Toussain, the sculptor, in whose atelier she studied modelling. She also continued her studies in engraving under the famous M. Chevalier, engraver of arms and heraldry, and also under M. Barr, Engraver to the French Mint. Leah's uncle Solomon was also an engraver, and under his direction she engraved on cameos the portraits of the then Crown Prince Charles (afterwards Charles XV), and of Prince Gustaf, which were afterwards purchased by the Royal Family of Sweden.

Leah Lundgren was married in April 1854 to Herr Carl Ahlborn, who was also an artist of reputation, and has performed a great work in Sweden by setting on foot the technical schools, now known under the name of "Slöjd" schools, which were warmly supported by Baron Alfred Fock and others.

Leah Ahlborn was appointed in the year 1855 Engraver to the Royal Mint in Stockholm upon the death of her brother, Peter Lundgren, for whom she had most successfully acted as substitute during his protracted illness. The result of the appointment has abundantly proved that no better

selection could have been made. Since that time, during a period of thirty years, she has fulfilled all the duties of that arduous office, with exemplary industry and success, and has gained for herself a high and honourable name as an artist, both in her own land and in other countries. This is manifest from the number of distinctions which she has received. In 1863, King Charles XV of Sweden presented her with the gold medal "Litteris et Artibus."

The Grand Duke of Mecklenburg-Schwerin in 1871 gave her the medal "Für Wissenschaft und Kunst." The most honourable of all her distinctions was the large gold medal presented to her in 1883, "Illis quorum meruere labores," for distinguished services to the Government during thirty years. This decoration is worn round the neck, suspended by a blue and gold band.

The "Leipziger Illustrirte Zeitung" of August 23, 1884, describes Fru Ahlborn in the following complimentary terms: "Fru Ahlborn, Engraver to the Royal Mint in Stockholm, is a specialist in her art. This lady is mistress of the art of engraving. The medals which she has produced during the last thirty years testify to her high artistic qualifications. Fru Ahlborn is a member of the Swedish Academy of Arts and Sciences, and has been decorated by the King of Sweden in acknowledgment of her artistic works."

Leah Ahlborn has received the distinction of being elected honorary member of the following learned societies:—The Imperial Academy of Arts in St. Petersburg in 1878, the Numismatic and Antiquarian Society of Philadelphia in 1879, the Royal Academy of Arts in Stockholm in 1881, the Numismatic Society of Boston in 1879, the American Numismatic and Archæological Society of New York in 1885.

Some idea of her numerous works may be gathered from the following facts, communicated to the writer during a visit to her in Stockholm, during the meetings of the Oriental Congress held last

COMMEMORATION MEDAL OF THE FOUR HUNDREDTH ANNIVERSARY OF UPSALA UNIVERSITY

September. During the first eight years after her appointment as engraver to the Royal Mint in Stockholm, she seldom took more than three or four hours' sleep at night, as she had to design stamps which could not be imitated or falsified, for nearly all the different departments of the State. She was so successful in her inventions in that direction that the same stamps have been in continuous use during the long period of thirty years. She has trained several pupils in the art of engraving who afterwards have assisted her in the mechanical parts of her work. The artistic portion has, however, always been performed by herself.

Mrs. Ahlborn has designed and engraved no less than 300 medals, not only for learned societies in Sweden, but for many countries in Europe.

In the year 1883 she had the honour of being entrusted with designing the Jubilee medal struck by the city of New York in commemoration of the liberation of the United States of America. The

medal depicts Washington taking his oath to the Constitution. She has designed medals for four kings of Sweden: Charles XIV, Oscar I, Charles XV, and Oscar II; and for several queens: Queen Josephine, Queen Louise, and Queen Sophie; also a medal in commemoration of the marriage of the Crown Prince Gustaf with Princess Victoria of Baden.

The largest medal ever struck in Sweden was that designed by her in commemoration of the silver wedding of King Oscar II and Queen Sophie in 1886. The Jubilee medal struck at the 400th anniversary of the University of Upsala was also her work. She executed for Norway the Coronation medal, representing Charles XV in his coronation robes. She has made all the stamps for the gold coins issued in Norway, as well as for all the current coins in Finland.

Leah Ahlborn's great energy and power of work has also found a field of operations in designing medals for a large number of private persons in Sweden, Denmark, and America, which have been executed in silver and bronze.

Fru Ahlborn has been twice offered appointments in other lands. She was invited to settle in England and also in Finland. Charles XV and Oscar II, however, urged her to remain in her native land, and as she had a large family she did not like her children to be brought up in a foreign country. Hence she has remained in Sweden, although her emoluments there are comparatively small.

Her eldest daughter was the first lady in Sweden who obtained the degree of Master of Arts in the University of Upsala.

## FRANCE.

### PART II.

M. CLÉMENCEAU.
(*From a photograph by Nadar.*)

NEVER yet Prime Minister, but among the most conspicuous and influential of French statesmen, is Clémenceau. Georges Benjamin Clémenceau belongs to a Vendée family. He came to Paris as a medical student, but turned his attention at once chiefly to politics. After a rapid journey to America to study the institutions of that commonwealth, he came back to Paris, and took up his abode between Montmartre and Belleville, in order that he might live right in the very midst of revolutionary Paris. He soon gained a rapid popularity among his obstreperous neighbours, and found himself among the new men called to the front by the events of September 4. At that time he was twenty-nine, but was nevertheless elected to be mayor of his arrondissement, though he had neither services nor titles to show. His first move was in the direction of laicising the schools; his first misfortune, the assassination in his arrondissement of the Generals Lecomte and Clément Thomas. He has often been accused of complicity, and has as often pleaded his innocence, or rather, his impotence.

It was in October 1876 that he first became member of the Chamber. At the Municipal Council of Paris, whence he issued, his influence had been preponderant. He had incarnated in his person Radical and Revolutionary Paris, and he entered the Chamber in the same quality. He would, no doubt, have made himself remarkable at once, had not Gambetta at the time been covering every one by his shadow, and M. Clémenceau, willy-nilly, had to resign himself to walk under that shade. He became the lieutenant under this captain, and was at the beginning an obedient and submissive subordinate.

In his appearance, M. Clémenceau has something of the character of a Puritan of Cromwell's Court. He is a middle-sized man, thin, with a big, bony head, straight, thick eyebrows, and deep-set, twinkling eyes. To those who look closer at the face it bears traces of continual effort and premature fatigue, traces of a something which might be politely qualified as scepticism. When he speaks his voice is sharp and his words short, his gestures are decisive, and, even when his face is in movement, his delivery remains calm.

In the tribune he is a powerful antagonist. Just as in his exterior appearance there is an affectation of calm and austerity, so in his speeches there is an appearance of the most rigid precision—an appearance with which he deceives himself and others. He starts in his political conceptions from three or four *à priori* ideas which other men might account unproved, and which he pushes relentlessly to their logical conclusion. A Frenchman has said that Clémenceau's chain of reasoning, which looks so logical and strong, is tacked on to a rotten old stake; strike that, and the chain comes away in your hand. The criticism is characteristic, though not always applicable. He is the theologian of a theology without God, or, if we may coin the word, the demologian of democracy raised to the level of a dogma. Masterful and authoritative with his colleagues, he is all honey and flattery with his electors—flattery of the grossest and vulgarest kind, calculated to catch the suffrages of the mob. According to him, the upper classes are corrupt, vile, grasping; the people alone is lofty, grand, pure, impeccable, the source of all light, and all right. According to him, all those who think with him are good and loyal Republicans; all others are traitors—he has no gentler word to bestow. Probably he is not singular in thus dividing the world of politics.

When MacMahon formed the Rochebouet Ministry, the so-called Ministry of Resistance—which resisted three weeks—the Republicans leagued themselves together, and answered by appointing a committee of eighteen members, whose duty it was to watch MacMahon, and avert a monarchical reaction. Clémenceau was one of the eighteen. This committee became a

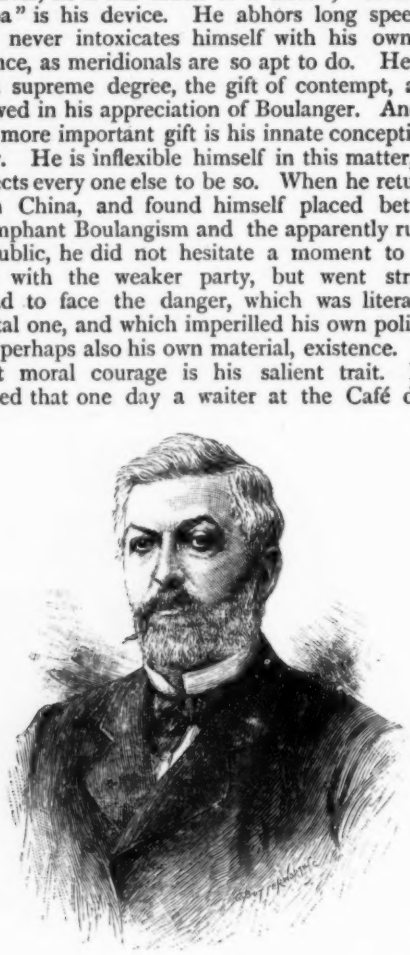
regularly organised, parliamentary counter-government, in which, for a moment, all party differences were laid aside. Its decisions were secret, and remained inviolate until the moment appointed by the Chamber for putting them into execution. M. Grévy declared this manner of forcing MacMahon unconstitutional, and even insurrectional; but the eighteen had so decided it, and the House followed them to the end. The task in which he was employed was one thoroughly congenial to Clémenceau's temperament. There is nothing he seems to enjoy so much as overturning a ministry, and he boasts that he has overturned more ministries than any other man now living in France.

In his opinion a necessary evolution must give the power to each faction of the Republican party in succession. Needless to say that each has considered itself the last term in this evolution. While Gambetta would have stopped this translation of power at his own group, Clémenceau went further, and imagined it to be meant for him and his. When the Waddington Ministry fell, Clémenceau said: "Now it is Gambetta's turn, and then it is mine."

He was at the time the proprietor of the newspaper "La Justice," and besides this, in the clubs, in the corridors, in the House, he ceaselessly laboured to prepare the way for his own aggrandisement. By the proposal of a law on landed property by which no one was to be allowed to possess more than five hectares, he curried favour with the Red Republicans of Montmartre, Charon, Belleville, and Menilmontant. When Gambetta died, Clémenceau flattered himself that the greatest obstacle to his political career had been removed. But Ferry was tough, and, moreover, M. Grévy disliked Clémenceau, and never thought of calling the Extreme Left to office.

It would almost appear as if it was wounded vanity at not being able to come into power that caused M. Clémenceau to try and obtain it by indirect means. It was he who invented that disgrace of contemporary France, Boulangism—that is to say, the upraising of a man of straw to pose as the liberator and regenerator of France. It is said that he arrived at this by the following mode of reasoning: Gambetta's popularity helped the reputation of the army, and the reputation of the army helped Gambetta's popularity. He (Clémenceau) had no National Defence in his earlier history, he had never organised and directed armies, he was too much of a civilian. Willingly he would have exclaimed with Robespierre: "If only I understood something about these military matters, would not I do without the military!" As he could not do without, he wanted to have one of those plumed heroes devoted to him, one whose popularity should complete his own, one who would remain docile and submissive, and should be the sword of the democracy, as he (Clémenceau) was its head. For France, with its love of show and pomp, journalists were not enough; a sabre was wanted.

It was indeed a bad hour for France when M. Clémenceau forced General Boulanger, as Minister of War, on the weakness of M. de Freycinet, his relative. It is a matter of history how M. Clémenceau's foolhardy venture very nearly became a shameful one; he woke up, only just in time, from his fool's paradise to perceive that his General was borrowing *prestige* from him, giving him none in return. Then he was among the first to turn upon "the man on horseback." But it was not he, but Constans, who saved France from that iniquity.



In a word, if, after twenty years, the French Republic is still a party, and not an unquestioned Government; if this party itself be split up, as it is, into four, five, six factions; if the Constitution which has restored a little order to France be in danger of falling; if an immense amount of energy and goodwill has been expended in vain; if ill-intentioned persons have found easy opportunities of doing harm; if there is rarely a majority in the Chamber; if the parliamentary morals and customs of which it has been the scene have become acclimatised in France, greatly to her discredit in Europe,—a large measure of the responsibility must be attached to M. Clémenceau. Just as he was more highly gifted he is the more guilty,—guilty of what he has done, and of what he has prevented being done.

In private life M. Clémenceau is most charming, always ready, if possible, to grant a favour, and endowed with considerable æsthetic perceptions and much artistic good taste.

The strongest man in France at the present moment, and the man of whom the world will probably hear a good deal more in the future, is M. Constans, Minister of the Interior. The son of an officer of the First Empire, he was born, in 1834, at Toulouse, of a father who once had been rich, but who lost his fortune before his son was started in life. The son took his legal degree at the age of twenty-two, but, despising the law, he became a railway contractor, a profession in which he ruined himself, despite his great activity and enterprise. At the age of thirty-two he returned to his legal studies, and after four years the railway contractor became Professor of Roman Law at Toulouse, then National Councillor, finally Deputy, Minister, and Governor of Indian China. On returning to France from his post of Governor-General, a friend asked him, in June 1888, what he thought of Boulangism, which at the time was at its height. "I will tell you," replied Constans, "when I have seen the man." A fortnight later he had seen the man, and said to his friend: "Boulanger is hollow; Boulangism is a big practical joke." Nevertheless, at that moment the practical joke was taking alarming proportions, and everybody in France, and many persons in Europe, were convinced that it would prove successful. Even the Government, influenced by the surrounding atmosphere, was wavering and breaking up; resistance seemed useless, defeat certain. And yet Boulanger was conquered, and it is to Constans in largest measure that this is due. He saved the Republic, and saved France from a danger that would have been an ignominy. At the moment that Boulangism was at its apotheosis, Constans alone shrugged his shoulders, and said: "You will see the new Chamber will count 362 or 365 Republicans." It counted 366.

Like many another eminent Frenchman, Con-

stans is a Southerner, and has many of the Southerners' peculiar qualities. Unlike a Southerner, however, he is not much of a talker; "Acta non verba" is his device. He abhors long speeches, and never intoxicates himself with his own eloquence, as meridionals are so apt to do. He has, in a supreme degree, the gift of contempt, as he showed in his appreciation of Boulanger. Another and more important gift is his innate conception of duty. He is inflexible himself in this matter, and expects every one else to be so. When he returned from China, and found himself placed between triumphant Boulangism and the apparently ruined Republic, he did not hesitate a moment to take side with the weaker party, but went straight ahead to face the danger, which was literally a mortal one, and which imperilled his own political, and perhaps also his own material, existence. But great moral courage is his salient trait. It is related that one day a waiter at the Café de la

M. CONSTANS.
*(From a photograph by Ladrey.)*

Paix came to tell him that he had overheard Boulanger say: "If I don't kill Constans, he will kill me." "Really," replied Constans, "that is the only sensible remark of Boulanger's I have ever heard." Certainly, Constans is not the kind of man to kill any one. It has been acutely remarked that there is much more of the fisherman than of the gunner in him. He perceives his prey, throws in his line, gently plays with his fish, draws him up and down stream, and then, just when he might land him and finish him, he stops. He prefers making his adversary disappear rather than kill him. In Boulanger's case it were hard to say whether Constans' cleverness or Boulanger's stupidity were the chief instruments that brought about success. But certainly, Constans is a great tactician. He never drops a card unless it is a bad one, and then in order that some one else may pick it up. His whole strength lies in his psychological perceptions; he has a keen intuition of the human soul with which he has to deal. Gambetta used to attack situations, Constans attacks men. He acts on principle, although he is accused of having none. The professor of law is still strong in him; he proceeds by regular phrases, each beginning, "Seeing that," &c., and in his calculations he is scientific as well as calculating. "If this is equal to that, such-and such a result must be brought about by such-and-such a combination." He never speaks or acts unless he is thoroughly convinced, and his conviction is so strong that it magnetises others and convinces them too. Herein lies his main strength; his will is a magnet, and by it he has magnetised France. His great firmness in office, his cleverness in administration, have given him the supremacy which he undoubtedly holds at the present moment. Nevertheless, it must not be for one moment supposed that he is popular. Like Jules Ferry, he enjoys the hatred of the masses, and is accused of the most infamous and dishonourable crimes.

Constans is a successful man in society, and much beloved of his convivial friends. He is a member of the club called "La Luscrambo" (a provincial word meaning glow-worm), much frequented by meridional artists. Billiards, however, are more in honour at this club than politics. In appearance Constans shows no great character; his face is not remarkable, it is only his eyes that betray his power—fine, grey Southern eyes, of which it is difficult to read the hidden meaning. They constantly convey an impression of being shut and seeming tired, and they avoid meeting a direct gaze. His general aspect is that of a *bonhomme*, as the French would say. His enemies declare that he looks like a grocer. He has a most marvellous memory, and can repeat books that he has read from cover to cover. He has also an astonishing memory for music; but with regard to this it is jokingly said that his memory is Italian—he can recall all the words and music of an Italian opera, but he cannot remember a single French air. Like many men of the South, he is very superstitious; he is afraid of sitting down thirteen at table, and always, they say, puts a piece of old iron under his chair to keep away evil influences. Since he came into office there has certainly been a notable change in the direction of French politics. His clear-sighted determination has been of immense value to the tranquillity of the State, and, so long as he holds the authority of Government, it is likely that the Third Republic will be able to continue its existence.

With M. Constans we close the list of the leading statesmen of modern France; but there remain a large number of minor men who are also making their mark upon the course of events. We will mention a few of the most prominent.

In 1888 Charles Thomas Floquet was President of the Council. He, like so many of his compeers, began his career as a lawyer, passing from jurisprudence to journalism. He is to this day a contributor to the "Temps" and the "Siècle." His distinguishing feature when in office was that he was willing to let everything go, and to insist on nothing—the very contrary of M. Constans, who knows what he means and intends to do it. Like

so many of his countrymen, also, he is enamoured of words, and, above all things, of epigrams, by which he is ever seeking to make effects. A few of these will always remain attached to his name, as, for example, his address to Boulanger: "At your age, M. le Général Boulanger, Napoleon was already dead, and you will be nothing but the Sièyes of a stillborn Constitution;" or his apostrophe to Monsignor Freppel: "You bishops, are the prefects of the Pope." M. Thiers was in the habit of saying, in order to excuse his redundancies of speech: "It is not too much to repeat the same thing twice; the first time that one says it, it is for intelligent people, the second time is for the fools, and these are in the majority outside the Chamber—and even inside." M. Floquet has not much regard for fools; he does not repeat his epigrams. His enemies say that he has ticketed himself as "incorruptible like Robespierre, and handsome like Saint Just"—at least, his enemies declare that he has so labelled himself; and they go on to add that from that moment he has been the captive of the Revolution, and has walked all his political life, like a sandwich-man, between two boards, on one of which was painted Robespierre, and on the other Saint Just, his own head only appearing vaguely above the boards, and presenting a forced resemblance to a rather artificial Danton. His dominant hobbies are a revision of the Constitution, in order to give more power to universal suffrage, and a new system of taxation which should bring about a fairer distribution of imposts. The men whom he managed to group around him were moved much more by a suspicion of Boulanger than any sympathy with Floquet; and now that Boulanger is dead, it is possible that Floquet, too, may subside into oblivion.

Another man whom the disappearance from the scene of Boulanger has also largely deprived of his political *raison d'être* is M. Alfred Naquet, the man who was the brain of the gallant General, who wrote his speeches for him, and who pulled the wires of that good-looking puppet, who was occupied, meanwhile, with red carnations, fine ladies, and dainty suppers. By profession a scientific chemist, by birth an Israelite, he entered into political life in 1878, opening up a campaign in favour of a union of all the Republicans. He wrote in the "Revue Bleue" and the "Estafette," and he spoke in the Chamber in favour of a Constitution modelled on that of the United States. It was this hobby which led him to take up Boulanger, whom he thought might be utilised for carrying out his ideas; while, on the other hand, the Monarchical party were utilising this same Boulanger in order to support their aspirations. He will be remembered as the man who gave the Divorce Law to France.

Among the most important measures passed in France within the last ten years is M. Goblet's *loi des maires*. M. Goblet, who was a barrister, entered public life as Secretary of State in the Ministry of Justice in 1879. He had practised at the Bar at Amiens with considerable success, and in that city founded at the close of the Empire a democratic newspaper. From the beginning of his career he distinguished himself by pronounced republican sentiments and hostility to all reactionaries. He is a Liberal in the Jacobin sense—Liberal, that is to say, as the First Revolution was Liberal, with the guillotine for a corrective. "Liberty or Death" is the watchword of this fiery enthusiast and of the party he represents. The compatriot of Robespierre, he possesses some of Robespierre's qualities. Worthy of Robespierre was the amendment he introduced in the press laws, authorising the Government to suppress any newspaper they chose by the mere decision of the Ministers in Council. In the Ferry Cabinet Goblet was chosen Minister of Public Instruction and Worship, and in this post he showed great energy. It was he who prompted the deconsecration of the Panthéon, and who replied so sternly to the protest made by the Archbishop of Paris. Before the elections of 1885 he addressed a circular to all the bishops, recommending them to enjoin on the clergy a policy of non-intervention in politics. When his orders were disobeyed he stopped the pay of certain priests, claiming for the Government the right to act thus, as being the only check it has upon ecclesiastics. He does not, for the present, however, think it possible to separate the Church from the State, as he admits that, up to date, this would be contrary to the wishes of the majority. Twice called upon to form a Cabinet, he failed to bring together a working Ministry; but under Floquet he was appointed Minister of Foreign Affairs, and showed himself very successful in treating several delicate matters, as, for example, the Suez Convention, and the question of schools in Tunis raised by Signor Crispi. He is, perhaps, one of the ablest men now acting together with Carnot, but he will never take a leading position.

M. Brisson, who has also held the post of President of the Council, is among the most characteristic leaders of the Republican party. He, too, is a lawyer by profession. At the age of eighteen, together with Vacherot, Pelletan, and others, he founded, in 1854, the first republican paper issued in the Quartier Latin. He afterwards passed on to the staff of "Le Temps," but found it too moderately republican for him. When he became the head of the Cabinet, in 1885, his programme was inspired by the desire to re-establish concord between the various factions of the Republican party; a programme which it was of course impossible to realise, as every one of the factions desired that its dominant ideas should become those adopted by the whole party. Since his resignation he has played no prominent part.

M. Ribot, the present French Minister of Foreign Affairs, officially untried as yet, possesses the gift of practical parliamentary eloquence to a high degree; and, as he belongs to no pronounced school, it is possible that he will make himself popular among the various elements with whom he has to deal. His aspirations are to see France a species of Swiss Republic, pacific, laborious, and keeping outside of all European agitation.

M. Rouvier has proved his mettle, and is a Finance Minister who may stand worthily beside

M. Léon Say. His determined action with regard to the scandals of the Copper Ring, and the able way in which he saved the Paris market from a financial disaster which might have been tremendous, have given the test of his capacity. The victory achieved by him was as great as that of M. Constans in crushing Boulanger. The French finances are not in a flourishing state just now; the war burdens are heavier than even that rich country can bear; and France has the unenviable distinction of being to-day the most heavily taxed country in Europe. Whether the policy of strenuous protection which seems to be becoming the keynote of French financial affairs will be found to answer in the end, and whether the people will be able or willing to bear additional burdens, is a question the future can alone decide. To us English this protection policy appears a suicidal one, and as yet there has been no appearance of increased prosperity in France to justify those who hold this doctrine.

Of M. Spuller, M. Léon Say, M. Tony Révillon, M. Deroulède, M. Turquet, and M. Tirard, the limits of our space will not allow us to speak. They are men who all, in their turn, have had an influence upon parliamentary affairs, and are all Republicans.

The Imperialist party has but one man of note to show, and he is rather notorious than noted. We refer to the hot-headed M. Paul de Cassagnac, journalist, politician, and swordsman. He has, perhaps, fought more political duels in his time than any other man in contemporary Europe. A great favourite at the Tuileries during the time of the Second Empire, he received much Court protection. At Sedan he was taken prisoner. After his release he re-entered political life, and became director of "Le Pays," and Imperialist champion in the Chamber. Duel after duel did he fight in the Imperialist cause, until at last, perhaps tired of this amusement, he refused successively to fight both M. Rochefort and Clémenceau, alleging that he had entered "la phase du travail." Clémenceau added, "la phase où l'on se dérobe." The Chamber has had to condemn him again and again for offensive behaviour and insults to deputies, and his violent language in "Le Pays" draws down upon him repeated fines and various imprisonments. It was he who tried to excite Marshal MacMahon to make a *coup d'état*. During the discussion of Jules Ferry's educational laws, he publicly accused Ferry of having falsified a document, and refused to retract the accusation. It caused no little surprise, on the Prince Imperial's death, to find there was no mention of Cassagnac in his will. The journalist transferred his allegiance to Prince Jerome, whom a few years before he had reviled. But in 1880, in consequence of a battle between his paper and another, there arose that schism between Prince Victor and Prince Jerome which is so notorious. Cassagnac sided with the younger man. It may be said that he is the high priest of *N'importequiism*, or "solutionism"—that is to say, anything and anybody rather than the present *régime*. It was this *N'importequiism* which led France to Boulangism.

Another hot-headed member of the French Chamber is Henri Rochefort, a noble belonging to a very ancient family of Berry. He began his career by writing dramatic reviews for the newspapers—the only form of criticism that was then allowed by the jealous censorship of Napoleon III. His articles proved an enormous success; for, though they pretended to deal with the drama, they were really levelled at the Empire, and he had a way of saying things so subtly that it was difficult to bring against him an action for libel. Moreover, he wielded his sword with as much skill as his pen, which not a little helped his reputation as a journalist in a country where duelling is as much a part of a journalist's profession as the correcting of proof-sheets. As soon as the restrictions imposed on the press with regard to politics were a little slackened, Rochefort published in the "Figaro" most slashing articles against the Second Empire, till, at last, the editor was afraid to keep him, for fear of incurring the ill-favour of the Emperor. He turned him off, but advised him to found a newspaper of his own. This was the origin of the famous "La Lanterne." The popularity of the new paper was tremendous, much to the alarm of Napoleon and his Court. Every effort was made to throw discredit upon Rochefort. At last, one day, tired of being calumniated, he went to demand satisfaction of an editor who had published a number of scurrilous pamphlets against him. The editor was insolent. Rochefort knocked him down; and for this he was condemned to a year's imprisonment and a fine of 10,000 francs, together with the loss of his civil and political rights. This sentence amounted to extinguishing his career as a journalist and a politician. Rochefort, therefore, fled from France, and took refuge in Belgium, where he continued to publish his "Lanterne," which, although it was prohibited, found its way into France in large numbers. Many French exiles were at the time living in Brussels, among them Victor Hugo, who received Rochefort with open arms and the words, "Voilà mon troisième fils."

The Imperial Government had hoped to snuff out Rochefort and extinguish "La Lanterne" at one breath; but Rochefort safe across the frontier continued his fiery denunciations of the Emperor and his satellites, and "La Lanterne" flamed as brilliantly as ever. Amongst the adherents of the Court of the Tuileries, one and one only, young Baroche, son of the Garde des Sceaux, had the courage to challenge the fire-eater. The duel that ensued was a peculiarly fierce one, both parties displayed great courage; young Baroche was wounded in three places and Rochefort came off triumphant. Soon the difficulties of finding new dodges for smuggling the prohibited "Lanterne" into France became insurmountable. So "Le Rappel" was started, with Vacquerie, Meurice, Charles, François Victor Hugo, and Rochefort, as its staff, and a fresh campaign was begun against the Empire, despite fines and imprisonments. The signs were not wanting that the Empire was beginning to totter towards its fall; how that fall was to come, and the depth to which it was to drag France, no one could then foresee.

At the election for the Corps Législatif in 1869, the republicans felt that the time had come to make an effort, and pass from words to action.

The Quartier Latin called on Rochefort to stand for the seventh circumscription. Rochefort accepted, but was defeated by the Imperial candidate, Jules Favre.

There was joy at the Tuileries, but it was short-lived. Gambetta elected for Marseilles and Belville opted for the former, Rochefort was called on to stand for Belville. He replied by at once crossing the frontier. Arrested, he had soon after to be set at liberty, the Government fearing an insurrection. His return to Paris was a triumph, and he was elected for Belville by an overwhelming majority.

In the Corps Législatif Rochefort was more remarkable for his ironical interruptions than for his set speeches. He soon understood that the Press, not the Tribune, was his field, and forthwith he founded "La Marseillaise." In the fresh campaign thus entered on, the tactics were the same as before on both sides. Fiery accusations, bitter invective, shameful revelations, fines, imprisonments. Then came the tragic incident of the murder (the word is not too strong) of young Victor Noir, one of the staff of "La Marseillaise," by Prince Pierre Bonaparte. Republican France thrilled with indignation, and Rochefort burst forth into language so openly seditious that on February 7 he was arrested and imprisoned at Ste. Pélagie. The next day the rest of the staff of "La Marseillaise" were imprisoned along with their editor; but from their prison they wrote, and their words found an echo throughout the country.

Seven months later, Napoleon III was himself a prisoner, and Rochefort was carried in triumph from Ste. Pélagie to the Hôtel de Ville. His dream was *résistance à l'outrance*; he strove by words and deeds to encourage it. He was elected deputy for Paris; but his career was short, for in company with twenty-five other deputies, he resigned in disgust when the Assembly voted the peace. Shortly after his paper, "Le Mot d'Ordre," was suppressed by the then governor of Paris, but when the Commune was triumphant Rochefort hastened to Paris and resumed its publication. His opinions, however, were not sufficiently ferocious for the Place de la Grève, but were too revolutionary for Versailles. Obliged to quit Paris to avoid being seized by the Commune, he was arrested at Meaux by the Versaillais, tried by court-martial, and condemned to perpetual confinement.

Some years after, France was electrified by a telegram which announced that Rochefort with five of his companions had escaped. After a short stay in London he went to Switzerland, and from Geneva continued to publish "La Lanterne," and to contribute to "Le Mot d'Ordre," "Le Reveil," "Le Droit de l'Homme." In July 1880, profiting by the amnesty, he returned to Paris in triumph. *La gare de Lyon* was literally besieged. The next day appeared the first number of "L'Intransigeant," a paper devoted to the doctrine that the republic exists in name but not in fact, and that the question of government is a social one.

An ardent adherent of Boulanger, Rochefort was obliged to fly, together with the "brave Général," and was condemned, together with him and Dillon, in the famous *Réquisitoire* of August 12, 1888, pronounced by the Procurateur, M. Quesnay de Beaurepaire.

In naming M. Jules Simon, we are naming one whom many account the most attractive man modern France has to show, and the man who most profoundly has at heart the public weal. Alas, that he should be no longer in his prime! Born in 1814, he belongs to a generation which heard the voices of Talleyrand, Chateaubriand, Sismondi, Demaistre, Cousin, Lamartine, Béranger, and other great men—a generation which, as M. Ernest Daudet remarks, seems to have inherited some of the merits of its elders, and preserves the stamp of that pre-eminently grand epoch. Poor by birth, Jules Simon had from his childhood to work for his daily bread; yet, nevertheless, he managed to educate himself so thoroughly that at the age of twenty-five he was called to fill Cousin's Chair of Philosophy at the Sorbonne. From that time forward his private life has run smoothly; and though he has been connected with nearly all the great events of the last fifty years, he has played no decisive part in any. His action as a politician has been comparatively small; his influence as a thinker, however, has been considerable, and, as it has been well said, we all know that the world is governed by the men of whom it hears least. In any other country but France, M. Jules Simon's influence would have been even greater than it has been. Of all the public men of the day in his country he has this pre-eminent advantage—that he is of an honesty and uprightness unquestioned even by those who affect to despise him as a *vieux bon homme*. Were he to die to-morrow, all parties would unite in rendering him the same kind of homage that was rendered to John Bright. Simon has had the disadvantage of being a moderate man in a country where moderate men have seldom, at any period of history, been listened to. The very name is almost a term of reproach; and this is more truly strange of a land which, with characteristic self-complacency and exclusiveness, claims that "Le bon sens est né français." If so, it seems to have had some difficulty in coming to maturity in the land of its birth.

The Liberals of 1840 listened with scant respect to Simon's first lectures, and read his first books with impatience—they wanted fire and thunder. One quality, however, none could deny him—his sweet-voiced, penetrating eloquence. Thirty years later, in 1871, during the disaster of the war, Simon proved that there was strength as well as sweetness in the storehouse of his mind. It was he who obliged Gambetta to renounce his dictatorship. He plainly declares himself an enemy of Socialism, and has always fought for the cause of order against anarchy. Questions of education have occupied him above all others, and in his day he defended the university against Montalembert, not from any anti-Catholic spirit, for he is himself a liberal-Catholic, but from a repugnance to seeing the liberty of any one set of men domineered over by that of another. It is to the honour of both men that from this contest arose a mutual esteem which ripened into friendship. The *coup d'état* of December drew from him an eloquent protest,

which caused him to lose his Chair; he fell back on his pen, and made good use of it against the Empire. At the same time he produced that series of books on "Duty," "Natural Religion," "Liberty of Conscience," "Schools," and "Working Men," with which his name will always be associated, and interested himself in all great philosophical and social questions. Under the Republic he became Minister of Public Instruction, and he strenuously opposed Ferry's educational scheme, particularly Article 7. It was then he made his celebrated speech in favour of teaching duty to God, independently of any religious denomination. He is a pronounced enemy of the dogmatic irreligion of the Third Republic.

Simon now sits in the Senate. The speeches he there holds, and that delivered but a few months ago at the unveiling of Lamartine's statue, show that age has not lessened his oratorical power. The honour shown to him by the German Emperor, who specially invited him to come to Berlin to attend the Liberal Congress, will be fresh in all minds. The old man continues to interest himself in the well-being of the working classes, from whom he himself has sprung. He is president of a philanthropic society for the education of poor children, as well as secretary of the Academy of Moral and Political Sciences. It will be an evil day for France when she no longer has such men to show.

From all that we have written, it will be seen that modern France may be said to be in a transition stage. It is always difficult in a Latin country to gauge public opinion, and it may not be too much to say that in France two-thirds of the population are absolutely indifferent to politics. The only people who appear to have really hard-and-fast ideas are the members of the Extreme Right—men who have inherited, rather than thought out, their political creed. The manner, however, in which the Boulanger bubble burst, without bringing about the terrible danger which it menaced, is an evidence of a more balanced public opinion. The incident has certainly taught the Republic and its rulers some salutary lessons; the latter especially realise that the country requires from them less wrangling and more useful practical work. It is to be hoped that a new and better state of things is about to be ushered in. In one matter there is a marked improvement—the intense strain which the antagonism of Germany created among the French people has been happily and suddenly removed: first, by the unexpected fall of Bismarck; secondly, by the improvement in tone and policy of the German Emperor.

That witty poet and acute observer, Heinrich Heine, said: "When I speak of France I speak of Paris, not of the provinces; just as when I speak of a man I speak of his head, and not of his legs; to talk about the opinion of the provinces is like talking about the opinion of a man's legs." Not the least important issue of Boulangism has been that it has shown that France, as a country, is no longer at the beck and call of Paris. There remains a genuine rectitude under the immense majority of the French population, and it is these who chiefly inhabit the provinces, and who have been less affected by that deplorable deterioration of French moral worth, through her mental culture, which has been the most disastrous feature of her literature since the downfall of the First Empire. It is by no means improbable that the French people may find some fine morning that the legs will suddenly wake up with a very positive opinion of their own, and the result may be a most important change, not only in the government of Paris, but in the government and character of the whole country.

## Heard in Heaven.

I PACED the platform—body, and mind, and brain,
Dulled by the deadly cold—what time the train,
Too-tardy, came not.
'Twas a darkening noon
In bleak December. Low i' the east, red Mars
Rose large and lurid; and a slender moon
Lay, like a finger, on the lip of Night,
Commanding silence.
'Neath the silent stars
(Perched on a bench, with wistful face, and white,
With limbs a tremble, bare legs red and raw,
And hands blue-nipt) a tiny child I saw,
Who, thinly-clad, sat blithe, and brave, and bright,
Crooning some baby lay.
What song she sang,
That little maid, the while her wee voice rang
So shy and low,—
Whether some childish chime,
Olden and quaint,
Of fairy and fay; a snatch of nursery rhyme,
Or hymn, or prayer—I knew not, nor shall know;
But long ago
One spake this word:
"No sparrow falls, its dying cry unheard,
Though feeble and faint;"
And I am sure that He who hears the bird,
Heard that sweet plaint.

C. K.

# FAINT HEART AND FAIR LADY.

BY ELLA EDERSHEIM.

"I AM A DOOMED MAN, TOMMIE; A DOOMED MAN."

## CHAPTER I.—FAINT HEART.

"THE situation is frightful, Tommie; absolutely frightful!"

Richard Doughty wiped the perspiration from his high rounded forehead with the pad into which he had been working the centre of a large silk handkerchief while he was speaking, and gave an uncertain glance at his companion.

The younger man sat in a stooping position, tucking the ends of a tough little moustache between his teeth, so that only the crown of a wide head covered with thick straw-coloured hair faced Mr. Doughty. He gave his head a little jerk, however, which Mr. Doughty translated as being indicative of sympathy, and thus encouraged proceeded:

"The woman knows no mercy. Woman? *Women*, I should say. An exceptionally constituted man might perhaps tackle one woman; but a pair of them! On my word, Tommie, it makes me shiver only to think of what I have gone through!"

Tommie Mills released his moustache, and straightened himself a little. His observant grey eye, set far back amongst fair bristling eyelashes, twinkled for one moment comprehensively on Mr. Doughty's disturbed visage; but he gave no other sign of interest.

The original speaker resumed his parable.

"It took them some time. Certainly it took them some time. It is a pleasure to me to think that I have even put them to some considerable expense and inconvenience. A six weeks' stay at the Vicarage—that's where the mischief was begun; letting their house; and now three months of lodgings in Hupton. I shouldn't care myself to lodge for three months in Hupton. And yet, that's bad too . . . for I am afraid that the mother . . . very much afraid. . . . In fact, the woman's getting desperate, Tommie. There it is in a nutshell. She's well-nigh bored to death, and desperate. And"—his voice sank ominously, and his face dropped into deep gloom—"I am a doomed man, Tommie; a doomed man."

There was silence for a few minutes. The scent of late jasmine and roses came in at the low

mullioned window. The September sun brightened the book-lined walls, and glittered here and there on their gold lettering and handsome bindings. Mr. Mills sat in a carved oak writing-chair, near Mr. Doughty's writing-table, and facing the pleasant window. The master of the house shifted uneasily about on a faded Axminster hearth-rug at a safe distance from a beautiful collection of Chelsea cups and saucers which adorned the mantel-shelf. The space above his head was crowded with miniatures, and rare china let into the panelling over the chimney-piece. The other walls were quite given over to books—untouched rare editions and unique volumes. A small Turkey carpet, a useful-looking sturdy oak table, and a few lounging chairs completed the furniture of the room. It was Mr. Doughty's sanctum and living-room: the other sitting-rooms were in the keeping of his housekeeper.

"It's hard on me, Mills," the speaker resumed again, in a voice softened by self-pity. "Really, I sometimes think it is very hard. Here am I, a man who has lived for fifty-two years without ever having consciously hurt one of God's creatures, and whose only ambition has been to be left alone. On my word of honour as a gentleman and a Christian, Tommie, I cannot remember having used any means, or arts, or wiles, to 'raise expectations' (that's the term they employed) in Miss Lankaster's or any other woman's breast."

The stooping figure in the oak chair suddenly became alert. Mr. Mills left off chewing his moustache and smiling into his hand, and fixed on Mr. Doughty a look which, had that gentleman been at the moment less self-absorbed, would certainly have surprised him.

"I didn't quite catch the name, Richard," he said in an unsteady voice. "What are these people called, did you say?"

"Lankaster," repeated Mr. Doughty, obediently; "Evelina Lankaster is the name of the young woman whom her mother says is to be my wife."

Tommie Mills had sprung to his feet and hurried to the window. He flung open the other lattice with entire disregard to the comfort of a large black cat, relieved by white spots, who had lain, apparently legless, sleeping on the sunny sill. The cat thus hustled off, fell into the flower-border, where she stretched herself deliberately, spat at Mr. Mills, and then retired with unabated dignity to the shelter of a geranium plant. Mr. Mills gave an odd little laugh and turned back a flushed face into the room.

"Tell me all about it, Richard," he said, "from the very beginning. It's a most extraordinary tale."

Mr. Doughty lost a good deal of his harassed expression and looked genuinely pleased. "That's it, my boy," he said in a gratified tone, and dropping into a discoloured hammock chair by the side of the writing-table. "Now you're beginning to take a proper interest. Indeed, I relied on your help from the very first moment I heard you were coming."

He kept up a little uneven movement in the chair all the time he was speaking, which seemed to harmonise with his unequal tones and the uncertain glance of his mild eyes.

The younger man looked somewhat shamefaced. "Indeed, sir," he said, "I am afraid that *I* was counting rather on *your* assistance when I proposed paying you a visit."

"That's all right," said Mr. Doughty, comfortably. "You're a good lad, Tommie, and I have never regretted that in your case I broke my rule and consented to be your godfather. I've got no relations to speak of, as you know, Tommie. You've been a very good lad and a great pleasure to me. It can't be all *take* on my part; I hold it quite fair that there should be a certain amount of *give*, too."

He smiled gently, and thrusting his hands into his trousers pockets, set the keys and coins there jingling suggestively. Mills winced, and said hurriedly:

"No, no! It's not that, this time." Then pulling himself up he added: "But I must hear your story first, Richard. Let's have it from beginning to end."

Mr. Doughty's small slight form writhed visibly at this reminder of his troubles. His fingers wandered aimlessly over his face and among his straggling whiskers. Then with an attempt at resolution he braced himself together, clasped his hands behind his head, and began his recital.

"Mrs. Lankaster is sister to the Vicar here—that's Mr. Harvey, of whom you have often heard me speak. I used to think his wife was a peaceable, nice soul. But I find now that she's every bit as bad as her sister-in-law: a couple of designing women, Tommie; plotting, deceitful women. Well, in the spring, Mrs. Lankaster and her daughter came to stay at the Vicarage. I was a good deal there at the time, because I was busy classifying a very fine collection of coins that Harvey inherited from an uncle. The fellow's sold them now, after all my trouble, to pay for a children's cottage-home, or some such fad, that he's mad on: however, that's neither here nor there. I liked Miss Lankaster. She seemed a nice, unaffected girl, who could sing very sweetly, and she used to help me by cleaning the coins. She wrote some letters of inquiry for me too, to the British Museum—of course under my direction—and made some fairly correct drawings of pieces of which I was not certain. On the whole I certainly liked her, and I saw a good deal of her."

"What was she like?" interrupted Mr. Mills, in a subdued voice.

"What was she like?" echoed Mr. Doughty. "Dear me, I scarcely know. But I think she was dark—no, she wasn't; I remember remarking one day in the sunshine that her hair was red. And as for the rest of her—I am not clear. I don't think she was much like any one in particular, and she was very quiet."

"That will do," assented Mr. Mills to the half interrogative pause.

"I found she liked flowers, and as the Harveys' flowers all go to the children's home I used to bring her some when I came in the morning. I remember, too, I took her the first section of honey—she is very fond of honey—and once or twice some

early strawberries. You see she did a good deal of work, one way or another, for me, and I felt beholden to her, so to speak."

As it was evident that Mr. Doughty required something beyond self-justification at this juncture Mr. Mills interposed with: "Very natural, I'm sure."

Mr. Doughty looked relieved, and continued:

"Quite so; quite natural; that's what I thought. Any one could have seen that no idea . . . of a . . . love-making" (he stuttered over the word, and blushed considerably) "had ever entered my mind. At last they went away. I missed Miss Lankaster very much, and I told Mrs. Harvey so: and then she informed me that *the feeling was mutual—that I had made a conquest.*"

"Made a *what*?" shouted Tommie, very red in the face, and leaning forward in his chair.

"It's quite true, though," Mr. Doughty was fain to repeat, though modestly enough. "I can't tell you all the nonsense she talked. It makes me quite uncomfortable to think of it." And indeed the poor little man looked most miserable, as he recalled the *badinage* to which he had been subjected. "I had always thought her a sensible sort of body, and I assure you it gave me quite a shock when she pointed her finger at me, and called me a 'naughty, wicked flirt.'"

There was a convulsive movement in the oak chair, but no further sign of life.

"Well, the next thing I heard was that the Lankasters had left their house in Town for the summer, and had come into lodgings at Hupton. Of course I had to go and pay my respects to them, though you will readily understand how ill at ease I felt after all that Mrs. Harvey had said. I had never particularly noticed Mrs. Lankaster, she had seemed to me a quiet unobtrusive sort of a person" ("*O nimium facilis!*" broke involuntarily from his listener's lips), "and I must say I was a little surprised at the fussy way in which she greeted me. I remember noticing too that Miss Lankaster looked trimmer a good deal than when I had last seen her, and she seemed worried. That made me feel sorry for her, and perhaps I threw too much *empressement* into my manner. But really, I meant nothing. Mrs. Lankaster went out of the room, I don't exactly know when, and I took Miss Evelina's hand and began to ask her if there was anything I could do for her; for I liked the girl, I did indeed, Tommie. She was a nice quiet person, I thought then. And, besides, I was sorry for her."

"Yes, yes," assented Mr. Mills, somewhat impatiently.

"I took her hand, I told you, didn't I, Tommie? Yes, I took her hand. And all at once she began to say very quickly, and her cheeks got quite scarlet, 'Yes, there is something you can do for me. Oh! Mr. Doughty,' and just as she had got so far she began to cry. I implored her not to give way: indeed, by her manner, I thought that she had some important confidence to make to me—but I find now it was only part of the plot. As I stood over her, endeavouring to comfort and reassure her, the door was flung open, and Mrs. Lankaster burst into the room. She did not wait a moment. She flew at me as though she had been mad. "My children!" she cried. "Oh, my children! My prayers have at last been answered!" Then, Tommie,—Tommie, I would have you remember that I am not a man who exaggerates—she flung her arms round me—ME, *and kissed me on both cheeks*!"

"What did Miss Lankaster do?" gasped Tommie.

"I think she said something about a mistake, but I am not sure. Indeed, I was so much confused and upset by this unprecedented occurrence, that I scarcely know what followed. Do you know, Tommie, I think my brain must have been affected by the great shock. For I have an indistinct notion, yes, really I have, that I thanked Mrs. Lankaster for her great kindness, and hoped I should prove worthy of it. I don't know how I got home. I think I must have left almost directly. And the next morning I got a letter."

He paused, and Mr. Mills fixed him with a feverish gaze. "Yes, yes," he said. "Was it from Miss Lankaster?"

"Not at all," replied Mr. Doughty. "It was from her mother. Here it is. I always carry it about with me. It is my death-writ." At the same moment he drew from his pocket an ash-coloured envelope, scrawled over in a flowing feminine hand.

Unfolding the letter thus handed to him Mr. Mills read the following extraordinary document:

"Dear Richard,—For so I feel I must *at last* call you after the *decisive events* of yesterday. Ah, cruel man! how long have you toyed with my poor child's *peace of mind!* Would you believe it? I had actually resolved to speak to you *myself*, had you not *happily forestalled me*. What a *treasure* you have won! How *sweet* a creature is my Evelina! How *blissful* will she make *your home* for you! The dear girl is very much upset by *the event* of yesterday. Therefore, my good Richard, I beg you to curb your *natural impatience*, and do not visit us *to-day*. You might, however, *send me a line*; that, I do not think will hurt my darling daughter, and she is *wearying* for some word from you.

"I remain yours most affectionately,
"JEANETTE LANKASTER."

When he had finished reading the letter Mr. Mills looked up anxiously.

"And what did you do?" he asked.

"I wrote; I did not see how I could help it," replied Mr. Doughty with an appealing ring in his voice, to which, however, his companion remained wholly unresponsive. "I said as little as I could, but still I wrote."

There was another pause, and then the elder man said nervously: "You think I was wrong, Tommie?"

"It's your fatal weakness," said Mr. Mills solemnly, and gazing with a great seriousness at his companion's restless face. "I don't know what you said, but I've no doubt you booked yourself by that idiotic letter."

"I believe I did," said Mr. Doughty very quietly

and very humbly. "But indeed I did not know what else to do."

"You should have said—" began Tommie impetuously. "But," he dropped off in answer to Mr. Doughty's prolonged and heavy sigh, "what's the good of saying what you should have done. You're in for it now, I reckon."

Mr. Doughty's head drooped low on his breast. Mr. Mills noticed that silver streaks had greatly increased among the soft brown locks. Yes, Richard had aged during the last three months, decidedly aged. The knowledge smote the younger man, and brought compassion in its train.

"And since then?" he inquired, in a more sympathetic tone of voice. Mr. Doughty immediately became conscious of the change in his companion's attitude of mind.

"Since then," he resumed with more spirit, "I have been getting deeper and deeper. At first it did not seem so inevitable. I really liked the girl, Tommie, and I did not mind giving her a ring, as her mother said she ought to have one. I did not give her one of the family rings, Tommie; somehow I could not bring myself to do that. But I got her something that looked pretty, and her mother was very pleased."

"And, Miss Lankaster herself?"

"Oh, I suppose she was pleased too. But she did not say much. She is very quiet, you know."

"What finger does she wear your ring on?" pursued the inquisitive Mr. Mills rather breathlessly.

"Really," replied the lover, "I do not know. It has never struck me to notice. But it's not a wedding-ring, you know, and so it does not matter in the least."

"Oh, not in the least," answered Tommy demurely.

"At first, you see," pursued Mr. Doughty, encouraged by this acquiescence, "nobody talked about marriage, and so I thought that if I only allowed things to take their own course I should somehow get out of it. But a month ago Mrs. Lankaster let loose the question on me, and since then she has been hounding me down with it."

"And what does Miss Lankaster say?"

"Oh, we don't talk to her about it. For, although she is so quiet she is very hysterical, her mother says; and I am afraid of upsetting her. Have you ever seen a female in hysterics, Tommie? It's a dreadful thing. Ten years ago my housekeeper had hysterics in this room. I have never had an easy moment alone with her since."

"What gave her hysterics?" inquired the sympathetic godson.

"I scarcely know—in fact, I scarcely like to say. It was a trifling disagreement over the amount of butter consumed in the household. Nine pounds a week seemed to me excessive, but of course I don't understand such matters, and butter weighs heavy, Mrs. Fidler says. But we have always been good friends since."

A smile of some meaning played on the listener's face. He seemed however suddenly to cast the interesting digression out of his mind, and returned direct to the question in hand.

"You keep on telling me how quiet Miss Lankaster is," he said. "And you seem to hold no converse with any one but the mother. But is your *fiancée* not aware of the state of your feelings towards her? How do you get on with her when you are alone together?"

"Oh, we never are alone together," Mr. Doughty made prompt reply. "That is inconsistent with Mrs. Lankaster's notions of propriety. And indeed I am quite of her opinion myself. Besides I am only too thankful to be spared the burden of *tête-à-tête* with Miss Evelina. She is quite extraordinarily quiet: she never seems to have anything to say."

"But used she to be so in the old days?" persisted Mr. Mills. "Just think, when you were classifying her uncle's coins, and she was writing letters at your dictation?"

Mr. Doughty paused before replying. Then he brought out his red silk handkerchief once more, and sat up to wipe his moist countenance.

"Really, it's most remarkable, Tommie," he said in a distressed voice. "I've never thought of it before, but she certainly used not to be so quiet when first I knew her. I don't know what that portends. I can't pretend to say."

"Perhaps," suggested Mr. Mills, "it only portends that Miss Lankaster is tongue-tied in her mother's presence. If you could only make up your mind to get an interview alone with her, you might even yet put matters right."

"My dear boy, my dear boy, for mercy's sake don't suggest such a thing," cried Mr. Doughty, tearing at his handkerchief till the silk gave way under the nervous clutch of his fingers. "Mrs. Lankaster is bad enough: indeed she is sometimes altogether too much for me. But *Miss* Lankaster! You can never have seen her. Of course, I remember now you *have* never seen her. I couldn't do it, Tommie; I really could not face that girl alone if you were to give me a hundred pounds for it.

"I am not likely to do that," said Mr. Mills, somewhat bitterly. "But may I ask how you intend to get on with a wife that you are afraid to be alone with?"

"It is Mrs. Lankaster's plan to reside here with us," said Mr. Doughty, letting his head once more fall forward. "But I have not yet been able to bring myself to enter into all the details of this most distasteful business."

Mr. Mills gave something which very nearly approached a long low whistle. "So," he said finally, "that's the old woman's game, is it?"

But Mr. Doughty now changed front.

"Thomas Mills," he said solemnly, leaning forward in his chair and with more concentration of purpose in his face than his godson ever remembered to have seen there before, "Thomas Mills, I will not do it. I will not marry that girl. I can't and I won't. I don't hate her, Tommie—don't misunderstand me. I used to think her a very nice girl, and I don't wish her any harm now. But I can't marry. Why should I marry? I am so comfortable and happy alone. I love my things. She will go prying about amongst my editions—she is intelligent—I know she will. She will want to ask her friends to drink tea out of the Chelsea. She

will tidy my drawers, and sit in this room with me, and . . . Tommie, I can't do it. Don't ask me to do it. I tell you I *won't.*"

"I don't want you to do it, Richard," said Mr. Mills, soothingly. "I am trying to think of some plan whereby I may get you out of this hobble. Wait. . . . Can't you tell Mrs. Lankaster you don't think her daughter cares sufficiently for you to marry you?"

"I have done it," moaned Mr. Doughty. "I took an early opportunity of saying so. But she only laughed at me. Said her Evelina was head over ears in love with me, and that that was her way of showing it."

Mr. Mills muttered something indistinctly. It sounded like: "The liar!"

There was another space for reflection, and then Tommie spoke again, but hesitatingly:

"Couldn't we bring another man on the scene?" he began. But Richard Doughty broke in on him impetuously.

"The very thing!" he cried, starting from his chair, and beginning wildly to gesticulate with his lank arms. "Why have I never thought of it before? I will take you to the Lankasters to-morrow; I will introduce you to my would-be mother-in-law. You will either win her heart, or Miss Lankaster's, or in some clever way oust me. Oh, it is splendid! I shall be free, I shall be absolutely at liberty again!" In his paroxysm of delight Mr. Doughty literally waved his arms above his head and uttered a feeble attempt at a whoop.

"Sit down," said his godson crossly, leaving his own seat to thrust Mr. Doughty once more back upon his chair. "You really are too great a fool, Richard. I believe if you are to be saved you must be saved in spite of yourself. You would mar the best-laid plot. Now let me think a little," and he withdrew thoughtfully to the hearth-rug, while Mr. Doughty, by no means resenting the liberties that had been taken with him, sat biting his finger-nails, and glancing from time to time at his tyrant.

"Yes," said Mr. Mills at last, after a prolonged silence, "I think I have it. But one thing I clearly see: you must be saved in spite of yourself, Richard. You are no more than a babe in the hands of these designing women." He smiled a curious smile, which found a weak reflection on Mr. Doughty's face. "Can you trust me, Richard?" he inquired. "Will you promise to trust me absolutely?"

"If I only thought——" began Mr. Doughty; but the other interrupted him.

"There are no 'ifs' in the matter," he said sternly. "Do you trust me or do you not? I want a plain Yes or No."

"You know quite well," said Mr. Doughty, remonstratingly, "that I have always been in the habit of trusting you."

"I know; but that is not the question now. Will you trust me though things seem to be going all wrong; though your suspense is prolonged, and though you appear to be on the very verge of matrimony?"

"I will try," said poor Mr. Doughty.

"You can't do more, I suppose," allowed his godson. "But now tell me. Does any one know of my arrival here besides the servants in the house?

"How can I tell?" replied the distracted little man. "You must yourself know best whom you met on your way from the station."

"Oh! I met no one at all but a couple of ploughboys. The five miles of road between here and Hupton were practically deserted. But I did not refer to a chance encounter. Haven't you told the Harveys or the Lankasters, for instance, that I was coming?"

"No," replied Mr. Doughty, valiantly, "I have not. The Harveys are away from home for a few days, and somehow I don't ever seem to speak with Mrs. Lankaster on affairs in which she is not directly interested."

"Oh!" said Mr. Mills, with a good deal of meaning in the monosyllable. "You don't, don't you? Then I'll tell you what. Don't you say a word about my having been here. I am going now, going right away. Don't mention my name to a single soul. Let it be as if I hadn't been here at all. Do you understand? Can you make the servants understand?"

"Going?" gasped Mr. Doughty, as the meaning of Mr. Mills's words slowly dawned on him. "Going to desert me? To leave me in the lurch after all? Oh, Tommie!"

"My dear Richard," cried Mr. Mills, with a trace of exasperation in his tone, "didn't you promise just now to trust me?"

He had picked up his hat and umbrella, and thrown the travelling rug which he had brought down with him a couple of hours before once more over his arm. Now he came back from the door whither he had moved, and laid his large hand on Mr. Doughty's quivering shoulder. "Trust me, Richard," he repeated, impressively. "I will save you. Only you must trust me, up to the last."

There must have been a kind of mesmerism in the young doctor's grasp, for a look of tranquillity slowly crept over Mr. Doughty's puckered face.

"Yes," he said quaveringly, "I know you're a good lad. I'll do my best to trust you. And there's that other little matter you came to speak to me about. Let me help you in it, Tommie. Has your cob broken down again? I fear you work him and yourself too hard. What do you require, Tommie, to set him up?"

He had moved to the writing-table as he spoke and taken from one of its drawers a cheque-book. The younger man looked at him, and the elder's blight of uncertainty seemed to have fallen on his square young face. He chewed viciously at his moustache and knitted his brows.

"I said I never would sponge on you again," he said gruffly. "But I don't see any way out of it this time. I am afraid I must ask for £50, Richard, but I should like to take it as a loan. When the practice begins to pay well, which it must do some day or other, I will refund you, I will indeed."

"Why," cried Mr. Doughty, who in turn seemed to have adopted his godson's manner and cheery laugh, "what a fuss to make about nothing! It's

Christmas in three months' time. Take it as a Christmas present, my boy, or whatever else you like," and he dried the paper, and, rising, gave it to Mr. Mills with a ringing slap on the back.

The young man took it confusedly. "You're very good to me, sir," he said, "and I shall be proud to do you a good turn. I shan't forget your confidence, and I shall lose no time in acting."

They shook hands warmly.

"Only trust me, Richard," repeated Mr. Mills, as he left the room. "Remember, you must trust me."

### CHAPTER II.—RUN TO EARTH.

A WEEK had passed since Mr. Mills had paid his hurried visit to his godfather. It had been a week of terrible anxiety to Mr. Doughty. During its course he had rigorously abstained from all intercourse with Hupton, and, indeed, the whole outer world. He immured himself in his own substantial red brick dwelling, where many past generations of Doughtys had lived and died, and gradually emerged in the slow process of time from the rank of yeomen-farmers to that of small gentry. Richard Doughty, with his good education, quiet ways, and antiquarian tastes, had unconsciously lifted still higher the name and fame of the Doughty family. In the village he was generally described as "the squire," probably on account of the non-existence of such a legitimate potentate in Swire, and the unwillingness of its inhabitants to be behind their neighbours in glory or possessions. Mr. Doughty was, however, quite unaware of his own importance, or the prestige which hung round his comfortable little property. He had led a simple and secluded life. He was more affected by the death of an old-established yokel of Swire than by the fall of kings. Well-known as a never-failing bank on which the destitute might draw at pleasure, he became the prey of all the ne'er-do-weels for miles round. His orchard was robbed in the open day; he habitually bought his own eggs from his under-gardener; his kitchen garden largely supplied the Hupton market without its owner's ken.

From such a life of continual pillage Mrs. Harvey had plotted to save her kindly neighbour. At the same time she informed the Vicar with marital candour "that it would be a good work to release poor Evelina from that dreadful old sister of his."

"My dear," replied the Vicar, "your good work will have still further reaching effects than those you contemplate. For in supplying Richard Doughty with a guardian you will remove one of the greatest stumbling-blocks to morality in the whole district."

Mrs. Harvey nodded complacently. She was well aware that she was a clever, capable woman, and that her husband and the parish could not possibly get on without her.

"But," added the Vicar, "I thought Evelina told you in the spring that she would never marry."

"Bah!" responded the lady. "Some girl's fancy that had taken hold of her. I never got to the bottom of it, only I know her mother was dead against it, and nobody yet was ever able to stand out against the obstinacy of a Harvey. But depend upon it, that's over long ago, and it will be delightful to have the dear girl so near to us."

And the Vicar, as usual, bowed to his wife's superior knowledge and worldly wisdom.

Mr. Doughty was wrestling with an unmanageable branch of honeysuckle that hung over the entrance to his summer-house. The little building stood at the end of the lawn, at the back of the house, on which the window of his sanctum looked. It commanded a view of his neatly-kept drive, whose towering bays and ilex almost gave it the dignity of an avenue. Behind him, the kitchen garden sloped upwards. Late peas with tender pods swayed in the autumn breeze; a few scarlet blossoms hung on the tall ranks of French beans, and giant cabbages, their massive balls still holding twinkling drops of last night's rain, stood in compact rows. A smell of herbs and mignonette, and delicate odour of warm hanging fruit came every now and then on the breeze. Over the discoloured red wall, thickly covered with fruit trees, the bees came humming and floating to their favourite pleasaunce. The great black cat, Rebecca, sat slowly washing one uplifted paw, the claws of which she had drawn tightly together, and from which from time to time she tore some offending particle. The dark chimneys of the old house stood out against a sky of deep, pure blue; two blackbirds were singing in the elm trees an intoxicating song of last spring's delights. It was an afternoon of perfect peace, and Richard Doughty, absorbed for the moment in his occupation of nailing up the refractory honeysuckle, had forgotten his troubles and was also at peace.

All at once there was a sound of squeaking hinges and grating on the gravel. Mr. Doughty knew well the noise of his own labouring gates. In an instant memory had flooded back upon him, and with it the premonition of evil. He crept to his kitchen window and tapped on the lattice.

"I am out, Mrs. Fidler," he said, in nervous reply to the sternly interrogating countenance of his housekeeper. "Very much engaged, and out—that is, if any visitors call—you understand. Not that I am expecting any one to call—only I am out."

He beat a hasty retreat up his back lawn, for already the sound of wheels was on his ear. He got behind his little wooden summer house, and peeped anxiously round it to see who the visitors might be.

In a hired open carriage sat two ladies; and his heart beat quickly. He had not been wrong: the Lankasters were upon him.

He heard the carriage stop before the rose-covered porch on the other side of the house to him. Then the clanging of the bell seemed to fill his brain. Through the open windows he could hear Mrs. Fidler's deliberate step up the passage and across the hall, and the opening of the front door.

There was a murmur of voices, and then his housekeeper's distinct tones were borne to him.

"Not at home, ma'am. Mr. Doughty has gone out for the afternoon."

Some hubbub seemed to ensue, and the listener could distinguish nothing for several minutes. Then the voices seemed to be advancing.

"So very unfortunate—such a long drive, and I feel so fatigued. Evelina, my dear child, how white you are. Really, Mrs. Fidler, do you think Mr. Doughty would object to our coming in and resting for a few minutes? I feel positively faint, I do indeed. Perhaps you would even be so good as to give us a cup of tea. I am sure Mr. Doughty would have no objection."

By the peculiar fall of Mrs. Fidler's jean heelless boots on the polished floor, Mr. Doughty discerned the state of dudgeon into which Mrs. Lankaster's remarks had driven his housekeeper. He held his breath, however, and listened intently.

That was the handle of the drawing-room door. Mrs. Fidler knew better than to obtrude the guests whom she hated, and shrewdly suspected her master of hating, into the snug comforts of the sanctum. The drawing-room door shut behind the ladies, and there was silence, but for the loud beating of Mr. Doughty's heart, for several minutes.

All at once voices struck upon him again, but horribly nearer. It was Mrs. Lankaster who was speaking.

"I believe it's all humbug, Evelina, and he is somewhere about the place. But if he is I'll hunt him down yet."

The low swift voice that answered did not reach Mr. Doughty. A deadly terror was on him. Peeping cautiously from his shelter he saw that the two ladies had issued from one of the long windows of the drawing-room and were slowly advancing in his direction. Not a moment was to be lost. Like an antelope he sped up the garden, taking care to pursue such a direction as should still leave the summer-house to interpose between a view of himself and his pursuers. There was no escape from the kitchen garden. Its high red walls were unbroken by gate or gap. He dared not double and cross the unsheltered lawn. The cat, scampering after him, made tell-tale treads on the weed-grown paths, and the leaves crackled ominously beneath her weight. Mr. Doughty was in an agony. He crouched for breath behind the shelter of the scarlet-runners, and then safety seemed suddenly to open to him. Dropping on the ground he crawled between a row of the giant cabbages, and, prone on his stomach on the wet earth, awaited triumphant the march of events.

Once more the voices approached him, and this time he heard the rustle of Mrs. Lankaster's silk skirts and a kind of swirl that seemed to accompany them.

"It is quite an ideal place," the elder lady was saying. "Really, Evelina, it is far more than you deserve, and you are a remarkably lucky girl."

"Mamma," began Miss Lankaster, tremblingly, but Mr. Doughty was in no mood to distinguish the tones of voices.

"Now I will have no more of your nonsense!" broke in the mother, irritably. "You have once already made a great fool of yourself, and the less you say about it the better."

"That's the day she cried to me," commented Mr. Doughty to the cabbage stalks.

The ladies had paused for breath, as he had done, at the top of the steep path. They stood so near to him that he could have touched their gowns with his outstretched hand. He dared scarcely breathe; the least nervous twitch would betray his presence.

Once more they began to move slowly on.

"Just think what I have saved you from, ungrateful child!" pursued the fond mother. "Poverty! wretched, grinding poverty! Loss of liberty! May I ask what your preposterous infatuation would have ended in?"

"I knew they were in debt," thought Mr. Doughty, "but they don't send people to prison for that nowadays. Oh! I'd pay all their debts if they'd only let me off."

"Of course I don't expect you to care for *me*, though *I* have given up everything for *you*," Mrs. Lankaster continued. "To what expense and trouble I have been put! Most girls would deem it a small thing to provide a suitable home for an aged and impoverished parent, who has been worn out by their obstinacy and stupidity."

"Oh, mamma!" began the aged parent's child again, while Mr. Doughty, considerably puzzled, was weighing this sentence still in his mind.

But at that moment Rebecca, the cat, who had been preceding the visitors along the gravel path, and indicating in every hair of her body her resentment at their intrusion on her tête-à-tête with her master, suddenly sprang to one side with a piercing and unwarranted cry, and, having calculated her distance to a nicety, fell on that cabbage whose outstretching leaves protected Mr. Doughty's head from the gaze of all beholders. The ladies, startled by the jump, and following with their eyes her flight, marked her fall and the battered straw hat which her hind-legs displaced. "Richard!" shrieked Mrs. Lankaster, and poor Mr. Doughty, scrambling to his feet, and trying to brush the heavy soil from his clothes, stumbled from his security and felt his courage and resource fading with his hope.

He shook hands nervously with his visitors. "The caterpillars!" he stammered out. "They give me a great deal of trouble. So do the slugs and snails."

"Dear me," said Mrs. Lankaster distantly, and Evelina turned away.

"Go, my child!" the elder lady said, addressing once more her daughter, "and see if the excellent Fidler has yet served tea. You need not come out again. I want a few words alone with Mr. Doughty."

Evelina moved swiftly down the path and across the lawn. Evidently she was relieved at her dismissal, but her mother thought she should not show her relief so plainly. The girl was obstinate, yet for the last week she had seemed more amenable to reason than ever before, and Mrs. Lankaster, encouraged by this fact, had determined on a master stroke, and meant to lose no time in dealing it. The situation in which she had found her future son-in-law added materially to her advan-

tage, and she resolved to make the very best of the present opportunity.

"Richard," she began, directly Evelina was beyond earshot. "I have a few very serious words to say to you."

Mr. Doughty, who was struggling to control his quivering features, and at the same time to repel the advances of Rebecca, who was describing those figures at his feet which he knew must ultimately result in a spring to his shoulder, made no answer to this statement beyond a distressed and appealing glance.

But Mrs. Lankaster was a stranger to mercy.

"Are you aware," she continued in a sepulchral tone intended to carry great solemnity, and not without a certain impressiveness, "are you aware, Mr. Doughty, that you are trifling with the feelings—I do not now mention the affections—the feelings of a fatherless girl, and taking advantage of two helpless women?"

It might have seemed as though at that moment Mr. Doughty himself was decidedly the most helpless of the party. Standing irresolutely shifting his position with each second, his fingers working with the discoloured ribbon of his hat, his pale face moist with nervousness, his mouth set in a deprecating droop, his unhappy eyes wandering from Rebecca and her blandishments to Mrs. Lankaster, and back once more to the cat, he was a picture of misery complete and pathetic. Still he answered nothing, but seemed waiting until the full tale of his enormities had been announced.

"Richard," pursued his tormentor, and her fine dark eyes literally flashed with righteous indignation through the intervening lace of her veil, "I thought you were a gentleman, a gentleman and a Christian. But how can I reconcile such conduct as yours with this opinion?"

"Indeed," began Mr. Doughty, falteringly, "if I thought that, that—the steps you contemplate were for Miss Lankaster's ultimate happiness I would not hesitate; I assure you I would not. But I am convinced that there—is—" (he became dreadfully confused) "there is not enough love on either side to warrant our adopting the—course you have indicated."

Only for one instant did Mrs. Lankaster pause. Then she cast up the thick veil which hung loosely over her handsome features, and at the same time turning her eyes sky-wards thus addressed Mr. Doughty.

"Unhappy man! Do you suppose that by such feeble arguments you can disguise the real meaning of your words, or deceive *me* by the cowardly subterfuge to which you have had recourse? With your own lips you told my daughter that you loved her. Stay, I will not bear contradiction. You have never denied it before, and it is too late to do so now. By your conduct and protestations you won her young and confiding affections; and now, when I, her mother, in the endeavour to protect her interests, ask of you what are your final intentions, and the meaning of that engagement into which you have solemnly entered, you turn upon me with abuse and threats, and strive to crush the orphan and the widow!"

Mr. Doughty was moved to horror at his own iniquitous conduct. He had never before contemplated it in this light, and he was staggered at the interpretation which he now found put upon his actions. His eyes moistened at the mere notion of the oppression to which the weak had been subjected. Yet an insurmountable objection to altering his own line of behaviour remained.

Mrs. Lankaster saw she had made some impression, and thought well immediately to follow it up.

"Not only," she proceeded, "must your conduct be contemptible in your own eyes; but think of how it must appear in those of your neighbours. What will your friends say when they hear of the dishonourable way in which you have behaved? What will even the poor of the parish think? What an example for their squire to set them! How many a broken heart amongst your lowlier friends will in the future, and with justice, refer its injuries to one whom they had been wont to regard as their benefactor!"

This shot told well home. Mr. Doughty groaned aloud. That he, who had never consciously given to any one a moment's pain, to whom the very thought of suffering or misery was well-nigh unbearable, should be the pioneer of broken engagements, bleeding hearts, general unhappiness, and an object of universal reproach, was indeed an awful thought. He felt that, being such a villain as he evidently was, he had forfeited all right to his own sympathy and support. He dropped all thought of himself and his own defence, and desperately turned to see if he could not show some fight for the sake of the lady who was to be chained to him.

"But, Mrs. Lankaster," he protested feebly, "I do not think I can make Miss Lankaster happy. I do not think I love her sufficiently to give her all to which so charming a young lady has a right."

"Selfish wretch!" cried the indignant mother. "Always what *you* feel and what *you* think! Never a thought of my poor child's blighted life and reputation! For," she continued, lowering her voice, but speaking with an awful distinctness, "I warn you fairly, Mr. Doughty, that if you continue in this most unsatisfactory attitude, I will appeal to the general sense of justice of the nation. Understand what I mean. If you refuse now to marry my daughter, I will summon you for breach of promise of marriage, and the whole country shall ring with your disgrace."

The shell was discharged, the bomb had exploded. As the smoke of excitement slowly cleared, Mrs. Lankaster was able to mark the effect of her words. Richard Doughty was literally trembling from head to foot. His pale countenance had turned to ashen grey, his hat had fallen from his slack fingers. He stood shaking and gazing at Mrs. Lankaster, tongue-tied.

"I mean every word I say," proceeded the victorious general, although she longed to shout for very triumph at the effect she had produced. "I know that by such a proceeding I should drag my daughter's fair name through the very mire of publicity. But I should be bold and brave to do it, because I feel that I must fight for her interests

and her protection; and with you, and not with me, would lie the shame and the blame of the proceeding."

Mr. Doughty's mild grey eyes, wide open now from horror, still hung fascinated on the lady's immovable visage.

"But, Richard," she resumed in more kindly tones, "I know that affairs will never get as far as that. You will do your duty by my poor child, without any force from without. I really only came to settle which day would be the most convenient for the wedding. You will have no objection to its being before the end of the month."

you, and you shall come on in our carriage to church. I suppose we'd better have it in the morning, for Mr. Harvey does not like the new-fangled notions. I'll go on now and tell them all about it. You can see about the licence to-morrow morning. Leave all the rest to me. I'll manage everything. The only thing you've got to do is to mind and get the licence in good time, and to be ready at a quarter to eleven next Saturday."

She shut her parasol, drew down her veil, and held out her hand to Mr. Doughty as she spoke. Remonstrance, entreaty, excuse, rose to his lips, but found no expression in words. "The whole

MRS LANKASTER DECLARES SHE WILL APPEAL TO THE GENERAL SENSE OF JUSTICE OF THE NATION.

A faint "No" came from Mr. Doughty's parched and quivering lips.

"That only leaves us a week," Mrs. Lankaster proceeded cheerfully. "Let me see; to-day is Tuesday, and to-morrow is rather too soon. What do you say to Thursday?"

Mr. Doughty faintly shook his head. "I couldn't get a licence in time," he ventured.

"Then how about Friday?"

"Unlucky," gasped the bridegroom.

"Well, there can be no objection to Saturday," said Mrs. Lankaster, resolutely.

Poor Mr. Doughty's brain reeled. "My dear Aunt Susan died on a Saturday," he gasped with happy inspiration.

"Stuff and nonsense," cried Mrs. Lankaster unfeelingly. "Who cares about your Aunt Susan? Saturday's the day. We'll come over here to fetch

country shall ring with your disgrace"; "With you and not with me would lie the shame and the blame of the proceeding." These words seemed to sound in his ears, to be stabbed into his heart, to struggle with and suffocate any of his own. Dumbly he shook hands with his visitor, and dumbly he stood looking after her as she swept down the narrow path. At the foot of the kitchen-garden she turned to call back: "Don't forget about the licence. Better see to it first thing to-morrow." Then she disappeared for a minute into the house, and a few seconds afterwards he heard the front door reopen, the carriage door bang to, and then the crunching of the gravel once more below the unwilling feet of the cab horse.

Still Mr. Doughty stood, as one who is turned into clay. He might yet be standing in that attitude of

utter, blank despair, had not Rebecca, who had wisely awaited her time for the performance of her designs, now taken the opportunity to spring from the flower-border on to his shoulder with a little pitying cry. The start aroused Mr. Doughty. He staggered to a garden bench, his shoulders bowed to support without disturbing the cat's weight, and sinking down he buried his face in his hands groaning: "I can't, Rebecca; I can't, I can't, I can't!"

### CHAPTER III.—THE WORM TURNS.

IT would be worse than useless to attempt to describe the hours of despair which ensued for Mr. Doughty after his visitors had taken their leave. All Wednesday he remained in his sanctum, with the door locked, only opening it so far as to allow Mrs. Fidler to hand in to him the meals which remained untasted. On the Thursday morning he recovered so far from the state of collapse into which he had sunk as to write a long letter to Mr. Mills, posting it to that gentleman's home-address. In this letter he gave a circumstantial account of the interview which had been forced upon him by Mrs. Lankaster; of that lady's demands and threats, and his, Richard's, useless protests and entreaties. His own attitude of defiance was doubtless drawn from that which Mr. Doughty had mentally felt capable of sustaining; it scarcely represented him as he had appeared in single combat. The letter wound up with a pressing appeal. The matter was urgent, and Mr. Mills must come to the rescue without a moment's delay. Mr. Doughty calculated that this powerful missive would reach the suburb of London where his godson's practice lay not later than eight of the following morning. He therefore counted on Mr. Mills' arrival at Hupton station by the afternoon train of the Friday. When his letter was posted he felt rather more at ease than he had done since the memorable interview with Mrs. Lankaster. Tommie had promised to help him, and Tommie was a man of his word. Mr. Doughty could not tell what means Mr. Mills would employ for his rescue; but he felt quite sure that he had secured the best possible champion for his cause. And in the meantime he himself would remain defiantly inactive as regarded the procuring of a licence or other such unnecessary forms.

On the Friday morning the Vicar, alarmed by the reports given him by his invaluable partner of the frame of mind in which Mrs. Lankaster had visited her sister-in-law on the previous day, called upon Mr. Doughty. But Mrs. Fidler, who was possessed of all those ordinary means which place a faithful servant *au courant* of her master's affairs, did not admit the gentleman without preliminary consultation. Upon parley being held through the keyhole of the sanctum Mr. Doughty declared himself to be in bed with a violent catarrh, which he was nursing against the morrow; and furthermore, when even this excuse did not serve to check the attentions of Mr. Harvey, Mr. Doughty protested to Mrs. Fidler that he had just sunk into a profound slumber, from which at her peril she dared not wake him. The same slumber-device was repeated later on in the day, when the clergyman again called, although at the moment Mr. Doughty was sitting in his favourite hammock-chair, watch in hand, counting the moments to the time when Tommie Mills might be expected to arrive.

But Tommie did not come. At first Mr. Doughty allowed himself to believe that the train had been fifteen minutes late. But before this time of grace had well elapsed the smart dog-cart, which was kept for the pleasure of Mr. Doughty's groom and occasional visitors, returned with the tidings that Mr. Mills had not been among the passengers disgorged at Hupton. Neither questioning nor cross-questioning could elicit any other report from the grinning servant, and poor Mr. Doughty retired from the window, whence for greater security the dialogue had been carried on, to a search of the railway-guide, and then issued fresh orders that Ducat should meet the 8.30 down train with the dog-cart.

A choice supper was prepared by Mrs. Fidler for her favourite, and Mr. Doughty with the *Spectator* in his hands, but his eyes on the timepiece, endeavoured to await with as much patience as he could muster the arrival of the expected guest. But another disappointment was in store for him. At 9.15 the dog-cart again returned without Mr. Mills.

"Can't 'elp it, zur," said Ducat, in reply to his master's remonstrances, for in his excitement Mr. Doughty had flung open the door of the sanctum. "If 'er wadden theer I coudden bring 'er; thick's plain."

"I can't understand it, I can't understand it," moaned poor Mr. Doughty. "He never would have played me false like this if he'd been alive, I'm sure. I cannot think what can have happened to Mr. Mills." And shutting the door once more Mr. Doughty retreated to the inner recesses of the chimney-corner, wringing his hands and repeating to himself, "And what is to happen to me: whatever on earth will become of poor me?"

There was no sleep for Mr. Doughty again that night. During its early hours he sat in his chair, half-stupefied from his disappointment, and his brain racked with nervous terrors for the welfare of his godson. But with the morning hours a consciousness of his own exceeding and nearing peril returned to him. It wanted but a few hours to his doom and he was alone to meet it! The thought stirred him to some kind of energy. His anxiety should be more on his own account than on that of the deserter. A suspicion even dawned upon him that Tommie was purposely forsaking his cause. A faint remembrance of the half smile with which his godson had heard the preliminary account of his troubles dawned on him now, though at the moment it had been quite unnoticed. Perhaps Tommie was only amused at the predicament in which Mr. Doughty found himself. He had a habit of being unaccountably amused by circumstances in which Mr. Doughty could see no joke. This theory grew upon him, till by 5 A.M. it had become plain and clear to him that Thomas Mills meant to throw him

over, and was wholly indifferent to the horrible fate which awaited him.

This conviction when thoroughly formed stirred Mr. Doughty out of all inertness. He threw off the feelings of lassitude and incapacity which were the growth of years and sprang to his feet. He paced up and down the room rapidly, fanning the flame of his own indignation and revolt, and encouraging in himself the unwonted activity and power of initiation which he now felt. He would not submit; he would not tolerate the bondage which was being thrust upon him. He would repudiate his bride at the church-door; he would refuse to take his part in the ceremony before the altar. A vision of the crowded church, the solemn faces of the expectant throng, the white-robed bride, the priest, the organ, the flowers, the rice, rose before him. Could he trust himself to play such a part before all this multitude? Should he have courage to carry out his protest in the face, as it were, of God and of man. He knew he should not. He could not attempt to deceive himself; and falling back again into his chair he groaned aloud.

But why push events to this very last extremity? Why not rather refuse to come to the church? Why not feign illness, paralysis, anything? Alas! he realised that here Mrs. Lankaster would be too much for him. The undaunted lady had promised herself to conduct him to the altar, and he knew that she would be as good as her word. He believed her even capable of hiring an ambulance-conveyance if so be that he could reasonably plead ill-health or accident.

Escape! Where was it? It seemed to elude him, but he *must* grasp it! He clutched his aching forehead and his thoughts whirled wildly on. Flight. There was a path open to him. What should prevent it; who could stand in his way? He would run the country! He would desert his happy peaceful home, until this calamity should be overpast. Why had he never before thought of this most simple expedient? He laughed aloud in mad elation at the scheme.

Half-past six! In four and a quarter hours that terrible woman would be on him. He sprang from his chair and seized the railway-guide once more. At 6.40 a train left Hupton for Saltby-on-Sea, and at 6.45 another started for London. He was too late for both these. He dared not drive, for none of his own household must know of his destination. If he waited for the next Town-train, which left Hupton at 9 A.M., all his servants would be about, and he would be distraught by the curiosity of Mrs. Fidler and the chatter of the outdoor men. No, he must fly at once and without further loss of time. Hurriedly his eye fell down the railway-table. How few trains stopped at Hupton! Stay! What was this? An express left for Saltby-on-Sea at 7.45. He had time to catch that. Why not go there as well as anywhere else? And, besides, from there he could make his way at leisure to the protection of Mr. Mills, or to any other spot which might seem to afford safety.

Mr. Doughty was now acting with speed and decision. His servants, according to their usual custom at this hour, were all fast asleep. He would not venture to cross the hall, for fear of disturbing them. He became suddenly conscious of hunger, and hastily devoured the cold remains of his last night's dinner. With his mouth crammed full of sodden beefsteak and dried bread he collected his purse, his cheque-book, and a few other trifles. Quite regardless of the ludicrousness of the statement, he scrawled in large letters on a sheet of foolscap: "I left for Central Africa last night," and put the paper in a prominent position on his mantelshelf. He could get at no hat beside the battered straw which he used for garden-wear. He placed this firmly on his head and gently opened the lattice. With some difficulty he squeezed himself through its narrow opening and stood in the fresh green garden. The delicious morning-air cooled his head and quieted his fevered pulses, but his resolution did not abate. Choosing the orchard path, as being the one least frequented, he hurried from his grounds, without so much as one backward look or pang of regret, and struck into the field-path to Hupton station.

Like most nervous people Mr. Doughty was an extremely rapid walker. In the present instance the fears which pursued him served as goads to hasten his footsteps. He cleared stiles and gates with boy-like agility, and never once did he pause for breath till he found himself safely at the booking-office. To secure his ticket and a seat in a crowded compartment where he might hope to be unnoticed was the work of but a few moments; and indeed, had he known it, Mr. Doughty need have had no fear of detection. The four days' growth of beard upon his face, his tumbled clothes and disreputable hat sufficiently disguised his identity to the sleepy porter. Richard Doughty entirely escaped all observation, and sinking back with a profound sigh of thankfulness as the train steamed out of the station, he composed himself for slumber.

How sweet was his sleep! For two delightful hours anxiety and fear forsook him. He roused himself with difficulty and rubbing his eyes sat up. Most of his fellow passengers had left the compartment while he slept, and there only remained a poor woman with her two ugly little girls, whose tiresome and persistent questions had aroused him. The children seemed to Mr. Doughty charming. They were sceptical as to the nature of sand, and openly derided the possibility of "so much water that they wouldn't be able to see across it." Mr. Doughty became deeply interested in their conversation, and gave them each half-a-crown when the train stopped at Saltby.

Liberty! He was free! He had escaped! A clock struck eleven as he dismounted and dismissed his cab alongside of the asphalted esplanade. The Saltby season was now at its height, and swarms of people strolled together or chatted in little groups in the warm sea-air. The day was glorious. The sun shone as though it had been midsummer, and the fresh salt-laden air saved the heat of the morning from oppressiveness. How happy every one looked! How happy, how consciously and perfectly happy he felt! Mr. Doughty

was quite oblivious to the unseemliness of his personal appearance; but it struck him that he had not washed that morning, and that his hands were grimed with railway dust, and the skin of his face felt uncomfortable. He left the esplanade and descended to the beach. There were not many bathers, and Mr. Doughty had never before so enjoyed a tub as he did that morning's swim. He felt like sixteen. He kicked about and splashed the water high over his head. A sense of irresponsibility, an ignorance of the future, and a delight in the present, were on him. He dressed and emerged again from his bathing-machine with a step as light as a child's.

But this delicious exhilaration of feeling was short-lived. He had returned once more to the esplanade and was passing below one of the smaller hotels of the place. Something tempted him to look up, and there, standing in the full sunshine on a balcony of the first floor, gazing seawards with her profile half turned from him, stood Miss Lankaster. At first he could not believe his eyes. He remained stockstill, staring at the tall slight figure. But he was not mistaken. The pale complexion, the thick plaits of soft brown hair, the gently-rounded figure, the long shapely arm, and the simple gown were indeed all unmistakable.

When Mr. Doughty had fully satisfied himself that his eyes were not playing him false, that there before him in the flesh stood Evelina Lankaster, he turned and sped in an opposite direction. He knew the town well, and dodging from one street to another, he presently found himself in a quiet coffee-house, where he was at liberty to ruminate at his leisure on this new and most astounding aspect of affairs.

But ten minutes before he had been spitefully chuckling to himself over the bridal party without its bridegroom, over the hubbub and commotion which would at that moment be reigning in Swire, and over his own consummate resource and promptitude of action. Now all was changed. He had been discovered and tracked. How could he ever have hoped to outwit the dauntless Lankaster? Some one must have seen him at the Hupton railway-station and have reported the matter immediately at head-quarters. Perhaps, indeed, his would-be mother-in-law kept spies always on the watch. And yet how could he have been so speedily followed? If his pursuers had been in the same train with him he would have been long ago seized and probably delivered over to execution, that is, marriage. He could not remember any other Saltby train which left Hupton before midday, and it was barely twelve now. He sat drinking his coffee and munching his rolls in an inner private room with only the gloomiest forebodings for companions. One thing became clear to him as his depressed brain revived under the stimulant of the coffee. If he was to avoid discovery and capture, he must immediately leave Saltby and seek a hiding in London.

He paid his bill and left the house. With the step and hunted look of a criminal he sped down the High Street and took the first turning in the direction of the railway station. He would fly to Tommie. Tommie would not refuse him protection and shelter when once he properly understood the dilemma in which Mr. Doughty now was. Tommie could not before have thoroughly realised the extreme peril and danger of the situation in which he had refused his support. Tommie was good at heart, and had always been a good boy to him. Yes, he would go to Tommie.

He was passing the Post Office as he formed this resolution, and a man issuing from its doors ran up against him. Mr. Doughty started back and grasped at a lamp-post for support.

"Tommie!" he cried in accents shaken by surprise and wrung by despair. "It is Tommie? Tommie too!"

No *et tu Brute* could have told forth a love more deeply wounded by the conviction of the treachery of an own familiar friend, than did those few simple words of Mr. Doughty.

In an instant it all flashed upon him—the reason of Tommie's indifference and silence to his appeal. Tommie had gone over to the enemy; Tommie was with the Lankaster faction; Tommie was a party to the pursuit; Tommie had hunted him down. The great sorrowfulness of the thing, the ingratitude, the desertion, the loss of love, the spirit which prompted all these, smote on Mr. Doughty more sorely than even the fact of his own capture. He could not speak; a sob rose in his throat and he concentrated his mind on choking it down. His pitiful eyes sought his godson's with a pertinacity rarely seen in them. He remained mute, holding by the lamp-post and looking at Tommie.

And Mr. Mills stared back at him. His healthy young face, which had flushed somewhat abnormally on their first encounter, gradually resumed its ordinary colour. A puzzled expression, which slowly passed into one of deep contrition, was on his countenance. He took a step nearer, and then, as Mr. Doughty shrank and trembled at his approach, he dropped his outstretched hand and retreated again. When he spoke it was in tones of sorrow impossible to misinterpret.

"Oh, Richard! I never would have done it had I known that you really cared."

By mutual, if mute, consent, the two were now walking down a quieter side street which led back to the sea.

"Cared!" repeated Mr. Doughty, and even in his own ears his voice sounded old and quavering. "Did I not tell you that my liberty, my happiness, my very life almost were at stake? Did you not promise to help *me*? Did you not give me your plighted word? And I believed you! I was foolish enough and weak enough to trust *you* instead of trusting only to *myself*! I——"

"I don't know what you mean and why you are going over all that," interrupted Tommie, with a confused air. "I thought you did not care for Miss Lankaster."

They were standing now in the full sunshine of the esplanade. The sparkling water dazzled Mr. Doughty's eyes, and his brain was beginning to feel the fatigue of the unusual strain which he had imposed upon it. He gathered himself together,

however, for one final protest, and leaning against the traitor's arm, the support of which he sorely needed, but could not bring himself avowedly to take, he gasped out :

"No more I do, and no more I did, and no more I ever shall."

"Well then, why are you here, and what's the matter?" cried his questioner, with a strange ring in his voice, and a smile sweeping the lines from his contracted features.

"I am here because I fled at the last moment. I couldn't bring myself to the point, Tommie ; you know I told you I knew I couldn't. But that *you* should run me down, that *you* should hunt me up, that *you* should turn upon your old friend—your friend who loved you, Tommie—ay, and who loves you still—that *you* should want to deliver me up into the hands of those designing women! Oh, Tommie, that is bitter—that is exceeding hard to bear."

Poor Mr. Doughty's voice, which, through the delivery of this speech had been gradually breaking, now gave way altogether, and ended in a most uncompromising sob.

But Tommie Mills burst into a roar of laughter.

"Oh, poor old man!" he cried. "So you thought that I had forsaken you ! that I had given you up and gone over to the enemy. And all the time I was plotting for your liberty, and holding daily and secret consultations with a friend in the very camp of the enemy !"

Mr. Doughty turned his bewildered face on his companion.

"Where were you?" he inquired hoarsely, "and who was the friend in the enemy's camp?"

"I was lying *perdu* in Hupton," Mr. Mills replied gravely. "And the friend was Miss Lankaster herself."

"But she is here ; she is in pursuit of me too," persisted Mr. Doughty. "I daren't even walk in this direction or she will see me ! I tell you she is at this moment at the Victoria Hotel."

"I know she is," said Tommie, with great simplicity. "I took her there myself. She's my wife now."

Mr. Doughty made no difficulty in the present instance in clutching at Mr. Mills's arm. Indeed, without its timely assistance he would inevitably have fallen. He could not articulate one of the myriad questions with which he seemed bursting. His whole face and figure, his crooked fingers and wavering limbs, gave points of interrogation.

Mr. Mills did not keep him long in suspense. Thrusting him gently on to one of the many benches which faced the seashore, he took a place beside him, and briefly narrated to him the following facts :

MR. MILLS EXPLAINS THE POSITION.

"I knew Evelina Lankaster when I was still a student and walking the hospitals," he began. "We loved each other then, but her mother would not listen to my proposals. The old woman hated me —why, I scarcely know, unless it were on account of my great impecuniosity, and because I cherished anything but an affection for herself. She forbade Evelina to have anything whatsoever to do with me, and although we had sworn to be true to each other, I did not dare come forward till I had something definite to offer in the shape of income and prospects.

"Through your generosity, sir, I was able to escape from my creditors, and by dint of hard work and application I at last scraped together a small but promising practice. After three years I felt myself in a position to come forward and announce my intentions to Mrs. Lankaster, and, as I have subsequently found, chose that moment when my *fiancée* and her mother had just returned from their visit to Swire Vicarage. Mrs. Lankaster was exceedingly angry with me. She vowed she would not hear one word further on the subject of

my suit. She forbade me the house, and her daughter all intercourse with me, and she did her best to ensure her orders being carried out. By dint of some ingenuity I managed at last to elude her, and spent one stolen afternoon with Evelina in the seclusion of a city church. By some means Mrs. Lankaster discovered that we had met, and a few days afterwards she and her daughter entirely disappeared from London. They left neither trace nor clue behind, and seemed to have vanished into thin air.

"From that day forward I could hear nothing of them. I made every possible inquiry, but all with no result. Their house was let to strangers, and the house-agent professed total ignorance of their whereabouts. Three months of useless search and investigation followed, and then I determined to take you into my confidence, and to ask your advice and help. I came down to Swire, and the results of that visit you know. Mrs. Lankaster had not made away either with her daughter or herself. She was merely quietly living at Hupton and pursuing those schemes which should secure a wealthy husband for her daughter, a home for herself, and perdition for me. She had worried Evelina nearly into a brain-fever, and would I believe have finished by driving the poor girl off her head. Excuse me, Richard, but I believe your condition was very similar. When I found the state of mind to which you had been reduced by the conduct of this unprincipled woman, I saw that if you were to be rescued the work would have not only to be carried out for you, but totally irrespective of any assistance from you. You were, in fact, incapable of giving any reasonable assistance.

"I left you, only soliciting your trust and extracting enough money to carry out the plans which I immediately formed. I went into hiding at Hupton, and the rest was easily arranged with Evelina herself. Her mother thought I was safely in town, and had grown over-confident from her success in the interception of the letters which Evelina had tried to send me. My dear girl readily entered into all my plans. I obtained a special licence with your money—you remember that fifty pounds—and this morning we came off here together and were married. When you met me I had just come from the Post Office to see if there was any reply to the telegram I had sent you on arriving here, or to the note I had despatched by a messenger before I left Hupton this morning."

As Mr. Mills finished his recital Mr. Doughty slipped his hand through his companion's arm.

"What a fine, bold fellow you are, Tommie," he said admiringly. Then added with a little hesitation, "I hope you are really quite pleased with your wife?"

For answer Mr. Mills laughed a little.

"And what are we to do now?" Mr. Doughty continued.

"We must act together," Mr. Mills replied decisively. "Our interests and our enemy are common. Probably Mrs. Lankaster will learn where Evelina and I are, and a good deal more about our doings than I care that she should know, from my letter and telegram to you. She is not likely to stick at opening them. But that can't be helped now."

"No, I'm sorry to say it can't," assented Mr. Doughty. "And, as you say, we must act together; our interests are common. I fancy you remarked," he added, with an underlying tone of glee, "that Mrs. Lankaster's principal objection to you was your lack of money. Well, if that is really all she has against you, I think that—always acting together—we may yet be able to tackle the good lady. And in any case we have the whip-hand of her. Now come," and he rose as he spoke, still holding Tommie's arm, "now come and introduce me to your wife."

"Hadn't you better get shaved first?" commented Mr. Mills.

## Of Long Ago.

WITH rose and may the world was fair,
And there was sunshine in the air
When we went courting down the lane
Where we shall never walk again,
A happy, foolish, loving pair.

I talked of home we two would share,
And you pretended not to care:
Now hope and youth no longer reign
With rose and may!

White roses where red roses were!
Few are the flowers that Time will spare;
But Time's the slave of Love: in vain
Come age and tears and loss and pain,
Since still Love crowns your snowy hair
With rose and may!

E. N.

# A WASP'S NEST.

IT was about the size of a cricket-ball, and was made of a somewhat coarse, though thin, light-grey paper. On its upper side it was attached to a branch of gooseberry bush by a mere ribbon of paper, and there was a reddening gooseberry half embedded in its walls. In the centre of its lower surface it was pierced by a small round hole which evidently served as a door for the inhabitants.

It had been built in a gooseberry bush ; and my friend R——, who is always on the look-out for "specimens" for me, had cut it out, at the risk of being badly stung for his pains. By some means he had managed to drive off all the wasps that were within, but by the time the nest reached my office several of the pupæ in the cells had come to maturity, emerged, and dried their wings. During the cutting-out process, the paper walls had got torn on one side, and by carefully turning back the fractured portion I got a capital view of the internal arrangements of the nest.

Right up in the top of the domed roof was a cluster of three paper cups, of a round shape, and inverted. From the centre of this structure there was produced a pillar of grey cardboard, spreading out at its lower end, and rooting, so to speak, in an inverted "comb," made up of about thirty-five six-sided cells. Half an inch or thereabouts below this second tier of cells was a third, depending from that next above it by four or five pillars. All the cells in these combs hung mouth downwards, and each was occupied. In some the tenant was in the egg-stage, and newly deposited ; in others there were larvæ of different sizes—from the tiny maggot recently hatched and clinging to the empty egg-shell, to the burly-looking grub that completely filled its cell with its fat body. Then there were cells which had the opening closed up by a paper —wasp-paper—cover, and looked much like little pots of jam with their parchment covers. These last contained wasps in the chrysalis-stage, and some were breaking through the covers as complete wasps, or standing outside drying their newly acquired wings.

This was very interesting ; but when these recently developed wasps began to leave the nest and fly about the office, it was thought to be the proper time for me to shut the nest up.

On arriving home with my paper city and its hundreds of inhabitants my first concern was so to dispose the nest that "business would be carried on as usual" in spite of the removal of the establishment. In cutting out the nest my friend had been careful not to injure the attachment to the gooseberry bush ; and now, by means of a stout piece of galvanised wire, I fastened this bit of gooseberry branch to a shoot from a wall pear. It seemed an easy matter to accomplish, and yet, try as I would, I could not get it so fixed that the gate of the city would come into its proper position —underneath the nest, as formerly. It would persist in so hanging that the door came half-way up one side. This meant that the combs were all edgewise, and consequently the poor grubs had to undergo the misery of lying on their sides instead of comfortably hanging head downwards. This would never do ! Yet I could not alter the position : the law of gravitation was too strong for me.

Here comes a strange part of my story. I want you to notice this fact, that when the nest came into my possession there was not a single completely developed wasp about it, so that the new wasps could not receive instruction as to their functions and duties from their elders. In spite of this, as soon as the new wasps came out they went round from cell to cell, licking the grubs, and evidently giving them food. They flew away from the nest, and were busy all day, flying in and out, bringing insects they had caught and feeding the grubs with bits.

Then some of them set to work to mend the broken walls, and build new cells. Was not this wonderful ? They never made paper before, had never seen it made, and had no one to teach them ; and yet they knew just where to go for the proper material, how to work it up into a pulp, and how to spread it evenly, and so to repair the breakages in a neat and workmanlike manner.

But this repair of the wall—however desirable from a waspish point of view—was a great disappointment for me, because it shut out my view of the inside ; and henceforth I had to content myself with what I could see through the doorway. This was not much, because these very particular wasps had cut away the old entrance at the side and had constructed a new doorway at the bottom of the nest. Looking in at this aperture a few days later, I found that by some almost incredible feat of industry the wasps had altered the arrangements of the combs, and now, instead of being perpendicular, they were hung horizontally. I believe that in order to effect this they had to build entirely new combs, and demolish the old ones.

By this time the number of winged workers had enormously increased, and some of them were constantly busy laying on fresh strata of paper outside. And so the nest grew in size by this associated labour, until it was six and a half inches across, and the walls (as I afterwards ascertained) were about an inch in thickness. The colony had also increased, until now the mature wasps could be numbered by hundreds.

I always feel annoyed when I hear some disagreeable, short-tempered person dignified by having the adjective *waspish* applied to him. It is an entire misuse of terms, and a gratuitous libel

on the insect. In the sense in which that term is understood *the wasp is not waspish!* Here is a bit of my own experience :—

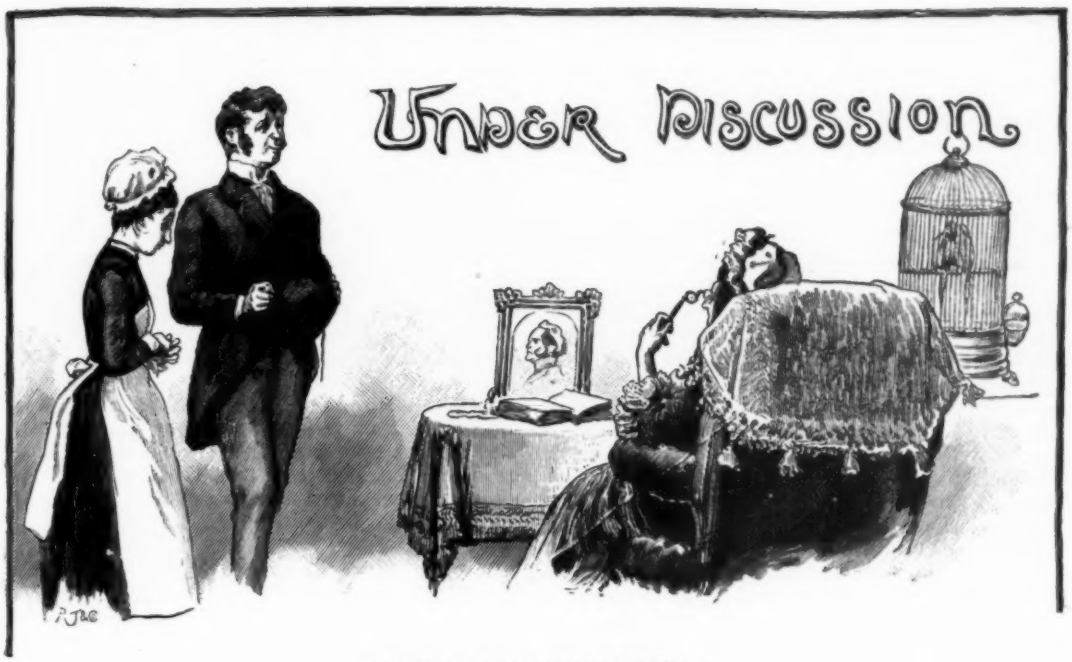
My wasp's nest was hung on a level with my eyes, to enable me—being somewhat short-sighted—the better to see what was going on ; and I have spent hours standing with my face close to the nest, with wasps flying in and out of the door every second, having in fact to go out of the way to avoid flying in my face. And yet, never was there the slightest attempt made to sting me ; in fact, no notice was taken of me. I confess I should not care to try a similar experiment with bees.

The early history of the nest is by no means without interest, although in this particular case I was unable to watch its foundation ; but what is true of one nest of a particular species—this was the *Vespa sylvestris*, or wood wasp—is true of any other of that species. The colony was founded by a solitary individual—a lady wasp that all the winter through had slept soundly in the inmost recesses of a faggot stack. In spring the genial spirit of rejuvenescence had affected her in common with many other things, and she had felt the necessity of being and doing something in the work of the universe. So she had fixed upon the gooseberry-bush, after a good deal of flying to and fro, and examination of "eligible building sites." Already there were hundreds of tiny black and white caterpillars swarming over the bush, eating up the tender green leaves that were only now smoothing out their crumples. To help the gardener by destroying these would be an object in life—a mission of usefulness.

After some debate in her own mind as to the best part of the bush for her purpose, she finally decided upon a particular branch, and then flying to a decaying post in the fence, she cut out some of the soft fibres of the wood and carried them to the bush. With her sharp mandibles she rapidly tore these to pieces, and mixing them up with her glutinous saliva, she soon had a pellet of wood pulp. Spreading this out smoothly and equally, and fashioning it into a little circular cup, inverted, she lays an egg within, and goes in search of more material. Several little cups are added to its fellow, and in each an egg is deposited. Then a paper roof is made over these cells, and this is gradually increased until it becomes globular in form. But the eggs have hatched, and the resultant larvæ require feeding ; so the mother wasp goes off and kills caterpillars, and flies, and spiders, cutting them up and distributing the portions as so many tid-bits to her progeny, actually placing each morsel in their mouths, for they have no limbs and cannot therefore help themselves.

She is most assiduous in her attentions, and one day she is rewarded by the appearance of a winged worker—a female whose sexual attributes are imperfect. Now a fresh tier of cells is made below the other, and larger in diameter. The nest has to be increased in size to accommodate the new cells and the utmost exertion is required to feed the increased number of grubs. By-and-by there are so many winged workers that the nest increases in size every day, and then cells of a much larger size are made in which true sexual insects are produced, in order to provide for the perpetuation of the species.

The season for ripe plums and peaches comes, and the wasp demands payment for the help she has rendered the gardener by the destruction of the countless swarms of caterpillars, green fly, etc., with which she has fed her progeny.



For a short time they revel in dissipation, and then insect life begins to get scarce out of doors, and the nights get frosty. The wasps become in some strange manner aware that ere long their powers will fail, and their helpless grubs in the cells will starve. So the cells are visited, and the grubs are brought forth and mercifully killed. Then by general consent the nest seems to be entirely abandoned, the wasps coming into our houses and walking into jam tarts and pots of preserve. Whilst so engaged many of them come to a violent end at the hands of the indignant housewife. But sometimes their attention is not confined to the jams and fruit jellies—they come also after the flies that are a perfect pest to the jam-makers. This is especially so when the colony is in full vigour and there are hundreds of voracious grubs to be satisfied. Let me tell a little story that was told to me by a friend.

He was staying in a country town, and had occasion to go into the local confectioner's shop for some dainty or other. Once inside he was astonished at the number of wasps that were flying around and walking over the counter and glass dishes, and made some remark upon the subject to the young lady in charge. "Oh, pray don't call them a nuisance," said she, "they are our best friends. Were it not for the wasps, I really do not know what we should do. See, there is Mr. Blade's butcher's shop across the road, and we get swarms of flies from there. They come in the door and swarm in the windows, although we keep muslin over the tarts and sweets. But the wasps are in and out every minute of the day, and every time they take off a fly. Look at that beauty now!"

And following the lady's glance my friend saw a bright yellow wasp swoop down on a vulgar-looking blow-fly, capture it, and then sail triumphantly out at the door with it.

To return to my wasp's nest—and in this matter I am unlike the wasps at the end of the season : they never did return. What became of them I know not, but doubtless a few females got into dry cosy corners somewhere and slept through the winter in safety, each founding a new colony in spring. The males would all die early in life. The old nest hangs up among my other natural curiosities, and I should be pleased to show it to you if you are ever passing my way.

EDWARD STEP.

## "YOUNG MEN AND MAIDENS."

BY THE AUTHOR OF "VOICES FROM THE HIGHWAYS," ETC.

PLEASANCE and I have been often exercised in our minds concerning that "young man" who is, quite naturally, almost sure to be found in the vista of life opening out of a kitchen wherein one or two comely damsels live and work, or out of a factory where scores of such find employment.

I remember the time when this youth's undeniably important existence was often absolutely ignored, so far as domestic life was concerned. Cooks and housemaids were hired with the distinct understanding that there should be "no followers." Such prohibition was even stated in advertisements, which yet, nevertheless, did not then fail to obtain answers. And if the young man was not to put in any appearance in his sweetheart's kitchen, his sweetheart did not enjoy many opportunities of leaving it, for she got her liberty only for about two hours during the week, or perhaps for one day in the month, and for one service on Sunday. It was certainly a false and unnatural state of things in which a girl could be expected to forfeit her natural rights and aspirations simply because she had to earn her bread. And this was, probably not without justice, assigned as one of the causes why girls turned towards other means of gaining a livelihood. True, the domestic servants of those days did often marry, but it seems as if they must have generally married either on very inadequate acquaintance, or else have indulged in an amount of secrecy and subterfuge which would afford but a poor guarantee for subsequent domestic bliss.

"I think the views which pervade society now are rather more just and kind," I said, after retailing some of my remembrances; "but certainly they involve mistresses in difficulties and problems of which the old high-handed dames did not dream. The servant is to be allowed her one lawful lover, whose name her mistress asks and whose occupation she is told, less in her right as an employer, than in her duty as a house-mother. But if that lover falls from his place, what then? Is another to be permitted? It might be rank tyranny to withhold such privilege because a girl had been deserted by a false admirer, or, on her own part, had seen some good reason to withdraw her favour. And yet, at what number in succession is a mistress to draw a line? And is there not a comic element in the picture of a worthy matron gravely enquiring into the antecedents first of the butcher, then of the grocer, next of the postman, and lastly of the guard."

"This sort of difficulty crops up everywhere," said Pleasance.

"Yes, indeed," chimed in Penelope Boughton, who was spending a leisure afternoon with us. "We encounter it in the festivities of our factory girls' clubs and guilds. For a long time we conducted these on a sort of conventual basis, making

them gatherings of 'girls only.' But we felt there was something wrong in this, since God had not put the two sexes apart but together. With great trepidation we made tentative experiments. Girls were permitted to bring their 'young men.' We found we had introduced veritable apples of discord, involving tears, sulks, recriminations, and sometimes almost fisticuffs. Further, we discovered that in many cases, the 'young man' was no sober lover, with matrimonial purposes, but that he was merely the necessary instrument of trivial flirtation, so that every girl might have 'her young man' of the occasion, but the next occasion found a different 'young man.'"

"I think this degrading enjoyment in mere flirtation is sure to exist where there is no scope for the natural associations of home and friendliness among young people," I said. "This is one reason why, for my own part, I would never be too rigid in excluding from my kitchen all male visitors except him who comes in the guise of a declared 'sweetheart.' Certainly I should feel entitled to ask who any such visitor is, precisely as I should expect to know the name and status of any gentleman who called on a young lady in my drawing-room. But I should be satisfied if I was told that he was a brother's fellow-workman, or the gamekeeper on the estate where a father's croft was situated. For I think old acquaintance and simple honest friendliness make the best soil for love, and that its sweet blossom is all the healthier if it is not prematurely opened. Such visits, of course, would be very occasional, and with nothing furtive about them. By the time they grew frequent, it would be necessary to have a definite understanding."

"You know, of course," said Pleasance, "that this freedom might give your servants rather too much opportunity for indulging in that phase of courtship known as 'keeping company,' which among the working classes seems to take the place of the ordinary process of acquaintance and friendship. Such 'keeping company' is sometimes a preliminary to betrothal, but is often indulged in merely as a pastime, and a refuge from loneliness and *ennui*. When we know that this 'keeping company' is generally based on tawdry coquetry and clumsy compliment, and is seldom debarred from those personal caresses and pecuniary favours which should be reserved for the most sacred emotions and the closest ties, don't you think we may well ask ourselves how far we ought to countenance or encourage it?"

"Our old-fashioned friend Miss Barwick," said Penelope, "always asks why we should concede to the servants in our kitchen a greater liberty than is accorded to the lady students at Girton or Newnham, who are not allowed to receive masculine visitors."

"That sounds plausible," I admitted. "But there is a wide distinction between the cases. The young ladies are at those scholastic institutions by their own free will, in order, under specially favourable conditions, to secure advantages which, nevertheless, they might obtain elsewhere, or might be content to forego. Our servants are with us that they may earn their bread by serving us, and we ought not to wish to take any unfair advantage of such a position. Again, the young ladies' stay at college is for a definite object, and for a brief and terminable period. The servants' stay in our house is for an indefinite time, and with an indefinite future. Yet, once more, even during the years of restraint, the young ladies' lives are broken up by holidays of months' duration, when they can enjoy whatever social opportunities exist in their own homes."

Mrs. Yeldham, who is visiting us, and who had been sitting silently in the big arm-chair, here looked up from her knitting, and said quietly, "May not that last clause give us a clue to lead out of the difficulties in servants' cases—at least in some instances? Where a girl has a mother's home, or worthy relations or friends near at hand, might it not be wiser, and indeed safer, to give her more opportunities of spending her leisure with them, rather than much freedom to see friends in her mistress's kitchen? For, with the best efforts and intentions, a mistress cannot know the character and tendencies of those whose lives are necessarily separated from her own in a thousand ways, as these may be known to people of their own class, who can associate with them on terms of intimacy."

"Ay!" said Penelope, "the home will always be the safest place for social intercourse of every kind, and especially that which is likely to lead to matrimonial bonds. But alas! in this respect many of our working girls would find their own parents far less friendly than mistresses frequently are. Among the working classes, nay, I fear, among most classes, the relations of parents and children are very much disturbed, and are in a precarious transitory condition."

"Ah!" said Mrs. Yeldham, "many causes have tended to undermine parental authority everywhere. Filial independence is the order of the day. Half-grown and undeveloped creatures assert the right of entire self-control, with results as disastrous as if young plants attempted to do without their props and screens. Then, as must be always the case, sooner or later, the authority that is disregarded or defied, is forced to withdraw itself from countenance and encouragement, and stands aloof, either in distant disapproval, or in disheartened indifference."

"Well," went on Penelope, "what I find is that working-class parents do not generally care that their daughters' lovers should visit their households. The mother says she cannot have 'him' loafing about, hindering her work. The father says food is scarce and dear enough, without always inviting 'him' to take pot-luck. Besides, they both add, 'What is the good of it all? If it's 'him' to-day, it will be somebody else to-morrow; or if not, then so much the worse!' Working-class parents, unlike the typical 'marrying mothers' of another sphere, are in no haste to part from their daughters. With them, marriage is not what it has been wittily and wickedly described—'an insane desire to provide board and lodging for another man's daughter.' Rather it is regarded as the artful withdrawal of

that other man's daughter from her contribution to his family's food and rent. While she is unmarried, she 'brings in something,' which may make all the difference to the little home, by tiding it over his own strikes, or his wife's illnesses. And though any dutiful service or consideration to be expected from her is, alas! too often scant enough, still she is somebody to turn to at a pinch. At least she claims very little on her part, whereas, once married, she will soon make her mother into a grandmother, whom she will expect to be her gratuitous drudge, while there is always the terror of her falling back on her father's hands, a deserted wife or a widow, with a 'large little family,' who cannot, for shame's sake, be allowed to starve, while outdoor relief will do very little for them."

"Ay," said Mrs. Yeldham, "these are the stern conditions which surround the life of the struggling masses in great cities, where a single misfortune will utterly and speedily destroy the results of years of thrift and industry, since the common nomadic habits of much modern life and labour tend to limit those results to a few poor pounds in a Savings' Bank, rather than to sink them in any solid foundation of character and association."

"I have come across very sad instances of this in my work," resumed Penelope. "The bankruptcy of some reckless employer, the defalcation of some official, or the breaking up of some neighbourhood, will suddenly and without remedy reduce a number of hardworking struggling folk to a state of beggary, costing them all the advantages which they may have gained by the thrift and industry of years. This perpetual uncertainty —the unceasing consciousness of the danger of helplessly slipping into that 'hand of man' which was so justly terrible to King David, is very different from that more picturesque view of 'poorlith's brink,' with whose sight the poet Burns tells us the old-fashioned Scottish peasant was 'so well acquaint' that the view of it gave him 'little fright.' The latter is but a wary walking on narrow paths, and is calculated to make eyes keen and feet sure. The former is more like a seat on a wild see-saw or go-round, from which at any moment there may be a precipitate tumble! I bring all this in at this point, because I feel that under these influences vast masses of our population are becoming mere wanderers, to whom all ideas of home and lasting affections and settled ties are becoming ever more and more mythical. When I think of many of my poor people whose only stake in life is a few poor sticks in one broken room in some shoddy house where they are little likely to remain many weeks, while they work for some master whose face they never saw, I am not at all sure that their lot is any improvement on that of the gipsy camped in his tent on the breezy common, or even on the life of the ancient Briton, airily attired in blue paint and snugly nested in a hollow tree."

"It has sometimes seemed to me," said Pleasance, "that if any young pair of this lowest class should aspire to the constancy of Longfellow's Evangeline and Gabriel, they might well be doomed to share a similar sad and fruitless searching and wandering. How easily and completely can John Jones, jobbing workman, lose sight of Jane Smith, fancy-box-maker, or lodging-house drudge, and how hard it may be to recover touch!"

"Yes," said Mrs. Yeldham, "in one of the saddest books that has appeared during the last quarter of a century,—Mrs. Mulock-Craik's pathetic memorial of a poor lad named Martin—who had possessed considerable culture and some poetic gifts, and who in no sense belonged to what could be called the lowest section of the London poor, nothing struck me more painfully than Mrs. Craik's record that almost immediately after the youth's death, his relatives were forced to wander away, and were soon utterly lost to her knowledge and enquiry."

"It is very sad," remarked Penelope, "and if some of this perpetual change and enduring transitoriness may be attributable to mere whim and restlessness, much of it is undoubtedly compulsory, and even the very whim and restlessness which we justly blame, may yet have been bred by the forcible and reckless uprooting of old ties in the first instance. In general, we find our peasantry and our fisher folk but too immovable even for their own interests. But if a whole district is ruthlessly depopulated to make a deer forest or a huge farm, what wonder if the exiles cannot easily take deep root among hateful new conditions, but presently grow heartless, and cease to value that which had been snatched from them. Mere average human nature will adapt itself to its environment, and discard those sentiments, affections, and tastes which it finds bring it nothing but agony and disappointment."

Said Mrs. Yeldham, thoughtfully, "I have been often painfully struck by the singular selfishness which too many young men and maidens seem to think is the natural corollary of 'falling in love' and forming new ties. This is peculiar to no class. Only among the poorer folk, it comes out palpably, since neglect of aged parents involves their being left in extreme destitution, or even driven upon public charity. Equally cruel and self-considering is the course taken in other complications of life. I came across an instance yesterday. A young servant girl told me of her approaching marriage, and proudly showed me her engagement ring. I entered into her little affairs, and heard the following account. Her future husband and his brother were maintaining an aged and invalid father, and a sister had been obliged to leave service to look after the old man. The young wife that-was-to-be clearly grudged her future husband's filial and fraternal support. 'She should not like to have to do such a thing herself.' She owned that it might be also rather hard on the sister, who could neither be earning anything, nor making a place in the world for herself, and who was thus passing her most valuable years. I could foresee that poor woman's future—an old maid, who after a laborious life would find herself without either work or wages when she was little fit for either, and with none on whom she could establish any 'claim' likely to be recognised. I put it to the prospective bride, did she not think that as she was to marry the son, it

might be her duty to take the old man to their new home, and tend him there, setting his daughter free to fend for herself while some youthful strength remained to her. The girl flounced round indignantly, 'I would not do such a thing,' she said. 'And they wouldn't dare to ask it—they know better!'"

"I find that most of my old women in the workhouse have sons and daughters," testified Pleasance, "but that 'they are married and have children of their own' is accepted by the old ladies as ample excuse not only for their doing nothing to maintain their parents, but even for their never coming near them."

"Under such circumstances, one cannot but understand the watchfulness and zeal with which mothers of the working class will endeavour to ward off the marriage-day of a son," said Penelope. "I have often observed this instinct to be strongest in the most industrious and thrifty women, to whom the thought of destitution and public charity would naturally be particularly hateful! Their dread quite demoralises the poor creatures, and some, who have trained their sons well and strictly up to this perilous period, suddenly spoil them in the most abject fashion, pampering their appetite with dainties, and indulging them in all sorts of licences as to hours, insobriety, and so forth; depriving themselves of necessaries that the lad may go smart and have loose 'money in his pocket.' I have repeatedly heard them say in triumph, 'He won't easy get a wife to do as much for him.' I have even known them encourage a son's inclination for some girl above him in position or adverse to him personally, the reason being, 'She'll never have him, and it keeps him amused.'"

"It is very sad," observed Pleasance, "but not a whit sadder than another kind of selfishness of which I had a curious instance last week, when I heard a wealthy mother confiding to an acquaintance that her son had fallen in love with a person who seemed to favour him, but whom the mother held to be an undesirable match *in futuro* because she was so much the son's senior. 'But never mind,' she added; 'if only it is an incentive to him to work hard at his studies, it will answer its end, for if the girl is still single when Jack is old enough to marry, he will certainly see his mistake.' No thought of the girl's interests or feelings entered into the woman's calculation."

"If you venture to hint that those who have borne the burdens of a man's or woman's youth, surely deserve in their turn to be succoured and cherished in old age," said Penelope, resuming her subject, "I find you are then met by a Scripture quotation. A man, say they, 'is commanded to leave father and mother and cleave to his wife.' It is odd how they manage to translate this insistence on the obligations of married fidelity and forbearance and of mutual bearing of all burdens (obligations which too often they do not carry out!) into an abrogation of all other obligations, though these are equally insisted on in their due proportion, by Holy Writ."

"It seems as if it were so easy to understand how such an injunction was addressed in special terms to people like the Jews, with whom blood-relationships were apt to be but too paramount," remarked Mrs. Yeldham. "And I know there are people who still need it—families into which it is well said that it is 'ill to marry,' since the newcomer is received as an enemy, persistently treated as a stranger, and invariably held to be solely responsible for anything which may happen to go wrong in the affairs or lives of the married couple. I was told lately of a foolish fond mother who kissed her daughter the bride, and said good-bye to her with the remark, 'Well, my love, you know if you are not happy, you've still got your own home to turn to.' As if any house but her husband's could be any wife's 'own home'! Parents and all other older ties of affection must never forget that after a marriage henceforth things are changed. If wise, they will not let even the most specious entreaties mislead them into giving much counsel, since it may be hard to suppress feelings of soreness when what has been begged from them is disregarded after all, as it is very likely to be! And they will do well to insist quietly on such a separation between the old home and the new as shall give each a chance of its own distinct and independent individuality—a right which, if it is often foolishly grudged by the old folks to the young, is quite as often disturbed for the old folks by the younger, who selfishly imagine that the ways, and feelings, and friendships of long lifetimes may be changed or discarded to suit themselves! It is not 'dutiful' but cruel to insist on those living together who have so little unity that any mutual home must become that terrible ruin, 'a house divided against itself.' Yet a son who means some dutifulness after his own inconsiderate fashion, will sometimes do this by making the old mother understand that if she cannot 'get on' with ways utterly different—possibly antagonistic—to her own, then he can take no more heed for her welfare. So the poor old dame, who would sit quite content over a cup of tea among her little household gods in some lonely attic, is doomed to flit about like a ghost in her daughter-in-law's gaudy parlour or noisy kitchen, and to see the frail old treasures round which her own life-history is linked, vanish one after another into the dust-bin or the firewood-box."

"I don't think there are any verses more pathetic than Carleton's 'Over the hill to the poor-house,'" said Penelope. "Do you remember how the old woman says:

> "'Strange how much we think of our blessed little ones:
> I'd have died for my daughters, I'd have died for my sons;
> And God He made that rule of love; but when we're old and gray
> I've noticed it sometimes somehow fails to work the other way.'

And how she tells us of the days of her widowhood—that her son

> "'Charlie was pretty good to me, with scarce a word or frown,
> Till at last he went a-courtin' and brought a wife from town.
> She was somewhat dressy, and hadn't a pleasant smile,
> She was quite conceity, and carried a heap of style;

But if ever I tried to be friends, I did with her, I know,
But she was hard and proud, and I couldn't make it go.
. . . . . .
So 'twas only a few days before the thing was done,
They was a family of themselves, and I another one;
And a very little cottage for one family will do,
But I never have seen a house that was big enough for two!
An' I never could speak to suit her, never could please her eye,
An' it made me independent, an' then I didn't try;
But I was terribly staggered, and felt it like a blow
When Charlie turned agin me, an' told me I could go!'

And then, after proving her other children equally faithless, she adds:

"'Still, I've borne up pretty well, and wasn't much put down,
Till Charlie went to the poor-master and put me on the town;
Over the hill to the poor-house! my children dear, good-bye!
Many a night I've watched you when only God was nigh,
And God 'll judge between us, but I will always pray

(And here her love bursts out in supremest effort)

That you shall never suffer the half I do to-day.'"

"Well," said Pleasance, "it is a strange fact that the very people who hold all old duties and affections as cheap beside their new wife's caprices, are generally the readiest, if she dies, to supply her place with another! The poor little women need not be vain of their temporary supremacy, which is less personal than official." (I think I have said before, that when Pleasance thinks of wrong inflicted, she can speak rather bitterly!)

"My friend Mrs. Bruce, who has recently returned from Canada," said Penelope, "tells me that among the farming population there, the farmer's widow frequently holds the mortgage of the farm her son and his wife occupy. This gives her a position of power and respect, while on the other hand, a daughter-in-law is generally heartily welcome, as relieving the aged mother from some of the household duties which are getting too much for her. Such an arrangement preserves the balance for the weaker among the contracting parties, for it seems to me that wherever there is a husband and wife there will be found the master and mistress of any house, even though they should seem to be but servants, and though the illusion of authority may appear to be in the hands of some bachelor, spinster, or widow! I only mention these facts of Canadian life because, when I heard them, it struck me that thus the shortest road to the idyllic side of things may be by the way, not so much of romantic thinking and theory, as by that of wholesome natural living!"

"I think it is such an advantage when men and women can get to know each other in their daily living and at their work, and so touch at those points of their nature which go deepest and are most sincere," said Mrs. Yeldham. "How else can a youth take the poet's advice, and

"Learn to win a lady's faith,
Nobly,—as the thing is high;
Bravely as for life and death,
With a loyal gravity.

It is such a pity that the way of the world just now (or rather our bit of the world) seems rather to keep young people apart at these fit occasions, and to throw them together only under circumstances of frivolity and pleasure; to withhold them from cheerful intimate association in small household circles, and to mingle them in great herds, where the individual characteristics which would attract one or repel another are swamped in a dead level of superficial convention. It is easier for a young man to get opportunities for dancing with a hundred girls than any chance of rational conversation with two or three. I remember a singular instance of this which came under the notice of my husband and myself some years ago, when certain ladies occupying a somewhat official position in an important city were quite shocked and scandalised by the suggestion that some youths, studying in the town, might be permitted to enjoy the benefit of a series of high-class literary lectures then being delivered to the women of that place. Yet the daughters of those very ladies, in tennis-court and ball-room, were allowed to mingle quite freely with the least thoughtful and most dubious of those same youths. In the one case they would have met in sympathy with the greatest works of human genius and wisdom, raising their minds (if they could be raised) above what was petty and personal. In the other, they met with tinsel compliment, vapid sentiment, and trivial frivolity. They might not meet on the higher plane, but they might on the lower. Now if a man is not allowed to know the quality of a woman's mind and heart, what is he to 'fall in love' with, except a bewitching curl (which will soon turn grey), or a stylish dress, whose fashion will change next season?"

"Ah! if we would follow the best ideals of love we must come back to the homes—to the little neighbourly circles, under the eyes of fathers and mothers and old friends," cried Pleasance. "It will be proved that, after all, truest freedom lies within their righteous restraints, and that inside their narrow limits the heart finds its widest scope and its surest rest. I was much struck only the other day by the exclamation of one who, after much yearning and drifting among 'schemes' and 'philanthropies,' suddenly found himself at anchor in a humble little social harbour. Said he, 'It seems so *healthy* to have a firm mutual connection established between one and a family.'"

"But may we not still believe in what is generally understood as 'romance'?" pleaded Penelope. "I mean those marriages which may be said to be made in heaven, because they come about one scarcely knows how, a strong impulse of attraction preceding all knowledge or acquaintance, and seiz-

ing on life like a fate, which may single one man and one woman out, even of a large assembly, and make them aware of bonds between them before they have exchanged a word? I must confess this possibility has always a fascination for my imagination, because it seems to suggest the mystic infinity of love, latent, but ready to start into life, without beginning and therefore without end."

"You are thinking of love at first sight," I answered. "Well, you may hear much said for and against it, but there is one kindly and sensible philosopher who has spoken of it in much the same terms as you do. For Sir Arthur Helps says that 'Love at first sight is the surest love, and for this reason, that it does not depend upon any one merit or quality, but embraces in its view the whole being. That is the love which is likely to last—incomprehensible, indefinable, inarguable about.' And I suppose the poet Longfellow was aiming at the same idea, when he depicted a lady as asking her swain with which of her attributes he was in love, and receiving the answer, 'Confound your attributes, madam.' And I suppose Schopenhauer, the famous German pessimist, is but analysing this matter when he bids us take note of our first impression of any stranger, since it, unbiassed, is likely to prove the truest."

"And yet all this is very dangerous ground," said Pleasance, thoughtfully. (Alas! the melancholy romance of her own blighted love affair had begun with just such a glorious dream.) "It ends well sometimes, I suppose," she went on. "I believe the artist Leech first saw his future wife in the street, followed her to her home, and procured an introduction, and I understand they were a very happy couple. Yet it seems to me but a dangerous adventure, with twenty risks for one prize. Still there must be something ideal about it, or how is it that a few stories of this sort stand so pre-eminent in the annals of Love?"

Mrs. Yeldham looked up, with a bright flashing glance. "I know one such story in real life," she said softly. "But then its hero and heroine were as different as can be from the people who are likely to make shipwreck on this line. Still young, they had, nevertheless, quite passed out of that boy and girl stage which is apt to see an angel behind every pretty face, and a hero in every stalwart figure. Both had borne the yoke in their youth — nay, many yokes—of pain, of care, of bitter toil, and bitterer experience of life, which had served to separate them from much of the ordinary conventions and frivolities of society, and to purge away most of that dross of human nature which is best described as 'the lust of the eye, the lust of the flesh, and the pride of life.' To the ordinary eye, she was no angel, and he was no hero. Surely such might trust that it meant something when in one look soul seemed to recognise soul, and each to find in the other the answer to the problem of life. 'I felt I had never before seen a woman like her,' said he. 'I knew at once that he would ask me to marry him,' said she. And the strength of the impulse was proved by the determination with which, under very peculiar adverse circumstances, their acquaintance was founded. But that once done, there was no hot-house hastening of love's declaration and consummation. They carried its mystic flower in secret through the quietest paths of friendship till it was fully grown. They could be patient in all things, because they knew that whatever else life might bring or deny, their love in itself was enough."

"Only let those who have not had their probation and have not their patience, beware of plucking at their crown," sighed Pleasance, "for such others might find it but a crown of thorns!"

"And yet—and yet"—said Mrs. Yeldham, "the pain of a sad and incomplete love is better than anything else in life, save the joy of perfect love!

> "So much we miss
> If love is weak—so much we gain
> If love is strong—God thinks no pain
> Too sharp or lasting to ordain
> To teach us this."

"But when you use the word 'love' in this way," said Penelope, "you do not mean only the love which is indicated in the phrase 'love-making'?"

"No, indeed," answered Mrs. Yeldham; "it is but a common and vulgar profanation of all love to give its name solely to one department of human affection,—and that the very department into which folly and passion and self are most ready to intrude! In whatever form it may be manifested, Love itself is a great unity. Nay, Love is God! Why do you start? You would not have started if I had said 'God is Love.'"

"In this connection," said I, "a thought has often struck me, which I have noticed does not seem to enter at all into some people's way of thinking. It is this,—that the ties and the deprivations of life are infinitely varied, but that the one right of every living soul is—to love. Every heart should have its dearest—be that dearest called by the name of husband or wife, parent or child, friend or brother. I believe that few lives (if any) miss this benison. Some of those who seem externally the most lonely, are simply the richest in the hidden wealth of those attachments which are founded, not merely on blood or circumstance, but on the immortal bond of union with the will of the Father who is in Heaven."

"It has been observed," remarked Mrs. Yeldham, "that it is by the supreme attachment of our life (be its form what it may) that we 'are put in training for a love that knows not sex, nor person, nor partiality; but which seeks virtue and wisdom everywhere, to the end of increasing virtue and wisdom.' And the simplest boy-and-girl affection which is to be blessed to those who feel it, must start on this track, however unconscious it may be of its high goal, and however far away it may begin."

# INTERNATIONAL ARBITRATION.

THE international questions which are now pending, and the proposal of our own Government to submit those affecting the United States to arbitration, as well as the recent reference of the Newfoundland difficulty, give additional interest to discussions which have hitherto been limited to too narrow a circle.

The Archbishop of Canterbury (Dr. Benson) remarked at a meeting of the clergy, held at Lambeth Palace in 1889:

"A man is not a fanatic who looks with misgiving upon the large armaments of Europe. I believe it is admitted on all hands that seven millions of men under arms must be looked upon as a calamity, and that nations which are ready for arbitration may well be encouraged to persevere in their search for it. There does want preaching a principle which shall make military appetite a thing despised, which shall make us feel, for I am sure we want to feel it as much as any nation, that the good of other nations is our good, and that the evil of any nation is a good to no nation."

The Archbishop was followed on the same occasion by the present Bishop of Durham (Dr. Westcott), who said:

"The question of international relations has not hitherto been considered in the light of the Incarnation, and till this has been done, I do not see that we can look for the establishment of that peace which was heralded at the Nativity. I wish simply to claim that, as Christians, and especially as English Churchmen, we should at length face this question with sincere and resolute hearts, that we should ask ourselves, without reserve and without prepossessions, what the Faith teaches us upon it, at this point in the development of the life of men; that we should accept the responsibility of bringing the results of our inquiry, without fear and without impatience, into the field of public life. If we can ascertain what is the will of God, we shall assuredly not admit that it is impossible to fulfil it. Failure is no more than a lesson of experience, when we are striving towards a Divine end. What, then, does the Christian faith teach us on international duties now?

"When we confess the Incarnation, we place every element of humanity in connection with God. If nations are, as history has proved them to be, factors in human progress, the Incarnation proclaims a brotherhood of nations no less than a brotherhood of men. It follows that every duty which is recognised in our private dealing one with another, every virtue which ennobles the intercourse of man with man, every aim which gives dignity to personal effort, every aspiration which brings enthusiasm to personal sacrifice, all the treasures of tenderness and sympathy which sweeten and illuminate common life, must find an analogous place in international relations."

These impressive words of two great leaders of the Church of England indicate the growing sense of responsibility, individual, national, and Christian, in all that relates to the preservation of peace and the diminution of the burdens and horrors of war.

Eminent men in other nations also have become increasingly interested in this subject, such as, in particular, the late General Grant during his Presidency of the United States of America. Soon after his accession to that high office he spoke very hopefully of the extension of arbitration as a substitute for the sword, and remarked, "the nations are fast becoming so civilised as to feel that there is a better way to settle their difficulties than by fighting." Nor were these mere formal or sentimental expressions on the part of the great soldier, for during his Presidency he united with the British Government in referring to the decision of five arbitrators the vexed question of the injuries alleged to have been inflicted upon American commerce by English complicity with the depredations of the Confederate steamer, the Alabama. These arbitrators held their deliberations in the neutral territory of Switzerland, and made their celebrated award at Geneva in 1871. Although, under the terms of their decision, Great Britain had to pay the sum of three million pounds to the United States, this was a cheap purchase of the incalculable advantages of restored harmony and friendship between the two great kindred nations.

President Grant also agreed to refer to another body of arbitrators, known as "the Mixed Commission," the settlement of a large number of claims raised mainly by British subjects against the United States for losses occasioned to their interests during the American civil war. There were 478 of these British claims, all of which were investigated by the commissioners, who decided that the Government of the United States, in their turn, should pay to the English Government £400,000 in discharge of the said claims. This sum was duly paid by the Americans. Two other disputes between the United States and Great Britain were also peacefully arranged by means of arbitration during the long presidency of General Grant, namely those relating to the Nova Scotia Fisheries and to the island of San Juan off the western shores of North America.

President Grant also introduced into the internal policy of his Government, an habitual recourse to pacific and conciliatory measures in regard to the Indian aborigines of the United States. A remarkable precedent in this direction had indeed been furnished, nearly two centuries previously, by William Penn, the Quaker founder of the great commonwealth of Pennsylvania, whose just and friendly treatment of the Indians won their grateful and abiding allegiance to him in his capacity of colonial governor. But in later years the aboriginal tribes had been treated with systematic unfairness by the successive Presidents of the United States, or at least by agents acting in their name and with their authority. The most disgraceful frauds were thus habitually perpetrated by Government officials. To these injuries were added innumerable acts of insult and violence. The consequences were a series of Indian wars, in the course of which whole tribes disappeared for ever, whilst others left but a comparative remnant of embittered and angry survivors, anxiously vigilant to avail themselves of any practicable opportunities of taking revenge upon the whites. It was in this

condition of affairs that General Grant became President.

He promptly inaugurated a new and peaceful policy towards the 300,000 Indians remaining in the States. He heralded this change with the utterance of the noble words—"I do not believe our Creator ever placed different races on this earth with the view of having the stronger exert all its energies in exterminating the weaker. If any change takes place in the Indian policy of the United States Government, whilst I hold my present office, it will be on the humanitarian side of the question." In accordance with this determination, President Grant requested the Society of Friends in America to select for the superintendence of the various Government agencies amongst the Indians, well-qualified and disinterested members of their own denomination. These new Quaker agents speedily effected a great improvement in the treatment and disposition of the Red Men, as compared with their predecessors, the self-seeking financiers and unscrupulous adventurers who had, in too many instances, managed to get themselves appointed "Indian agents," and whose chief functions had consisted in the supply of adulterated provisions, bad whisky, and shoddy clothing, at the highest prices, together with a general policy of chicanery and oppression. This had been a very dear policy, however, for it led to a succession of costly wars with the aboriginal tribes. It was estimated that every Indian killed during four of these wars cost the United States the lives of twenty white men and several hundred thousand dollars in money. But under the Quaker agencies, and their encouragement of agriculture and self-supporting industry, the Indian crops increased twelvefold in a few years. Further, one of the fiercest and most intractable of the Indian races, that of the Modocs, with whom the United States Government had waged a war which destroyed a considerable proportion of their tribe, now came under the influence of friendly example and peaceable persuasion, and settled down in law-abiding, orderly habits of life. And not only so, but the remnant of the Modocs have actually become Quakers, and have earned the cordial esteem of their fellow members of that sect. They have illustrated the truth of the words of an old white settler in Oregon—"Injuns is jest as civil as any other people in the world, ef you only treat 'em fair. I never had no trouble with 'em. I tell 'ee 'tis jest with them as 'tis with cattle. One sort of man will be real mean and nasty with his cattle, and then they'll toss yer, and kick yer, and break fences and run away. But the cattle of a fair sort of man will come to yer when yer call 'em, and be as quiet as yer like. And never tell Injuns a lie. If yer cheat 'em once they won't ever trust yer again, and then yer can't trust 'em nayther. But be true and square, and they will be all right with yer." All through his double term of office as President, General Grant maintained this conciliatory policy with the Indians, and with remarkable success. During the years which have elapsed since President Grant's retirement from the administration of affairs, the Indian Agencies have again been entrusted to mere political partisans, and to persons unworthy of the office. Consequently the Indians have again been irriated into hostilities, which in December 1890 led to deplorable recriminations, even upon their women and children, by the United States troops. The outbreak of this war has to some extent clouded the previously brightening prospect, and there is reason to believe that it might have been wholly averted by a more thorough adhesion to the policy of brotherhood.

General Grant did not cease to manifest his love for peace and arbitration when he finally retired from the cares of government. One of his biographers, Mr. J. R. Young, states that in a speech delivered after the termination of his official career, General Grant used these memorable words:

> "Though educated as a soldier, and though I have gone through two wars, I have always been a man of peace, preferring to see questions of difference settled by arbitration. It has been my misfortune to be engaged in more battles than any European general; but there never was a time during my command when I would not have chosen some settlement by reason rather than the sword. When the Duke of Cambridge asked me to review his troops at Aldershot, I told him that the one thing I never wanted to see again was a military parade. I never went into a battle willingly, or with enthusiasm. I never want to command another army."

On one occasion General Grant himself undertook the office of arbitrator, or at least of mediator, under very interesting circumstances. During his visit to China, in 1879, an embittered quarrel was raging between the Governments of that country and of Japan in reference to the claims of the latter nation upon the Loochoo Islands. Hostilities appeared to be imminent, and the Japanese Government in particular manifested a very angry disposition. At Pekin the two principal statesmen of China, Prince Kung and the Viceroy Li Hung Chang, laid the whole matter before General Grant and invited his mediation with Japan. The latter expressed his good wishes for the interests of both nations, but also evinced some hesitation at entering upon such an important undertaking in his capacity of a private American citizen. However, his Chinese friends urged him not to let slip this opportunity for serving the great cause of peace. Eventually the General allowed himself to be persuaded, and although he had already visited Japan, he now undertook a second journey thither and obtained two long interviews with the chief Ministers of State, with whom he pleaded earnestly on behalf of a conciliatory settlement of the difficulty with China. Nor were these endeavours unsuccessful. The influence of the eminent American had great weight with both Governments, and they were thus enabled to arrive at a final arrangement by which war was averted and peace maintained. It was to the Chinese Prince Kung that General Grant remarked—"An arbitration between two nations may not satisfy either party at the time, but it satisfies the conscience of mankind, and it must commend itself more and more as a means of adjusting disputes."

As a matter of fact, about seventy cases of successful recourse to arbitration and mediation for the settlement of various international disputes have occurred during the present century, since

the close of the great wars which terminated with the battle of Waterloo. Arbitration has taken a prominent place in modern diplomacy. Many, if not most, of the recent Treaties entered into by the principal nations of the civilised world contain clauses stipulating for a resort to this peaceable mode of reference in case of any differences arising out of the terms of these contracts. The late Italian Prime Minister, Signor Mancini, procured the insertion of such an arbitration clause in no fewer than nineteen treaties negotiated under his influence. One of the most recent instances in this direction was furnished by the Anglo-Portuguese treaty or agreement of 1890, entered into between the British Government, under Lord Salisbury, and the Portuguese Plenipotentiary, Baron de Freitas, in reference to certain mutually disputed claims to territories in Africa. Article 9 of this treaty provided that :

"If a difference of opinion shall arise between the two Governments as to the validity of a concession, or as to the equitable character or suitability of the above mentioned regulations, it shall be settled by the arbitration of a jurisconsult of a neutral nationality."

Article 77 of the same treaty stipulated that :

"Differences of opinion between the two Governments as to the execution of their respective obligations shall be referred to the arbitration of two experts, one of whom shall be chosen on behalf of each power, who shall select an umpire, whose decision in case of difference between the arbitrators shall be final. If the two experts cannot agree upon the choice of an umpire, this umpire shall be selected by a neutral power."

The same Anglo-Portuguese treaty definitely committed to the arbitration of three Swiss jurists the settlement of the amount of money to be paid by Portugal in satisfaction of certain British and other claims upon that nation for its arbitrary seizure of the Delagoa Bay Railway. Whilst it is to be noted that the absolute acceptance of this Treaty, in its entirety, has been left in abeyance, owing to subsequent political events in Portugal, the significance of its definite provisions in regard to Arbitration, remains, in spite of the delays in question. The Delagoa Bay dispute, however, was definitely committed to the decision of arbitrators in Switzerland, fully accepted as such both by Portugal and Great Britain.

Some persons have advocated the establishment of an elaborate Code of International Law for the authoritative determination of all and every dispute between the nations. But the more such a scheme is formulated in detail, the more difficult and improbable of attainment, at least under existing circumstances, it will appear to be. Some instructive words bearing upon this point were addressed lately to the large and representative Universal Peace and Arbitration Congress, which assembled in London last year, by the President of that gathering, the Hon. David Dudley Field, an eminent jurist and senior member of the New York Bar. He pointed out the value of simplicity of action on such bases of agreement as might be found attainable on each occasion. And he added that if only a willingness to refer any particular dispute to arbitration exists, the means of carrying this into effect will easily be found, without recourse to complicated arrangements, which may involve further difficulties, if not positive obstacles to a settlement. Mr. Field also alluded to the very successful action, during many years, of the Supreme Court of the United States, which is practically a court of arbitration. It is not unusual for one State of the American Union to sue another State before this Court. And its decisions are always obeyed. For example, in 1890 a suit was instituted by the State of Indiana against Kentucky for the possession of what was once an island in the river Ohio, but which is now absorbed into the northern mainland by a change of the channel. Each of these two States has a population of more than two millions, but they amicably acquiesced in the decision of the Supreme Court in regard to this matter.

The diplomatic Congress of Berlin in 1878 was in some respects, as one of its members, Count Corti, the Italian Plenipotentiary there, remarked at the time, "a sort of court of arbitration." It also furnished an example of a High Court of Nations, more readily constituted and more experienced in practical diplomacy than such a permanent court of jurists as certain writers have proposed would ever be likely to become. A Congress like that of Berlin lays down its own principles of procedure, whereas a court meant to administer what is termed International Law would be exceedingly difficult of realisation, owing to the fact that there is really very little definiteness of authority in what is popularly assumed to be such international law.

For this term is usually applied in a very vague sense to imaginary rather than positive rules of common agreement. And perhaps there are few things about which more solemn nonsense has been spoken and written than this matter. Some enthusiastic people assume that there are in existence a vast number of recognised principles applicable to the mutual relations of States, and which only require to be collected and codified and then made the basis of reference and authority on the part of a few judges or arbitrators, in order to furnish the means for the ready and pacific adjustment of all international differences. Whereas, the number of such principles is exceedingly few.

Hence the resort to arbitration must be expected to continue to be, in the future as in the past, most advantageously conducted when arranged on a simple basis and negotiated by eminent statesmen or jurists selected on the spur of the occasion, and relying mainly on the ordinary rules of sound judgment and fairness of procedure, rather than on an accumulation of disputable maxims and vague precedents. Administered on such a simple basis, arbitration is an excellent expedient for the solution of a considerable proportion, though perhaps not the whole, of those difficulties which from time to time may be expected to arise between one country and another. And every successful resort to it is a material help to the promotion of the Divine kingdom and to the extension of the Christian spirit of love and goodwill amongst all nations.

# THE FLOWER AND THE MAIDEN.

## A STORY FOR CHILDREN FROM EIGHT TO EIGHTY.

BY THE AUTHOR OF "A DEAD MAN'S DIARY.'

### *Dawn.*

"LITTLE flower, little flower," said the birdie, "why are you so silent and sad?"

"I am not sad, sweet sister," whispered the flower gently; "ah! no, but I have seen an angel. Yestreen, as I slept, my birdie, being all aweary with gazing up into your birdland home among the branches, and watching the merry sunlight come and go, and strike shafts of golden flame among the green, I dreamt of heaven and of the holy angels; and lo! when I awoke, one there was who stood beside me, beautiful even as is the sunlight or the dawn, and her voice, when she spoke, was low and tender, like the restful ripple of the rain. And to the flowers, as you know, my birdie, the hearts of the pure lie ever open and unsealed, and I saw into her heart, that the thought of it was white and spotless as the lily, and I saw that her thought was a prayer, and that she said: 'Dear Lord, I thank Thee for making this little flower so fair and lovely, and I ask Thee that even I may be in heart as pure and holy as she!'"

### *Morning.*

"Wake up, little flower, and hear what I have to tell you," said the bird, gaily, "for I, too, have seen your angel—and angel is she none, but the fairest maiden from the town beyond the hillside."

And to her the flower made low reply, saying:

"Can any one as fair as she be found out of heaven? And, moreover, I looked into her heart, and saw that the thought of it was white, and pure as the morning."

"It is only the flowers that can see into hearts," said the bird, gravely, "but this I know, that your angel is of earth, not heaven," and so saying, she spread her silken wings and flew away.

But the flower said, "Is there, in all heaven, anything more fair than a maiden?"

### *Noon.*

"I would not pluck you to please my idle fancies, dear blossom," said the maiden, gently, "for I cannot bear to see the dear flowers wither and fade! But I know of one who lies ill and dying, and to whom the scent and sight of a wild flower may bring some passing moment of peace. Tell me, then, you who are so pure and lovely, will not you spare a space of your slender life, that so you may make happy the heart of a sorrowing one?"

Then the flower said, "Dear Maiden, I will"; but inasmuch as it spake not the maiden's language, it breathed forth all its perfume, like sweet music, in assent. And, though the maiden knew not that the flower had heard her words, and had answered her, yet at heart she was strangely though sweetly saddened. "Even in heaven I should long for the earth-flowers!" she said, as she drank in the fragrance. "Is there anything, in all heaven, more fair than a flower?"

. . . . . .

Then the maiden plucked the flower, and bore it away from the birds and the sunshine, away from the wind and the trees, to a squalid court in a great city, where a dying woman lay, haggard and wan, upon a bed. And as the flower looked into the soul of the dying woman, its fair leaves seemed to wither and wi!* as though some foul breath had come forth upon it, for therein it could see nothing because of the blackness and sin. And at first the flower shrank into itself, and would fain have gathered up its perfume, but it thought of the prayer in the maiden's heart, and, opening out its snowy petals to their full, it breathed forth a fragrance which filled the foul room as with music and light. And as the dying woman looked upon the flower, she thought of the white lilies which she had gathered and placed upon her dead mother's bosom—many, ah! so many weary years ago; and she thought of the days when she was pure and beautiful, and had knelt at that mother's knee, to whisper, after her, the hallowed words to the Father in heaven.

Then the flower saw that in the woman's heart there was some strange and sudden commotion, as though the light were seeking to win in its way, and to drive out the darkness and sin.

And, folding her wasted hands together, the dying woman turned to the light, and said: "Dear Lord Jesus, make me—even me—white and pure as this lily, and wash away all my sins in thy precious blood. Amen."

And when the dawn came, the flower lay withered and drooping, but ere it died it saw into the woman's heart, that it was white and pure as the snowflake.

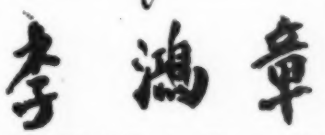
And there fled from that room a shining angel, *and lo! on her bosom lay a little flower!*

# THE VICEROY LI HUNG CHANG AND GENERAL GORDON.

## LETTER TO MISS GORDON.

IN the autumn of 1890 a new Hall, named the Gordon Hall after General Gordon, was opened by the Viceroy Li Hung Chang at Tientsin, the great northern port of the province of Chih-li. Of this province, in which is Pekin, the capital of the empire, Li Hung Chang is the governor. When asked to open the Gordon Hall, the Viceroy said it would be an honour and pleasure to be associated with this memorial of his distinguished friend. An account of the ceremony and report of the Viceroy's speech was published at the time. The speech was a warm and generous tribute to "one whose pure and noble career," he said, "I followed with the greatest interest and admiration, and whose premature loss I still deeply deplore. May this Hall, which I now declare open, be a lasting memorial of Gordon's connexion with China." The report of the proceedings and of the Viceroy's speech having been seen by General Gordon's sister, she wrote a brief note expressing her grateful thanks for the words spoken about her brother. The Viceroy sent the following reply, which Miss Gordon allows us to publish:

Viceregal Yamên, Tientsin.
January 2, 1891.



My dear Miss Gordon,—It gives me great pleasure to acknowledge the receipt of your unexpected letter, conveying your thanks for the poor efforts I made in endeavouring to express my great esteem and admiration of the noble qualities of your late deeply lamented brother, on the occasion of the opening of the "Gordon Memorial Hall" at Tientsin. Believe me, dear Miss Gordon, that this esteem and love for the late Major-General Gordon is not held by me alone in China; inasmuch as all who knew or had heard of him revered him for his filial conduct as a son; for his earnest and sincere love towards his fellow-creatures; and, finally, for that noble conception of duty towards his country which the world saw realised by his martyrdom, and which shall ring as a clarion for ages to come. Your brother stood pre-eminent in such noble qualities before all men—a fact testified by all who had the good fortune to have known him personally, or by report. I, who was closely associated with him as a comrade in arms and by ties of friendship, admired and loved to see one alien to my country, and yet, because of his great love for his fellow men, consent to accept from our Gracious Sovereign the *batôn* of command over the "Ever Victorious Army" against the Taiping rebels, in order that by his eminent military talents he might assist in pacifying a country already deluged with the blood of millions.

As a general, he showed himself earnest and careful in the duties of his station. As a superior officer, he exercised justice, characterised by gentle firmness, which won for him the love and devotion of his followers; and, lastly, as an officer of the Crown, his loyalty stinted at no sacrifices so long as by them he could prove himself worthy of the high trust reposed in him. For such qualities of disinterestedness who was there that did not sincerely revere him? For having known, therefore, and associated with such a man I have ever considered myself fortunate indeed.

But alas! the day and sad hour came carrying the lamentable news of the heroic end of your gallant brother. And what death did he die? Just such a death as I have ever pictured to my mind would be the end of this chivalric hero of our unheroic age; fighting and dying for his country. When the sad news came, I felt then, indeed, as if I had lost a brother dear to me—even as it were the loss of my right hand.

The unworthy effort I made in eulogising your brother, Major-General Gordon, at the opening of the "Gordon Memorial Hall" at Tientsin, was but a well-deserved though slight tribute of the love and reverence I bore him, and scarcely worthy the thanks which you have taken the trouble to express. But I thank you sincerely for your kind sympathy for China, and close this letter with every feeling of respect and high esteem.

Believe me,
Yours Very Sincerely

Premier of the Chinese Empire, Viceroy of Chih-li, &c.

We may add that the sentiments of regard and affection between these great men were mutual. A misunderstanding during the early days of the Taiping rebellion had been explained and forgotten, and during Gordon's second visit to China their relations were most cordial, and he then wrote, "In my opinion Li Hung Chang is the best man in the empire, though he has a difficult part to play with the other mandarins." When Gordon was governor of the Soudan in 1879, a letter from Li Hung told how his services in China were remembered, and how "the people bless you for the peace and prosperity they now enjoy. I am striving hard to advance my people to a higher state of development, and to unite both this and all nations under one common brotherhood." Thus Gordon left in China not only the reputation of a great name, but the influence of a good example. Li Hung Chang is now one of the most influential statesmen of the empire, and he is as generous as he is enlightened. It was he who gave to Dr. Mackenzie, of the London Missionary Society, a temple close to the busiest and best part of the city of Tientsin to be fitted up as a dispensary, promising to bear all expenses, and pay for all medicines. There is no man in China more worthy of the sympathy and honour of Englishmen as well as of his own countrymen.

# NOTES ON CURRENT SCIENCE, INVENTION, AND DISCOVERY.

## EXPERIMENTS WITH MOLECULES: MR. CROOKES AND THE ELECTRICAL ENGINEERS.

THE recent progress of molecular science has so largely extended the range of the visible world as to have accustomed us to ideas and expectations which, but a short time since, would have seemed eminently rash and unscientific. The invisible and separately-moving free molecules of which a sturdy, solid bar of cold iron is composed were not long since believed, even in scientific circles, to have no more than a conjectural existence, simply serving the functions of an hypothesis for working purposes, such, for instance, as the hypothesis of the ether serves for the purposes of the astronomer. But here, as elsewhere, the veil is being lifted from the invisible things of nature. The feat of seeing the invisible now forms a brilliant chapter in the newer scientific literature of the day.

Some recent and striking demonstrations of this character have lately been given by Mr. Crookes, F.R.S., the eminent chemist and electrician, and the new President of the Society of Electrical Engineers. As the inventor of the radiometer or "light-mill," and as the leader of the experiments in greatly rarefied gases which have led to the commercially successful electric glow-lamp, Mr. Crookes is necessarily a past master in researches which deal with matter in its most tenuous and diffuse condition. The experiments we are about to describe were made not with solids but with gases, in which, by reason of their more discontinuous and diffuse condition, the molecular nature of matter is the more easily demonstrated. Mr. Crookes is able with surprising ingenuity to bring before the eye in various forms the commonly invisible but ever active molecules, and to manipulate them in quite a novel and startling manner. He can marshal them as a huge army before his audience, and tell them off for different kinds of work and service in the field. He can increase or reduce the host before him as he chooses, resolving them, as it were, into brigades, regiments, or companies as occasion requires. He shows them in violent and luminous collision, in crowds or groups; or they are seen bombarding an obstacle placed before them for attack until it is raised into a state of incandescence, whilst in another part of the field a dark space shows where the non-combatants pursue an unmolested path.

These interesting feats are achieved, as already intimated, in closed glass chambers which have been largely exhausted of their atmosphere. They are for the most part experiments in "high vacua." By the aid of the Sprengel air-pump as perfected by himself, Mr. Crookes is able to exhaust the vapour in one of his tubes until its rarefaction amounts to the almost incredible degree of one hundred-millionth of an atmosphere. This corresponds to the density of the air at a height of ninety miles above the earth's surface. The speed of the molecules of atmospheric air is about sixty times that of an express train, while their mean free path is but the $\frac{1}{10000}$ of a millimetre; but by exhausting to the hundred-millionth of an atmosphere, a point now easy to attain, the mean path is increased to thirty feet. The value of experiments made under such conditions, and the important discoveries which have resulted to industrial science from the investigation of objects in high vacua, will be referred to hereafter; at present the purely molecular phenomena will be dealt with.

What really takes place in a vacuum tube under the conditions we have referred to, will best be understood if we quote Mr. Crookes's description of it as recently given in his presidential address.

"The kinetic theory of gases teaches that the constituent molecules dart in every possible direction with great but continually varying velocities, coming almost ceaselessly in mutual collision with each other. The distance each molecule traverses without hitting another molecule is known as its *free path*; the average distance traversed without collision by the whole number of molecules of a gas at any given pressure and temperature is called the *mean free path*. In ordinary gases, the length of the mean free path of the molecules is exceedingly small compared with the dimensions of the vessel, and the properties we then observe are such as constitute the ordinary gaseous state of matter, which depend upon constant collisions. But if we greatly reduce the number of molecules in a given extent of space, the free path of the molecules under electric impulse is so long that the number of their mutual collisions in any given time in comparison with the number of times they fail to collide may be disregarded. Hence, the average molecule can carry out its own motions without interference.

"The mean free path of the molecules of a gas increases so rapidly with progressive exhaustion, that whilst that of the molecules of air at the ordinary pressure is only 1-10,000th of a millimetre, at an exhaustion of a hundred-millionth of an atmosphere—a point which, with present appliances, is easy to attain—the mean free path will be about thirty feet."

The various phenomena presented when an induction current is made to pass through a gas of different degrees of rarefaction point to a modified condition of the matter. At a certain stage of exhaustion, one of the most interesting of molecular phenomena is made visible: the electrified molecules are seen arranged in groups with spaces between; we get, in fact, a "stratification" and discontinuous arrangement of groups of molecules.

Though originally in a state of rampant disorder and in ceaseless mutual collision, the molecules under the influence of the electric rhythm dispose themselves in well defined groups.

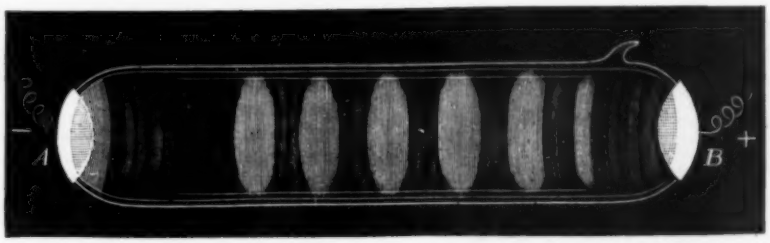


FIG. 1.—THE LUMINOSITIES SHOW THE MOLECULES IN COLLISION; THE DARKER INTERSPACES THEIR FREER PATH.

The luminosities show where arrested motion with concomitant friction occurs; the interspaces indicate where the molecules travel with comparatively few collisions.

The experiment can be varied so as to produce parti-coloured stratifications of blue, pink, and grey. In this case the gas would be hydrogen, prepared from zinc and sulphuric acid, after being passed through various purifying agents, dried, and exhausted with a mercury pump.

After the stratification stage is passed, and the pressure increased so as to secure greater rarefaction of the gas, we come to a very curious phenomenon. It is the so-called "dark space." Studying electrical phenomena in gases in the year 1838, Faraday pointed out a break in the continuity of the luminous discharge, separating the glow of the positive electrode from that of the negative electrode. This gap, or non-luminous hiatus, he called the "dark space." But separating the negative glow from its electrode is another similar space. It is with this second dark space that Mr. Crookes has made a most important and fruitful experiment. He accordingly refers to this as the "dark space" in the demonstration now under notice, meaning always the non-luminous gap in the glow at the negative electrode.

In the former experiment showing stratification, in which the air was but slightly exhausted, numbers of molecules were moving in every direction with velocities of all conceivable magnitudes. By continuing the exhaustion, the dark space round the negative pole becomes visible, and gradually grows larger and larger.

Its radius varies with the degree of exhaustion, with the kind of gas in which it has been produced, with the temperature of the negative pole, and to a less extent with the intensity of the spark. The length of the dark space is a gradually increasing multiple as the exhaustion becomes greater.

Wishing to learn something of the electrical condition of the matter within and without the dark space, Mr. Crookes has constructed a tube with extra intermediate poles which can be moved internally along the diameter of the tube and placed at different degrees of proximity to the dark space. The results are interesting from an electrical point of view, and should be read by all students of the science.[1] Restricting ourselves, however, to the more immediate behaviour of the molecules, we proceed to a diagram which gives a vivid illustration of what happens at the margin of the dark space when an obstacle is interposed between the opposing armies of molecules.

The dark space is occupied by invisible molecules negatively electrified. When a substance that will phosphoresce under electrical excitement is introduced into the tube, the position of greatest luminosity is found to be at the border of the dark space, just where the two opposing armies of negative and positive atoms meet in battle array and re-combine. Fig. 2 shows the phenomena with admirable effect.

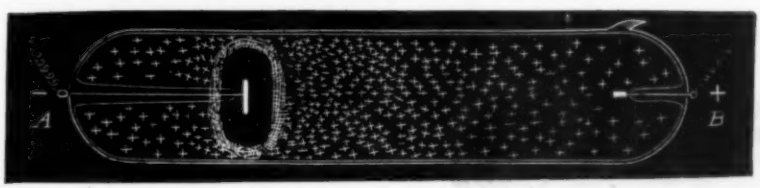

FIG. 2.—OPPOSING ARMIES OF MOLECULES MADE LUMINOUS BY THEIR COLLISION.

When the tube is largely exhausted under the air-pump, and the molecules greatly decreased in number, so that their mean free path is further lengthened and approaches that of the containing vessel, the attributes which constitute gaseity shrink to a minimum. The matter attains the ultra-gaseous or "radiant" state, and we arrive at conditions under which molecular motions can be easily studied in new and important aspects. Accordingly some of the most beautiful and striking of Mr. Crookes's experiments are made upon molecules in the form of "radiant matter."

One of the most characteristic attributes of radiant matter—whence its name—is that it moves in approximately straight lines. Thus the molecules, invisible under ordinary conditions, can in such

[1] *Vide* "Electrician" for January.

circumstances be made to cast a shadow. They can be used to produce mechanical energy, and so to impinge on objects placed in their path as to produce remarkable luminous and phosphorescent effects.

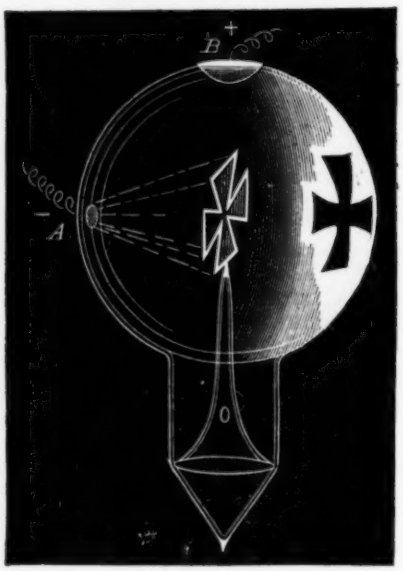

FIG. 3.—MOLECULES CASTING A SHADOW.

A shadow of an object inside a glass bulb can be projected on to the opposite wall of the bulb. A mica cross is supported in the middle of the bulb (Fig. 3), and on connecting a small silvered patch, A, on one side of the bulb with the negative pole of the induction coil, and putting the positive pole to another patch of silver, B, at the top, the opposite side of the bulb glows with a phosphorescent light, on which the black shadow of the cross seems

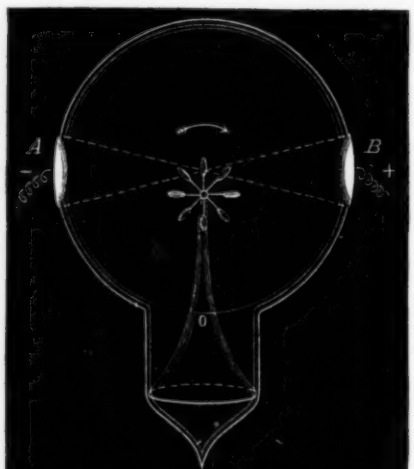

FIG. 4.—MOLECULES TURNING A WHEEL.

sharply cut out. Here the internal pressure is 0·00068 millimetres.

Fig. 4 is an example of the production of mechanical energy by the impact of invisible molecules on the vanes of a "windmill." In this case the glass bulb contains a light wheel of aluminium, carrying vanes of transparent mica. The poles, A, B, are in such a position outside that the molecular focus falls upon the vanes on one side only. Turning in the current the wheel rotates rapidly. The experiment is a favourite one, and has already taken classic rank in the annals of molecular action in high vacua.

Another ingenious piece of mechanism (Fig. 5, on next page) has been devised by Mr. Crookes in order to show how the supply of molecules in these experiments, which is so rapidly expended from the negative pole, is kept up. It enables us to trace the molecule throughout the whole cycle of its journey. If the induction current is kept passing continuously through a vacuum tube in the same direction, we can imagine two ways in which the action proceeds—either the supply of gaseous molecules at the surface of the negative pole must run short, and the phenomena come to an end, or the molecules must find some means of getting back again. The experiment in question reveals the molecules in the very act of returning. "Here" (we quote Mr. Crookes's own words) "is a tube exhausted to a pressure of 0·001 millimetres. In the middle of the tube is a thin glass diaphragm, C, pierced with two holes, D and E. At one part of the tube a concave pole, A, is focussed on the upper hole D, in the diaphragm. Behind the upper hole, in front of the lower one, are movable vanes, F and G, capable of rotation by the slightest current of gas through the holes.

"On passing the current with the concave pole negative, the small vanes rotate in such a manner as to prove that at this high exhaustion a stream of molecules issues from the lower hole in the diaphragm, whilst at the same time a stream of freshly charged molecules is forced by the negative pole through the upper hole. The experiment speaks for itself, showing as forcibly as an experiment can show that so far the theory is right."

Thus far we have seen a few of Mr. Crookes's beautiful and masterly experiments in the field of pure science. It remains to be said that the practical outcome of such researches is already before the world in various forms of great utility and commercial importance. By using the spectroscope upon substances placed in his highly exhausted vacuum tubes, Mr. Crookes has really invented a new method of spectrum analysis. His discovery by this means of the metal thallium is one of the most eventful of his achievements. Of more direct industrial importance in connection with these experiments in high vacua, is the electric incandescence glow-lamp. This invention was an immediate outcome of the fascinating researches already illustrated in this paper. But for these researches very little would have been heard of the subsequent inventions of Swan, Edison, Lane-Fox, and others.

In 1881 Mr. Crookes acted as one of the jurors at the French Exhibition, when his fellow-jurors pronounced the following verdict on the four glow-lamps which received the awards:—"None of them could have succeeded had it not been for those extreme vacua which Professor Crookes has

taught us to manage." At the close of the meeting of the Electrical Engineers in January last, at which was read the paper from which these notes are taken, Sir William Thomson, President of the Royal Society, who proposed the vote of thanks to the author, said that when the scientific history of the nineteenth century came to be written the name of Crookes would rank with the names of Faraday and Joule. No higher eulogium could be pronounced.

In the experiments above described, the high vacua were produced in glass vessels exhausted by means of a complex mercurial or Sprengel pump. The residual pressure ranged from 75 millimetres, or about $\frac{1}{10}$ of an atmosphere (a very slight degree of exhaustion, as was explained), to $\frac{1}{100000}$ of a millimetre, or 0·13 millionth of an atmosphere. The electric energy was derived from a large induction coil having some 60 miles of secondary wire, and giving, with two cells of a storage battery, a spark of four or five inches, which is equivalent to an electro-motive force of about 100,000 volts, sufficient to impart a dangerous shock to any one incautiously touching the uncovered wires.

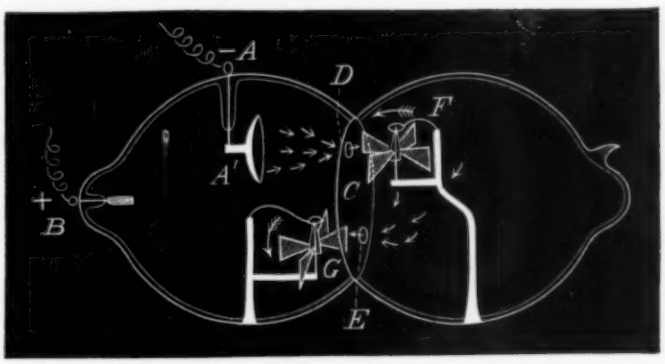

FIG. 5.—"MOLECULE MILLS"; THE SAILS REVOLVING UNDER THE IMPACT OF MOLECULES.

PHOTOGRAPHY IN COLOURS: PROFESSOR LIPMANN'S PROCESS.—THE CHEAPENING OF SENSITIVE PLATES

Photography in natural colours has long been regarded, even in scientific circles, as the Will-o'-the-Wisp of a most useful and beautiful art, wasting the energies and time of those who could be far better employed. It is only a year since Captain Abney, one of our highest authorities on the subject, declared that photography in colours, whether by a printing out or a development process, was an utter impossibility—a statement which he subsequently repeated at the autumn meeting of the British Association. Nevertheless, during the past few weeks it has been claimed that the problem has been successfully attacked by a French scientist of undoubted ability, M. Lipmann, Professor of Physics at the Sorbonne. The professor announces that after many experiments he has discovered a process by which colours throughout the whole range of the spectrum can be reproduced on a sensitive plate, just as accurately as outline or shadow is fixed by the present photographic negatives and prints; and, as the first fruits of his labours, he has succeeded in photographing a stained window in hues as brilliant as the originals. He has also taken photographs of the solar spectrum, in which are reproduced "all the colours of the rainbow," including the infra-red and the ultra-violet, invisible to our eyes. The colours between these two—red, orange, green, blue, &c.—are as vivid as any objects in nature. It appears that during the exposure the plate is pressed against the opening of a trough filled with mercury, which forms a mirror in contact with the plate. The rays of light pass through the sensitive film as in the old process, but on reaching the other side of the plate, instead of being absorbed by a dark background, they are sent back by the even surface of the mercury. In this mirror the whole secret lies; apart from it the entire process is exactly the same as in ordinary photography. Such is a brief *résumé* of M. Lipmann's method, which, as far as it goes, is thoroughly scientific in principle. It is an adoption of the well-known optical laws of "interference" for the production of colour.

M. Lipmann's own explanation of the phenomena (as given in his original paper in the *Comptes Rendu des Séances de l'Académie des Sciences de Paris*, vol. lxii. p. 274) may be added. The incident light which forms the image in the camera interferes with the light reflected by the mercury. There is consequently formed in the interior of the sensitive film a system of fringes, that is, of luminous maxima and dark minima. The maxima alone act upon the plate. At the close of the photographic operation these maxima remain marked by deposits of silver, more or less reflective, which occupy their place. These deposits divide the sensitive film into a series of thin laminæ, the thickness of which is the interval between two maxima; that is to say, half a wave of the incident light. These thin laminæ have, therefore, that thickness which is necessary to produce the incident wave-length by reflection. One who has seen the plates says they strongly remind him of the iridescent colouring which sometimes results with negatives left a considerable time in an ammonia developer. M. Lipmann compares it to the colour in soap bubbles, or

to the effect of dropping coal oils on water, and to other substances whose molecules produce refraction in solar light.

M. Lipmann's discovery (if, indeed, it is any advance upon the coloured films introduced by Becquerel and others during the last few years) is still upon its trial. The colours he has succeeded in fixing are simply the most brilliant parts of the spectrum. It does not appear that he has even tried to reproduce the mixed and composite hues, such as are found in the human complexion or in a landscape, and it seems certain that the moment such an experiment should be made under his method, the special interferences would vanish : parts of the plate would receive in effect wave-lengths of all sizes, and the interference fringes would coalesce into a grey. We have, therefore, to wait new experiments on mixed colours. Veteran photographers are by no means sanguine of any satisfactory result under Lipmann's or any other method. So far the Professor's plan seems to be simply one for producing coloured films of certain selected parts of the spectrum. Further, it throws no light on any process for photographic printing in colours, which the uninitiated seemed to think was the chief feature in the discovery.

In the meantime, should amateurs wish to obtain such results as M. Lipmann has achieved, they may be reminded that great care is necessary in preparing the sensitive plate in order to obtain the essential condition of success—perfect continuity of the film. The best result has hitherto been obtained with gelatino-bromide of silver. M. Lipmann uses the following formula :—Pure gelatin, 10·0 grammes ; bromide of potassium, 0·5 grammes ; distilled water, 100·0 grammes. The bromide of potassium and the gelatin are dissolved in the water, then filtered, and the solution spread upon the glass to the required thickness. When the plates are quite dry, they are sensitised for at least five minutes (a longer time is better) in a solution of silver nitrate, containing 20 per cent. of this salt and a little acetic acid ; after they are washed thoroughly and carefully dried. They are then ready for use.

In another direction photography has undoubtedly made a really important advance for popular purposes in a remarkable cheapening of the cost of the chemical materials employed. At the Society of Arts last month Professor Meldola, F.R.S., announced that Mr. Varley had so far succeeded in exalting the sensitiveness of iron salts that they may now take rank with silver emulsions. An experiment made before the audience showed a piece of paper coated with the new preparation ; this was exposed for a second or two to the light of a gas flame, and the image subsequently developed and shown to the audience. No silver whatever had been employed. Mr. Varley stated that the preparation was one hundred times cheaper than that of silver hitherto employed for taking the image.

### THE LONDON-PARIS TELEPHONE CABLE

The proposed telephone cable across the Straits of Dover has been successfully laid, and placed in connection with London and Paris. On March 16 the first words ever spoken beneath the Channel were flashed along the sea-bed from shore to shore. Such is the delicacy of the instrument in its perfected form, that currents of vibration probably millions of times feebler than ordinary telegraphic currents now reach the human ear in the form of articulate speech after travelling hundreds of miles from their source. The results may not have come upon the scientific world as a surprise, owing to the success of experiments made through similar or longer distances on land-lines for some time past ; but under the circumstances, and the fact that there are always great difficulties and risks in laying submarine cables, the interest and importance of the event has by no means been overrated. Moreover, this is the first telephone cable ever made for the open sea.

The scheme involved the construction of a trunk telephone line between two cities. It was decided to have two separate circuits, so that if one should fail at any time, the other might be in use. The route for the English land-line runs along the South Eastern Railway to a point near Sidcup, and thence by road and rail through Swanley, Maidstone, and Ashford to the cable-house on the beach at St. Margaret's Bay, between Dover and Deal. The wire is of copper, the best material for the purpose, and weighs 400 lbs. to the mile. It is supported on creosoted wooden poles, seventy yards apart, by means of double-shed porcelain insulators about twenty-five feet above the ground. The going and returning wires of each circuit are twisted spirally round each other all the way, so as to exchange their places, and, by cancelling the induction, to prevent the overhearing of messages on other lines. The connection between the last pole on the chalk cliff of St. Margaret's Bay and the cable-hut on the beach is effected by lengths of the cable core enclosed in an iron pipe and buried in a trench down the face of the cliff.

The English land-line is eighty-five miles long, and its excellence is proved, not only by the electrical tests, but by the wonderfully clear and loud speaking through it between Paris and the General Post Office. The voice of the speaker in London can be recognised at the hut in St. Margaret's Bay, and the ticking of a watch distinctly heard. The chattering effect of induction has been reduced to a minimum. A Wheatstone automatic transmitter, working at fast speed on one of the circuits, can just be heard in the telephone upon the other circuit like the feeble purring of a cat between the pauses of the conversation.

The French land-line follows the direct route of the Chemin de Fer du Nord, through Montdidier and Calais to the cable-house at Sangatte, between Calais and Boulogne. It is similar in construction to the English line, except that only one circuit is run at present, and the copper wire weighs about 600 lbs. a mile. Its length is about 204 miles, and the speaking with the D'Arsonval apparatus employed in France is also excellent. The total length of the wire is 297 miles.

The connecting cable, which is the joint property of the two Governments, was designed by Mr. Preece, and contains four separate conductors, two

for each circuit. Each conductor is a strand of seven very pure copper wires, weighing 160 lbs. per nautical mile or knot. For insulating and protective purposes it is covered with three alternate layers of Chatterton's compound and gutta-percha, weighing 300 lbs. per knot. The total weight of each core is, therefore, 460 lbs. to the knot. This insulating jacket prevents the current in the wire from escaping to the sea-water. The capacity for induction between the wire and the water outside, which is so harmful in blurring the delicate ripples of the telephonic currents and thickening the speech, does not exceed 0·3045 microfarads per knot. The cores are twisted spirally round each other in a strand, so as to change places like the land wires; and to silence the cross-talk as much as possible. The cable was manufactured by Messrs. Siemens Brothers, of Charlton, the well-known firm of electrical engineers.

The cable was laid in somewhat dangerous March weather, and not without casualties, by the screw-steamship Monarch, a vessel whose business it is to cruise in British waters and lay or repair the sea and river-cables of the Post Office. The Monarch has also a number of shore-ends to keep in order, inasmuch as, lying frequently on rocky beds, they are often chafed through. Her tanks are capable of storing seventy miles of cable, weighing seven tons per mile—that is to say, heavily armoured cable for shallow and rocky seas like that along our own coasts. Of the light armoured cable intended for the deep sea they hold from 300 to 400 miles. The engineer-in-chief of the Monarch is Mr. Lumsden, a well-known electrician, who took part in the laying of some of the earliest cables thirty years ago. The commander is Captain James Eardley Thompson, an expert navigator of much experience in cable work of every kind, both at home and abroad.

The Monarch put out to sea for the purpose on Monday, March 9, and during the process of "paying out" from the ship's hold a blizzard came on, followed by a sea so rough that the captain was eventually compelled to cut the cable, leave it buoyed in the open sea, and take his vessel into the Downs for anchorage. The bad weather lasted from Monday to Saturday, some ten miles' length of the cable still being buoyed in the Channel. On Saturday morning, in tolerably fair weather, the buoyed end was taken up and successfully spliced with the cable on board ship. The weather still brightened, and eventually connection was successfully made at the Sangatte end. A similar feat was then achieved at St. Margaret's Bay at the South Foreland, where the end was hauled ashore by the sailors at 10 minutes past 6 p.m., and twelve minutes later brought into the cable-hut. Lieutenant O'Meara called up St. Martin's-le-Grand and announced the good news. Three cheers were given at the Post Office and in the hut through the land-line, and those from London sounded so lustily that the lieutenant declared they had split the drum of his telephone. The end of the cable was then stripped and the sheathing filed off, the rasping of the file being plainly heard in London.[1]

Experiments have been made to find the best kind of telephonic apparatus to employ, and the best system of simultaneous telegraphy and telephony over the line. The line is now opened to the public at a tariff of 8*s.* for a conversation lasting three minutes. If the venture proves successful another cable will doubtless be laid, but most likely from Folkestone, a longer distance. We may also see a line established between Glasgow and Belfast, with a cable between Portpatrick and Donaghadee.

Another chapter has thus been added to the history of perhaps the most delicate and sensitive instrument which has ever been popularised for commercial purposes. Indeed, the extreme sensitiveness of the telephone has been one of the great difficulties in the way of its use. The wires were never free from sound, and every change of temperature or of the electric conditions of the atmosphere was recorded in this delicate apparatus. Lord Rayleigh has made experiments from which it appears that with the telephone the note of a whistle is audible at a distance at which the amplitude of the vibrating particles of air is less than a millionth of a millimetre (a millimetre being about the $\frac{1}{25}$ of an inch). This suggests that, after all, perhaps the human ear is the most wonderful apparatus concerned in the process, so extremely sensitive is it to movements however small which recur periodically, as do the vibrations set up by the voice in the disc of the telephone.

Microphones are of course used as transmitters at either end of the line. Pine-wood is the best resonant material we possess, and it preserves its structure and quality when converted into charcoal. The Gower-Bell form of the microphone, which is used at the London end, is a small wheel or octagon of carbon, having loose spokes, on which the speaker's voice impinges with marvellous molecular effect. Since the tramp of a fly and the cry of an insect were first heard through the microphone some fifteen years since, more sensitive forms of the instrument have still further opened up to us unknown worlds of sound.

[1] A few days later the "Times" reported an experiment which must be regarded as perhaps the greatest triumph achieved up to that date by telephony: "About 8 P.M. five telephone receivers were connected to the new line in room 90 of the General Post Office, and the electrician there distinctly heard the music of the Grand Opéra in Paris. The orchestra sounded so clearly that the piccolo could be plainly heard joining in. The voices of the singers were also wonderfully well rendered, the gradations in tone being very faithful. In a duet the two voices could be separated by the ear. Indeed there was no confusion of voices even in the chorus. The applause of the audience, and the cries of 'Bis!' were also heard by the listeners, who could almost fancy themselves comfortably seated in a box or fauteuil, and were loth to relinquish their instruments. The transmitters were, of course microphones, placed on the floor of the Opera-house."

# Varieties.

## The Country of John Halifax.

ROSE COTTAGE.

In our article in the March number on "The Country of John Halifax," we were content to leave Enderley, "eight miles off" from Norton Bury, that is Tewkesbury, "on a hilly cross-country road," the "highest table-land in England," with its hills and valley and beechwoods, in the Cotswolds generally, little thinking of the interest that would be taken in the matter; but quite a number of correspondents—to whom we beg to tender our thanks and acknowledgments—have pointed out to us that the identification of those places is easy enough, and that the two sides to the question are the two which a large number of questions have, namely, a right one and a wrong one.

It is true that for the eight miles which John Halifax rode in and out to business, we must read five and twenty; and for the seven miles to S—, for which he rode for the doctor, we must read three, but with that trifling emendation—allowable enough on the elastic map of the novelist—the ground is localised unmistakably.

S— is Stroud; Enderley, where John devoted himself to Phineas and fell in love with Ursula, is Amberley; Nunnely, across that "dear, smiling, English valley, holding many a little nest of an English home," is Selsley Hill; Rose Cottage, where Ursula showed John the scar on her wrist, is still under the brow of the common—and here is its portrait.

When the authoress of "John Halifax" last went to Tewkesbury, she and her husband also paid a visit to this cottage, and presented the landlady with a silver teapot, out of which they drank the first cup of tea to the memory of John Halifax. Surely that evidence is conclusive? Here are the roses still hanging "in clusters, a dozen in a group, pressing their pinky cheeks together in a mass of family fragrance"; here are the "two entrances each distinct," although the two gates have gone and been replaced by one; here is the kitchen in which Ursula "came and stood by the fire." Below is the "little town"—Nailsworth—and beyond is Luxmore Hall, otherwise Gatcombe Park, the property, then, not of Lord Luxmore, but, of all people in the world, of Rent-and-wages Ricardo!

And here is the cloth mill, Dunkirk Mill, into which John Halifax—in imagination—put the steam engine that upset his lordship's plans; the part owner of which mill, Mr. Playne, to whom we are most indebted for our information, told Miss Mulock of his "Flemish forefathers," and tells us how "she wrote much of the book whilst seated by the side of the stream, Mr. Dobell being engaged in fishing close by."

Here is the wood with the beeches and firs, "the Adam and Eve in this forest of Eden;" and here is the well, altered somewhat, and bearing the name of Spriggs—a detail judiciously omitted in the history. And here is the church, or rather a church—Amberley church—built as Miss Mulock saw it two years after Ursula had ceased to be a widow.

The golfers now play on Enderley Flat, and their "hazards" are the ruined tumuli among which Phineas fell, and that Roman or British or other encampment which he and John discussed, and which proved too much for Ulfa the Dane, who has left his memory in Woeful Dane Bottom. Minchinhampton Common is still "a perfect sheet of greenest, softest turf, sowed with minute and rare flowers," and is 600 feet above the sea, bathed by the Atlantic breezes, though not quite the highest point of the Cotswolds. And the "minchin" is no other than "monachyn," the nun, whence, perhaps, the "nunnely."

Here, then, and not at Bredon, or Cleeve, or Langley, is Nunnely Hill, otherwise Selsley Hill, the description of the road being exact, barring the poplars,—"three together, and one apart"—which have since fallen, and have not been replaced owing to the landowner, so Miss White informs us, "not caring for 'John Halifax,'" Here is Beechwood, otherwise Amberley Court; and at almost due distance is the Beare, another Beare, vouched for as the real original, with the sign still in want of oiling.

And finally, if you find yourself on these breezy uplands, or in this pleasing valley, on golfing or Halifaxing thoughts intent, the natives can take you among "the pearly network of dewy gossamer"—at the proper time of year—to the very spot from which "you may espy" the "twenty-three churches with the glass and the eye," and convince yourself that the scenery of the fiction is even inferior to the scenery of the fact.

**The Approaching Transit of Mercury over the Sun.**—A transit of the planet Mercury over the Sun's disc will occur on the 10th of the present month, but only a small portion of it will be visible in this country, as the Sun will not rise at Greenwich until about half an hour before the end of the phenomenon, which will take place a little before 5 o'clock in the morning. The transit will be best seen in the western part of North America. It is a phenomenon of the same kind as the passage of Venus over the sun's disc, but, though of more frequent occurrence, is not of the same use in determining the Sun's disc, on account of the much greater distance of Mercury than Venus from us when those planets are in inferior conjunction with the Sun. Nevertheless the phenomenon is of interest to astronomers in several ways, and will be carefully observed in places where it is visible. The first time a transit of Mercury was witnessed was by Gassendi, at Paris, on November 7, 1631; the second was by a countryman of our own, Jeremy Shakerley, in 1651, who made a journey to India on purpose to see it. One which took place on November 7, 1677, was well observed by Halley (afterwards the second Astronomer Royal) at St. Helena, to which island he had gone to form a catalogue, the first ever made, of southern stars. The observation led him to suggest those of transits of Venus when they should occur, as the best means of determining the distance of the Sun from us, by making that of Venus a stepping-stone towards it, the proportion being well known by Kepler's third law. The last transit of Mercury took place in 1881; the next, after that of the present month, will occur in 1894.

W. T. LYNN.

**William K. Parker, F.R.S.**—Among the obituary notices of the "Proceedings of the Royal Society," during last year, is a brief memoir of Professor William Kitchen Parker, whose works are valued by men of science, although his name has been little before the general public. Born on his father's farm near Peterborough, in 1823, he was from earliest years accustomed to outdoor life, and a true lover and observer of nature; and he gradually became an ardent student of many branches of natural history. The Flora and the Fauna of that region of England were familiar to him when still a lad. In 1844 he went to London, and entered Charing Cross Hospital as a medical student. In 1849 he commenced to practise in Pimlico, and was much occupied with professional duties. He found time, however, to be busily engaged in natural history pursuits. During his student days he had the advantage of working in the physiological laboratory at King's College, and for a time was prosector at the lectures of Dr. Todd, who had very warmly encouraged his biological studies. In the year 1856 he was induced by his friends Professor T. Rupert Jones and W. Crawford Williamson to devote special attention to the Polyzoa and Foraminifera. From that time a succession of papers and memoirs, giving the results of his researches, appeared in the Transactions of the Linnean, Zoological, and Microscopical Societies. But he did not confine his studies to minute forms of life, for he produced monographs on a vast number of subjects in every department of natural history. For instance, the Royal Society's Transactions include illustrated papers on "The Skull of the Batrachia," on "The Common Snake," on "The Sturgeon," on Edentata, Insectivora, and an elaborate memoir on the "Development of the Wing of the Common Fowl." The mere list of his scientific papers occupies large space. In 1865 he was elected a Fellow of the Royal Society, and in the following year received a Royal Medal for his researches in the "Osteology of Vertebrate Animals." Of many learned societies at home and abroad he was elected an honorary Fellow. In all his studies and labours he was a devout observer of the wonders of nature, and worked in the spirit expressed in one of his ablest treatises. "The study of animal morphology leads to continually grander and more reverent views of creation and the Creator." One of his sons is Professor of Zoology in the University of Otago, New Zealand, and another in the University College at Cardiff.

**First Voyage by Steam from England to Australia.**—The journal of this first voyage, by the Australian Royal Mail Steam Navigation Company's ship Australia, was published in 1853. There was no Suez Canal in those days, and the route was by St. Vincent, Cape of Good Hope, King George's Sound, Adelaide, Port Philip, and Sydney; to each of which destinations the fare being given. The fare to Sydney was £80 1st class, £40 2nd class, £25 3rd class. The journal, as given by the writer, H. Lucas, contains many points that will be read with curiosity now, both as to the regulations for passengers and the events of the voyage. The ship was advertised to depart on May 28, but the day was twice altered, the final start being on June 1. The Australia anchored in Melbourne Harbour on August 31. Mr. Lucas did not proceed to Sydney. Among the incidents of the voyage was a strike of the firemen or stokers and various acts of violent insubordination. The freight charges were also justly complained of. The whole journal is a record worthy of being preserved.

**Popular Entertainment.**—In the preface to the People's edition of "Reminiscences of Scottish Life and Character," Dean Ramsay says: "So far as my experience of life goes, I have never found that the cause of morality and religion was promoted by sternly checking the natural tendencies of our nature to relaxation and amusement. If mankind be too ready to enter upon pleasures which are dangerous or questionable, it is the part of wisdom and of prudence to supply them with sources of interest the enjoyment of which is innocent and permissible."

**The English Language.**—It is estimated that in the year 2000 no less than 1,700,000,000 people will be speaking the English language, while only 500,000,000 will be speaking other European tongues. English is thus indisputably the language of the future.

**Parthenon Sculptures and the Frieze on the Athenæum Club.**—The amusing discussion raised by Mr. Harrison's farcical proposal to send back the Elgin marbles to Athens, recalls to memory an incident in the early history of the Athenæum Club. The Right Hon. J. Wilson Croker, Secretary to the Admiralty, was one of the twelve who attended the preliminary meeting for the formation of the club. Among others present were Sir Humphrey Davy, Sir Francis Chantrey, the Earl of Aberdeen, Sir Walter Scott, Lord Dover, and Mr. Faraday. Wilson Croker soon became the leader of the affair, and chairman of the committee. He was absent when the committee proposed to have an ice-well, at considerable cost. Croker professed to be indignant at the luxurious outlay for wine-cooling, and he put a stop to the proposal, suggesting that the money would be used with greater propriety by obtaining a copy of the famous frieze from the Parthenon for their building in Pall Mall. Mr. Herring was sent to Athens to secure accurate moulds and drawings. This was the occasion of a clever *jeu d'esprit*, left by an unknown wit on the club library table:

I am John Wilson Croker,
I do what I please;
You asked for an ice-well,
And I give a frieze.

**"Mountain Whites" in America—Can this be true?**—It is stated in the "New York Observer" that in the mountain region running through the western part of Virginia, North Carolina, Tennessee, and Georgia, there exists a population, numbering from two to three millions, in a state of deplorable deterioration, known as "Mountain Whites," a portion of the "poor whites" of the Southern States. Many of them are descendants of emigrants from Sweden, Holland, France, and Scotland, and other early settlers. Surrounded by the boasted civilisation of this nineteenth century, they have (owing to extreme poverty, the system of slavery, and the adverse habits and customs of the surrounding country) fallen fifty years behind the march of progress from which but a few miles separate them. Living from generation to generation in the log cabins occupied by their fathers, containing often but one room, seldom more than two, life has become a mere struggle for existence, and their poor attempts at education are unworthy the name.

Some benevolent persons in Philadelphia and New York propose that efforts should be made to send teachers and ministers to these regions; but, if this account is true, larger attempts at civilisation are needed.

**Burial, Funeral, and Mourning Reform.**—This Association has lately enlarged its scope, taking in subjects of reform in many matters besides the original object of burial in more perishable coffins, and advocating less expensive burials. One very simple and desirable reform might be considered—the perils to the living from attending funerals in inclement weather. Many aged and infirm people get fatal illness from the exposure. It is so far good to wear a silk or velvet skull-cap; but why not have a portable tent or canopy for shelter at the grave? We commend the idea to the Secretary, the Rev. F. Lawrence, who, being himself young and strong, may not think of this reform.

**The Queen at Grasse.**—Among the French visitors who inscribed their names in Her Majesty's book soon after her arrival was the Count de Bernstoff, who wrote under his name the interesting fact that he was present at the coronation ceremony of the Queen, as First Secretary at that time of the Prussian Embassy in London,

**A Swedish Lady Professor.**—Among the recent deaths of eminent persons is that of Dr. Sophie Kovalevsky, Professor of Mathematics in the High School (Högskola) of Stockholm. She was the daughter of a Russian general, and at the time of her death was barely thirty-eight. At the age of sixteen she married Kovalevsky, the Moscow palæontologist, who died in 1883, though this fact did not cause any intermission in her studies at St. Petersburg, Heidelberg, Berlin, and Göttingen, where at the age of twenty-one she received the degree of Doctor of Philosophy, and was called to the chair of the Higher Mathematical Analysis in Stockholm, being permitted during the first year of her incumbency to lecture in German. She received the Baudin Prize from the French Academy, and though her political views rendered St. Petersburg no place for her, the Academy of that city elected her a member. She was author of various scientific works.

**Jewish Charitable Gifts.**—In the last annual report of the Board of Guardians for relief of the Jewish poor it is stated that during last year £10,776 1*s.* 8*d.* had been paid out in gifts to the poor, £15,097 11*s.* 2*d.* in relief, and £2,935 1*s.* 5*d.* in specified cases on behalf of private philanthropists. As many as 21,648 persons applied for relief, which was granted in 3,351 cases. In regard to emigration and immigration, 742 persons were assisted to leave the country, and 404 immigrants were helped to gain a livelihood on settling in this country. The statements as to the immigration of pauper Jews from the Continent have been much exaggerated. The larger number came to this country from Russia and Poland, where they are oppressed; but many were quickly helped to emigrate to America, and not a few of the refugees had means of their own, and did not apply for relief.

**Little Sisters of the Poor.**—The Countess of Meath has given a very interesting account of a visit paid by her when at Marseilles to one of the *Asiles*, or refuges for the aged, established by that remarkable pilgrim community, the Little Sisters of the Poor (Petites Sœurs des Pauvres). There are, we are told, no fewer than 262 of these Asylums. It must be remembered that in France there are no State Poor Laws, and no workhouses, such as we have in England by legal enactment. What aid is given to the poor, the infirm, and the aged is the work of various *Sociétés de Bienfaisans*, not necessarily ecclesiastical, nor religious in their arrangements. The community of the Sisters of the Poor only dates from the year 1840, when two seamstresses and a former domestic servant put themselves under the guidance of a kind Abbé at Saint-Servan, a little town in Brittany. The Abbé Le Pailleur directed them to care for the aged poor of the town, and the alms of the charitable furnished the means for this good work. The good Abbé is still alive, and one of the sisters, Marie Jamet, who is the Supérieure Générale of the community, which now is found in almost every country of Europe, as well as in Great Britain and America, and even in Africa and Australia. Each *Asile* is presided over by a Mother Superior (*Mère Supérieure*). The arrangements and occupation of the inmates in the *Asile* at Marseilles are very fully described by Lady Meath. There was an air of cheerfulness and of kindliness throughout the establishment. Attendance at the chapel was not compulsory, but the privileges of the place of worship and prayer were evidently appreciated. Most of the Sisters are young or middle-aged, and there are at present about 4,500 devoted women who give themselves freely and voluntarily to the care of about 35,000 aged men and women. For the sick and infirm there is special provision made, and a well-ordered *Asile* combines all the best advantages of a model "Poor House," and a Home for Invalids and Incurables. The Sisters are skilful beggars, and they obtain all sorts of furniture and appliances for the disabled, as well as food and necessary supplies for the ordinary workers among the old people. Lady Meath asks why we cannot have Protestant Sisters to look after the aged and infirm in similar asylums in our own country; and "might it not be possible to have Little Sisters of the Poor connected with the English Church, true-hearted women, filled with the spirit of charity?"

**Zeal without Knowledge.**—Professor Huxley tells this personal anecdote: "When I was attending the meeting of the British Association in Belfast nearly forty years ago, I had promised to breakfast with the eminent scholar Dr. Hincks. Having been up very late the previous night I was behind time; so hailing an outside car I said to the driver as I jumped on, 'Now drive fast, I am in a hurry.' Whereupon he whipped up his horse and set off at a hand gallop. Nearly jerked off my seat, I shouted, 'My good friend, do you know where I want to go?' 'No, yer honner,' said the driver, 'but anyway I am driving fast.'"

**Bishop Creighton.**—An anecdote is told of the new Bishop of Peterborough which reminds us of a similar kindly act of George Herbert, when he helped a peasant to get his cart out of a rut near Salisbury. In a poor street in Worcester Canon Creighton saw an old woman vainly striving to wheel a heavy barrow filled with coal up an alley. Canon Creighton deposited his umbrella in a doorway, and, taking the place of the poor old woman, trundled the load briskly up the alley, and was off before the astonished dame could thank him for the kindly help.

**Belgian Electors.**—In Belgium the parliamentary franchise is granted only to male adults paying 42 francs a year of direct taxes; and, in consequence, the country, although having about 6,000,000 inhabitants, has only about 115,000 voters. Some such limitation of electors would be desirable in other countries; in Ireland, for instance, where illiterate and poverty-stricken labourers are led to the poll by priests or agitators.

**Cost of a Storm on the British Coasts.**—There is never a storm on our coasts that does not involve great loss of property as well as of life. It is possible to obtain only rough estimates of these losses. The lives of many fishermen as well as of mariners are sacrificed on the occurrence of every gale. About ten or twelve years since, it was stated by Mr. Chamberlain that at least 1 in 56 of those engaged in maritime industry perished each year. The system of signalling from the Meteorological Office to the coasts, and the benevolent and vigilant efforts of Mr. Plimsoll and his associates, may have reduced this ratio somewhat, but it is still lamentably great. As to the loss of property, the loss must be felt somewhere, even when the owners of ships fraudulently shift it to the shoulders of underwriters and marine insurance companies. But part of the annual loss, both of life and property, is borne by the beneficent and unselfish agencies seeking to save from loss. For instance, there are frequent casualties to those who attempt to rescue shipwrecked crews; and it was stated by Sir Edward Birkbeck, at the annual meeting of the Royal National Lifeboat Institution, that the gale of November 6th and 7th, 1890, when twenty-six of their boats saved 118 lives, involved an expenditure, for life-saving, of £773, apart from the damage done to some of the boats.

**Lifeboat Institution.**—At the annual meeting of the Royal National Lifeboat Institution, held on March 21, the Marquis of Hartington in the chair, the report read by Mr. Charles Dibden, the Secretary, gave many interesting details, showing the great benefits of the service, and the need for increased support. There are now 300 lifeboats on our coasts. The first steam lifeboat, stationed at Harwich, has been out several times, with gratifying results. During the year above 550 lives have been saved by the boats of the Institution, and 27 vessels assisted to escape wreck. The total expenditure for the year has been nearly £76,000, while the annual revenue (apart from legacies) only amounted to between £42,000 and £43,000, from subscriptions, donations, and dividends. It is necessary that larger funds should be obtained to carry on the service efficiently. Mr. W. H. Smith, First Lord of the Treasury, formerly First Lord of the Admiralty, warmly advocated the claims of the Institution to the support of the public. It seems that the Government can give no grant, though the Coast Guard Service is always ready to co-operate. Lord Hartington made the happy remark that, besides the gratifying and beneficent results referred to in the Report, this was a National institution having an object of even higher aim, for it was a grand school of heroism; not rash and reckless daring, but the cool and unselfish heroism of duty. For this reason, as well as for the merciful object of saving life, it deserved wider support.

**Sprats and Herrings.**—It has long been disputed whether sprats are the young of herrings, or a separate fish. The matter has been definitely settled at the Brighton Aquarium, where a number of sprats put into one of the tanks in due time grew to be herrings. The fact of sprats never having been seen with the development of mature fish, neither roe nor milt, ought to have satisfied naturalists. In the middle of February of this year, 1891, prodigious shoals of sprats were taken at Brighton. For several successive days the boats discharged loads on the beach. They were sold to the fish dealers and fishmongers, vast quantities being consumed in the town, and sent for sale in London and elsewhere. At last they could be only carted away for manuring the fields, and were sold for this purpose at a penny the bushel. The sprat is as delicate and beautiful a fish as the pilchard, and as tasty as the anchovy when cured. Thousands of sprats are now sold in the form of anchovy paste. In Frank Buckland's "Natural History of British Fishes," the mode of preparation is given. A most important industry could be established on our coasts if these young herrings could be preserved in the same way as sardines, of which the sale is enormous in this country. The fish are of the same size, and sprats are more tempting in look as well as taste than many sardines sent to the English market. The fecundity of the herring is so great that there can be no objection to using the young in any quantity. Mr. Buckland records a shoal of herrings fallen in with by Captain McDonald of the cruiser Vigilant in 1877, which was four miles long and two broad, containing more fish in almost solid mass than are caught in a whole year throughout Scotland. There is no need of a close season or any restriction as to sprat catching.

**Fear God and work hard.**—When Dr. Livingstone revisited Scotland for the last time, he addressed the school where his son Oswald was then being educated. The closing words of his speech were, "Fear God and work hard"—words which embody the spirit of his own noble life, and which form an admirable motto for workers of all ages, and in every sphere.

**Close of the 51st American Congress.**—The close of the session was a scene of great excitement. The members of both chambers were wearied with the protracted and keen discussion on the McKinley Tariff, the silver question, the Copyright question, and other troublesome subjects. The final hour came, and the last Appropriation Bill was not yet passed. But, according to custom in recent times, the Senate clock had been turned back ten minutes, so as to enable business to be transacted during the period of legal life. The Senate adjourned at "noon by the marble clock." The House of Representatives had also to adjourn at noon, but the hour really was 12·15. When the Speaker's gavel struck the desk, a wild "Hurrah" came from the floor and the galleries. The Republicans broke into the song "Marching through Georgia," the tune always played when Sherman appeared, after his famous march to the sea. The Democrats then took up "Dixie," the favourite march of the Confederates, and recognised as the most representative song of the Southern States.

# Household Queries.

**Linoleum Curling.**—*A reader would be glad to know of a remedy for the Linoleum covering the floor of a large upstairs bath-room, which since the departure of the late severe frost, has broken away from the nails which fastened it down, and risen up like small wavelets. It has been down for three years, and until recently been most satisfactory?*—It must be entirely taken up and relaid. There is no other remedy, but this has frequently to be done after such weather. It shrinks with the cold, and that stretches it and tears it away; and then when it expands again it is rather too large.

**Pampas Grass.**—*Could you tell me how to clean pampas grass?*—It can be washed with soap and water, using a sponge or soft brush, moved the "right" way only. Of course it won't last for ever.

**Violets and Ferns.**—1. *Should violets be moved yearly to flower well?* 2. *Also, is it good to give maidenhair ferns cold tea?*—(1.) Violets should be taken up every spring, about the end of March being the best time, and the best and strongest pieces only selected for replanting. In smoky and foggy neighbourhoods it promotes flowers a great deal to remove a portion of the leaves, when very abundant, shortly before the flowering season. (2.) Personally we don't know, but a good authority we have asked says that it is.

**Piano Cover.**—*Kindly assist me as to the best mode of making a cover for a cottage piano.*—If you mean a loose cover for removal, or during holiday absence (no one ever puts a cover on in an inhabited house), you cannot do better than shape it out of brown holland or unbleached linen, binding all the edges well with strong broad tape. If you mean an artistic cover for the back of the piano facing the room, embroidery is the general favourite, choosing bold and simple rather than complicated designs. A piece of *appliqué* work also looks well. Some ladies make a living by *painting* decorative designs for pianos. In the meantime, and for cheapness, a plain square of many patterns of Japanese paper looks tolerably well.

**Swiss Rolls.**—*Will you please give a recipe for making Swiss rolls?*—It is difficult with such names to know exactly what are meant. The following is one for what we have known as Geneva rolls:—Rub two ounces of butter into one pound of flour till it grains like oatmeal; then add a pinch of salt, a dessert-spoonful of strong yeast, and about half-a-pint more or less of milk, as much as will make a stiff dough. Let this rise for an hour, then work into it two eggs which have been beaten up with enough hot milk to make the milk new-milk warm. Knead the dough again till it is soft and light, let it rise half an hour again, then form into small rolls and bake in a quick oven till done, probably about twenty minutes.

**Kidgeree.**—*Can you give me a good recipe for Kidgeree?*—This Indian breakfast dish may be made from any firm fish, such as salmon, soles, turbot, brill, or whiting, or from shrimps. Boil ¾ lb. of rice same as for a curry, soft but dry: put the rice in a saucepan with 2 oz. of butter, and when this is mixed ½ lb. of the fish free from all skin and bone, and cut into small pieces. Season to taste with cayenne, salt, and pepper. Stir over the fire till quite hot, then add two well-beaten eggs, mix well, and serve.

**Varnishing.**—*Can you tell me how to varnish paint properly? I have tried but failed. I put on size first, and then what was sold as best varnish, but it sank into the wood and looked streaky in a day or two. It was a dark brown painted door. Must the old varnish be removed before re-varnishing, and how?*—You were wrong to size the work. Size is only used on new unpainted wood, after which the best varnish for amateurs is pale oak or furniture varnish. Painted surfaces are carefully cleansed with plain soap and water, and then dried, after which the varnish is applied direct, the oil varnish of the shops being most useful for common work. As long as the paint is good enough it need not be removed; when worn or defaced, of course it must be before being re-done. Your sizing and application of varnish we know nothing of has so complicated matters, that we can only advise now calling in a painter, who will recognise the actual varnish and know what to do.

**Hasty Pudding.**—1. *Teggy would be much obliged for a recipe for the Kentish dish called "hasty pudding." 2. Also to know if oranges are good for people suffering from rheumatism.*—(1.) We suppose you to mean the "lumpy" form of hasty pudding which is hardly ever described, while the smooth kinds are in all the cookery books. Boil sufficient milk with a pinch of salt up in a saucepan, and as soon as it boils, but *not before* (else the pudding will taste like paste), sprinkle in dry flour with the left hand while you stir with the right, moderately, so as to let lumps form. Go on till thick enough, which with a pint and a half of milk will be somewhere about half a pound of flour. Either pour out in a heap on a dish, and eat with butter and brown sugar, or treacle, or jam, to taste; or it may be put into a mould, and after a little further cooking in the oven will turn out. (2.) They are generally beneficial, but a doctor should be consulted in case of peculiarities in the constitution.

**Violins.**—*Could you tell me whether cold is bad for a violin? During the winter I have been in the habit of wrapping shawls etc. round my violin, as I thought that might keep out the cold; but perhaps the heat of the shawls would melt the varnish?*—All great extremes are bad for the instrument, but the worst of all is damp. Wrappings are, however, no use in really winter temperature, as there is no vital heat to keep in, as with us. But there is really no cause to worry at all. It is quite enough to keep the violin in an ordinary case in a sitting-room which is used. Unless of really good quality, even dry cold need not be feared.

**Patent Leather.**—*Would you tell me how to prevent the gloss coming off patent leather shoes?*—The first time or two milk applied with a soft cloth is sufficient; but when they begin to get dull, they are polished with a soft cloth and a little sweet oil.

**Bread-crumbing Fish.**—*Please inform me the best method to prevent the bread-crumbs falling off fish and sticking to the pan during frying?*—By the form of your question we think you have forgotten the egg. You first dry the fish; then rub it with flour to dry it still more; then either dip it in raw egg well beaten up, or brush the beaten egg all over it, drain any excess off, and then lay it on the bread crumbs well spread out, and sprinkle more on the top side. They stick on the egg. Don't pat the crumbs down at all, but leave the fish on the crumbs till ready to dip into the hot oil or fat, which must cover it all over. It should be done a little time before frying, and the bread-crumbs should be fine, stale, and dry.

**Grates.**—*Kindly inform me a substitute for black lead for grates, as it is very laborious work for people who have been accustomed to a servant. We have tried Brunswick black, but find that it burns off.*—There is really no effectual substitute for leading. You will, however, find that a very thorough performance now and then is very lasting, and really will fairly dispense with a great deal in between.

**Corns.**—*What is the best remedy for corns?*—There is no absolute "remedy." The first thing is to have boots or shoes made so as to avoid all pressure. No permanent good can be effected without this. Then get from your chemist the following, which he will know at sight, as it is sold by lots under the most extraordinary names as their own:—Salicylic acid 30 parts, Extr. Cannabis Sativa 5 parts, Collodion 100 parts, mix. Apply this with a camel-hair brush every night, and in four to eight days the corn will fall off; then take a warm foot-bath, wear shoes that don't make corns, and be thankful. In reply to your other query, we decline medical advice.

**Cocoa-nut Biscuits.**—*Can you give me a recipe for cocoa-nut biscuits?*—The following is as good as we know of for home-made. Rasp a good nut with care to let no rind fall in the raspings. Spread 1 lb. of this on a dish and let stand in a cool dry place two days to dry. Mix with it 2 lbs. of sifted loaf sugar, the whites of six eggs whisked to a stiff froth, and two teacupfuls of flour. Drop the mixture like rocks from a spoon on tins, or into drop-cake tins. Bake in a gentle oven for about twenty minutes, take out of the tins while warm, and when cold store in a canister.

**The Hair.**—1. *Is once a fortnight too often for the washing of hair? 2. Does soft-soap harm the hair?*—(1.) Not for young people. For elderly people much washing is not advisable, and as the natural oil diminishes is seldom necessary. (2.) Yes, only mild soap should be used, best of all with rain-water in which some bran has been boiled.

**Grey Hair.**—*Can you tell me anything to prevent my hair from going grey? I saw a recipe which you gave, a very good one as far as keeping it clean and from falling off.*—Nothing will really prevent this, except that so far as it may be owing to deficiency of natural oil; this may be palliated by rubbing in occasionally a little lanolin, which is a natural sheep's wool fat obtainable at any chemist's, and the best for any such purpose.

**Oil Paintings.**—*Kindly tell me what is the best thing to clean oil paintings with?*—See a reply on p. 494, vol. for 1890.

**Soiled Wall-paper.**—*Be good enough to advise me how to remove soiled marks from a wall-paper, caused by contact with dresses (at the entrance of room); the paper is light, but of serviceable pattern, and is otherwise quite clean.*—Up to a certain point they may be removed by judicious rubbing with the crumb side of crusts of bread two days old. Beyond that, there is no remedy for the paper itself; but a common plan is to have a piece of different and darker pattern laid over it, which can be generally done so as to harmonise with the rest of the room. Often such a guard-piece is varnished, or a varnished dado put round the room.

**Ants.**—Several correspondents write us on this subject; and here we again express our thanks for, and appreciation of, the willingness of our readers to assist us in giving practical aid in this column. Two inform us that the best remedy they have found is to soak bits of rag in paraffin oil, and press these into the holes or crevices from which the ants issue. Another has in two different kitchens conquered the enemy by taking a lighted "taper" and moving it amongst them whenever seen, which soon drives them away; of course, care must be taken to set nothing on fire. Another reply has misunderstood the query, which did not refer to the insects in the garden, but in the house.

POPPIES.

# THE STORY OF FRANCIS CLUDDE.

BY STANLEY J WEYMAN, AUTHOR OF "THE HOUSE OF THE WOLF," ETC.

## CHAPTER XV.—BEFORE THE COURT.

"YOUR HONOUR, FOOL? DIE LIKE THE BRAINLESS BRUTE YOU ARE! DIE AND BE FORGOTTEN!"

I HAD not seen the first moon-beams pierce the broken casement of the tower-room, but I was there to watch the last tiny patch of silver glide aslant from wall to sill, and sill to frame, and so pass out. Near the fire, which had been made up, and now glowed and crackled bravely on the hearth-stone at my elbow, my three gaolers had set a mattress for me; and on this I sat, my back to the wall and my face to the window. The guards lounged on the other side of the hearth round a lanthorn, playing at dice and drinking. They were rough, hard men, whose features, as they leaned over the table and the light played strongly on their faces, blazoning them against a wall of shadow, were stern and rugged enough. But they had not shown themselves unkindly. They had given me a share of their wine, and had pointed to the window and shrugged their shoulders, as much

as to say that it was my own fault if I suffered from the draught. Nay, from time to time, one of them would turn from his game and look at me—in pity, I think—and utter a curse that was meant for encouragement.

Even when the first excitement had passed away, I felt none of the stupefaction which I have heard that men feel in such a position. My brain was painfully active. In vain I longed to sleep, if it were only that I might not be thought to fear death. But the fact that I was to be tried first, though the sentence was a certainty, distracted and troubled me. My thoughts paced from thing to thing: now dwelling on the Duchess and her husband, now flitting to Petronilla and Sir Anthony, to the old place at home and the servants; to strange petty things, long familiar—a tree in the chase at Coton, a herb I had planted. Once a great lump rose in my throat, and I had to turn away to hide the hot tears that would rise at the thought that I must die in this mean German town, in this unknown corner, and be buried and forgotten! And once, too, to torment me, there rose a doubt in my mind whether Master Bertie would recover; whether, indeed, I had not thrown my life away for nothing. But it was too late to think of that! And the doubt, which the evil one himself must have suggested, so terrible was it, passed away quickly.

My thoughts raced, but the night crawled. We had surrendered about ten, and the magistrates, less pitiful than the gaolers, had forbidden my friends to stay with me. An hour or more after midnight, two of the men lay down, and the other sat humming a drinking-song, or at intervals rose to yawn and stretch himself and look out of the window. From time to time, the cry of the watchman going his rounds came drearily to my ears, recalling to me the night I had spent behind the hoarding in Moorgate Street, when the adventure which was to end to-morrow—nay, to-day—in a few hours—had lured me away. To-day? Was I to die to-day? To perish with all my plans, hopes, love? It seemed impossible. As I gazed at the window, whose shape began to be printed on my brain, it seemed impossible. My soul so rose in rebellion against it, that the perspiration stood on my brow, and I had to clasp my hands about my knees, and strain every muscle to keep in the cry I would have uttered!—a cry not of fear, but of rage and remonstrance and revolt.

I was glad to see the first streaks of dawn, to hear the first cock-crowings, and, a few minutes later, the voices of men in the street and on the stairs. The sounds of day and life acted magically upon me. The horror of the night passed off as does the horror of a dream. When a man, heavily cloaked and with his head covered, came in, the door being shut behind him by another hand, I looked up at him bravely. The worst was past.

He replied by looking down at me for a few moments without disclosing himself, the collar of his cloak being raised so high that I could see nothing of his features. My first notion that he must be Master Lindstrom passed away; and, displeased by his silent scrutiny, and thinking him a stranger, I said sharply, "I hope you are satisfied, sir."

"Satisfied?" he replied, in a voice which made me start, so that the irons clanked on my feet, "Well, I think I should be—seeing you so, my friend!"

GAOLERS.

It was Clarence! Of all men, Clarence! I knew his voice, and he, seeing himself recognised, lowered his cloak. I stared at him in stupefied silence, and he at me in a grim curiosity. I was not prepared for the blunt abruptness with which he continued—using almost the very words he had used when face to face with me in the flood—"Now tell me who you are, and what brought you into this company?"

I gave him no answer. I still stared at him in silence.

"Come!" he continued, his hawk's eyes bent on my face, "make a clean breast of it, and perhaps—who knows?—I may help you yet, lad. You have puzzled and foiled me and I want to understand you. Where did my lady pick you up just when she wanted you? I had arranged for every chequer on the board except you. Who are you?"

This time I did answer him—by a question. "How many times have we met?" I asked.

"Three," he said readily, "and the last time you nearly rid the world of me. Now the luck is against you. It generally is in the end against those who thwart me, my friend." He chuckled at the conceit, and I read in his face at once his love of intrigue and his vanity. "I come uppermost, as always."

I only nodded.

"What do you want?" I asked. I felt a certain expectation. He wanted something.

"First, to know who you are."

"I shall not tell you!" I answered.

He smiled drily, sitting opposite to me. He had drawn up a stool, and made himself comfortable. He was not an uncomely man as he sat there playing with his dagger, a dubious smile on his lean dark face. Unwarned, I might have been attracted by the masterful audacity, the intellect as well as the force which I saw stamped on his features. Being warned, I read cunning in his bold eyes, and cruelty in the curl of his lip. "What do you want next?" I asked.

"I want to save your life," he replied lightly.

At that I started—I could not help it.

"Ha! ha!" he laughed, "I thought the stoicism did not go quite down to the bottom, my lad. But there, it is true enough I have come to help you. I have come to save your life if you will let me."

I strove in vain to keep entire mastery over myself. The feelings to which he appealed were too strong for me. My voice sounded strange even in my own ears as I said hoarsely, "It is impossible! What can you do?"

"What can I do?" he answered with a stern smile. "Much! I have, boy, a dozen strings in my hands, and a neck—a life at the end of each!"

He raised his hand, and extending the fingers, moved them to and fro.

"See! see! A life, a death!" he exclaimed. "And for you, I can and will save your life—on one condition."

"On one condition?" I murmured.

"Ay, on one condition; but it is a very easy one. I will save your life on my part; and you, on yours, must give me a little assistance. Do you see? Then we shall be quits."

"I do not understand," I said dully. I did not. His words had set my heart fluttering so that I could for the moment take in only one idea—that here was a new hope of life.

"It is very simple," he resumed, speaking slowly. "Certain plans of mine require that I should get your friend the Duchess conveyed back to England. But for you I should have succeeded before this. In what you have hindered me, you can now help me. You have their confidence, and great influence with them. All I ask is that you will use that influence so that they may be at a certain place at a certain hour. I will contrive the rest. It shall never be known, I promise you, that you——"

"Betrayed them!"

"Well, gave me some information," he said lightly, puffing away my phrase.

"No. Betrayed them!" I persisted.

"Put it so, if you please," he replied, shrugging his shoulders and raising his eyebrows. "What is in a word?"

"You are the tempter himself, I think!" I cried in bitter rage—for it *was* bitter—bitter, indeed, to feel that new-born hope die out. "But you come to me in vain. I defy you!"

"Softly! softly!" he answered with calmness.

Yet I saw a little pulse beating in his cheek that seemed to tell of some emotion kept in subjection.

"It frightens you at first," he said. "But listen. You will do them no harm, and yourself good. I shall get them any way, both the Duchess and her husband; though, without your aid, it will be more difficult. Why, help of that kind is given every day. They need never know it. Even now there is one of whom you little dream who has——"

"Silence!" I cried fiercely. "I care not. I defy you!"

I could think of only one thing. I was wild with rage and disappointment. His words had aggravated the pain of every regret, every clinging to life I felt.

"Go!" I cried. "Go and leave me, you villain!"

"If I do leave you," he said, fixing his eyes on me, "it will be, my friend—to death."

"Then so be it!" I answered wildly. "So be it! I will keep my honour."

"Your honour!" The mask dropped from his face and he sneered as he rose from his seat. A darker scowl changed and disfigured his brow, as he lost hope of gaining me. "Your honour? Where will it be by to-night?" he hissed, his eyes glowering down at me. "Where a week hence, when you will be cast into a pit and forgotten? Your honour, fool? What is the honour of a dead man? Pah! But die then, if you will have it so! Die, like the brainless brute you are! And rot, and be forgotten!" he concluded passionately.

They were terrible words; more terrible I know now than either he or I understood then. They so shook me that when he was gone I crouched trembling on my pallet, hiding my face in a fit of horror—taking no heed of my gaolers or of appearances. "Die and be forgotten! Die and be forgotten!" The doom rang in my ears.

Something which seemed to me angelic roused me from this misery. It was the sound of a kindly familiar voice speaking English. I looked up and found the Dutchman bending over me with a face of infinite distress. With him, but rather behind him, stood Van Tree, pale and vicious-eyed, tugging his scanty chin-beard and gazing about him like a dog seeking some one to fasten upon. "Poor lad! poor lad!" the old man said, his voice shaking as he looked at me.

I sprang to my feet, the irons rattling as I dashed my hand across my eyes.

"It is all right!" I said hurriedly. "I had a—but never mind that. It was like a dream. Only tell the Duchess to look to herself," I continued, still rather vehemently. "Clarence is here. He is in Santon. I have seen him."

"You have seen him?" both the Dutchmen cried at once.

"Ay!" I said, with a laugh that was three parts

hysterical—indeed, I was still tingling all over with excitement. "He has been here to offer me my life if I would help him in his schemes. I told him he was the tempter, and defied him. And he—he said I should die and be forgotten!" I added trembling, yet laughing wildly at the same time.

"I think he *is* the tempter!" said Master Lindstrom solemnly, his face very grim. "And therefore a liar and the father of lies! You may die, lad, to-day; perhaps you must. But forgotten you shall not be, while we live, or one of us lives, or one of the children who shall come after us. He is a liar!"

I got my hands, with a struggle, from the old man, and turning my back upon him, went and looked out of the window. The sun was rising. The tower of the great minster, seen now for the first time, rose in stately brightness above the red roofs and quaint gables and the rows of dormer windows. Down in the streets the greyness and chill yet lingered. But above was a very glory of light and warmth and colour—the rising of the May sun. When I turned round I was myself again. The calm beauty of that sight had stolen into my soul. "Is it time?" I said cheerfully. For the crowd was gathering below, and there were voices and feet on the stairs.

"I think it is," Master Lindstrom answered. "We have obtained leave to go with you. You need fear no violence in the streets, for the man who was hurt is still alive and may recover. I have been with the magistrates this morning," he continued, "and found them better disposed to you; but the Sub-dean has joint jurisdiction with them, as the deputy of the Bishop of Arras, who is dean of the minster; and he is, for some reason, very bitter against you."

"The Bishop of Arras? Granvelle, do you mean?" I asked. I knew the name of the Emperor's shrewd and powerful minister, by whose advice the Netherlands were at this time ruled.

"The same. He, of course, is not here, but his deputy is. Were it not for him— But there, it is no good talking of that!" the Dutchman said, breaking off and rubbing his head in his chagrin.

One of the guards who had spent the night with me brought me at this moment a bowl of broth with a piece of bread in it. I could not eat the bread, but I drank the broth and felt the better for it. Having in my pocket a little money with which the Duchess had furnished me, I put a silver piece in the bowl and handed it back to him. The man seemed astonished, and muttered something in German as he turned away.

"What did he say?" I asked the Dutchman.

"Oh, nothing, nothing," he answered.

"But what was it? It was something," I persisted, seeing him confused.

"He—well, he said he would have a mass said for you!" Lindstrom answered in despair. "It will do no harm."

"No, why should it?" I replied mechanically.

We were in the street by this time, Master Lindstrom and Van Tree walking beside me in the middle of a score of soldiers who seemed to my eyes fantastically dressed. I remarked, as we passed out, a tall man clothed in red and black, who was standing by the door as if waiting to fall in behind me. He carried on his shoulder a long broad-bladed sword, and I guessed who he was, seeing how Master Lindstrom strove to intercept my view of him. But I was not afraid of *that*. I had heard long ago—perhaps six months in time, but it seemed long ago—how bravely Queen Jane had died. And if a girl had not trembled, surely a man should not. So I looked steadfastly at him and took great courage, and after that was able to gaze calmly on the people, who pressed to stare at me, peeping over the soldiers' shoulders, and clustering in every doorway and window to see me go past. They were all silent, and it even seemed to me that some—but this may have been my fancy—pitied me.

I saw nothing of the Duchess, and might have wondered, had not Master Lindstrom explained that he had contrived to keep her in ignorance of the hour fixed for the proceedings. Her husband was better, he said, and conscious; but, for fear of exciting him, they were keeping the news from him also. I remember I felt for a moment very sore at this, and then I tried to persuade myself that it was right.

The distance through the streets was short, and almost before I was aware of it I was in the court-house, the guard had fallen back, and I was standing before three persons who were seated behind a long table. Two of them were grave, portly men wearing flat black caps and scarlet robes, with gold chains about their necks. The third, dressed as an ecclesiastic, wore a huge gem ring upon his thumb. Behind them stood three attendants holding a sword, a crosier, and a ducal cap upon a cushion; and above and behind all was a lofty stained window, whose rich hues, the sun being low as yet, shot athwart the corbels of the roof. At the end of the table sat a black-robed man with an inkhorn and spectacles, a grave, still, down-looking man; and the crowd being behind me, and preserving a dead silence, and the attendants standing like statues, I seemed indeed to be alone with these four at the table, and the great stained window and the solemn hush. They talked to one another in low tones for a minute, gazing at me the while. And I fancied they were astonished to find me so young.

At length they all fell back into their chairs. "Do you speak German?" the eldest burgher said, addressing me gravely. He sat in the middle, with the Sub-dean on his right.

"No; but I speak and understand Spanish," I answered in that language, feeling chilled already by the stern formality which like an iron hand was laying its grip upon me.

"Good! Your name?" replied the president.

"I am commonly called Francis Carey, and I am an Englishman." The Sub-dean—he was a pale, stout man, with gloomy eyes—had hitherto been looking at me in evident doubt. But at this he nodded assent, and, averting his eyes from me, gazed meditatively at the roof of the hall, considering apparently what he should have for breakfast.

"You are charged," said the president slowly, consulting a document, "with having assaulted and wounded in the highway last night one Heinrich Schröder, a citizen of this town, acting at the time

as Lieutenant of the Night Guard. Do you admit this, prisoner, or do you require proof?"

"He was wounded," I answered steadily, "but by mistake, and in error. I supposed him to be one of three persons who had unlawfully waylaid me and my party on the previous night between Emmerich and Wesel."

The Sub-dean, still gazing at the roof, shook his head with a faint smile. The other magistrates looked doubtfully at me, but made no comment, and my words seemed to be wasted on the silence. The president consulted his document again, and continued, "You are also charged with having by force of arms, in time of peace, seized a gate of this town, and maintained it, and declined to surrender it when called upon so to do. What do you say to that?"

"It is true in part," I answered firmly. "I seized not the gate, but part of the tower, in order to preserve my life and to protect certain ladies travelling with me from the violence of a crowd which, under a misapprehension, was threatening to do us a mischief."

The priest again shook his head, and smiled faintly at the carved roof. His colleagues were perhaps somewhat moved in my favour, for a few words passed between them. However, in the end they shook their heads, and the president mechanically asked me if I had anything further to say.

"Nothing!" I replied bitterly. The ecclesiastic's cynical heedlessness, his air of one whose mind is made up, seemed so cruel to me whose life was at stake, that I lost patience. "Except what I have said," I continued—"that for the wounding, it was done in error; and for the gate-seizing, I would do it again to save the lives of those with me. Only that and this: that I am a foreigner ignorant of your language and customs, desiring only to pass peacefully through your country."

"That is all?" the president asked impassively.

"All," I answered, yet with a strange tightening at my throat. Was it all? All I could say for my life.

I was waiting, sore and angry and desperate, to hear the sentence, when there came an interruption. Master Lindstrom, whose presence at my side I had forgotten, broke suddenly into a torrent of impassioned words, and his urgent voice ringing through the court seemed in a moment to change its aspect—to infuse into it some degree of life and sympathy. More than one guttural exclamation which seemed to mark approval burst from the throng at the back of the hall. In another moment, indeed, the Dutchman's courage might have saved me. But there was one who marked the danger. The Sub-dean, who had at first only glowered at the speaker in rude astonishment, now cut him short with a harsh question.

"One moment, Master Dutchman!" he cried. "Are you one of the heretics who call themselves Protestants?"

"I am. But I understand that there is here liberty of conscience," our friend answered manfully, nothing daunted in his fervour at finding the attack turned upon himself.

"That depends upon the conscience," the priest answered with a scowl. "We will have no Anabaptists here, nor foreign praters to bring us into feud with our neighbours. It is enough that such men as you are allowed to live. We will not be bearded by you, so take warning! Take heed, I say, Master Dutchman, and be silent!" he repeated, leaning forward and slapping his hand upon the table.

I touched Master Lindstrom's sleeve—who would of himself have persisted—and stayed him. "It is of no use," I muttered. "That dog in a rochet has condemned me. He will have his way!"

There was a short debate between the three judges, while in the court you might have heard a pin drop. Master Lindstrom had fallen back once more. I was alone again, and the stained window seemed to be putting forth its mystic influence to enfold me, when, looking up, I saw a tiny shadow flit across the soft many-hued rays which streamed from it athwart the roof. It passed again, once, twice, thrice. I peered upwards intently. It was a swallow flying to and fro amid the carved work.

Yes, a swallow. And straightway I forgot the judges, forgot the crowd. The scene vanished and I was at Coton End again, giving Martin Luther the nest for Petronilla—a sign, as I meant it then, that I should return. I should never return now. Yet my heart was on a sudden so softened, that, instead of this reflection giving me pain, as one would have expected, it only filled me with a great anxiety to provide for the event. She must not wait and watch for me day after day, perhaps year after year. I must see to it somehow; and I was thinking with such intentness of this, that it was only vaguely I heard the sentence pronounced. It might have been some other person who was to be beheaded at the east gate an hour before noon. And so God save the Duke!

### CHAPTER XVI.—IN THE DUKE'S NAME.

THEY took me back to the room in the tower, it being now nearly ten o'clock. Master Lindstrom would fain have stayed with me constantly to the end, but having the matter I have mentioned much in my mind, I begged him to go and get me writing materials. When he returned Van Tree was with him. With a particularity very curious at that moment, I remarked that the latter was carrying something.

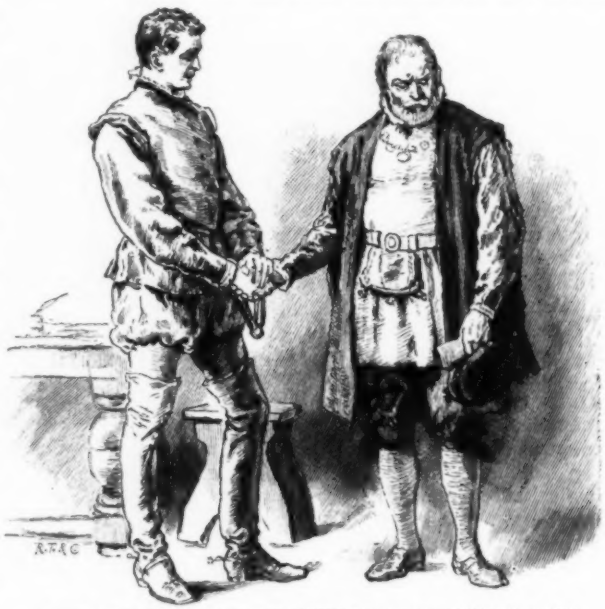
"Where did you get that?" I said sharply and at once.

"It is your haversack," he answered, setting it down quietly. "I found the man who had taken possession of your horse, and got it from him. I thought there might be something in it you might like."

"It is my haversack," I assented. "But it was not on my horse. I have not seen it since I left it in Master Lindstrom's house by the river. I left it on the pallet in my room there, and it was forgotten. I searched for it at Emmerich, you remember."

"I only know," he replied, "that I discovered it behind the saddle of the horse you were riding yesterday."

He thought that I had become confused and was a little wrong-headed from excitement. Master Lindstrom also felt troubled, as he told me afterwards, at seeing me taken up with a trifle at such a time.



But there was nothing wrong with my wits, as I promptly showed them.

"The horse I was riding yesterday?" I continued. "Ah! then I understand. I was riding the horse which I took from the Spanish trooper. The Spaniard must have annexed the haversack when he and his companions searched the house after our departure."

"That is it, no doubt," Master Lindstrom said. "And in the hurry of yesterday's ride you failed to notice it."

It was a strange way of recovering one's property—strange that the enemy should have helped one to it. But there are times—and this to me was one—when the strange seems the ordinary and commonplace. I took the sack and slipped my hand through a well-known slit in the lining. Yes, the letter I had left there was there still—the letter to Mistress Clarence. I drew it out. The corners of the little packet were frayed, and the parchment was stained and discoloured, no doubt by the damp which had penetrated to it. But the seal was whole. I placed it, as it was, in Master Lindstrom's hands.

"Give it," I said, "to the Duchess afterwards. It concerns her. You have heard us talk about it. Bid her make what use she pleases of it."

I GAVE THE LETTER TO MASTER LINDSTROM, WITH MESSAGES IN WHICH DYMPHNA AND ANNE WERE NOT FORGOTTEN.

I turned away then and sat down, feeling a little flurried and excited, as one about to start upon a journey might feel; not afraid nor exceedingly depressed, but braced up to make a brave show and hide what sadness I did feel by the knowledge that many eyes were upon me, and that more would be watching me presently. At the far end of the room a number of people had now gathered, and were conversing together. Among them were not only my gaolers of the night, but two or three officers, a priest who had come to offer me his services, and some inquisitive gazers who had obtained admission. Their curiosity, however, did not distress me. On the contrary, I was glad to hear the stir and murmur of life about me to the last.

I will not set down the letter I wrote to the Duchess, though it were easy for me to do so, seeing that her son has it now. It contains some things very proper to be said by a dying man, of which I am not ashamed—God forbid!—but which it would not be meet for me to repeat here. Enough that I told her in a few words who I was, and entreated her in the name of whatever services I had rendered her, to let Petronilla and Sir Anthony know how I had died. And I added something which would, I thought, comfort her and her husband—namely, that I was not afraid, or in any suffering of mind or body.

The writing of this shook my composure a little. But as I laid down the pen and looked up and found that the time was come, I took courage in a marvellous manner. The captain of the guard—I think that out of a compassionate desire not to interrupt me they had allowed me some minutes of grace—came to me, leaving the group at the other end, and told me gravely that I was waited for. I rose at once and gave the letter to Master Lindstrom with some messages in which Dymphna and Anne were not forgotten. And then with a smile—for I felt under all those eyes as if I were going into battle—I said, "Gentlemen, I am ready if you are. It is a fine day to die. You know," I added gaily, "in England we have a proverb, 'The better the day, the better the deed!' So it is well to have a good day to have a good death, Sir Captain."

"A soldier's death, sir, is a good death," he answered gravely, speaking in Spanish and bowing.

Then he pointed to the door.

As I walked towards it, I paused momentarily by the window, and looked out on the crowd below. It filled the sunlit street—save where a little raised platform strewn with rushes protruded itself—with heads from wall to wall, with faces all turned one way—towards me. It was a silent crowd standing in hushed awe and expectation, the consciousness of which for an instant sent a sudden chill to my heart, blanching my cheek, and making my blood run slow for a moment. The next I moved on to the door, and bowing to the spectators as they stood aside, began to descend the narrow staircase.

There were guards going down before me, and behind me were Master Lindstrom and more guards. The Dutchman reached forward in the gloom, and clasped my hand, holding it as we went down in a firm, strong grip.

"Never fear," I said to him cheerily, looking back. "It is all right."

He answered in words which I will not write

here; not wishing, as I have said, to make certain things common.

I suppose the doorway at the bottom was accidentally blocked, for a few steps short of it we came to a standstill; and almost at the same moment I started, despite myself, on hearing a sudden clamour and a roar of many voices outside.

"What is it?" I asked the Dutchman.

"It is the Duke of Cleves arriving, I expect," he whispered. "He comes in by the other gate."

A moment later we moved on and passed out into the light, the soldiers before me stepping on either side to give me place. The sunshine for an instant dazzled me, and I lowered my eyes. As I gradually raised them again I saw before me a short lane formed by two rows of spectators kept back by guards; and at the end of this, two or three rough wooden steps leading to a platform on which were standing a number of people. And above and beyond all only the bright blue sky, the roofs and gables of the nearer houses showing dark against it.

I advanced steadily along the path left for me, and would have ascended the steps. But at the foot of them I came to a standstill, and looked round for guidance. The persons on the scaffold all had their backs turned to me, and did not make way, while the shouting and uproar hindered them from hearing that we had come out. Then it struck me, seeing that the people at the windows were also gazing away, and taking no heed of me, that the Duke was passing the farther end of the street, and a sharp pang of angry pain shot through me. I had come out to die, but that which was all to me was so little to these people that they turned away to see a fellow-mortal ride by!

Presently, as we stood there, in a pit, as it were, getting no view, I felt Master Lindstrom's hand, which still clasped mine, begin to shake; and turning to him, I found that his face had changed to a deep red, and that his eyes were protruding with a kind of convulsive eagerness which instantly infected me.

"What is it?" I stammered. I began to tremble also. The air rang, as it seemed to me, with one word, which a thousand tongues took up and reiterated. But it was a German word, and I did not understand it.

"Wait! wait!" Master Lindstrom exclaimed. "Pray God it be true!"

He seized my other hand and held it as though he would protect me from something. At the same moment Van Tree pushed past me, and, bounding up the steps, thrust his way through the officials on the scaffold, causing more than one fur-robed citizen near the edge to lose his balance and come down as best he could on the shoulders of the guards.

"What is it?" I cried. "What is it?" I cried in impatient wonder.

"Oh! my lad, my lad!" Master Lindstrom answered, his face close to mine, and the tears running down his cheeks. "It is cruel if it be not true! Cruel! They cry a pardon!"

"A pardon?" I echoed.

"Ay, lad, a pardon. But it may not be true," he said, putting his arm about my shoulder. "Do not make too sure of it. It is only the mob cry it out."

My heart made a great bound and seemed to stand still. There was a loud surging in my brain, and a mist rose before my eyes and hid everything. The clamour and shouting of the street passed away, and sounded vague and distant. The next instant, it is true, I was myself again, but my knees were trembling under me, and I stood flaccid and unnerved, leaning on my friend.

"Well?" I said faintly.

"Patience! patience awhile, lad!" he answered.

But thank heaven I had not long to wait. The words were scarcely off his tongue, when another hand sought mine and shook it wildly; and I saw Van Tree before me, his face radiant with joy, while a man whom he had knocked down in his hasty leap from the scaffold was rising beside me with a good-natured smile. As if at a signal, every face now turned towards me. A dozen friendly hands passed me up the steps amid a fresh outburst of cheering. The throng on the scaffold opened somehow, and I found myself in a second, as it seemed, face to face with the president of the court. He smiled on me gravely and kindly—what smiles there seemed to be on all those faces!—and held out a paper.

"In the name of the Duke!" he said, speaking in Spanish in a clear loud voice. "A pardon!"

I muttered something, I know not what; nor did it matter, for it was lost in a burst of cheering. When this was over and silence obtained, the magistrate continued, "You are required, however, to attend the Duke at the court-house. Whither we had better proceed at once."

"I am ready, sir," I muttered.

A road was made for us to descend, and walking in a kind of beautiful dream, I passed slowly up the street by the side of the magistrate, the crowd everywhere willingly standing aside for us. I do not know whether all those thousands of faces really looked joyfully and kindly on me as I passed, or whether the deep thankfulness which choked me and brought the tears continually to my eyes, transfigured them and gave them a generous charm not their own. But this I do know: that the sunshine seemed brighter and the air softer than ever before; that the clouds trailing across the blue expanse were things of beauty such as I had never met before; that to draw breath was a joy, and to move, delight; and that only when the dark valley was left behind did I comprehend its full gloom—by heaven's mercy. So may it be with all!

At the door of the court-house, whither numbers of the people had already run, the press was so great that we came to a standstill, and were much buffeted about, though in all good humour, before, even with the aid of the soldiers, we could be got through the throng. When I at last emerged, I found myself again before the table, and saw—but only dimly, for the light now fell through the stained window directly on my head—a commanding figure standing behind it. Then a strange thing happened. A woman passed swiftly round

the table, and came to me and flung her arms round my neck and kissed me. It was the Duchess, and for a moment she hung upon me, weeping before them all.

"Madam," I said softly, "then it is you who have done this!"

"Ah!" she exclaimed, holding me off from her and looking at me with eyes which glowed through her tears, "and it was you who did that!"

She drew back from me then, and took me by the hand, and turned impetuously to the Duke of Cleves, who stood behind smiling at her in frank amusement. "This," she said, "is the man who gave his life for my husband, and to whom your highness has given it back."

"Let him tell his tale," the Duke answered gravely. "And do you, my cousin, sit here beside me."

She left me and walked round the table, and he came forward and placed her in his own chair amid a great hush of wonder, for she was still meanly clad, and showed in a hundred places the marks and stains of travel. Then he stood by her with his

THE DUKE PLACED HER IN HIS OWN CHAIR, AND STOOD BY HER SIDE.

hand on the back of the seat. He was a tall, burly man, with bold, quick-glancing eyes, a flushed face, and a loud manner: a fierce, blusterous prince, as I have heard. He was plainly dressed in a leather hunting-suit, and wore huge gauntlets and brown boots, with a broad-leaved hat pinned up on one side. Yet he looked a prince.

Somehow I stammered out the tale of the surrender.

"But why? why? why, man?" he asked when I had finished—"why did you let them think it was you who wounded the burgher, if it was not?"

"Your highness," I answered, "I had received nothing but good from her grace, I had eaten her bread and been received into her service. Besides, it was through my persuasion that we came by the road which led to this misfortune instead of by another way. Therefore it seemed to me right that I should suffer, who stood alone and could be spared—and not her husband."

"It was a great deed!" cried the prince loudly. "I would I had such a servant. Are you noble, lad?"

I coloured high, but not in pain or mortification. The old wound might reopen, but amid events such as those of this morning it was a slight matter. "I come of a noble family, may it please your highness," I answered modestly; "but circumstances prevent me claiming kinship with it."

He was about, I think, to question me further, when the Duchess looked up, and said something to him and he something to her. She spoke again and he answered. Then he nodded assent. "You would fain stand on your own feet?" he cried to me. "Is that so?"

"It is, sire," I answered.

"Then so be it!" he replied loudly, looking round on the throng with a frown. "I will ennoble you. You would have died for your lord and friend, and therefore I give you a rood of land in the common graveyard of Santon to hold of me, and I name you Von Santonkirch. And I, William Duke of Cleves, Julich and Guelders, prince of the Empire, declare you noble, and give you for your arms three swords of justice; and the motto you may buy of a clerk! Further, let this decree be enrolled in my Chancery. Are you satisfied?"

As I dropped on my knees, my eyes sparkling, there was a momentary disturbance behind me. It was caused by the abrupt entrance of the Sub-dean. He took in part of the situation at a glance; that is, he saw me kneeling before the Duke. But he could not see the Duchess of Suffolk, the Duke's figure being interposed. As he came forward, the crowd making way for him, he cast an angry glance at me, and scarcely smoothed his brow even to address the prince. "I am glad that your highness has not done what was reported to me," he said hastily, his obeisance brief and perfunctory. "I heard an uproar in the town, and was told that this man was pardoned."

"It is so!" said the Duke, curtly, eyeing the ecclesiastic with no great favour. "He is pardoned."

"Only in part, I presume," the priest rejoined urgently. "Or, if otherwise, I am sure that your highness has not received certain information with which I can furnish you."

"Furnish away, sir," quoth the Duke, yawning.

"I have had letters from my Lord Bishop of Arras respecting him."

"Respecting him!" exclaimed the prince, starting and bending his brows in surprise.

"Respecting those in whose company he travels," the priest answered hastily. "They are represented to me as dangerous persons, pestilent refugees from England, and obnoxious alike to the Emperor, the Prince of Spain, and the Queen of England."

"I wonder you do not add also to the King of France and the Soldan of Turkey!" growled the Duke. "Pish! I am not going to be dictated to by Master Granvelle—no, nor by his master, be he ten times Emperor! Go to! Go to! Master Sub-dean! You forget yourself, and so does your master the Bishop. I will have you know that

these people are not what you think them. Call you my cousin, the widow of the consort of the late Queen of France, an obnoxious person? Fie! Fie! You forget yourself!"

He moved as he stopped speaking, so that the astonished churchman found himself confronted on a sudden by the smiling, defiant Duchess. The Sub-dean started and his face fell, for, seeing her seated in the Duke's presence, he discerned at once that the game was played out. Yet he rallied himself, bethinking him, I fancy, that there were many spectators. He made a last effort. "The Bishop of Arras——" he began,

"Pish!" scoffed the Duke, interrupting him.

"The Bishop of Arras——" the priest repeated firmly.

"I would he were hung with his own tapestry!" retorted the Duke, with a brutal laugh.

"Heaven forbid!" replied the ecclesiastic, his pale face reddening and his eyes darting baleful glances at me. But he took the hint, and henceforth said no more of the Bishop. Instead, he continued smoothly, "Your highness has, of course, considered the danger—the danger, I mean, of provoking neighbours so powerful by shielding this lady and making her cause your own. You will remember, sir,——"

"I will remember Innspruck!" roared the Duke in a rage, "where the Emperor, ay, and your everlasting Bishop too, fled before a handful of Protestants, like sheep before wolves. A fig for your Emperor! I never feared him young, and I fear him less now that he is old and decrepit and, as men say, mad. Let him get to his watches, and you to your prayers. If there were not this table between us, I would pull your ears, Master Churchman!"

. . . . .

"But tell me," I asked Master Bertie as I stood beside his couch an hour later. "How did the Duchess manage it? I gathered from something you or she said a short time back, that you had no influence with the Duke of Cleves."

"Not quite that," he answered. "My wife and the late Duke of Suffolk had much to do with wedding the Prince's sister to King Henry, thirteen—fourteen years back, is it? And so far we might have felt confident of his protection. But the marriage turned out ill, or turned out short, and Queen Anne of Cleves was divorced. And—well we felt a little less confident on that account, particularly as he has the name of a headstrong, passionate man."

"Heaven keep him in it," I said, smiling. "But you have not told me yet what happened."

"The Duchess was still asleep this morning, fairly worn out, as you may suppose, when a great noise awoke her. She got up and went to Dymphna, and learned it was the Duke's trumpets. Then she went to the window, and seeing few people in the street to welcome him, inquired why this was. Dymphna broke down at that, and told her what was happening to you, and that you were to die at that very hour. She went out straightway, without covering her head—you know how impetuous she is—and flung herself on her knees in the mud before the Duke's horse as he entered. He knew her, and the rest you can guess."

Can guess? Ah, what happiness it was! Outside, the sun fell hotly on the steep red roofs with their rows of casements, and on the sleepy square, in which knots of people still lingered, talking of the morning's events. I could see below me the guard which Duke William, shrewdly mistrusting the Subdean, had posted in front of the house, nominally to do the Duchess honour. I could hear in the next room the cheerful voices of my friends. What happiness it was to live! What happiness to be loved! How very, very good and beautiful and glorious a world, seemed the world to me on that old May morning in that quaint German town which we had entered so oddly!

As I turned from the window full of thankfulness, my eyes met those of Mistress Anne, who was sitting on the far side of the sick man's couch, the baby in a cradle beside her. The risks and exposure of the last week had made a deeper mark upon her than upon any of us. She was paler, graver, older, more of a woman and less, much less, of a girl. And she looked very ill. Her eyes in particular seemed to have grown larger, and as they dwelt on me now there was a strange and solemn light in them under which I grew uneasy.

"You have been wonderfully preserved," she said presently, speaking dreamily, and as much to herself as to me.

"I have, indeed," I answered, thinking she referred only to my escape of the morning.

But she did not.

"There was, firstly, the time on the river when you were hurt with the oar," she continued, gazing absently at me, her hands in her lap; "and then the night when you saw Clarence with Dymphna."

"Or, rather, saw him without her," I interposed, smiling. It was strange that she should mention it as a fact, when at the time she had so scolded me for making the statement.

"And then," she continued, disregarding my interruption, "there was the time when you were stabbed in the passage; and again when you had the skirmish by the river; and then to-day you were within a minute of death. You have been wonderfully preserved!"

"I have," I assented thoughtfully. "The more as I suspect that I have to thank Master Clarence for all these little adventures."

"Strange—very strange!" she muttered, removing her eyes from me that she might fix them on the floor.

"What is strange?"

The abrupt questioner was the Duchess, who came bustling in at the moment. "What is strange?" she repeated with a heightened colour and dancing eyes. "Shall I tell you?" She paused and looked brightly at me, holding something concealed behind her. I guessed in a moment from the aspect of her face what it was: the letter which I had given to Master Lindstrom in the morning, and which, with a pardonable forgetfulness, I had failed to reclaim.

I turned very red. "It was not intended for you now," I said shyly. For in the letter I had told her my story.

"Pooh! pooh!" she cried. "It is just as I

thought. A pretty piece of folly! No," she continued as I opened my mouth, "I am not going to keep your secret, sir. You may go down on your knees. It will be of no use. Richard, you remember Sir Anthony Cludde of Coton End in Warwickshire?"

"Oh yes," her husband said, rising on his elbow, while his face lit up, and I stood bashfully, shifting my feet.

"I have danced with him a dozen times, years ago!" she continued, her eyes sparkling with mischief. "Well, sir, this gentleman, Master Francis Carey, otherwise Von Santonkirch, is Francis Cludde, his nephew?"

"Sir Anthony's nephew?"

"Yes, and the son of Ferdinand Cludde, whom you also have heard of, of whom the less——"

She stopped, and turned quickly, interrupted by a half-stifled scream. It was a scream full of sudden horror and amazement and fear; and it came from Mistress Anne. The girl had risen, and was gazing at me with distended eyes and blanched cheeks, and hands stretched out to keep me off—gazing, indeed, as if she saw in me some awful portent or some dreadful threat. She did not speak, but she began, without taking her eyes from me, to retreat towards the door.

"Hoity toity!" cried my lady, stamping her foot in anger. "What has happened to the girl? What——"

What, indeed? The Duchess stopped, still more astonished. For, without uttering a word of explanation or apology, Mistress Anne had reached the door, groped blindly for the latch, found it, and gone out, her eyes with the same haunted look of horror in them, fixed on me to the last.

## STATESMEN OF EUROPE.

### AUSTRIA.

HOUSES OF PARLIAMENT, VIENNA.

PART I.

THAT curious dual empire, the Austro-Hungarian, furnishes the most interesting political study which contemporary Europe has to show. Until 1848 and 1866, Austria was known as an absolute monarchy, the oppressor of nationalities, the suppressor of free institutions, and of nearly every form of liberty among its people, the upholder of harassing restrictions against trade, commerce, and industry—in short, so conservative of everything old and established, and so little given to change, as to merit the designation of the "China of Europe." After the loss of the Lombard-Venetian kingdom, and of the hegemony in Germany consequent on the battle of Sadowa, the Emperor saw himself obliged to grant his country a constitutional form of government, and the separation of the kingdom of Hungary from the empire of Austria.

After 1867, the old Austrian monarchy gave place to the Austro-Hungarian Empire, supposed to consist of two States, each having its own constitutional laws, but united under one ruler

and for certain common purposes. Thus they act together in all matters affecting their interest with foreign countries, in what concerns the Army and Navy, commercial treaties with foreign countries, coinage, and so forth. It was as complete a change in the internal government of a country as it is possible to imagine; instead of the former despotic and bureaucratic or so-called paternal government, Austria was able to enjoy a free constitutional and conservative rule. And from the time that this constitution was granted until 1878, the country made great progress.

The German party, who represented the intellect of the kingdom, and held the power in their hands, made a sturdy effort to modernise the land, and actually succeeded in changing the outward appearance of a good many things. But their task was gigantic and fraught with difficulties.

It is often contended that there is no such thing as an Austrian, that Austria is a political idea, and indeed the polyglot monarchy of the Hapsburgs is no homogeneous one. It consists of a number of different peoples, a number of smaller and larger nations collected under one name and one sceptre. Austria is a link between the East and the West; its ethics are Oriental, its customs and government European, that is, European somewhat after the fashion of a hundred years ago. Such a country is obviously not easy to govern; dissensions among themselves and with the diverging nationalities that make up the Austro-Hungarian Empire robbed the German party of their strength for completing their task; and a thorough reaction intervened from the moment Count Taaffe came into office, and clubbed Clericalism and Nationalism together for resistance to German ideas. Consequently Austria to-day may be said to be the only European civilised country (for we do not rank Russia among civilised countries) which is calmly backing up-stream, while all the other nations are pulling down. What the result may be is the secret of the future; the fact remains that under the combined influence of triumphant clericalism and retrograde nationalism all the sprouting liberties planted twenty-six years ago have been quietly plucked up by the root.

The Reichsrath, or imperial Council of Parliament of Austria, consists of a House of Lords and a House of Deputies. The House of Deputies is composed of 353 members, elected to represent different classes of the inhabitants of the several provinces. Of these 85 are chosen by the large landed proprietors, 21 by the chambers of trade and manufactures, 116 by electors in the cities, towns, and places of industry directly, and 131 by electors in country districts, not directly, but through representatives chosen for that purpose every six years. Each province or electoral district has its provincial diet which deals with such matters affecting it as do not come before the Reichsrath. Each diet is composed of the Archbishops and Bishops of the Roman Catholic and Greek Catholic Churches, the rectors of the Universities, representatives chosen by the great landed proprietors, representatives of the chambers of trade and manufacture, and representatives of the rural districts. The Government therefore cannot be called a popular one. Whether in consequence of this mode of electing their representatives, or for other causes that may have their root in the idiosyncrasies of the people who compose the Austrian Empire, it is certain that that country shows none of those incessant mutations of government of which France for the last ten years has been the theatre. It has been said, and repeated, that the Austrian Government is not a parliamentary one, and this to a certain extent is true. Between the various constituents of the Austrian Monarchy there must be a certain amount of give and take. To Austria may be applied the old saying that the Parliament reigns, but does not govern.

Although the youngest in Europe, the Austrian Parliament presents a dignified air. The English House of Commons may sometimes envy its sober deportment, the German Reichsrath its elegance of speech, and the French Chamber its cool deliberation. Discussions are carried on in German, which is the official language, but it is by no means unusual to hear Czech, Ruthenian, and Slav discourses. Scandals are not frequent, and Austrian political men are rarely occupied in fighting duels. It was inevitable that the strife of parties should become more accentuated when Taaffe came to power. Until then the German party had ruled supreme, now the actual majority is held by the Clericals, the Feudalists, the Poles, the Czechs, the Slovacks, who perhaps more correctly represent the constituent elements of that great conglomeration, a veritable mosaic of peoples, which is named Austria. The German party had hoped to Germanise the Empire; the task proved impossible. The non-German peoples of the monarchy are of too vigorous and imperious a race, exuberant in vitality, civilised but yesterday, of quick intelligence, keen national aspirations, and scant political experience.

The different parties or nationalities represented in the Chamber correspond to a certain set of extra-parliamentary clubs. Thus there is a German Liberal club, the Liechtenstein or Clerical club, the club of the Poles, the club of the Czechs, the Hohenwart or Feudal club. In each of these clubs the parties discuss the various projects which the Government lays before the Chambers, and it is here that they resolve upon the conduct they mean to maintain in Parliament. And the peculiarity of these clubs is that they always vote solid. A club, though it may consist both of Liberals and Conservatives, can be relied on to vote either as a body or not at all. It is in this way that the various parties have preserved their influence; this it is, too, that causes Austrian politicians to be divided into an infinity of groups, so that party government, as it is understood in England, is there an impossibility. Austria, in the nature of things, can never be free from perils; clear as the sky may appear, a storm is sure to be blowing up from one quarter or another. Much reciprocal forbearance is the only security for averting difficulties and for maintaining the necessary strength against foreign attacks. Consequently all

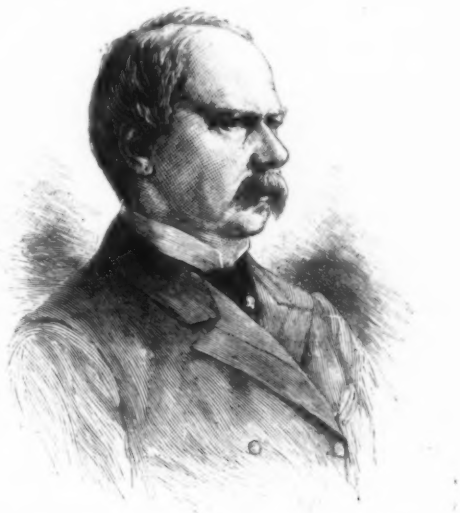
these parties may wrangle as they will, nevertheless they are not insensible to their essential need of one another. The great problem which Austria will have to solve in the future is, whether its various peoples can free their minds from narrow racial conceptions, and be able to survey the interests of the empire from an imperial standpoint. At present that moment seems further off than ever.

It was in 1879 that the Emperor invited Count Taaffe, then Governor of the Tyrol, to take the portfolio of Minister of the Interior. It must be understood that Count Taaffe is not a Premier like those who in other countries are chosen as representatives of a Parliamentary majority. The Austrian Premier is directly called to act by the Emperor, and when Francis Joseph placed him at the head of his Government eleven years ago, it was with the express wish and understanding that

COUNT TAAFE.
(*From a photograph by Adèle.*)

he should bring about an improved state of feeling between the conflicting nationalities, and put a stop to the contests which caused an incessant warfare in Bohemia. The Emperor, who cannot bear to see any portion of his subjects suppressed, desired that a satisfactory arrangement for all parties should be made. The reasons for choosing Count Taaffe were various. For one thing he was an old comrade of the Emperor's, they had known each other as children, and to this day the Prime Minister addresses his sovereign with the familiar "Thou." Further, as Governor of the Tyrol, that arch-Catholic and fanatical country, Count Taaffe had evinced remarkable tact and conciliatory genius. And he had done this in so good-humoured a manner that his enemies were usually converted into friends.

When the law was passed that children of all creeds should be allowed to attend the primary school, it was held by the ignorant Tyrolese that the abomination of desolation was at hand, and various local mayors refused to carry the law into execution. Count Taaffe invited them all to come and see him at the castle of Innsbruck. He gave them a copious breakfast, spoke genially to every one of them, calling each man by his Christian name and patting him familiarly on the shoulder. At last stopping in front of one of the most obstinate and headstrong of the clerical party, he said to him good-humouredly, "Tell me, father, is it true what I have heard, that you are no longer the master in your Commune?" The mountaineer closed his two fists in anger. "Who said that, Excellency?" he replied; "I will strangle him with my own hands." "You will strangle him? Very good, but then what ought I to do to you who want to hinder the Emperor from being master of his own country?" He then explained to the mayors that the Emperor having sanctioned the educational laws, it was a crime of *lèse-majesté* to oppose them. The Tyrolese, ardent patriots as they are, and devoted to their ruling house, went away touched at the thought that they of all people should have seemed to be unfaithful to the family of Hapsburg. They all promised to conform to the orders of his Majesty, and from that day forth there was no further trouble.



Count Edward Taaffe was born on February 24, 1833, at Prague, a descendant of an old Irish family. In 1852 he entered the service of the State and made a rapid career, which was no doubt largely due to the Emperor's personal friendship. When he took up the reins of power everything seemed going well for Austria. The last vestige of the "Krach" of 1873 had vanished, Europe was at peace, and Austrian finances had been improved by the creation of the "Laenderbank." The chief difficulties were the international ones, the want of harmony between the different nationalities; it was especially the Czechs who were causing trouble, and they for sixteen years had kept away from the Reichsrath. Count Taaffe's wish was to stand above all parties—that is to say, to govern in constitutional form without following the constitutional principle. He thought this might be an expedient method of dealing with the current confusions; and his conciliatory policy was at first crowned with apparent success. He fulfilled every wish and demand of the Slav nationalities, the conservative aristocracy, and the clerical party; but he did so at the expense of the State, the constitution, and liberal progress. He satisfied the desires of these three factions and thus kept them quiet for the time being; but this line of policy in the course of time increased the conflict between the Germans, whose rights were infringed, and the Bohemian Czechs. The Count had said in his opening speech that his aim was to bring about an Austrian majority, not a national majority, and he begged the Parliament to remember that Austria consisted of most diverse nationalities, the rights of each of which must be respected. His idea was that by granting to each nationality a measure of autonomy, and giving to the States the satisfactions they asked for, he might create a strong and united Austria, bound together voluntarily in common solidarity, whose every instinct of national and mutual independence would make the several parts feel more strongly the need of the dynastic chain which links them together.

These hopes of seeing an Austrian, as opposed to a nationalist, majority soon proved futile. The

Germans, repelled and disgusted, retired like Achilles sulkily into their tents, and refused to work in the Parliament; and Count Taaffe found himself obliged to work with that heterogeneous amalgam of Slavs and Ultramontanes which forms the not very dignified bodyguard surrounding him. Hence it has proved impossible to find a satisfactory solution for some of the most pressing questions. The Ministry sows its seeds in the unfruitful ground of general indifference. It has to admit that it belongs to no party, and yet to demand sacrifices from all. In this wise the dreams of Count Taaffe of standing above all parties vanished, and together with these dreams the conciliation programme was shipwrecked. Its execution and realisation were actively hindered by all those various nations and statelets who held that up to the present their historical rights had been oppressed. They each, seeing that the Minister desired to be fair to them as well as to their brethren, showed themselves very eager and very anxious to realise for themselves immediately every advantage that could be derived from a ruler so well disposed to them.

In order to keep his inorganic majority in a good temper, Count Taaffe had to accord to its larger and smaller members certain concessions in the matters of language and education, which brought about in time more serious consequences than had been anticipated. Thus under his government the German language has been in danger of losing its characteristic as the State tongue; and the late Imperial Minister of War, Count Bylandt Rheydt, was himself obliged, in the interest of the army, to defend it against Taaffe. He issued a proclamation to the effect that the voluntaries might not become officers unless they were able to use the German language, and that the theoretical examination of the officers of the Reserve must be conducted in German, which he pronounced to be the official language of the army. How much the educational *niveau* of the Slav youth had suffered under the present system of government is shown by the circumstance that a very considerable percentage of these were not able to pass their examination in German, and in consequence, and as a punishment, had to serve for two years instead of one. Nor can the Minister of War be blamed for his action; after all, the army must have a common language, and German has always been the official speech of Austria.

Count Taaffe is now reaping what he has sown; he has nourished a number of young Czechs, young Slavs, and clerical Hotspurs in his breast, and these are now turning upon him and rending him, placing him in the greatest embarrassments by demanding concessions for their various parties, which are in absolute contradiction to all Austrian traditions and endanger the very unity of the monarchy. Thus the Czechs demand that Bohemia should have autonomy such as Hungary enjoys, and that Moravia and Austrian Silesia should be incorporated within its borders, and they claim to see the Emperor crowned King of Bohemia on the Hradschin. They demand further that the Czech tongue shall be used as the legal language in all Government offices and Courts of Justice—in short, they wish to found a perfect Czech State in the Empire. This, their opponents allege, would be to give back the education of youth into those hands which led Austria to Solferino and Sadowa. Count Taaffe's position became somewhat critical in January 1890, but he once more succeeded by the intervention of the Bohemian conservative aristocracy in bringing about in outward form a reconciliation, and he has since held the post of Premier more firmly than ever. His troubles, however, are by no means ended, nor is the reconciliation aught but hollow. For these Czechs are divided into two parties, the Old and the New, the one being conservative, the other radical. The old Czechs showed themselves willing to come to a compromise with the Germans, because they desired a political union of all the moderate parties of the Empire against the extreme factions. The young Czechs opposed the

COUNT KALNOKY, THE MINISTER OF FOREIGN AFFAIRS.
(*From a photograph by Braatz.*)

compromise, because politically there was nothing in common between them and the great Bohemian landowners and clergy who formed the bulk of the old Czech party. The motto of the latter is, "Bohemia for the Bohemians;" of the former, "Bohemia for the Czech democracy." In the matter of nationalism they stand on the same footing.

The hot, impetuous leader of the young Czech party, Edward Gregr, never ceases to protest against what he stigmatises as the incessant insults and humiliations to which the Czech nation is subjected by the Germans, and he keeps alive in the country an agitation which the old Czech party who vote in favour of peace are unable to quell. Thus the apostle of Reconciliation sees himself surrounded with nothing but discontented people, who after a conciliatory policy of eleven years still await reconciliation. He is further off from his goal to-day than when he came into office.

The result of the late elections has been that the young Czechs have been returned in greater numbers than ever, while the old Czech party

must be considered as almost annihilated. A gale of national Chauvinism is blowing over Bohemia at this moment, which raises apprehensions as to the future of Count Taaffe's government. The task which he has in hand appears to be that of reconciling irreconcilable elements. Certainly the victories of the young Czechs are but another proof that the doctrines of the German Liberals are further off than ever from making any progress in the land.

For social questions, those burning questions of the day in all other States, Count Taaffe has no interest or comprehension. They may be said also to be in a backward state in Austria, torn as it is by all these national dissensions, and hampered by antiquated Ultramontane theories. Nevertheless it is a remarkable and significant fact that in no European country have the doctrines of the Socialists made such rapid progress as in Austria.

Count Taaffe is never absent from the Chamber. His hale face and bright eyes present a cheerful aspect. He speaks rarely, and more often in the lobbies and at committee meetings than in the Chamber itself, but when he does get upon his feet he talks with the racy humour which he has inherited from his Irish ancestors. In the Ring Strasse and the Prater he is a familiar figure, with his grey overcoat and grey felt hat, which he wears very much on the back of his head. His coachman is as well-known as his master; he has much the same figure, and wears his old clothes, even pushing his hat back in the same manner as the Count, so much so that a witty Viennese once said: "This Taaffe, one never knows when one meets him whether he or his coachman is driving. The German party would never be able to upset him; if they were to throw him out of his carriage he would get up on to the box."

Near Count Taaffe in the Chamber sat until quite recently a tall, blonde man, with refined and delicate features. This was Herr von Dunajewski, Minister of Finance. Julian von Dunajewski was born at Neu-sandec, and for many years was Professor of Political Economy at the Jagellonscki University of Cracow, where he lectured in Polish. He was chosen into the Cabinet of Count Taaffe as a concession to the Polish faction, of which he had for many years been the leader in the Galician Diet. He was the chief orator of the Ministry and an ardent supporter of the Federalistic idea, representing the views of the Extreme Right. A man of warfare, he does not seek to win over the Opposition, but endeavours to destroy it. Beyond question he is largely responsible for the misunderstanding that has arisen between the Opposition and the Government, offending them by rash speeches and disrespect. His venomous words have greatly increased the difficulties of an understanding between the parties. He encourages the Feudalists and the Czechs in their resistance by continually repeating that by means of patience everything can be attained. He even went so far, in 1881, as to permit the acceptance of Czech bank notes at the State Bank, in order to please the Bohemians, but he was obliged to withdraw this measure. It is he who made the famous statement that the Government had shown that they could govern without the Germans, and could satisfy the demands of the

HERR VON DUNAJEWSKI.

State without them; and he has remained true to his utterances, for he did not take part in the recent conciliatory conference. He speaks with remarkable facility, and possesses in a high degree the art of grouping figures so as to render the most arid subjects interesting in discussion. But his figures are not always trustworthy, and the wish is frequently father to the thought, so that he is apt to discount probabilities. Thus for example, when he presented the budget of 1889 he entered the Chamber radiant, bidding the deputies congratulate each other, for he was able to present them with a surplus of 900,000 gulden. To his amazement this announcement called forth no applause, but rather mute dismay. What! only 900,000 gulden after the taxes had been raised 50 millions, after the people had made most heroic sacrifices without parallel in the history of Austrian finances. And a closer examination of the figures proved that even this slender surplus was rather the result of accident than of good management on the part of the Finance Minister. In that very year the returns from the Income Tax had been lower than usual; Galicia, Silesia, Moravia, and Bohemia had been visited with flood and disasters of various kinds; money was required to help them in their misfortunes, and yet at that very moment the Minister of Finances asked the deputies to congratulate themselves on the state of the Austrian budget.

# A PUBLISHER AND HIS FRIENDS.[1]

JOHN MURRAY THE SECOND.

THE life-story of a man who, from moderate position as a bookseller, rose to be the "Anak of publishers," as Byron called him, and "the Mæcenas of the age," could not fail to be deeply interesting. In every period of English literature there have been booksellers and publishers of distinguished eminence, worthy of remembrance for their own merits, as well as from their relations with great authors. Such was Jacob Tonson in the age of Addison, and Edward Dilly in that of Johnson. The names of many others at once will be recalled which not only appear on title-pages but figure in many pages of famous volumes. Yet, even if there were a series of such biographies, the "Lives of the Publishers" (like the "Lives of the Engineers" or the "Lives of the Chancellors"), that of John Murray would be unique in its way. It deals not only with a man of remarkable personal character, but with a condition of the Republic of Letters that was then new, and can never be repeated. The sudden and rapid increase of education and the multiplication of readers opened new fields of ambition to authors and publishers. Only a generation previously, Edmund Burke estimated the number of readers in Great Britain at eighty thousand, or about one per cent. of its inhabitants. Already, in the second decade of the nineteenth century, the number of readers could be reckoned by hundreds of thousands instead of thousands, and in the diffusion of knowledge through the press the name of John Murray deserves to rank with those of Charles Knight and Henry Brougham.

Important as was the influence of Mr. Murray in this way, and gratifying as is the record of the progress of the House during his reign, the popularity of Mr. Smiles's book is mainly owing to the notices and the correspondence of the publisher's friends. Some of these friendships were inherited from his father, such as with Sharon Turner and Isaac D'Israeli. But the greater number were of his own making. The relations with distinguished persons, which commenced with business transactions, almost always led to mutual esteem and warm friendship. As Mr. Smiles says:

> "He was the intimate friend and correspondent of Sir Walter Scott, Lord Byron, Canning, Southey, the Disraelis, Campbell, Crabbe, Hallam, Croker, Milman, Washington Irving, Madame de Staël; as well as with the early editors of the 'Quarterly,' Gifford, Coleridge, and Lockhart; and many original letters from these authors are given in these pages. It was observed by Southey that a man's character may be judged of even more surely by the letters which his friends addressed to him, than by those which he himself penned. Guided by this standard, the readers of these volumes will have little difficulty in forming an opinion as to the estimation in which Mr. Murray was held by his friends and contemporaries."

Many others might have been added, one of the last and almost the only now surviving author being Mr. Gladstone, whose first works, "Church and State" (1838) and "Church Principles" (1840), were published by Mr. Murray.

As the originator and the proprietor of the "Quarterly Review," Mr. Murray secured an advantageous position early in his career. He had for some years been the London agent for the "Edinburgh Review," but when the dissatisfaction with the critical flippancy as well as the political principles of the Whig organ increased, Mr. Murray saw the opportunity for establishing a rival in the Tory interest. The secession of Sir Walter Scott from the "Edinburgh," after its attack on "Marmion," led Mr. Murray to seek his support, which was heartily given, for he had helped the Scottish publication mainly from patriotic sympathy. This, with other circumstances connected with the establishment of the "Quarterly," Mr. Smiles duly records, but with little addition to what has already often been told.

Of John Murray the First, the founder of the House, an account is given in the opening chapter. To many this will appear one of the most interesting chapters in the whole book, inasmuch as it deals with subjects and with times with which we are less familiar. He was born at Edinburgh in 1745. His uncle, Colonel Murray, a Murray of Athol, was "out in 1715," and fought at Sheriffmuir. After the suppression of the rebellion he retired to France, where he served under the exiled Duke of Ormonde, attached to the Stuart Court. His brother Robert, remaining in Scotland, adopted the law as his profession, and, to disguise his Jacobite connection, prefixed a Mac to his name. He had two sons, one of whom entered the Church, and the other served in the Royal Marines, his commission as lieutenant bearing date 1762. This was just before the close of the Seven Years' War, when Pitt, with Anson at the Admiralty, raised England to the first place among the European Powers. When the Treaty of Paris was signed, in 1763, the English navy had little to do; the ships were laid up in ordinary, the seamen discharged, and the marines quartered in their barracks. For six years Lieutenant Macmurray remained at Chatham on full pay, but in enforced idleness, and with no prospect of promotion or of active service. Having fallen in love and become engaged to the daughter of a Captain Wemyss, he resolved to retire on half-pay at the age of twenty-three, and to start as a bookseller in London.

[1] "A Publisher and his Friends. Memoir and Correspondence of the late John Murray, with an Account of the Origin and Progress of the House," 1768–1843. By Samuel Smiles, LL.D. 2 vols., with portraits. John Murray, Albemarle Street.

What led to the choice of this calling is not stated; but it was probably due to his intimacy with William Falconer, the sailor-poet, a former schoolmate at Edinburgh, and then resident at Chatham. Falconer had been in the merchant service, but through the patronage of the Duke of York, to whom he dedicated his poem "The Shipwreck," he got a commission in the Royal Navy. His ship being laid up at Chatham, and for him also no prospect of active service appearing, he occupied his time in compiling the "Marine Dictionary," a book which is still in request for its excellent glossary of nautical terms. While thus employed he was offered the post of purser to the Aurora frigate, which was lost at sea during the voyage. The ship was still at Dover, waiting for a fair wind to go down the Channel, when Falconer received a letter from Macmurray, announcing his purpose of purchasing the business of a bookseller, and inviting him to join in the venture. "Many blockheads in the trade," he said, "are making fortunes; and did we not succeed as well as they, I think it must be imputed to ourselves."

It was too late for Falconer to consider the proposal, and Macmurray went into the business alone, "after deliberate reflection," as he says, and under good advice. His father sent from Edinburgh the necessary purchase money, and in 1768 he began the bookselling business. Dropping the "Mac," and resuming the ancestral name, he put a ship at the head of his invoices, and issued the following announcement—

"John Murray (successor to Mr. Sandby), bookseller and stationer, at No. 32, over against St. Dunstan's Church, in Fleet Street, London, sells all new books and publications, fits up public or private libraries in the neatest manner with books of the choicest editions, the best print, and the richest bindings. Also executes East India or foreign commissions by an assortment of books and stationery suited to the market or purpose for which it is destined; all at the most reasonable rates."

From not a few of his early friends and his brother officers he received the warmest support, and consignments of books and periodicals were sent to some of them in all parts of the world, the choice of what was sent being often left to his discretion. Of his early ventures in publishing, the memoir gives details, but there is not much in this way worthy of record. More interesting in its bearing on the future of the House is the account of his efforts to form relations with the trade in Ireland and Scotland. Ireland was then a country with laws and usages of its own, and pirating English books was usual; but it was not a place for much extension of business. With Scotland Murray had more satisfactory relations. In 1770 he made the acquaintance of Professor Millar, of Glasgow, to whom he was introduced by Dr. Moore, the author of "Zeluco," and of other works, literary as well as medical. He was father of the famous Sir John Moore, of the Peninsular War and Corunna. Through Professor Millar, who had among his pupils Lord Jeffrey, Lord Adair, and the Earl of Lauderdale, Murray got good introductions in Edinburgh, leading to business transactions with publishers, among whom were Creech, and Elliot, the latter of whom became one of the principal correspondents of the Fleet Street House. Large parcels of medical and other books were sent for sale in London; and it is a curious illustration of the times, that they were sent in armed ships, the fleet escorted by men-of-war, for protection against hostile cruisers or privateers. Elliot's shop was in Parliament Close, and Creech's in the Luckenbooth, both near the Parliament House, then the centre of all literary as well as legal activity. The families of Elliot and Murray were afterward more intimately connected, the son of one marrying the daughter of the other. But as yet the Edinburgh relationship was only in business.

His first wife, *née* Wemyss, having died childless, John Murray the First had married again, and the only surviving son of the second marriage, John Murray the Second, was born in 1778. The business was continued in Fleet Street with varying but not brilliant success, till his death in 1793. The chief events of his career are given in Mr. Smiles's book. One of the most touching incidents is his having seen the funeral of Dr. Johnson, on December 20, 1784. "His remains passed my door for interment this afternoon. They were accompanied by thirteen mourning coaches with four horses each; and after these, a cavalcade of the carriages of his friends. He was about to be buried in Westminster Abbey."

John Murray the First began his publishing career when only twenty-three. He was twenty-five years in business, and died at the comparatively early age of forty-eight. With all his industry and energy, he did not, we are informed, double his capital. His last enterprise was most unfortunate, publishing Lavater's work on Physiognomy. The engraving of the numerous plates was a costly affair, and nearly £4,000 had to be paid out of the estate by the executors.

By the will of the elder Murray, the business was to be carried on during the minority of his son by Samuel Highley, his "faithful shopman," for the benefit of the widow and family. John Murray the son was only fifteen at his father's death. He remained at school two years longer, and in the autumn of 1795 returned to No. 32 Fleet Street to take part in the business, his mother having then made a second marriage, and gone to live at Bridgenorth with her husband and her two daughters, receiving from time to time the money necessary for their education. A partnership was concluded between Murray and Highley, although Murray was still a minor. Some of the Indian friends of the first Murray—among them Warren Hastings and Joseph Hume—were regular customers of the new firm. The son came of age on November 27, 1799. He was prudent enough to maintain his connection with Highley for a few years longer, though with ever-increasing dissatisfaction. His father's "faithful shopman" had no enterprise, as the younger partner thought, and was content to sell the books of other publishers. Chafing under the restraint put on his own more active spirit, he proposed, in November 1802, to have the partnership dissolved. The terms were soon arranged, and on lots being drawn for the house, Murray had the

good fortune to remain at No. 32 Fleet Street, while Mr. Highley removed to No. 24, taking with him, by agreement, the principal part of the medical works of the firm.

As soon as he was his own master he resolved to launch into publication. Having, shortly before the dissolution of partnership, seen the first representation of Mr. Colman's comedy of "John Bull," and being fascinated by its "union of wit, sentiment, and humour," the young publisher offered Colman £300 for the copyright. Mr. Colman was pleased with the young man's proposal, and with the tone of the letter in which it was made, but in a pleasant reply explained that it was the custom to offer the copyright of a successful play to the manager of the theatre where it was produced.

Though disappointed in this first venture, the affair is worth mentioning as showing the ambition of the young publisher. He did not, however, neglect the ordinary routine of the bookselling business. One of the letters of this period is to Mr. Joseph Hume, who was not very prompt in settling his accounts; and in sending a new consignment, of the value of nearly £100, the young bookseller begged that an arrangement should be made for "payment by some house in London within six months after the goods are shipped." He added that he had no apprehension of not being paid, but his circumstances did not permit him to give a large amount of credit.

In 1803, when Napoleon's threatened invasion of England aroused the national spirit, volunteers were enrolled to the number of 300,000, and in London the force was 12,500 strong, when the metropolis contained less than half the number of its present population. John Murray was in the famous review by King George III that summer in Hyde Park, as an ensign in the 3rd Royal London Volunteers. He gave much time to drill and his "military duties," as he called them in a letter to his business correspondents in Edinburgh, excusing himself for being unable to accomplish an intended visit to Scotland.

This patriotic activity did not interfere with his attention to his business, for in the year 1803 he published an important medical work, the "Pharmacopœia of Dr. Graves," and lighter books such as the "Revolutionary Plutarch," being memoirs of Bonaparte and of the French leaders. In the following year the "Memoirs of Talleyrand" and "The Female Plutarch" were published by him in conjunction with Messrs. Longman & Co. But these publications were soon withdrawn, strong representations being made as to their immoral tendency. He soon after published the journals of the celebrated African traveller, Mungo Park, the first venture in books of travel, a department for which the House of Murray, both under the second and third of the dynasty, has been specially celebrated.

It was in 1812 that Mr. Murray, who had already meditated migration to the West End, and had almost fixed to settle in Pall Mall, heard of the intention of William Miller, of 50 Albemarle Street, to retire from business. Miller, who had first been in Bond Street, removed to Albemarle Street in 1804. An arrangement was soon effected by which Murray purchased the lease, together with copyrights and stock. The removal proved of much advantage, both as to business and influence. The Albemarle Street drawing-room became a favourite centre of literary as well as social reunion. Until the establishment of the Athenæum Club, this was the place where men distinguished in science and art, as well as literature, most did congregate. In fact it was by Croker, Davy, Chantrey, and other regular frequenters of Murray's house that the Athenæum was started some years later. For the contributors and supporters of the "Quarterly," as well as Gifford the editor, this was a much more convenient locality than the old shop in Fleet Street. In the dining-room of Albemarle Street the host displayed most generous hospitality, and here distinguished strangers from the Continent and America were entertained, as well as the intimate friends of the publisher. In a letter to a relative Murray himself says:

> "My house is excellent; and I transact all the departments of my business in an elegant library, which my drawing-room becomes during the morning; and then I am in the habit of seeing persons of the highest rank in literature and talent, such as Canning, Frere, Mackintosh, Southey, Campbell, Walter Scott, Madame de Staël, Gifford, Croker, Barrow, Lord Byron, and others; thus leading the most delightful life, with means of prosecuting my business with the highest honour and emolument."

This was written as early as in the winter of 1813. Every year added new celebrities to the roll of guests and visitors. In due time the dining-room was adorned with portraits of the notables who met at his table, including, besides those already mentioned, Coleridge, Washington Irving, Crabbe, Mrs. Somerville, Hallam, Moore, and Lockhart, forming a most interesting gallery of celebrities. From these, and others famous in the annals of that period, among them distinguished voyagers and explorers, letters are published in the present volumes. The publications embraced a succession of travellers of wonderful variety, from Parry and Basil Hall to Belzoni and George Borrow. Nor were military works less conspicuous, the most notable being Napier's "Peninsular War," and the "Wellington Despatches" edited by Colonel Gurwood. Every chapter of the book presents so great a number and variety of topics, and references to eminent people, that the reader is brought in touch with the life of the early half of the nineteenth century, much in the same way that he is carried by Boswell's Johnson into the latter half of the eighteenth century.

In the "Family Library," the first volume of which appeared in 1829, a new departure was made in literary production. Mr. Murray had long contemplated the serial publication of copyright works in a form and at a price which would render them accessible to a wider circle of readers than they had hitherto been. The great and rapid increase of education, at the time of Lord Brougham's famous saying, "The schoolmaster is abroad," determined the carrying out of this scheme. It was the beginning of an epoch in the publishing world, the "Family Library" being the parent of the innumerable "libraries," and series of "books for the million," which increase and mul-

tiply in our own day. It is true that the series known as "Constable's Miscellany" had already commenced, but he took the idea from Murray, who had in 1825 actually set in type a pocket edition of Parry's Arctic Voyages, a copy of which was shown to Constable by Captain Basil Hall. In the "Miscellany," Basil Hall's own voyages were published, and then Constable had the coolness to ask Murray to allow him the right of printing a cheap edition of "Southey's Life of Nelson." This was too much to grant even to his old friend and correspondent, and it hastened the starting of the "Family Library," a plan of issuing a "National Library" suggested by Mr. Charles Knight having been first considered.

Charles Knight was soon afterwards busily engaged with other schemes. The Society for the Diffusion of Useful Knowledge, with Henry Brougham as president, was established in 1828. The publishing of the "Library of Entertaining Knowledge" was offered to Murray, but he declined the undertaking, and he reverted to his own plan of issuing cheap copyright works. The first volume of the "Family Library" appeared in April 1829. A copy was sent to Charles Knight, who sent in return the first volume of the "Library of Entertaining Knowledge," with a letter in which he said :

"We each launch our vessels on the same day, and I most earnestly hope that both will succeed, for good must come of that success. We have plenty of sea-room, and need never run foul of each other. My belief is that, in a very few years, scarcely any other description of books will be published."

While "library editions" of books are in demand, the notion of having scarcely any other than cheap volumes is for this country chimerical, but the proportion of such publications has become so large that it seemed right to dwell on the fact of John Murray being one of the chief originators of cheap and popular literature.

One of Mr. Murray's few unsuccessful enterprises was the attempt to establish a new daily morning newspaper. The "Representative," as it was called, in its projection and planning occupied much time, and caused immense anxiety and trouble, and in the brief period of its existence involved Mr. Murray in a loss of not less than £26,000. It ceased on July 29, 1826, after a career of only six months. In a letter to Mr. Sharon Turner, the historian, and the solicitor both of Murray and the elder D'Israeli, reference is made to the loss he had sustained by yielding to Benjamin's "unrelenting excitement and importunity." This letter is given in the memoir, with other documents relating to the year 1826. Returning to the previous year, a memorandum, dated August 3, 1825, is now published, containing the agreement to establish a morning paper, the property in which was to be in the following proportions—Mr. Murray one half, Mr. Powles one quarter, Mr. Disraeli one quarter ; each party contributing to the expense, capital, and risk in these proportions ; the paper to be published by, and to be under the management of Mr. Murray.

Mr. Disraeli undertook to find an editor, and went to Scotland for this purpose.

We can imagine the surprise, if not amusement, of both Scott and Lockhart, when, instead of Isaac D'Israeli whom they expected, there appeared a young man such as pictures of the period and descriptions by Lady Morgan and other contemporaries have made familiar to us.

Disraeli left under sanguine belief that his mission had been successful. On returning to London, he helped to make the arrangements for starting the paper. But not long afterwards a letter came from Sir Walter Scott, saying that he could not conceive it possible that his son-in-law should "leave Scotland on the speculation of becoming editor of a newspaper." Lockhart himself wrote, "Every hour that has elapsed since the idea was first started has only served to deepen the feeling with which I at the first moment regarded it." In short the offered post was declined, and the eager negotiator had deceived both himself and his patron. Worse was to follow. After a short season of bustling activity, Mr. Disraeli disappeared from the scene. There has always been a gap in the record of this period of his career. The truth is now for the first time given by Mr. Smiles from the Murray papers :

"The emancipation of the Spanish Colonies in South America gave rise to much speculation in the money market, and shares, stocks, and loans were issued to an unlimited extent. Mr. Benjamin Disraeli seems to have thrown himself into the vortex, for he became connected with at least one financing firm in the City, that of Messrs. Powles, and employed his abilities in writing several pamphlets on the subject. This led to his inducing Powles to embark with him in the scheme of a daily paper."

But when the time came, neither Mr. Disraeli nor "his friend in the City" came forward, and Mr. Murray was left to bear the burden of care and cost alone. He was too far committed with the public, as well as with helpers, to suppress the scheme. His health broke down under the strain. The usual publishing business was neglected, letters remained unanswered, and manuscripts unread. Even the "Quarterly" might be endangered. It was a mighty relief when the ill-starred paper stopped. It was doomed to failure from the beginning. Mr. S. C. Hall, who had been engaged as one of the reporters, says in his "Retrospect of a Long Life" :—"The day before the issue of the first number Mr. Murray might have obtained a very large sum for a share of the copyright, of which he was the sole proprietor. The day after the issue the copyright was worth comparatively nothing. . . Editor there was literally none from the beginning to the end. The first number supplied conclusive evidence of the utter absence of editorial tact."

The very name of the paper was a blunder. There have been many abortive attempts since that time to start new daily papers, and there may be other efforts in the same direction, so that the frank revelations about the "Representative" may be of practical use.

At no period in John Murray's life did the nobility of his character shine with greater lustre than when this temporary eclipse of judgment passed away. His pecuniary loss he bore with much equanimity. Health of body and peace of mind were soon restored to him. In a letter to Washington Irving,

excusing himself for delay in replying to a communication, he said:

"The cause of my not writing to you during one whole year was my entanglement with a newspaper, which absorbed my money, and distracted and depressed my mind; but I have cut the knot of evil, which I could not untie, and am now, by the blessing of God, again returned to reason and the shop."

And to his friend Sharon Turner he wrote:

"I am disposed to consider this apparent misfortune as one of that chastening class which, if borne wisely, may be productive of great good; and I feel confidently that, as it has rekindled my ancient ardour in business, a very few months will enable me to replace the temporary loss, and make me infinitely the gainer, if I profit by the prudential lesson which this whole affair is calculated to teach."

He was generous enough to give a soft answer to an angry threat from Isaac D'Israeli, and magnanimous enough to forgive the son whom he said "he had loved not wisely, but too well." Benjamin Disraeli, though he published his first novel, "Vivian Grey," through Colburn, returned to Albemarle Street, and Mr. Murray published his "Contarini Fleming" at the urgent solicitation of the author, on most favourable terms.

It is only fair to add that Mr. Disraeli, as soon as he had the means, paid to Mr. Murray £150 for printing the Powles pamphlets and prospectuses; and in his subsequent career as a statesman more than justified the anticipations of his early friend.

Fortunately the other business of the House was not much affected by the newspaper speculation. The "Quarterly Review" had been increasingly prosperous under the editorship of Mr. Gifford, and his successor Mr. John Taylor Coleridge, who resigned after four years on account of his absorbing professional engagements, eventually to become one of the judges of the Court of Queen's Bench. Mr. Lockhart was offered the appointment, and he accepted the office very soon after refusing the editorship of the "Representative." Neither he nor Sir Walter Scott had the slightest hesitancy this time, and though some doubts as to his taste and judgment were muttered, on account of his connection with the less sedate staff of "Blackwood" in its early years, he soon showed his fitness for the higher work which he had now to undertake. Though only thirty years of age on his appointment in 1825, he commanded the respect of almost all the veterans of literature, and, what was of more consequence, he had the complete confidence of the publisher, and he continued to edit the "Quarterly" till his own death in 1854.

Another successful series of publications were the "Handbooks" of Continental Travel, the predecessors of the more familiar "Guides" of our own day. It was John Murray the Second who gave the name, and also the red binding, familiar to all tourists. In the preparation of the Handbooks the publisher took great personal interest, and much pleasure and advantage he obtained from his Continental expeditions.

Occasionally the publications of Mr. Murray were not successful from a financial point of view, as with Crabbe's Poems, for which he gave three thousand guineas. But he had no regret for this loss, having the highest esteem for the worthy poet and his writings.

A very large portion of Mr. Smiles's book is occupied with matters pertaining to Lord Byron, but there is little that is new, with the exception of letters not before published. In Moore's "Life and Letters of Byron," Lord John Russell's "Life of Moore," in J. Cordy Jeaffreson's "The Real Lord Byron," also in memoirs and magazine articles innumerable, the details of the poet's life, and comments on his works, have been given with almost wearisome repetition. It was of course necessary to bring together in this biography all that concerned his dealings with Mr. Murray, who from the beginning, while yet in Fleet Street, to the last sad end, was as true a friend as Byron ever had. The letters now published show how intimate were the relations between the poet and the publisher, and the whole intercourse and correspondence are to the honour of both of them. From Murray the poet accepted rebukes and protests that he would not have brooked from any other adviser, though he unfortunately did not always follow the advice faithfully given.

In the famous scene of the burning of Byron's private journals, for which the publisher had paid two thousand guineas to Moore, Mr. Murray had regard not merely to the appeals of the relatives, but also to his own desire to save his friend's reputation from further disgrace. The sum paid to Moore was a slight sacrifice compared with the loss of profits from issuing what the scandal-loving public would have eagerly purchased. The account in the present work is brief. After much preliminary negotiation—

"The meeting at length took place in Murray's drawing-room, on May 17, 1824. There were present Mr. Murray, Mr. Moore, Mr. J. Cam Hobhouse, Colonel Doyle representing Lady Byron, Mr. Wilmot Horton representing Mrs. Leigh, and Mr. Luttrell, a friend of Moore. Young Mr. Murray—then sixteen, the only person of those assembled now living—was also in the room. The discussion was long and stormy before the meeting broke up, and nearly led to a challenge between Moore and Hobhouse. A reference to the agreement between Moore and Murray being necessary, for a long period that document could not be found; it was at length discovered, but only after the decision to commit the manuscript to the flames had been made and carried out, and the party remained until the last sheet of Lord Byron's Memoirs had vanished in smoke up the Albemarle Street chimney."

When the agreement was inspected it was seen that Murray had the complete control of the property, and could dispose of it as he pleased, so that "he behaved most handsomely upon the occasion," as Byron's sister, Mrs. Leigh, said. The money was not repaid by the Byron family, as was expected. Moore got the 2,000 guineas advanced by the Longmans, and he handed to Mr. Murray the amount, together with interest, before he left the room.

As John Murray the son, the present Mr. Murray, has just been referred to, we may here give another interesting recollection of his early days. It was in April 1815, when he was scarcely ten years old, that Byron and Scott met for the first time, and were introduced to each other by Mr. Murray. The son says:

"I can recollect seeing Lord Byron in Albemarle Street. So far as I can remember, he appeared to me rather a short man, with a handsome countenance, remarkable for the fine blue veins which ran over his pale marble temples. He wore many rings on his fingers, and a brooch in his shirt-front, which was embroidered. When he called, he used to be dressed in a black dress-coat (as we should now call it), with grey, and sometimes nankeen-trousers, his shirt open at the neck. Lord Byron's deformity in his foot was very evident, especially as he walked downstairs. He carried a stick. After Scott and he had ended their conversation in the drawing-room, it was a curious sight to see the two greatest poets of the age—both lame—stumping downstairs side by side. They continued to meet in Albemarle Street nearly every day, and remained together for two or three hours at a time."

Young Murray, as he then was, has another remarkable incident of his early days to remember. When a student at the University of Edinburgh he was taken by Mr. Allan, the painter, to the Theatrical Fund dinner, in 1827, when Sir Walter Scott, on his health being proposed by Lord Meadowbank, one of the Scottish judges, for the first time made public confession of his being "the author of Waverley." The whole scene is most graphically described in a letter to his father. The secret of the "Great Unknown" had been maintained till then before the general public, although it was known to not a few personal friends. The revelations in the law courts, after the disclosure of the affairs of the Ballantynes and Constables, rendered any longer concealment useless.

Murray's first introduction to Byron was under amusing circumstances. The poet's friend Dallas was entrusted with the negotiation for publishing the first two cantos of "Childe Harold." The manuscript was offered to Miller, who declined it, and accepted a poem by Rosa Matilda Temple, which Murray had refused to take. Miller's purchase was sold the year after as waste-paper. The copyright was purchased from Dallas for a large price, Byron being, or affecting to be, totally indifferent as to money transactions. After the arrangement was concluded, Byron came to Fleet Street.

"The first time Mr. Murray saw him was when he called one day with Mr. Hobhouse. He afterwards looked in from time to time, while the sheets were passing through the press, fresh from the fencing-rooms of Angelo and Jackson, and used to amuse himself by renewing his practice of 'Carte and Tierce,' with his walking-cane directed against the book-shelves, while Murray was reading passages from the poem, with occasional ejaculations of admiration, on which Byron would say, 'You think that a good idea, do you, Murray?' Then he would fence and lunge with his walking-stick at some special book which he had picked out on the shelves before him. As Murray afterwards said, 'I was often very glad to get rid of him!'"

Of the success of the poem Byron was himself very dubious, and he was with difficulty persuaded to allow his name to appear as the author. This was partly from fear of the critics, the chief of whom he had satirised in his "English Bards and Scotch Reviewers." But in a few days after publication the whole edition was disposed of, and the critics had only to echo the universal outburst of admiration. "I awoke one morning and found myself famous," was the poet's own word in his note-book. Edition after edition went off in rapid succession, and the reputation of that early poem is as great now as when it first appeared. We may add that none of his subsequent poems raised him to a loftier position in the temple of fame. Of "Childe Harold," it may be said, as Byron himself said of an earlier poet:

"Had Gray written nothing but his Elegy, high as he stands, I am not sure that he would stand higher; it is the corner-stone of his glory."

The conclusion of the Byron-Moore transaction may just be mentioned. Moore, as usual, being pressed for money, sought reconciliation with Murray, through the intercession of Hobhouse. The Longmans generously released Moore from the engagement to write a life of Byron, for which Murray agreed to give £2,000, besides repaying the two thousand guineas advanced for the burned memoirs, an offer which Moore, in his diary, justly describes as most liberal. The Messrs. Longman said, "Do not let us stand in the way; it is our wish to see you free from debt, and it would be only for this work that we would be separated." So ended the affair, in a way honourable and satisfactory to all concerned.

With not a few of the most distinguished literary ladies of his time John Murray had business relations, and to them also he was the friend as well as the publisher. The greatest was Mrs. Somerville, whose first book, "The Mechanism of the Heavens," founded on the great work of Laplace, was prepared for the Society of Useful Knowledge at the instance of Brougham, but being too large for that series of publications was sent to Albemarle Street. A letter was enclosed with Herschel's opinion of the book. Brougham was so sanguine of success that he said he could ensure the sale of 1,500; but Mrs. Somerville agreed with the more cautious proposal of the publisher that an edition of 750 would be more prudent. The author had no risk, and the profit was handed over to her, Mr. Murray saying to Dr. Somerville, "I am overpaid by the honour of being the publisher of the work of so extraordinary a person." His liberality had its reward in the success of her subsequent works, especially "On the Connexion of the Physical Sciences." Her portrait, painted by Phillips, R.A., adorns the Albemarle Street gallery.

About the same time as Mrs. Somerville's introduction, Frances Ann Kemble, better known as Fanny Kemble, daughter of Charles Kemble, became one of Mr. Murray's regular correspondents. When only seventeen years of age she wrote an historical drama, "Francis the First," for the copyright of which Mr. Murray, after submitting the manuscript to the Rev. H. H. Milman, offered 400 guineas. The youthful authoress was astonished at the great liberality of the publisher, and she was the more thankful that it enabled her to purchase a commission in the army for one of her brothers. Before the book was issued she appeared for the first time on the stage as Juliet, when she was only eighteen years old. On the publication of "Francis the First," it was at once received with much favour, and at least ten editions appeared within a few years. A copy was sent to Joanna Baillie, at Hampstead, who wrote to Mr. Murray her warmest thanks for the pleasure she had received. It was

probably through Fanny Kemble's introduction that her brother, John Kemble, the learned Anglo-Saxon scholar, had the advantage of Mr. Murray being publisher of his works.

Fanny Kemble, after appearing at the principal theatres in England, went to America, and was there married to Mr. Pierce Butler, a Southern planter and proprietor. She soon after quitted the stage, but continued her literary activity, and her books were published by Mr. Murray, and also in America in order to secure the copyright there.

Our space precludes us from more than the mere mention of some of the other literary ladies corresponding with Mr. Murray, and they form certainly a most miscellaneous list, including the Hon. Mrs. Norton, Jane Austen, Miss Berry (editing Horace Walpole's Reminiscences), Lady Eastlake, and Mrs. Rundell, whose "Domestic Cookery" was one of the most profitable of all the publications of the House.

This notice has been rather discursive, but so is the book itself. Mr. Smiles must have found it no easy task to reduce his mass of materials to any kind of biographical order. Nor has he attempted to do so. Often he has, after finishing one subject, to hark back some years to take up another. But the general effect of the memoir is excellent. We see how great a heritage devolved upon Mr. Murray's successors, while to other publishing firms an example is left of enterprise, liberality, and honour.

JAMES MACAULAY, M.D.

# Three Voices.[1]

ONE night three Voices on my dreaming ear
Smote thro' the silence of a sleep profound.
Pure and serene the first; in reverent fear
I heard the still, sweet sound.

"From day to day I cry in every street,
My messengers in fruitless toil are seen,
Few hail as King, with adoration meet,
The thorn-crowned NAZARENE.

"Of 'faiths outworn' men speak; nor own my sway,
Nor pause to hear the story of the Cross;
Naught recking, as they heedless turn away,
Of an unmeasured loss.

"Yet mine the power to soothe all human ill,
To bring the captive thralls of sin release,
To grant, each bitter cry of earth to still,
My guerdon, heavenly Peace."

She ceased, and sighed. Then came a strange soft tone
Which stirred my being with remembered thrills,
With visions of fair faces, all unknown,
And sunlight on the hills.

Echoes of music, too, divinely sweet,
Stole with that Voice upon the listening air;
Such music as th' enraptured soul might greet
Down all Heaven's golden stair.

"How should men heed, in these impassioned days?
*I* love not one so cold, and swift to blame;
My servants worship Beauty, and my Praise,
And know no higher aim.

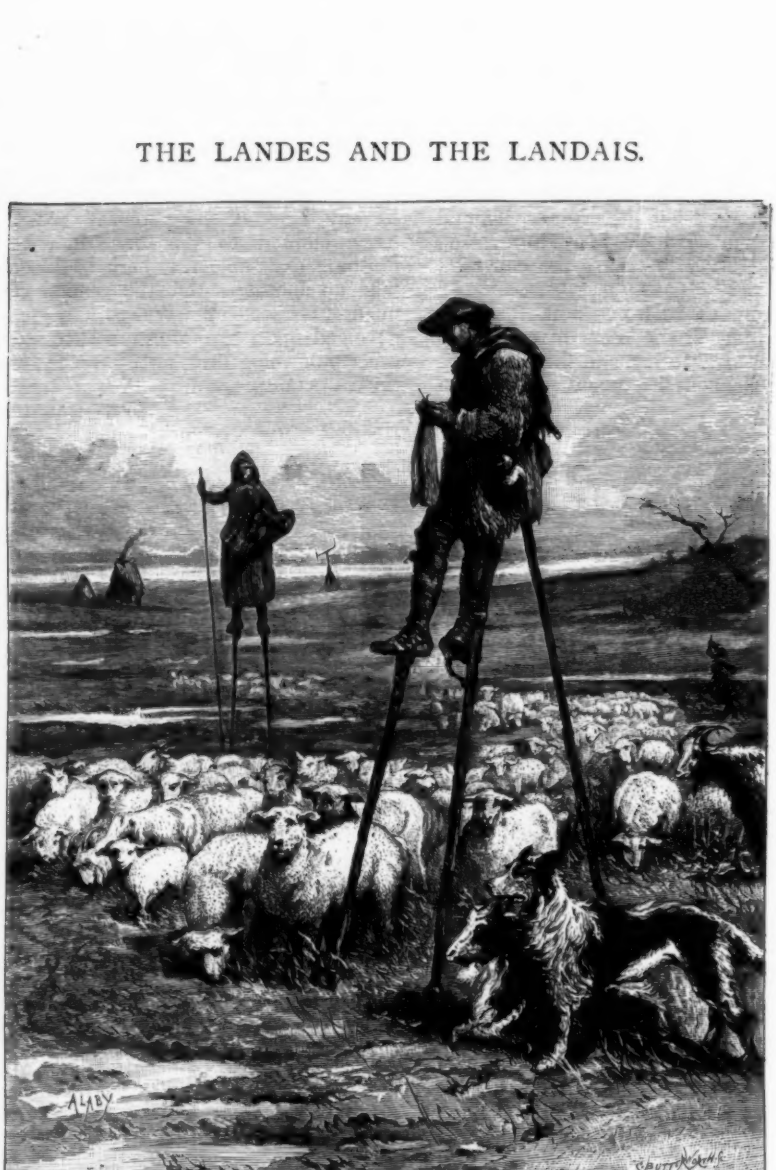
"Afar from strife for gold, or clash of creeds,
They seek to win the fair Ideal's shrine.
What inspiration to immortal deeds
So strong, so pure, as mine?"

She paused; and now a voice austerely sweet
In clearest, coldest tones took up the strain:
"Though I draw many from Religion's feet,
Why should she thus complain?

"I give them but the Truth's impartial light,
Tell no fond fables to the simple ear:
I pierce the Past with keen unerring sight,
I make the Present clear.

"For what were man without me?—helpless, blind,
Or like a wanderer on an unknown shore
Emerged in briefest daylight—night behind,
And deeper night before."

Again the Voice that erst had struck mine ear,
With chastened fervour: "O you do me wrong!
The tie between us should be close and dear,
We have been foes too long.



"For what are Truth and Beauty?—streams that flow
But from one Source; rays from the self-same Sun;
If higher be my service, yours more low,
He who inspires is ONE.

"Sisters, I fain would call you! O reply,
And lend your aid to raise the world with me!"
A sudden silence—and I woke to cry—
What shall the answer be?

LILY WATSON.

# THE LANDES AND THE LANDAIS.

THE SHEPHERD'S DINNER-TIME.

IN all the varied land of France, so remarkable for its contrasts of scenery and manners, there is no district wherein the traveller is more likely to be impressed by the solemn wildness of nature, and astonished by the strange habits and primitive simplicity of the people who dwell there, than in that portion of our old English province of Aquitaine, which now forms the department of the Landes. It was thus named because at the Revolutionary period, when the French provinces were broken up into departments, nearly the whole of this region was composed of *landes*—a term for waste land, and generally implying that it is covered with heather, broom or gorse. It is a maritime department, its coast line being that of the Bay of Biscay from a point a little below the now fashionable bathing place, Arcachon, to another nearly as far south as Bayonne.

Before describing the customs and other peculiarities of the present inhabitants of the Landes, and the natural features of their country which render it so exceptional, it may be well to take a rapid glance at the history of this remote corner of France which was English territory for three centuries. Its most ancient inhabitants of whom we have any record were Celts and Iberians, and it is probable that the blending of these two peoples formed the parent stock of the existing Landais. In the time of Cæsar, the most powerful tribe there were the *Tarbelli*, who held the country about Dax.

They and other tribes combining, formed an army of 80,000 men, which was cut to pieces by Cæsar's lieutenant, Crassus. Throughout the Roman domination, the Landes composed the greater part of that region called Novempopulania. Christianity was preached there in the third century by St. Honestus, and there was a bishop of Dax in 250. The break up of the Empire was a dire calamity to the inhabitants of this country, who would seem to have been always lovers of industry and peace. Each successive horde of barbarians who came from the north and the east, and who subsequently passed into Spain, slaughtered and pillaged the Novempopulanians. In the fifth century they fell under the domination of the Visigoths, who were comparatively mild rulers, but were disliked on account of their Arianism. After Charlemagne, the history of the Landes was identified with the struggle for supremacy between the North and South of France, or between the southern nobles who were so frequently at war with one another.

Passing over this very dark period of mediæval strife and horrors of every kind which men bring upon one another, we come to the marriage of the divorced Eleanor of Aquitaine with Henry II. of England, whereby the Plantagenet became in 1137 the feudal lord of one of the largest and richest provinces of France, which included the sandy Landes. The new state of things was not accepted without an appeal to the sword; even the peaceable Landais did not settle down quietly to English rule until they had been severely punished by Richard Cœur de Lion. But the English soon succeeded in overcoming old animosities by treating the people with justice and mildness and granting them rights and privileges such as they had never enjoyed under any other feudal masters. French historians acknowledge this, but better testimony is to be found in the traditions of the inhabitants at the present day. How completely the Landais were reconciled to the English and came to look upon themselves as belonging to the same nation is proved by the fidelity with which they and most of the Gascons fought under the same flag with the British yeomen until the close of the Hundred Years' War. Even when the British power was finally broken in Aquitaine, there was a rising of the Landais against the French king—a popular movement that was repressed with horrible cruelty. These events bring us down to the close of the Middle Ages, at which stage we may very well leave the history of the Landes.

Interesting as the Landes are to the student of nature and primitive manners, it is safe to predict that there will never be a rush of tourists thither; the country is too mournful, too desolate to attract those who travel with the expectation of finding the comforts of civilisation and facilities for locomotion combined with the charm of varied scenery. In his recently published volume, "Wayfaring in France," Mr. Edward Harrison Barker,[1] who walked through the Landes from north to south, says:

"The cause of this supreme desolation is the dunes or sandhills, which in the last century threatened to transform the whole of the Western Landes with their towns and villages into a French Sahara. The maritime pine was the salvation of the region. By undaunted perseverance the seed was made to take root in the shifting sand, and thus dune after dune was fixed. It was one of those battles with the forces of nature in which human purpose, often discouraged, but never turned aside from its object, triumphs at last over seemingly insurmountable obstacles. Before the dunes were covered with pines, they were constantly changing their shape and place, ebbing and flowing like the sea; but always gaining in the sum of years upon the mainland; and fatally, irresistibly drinking up the springs of fertility—the life-blood of civilisation. The ancient port of Mimizan lies under the dune of Udos, and Mimizan of to-day is cut off from the sea by a hill of sand. Although the high dunes did not travel much beyond the chain of lakes, their devastating influence was felt many a league eastward. The sand caught up from them by the storms rushing inland from the Bay of Biscay fell upon the whole region like showers of volcanic ashes. Thus were formed the Grandes Landes, in the midst of which lies the town of Sabres, where the land is flat and in winter marshy, and where the use of stilts by the inhabitants is still very general."

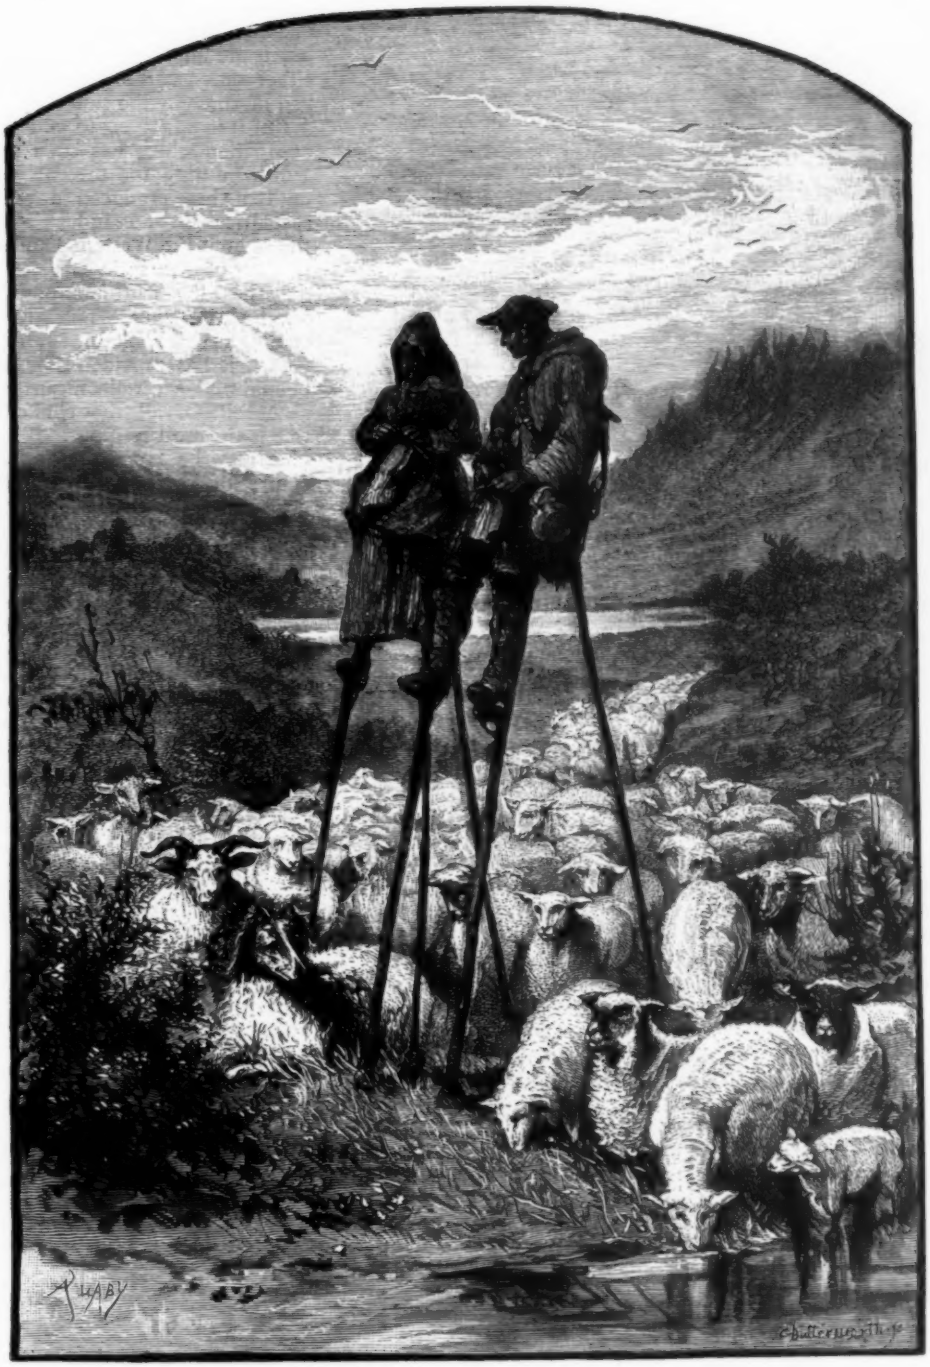
Some notion of what these sand storms are may be gathered from the following picture of one by the same writer, who saw what he here describes when in a train on the outskirts of the Landes:

"All at once I perceive that the sky is no longer a clear blue; that it is not blue at all, but of a soapy grey colour. The sun that shines through it is so dimmed that the eye can bear its light. Flocks of fleecy clouds are rushing up to the zenith like vapoury coursers lashed and spurred by spirit-riders. Lower down and to windward is a motionless mass of slaty vapour tinged here and there with copper, and underneath it, white and smoky, are well-defined patches of cloud hovering with gilded edges or scudding, all froth and fury, towards the sun. . . . We can hear a low wail coming up through the pines, growing louder and louder, until it is almost a shriek when the wind strikes the nearmost crests. Then the forest disappears or shows like the spars of shipping through a fog: boughs crack, cones rattle to the ground, twigs and branches fly through the air; up go all the carriage windows and the panes sound as though they were struck by volley after volley of fine shot. . . . The storm has lifted the sand from the earth and is hurling it back towards the sea from which it came."

The Landes must have been a weird country indeed before the forests changed the aspect of things, and chained, as it were, one of the forces of nature. A sandhill would suddenly rise out of the plain, and the next storm might lift it to another spot leagues away, or scatter it broadcast. The sand was drifted just like fine snow in a north-east gale, and as the wind blew from different directions the landscape was being constantly changed. Nothing could have been more strange and fantastic. Fortunately the sand always showed a tendency to form permanent dunes, to collect in certain places, otherwise the country would have been rendered uninhabitable. In the Middle Ages this region could not have been the melancholy desert that it afterwards became; the villages and towns which then arose indicated no mean measure of prosperity. In Gallo-Roman days an important

[1] Mr. Barker's name will be recognised by many of our readers. His recent volume (published by Bentley) may be commended to them, as containing some of the most vivid sketches of French provincial life and scenery which have appeared for a long time. His manner of travel, on foot, with knapsack as sole companion, brings him into contact with scenes and people in sequestered corners, and he shows them as they are without any disguises. The districts he describes are, "In the Landes," "In Dauphiné," "In Lower Languedoc," "In Lower Brittany," "In Alsace."

industry of the people was the manufacture of pitch, which was a proof of the existence of pine forests. These forests extended in all likelihood, where they do now, along the coast, nature unaided having provided the protection which in modern times was obtained artificially at an enormous cost of labour and ingenuity. The original forests must have been destroyed either by being set on fire during the long wars which devastated the South of France, or through the improvidence of the people, who used the timber for present necessities without thinking of the future. There being no longer any barrier to keep back the sand, which is always being thrown up by the sea in vast quantities, the country for many miles inland became a veritable desert. The greatest benefactor of the people was Brémontier, a civil engineer, who in 1787 wrote a pamphlet showing how this barrier might be restored and the shifting dunes fixed by sowing pines. The difficulty was to make the young plants take root in such a soil, but it was overcome by Brémontier's method. Since then the pine forests have not only covered the chains of dunes which run parallel to the coast, but have spread far inland, over immense tracts of level land called the *landes rases*, where great flocks of sheep were formerly tended by roaming shepherds on stilts.



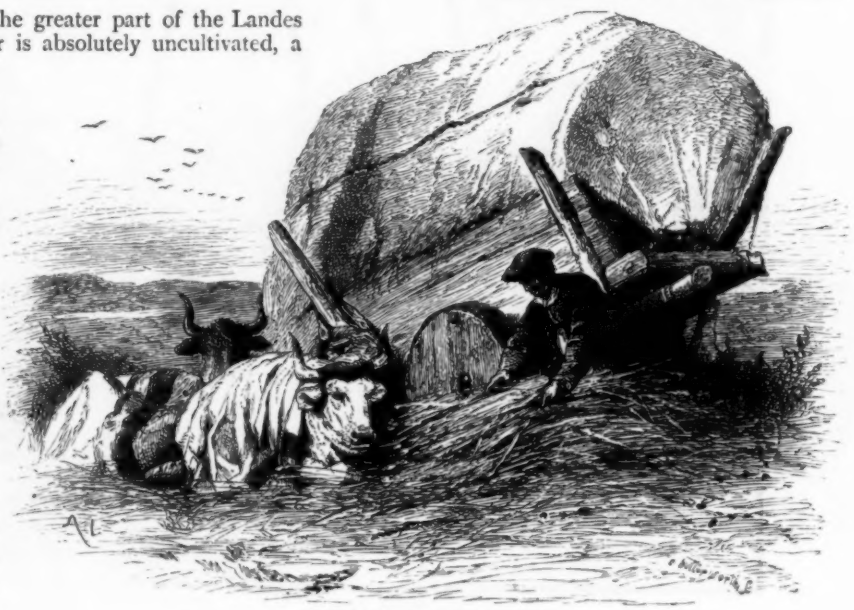
The same mode of life continues, but in a much more restricted sense, for it is the exception now to find an open plain where sheep are browsing knee-deep in heather, the Landais shepherd, perched upon his high stilts, watching his flock as he knits, and looking like a fantastic giant against the horizon. Any wanderer in the Landes may, however, if he takes the trouble, still see this curious picture of pastoral life.

The use of stilts by the Landais peasants is the direct consequence of natural conditions, and as these conditions change, stilts must gradually disappear. There are several reasons why it has been always difficult to move about in the Landes on the soles of the feet, and these combined difficulties suggested the artificial lengthening of the legs. In the first place there is the sand, which is often loose and quite free from vegetation. The feet sink into it up to the ankles. Stilts also sink into it, although they end in round knobs or have hoofs of animals fastened to them to prevent this; but a man so mounted has great power over his artificial legs. Then the marshes have to be reckoned with. These used to be very extensive and were the cause of much malaria. It may seem strange that such a sandy soil should become marshy, but the explanation is simple. The sand, which is chiefly composed of quartz broken into minute particles, has conglomerated in the course of ages at a variable distance below the surface and formed a tuff impervious to water. Thus, nearly the whole effort of draining from the winter rains is thrown upon the process of evaporation, which does not suffice for the purpose. Hence the permanent lakes filling the deep hollows between the dunes and the wide marshes of the *landes rases*, which are, however, mostly covered with herbage in summer. Thither the shepherd takes his flock, stepping with his stilts from tuft to tuft of firmly fixed heather, and leading his sheep where the ground is safest and the herbage most abundant. Large tracts of this wild region are completely overgrown with furze, and here the use of stilts comes in again, for one would have to be encased in leather in order to walk through such a prickly wilderness.

Moreover, these long wooden legs which lift a man four or five feet above the ground, make long distances short to the Landais peasant, for while he is leisurely stepping, another person with only his natural legs to rely upon would have to run in order to keep up with him. Let the stiltman quicken his movement and the other would soon be left far behind. The rural postmen—there is a postal service even in the Landes—often go on stilts, especially in winter when so much of the flat country is under water. Stepping though the water in this way, the Landais, covered with his sheep's or goat's skin, when seen from a distance looks exceedingly like a giant flamingo. The resemblance would be quite startling if his legs were red. The flamingo, by-the-bye, is a bird not unknown in this desert. It is needless to say that the ease with which the Landais travels upon stilts, and dances upon them when in a festive mood, can only be gained by long practice. He learnt the art in childhood, almost as soon as he felt quite firm upon the legs that nature gave him. The shepherds, who have used stilts all their lives, would feel like fish out of water if they were to follow their sheep on foot. Even in the wooded districts from which sheep have nearly disappeared, giving place to cattle, the herdsman is frequently mounted on stilts as he accompanies his roaming animals while they crop the undergrowth of the forest. Perhaps the brutes themselves would no longer respect him if they had not to look up to him.

When the Landais shepherd or herdsman starts off for the day, or, as it sometimes happens in summer, for two or three days, he carries a wallet containing food, chiefly bread—very dark from the quantity of rye that is in it—and a gourd filled with water. These are slung at his side. A gun is often strapped to his back, or in rainy weather a great blue cotton umbrella such as most people have seen in the rural districts of England. When he has mounted his stilts by the side of his hut and has strapped them to his legs, his wife hands him the wallet and gourd, and, if the weather be very wintry, a long brown cloak of homespun, like the *limousine* worn by the shepherds upon the highlands of Central France. Then he is prepared for a long run, if necessary.

Many of these peasants are very handsome men, with well-shaped, energetic features, but the women rarely show traces of beauty after their early youth. They are a dark-skinned people of a distinctly Southern type, but now and then red hair appears, which goes to strengthen the theory of their half-Celtic origin. The men are generally rather undersized, but very sinewy and agile. The development of their leg-muscles is remarkable—probably the result of living so much upon stilts for generations. The Landais youth who is ambitious to shine at that form of bull-baiting, or rather cow-baiting, known as *courses landaises*, will leap into the air just as the charging animal lowers its horns, and drop lightly upon his feet in the rear.



A PASTORAL IN THE LANDES.

MAKING READY FOR A LONG RUN.

Although by far the greater part of the Landes north of the Adour is absolutely uncultivated, a certain amount of agriculture goes on, especially in the neighbourhood of villages. The principal crops are maize, rye, and millet. There are few peasant proprietors. Most of the owners of the soil live elsewhere, and the land is leased upon the *métayer* or *colon* system. The *colon* or *métayer* is a tenant-farmer who pays no rent, but who divides all his produce with the owner. The latter has the best of the bargain, and the *colon* is as a rule so wretchedly poor that the landlord has not unfrequently to provide him with the means of subsistence in winter, when the crops have failed through drought or some other cause. The *colon* has sometimes to travel for days across the sandy or marshy country to a market where he can sell his produce. This is heaped in a very primitive bullock-wagon. When night comes on the beasts are unyoked, and the peasant either sleeps in the cart or makes a bed of straw by the side of it.

COLON LANDAIS MAKING HIS BED.

But it is now time to consider an occupation which has been steadily growing during the present century, until it has produced a complete revolution in an industrial sense throughout the Western Landes. It is that of the resin-gatherer. Not only has the maritime pine saved hundreds of square miles from becoming as uninhabitable as an African desert, it has provided thousands of people with a certain means of subsistence. Of all the conifers, this tree is the most resinous. The same pine may be tapped during a long course of years without apparently losing any of its vigour or productiveness. The work of collecting the resin is carried on upon the *métayer* system. The man who follows this occupation is called a *résinier* or a *gemnier*, and he divides with the proprietor the money which his hoard of resin sells for at the end of the season. Each man has usually about a thousand trees in his charge, and he lives almost entirely in the forest, often ten miles from any village or hamlet. The following description of the resin-gatherer at work is taken from "Wayfaring in France":

"Presently I caught a glimpse of a man's body flattened like a squirrel's against the trunk of a tree. He was standing about ten feet from the ground upon a notched piece of timber that he had planted against a pine. This piece of wood was the *résinier's* ladder. The man was barefooted like all his

GEMNIER, OR RESIN EXTRACTOR, AT WORK.

class when at work, and he was knocking off with his axe the sugar-like lumps of resin from the yellow stream where the bark had been lately stripped. Near the foot of the tree was affixed a little earthen pot to catch the more fluid resin, on which greater value is set."

Sometimes there are two pots affixed to the same pine, as shown in the accompanying illustration. The *résinier* has generally a comfortably built hut of pinewood, which includes a store-room for the resin. It is not uncommon to see three or four of these huts clustered together in the depths of the forest, for the love of companionship is deep-seated in the human heart. These men can earn about 50*l.* a year, but most of the money goes to the support of the family in some village. They live with the utmost frugality, their habitual drink being water, and rye bread their principal food. When they are near a lake they often catch fish, and when they get a chance of shooting a hare, a turtle-dove, or a young boar that has roamed from the watchful eye of its mother, they are not the men to miss the opportunity. But the old boars they discreetly leave alone. This suggests the subject of the fauna of the Landes, which is singularly comprehensive, including, as it does, quadrupeds like the wild-cat, and birds like the bustard and the wild swan, which have become rare in Western Europe; but this is a field that must be left to the naturalist. He will need, however, some endurance and perseverance to prosecute his studies in certain parts of these vast forests, which even the resin-gatherer considers impenetrable, so dense is the undergrowth of holly, juniper, furze, and hawthorn. Here the wild-cat and the boar incur little risk of being disturbed. Formerly these forests were infested with wolves, which caused great havoc to the flocks, but very few, if any, are to be found there now. In the south of the Department bordering the Basses Pyrénées, there are cork forests, and the work of stripping the bark from the *quercus suber* is an important industry in that district.

The Landes have in different ages, commencing with the third century, produced men of note, the most celebrated of all being Vincent of Paul, who was born in 1567, at the miserable hamlet of Ranquines, near Dax. This eminent philanthropist, the protector of abandoned children in France and the founder of the order of the Sisters of Charity, was the son of Landais peasants, and in his childhood he tended his father's sheep. His vocation for a higher life than that of a shepherd was so marked that his parents placed him with the Cordeliers of Dax, who for a little more than 2*l.* a year educated him and took charge of him.

No peasantry are freer from vice than those of the Landes. They really seem to live in the simplicity and peace of the patriarchal age. Every man trusts his neighbour and respects his rights. Among them the gendarme and the magistrate have practically nothing to do. The horror of theft and violence is so strong in the people that the machinery of justice might be almost dispensed with throughout their sandy, solemn country. Music is their chief pastime, and nothing in real life conveys a deeper feeling of idyllic charm than to listen to the Landais peasants singing in chorus at nightfall, in some village or hamlet, when the flocks and herds have been brought home.

BIRTHPLACE OF ST. VINCENT DE PAUL—NOW A CHAPEL.

# LITERARY COINCIDENCES.

THERE is no charge against a great author easier to make than the charge of plagiarism; there is none more difficult to prove. There have, no doubt, been unblushing plagiarists, thieves whose ill-gotten gains deceive no competent reader. But no work worthy the reading, and which retains a place in literature, has gained its reputation by false pretences. Every man of genius owes, no doubt, much to his predecessors; and the greater his power, the more able is he to make fruitful use of earlier writers. A poet, for example, is moved to sing himself by listening to other singers.

Cowley relates that by reading Spenser he became irrecoverably a poet, and there is scarcely an English poet since Spenser's time who has not acknowledged the largeness of his debt to the author of "The Faerie Queene." Not only did he stimulate the imagination as few poets have done, but he invented a new measure; and to the Spenserian stanza we are indebted for Thomson's "Castle of Indolence," and Byron's "Childe Harold." Yet this "poet of poets," as he has been truly called, gathered freely from every poetical field in the composition of his immortal Allegory. He translated from Lucretius, he borrowed from Chaucer, as Chaucer borrowed from Boccaccio, he used with royal freedom the famous poem of Ariosto, he took his machinery from the popular legends about King Arthur; and yet "The Faerie Queene" is as remarkable for its originality as for its exhaustless beauty.

Shakespeare, too, in spite of his boundless imagination, rarely trusts to that alone, and puts historians as well as poets under contribution. In his "Julius Cæsar," for instance, it is remarkable with what scrupulous exactness he follows the main facts of Cæsar's history as it is told by Plutarch. Where the matter lies ready to his hand he never cares to invent, and his marvellous power is seen in the way in which commonplace incidents or prosaic narratives are changed by his magic into the splendour of poetry.

Literary parallels abound in Shakespeare, and that they are also common in Milton is known to every reader who has taken up an annotated edition of that poet. Open Todd's "Milton," or the exhaustive edition of Dr. Masson, and you will find that for illustration as well as for expression Milton resorts without scruple to the masters of Greek and Roman literature, to the Italian poets, to the "sage and serious" Spenser, and even—as Mr. Pattison has pointed out—to an obscure Dutch poet. Indeed, Milton's adaptations, if we may use that term, are frequent, but what he uses he assimilates and makes his own. It is Milton's majestic voice we hear throughout, never a mere echo.

In searching, then, for literary coincidences—and they are practically numberless—it is well to remember that they are always to be found even in the noblest literature, and that a man of genius, however original, is constantly and rightly indebted to those who have gone before him. It is possible, no doubt, to carry the search for coincidences too far, and to discover them where they do not exist; but there is ample scope for the critical reader without venturing even for a moment upon uncertain ground. All we can attempt to do here is to give some illustrations, chiefly from the poets and taken without any formal arrangement, of a subject that is as wide as literature itself.

Sir John Denham's "Cooper's Hill," once a popular poem, lives now, if it lives at all, on the reputation of four noble lines addressed to the Thames:

> "O could I flow like thee, and make thy stream
> My great example, as it is my theme!
> Though deep, yet clear; though gentle, yet not dull;
> Strong without rage, without o'erflowing full."

There can be no question, as Dr. Johnson points out, that this poem, which won the high praise of Dryden, was the source of Pope's "Windsor Forest," in which, by the way, it is praised; and Mr. Gosse observes that the French poet Maynard, in his poem "Alcippe," has precisely the same order of reflections as Denham in his "Cooper's Hill." "It would be exceedingly rash," he says, "to take for granted that Maynard ever heard of Denham, or *vice versâ*; such a supposition, indeed, is extremely improbable, but the same ideas were common to both." Pope, too, modelled his "Dunciad" on Dryden's "MacFlecknoe," but it would be unjust on that account to accuse Pope of literary theft. The suggestion was due to Dryden, and so are some passages in the poem; but yet Pope's great satire cannot be said to add to its serious faults that of servile imitation.

Gray, Pope's most distinguished immediate successor in the kingly line of poets, has written what is probably the most popular poem in the language. The "Elegy" has been frequently imitated, but the copies are dead already, while the original is as full of life as it was a century ago. For the suggestion of this poem Gray, one of the most learned of poets, had not to turn to books. A walk on a summer evening through a rural village, and in a churchyard, where "the rude forefathers of the hamlet sleep," might suggest all the imagery of that beautiful poem. But if Gray did not take his idea of the Elegy from any foreign source, it is evident that his choice of metre was in some degree determined by Sir John Davies's poem "Nosce Teipsum," from which copious notes are still preserved in Gray's handwriting. The heroic quatrain borrowed

from the Latin elegiac had been also used by Dryden and Davenant, but Gray was the first to employ this impressive metre with a musical touch that is quite inimitable.

While we are among the eighteenth-century authors, it may be observed that although Swift is a thoroughly original writer, the critics have discovered several works to which, in their judgment, he is indebted. This, however, may not be the case. There is a living French novelist who, in some of his works, seems beyond question an imitator of Dickens. He had even invented a dolls' dressmaker, being unaware that for many a long year, indeed since 1864, Miss Jenny Wren has been busily using her little fingers in making dolls' clothes. In literature, as in the discoveries of science and of mechanical inventions, it sometimes happens that an idea is suggested or a discovery made by two persons, each of whom has an equal claim to originality. Of this, from the standpoint of literature, there is a striking illustration in Dr. Johnson's "Rasselas," which he wrote in one week, to defray the expenses of his mother's funeral and some small debts which she had left. This rapidity of composition is remarkable; but we may be certain that the story would not have been written in its present form if, more than twenty years before, Johnson had not translated Father Lobo's "Voyage to Abyssinia," a narrative which made a strong impression upon him. But the most curious fact about "Rasselas" is its similarity in some respects to Voltaire's "Candide," a work composed with a very different purpose. Writing of the two books, Boswell states: "I have heard Johnson say that if they had not been published so closely one after the other that there was not time for imitation, it would have been in vain to deny that the scheme of that which came latest was taken from the other."

Look where we will in literature we see how the suggestions afforded by one work form the foundation upon which another is built. A writer, however independent, cannot walk without the help of his fellows. Cowper is a poet who, like his contemporary Crabbe, deserves the highest praise for originality, but Cowper's use of the heroic couplet is based upon that of Churchill, and his blank verse is founded upon the model of Milton. There are few books in the language more original than Charles Lamb's "Essays," and yet it may be confidently said that they would have been written in a different vein had he not been so familiar with the works of Sir Thomas Browne, and with such writers as Fuller, Cowley, and Donne. Cowley himself, by the way, to return for a moment to the seventeenth century, was the father of more than one poet who, without his genius, pursued the eccentric paths on which his Muse delighted to wander; and Cowley is largely indebted to Donne, whom, as Dr. Johnson says, it appears to have been his purpose to emulate. A really great writer conscious of his strength is never afraid to own his obligations. Sir Walter Scott nursed his genius among the Border minstrels, caught the lilt of his verse in the Lay from the more exquisite music of Coleridge's "Christabel," and acknowledged that his character of Fenella was suggested by Goethe's Mignon in "Wilhelm Meister." And though there is no literary parallel in the case, it may not be amiss to mention here—for it exemplifies the interdependency of imaginative writers—that Goethe acknowledges his own obligations to Oliver Goldsmith, whose "Vicar of Wakefield," at a critical moment of mental development, proved, he said, his best education.

Perhaps enough has been said in illustration of a subject that is well-nigh inexhaustible. There is one lesson to be learnt from it useful alike to critic and to reader—namely, that it is unreasonable to attribute plagiarism to great writers because their works are not wholly unlike the mass of earlier literature. It is far more reasonable to suppose that they should have points of resemblance. Literature, like nature, has a thousand different aspects; but just as in nature, with its infinite variety of charm, the same sky bends over all, and the same earth is under our feet, so poets and men of letters look, though with different eyes indeed, on the same world, and study the same humanity. They must work in accordance with the limitations of which every writer is conscious; and it is not surprising, the soil of the literary field being what it is, that the fruit produced by two independent labourers should be occasionally alike. What, then, it may be asked, is plagiarism? We answer that it is the appropriation of literary property, without the ability to use it. There are scores of versifiers who have in this way appropriated Lord Tennyson's style, or Mr. Browning's, or Mr. Swinburne's, and the result has been a feeble musical echo in the first case, a contempt of metre and grammar in the second, and an overflowing verbiage in the third. The plagiarist is the man who has nothing to say on his own account. The man of genius, on the contrary, when he borrows turns what he touches into gold, and gives a new beauty to what is beautiful already. He is content to use whatever materials he can gain access to, but he stamps upon them the impression of his own genius. And so it is that the poet, looking upon the objects that are common to us all, is able by the light of imagination to "flatter the mountain-tops," and to "gild pale streams with heavenly alchemy."

JOHN DENNIS.

# Under Discussion

## ARE WE GOING BACKWARDS OR FORWARDS?

BY THE AUTHOR OF "VOICES FROM THE HIGHWAYS," ETC.

"I BEGIN to feel weary in my very soul," said Penelope Boughton. "For all the work that is done for the good of the world, I ask does the world really grow better? One gets interested in somebody's case, and one grows to care so much and to have such good hopes. Yet, sooner or later, disappointment seems sure to come! I have grown to expect it! And when one feels sure what the end will be, one goes disheartened all along the line—so that, after all, one cannot help feeling when some sad end does come, that it may be due to one's own lukewarmness. I know I don't give myself so enthusiastically to the people I encounter to-day as I did to those who came across me at the beginning of my work. And I hate myself for the change, but I cannot help it."

I was glad that Penelope Boughton thus opened her heart to us, for both Pleasance and I had noticed that of late she had not been quite herself. And yet I was sorry that she spoke when she did, for we were not alone, or only companioned by our dear friends Mrs. Yeldham and Horace Penrith. We had some other guests — one a literary man, by name Claud Alton; another a middle-aged matron, Mrs. Baraclough, the wife of the wealthiest man in our district; while a third was a quaint little spinster, a Miss Bright, a remote connection of Mrs. Yeldham's dead husband. I was not quite sure but that any of these might grievously misunderstand Penelope. Mr. Alton is one who holds himself rather apart from ordinary humanity, and is apt to despise it as "common and unclean." Mrs. Baraclough had always seemed to me one of those people who are far more likely to suffer under the inflictions of an ill-served dinner, or the torture of an ill-fitting dress, than from any unsatisfied yearnings of the spirit. Yet it was she who hastened to answer Penelope.

"My dear," she said, "I rather think you are simply learning wisdom. By-and-by you will cease to waste yourself as, I maintain, you are doing. You will no longer expect from life what it never gives, but will take people as you find them, and be content to evade disappointment by giving up expectation. We all come to that in time. I too have had my ideals and enthusiasms, but now I know such things always end in smoke."

Yet she sighed. And she did look so affluent and comfortable! I could not help wondering in what direction these blasted enthusiasms of hers had been turned.

"Aristotle himself lays down the axiom that 'not pleasure, but freedom from pain, is what the wise man will aim at,'" said Mr. Alton.

"I thought," murmured Pleasance,

> "'Not enjoyment and not sorrow
> Is our destined end and way,
> But to act that each to-morrow
> Finds us further than to-day.'"

Mr. Alton looked at her with a sort of pitying superiority. He despises Longfellow because simple and unlearned people enjoy him. Besides, I think he would have liked to say, "Further from what?—further on the way towards what?" For though he has a profound belief in physical evolution, yet he is always singularly incredulous of moral development!

"It is only when we learn that pleasures are the direct sources of pain, that we can begin to know how to avoid the latter," he went on serenely. "The game is not worth the candle, since, as Voltaire remarked, 'Happiness is but a dream and only sorrow is real.'"

"But Voltaire was an atheist!" chirped Miss Bright.

"I beg pardon, ma'am; he was only a deist," said Mr. Alton, suavely. "But whether deist or atheist, he belonged to humanity, and has a right to record his experiences as a man."

"And looking at him entirely as a man," observed Pleasance, "surveying his life without theological prepossessions, I should be inclined to say that he was right as regarded anything he would have called happiness. In his sorrows he possibly made his nearest approach to some of that genuine depth of feeling in which alone joy can germinate."

"Yet I maintain my point," said Mr. Alton. "Where do you see your happy people? Among the successful? How often do they find their success to be what they have expected? Or, if it is, is not their own point of view changed? Is any rich man rich enough? Is any famous man famous enough? Is he not keenly alive to the presence of some Mordecai at his gate, whose supreme reserve annoys him more than the plaudits of the nation can please? Have we not heard of the great statesman who said he would gladly exchange all his fame and all his power for the youth and health of the ploughboy working on his fields—blessings which the ploughboy, in his turn, was probably content to waste in ignorance and beer-drinking? Have we not been told that the old millionaire Rothschild pronounced himself the most miserable of men? Are not any of the great good fortunes of life usually balanced by some calamity on an equally magnificent scale? Or, if good fortune of any kind persists for a while, it serves only to add pathos and terror to the end that must come at last. Love lends his arrows to Death, and the sweetest companionship entails the saddest loneliness. I remember, when I was a boy, being struck by the singular happiness of a family who had lived for nearly forty years in ever-growing prosperity, without any intrusion of Death within the circle, or any parting except for pleasant marriages in the immediate neighbourhood. Well, what happened? Within three years, Death was the constant visitor in that family—Death in his most terrible forms of the slow tortures of disease and the sudden terror of madness. There was misfortune, too—ruin, even shame. The record of household comfort and prosperity closed in something like antique tragedy!"

"Well," said Penelope, "what strikes me is, how often the worthiest and most promising members of a family die first, while the ne'er-do-wells live on for ever!"

"Yes," said Mr. Alton, "and evil heredity seems to flourish broadcast, but the genius and the saint usually leave no descendants. It has been said that the happiest nation is that which has no history—and I maintain that the happiest individual is he whose life flows on most evenly—that, as it has been well put, the happiest lot is not to have experienced the keenest delights or the greatest pleasures, but to have brought life to a close without any very great pain, bodily or mental."

"Oh, I dare say it is all true," cried Penelope with a sudden vehemence, like one startled and stung. "I feel as if it is. Only, if so, then it seems a great pity that life was allowed to rise beyond the jelly-fish stage, which was just admirably adapted for such an environment as you would desire. For under such an ideal, our powers of feeling and aspiring are no longer privileges, but penalties, cruelly imposed on us for no purpose!"

"Now here is one of the difficulties," I remarked. "Does not anybody reasoning thus find himself on the horns of a dilemma? One cannot lose faith in a loving Father-God, knowing His own goodwill, and powerful to carry it out, without finding oneself at once driven to a horrible realisation of a supreme Satan, mocking the purposeless tortures which he inflicts. If we reject an overruling Providence, leading all things to a worthy goal, we feel, in the words of a great modern thinker, 'that life is a foolish and wicked joke, played upon us by we know not whom.' Surely the latter possibility is not more credible than the former! And an ingrained sanity of our reason revolts against it, protesting, even in the moment of deepest gloom,' that life and nature are full of touches of sweetness and beauty, incompatible with such a frightful scheme of the universe!"

"I don't know," observed Mr. Alton, cynically. "It would be quite consistent with what we know of the deepest malignity, to grant just such ameliorations as would serve to prolong torture. Mind, I am only answering your argument. Of course, I hold no such creed. I repudiate the alternative to which you fancy I am driven. To me, Nature is self-sufficing, going on her way, fulfilling her own ends, and dealing with man precisely in his relation to her, without any particular reference to his individual self."

"That only seems to me that you vest the supreme power of the Universe in a politely passive, selfish Being, instead of an active Tormentor—Mephistopheles instead of Moloch; and I am not sure which idea I like least!" said Pleasance.

"But I cannot agree with Mr. Alton's premise—about the best of life consisting in immunity from suffering," remarked Mrs. Yeldham, quietly. "I think the best of life is got in realisation of the fulness of life, and its infinite reserves of power. And this we get only in great joy or great sorrow—and I rather think we may get it the most in the latter."

Nobody can turn upon Mrs. Yeldham, saying that she talks thus, not knowing what anguish is. Even strangers can see its stamp on every feature. Yet not in sadness, certainly not in gloom; rather in a strange brightness which suggests that in her case the fires of affliction have been so searching that only a very strong and pure nature could have passed safely through them. Even Mr. Alton's cool, sarcastic eye softened a little as he looked at her and replied:

"And yet who will deny that the storm of life often buffets the soul into longing for that peace of the grave! 'where the wicked cease from troubling and the weary are at rest'? And however we may choose to call this soul-sickness 'a mere disease of modern life,' we cannot forget that Job cried out, 'Let the day perish wherein I

was born!' and Solomon himself declared 'the day of death to be better than the day of birth.'"

"Still," said Mrs. Yeldham, calmly, "I maintain that what we call the longing for 'rest' is at its root rather a longing for renewed strength. It is like the weary labourer's watching for set of sun, that he may go home to sleep. Though his thoughts may not go forward consciously to to-morrow, yet in the background of his mind remains the knowledge that at dawn he will rise refreshed!"

"But think of the suicides," urged Mr. Alton. "They, at least, in the moment of their rush to doom, can scarcely look beyond the mere hope to escape from something unbearable. And remember many of them—and some think an increasing number—are not profligates or gamblers, or men of otherwise lost character or useless life. Think of Hugh Miller, and of numberless others, of the purest and most admirable record, who have yet found something in life that made life unbearable, so that at last the tortured soul broke down the barriers of self-control and rushed out into the darkness. One can scarcely dare say that it can be 'the best of all possible worlds' in which such men as these find it impossible to live! For either they are worn-out in grinding toil for those means of physical existence which they see squandered on every hand by the idle and the vicious, or they are worried out by constant friction with supercilious incapacity or spiteful antagonism, or they find their efforts stultified by the 'insolence of office' and the power that seems always 'with the oppressor.' And when it is too late, and they are gone, how many friends they have who 'would have done anything for them.' But before it was too late there was none to give one considerate thought to the burden they were bearing!"

Mr. Alton spoke with a keen bitterness which he rarely permits to ruffle the calm indifference which is his chosen standpoint in life. I knew the reason for this. One of his earliest friends had 'gone out into the darkness' under such circumstances as those he had recapitulated.

Mrs. Yeldham spoke very gently. "I think," she said, "that if, under any of the unavoidable pressures of life, sleep fails and nerves are strained until reason totter, then suicide becomes a form of disease, the effect of certain causes, as pneumonia might be of exposure to cold, or fever of an accidental infection. Then the only moral side of the matter is how far were these pressures themselves unavoidable—an inquiry which you see might appertain equally to a death from pneumonia, since even that might be contracted either in facing a tempest to aid a sick person, or from spending a night in a ditch in a state of intoxication."

"Yes," said Pleasance, "I often think there is more grinding care and overstrain undergone to secure the unnecessaries of life than its necessaries! I think many a sad 'breakdown' might be truly attributed to a new carpet, a carriage, or an extra servant. I mean that these luxuries may have led insensibly to an enlarged way of life, in which burdens at last grow too heavy to be borne."

"I know," said Horace Penrith, "that a great many of the health failures and even deaths among students, though attributed to 'overwork,' are really due to the endeavour to combine things incompatible,—for example, studious distinction with social dissipation. Of course, the sheer idler, or 'waster' who does not trouble work at all, does not suffer. But he who sets himself high academic aims, and yet for their sake cannot even for a while forego late and exciting parties and a host of trivial engagements and acquaintances, is simply burning the candle of life at both ends. Yet if his light goes out untimely, then the tragedy is all attributed to 'the severe mental strain rendered necessary by the terrible pressure of modern life,' or to his indulgence in gloomy and morbid ideas which were symptoms of his nervous malady, and not its cause."

"Yes," went on Mrs. Yeldham, "so even in those cases where to human eyes the pressure may seem to have been more on the will and the mental powers of endurance than the mere physical faculties, still I think our consideration should be given rather to the way than to the end. For the whole truth must remain hidden between God and the individual soul."

"I am inclined to doubt," said I, "if such despair often believes itself rushing forward to annihilation. I think rather it has a desperate longing to be 'away from men'—to take, even by storm, some Divine refuge from 'the strife of tongues,' the insanity of its method being made manifest by its loss of the consciousness that if God is there, then He is here, and if He may be trusted to have a home ready there, may be equally trusted to remember His soldiers while they remain in their places here."

"So, as our friend Pleasance says," added Mrs. Yeldham, "our tenderest sympathy with these poor sufferers must not hurry us into the conclusion that they always are the helpless victims of some established Law of the Universe. Possibly the reverse. Has not a great thinker of our own day declared that 'the majority of men are martyrs to the doctrine of the world. . . . For each Christian martyr there have been a thousand martyrs to the doctrine of the world, and the sufferings of each of them have been a hundred times more cruel than those endured by the others.'"

"You see, Mr. Alton," said Pleasance, "we do not say with smug contentment that this is 'the best of all possible worlds,' because we do not consider it is quite finished yet! There may have been a Sabbath-like pause of completion in Nature, ere Human Nature took possession of the scene, but then a new cycle began, all creation groaning together waiting for the manifestation of the Sons of God! Some people when they discuss evolution theories will ask, What do we see being evolved to-day? We are not now discussing such theories, but I am inclined to answer, Man himself. Contrast the lowest specimens of savage humanity with some nobly organised individual of the higher races, and reflect how each race is destined to hold its own only by its power of adapting itself to ever new, developing conditions, and by its ready adhesion to whatever of superior quality is presented for its choice. You have human degeneration too,—not only seen in those slums where civilisation sinks below savagery, but also in effeminate luxury, such

as made the antique classical nations the ready prey of a more manly and vigorous barbarism. And what is true of physical things seems to me to be also true of things spiritual. Contrast the character and life and aims of some soul of saintly unselfishness with those of the average man of the world or woman of society, and we see again the dawn and the gradual development of another new order of life."

"And because we catch a glimpse of this new order—and even the more we catch glimpses of it," said I, "we are often apt to be impatient because it does not at once overflow the earth. Yet it is not likely that social wrongs and moral evils will vanish more swiftly than did the hideous and unwieldy animals of earth's primitive ages. And though the mastodon and the pterodactyl went long ago, the dodo has only vanished within historical memory, and the hippopotamus is still with us. 'He that believeth shall not make haste.' We are warned by very ancient wisdom 'not to forget this one thing, that one day is with the Lord as a thousand years, and a thousand years as one day.'"

"Ah," said Mr. Alton, "but I can't take comfort from these grand views. The cry of 'a good time coming' has been over and over again proved fallacious, and merely to postpone its advent for a few thousands of years may indeed postpone the disappointment which would promptly befal us if we expected it to-morrow; but we cannot take solid comfort wherever we once suspect delusion. Let us grant there is a 'future life.' I am quite ready to do so. Nature is so thrifty that I cannot imagine her wasting those results of individuality which are among her costliest products. Still, how little do we know of it; and from what we may predicate, why should we regard it as likely to be a universal "compensation"? Rather we may regret that a quiet and complete annihilation—the Nirvana of Buddhism—seems but to be the vain dream of a helpless humanity which is only too firmly caught in the toils of a Nature so sternly conservative of all her energies! For as what you call 'spiritual life' develops on this earth, does the possibility of suffering diminish? Is not

> 'The sign of rank in Nature capacity for pain'?

Do not the very characteristics which fit a soul for 'heaven' tend to destroy personal peace and pleasure while others remain under woe and wrong? Increase of wisdom and width of view means increase of sorrow by the knowledge of connection of cause and effect, and the almost prophetic powers which grow thereout. What is to be the outcome of all this? One can catch some idea of a lengthened vista of struggle and weariness; but what is at the end? Or is there any end? Can anything be worth all this pain and woe? Therefore it still seems to me that the only wisdom left us is to snatch as much ease as possible for each passing moment. Every quiet hour is at least so much saved from the general storm, which for aught we know may grow still more strenuous. That is all my philosophy."

"It is unutterably dreary," sighed Penelope. "But I only wish I could totally deny truth in what you say."

"May there not gradually come some change in ourselves which shall convert at least some pains into pleasures—nay, into exquisite joys," asked Mrs. Yeldham. "We know that children often cry when they are learning to walk, yet active exercise is one of the greatest delights of matured strength. No art, even one for which the learner has great gifts and inclination, can be mastered without struggle and sacrifice on many sides; yet after a certain point, its practice will become nothing but the most wholesome and enduring of joys. The time for learning may still go on, but the days of crying over lessons come to an end, and even new difficulties only bring new delight in the exercise of conscious power. I think there is a charm and an elevation in those growing ideas which suggest to us that, after all, the true bliss of the higher life may even be made out of the very materials of effort and yearning which we call toil and sorrow here. Are not the books our age delights in, made of the same alphabet over which we mourned and fretted in childhood? I think our Poet Laureate has written nothing grander than the lines:—

> "'The wages of sin is death: if the wages of virtue be dust,
> Would she have heart to endure for the life of the worm and the fly?
> She desires no isles of the blest, no quiet seats of the just,
> To rest in a golden grove or to bask in a summer sky:
> Give her the wages of going on, and not to die.'"

"But before one can accept these theories, one wants to see some promise of them in the tangible present," urged Mr. Alton. "And I must own I don't take kindly to most of the new ideas and ways by which the world is to be presently set to rights. I don't want to be at the mercy of a 'majority,' even for my good! I would rather be miserable, as the 'majority' would think, after my own fashion, with a book in an attic, than 'happy' after its mode, drinking beer in a public garden to the music of a brass band! (And the worst of it is, the brass band will disturb me in my attic!) I'd rather (like Mr. Ruskin) have my sugar (of all kinds, physical, mental, and moral) in different sized lumps, so that I could suit my own taste, than cut out in even squares to be administered in a regulation number! I think I am rather sorry that everybody has learned to read, since it really seems hard nowadays to get a new book, except of the kind which 'everybody' has the wits to enjoy! The whole world is getting deadly monotonous. You can't travel except in railway carriages and through first-class hotels all so alike that you don't know which country you are in! I suppose, though, that for my time at least there will remain a few quiet corners in the South Sea Islands and districts of Central Africa, where one can escape from decorative drawing-rooms, and society strictly regulated by etiquette, and where one need not make believe to appreciate high art,

or classical music, whether one does or not. Still, one cannot say. Fiji and the Great Dark Forest may be soon infected. Things go so fast nowadays."

"But then, Mr. Alton," said Horace Penrith, "are you fighting against the present-day tendencies, which you think so mischievous?"

"Well—no," admitted Mr. Alton. "From my point of view it is not worth while. One submits to the spirit of the age. I am not made for conflict. Peace is my pleasure, and I pursue it."

"Well," said Pleasance, "I must say that the happiest people I know are those who have quite left off pursuing pleasure—and to whom much that most think pleasurable has become matter of absolute indifference."

Sighed Penelope, "In a general way I have been able to say that nothing made me so happy as my work. All sorts of effort and struggle became delightful when they achieve their results. But somehow, of late, my work has lost its savour, and its results all seem miserably inadequate. One is thankful to undergo any vigils, any trouble, to get drunkards changed into sober men; but how does one feel when at the end of six months they lapse back into habits as bad as before? Or, worse still, if the sinners seem only to change their sins for some more 'respectable' and selfish form, like a young woman we rescued from the streets two years ago. We started her in business, in which she is thriving abundantly by virtue of the most cruel 'sweating' of those whom she employs! And the arguments which she uses when we try to convince her of the sin of this process, prove that all she has ever really recognised as 'sin' in her former courses was their pains and penalties!"

"You feel this of the individual," broke in Horace Penrith, "and I must confess that I feel it more and more every day concerning onward movements on a larger scale. I see that we have not abolished slaves because we have abolished slavery—and I doubt if the blood feuds and civil wars which we seem to have got rid of destroyed more life or caused more misery than the terrible competitions and trade struggles and heartless adulterations rampant among us still. It does often seem as if the noblest of mankind had offered themselves up in willing sacrifice or worn themselves out in heroic struggle to achieve so very little progress! One would not think of oneself one whit—if giving up oneself only secured something better for those who come after. But if only the names of evils are changed, and posterity is to have the same struggle and the same disappointment, what is the use of it all?"

"But what if the sacrifice and the struggle are themselves at once the best evidence and the very crown of progress?" pleaded Mrs. Yeldham. "Think! some wrong has been privileged from the beginning of the world, never recognised as a wrong, but quietly accepted as part of the necessary constitution of things. Suddenly it stands revealed to the conscience of some pure soul. Think of the advance which humanity has made before this purer soul, with its quickened intuitions, has become possible! And when such an one rises resolved to put his new sense of right to active use, at any cost to himself, then I think the true point of progress lies not as much in what he achieves or conquers, as in his own nature. In his person the tide of humanity is leaving a higher mark than before."

"Don't you think," said I, "that one origin of a sense of gloom and disappointment, and utter 'nothingness,' is found when the mental faculties—or call it 'conscience'—recognise as evil something which there is not moral strength to throw aside, or sees a good which there is not moral courage to struggle for and carry out? I think it is true in a very deep sense that we 'live by faith,' and since we know that faith without works is dead, so every separation between faith and works involves a stage of spiritual decay. A state of intellectual confusion is incompatible with those deeds of 'high strife and glorious hazard,' in which alone the human soul finds its healthy element. So when society becomes composed largely of individuals in this divided and inharmonious state, then society itself feels the pressure of a cloud of hopelessness and heartlessness, and pleasure takes the form of excitement which bewilders or of luxury which narcotises. Possibly such a cloud is passing over what is called the highest civilisation at the present time. And certainly we may notice that while purer and grander ideas on many subjects are gaining intellectual ascendency, such ideas, along with ethical questions of all sorts, are favourably discussed by too many whose lives, nevertheless, they are not allowed to influence. Those who laugh most at the 'gospel of getting on' are often found to be its most active disciples. Millionaires decry the wealth they nevertheless heap up. The 'dignity of labour' is upheld by those who never did a useful thing in their lives, while 'conventionality' is made a laughing-stock by some whose own constant consideration is not 'what is right?' but 'what is proper?' And all the while there is an undercurrent of wailing that there is nothing to live for, that the world is hollow, that the present times are commonplace, and that a hero can find no occasion to manifest himself!"

"Well," said Penelope, "I thought you wanted to cheer us, but I consider that you yourself have drawn as gloomy a picture as possible of the present state of things. And as it also seems to me a true one, I feel worse than ever!"

"What nonsense, child!" I cried. "Did I not qualify my words by speaking of this cloud as passing over what is called the highest civilisation? What is called the highest civilisation is rather those infinitesimal sections of humanity which on certain small spots of the earth's surface have managed to separate themselves from all the solid interests and functions of humanity in general—who have lost the wholesome interest of bread-winning, because their bread is already won for them, who enjoy nothing because they have nothing to do but amuse themselves, who defend themselves on every side from pain and shock—and whose souls therefore are likely to be as healthy as bodies would be which were rolled up in cotton-wool and never exercised! I am not saying these people are necessarily the rich: you

will notice that my description applies to those who prey like fungi on the body corporate—the world's paupers, that fateful class who may belong to any rank. But because these may be very evident to ourselves—even though they be the special incubi of our own lives, we must not exaggerate their importance, nor allow them to darken the face of the world for us."

"No, indeed," cried Mrs. Yeldham. "The world goes on, by virtue of the people who are not as these, the countless people who toil and dare and endure and suffer, and manage at once to live happily and to be quite ready to die when their time comes."

"The importance and the number of the other sort are magnified because they are generally so audible!" observed Pleasance. "It is your melancholy Jacques and your irresolute Hamlet who make the long soliloquies. And the worst of it is they infect others with their melancholy who would never have generated the malady of themselves, and they also provide a terminology for those merely transient fits of physical depression (due sometimes only to the weather) which would otherwise have passed by unrecorded."

"Well," said Mrs. Baraclough, "you have all been saying a great many fine things. And young Mr. Penrith—and, for that matter, Miss Penelope too—have both got the best part of their lives before them, and are entitled to hope as much as they can—and well they may—for, according to my experience, they will soon find that the anticipation of any blessing is the best part of it! But for the rest of us, we have had our day, such as it is, and have now just got to make the best of the remainder. Was it not Byron who said, 'Youth a blunder, middle-life a struggle, age a regret'?"

"I must say his own youth was rather a blunder, poor fellow," assented Horace Penrith.

"What did he know about age?" asked Pleasance—"he was only thirty-three when he died."

"I am the oldest among you," observed Mrs. Yeldham, "and I wish to bear this testimony of my experience. I have never met any old acquaintances—after the lapse of many years—without being struck with a genuine improvement in them! Sometimes certain appearances are against this, but I never fail to find the real improvement, if one only looks deep enough! Possibly even 'regret' may often be a feature in this advancement."

"There is always something pathetic about old age," remarked Mr. Alton, shaking his head.

"There is something pathetic about all life," I said. "But surely there is more pathos about youth than age? Is there not more pathos about a ship just starting on its voyage to unknown seas than about that which is coming safely into harbour?—ay, even though with rent cordage and torn sails. For, if we do believe what certainly most of us profess to believe, age is not the ending of life, but the completion of a perilous stage thereof."

"Ah," sighed Mr. Alton, thoughtfully, "I admit that, as you say, the wide discrepancy existing between the faith most of us profess and the faith we realise, doubtless accounts for much of our discouragement! I don't profess much myself."

"Well," observed Mrs. Yeldham, "I think that everybody who feels the world is not all they would like it to be, will do well to consider the words of a great modern writer, who after looking at life from every side, declares himself thus: 'Let all the world practise the doctrine of Jesus, and the reign of God will come upon Earth'—and he hastens to meet the ready objection of those who will rejoin, 'What am I among so many?' by adding, 'And if I alone practise it, I shall do what I can to better my own condition and the condition of those about me.'"

"I fear," said Pleasance, "that we are not making the most of our Christianity whenever we cannot say with the modern poet:

> 'That soul hath done with sadness which knows Christ aright.'"

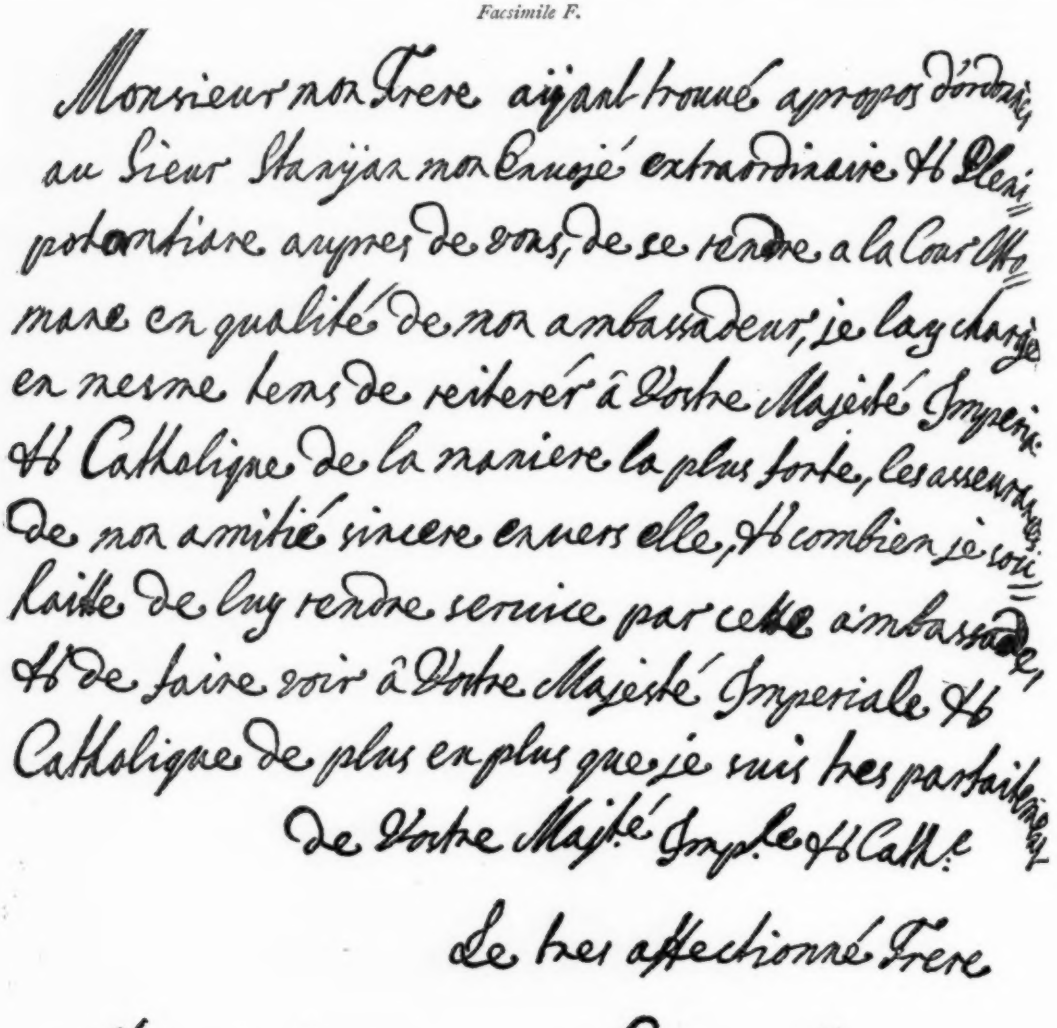
But the cloud did not lift from Penelope's sweet face, and when Mr. Alton and Mrs. Baraclough had taken their departure, she turned to Mrs. Yeldham, who took Penelope's hand, saying:

"I have tried to learn of Jesus, and to follow in the ways He sets before us, and yet——"

The gentle voice broke down, the soft eyes were full of tears.

# THE HANDWRITING OF OUR KINGS AND QUEENS.

BY W. J. HARDY, F.S.A.



## GEORGE I

To find an interesting letter of such a thoroughly uninteresting character as George I, is, on the face of it, so hopeless that I have not attempted the task. The following is a fair type of his compositions preserved to us. It is addressed to the Emperor Charles V, and was to be carried to him by Abraham Stanian, who was being sent as English Ambassador to Constantinople.

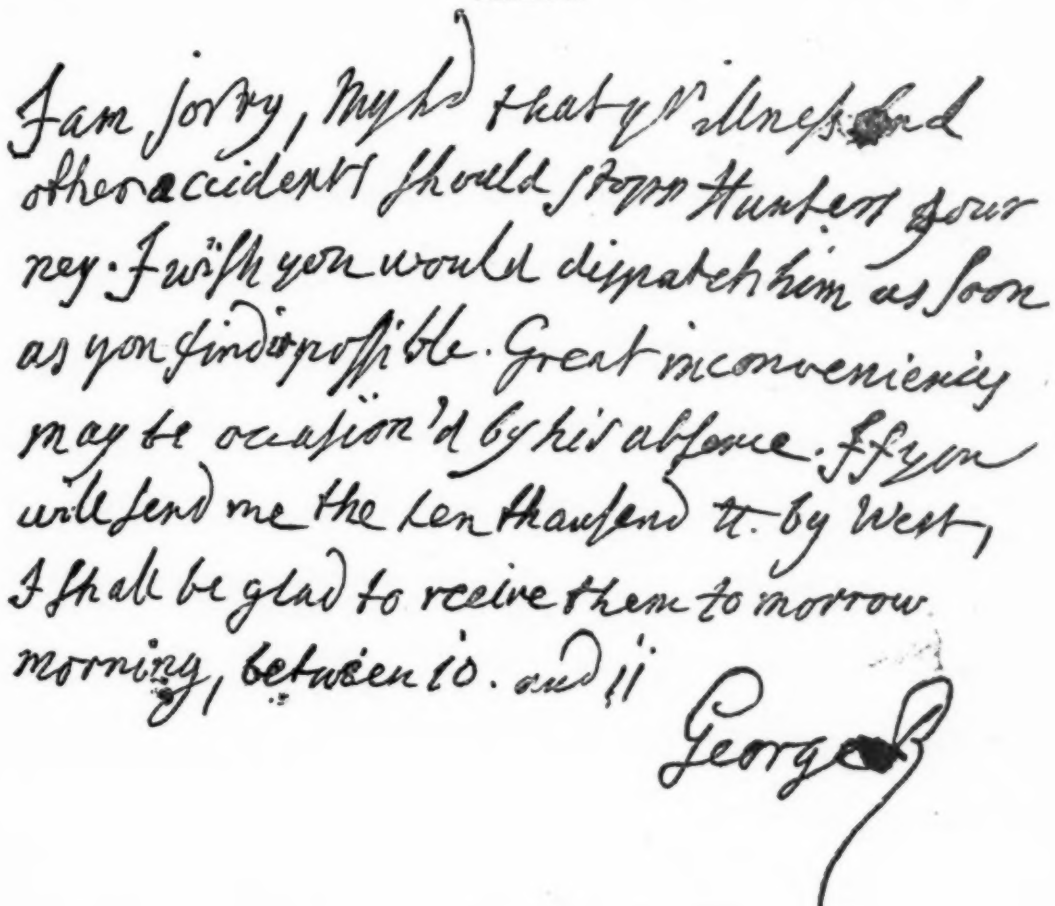
*Holograph. Translation. Original in French. British Museum. Additional MSS.* 22,046, *folio* 48. *See facsimile F.*

"My Brother! Having found it convenient to order Mr. Stanyan, my envoy extraordinary and plenipotentiary, near you, to return to the Ottoman court as my Ambassador, I have

*Facsimile F.*

Monsieur mon Frere ayant trouvé a propos d'ordonner
au Sieur Stanjan mon Envoyé extraordinaire & Plenipo-
tentiaire auprés de vous, de se rendre a la Cour Ot-
mane en qualité de mon ambassadeur, je lay chargé
en mesme tems de reiterer à Votre Majesté Imperiale
& Catholique de la maniere la plus forte, les assurances
de mon amitié sincere envers elle, & combien je serois
faitte de luy rendre service par cette ambassade,
& de faire voir à Votre Majesté Imperiale & Ca-
tholique de plus en plus que je suis tres parfaitement
de Votre Majté Imple & Catle
le tres affectionné Frere
George R
à Hampton Court
le 12 d'Octobre 1717

charged him at the same time to reiterate to your Imperial and Catholic Majesty, in the strongest manner, the assurance of my sincere friendship towards you, and how I wish him to render service by that embassy and to make known to Your Imperial and Catholic Majesty more and more that I am most perfectly



"Your Imperial and Catholic Majesty's most affectionate brother

GEORGE R.

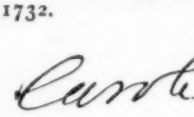
At Hampton Court
the 17th of October 1717."

I have not met with a specimen of the handwriting of George I's Queen, Sophy Dorothy of Zelle. That below was written in 1759, about a twelvemonth before his death, and is addressed to the Duke of Newcastle, the minister whom he had been forced two years previously to recall to office. The letter itself refers to the despatch of a messenger, probably to Germany; but the King's monetary dealings with Newcastle, which the letter mentions, may not be without significance when we remember it was that minister who dispensed the money which during George II's reign was so lavishly expended in Parliamentary and other corruption.

*Facsimile G.*

GEORGE II AND WILHELMINA CAROLINA, HIS WIFE.

Though George I occasionally spoke English, his accent was atrocious. He seldom trusted himself to write the language of the people he had been called to reign over, whom to the last he regarded as foreigners, and with whose sentiments he was never in touch. George II came to England as a younger man, and entered more into English ways. He spoke and wrote English fairly well; but as he was only a little more interesting a personage than his father, it is almost as useless to seek for an interesting example of his composition.

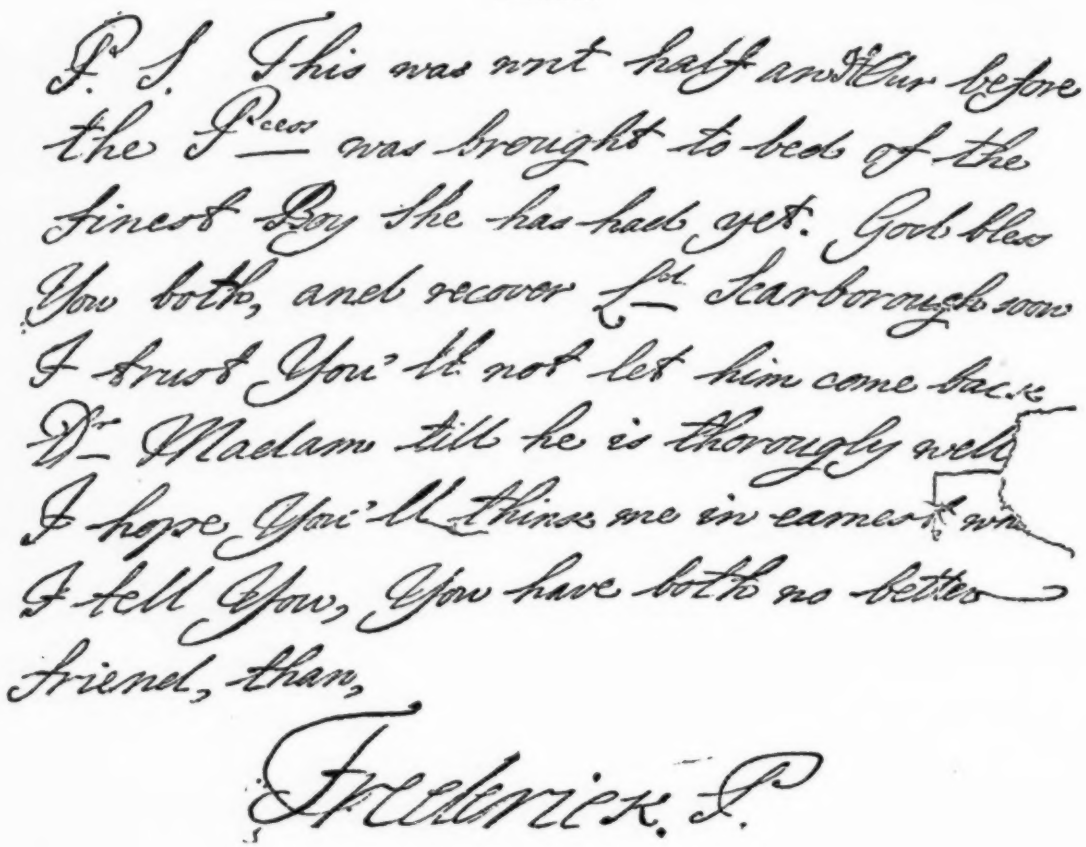


*Holograph. British Museum. Amongst the Newcastle Papers presented by the Earl of Chichester in* 1886. *See facsimile G.*

I am sorry My Ld that yr illness and other accidents should stopp Hunter's journey. I wish you would dispatch him as soon as you find it possible. Great inconveniences may be occasion'd by his absence. If you will send me the ten thousand £. by West, I shall be glad to receive them to morrow morning, between 10 and 11.

GEORGE R.

George II's Queen, Caroline Wilhelmina of Anspach, was a marked contrast to her husband. Cultured, witty, and fascinating, her death in 1737 was a real loss to the English people and to the



King. A story, told in a contemporary letter, of her fondness for making a witty speech is worthy of relation. During her last illness, when her physician, who was seeking a divorce from his wife, came to bleed her, she bade him raise his head towards her before he began, saying, "Let me have a look at your comical face!" and as he commenced the bleeding, added, "What would you give now that you were cutting your wife?" The signature below is appended to a letter written by her in 1732.

*British Museum. Additional MSS.* 32,684, *folio* 1.

his mother the Prince seems to have entertained a lively regard. Contemporary letters speak of the affectionate relations existing between them, and of their constant meetings whilst the King was away on the Continent. When, however, George II was in England all this was changed; at the Court balls the Prince had his own room, danced with those of his own set, and entertained them at a separate table. In 1737, only a little before the death of the Queen, the rupture between the Prince and his father became so open that the latter was forced to retire altogether from the Court. In May 1736 Frederick married the Princess Augusta of Saxe-Gotha. Lady Strafford gives her husband the following account of the lady and of the wedding, which, we see, took place in the evening: "The Princess is neithere handsom nor ugly, tall nor

*Facsimile H.*

### THE CHILDREN OF GEORGE II.

Just as George II hated his father, Frederick Prince of Wales, as he grew up, hated George II and his chief Minister, Walpole. Frederick had come to England much earlier in life than had his father or grandfather, was more conversant with the language and the people, and possessed more English personal friends; amongst them some of the bitterest political foes of Walpole. But for short, but has a lively pritty countenance enough The Duke of Grafton told me we ware to meet in the Great Drawing-room, and the Peers and Peeresses to either goe down into the chaple after the Queen, or sitt, during the cerrimony, above in the King's closset (which he said, as a friend, he thought wou'd be the best place). Then We were to see them supp, and then see them abed." The Prince's home was now at Leicester House: here George III was born in 1738; and here. with the

"patriots," as Walpole's opponents styled themselves, plenty of uncomplimentary language was spoken about the King and his advisers. Lord Scarborough was one of the nobility who attached himself to the Prince's party, though he did not wholly sever himself from the King's, and he and Lady Scarborough—to whom the letter, the postscript to which appears in the facsimile on the previous page (H), is addressed—seem to have been frequent visitors at Leicester House. The boy here referred to was christened Henry Frederick, and became Duke of Cumberland.

In Facsimile I, we have the signature of Frederick's wife, the Princess Augusta; and following that, specimens are given of the handwriting of other children of George II.

*Facsimile I.*

Believe me allways Dr Madam

Yours very affationate

Augusta

OTHER CHILDREN OF GEORGE II.

I remain your very affectionate

friend

William

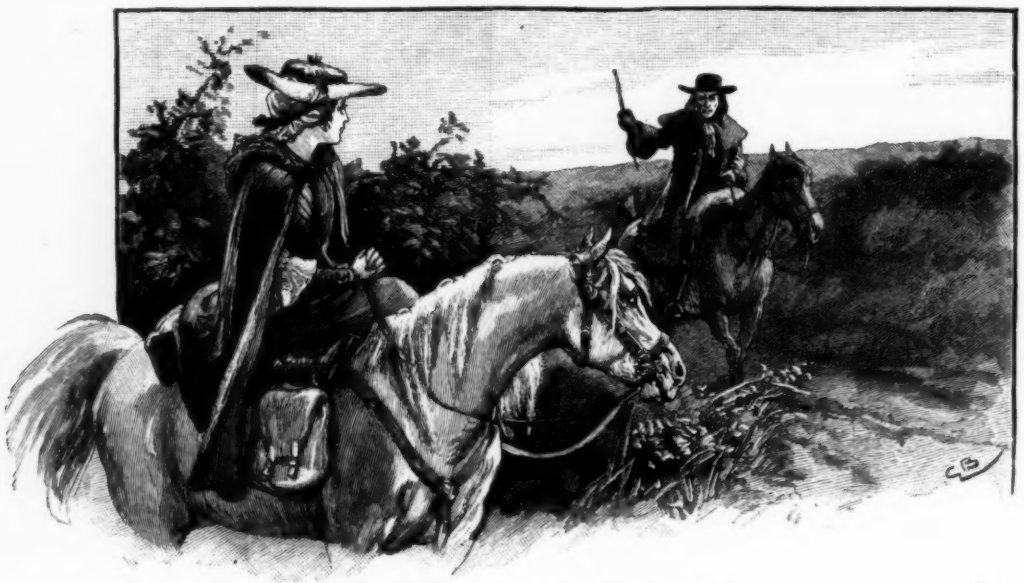
Anne

(*c*) PRINCESS ANNE: died, 1759; married the Prince of Orange.

Mary

(*d*) PRINCESS MARY: married the Landgrave of Hesse Cassel; died in 1771.



Louisa

(*e*) PRINCESS LOUISA: married Frederick V., King of Denmark; died, 1751.

# THE TRIAL OF MARY BROOM.

BY MRS. COGHILL.

## CHAPTER I.—THE KILN AT THE OLD "BANK."

THE OLD MAN'S VOICE STARTED HER FROM HER ABSTRACTION

IT was not quite an ordinary farm that George Broom cultivated. It had been a famous place for pasturage in his father's time, though the climate was somewhat cold and windy. But the pastures had been to a great extent spoiled by the fumes from neighbouring potteries; after losing a good deal of the family capital—a thing that went to his very heart—George had had a happy idea, and removing his stock to the other side of the hill, had started a small "Pot Bank" himself. Thus it came about that besides the cow-houses and stables in close neighbourhood to the house there were rough workshops; and a hideous kiln occupied the centre of what had once been the farmyard.

The family of Broom was one of the most substantial and respected in the district. All the week they worked at their different occupations: George himself, one of his sons, and two or three workmen at the "Bank;" Mrs. Broom, another son, and the only daughter Mary, about the business of the farm. On Sundays Mrs. Broom and Mary, and at long intervals the young men, went to church, making a laborious journey for the purpose. George himself, and generally his sons and workmen, went off in search of pleasure; usually coming back more or less drunk, and not unfrequently severely battered in fighting. It happened occasionally that there was a bull-baiting, or perhaps only a premeditated and arranged fight, coming off at Burslem or Newcastle, and when that was the case the men of the family invariably attended, not only for the pleasure, but because they would meet "all the world" and talk over business as well as sport.

Next to Sunday the most marked day in the week was Saturday. On Friday evening the coarse yellow or red ware made at the "Bank" was packed carefully into the ovens, and on Saturday morning the air was darkened with fumes from the salt glaze that melted and fused in the hot fires. From the hill on which Burslem stood, through the valley that separated it from Seton's Green, and far away in various directions now covered with populous towns, these same stifling, blinding fumes were going about, filling the atmosphere and blotting out the sky.

On Saturdays, Mrs. Broom and Mary used to shut all their windows and occupy themselves as much as they could indoors. They were used to the suffocating dismalness of these times, and never thought it possible that earthenware could be produced without it; but sometimes Mary went away on a visit, and she always tried to include a Saturday and Sunday in the limits of her absence. A sister of Mrs. Broom's lived a mile or two from Congleton, and when Mary could persuade her father to spare a horse, she was delighted to ride off the ten or twelve miles to her aunt's house, though to do so took her nearly the whole length of a winter day.

Roads in those days there were none in the neighbourhood of Seton's Green. Such household supplies as they could not produce for themselves were brought to the family on horseback by travelling traders, and the "pots" made at the "Bank," except such as were bought by the neighbouring farmers of Staffordshire and Cheshire, went away to Liverpool or elsewhere in crates carried by strings of packhorses who with their owners represented the yet unthought-of railway. Even waggons, such as were already used in many other parts of England, could not traverse those narrow and miry ways—the packhorses themselves sometimes came to grief in a quagmire as they struggled from one hill to another of the beautiful but uncared-for district.

To Mary Broom, however, a journey on horseback, with her luggage in a bundle strapped to the saddle, was no hardship, but one of the ordinary events of life. And one fine autumn morning she started back from her aunt's house in so pleasant a frame of mind, and was so occupied with certain new ideas that were dancing a perfect May-day revel in her brain, that she never noticed how much of the road she had passed, or that she was about entering the Pottery district, till a voice behind her calling out, "Good-day to you, Mistress Mary," started her from her abstraction. She looked round with a smile, for she knew the voice well enough, and drew up her old grey horse to wait for a traveller, who was approaching by a byepath, and apparently intending to join her.

"Good-day, Master Harper," she said, as an old man jogged to her side. "Are you going my way to-day?"

"Yes, my dear, I be," he answered in a quavering old voice; "and good company, thou knowest, mends a bad road."

"To be sure it does. And then you've always a tale of something or other, haven't you?" she asked, rather mischievously.

"Well, I do hear a bit, thou seest. It's here a day's work and there a day's work, now the good wife's winter cloak and now the good man's riding hose, and sometimes a new cushion for the settle. And I keep my eyes open, and my ears, my dear, as well as e'er a young one."

"And what is the last news?" Mary asked, to keep the old man talking.

"Sure enough thou'st been gadding off to Mistress Leader's again, and hast not heard the last, I warrant. Well, thou know'st the old 'Bank' down yonder at Bradwell—that where John Clegg died in the spring?"

"Surely I do. It was there our man Richard used to work."

"Well, it's going again; began a week or two ago, it seems. And they say the men that bought it be Dutchmen or some outlandish folk, and mean to bring in new ways among us. There was talk on Sunday of thrashing them and bidding them be gone; but thy father he says, 'Bide a while and see what harm they do.'"

"What harm should they do?" Mary asked. "And why did they come here?"

"Thou never knows what harm outlandish folks may do," Master Harper answered sagely. "They are going to make pots, and there's enough of ourselves, I warrant, in that trade. Why they came here who knows, unless for mischief."

"What sort of men are they?" Mary asked. "To look at, I mean. I suppose you have seen them."

"Ay, I've seen them. Two brothers they are; and one may be thirty years old, and the other four-and-twenty, as I can guess. They can talk well enough for a plain Englishman to understand, but they're not for us, them nor their ways, that thy father will find."

Jogging along together the two travellers had by this time reached the track that led to Seton's Green; and Mary bid the old travelling tailor "Good-bye" and turned up the steep and muddy way. Her pleasant visions had been put to flight by the interruption, and she was thinking as she went of the strange event of two foreigners coming to settle in this inland place, and why they should have done it. So it happened that when she had arrived at home, and given her mother all the news of their friends in Cheshire, she began to ask what old Harper's story meant.

It was quite true, Mrs. Broom told her, that the pottery formerly occupied by John Clegg had been bought by a Mr. Elers who came from "somewhere over the sea," but who could speak English, and was a Protestant, and moreover certainly a potter.

"Your father has stood by him," she added, "and he seems a friendly man and civil. He was at church on Sunday, and Will spoke to him and asked him why he came here, and he just said, 'Because it is a good place for making earthenware.'"

Mary was not, after all, eager enough for more particulars about the new comers to go on with her questions. Her thoughts went back to her recent visit, and the object which had been occupying them before her encounter with the tailor.

That object—as was not very unnatural with the thoughts of a young and comely maiden—was a good-looking young man. She had found at her Aunt Leader's, on her just concluded visit, a member of the family hitherto unknown to her, except by name—a certain Ralph Leader, her uncle's nephew, and a townbred personage, who had managed to entertain himself and her by much talk of distant places and exciting incidents. They had been several days under the same roof, and by the end of the third day the talk of adventures had somehow drifted into talk of Mary. She had been made love to before now, being, as has been said, comely, and the daughter of a well-to-do family; but that previous love-making had not pleased her, either because the makers of it were too rough and homespun, or because they had shown too plainly that they esteemed her fortune more than her face. But Ralph had known how to make her feel herself an object of admiration after she had already begun to admire him, so that she had left Mrs. Leader's house in a mood to think very kindly of any suit he might make to her; and when he had walked by the side of her horse for more than a mile of her way they had parted very nearly, if not quite, lovers.

This was what she was thinking of—and whether Ralph would come to see her as he had proposed to do, and what her father and mother would say to such a visit. And with these questions filling her mind and leaving no room for any visions of "outlandish men" or other curiosities, she fell asleep on the night of her homecoming.

It was not likely, however, that John and Francis Elers should be dropped as a subject of discussion among the slow wits and gossips of the neighbourhood. A train of packhorses happened to be due at Seton's Green shortly after Mary's return, and when the man who conducted them came into the house for a glass of Mrs. Broom's small ale, he had much to say on the subject. Mr. Elers was already at work, he said, and had engaged him to carry a load of pots to market the very next week. The old "Bank" was going to do a stirring trade, it appeared; and people in Burslem were saying that the brothers knew more about the clays than men born in the parish. "It was queer, everybody thought, that Germans should come here and know the trade of the place as well as any Englishman."

George Broom said, "Wait and see; there's room for the old 'Bank' pots, and I reckon they'll be no better than they were in John Clegg's time. I'm not frighted;" and he laughed a great roaring laugh, which the packman echoed out of civility.

It came to be known that the new establishment consisted of the two brothers, three foreign workmen who had come with them, and a few Englishmen engaged directly on their arrival. The elder brother managed the whole business, bought the materials, and sold the produce. The younger brother worked as a "thrower"—that is to say, formed the pieces of earthenware on the potter's wheel, at which, though so young, he was a highly skilled workman. The other foreigners were employed in mixing the clays, and other processes requiring knowledge. The Englishmen did such work as involved no acquaintance whatever with the processes of manufacture. All worked long hours and with little intermission—the brothers, apparently, because they chose; the men because they were paid good wages and were closely watched to see that they earned them.

One Saturday afternoon, when the whole district was wrapped in grey, suffocating mist from the ovens, old tailor Harper paid a visit to Seton's Green. He came about some matter of his craft,

OLD TAILOR HARPER BRINGS MYSTERIOUS NEWS.

but it was not long before he began to discourse about the strangers.

"I came by the old 'Bank' at Bradwell," he remarked to Mrs. Broom, "and 'tis a pity to see it."

"Why, what ails it?" asked the mistress.

"What day of the week callest thou this, goodwife?" was the next mysterious utterance.

"Saturday, to be sure. Where be your eyes, Master Harper, or your nose either, to ask such a question?'

"Why, there's the point, mistress. Saturday it is, and they're firing—the Dutchmen are—and looks to me they mean to fire the country along of their pots."

"Make too big a smoke, do they?" asked Mrs. Broom.

"Smoke? It's Sodom and Gomorrah, as the parson talks about. There's a flame as tall as a church spire."

"Nay, now; that would spoil all their ware."

"Well, then, they've spoiled it—and no great harm if they have. I wish 'em no better."

"But I do," said Mary. "And I'm sure they know their business better than that. Father saw Mr. Francis Elers this morning, and he said they would have a full load for the horses on Wednesday. They had engaged Tom Wade, and father wanted him."

"Well, mistress," the old man repeated, "all I can say is this. The kiln at the old 'Bank' smokes, and flames, and roars, as never I saw a kiln do afore—and I'm past sixty and a pottery man born. Why, if all your chimneys were afire at once, 'twould be nothing to it."

"What's that, Master Harper?" said George Broome, who happened to come into the house at that moment. "Are you teaching the goodwife to heat her oven?"

"Not I, master; I know better," quoth Harper. "I was but saying the Dutchman's would be a queer batch this week."

"Nay, no fear of that. The wonder is how they do their work so well, and them strangers. Why should you say it was a queer batch?"

"Go down yourself, master, and look at their ovens. They're ablaze like a smelting furnace, and the biggest ever you see."

"Well, happen they'm overheated."

"Maybe, maybe. I'm no potter, to be sure. And now, mistress, if thou'lt make up thy mind about the shaping of that collar, I'll to work."

George Broom, having got what he wanted, went thoughtfully out of the house again, and stopped on the doorstep to glance across the valley towards the old "Bank." He might have spared himself the trouble, for the air was impenetrably thick; and he said to himself that even if Harper had passed quite near, he would still have been unable to tell what "the Dutchmen" were doing in that ashen-tinted cloud. He felt himself in a fashion the friend and advocate of these strangers; for had he not opposed the hospitable suggestion of his neighbours that they should be thrashed and banished? He had no desire that their enterprise should fail, feeling, as he had said, that there was plenty of room for them, as there had been for their predecessors.

But later in the day he was surprised to have confirmation of old Harper's tale. His own man, Richard, who had formerly worked at the old "Bank," had some errand to the town, and came back charged with gossip.

"There's something queer about them Dutchmen, master," he remarked, as soon as he had sat down with the family to supper. "It's likely they fire their ware in some new way—seems to me."

"Why, Dick, what do you mean?"

"I wanted to see Mat Cowler, that works for them, this afternoon, and I went into the yard to find him. The oven was blazing away, just clean flames, as it might be your big bonfire on Guy Fawkes' night."

"They'll be new to the work, and made some blunder," said Mrs. Broom.

"Not they, mistress," answered Richard. "Mat told me Master Francis, as they call him, is the best thrower ever he saw. And you may ask the master if Master Elers does not know his business."

"It is no affair of ours, anyhow," said Broom, but he knitted his brows over the matter, thinking these violent flames had a suspicious look.

Sunday came, and nobody's curiosity had been satisfied. There *was* curiosity abroad, arising from the undoubted fact that though "the Dutchmen" had done their firing on Saturday morning—thereby conforming to the custom of the district—no one could yet tell whether their flaming kiln would turn out good ware or bad, or whether they had added unduly to the fumes that made the day hideous. And Mary, who shared the curiosity, had not yet caught sight of either of the brothers, though the elder had spent half an hour at Seton's Green one day on a visit to her father.

The women went to church alone that day. It was fine and frosty, and the walk, though long, was pleasant. They were a little late, however, and the bloom which exercise had brought to Mary's cheeks was not lessened as she made her way through the congregation to her accustomed seat. She took her place on the heavy oaken bench, gave her mother her prayer-book, with the place ready found, and was opening her own, before she perceived that beyond her, on the same bench, were two strangers. She glanced at the one nearest to her, and guessed at once that these were "the Dutchmen." "So," she thought, "at last I shall see for myself what they are like."

She could not see much at present, nor was she a girl to whom the vicinity of a stranger would be a reason for letting her thoughts desert the proper business of the moment. They might wander now and then naturally enough, and the first temptation they had to do so was when she could not help but see that her neighbour was not very well acquainted with the order of the service. To find the Psalms for the day so puzzled him that Mary's good nature was forced to come to the rescue, and she handed him her book, turning round to share her mother's. At the end of the Psalms her book was restored, and things went on smoothly till the first hymn, or rather metrical Psalm, was given out. Then, to her surprise, her neighbour produced a book containing music, and the name of the tune being announced, as well as the number of the Psalm, found it in his book, and offered to share the advantage with her. She shook her head, and as the choir began the well-known air, she took it up with a pure soprano which the Vicar had long desired to enlist in his band of men and maidens. Part singing has always been, and still is, much cultivated in the Pottery districts. In Mary Broom's time, many who could not get any great pleasure from an ordinary book, could readily and delightfully take their parts in a glee or catch—not to speak of a hymn or carol. So she was conscious of being decidedly pleased when a full and sweet voice beside her began to sing the bass part of the tune, evidently reading it from the book, and making occasionally a mispronunciation of the

words, which, far from being offensive, seemed to give a quaint attractiveness to the singing. "Father must invite him to supper," she thought, "and we'll have some glees. Jack must take the tenor, and mother can sing the seconds if there's nobody else. It is just a bass we always want."

Being in this frame of mind, she was glad that Mr. Elers and his brother closely followed them out of church and joined them at the gate. For some distance their way home lay together, and by-and-by it happened that Franz Elers and Mrs. Broom got into talk, while Mary was left to the companionship of John.

"I am glad, Mistress Mary," he said at once, "to be able to thank you for your courtesy to a stranger. Yours is, I think, the kindest family in the neighbourhood."

"Perhaps," she answered smiling, "you have not found the neighbours very kind? We are rough folks, Mr. Elers, but strangers see the worst of us."

"Don't say of '*us*,'" he replied. "Do you know that but for your father we might have had a fight to establish ourselves?"

"Would you have fought?" Mary asked again. She was thinking how very little use it would have been for these two brothers and their three workmen to have tried to defend themselves against that threatened expulsion.

"We should have fought, certainly," he said. "How, I do not know—but I suppose there is law—there are what you call justices, are there not?"

"Justices? oh yes. There is old Squire Sparrow—and there are two constables in Burslem. But I should not like to trust much to them. Better keep friends with our people, Mr. Elers—it is the safest way."

"That I will, if I can. And why not? We harm nobody—we do our business well and honestly, and pay good wages. Why should people not be friends with us?"

"Perhaps," Mary began, "because they think you——"

"Mary!" called Mrs. Broom at this moment, "which day is your father going to Stone?"

"Wednesday, mother."

"I have been asking your brother, Mr. Elers," Mrs. Broom said, "to come and taste my home-brewed ale, and we'll bid a neighbour or two beside. Will Tuesday do? And we'll have a bit of supper at seven."

"And some singing, Mr. Elers," Mary put in eagerly. "You must help us to sing some glees."

John Elers hesitated. He was not much tempted by the kind of boisterous hospitality he anticipated, but common sense told him to do all in his power to make and keep friends; and then Mary's bright face, and her talk, which was somewhat different from what he expected, these were not without their charm.

"Yes," he answered, after a moment's hesitation. "Thank you, Mrs. Broom; we will come."

They parted immediately after, and as the two brothers walked down the hill at a good pace they began to discuss, in their own language, the women they had just left.

"What a pretty girl!" said Franz, enthusiastically. "They may well talk of the beauty of Englishwomen. What a complexion: and how she walks! Look round now, John. You can only see her back, but look at her movement. Was ever any woman more graceful?"

"Well, well, Franz, I never heard you rave in this way before, that is certain. If you are going to fall in love, my boy, we may as well hire a thrower at once, for your cups and mugs will be all crooked."

"No fear. I believe I have not got it in me to fall in love, but the sight of a tall, slender, graceful woman makes me think of graceful shapes for my cups and vases, and that's more good than harm you'll allow?"

"Oh yes; and you might model a beer-jug on the lines of good Mrs. Broom, round, and capacious, and comfortable."

"So I will—so I will—first thing to-morrow. And a very nice beer-jug it will be."

Meantime Mrs. Broom and Mary had reached home, and opening the house door had been greeted to their astonishment by peals of laughter proceeding from the seats about the huge hearth. A high-backed settle hindered them from seeing the laughers, but they recognised the voices of Jack and Wat Broom. As the roar subsided, another voice, going on apparently with some narrative, made Mary start and blush, though it was quite unknown to her mother.

"It is Ralph Leader," the girl whispered, and Mrs. Broom smiled and nodded as she went round the settle to welcome her not altogether unexpected guest.

There had never perhaps been so merry a Sunday dinner at Seton's Green as on that Sunday. A great piece of salt beef with plenty of greens formed the substantial part of it, and big brown jugs of home-brewed ale were the accompaniment; there were custards and cakes and cheese also, all good and plentiful, to suit the healthy appetites of hard-working country folks. But all this excellent fare might have been eaten without a single jest or laugh to season it (as, indeed, had often happened), but for Ralph Leader, who having found his way into the good-will of the young men by the stories he had been telling them before dinner, now applied himself to pleasing the elders by a perpetual fire of merry sayings. To Mary he had managed to speak two or three words in a different manner, and while she too laughed heartily at his jests, she had a delightful feeling at the bottom of her heart that he was doing all this for her sake, not to please her, but to win her.

And as the day passed she began to say to herself that perhaps she was won. Before, even when she allowed herself to think of him as a man who loved her and whom she might possibly come to love, she had also thought that her father would certainly object to him as a poor man, and her brothers as a strange man, an alien to their place and ways. But somehow—not altogether because he made them laugh—she saw that he had made them forget these drawbacks. He had not only dazzled their slow wits, but he had conquered their prejudices. And

it was finally altogether without surprise that she heard her father, after the extraordinary experience of a Sunday spent at home, declare that Ralph's company was as good as a bull-baiting, and that he must stay and see if he could not settle down among the potters.

### CHAPTER II.—RIVALS.

PROBABLY the romance of a girl's first love was much the same in all essential points two hundred years ago as it is now. Even in our days it has its glamour and a marvellous skill to make the worse appear the better reason. So it is no wonder if Mary Broom, bright-spirited and clear-headed young woman as she was, yielded to the influence, and began to glide swiftly down the descent that should make her fathoms deep in love with Ralph Leader. He was very good-looking—which spoils nothing. Nature had made him in a more slender and shapely mould than was common in North Staffordshire, and she had at the same time given him an extraordinary faculty of imitation. In these days he would assuredly have become an actor; in those he cultivated his powers chiefly as a means of gaining influence with such persons as could be of use to him. Mary had, from almost the beginning of their acquaintance, a consciousness that with her he was a different person from the one he appeared to her father and brothers, but this at present was not an idea likely to repel her; it seemed but the natural effect of his feelings towards her. And so, indeed, it was; for she was not wrong in thinking that he loved her. Her beauty, her frank nature, her clear rectitude of character, all charmed him; and he said to himself, with a far deeper knowledge of his inclinations and antecedents than she could have, that if once he married her there should be no more crooked paths for him, but upright dealing and true speech such as she could share in all things.

He remained a guest at Seton's Green until Tuesday morning, and he left then only that he might the sooner come back. He had been for some time "a rolling stone"; sometimes working at his own trade, which was that of a wood-carver, sometimes at metal-working, sometimes at any odd piece of employment that might offer itself. He could do most things, and in his two days' stay at Seton's Green he convinced George Broom that he could bring "slip" to the proper consistence, and mix the various coloured clays to the right colours, better than either of his two present assistants. So he was engaged to spend the rest of the winter at the farmhouse, being treated in his capacity of connection of the family as a natural member of the household, and made free of Mary's company in consequence. Mary would have liked him to stay for the Tuesday evening when the brothers from Bradwell and some other neighbours were to be entertained, but Ralph, among all his accomplishments, was no musician; and as he liked to be chief entertainer on all occasions, he thought it more for his interest to make the needful return to his uncle's house coincide with the party at the Broom's. He departed, therefore, about midday on Tuesday, and Mary and her mother devoted themselves undisturbed to preparations for the festival.

Round Mrs. Broom's big kitchen table there assembled that evening about ten or twelve persons, of whom beyond comparison the two brothers were the most interesting. No one would have thought of setting up any rivalry between them and Ralph. They were neither of them much given to jest or laughter, though Francis was of a sociable and cheerful humour, and by no means a dullard in the art of pleasing women. Mrs. Broom looked very kindly on the slight fair young man with his foreign accent and winning civility; but Mary liked the more serious elder brother best. They sat side by side at table and had much talk of his country and of hers, and then of the music proper to each. He asked her about the glees of which she had spoken on Sunday; and when she had described them, and the carols that everybody sang at Christmas, he told her in turn of folksongs and chorales; and all this in the intervals of eating and drinking and being pressed to eat and drink, and of talk more local and professional from the other men of the party.

Supper ended, and fresh supplies of ale brought in great jugs of the master's own making, music-books were produced; and, some by note and some without, nearly everybody sang. It was in a pause of this amusement that, for the first time, a word was said of the question which so puzzled the neighbourhood.

"They tell me, friend," said Broom, "that you fired a good oven full of ware last week?"

"We did not do badly for newcomers," answered Elers; "but we hope to have more ready this week."

"And send it off to market on Wednesday?" Broom asked again.

"Yes. I am sorry if we inconvenienced you. I engaged Wade and his horses to carry the crates."

"Ay, ay; that's all right. But how did it happen that all the neighbours thought your kiln had gone wrong?"

"Did they? If they had asked me or Franz we would have told them it had gone right."

"But, man, seems they could see nought but a big flame. That's not our way."

"There was plenty of fire, you'll allow?"

"Ay, but we make a deal beside fire when we have a good kiln of well-glazed ware, and we don't make a blaze."

"You do make plenty of vapour, Mr. Broom, that's true enough. I like plenty of flame."

"Well, without the vapour you won't sell much of your ware to our people, I'm afeard," said Broom.

"I must sell as much as I can," Elers answered, smiling; "we shall see."

No more was said. All the potters present felt that this was not a man to fear as a rival, and were civil accordingly, as to a simple ignoramus. But some of the women were shrewder. John Elers had no look of an ignoramus; and the way he had spoken of the suffocating vapour made

them think that perhaps he knew how to do without it.

Mary spent a decidedly pleasant evening, though she had expected that the absence of Ralph would make it seem dull to her. She liked both the brothers; but for John, hardly knowing why, she felt the beginning of sympathy. Her father and mother might be friendly to the stranger, but the rest of the neighbourhood, even those who had been most civil, were, she knew, hostile to the bottom of their souls; and while, being herself of an active and somewhat enterprising nature, she wished success to these two who had adventured in a strange country friendless, she also felt that it might be well for them not to succeed too decidedly or too quickly. They would never be forgiven, she felt, if they did; and she had looked at John Elers' broad forehead and firm mouth and known in her heart that he was not a man to fail.

On Thursday evening Ralph returned, and he stepped into so eager and excited a family group that only Mary was at first aware of his entrance. Wat Broom had arrived but ten minutes before from Newcastle and had brought with him an object round which all the others were now gathered. George Broom held it in his hands, and, with big horn-rimmed spectacles on nose, was examining it by the smoky light of a candle. Mrs. Broom, a hand on either hip, stood opposite to him waiting for the oracle; Wat and Jack were talking loudly; and Richard, the thrower, was looking on, like Mary, from a distance.

"Hey!" cried Ralph. "What is in the wind now? Have you found a purse of gold, Master Broom?"

"A purse of gold for the Dutchman," answered Wat, "if it is for anybody. Come and look, Ralph."

It was simply a mug or drinking cup, and, moreover, it was broken. Anybody might have wondered what there was in this piece of useless pottery ware to rouse such extraordinary interest.

"Ay," said George Broom, as he handed the mysterious article to Ralph, "it is the Dutchman's, sure enough," and he sat down heavily in his great wooden arm-chair, with a frown on his face.

Ralph took the broken cup and examined it closely. Enough of it remained to show that the shape and colour were good; but it was not these that George Broom had been examining so closely, or that Ralph's quick apprehension had taught him to look at. The broken surface showed good and well worked substance—this would be no porous, easily broken ware, but one of singularly fine and firm kind; and, more important still from the potter's point of view, the unbroken surface was covered with a delicate ornamentation and a fine glaze, smooth, pleasant to the touch, and lustrous—a glaze such as no Staffordshire potter had yet compassed the making of.

Ralph gave a low whistle as he put down the cup on the table.

"And where did you get this?" he asked.

"I got it," answered Wat. "I went to Newcastle to-day to meet old Mr. Strange and get the money for the last half-dozen crates. I thought I should have an order for as many more, and I went into the Lamb, where the old man always puts up, feeling right down cheerful and inclined for a mug of ale. He paid the money all right, and I asked him when he would want the next load. 'I don't know,' says he, 'you'll have to look to your ware, Wat,' he says, 'if I am to go on buying it.' 'Why, what ails the ware, master?' I says, quite dumb-foundered. 'What ails it,' he says, 'is that I can get better.' 'Not in Staffordshire,' I says. 'We make no fancy pots, as you know, but for good, sound brown and yellow, there's no better.' 'There *wasn't*,' he says, 'I'll allow that—Broom's has been always goodish stuff—but there *is*, and not so far off. Look at that,' he says, and he pushes this piece of pot across the table. I took it up and I says, 'You're trying to play me a trick, master; that was never made in Staffordshire, nor I can't tell where it comes from,' for of course I saw it was none of our glaze. 'But it was made in Staffordshire, I tell you,' he says, 'and close to your place, and the man that can turn out ware like that is the man that will get my custom—that's all.' And he turns away and begins to talk to somebody else. Well, I brought the pot away with me, and at first I could not guess who made it, nor I couldn't see a mark. But there is one; it's partly broken through, but father says it is Elers'."

"Ay, it's Elers'," growled the old man. "And now you clever ones may tell me how he got that glaze when we were all thinking he was a softy that didn't know his trade."

"We'll soon put a stop to it, anyhow," said Jack Broom; "there are plenty of us to do as we said before, give him and the rest a sound thrashing and cart them out of the county."

"And what good will that do you, Jack?" asked Ralph, quickly. "Unless you kill him you can't stop him making good ware. You would only drive him to another place, and if the dealers know where to get the best pots they won't come here for worse ones. No, that plan is no good. What you've got to do is to find out how he makes his stuff—you can do it then as well as he can."

"No great harm if he did get a knock that settled him," said Jack, savagely.

"You could not settle them all. One might get the worse in a fight, and nobody to blame, but there are the others. And they would go off with the secret—if it is one."

"Ay," said George Broom; "it's a secret. He means to keep it, too. Dost not remember, wife, how he answered me on Tuesday?"

"Then," said Ralph, "we must find out the secret," and he glanced round to where Mary was sitting.

Why did she feel herself shiver as she met the look? His eyes grew too close together, the pupils contracted; and swiftly her mind seemed to shrink from contact with his. Just one second of this, and then he looked away and went on talking.

There was much more discussion of the Elers during supper and afterwards, but nothing was decided upon. George Broom, in his first anger at finding his ware surpassed, had been more than half-inclined to adopt the very measures he had

formerly disapproved. A good thumping of anybody's bones, even with the risk of breaking a few of them, seemed after all such a natural and proper way of showing offence. But, perhaps because age really had begun to exercise some calming influence over him, he soon decided that Ralph was right—that what was to be done was to force Elers to give up his secrets for the benefit of the community—or, better still, if it could be managed, for the benefit of the Broom family.

Matters were in this state when the household went to bed, and so vexed was the master, that instead of sleeping straight through the hours as usual he woke two or three times, and each time turned the affair over in his mind with a glimmer of fresh ideas about it.

The consequence of these cogitations was a resolution which he kept entirely to himself, acting upon it, for the present, only so far as to issue commands, which he knew would be obeyed, that not one of his family should speak word to mortal that day about what was disturbing all their minds.

The oven at Seton's Green, and all those within sight of it, were throwing out their accustomed clouds of stifling vapour when Mr. Broom, taking his oaken staff in hand, started alone to walk down to Bradwell. He found that the pottery had been improved in various ways even in the very short time during which it had been occupied by the brothers. A strong and very high wooden fence had been put all around it, and there was now no way of admission except through a door in this fence, which was fastened on the inside. Broom knocked loudly with his stick on the door, and in a minute or so it was opened by one of the English workmen.

"Is the master in?" Broom asked, and was at once invited into the yard. He looked round hastily, and saw that a second fence, or rather wall, had been run across the lower end. Outside of this were sheds where the first processes of potting were apparently carried on, and also the packing, but the only door leading into the inner sanctuary of the manufacture opened straight into an office, and thither Mr. Broom was led.

John Elers was at work at a desk, deep in papers; through a second door standing open in the background a glimpse was to be had of Francis at his wheel, attended by a boy, and far too much absorbed to be disturbed by any one coming into his brother's room.

"Good morning, Master Elers," said Broom, with a civility not altogether friendly. "So you are getting on, I hear? Hard at work, eh?"

"Hard at work—yes—and getting on, I hope," Elers answered, as he moved a chair for his visitor. "We have not done badly yet, at any rate."

"You have done badly for me," Broom said rather savagely. "This is your making, is not it?" and he drew the broken cup from his pocket.

"Yes, it is ours. How did it get broken?"

"I don't know—nor care. What I do care about is that the man who gave it to my son told him he meant to buy from you instead of from us. One of my oldest customers!"

Elers looked gravely at the cup and then at the man who had certainly befriended him.

"Mr. Broom," he said, "I am sorry. I think I know who had that cup; he is a large dealer, and I thought myself lucky that, through a friend in Liverpool, I had an order from him. I am very sorry; but if he prefers my ware to yours, what can I do?"

"Do?" cried Broom, utterly exasperated by the reasonableness of this speech. "Do? Take yourself and your secrets back to the place you came from. That is what you have to do."

Elers looked thunderstruck.

"Would not it be more to the purpose," he said, after a second's pause, "if you tried to make your ware as good as mine? My ware *is* good. I have no unrighteous secret; but I have, perhaps, methods that are better than yours, and by those I hope to make my living—or even a little more. England, I am told, is the freest country in the world. I have no intention of leaving it."

"You will have to leave it, young man, either for your own place or a worse, and that speedily—unless you can find some way to mend matters. Do you think we Staffordshire potters are going to sit by and let the bread be taken out of our mouths?"

"I should suppose not," Elers answered, with a quiet smile. "But put yourself in my place, Mr. Broom, and judge whether you would give up at any man's orders."

Broom grunted—he could think of no other answer at once truthful and appropriate.

"But wait, Mr. Broom," Elers went on. "Why not give us time? You are known and we are strangers; your ware is good, and perhaps you can make it cheaper than we can. How do you know that in six months' time we shall be doing you any harm? Let us be friends for a while, at any rate."

"Yes, Mr. Broom," said the voice of Francis Elers, who had, unperceived, been for the last minute or two close at hand. "I can promise you my brother wants to be friends, and so do I. If it were Broom and Elers, don't you think we could manage to live in England?"

"Franz!" cried his brother; "what are you talking about?"

"About what concerns me," answered Franz, laughing. "Mr. Broom, you have been friendly to us. I am sorry, as my brother is, to seem to do you any harm; but I have a plan. Only I must tell him what it is before I speak to anybody else about it. Will you wait a week before you get that big stick of yours ready for our shoulders?"

"What is the use of my promising to wait a week? Will you stop working?"

"No; and if my plan comes out right, you would be sorry that we should. But you can keep your friends and neighbours quiet if you will, and the others will not molest us."

It was difficult for Broom—who was not by nature a surly man, and who, moreover, had begun by taking the part of these brothers—to resist entirely the frank speech and pleasant smile of the young man.

"I can't see what difference a week will make," he said at last; "but if you're clever enough to turn out your ware like that without the help of witch-

craft, you may be clever enough to do it without robbing your neighbours. I'll see to it that you're not harmed for a week—one week, mind—and then you either go or make the rest of us as wise as yourselves."

He got up from his chair, and with an ominous flourish of his stick, walked towards the door.

"Mr. Broom," John Elers said gravely, "I do not know what my brother's scheme is, and I do not bind myself to accept it. If I cannot do so, I will let you know in less than a week. We are only strangers, and, therefore, perhaps easily banished—we are poor men, certainly, and easily ruined. But I hope you are not one either to banish or ruin us."

"I must look to myself," said Broom, and marched out.

"What do you mean, Franz?" said John Elers when the two were alone. "These men have neither reason nor charity. How do you think to get over them with fair words?"

"By the one way, brother, that can generally be gained by fair words—by the way of a woman."

"And what woman, pray, and how?"

"Oh, John, you are very clever at keeping your thoughts to yourself; but a woman has been getting a large share of them lately, and you know best who she is."

John Elers did not look entirely at his ease under his brother's assault.

"This is no joking matter," he said. "She asked me if we should fight, and I said yes; and fight we must—for our property and perhaps for our lives."

"'She' may prove the best weapon, though," Franz answered seriously. "John, if Mary Broom were your wife and my sister, we should have all her relations and friends on our side. You would have to bribe the old man at first; but that could be managed—and Mary—come, John, own that she is the handsomest girl you ever saw, and the most honest and sweetest."

"Franz, you are mad; I have seen Mistress Mary three times—or four, if you count five minutes for anything—and she would never think of me."

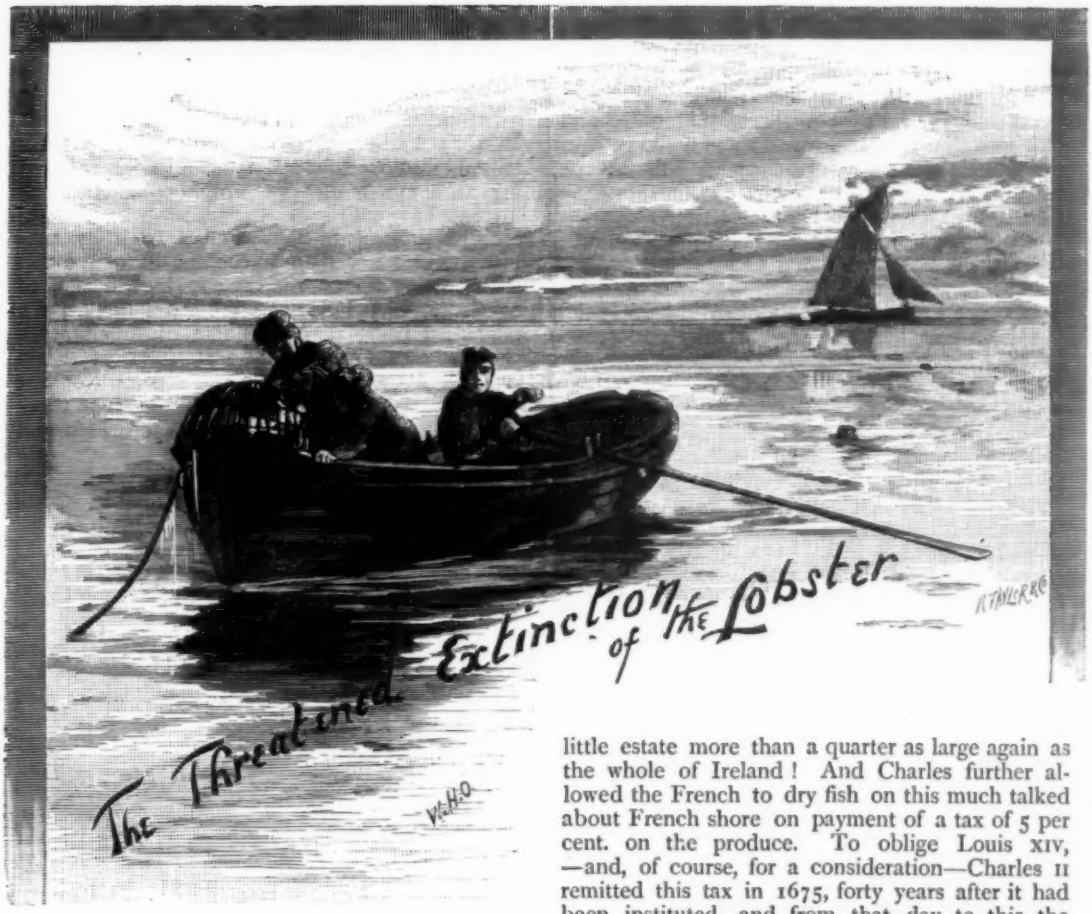
"Perhaps not. But if she *would* think of you it would be the making of us; and how do you know she would not? Have you asked her?"

"I tell you again, Franz, you are mad. Cannot you see that the more fair and sweet a maiden is, the less likely she is to take the first wooer?"

"The first, indeed! Do you suppose Mary Broom has not been wooed?"

"Most likely—and most likely won. It is useless, Franz, I tell you."

But Franz, noting that the supposed difficulties were to be all on Mary's side, smiled knowingly to himself. He loved his brother too well not to have guessed at the recent change in his mood, and he knew very well now that the grave man who had never before thrilled at a woman's name found his heart beating wildly at a suggestion he had not dared to make to himself—the suggestion that Mary might some day be his wife.



"And so she shall," said Franz to himself—all unwitting of Ralph Leader.

The brothers went back to their different occupations. Each thought enough had been said for the moment, and there was the day's work to get through.

Broom meantime trudged sturdily homewards. He almost turned into an alehouse on the way, but reflected that if he did so, he would meet with acquaintances and get talking of the Elers—a thing he had made up his mind to avoid for the present. He was extremely angry with them, and very likely would have given his vote at once for their punishment as intruders but for two considerations. First of all, having declared that there was room enough for the strangers, it would be unpleasant to have to eat his words. Secondly, his wife and Mary liked the two young men, and though there was a good deal of "awful rule and right supremacy" in the Broom household, there were times when George Broom preferred to have his womenkind on his side by their own will.

So he went home sulky, and buried himself for the rest of the day in the pottery, keeping that broken piece of Elers' ware always at hand, and returning over and over again to the problem—how to produce something as good or better. But no—the problem was beyond him—he knew of no process but the one in use in all the other "Banks." One man might have better "body"—another better "slip"—another more quaint and curious shapes and devices for ornamenting his "tygs" and "puzzle-jugs;" but all these were nothing. They had never interfered with the modest but steady trade carried on at Seton's Green. This new ware would interfere with everybody; and no doubt the whole neighbourhood would band together against it. Franz Elers had told him it might be for his profit that they should succeed—had said, "If it were Broom and Elers"—yes, but that must be only empty talk. They were not likely to give their secret to him, nor was he, as he said to himself, a man to "buy a pig in a poke." Yet—if it could be done—it was a thing not to be endured that outlandish people should come and take the trade from Englishmen; but that an Englishman should get a bit of an advantage, *that* was but fair and right, and the way of all trades.

It was an uncomfortable day, and the one that followed it equally so. On Saturday Broom made the whole of his establishment so fully aware of his annoyance that the young men thought they should spend a pleasanter evening at the Blue Lion than at home; and Mrs. Broom, feeling that her husband ought not to be too much indulged in the pleasure of swearing at her, retired to her bedroom. As only Ralph and Mary were left, and they were neither of them sufficiently resistent to be comfortable to his quarrelsome humour, he finally departed himself, and finished the day with a bout of cock-fighting in Burslem

THE lobster has appeared in politics on the Newfoundland shore, and the rights and wrongs of his catchers and canners are making considerable noise in the world ; but the progress of diplomacy is a leisurely one, and it would seem as though the diplomatising would go on until the lobster is extinct, which is anything but a distant eventuality.

The Britisher has little cause to be proud of his dealings with Newfoundland. It is our oldest colony, and has been ours for about 400 years, and for most of the time it was looked upon as a sort of pontoon to which fishing-boats could moor for a month or two. "No settlement allowed within six miles of the coast!"—which is about 2,000 miles round ; at one time even "no buildings permitted" ; for a long time "the master of the first fishing vessel to arrive will take the command of the island"—such can hardly be called enactments encouraging colonisation.

When David Kirke captured Quebec, Charles I gave back the French possessions, and rewarded Kirke with the gift of Newfoundland—a nice little estate more than a quarter as large again as the whole of Ireland! And Charles further allowed the French to dry fish on this much talked about French shore on payment of a tax of 5 per cent. on the produce. To oblige Louis XIV, —and, of course, for a consideration—Charles II remitted this tax in 1675, forty years after it had been instituted, and from that day to this the French have been encroaching and pressing in the thin end of the wedge with a view to possession. These encroachments have always been a possible cause of war. Dutch William cited them in his declaration as one of the reasons of his appealing to arms ; and although the Treaty of Ryswick confirmed the French in possession of Placentia and their fish-drying privileges, that of Utrecht turned them out of the island, and left them only the privilege of fishing for and drying cod concurrently with the Britishers.

When Wolfe captured Quebec, the Newfoundlanders thought they had settled this question once for all, particularly after De Ternay's miserable fiasco at St. John's ; but they were mistaken. The Great Commoner's policy was to clear the French out of North America at all costs, but his Cabinet would not follow him on the costs question, and asked why the taxpayer should be burdened with the continuation of the war, for the sake of a few dried cod-fish. "If you let the French back, there will be trouble," said Pitt. "Think of the expense!" said the Cabinet. So out went Pitt, who had won North America ; and in came Bute, to give some of

it away. By Bute's Treaty of Paris the French were again allowed to share in the fishing and fish-drying on a certain part of the shore—the best part, and that commanding the entrance to the St. Lawrence—and were even put into possession of the two small islands adjacent, on condition that they kept them unfortified, and only garrisoned them with a police guard of fifty men. The consequences were foreseen, not only by Pitt, but by Fox and Townshend and the rest. For the sake of peace and quietness the Britishers were warned not to go near the French, and were kept away until the French began to look upon that part of the shore as their own, and resume a policy of aggression which has given employment to many a subsequent Cabinet, although it has been thought wise to say as little about it as possible.

Now the French have abandoned the homely cod for the momentarily more profitable lobster, and have built "canneries" where they are only by treaty allowed to erect "stages for drying fish," and the Newfoundlanders, seeing this attempt at permanent establishment, are naturally aggrieved. They talk, as did the great Chatham, of the "exclusive fishery of Newfoundland," and would bring "pressure on the French"; but the French may soon have pressure to bear of the more acute and monetary order, for they have already found the cod-drying profitless, and soon may find their offending factories closed, for want of lobsters to "can."

### DIMINUTION AND DETERIORATION.

This question of the threatened extinction of the lobster is of such domestic interest that we may profitably leave the political for the industrial, and devote a few minutes to its consideration. The cry is rising from all the northern hemisphere. Already the British inshore grounds are becoming fished out, and the fishermen have to go farther afield, dividing the profits once accruing to the few among the many, to meet the demands of the market. Formerly a boat would have taken on an average about twelve lobsters a day, now it will take but three. As the supply diminishes, the prices necessarily increase, and a time must come when the profit of the fisherman on his catch will no longer repay the labour involved in its pursuit.

The diminution in actual numbers, however, does not fully represent the deterioration. The lobster is likewise declining in average size. Not that the lobster itself grows less rapidly at present, or is becoming in any way dwarfed, but the fishery has been carried on with more vigour than foresight, and we have practically cleared out the larger and more mature individuals, and have now to fall back upon the young fish to keep up the supplies. At many parts of the coast the lobsters caught rarely exceed the legal minimum size, whereas a few years ago they were, as a rule, some four or five inches longer. Those who pack them for market have good evidence of this falling off. A box which four years ago would have contained only three dozen "fish" will now easily hold four dozen, and five dozen then weighed a stone heavier than now.

It is difficult to ascertain the exact amount of lobsters imported, for Board of Trade returns give no particulars about the matter. But by examining the statistics of the countries from which we receive the largest quantities, we can form a fair idea of the extent of the trade and the degree to which our markets have to depend upon it.

Since the year 1860 the annual take of lobsters in Norway may be estimated at about a million, and of this the largest proportion is exported to us, representing a money value of about £22,500. In 1887 France introduced 60,000 lb. of fresh lobsters into our country, valued at £2,451, showing an increase of £503 over 1886, and that increase has continued. Canada's lobster fisheries are the greatest in the world. In 1887 they furnished no less than 30,000,000 lb. of the fish (representing above 100,000,000 individuals), of which 12,224,991 lb. were preserved in tins, the remainder being used for home consumption or exported alive to the United States. Great Britain is the chief market for the canned lobsters, the value of the importation being nearly four times the value of the fisheries of Great Britain and Ireland combined.

It is doubtless foolish of us to permit our markets to be flooded with foreign goods, many of which, did we but turn our attention to the subject, we could very well produce ourselves. But we do this over and over again, knowing that the matter should be attended to, and yet shirking to take it in hand. Probably we should have been equally apathetic in the case of the lobster but for a startling fact which has aroused us to a consciousness of our own misdeeds—the fact that the diminution in the lobster fishery is by no means confined to our own country, but is being similarly experienced in every country where the fishery is largely prosecuted.

In the United States, for instance, the deterioration is most marked. There, many of the once noted fishing-grounds which yielded a large and remunerative supply are now totally depleted, while others are showing symptoms of rapid exhaustion. The once famous fisheries about Cape Cod, which formerly furnished nearly all the lobsters consumed in the city of New York, are no longer profitable, even to the few men who still set their traps there. Maine is now the principal source of home supply, but here, as elsewhere, the evidences of decrease are exceedingly strong, though they have been made less apparent by the rapid extension of the fishing grounds into comparatively deep water. The decrease of the entire coast within the last seventy years has been no less than from 50 to 75 per cent. As in England, the decline in numbers has been accompanied by a diminution in size of the individuals caught. Few lobsters are now to be seen in the markets much over the minimum prescribed by law, and the weight is, of course, diminishing. As a result, the larger markets of the country are gradually becoming more and more dependent for their supplies on the British Provinces.

But the lobster fishing of Canada, vast though it be, is beginning to show signs that it can no longer endure the enormous drain which the increasing poverty, principally of England and the United States, causes to be made upon it. This fishery is

almost entirely limited to the gulf and ocean coasts of Nova Scotia, New Brunswick, and Prince Edward's Island, and lately of Newfoundland. Here, even more than in the other countries of the world where the lobster abounds, the number of those employed in the pursuit and the effectiveness of the apparatus used have increased of late since the development of the canning industry and of the perfected methods for the transportation of live fish, and yet the quantity and quality of the lobsters obtained have diminished with proportionate rapidity. In 1875, 1,800 traps would catch fish enough to pack 4,000 cases; now, no fewer than 2,500 traps are required to catch sufficient for only 1,500 cases—in other words, each trap now catches but about a fourth of what it did in 1875. As to decrease in size, eight or ten years ago three or four lobsters filled a can, now it takes six or seven or more.

From Norway comes the same tale, decrease in size and number of lobsters, in spite of an increased number of fishermen and improved traps. And serious as is the condition of this fishery in foreign countries, in our own it is far worse, for while Norway and Canada are still able to export large quantities, we are incapable of supplying our own markets.

## THE LIFE OF THE LOBSTER.

As a food-fish the lobster occupies a high position. Its intrinsic value, weight for weight, is little inferior to that of salmon, while its nutritive and restorative properties are superior. It contains a large amount of phosphorus, so necessary to the brain-worker, and there is probably no substance which conveys that element so readily and in such an agreeable form into the human system, and which the system so quickly assimilates.

A little consideration will make it evident that the lobster occupies a very different position to the products of most of our other fisheries. Though not rooted and fixed in particular areas, as the oyster and mussel, its powers of locomotion are limited and its range is restricted to a zone of varying width around the coast. Not only this, but it is practically absent from the shores of certain districts. Nor is the lobster general to many countries. In Europe its central point of location appears to be the south-western coast of Norway, but it extends as far northwards as Finmarken; it is rare in Iceland, does not go into the Baltic, and is not common in the Mediterranean. It seems to prefer rocky and broken grounds, in shoal waters, especially those more or less covered with growths of the larger seaweeds; but these are not essential to its well being, since it occurs on barren sands and on gravelly and rocky bottoms quite destitute of vegetation.

It must on the whole be considered as restricted to an ambulatory existence. It certainly is capable of executing an exceedingly swift sort of swimming movement through the water in a backward direction, through the flapping action of its spreading tail; but this power is exercised only in emergency, such as to escape from an enemy, and it quickly sinks to the bottom again. Yet it cannot strictly be regarded as an animal entirely stationary. Doubtless the accounts of the large bodies of lobsters, or "schools" as they are called, seen moving rapidly through the sea-surface are much exaggerated, still there can be no question that lobsters do congregate together to undertake certain migratory movements.

They regularly pass into deeper water in late autumn or early winter, and approach the shore again in the spring-time. The object of the summer movement is probably to obtain a better supply of food, the winter movement for additional warmth. Where lobsters are kept in shallow, enclosed natural basins, when the cold weather comes on they bury themselves in the mud, leaving only their antennæ, eyes, the tips of the claws, and a tiny portion of the carapace visible. In such positions they presumably lie all winter, unless disturbed. Whether this takes place under natural conditions in deep water is not known; of course, the temperature there would remain more favourable than in shallow water, but many lobsters caught in winter are more or less covered with mud.

Lobsters grow by means of shedding their shells. When the body attains such an increase in volume that the shell can no longer contain it, the latter is thrown off to give place to a larger and looser one. In this way the carapace—generally, but by no means always—splits lengthwise along the middle of the back with a clean cut to the rostrum, or the carapace merely separates widely from the abdomen on the upper side; and in either case, with much violent struggling and pulling, the lobster at last succeeds in withdrawing itself from its now useless outer coat, and comes forth soft and considerably enlarged.

Shedding forms a crisis in a lobster's life. Not only is the process in itself tedious and painful, but it leaves the lobster so weak and ailing that it is unable to escape or defend itself from the attacks of enemies. Fish, such as cod, greedily devour it, as do even hard-shelled individuals of its own species. It, however, hides under stones, and keeps as far as possible out of harm's way while in this state, and there is every probability that it does not feed, the soft-shelled lobsters found in traps having most likely been attracted there by the smell of the bait, without the possibility of eating it. During the younger stages of the lobster, shedding goes on rapidly; as it increases in age the periods probably become less and less frequent, and in old age may cease altogether. Of this, however, we cannot speak with certainty, but large lobsters are taken with thick and heavy shells so scarred and worn as to indicate prolonged service. We are equally ignorant as to the precise amount of growth at each moult. A lobster eight inches long has been known to increase two inches in the process, one of ten inches to increase to twelve, another of ten and a half to eleven and three quarters. These measurements seem to indicate that the rate of growth differs in different individuals of about the same size. Not knowing the frequency of the moulting, nor the amount of expansion at each moult, we are of course unable to determine the period required by a lobster to attain to a given

length. Some fishermen contend they are of marketable size at the age of two or three years, others say not till they are eight or ten.

### THE EGGS AND THE YOUNG.

But of all the phenomena concerning the lobster, those relating to its reproduction and development are perhaps of the highest importance in considering the practical questions connected with the fishery. The nature of its spawning differs essentially from that of a true fish. The eggs as they extrude from the body are coated with a substance of viscid consistency which quickly hardens into short, tough, and very flexible thread, by means of which they are attached in bunches or clusters of varying sizes to the long slender hairs which project from along the sides of the swimmerets of the abdomen, or so-called tail, and constitute what is popularly named the "berry." The amount of eggs extruded number from about 12,000 to 30,000. Thus attached to the parent in the form of berry, the eggs remain until they are hatched. The length of time required for development is not known, but experiments have proved that this period is prolonged, lobsters being known to carry their ova for a whole year. The relationship which exists between the parent and its egg-clusters is not nutritive but purely mechanical, and the sum total of the attention the latter receive consists in the passing of the lobster's small brush-like claws among them, to free them of any extraneously derived substance, and in the occasional swaying motion of its swimmerets, to increase the flow of oxygenated water.

The egg, when first emitted, is entirely opaque, and of a dark green colour, sometimes almost black. Its internal structure, when well advanced, which can be readily seen with a low power objective, is very interesting. It is then not perfectly round, and a trifle more than $\frac{1}{12}$ of an inch in its longest diameter. One side is still very dark, due to the unabsorbed yelk-mass; while the other, which is more or less transparent, shows the eyes as two large black spots, and the red pigment spots on the carapace and bases of the legs etc. as irregular lines of pink markings. The little heart is readily detected by its regular pulsations, and the intestine appears as a transparent tube in which float little granular masses which oscillate ceaselessly so long as the embryo is alive.

The fact is well established that lobsters with spawn attached, in different stages of development, are found in every month of the year; indeed, from the testimony of those engaged in the fishery, no fewer than 30 per cent. of the lobsters captured throughout the year are ripe females bearing spawn. This would lead us to infer that there is no definite time for spawning; nor can we tell, even approximately, how long the eggs are carried before hatching. But there is a general consensus of opinion among fishermen that "berried hens," as such lobsters are called, are most numerous in spring and early summer. The men employed in the smack trade in lobsters on the coast of south New England say that eggs hatch in the wells of their smacks in the greatest abundance in the months of May, June, and July, but that at other seasons they scarcely ever see a lobster embryo, although the trade is continued the entire year. This evidence is tolerably conclusive as to the duration of the principal hatching season. And the hatching known to take place at other times of the year is probably only an accidental or occasional occurrence. The hardy character of the eggs favours the idea of a long development, and they appear to be well adapted to endure the hardships of winter.

The young animals that issue from the eggs are distinct in every way, in appearance, structure, habits, and mode of locomotion, from the adult. If they were born in all respects like their parent, there would be no means for their distribution, but they would at once sink to the bottom in the immediate neighbourhood of their birthplace, and there live and breed in their turn, and the consequence of such close interbreeding would be the deterioration of the species. Nature, however, here, as in the case of the majority of marine invertebrates, provides against such a contingency. Not only is the body of the little lobster so constructed that its specific gravity is little greater than that of the medium which it inhabits, thus causing it to rise to the surface or subsurface waters of the sea, where it is at the mercy of tides and currents, but it is in addition equipped with long feather-like appendages, which enable it to swim. As an essentially free-swimming, pelagic animal then, the lobster passes the greater portion of its larval existence. During this interval it passes through a series of changes, by which it gradually arrives at the ambulatory condition, and acquires the features and form of the parent. These changes resemble the growth of the adult in so far as they are all effected by means of successive skin-castings, and the skin at each time differs in many structural points from its predecessor.

When liberated from the egg the little lobster is in length about the third of an inch. It possesses no abdominal appendages whatever, and swims by means of its thoracic limbs, the external branchlets of each of which being developed into a powerful swimming organ. In this respect, as also in its structure and appearance, it resembles a low group of shrimps, the so-called Schizopoda. Its eyes are bright blue, and the body and limbs are marked with an orange colour, which varies in its intensity from pale to brilliantly reddish. With the second changing of the skin the lobster increases somewhat in size, and the rudiments of the abdominal appendages put in an appearance, while the segments of the abdomen itself show signs of decrease.

When the third change occurs the little creature is about half an inch long, the abdominal appendages or swimmerets are developing, and the thoracic swimming organs are becoming simultaneously reduced, and the integuments are of much firmer consistency than before. When the fourth stage is reached, it has lost all the characteristics in which it resembled the Schizopods, and has assumed the more important features of the adult lobster. It, however still differs from the

adult in so many respects, that, were it in reality an adult form, it would be regarded as a distinct genus. The abdominal swimmerets are almost matured and the thoracic "exopodi" of the larva have become reduced to a mere process, but it is still a free and active swimmer, active indeed in all its movements, frequently jumping out of the water like a small prawn. It is at or about the sixth skin-cast that the thoracic swimming organs entirely disappear, and the little animal swims through the water with the aid only of its abdominal swimmerets. Meanwhile the internal elements of the thoracic limbs have developed into true legs, so that, like the prawn, it can now walk on the ground as well as swim. With the next cast it falls to the bottom as a typical lobster. The entire metamorphoses occupy about two months; but from this moment until the time the animal attains the length of five or six inches, the life of the lobster is entirely unknown.

### THE METHOD OF CAPTURE.

For the past thirty years or so, the method of capture has consisted in the use of creels or pots, usually formed of wickerwork or of a wicker frame covered with netting. These "pots" are baited, generally with fish such as flounder, skate, eel, and sunk in from three to forty-five fathoms of water. The lobsters enter the creel through a hole or pipe 4½ to 5 inches in diameter, and once within, can effect no escape. The creel is therefore essentially a trap, and comes into the category of a fixed, though, of course, a simple engine. Being so, unlike the old ring, it requires only periodic examination, thus the owner is enabled to work many more traps than he could before, and with much less labour. The number of creels carried by a single boat varies from 20 or 30 to 100 in different localities and at different times.

From our knowledge of the distribution of the lobster, it is not difficult to understand how such a mode of capture should have contributed towards the deterioration of this fishery. Whenever the drain upon any species or group of animals exceeds their power of natural fertility to make good the loss, that species diminishes, and if the cause of destruction be continued, becomes extirpated, and the diminution is the more rapid the more circumscribed the area of distribution. We have, in fact, overfished the lobster, which, in an economic sense, simply means that nature unaided cannot supply the demand. We have, likewise, foolishly destroyed undersized fish, of comparatively little present value, and ere they had reached their period of active reproduction. But our acquaintance with the peculiarity of the lobster's spawning will enable us to comprehend how easy it has been for us to lend ourselves to the destruction in yet another way.

A most irrational custom prevails of consuming largely the lobster's eggs or spawn for culinary purposes. Professed cooks must and will have it in the making of sauce and salads, and as a garnish for white fish, such as turbot, solely as a colouring matter and not as a flavouring agent. As a natural consequence of this pernicious practice, female lobsters bearing spawn are objects of great commercial demand and fetch the highest prices in the market. Cases are even known in which considerable quantities of spawn alone have been sold for such purposes. Mr. Buckland mentions the instance of a single dealer who in order to supply the cooks with material for sauce collected in this manner, within the short period of about two months, no less than from 14 to 18 lbs. of lobster spawn, a mass which Mr. Buckland estimates as containing, at the very least, 1,720,320 eggs, each egg a potential lobster. And this figure, it must be borne in mind, represents but a fraction of the sum total of eggs thus wastefully consumed in this country year after year.

And it is in these eggs that the future of the lobster lies. We need never hope to succour our dwindling lobster fisheries by remedies restrictive in character. If the natural fertility is increased sufficiently, the number of adults would be largely increased. We must then so increase the natural fertility that it may be able to make good the loss occasioned by the destruction of adults, however great.

### ARTIFICIAL HATCHING.

Increase the natural fertility, some one may say, impossible! Granted, actually it is impossible. But can we not in practice effect it by a systematic artificial cultivation of the eggs of those spawning lobsters we destroy, and by rearing the young so hatched through their helpless larval stages of existence, thus protecting them from their natural enemies until as ambulatory lobsters, however small, they are able to shift for themselves? By such operations carried out on a large scale millions of young lobsters might be transferred to the sea every year. That such a process is feasible has for some time been shown in the United States and in Norway.

In the latter country experiments in this direction were commenced as early as 1873, and reported upon two years later. At this time all that was done was to keep berried lobsters in live boxes until the young hatched out, the boxes being constructed so as to retain the embryos after hatching, to afford opportunity for study as to their habits and causes of destruction. But in 1885 Mr. F. M. Dannevig was the first to make the attempt of detaching the spawn from the parent, with the view of hatching it artificially in a specially constructed apparatus. In a letter dated the 29th of June of that year, Mr. Dannevig communicated the success of his experiment to the late Professor Spencer Baird, at Washington, and gave it as his opinion that doubtless this method could be carried out on a large scale.

But until the autumn of 1885, owing to the want of sufficient accommodation, the United States Fish Commission, although they had long had it in view, had been unable to carry on any practical experiments, according to the most improved methods of fish culture, with respect to salt-water species of fish. Various members of the Commission, however, interested in biological studies, had from time to time succeeded in hatching small

quantities of lobster eggs, and the possibility of doing this on a small scale, and of carrying the young thus hatched through the various early stages of growth, needed no further proof.

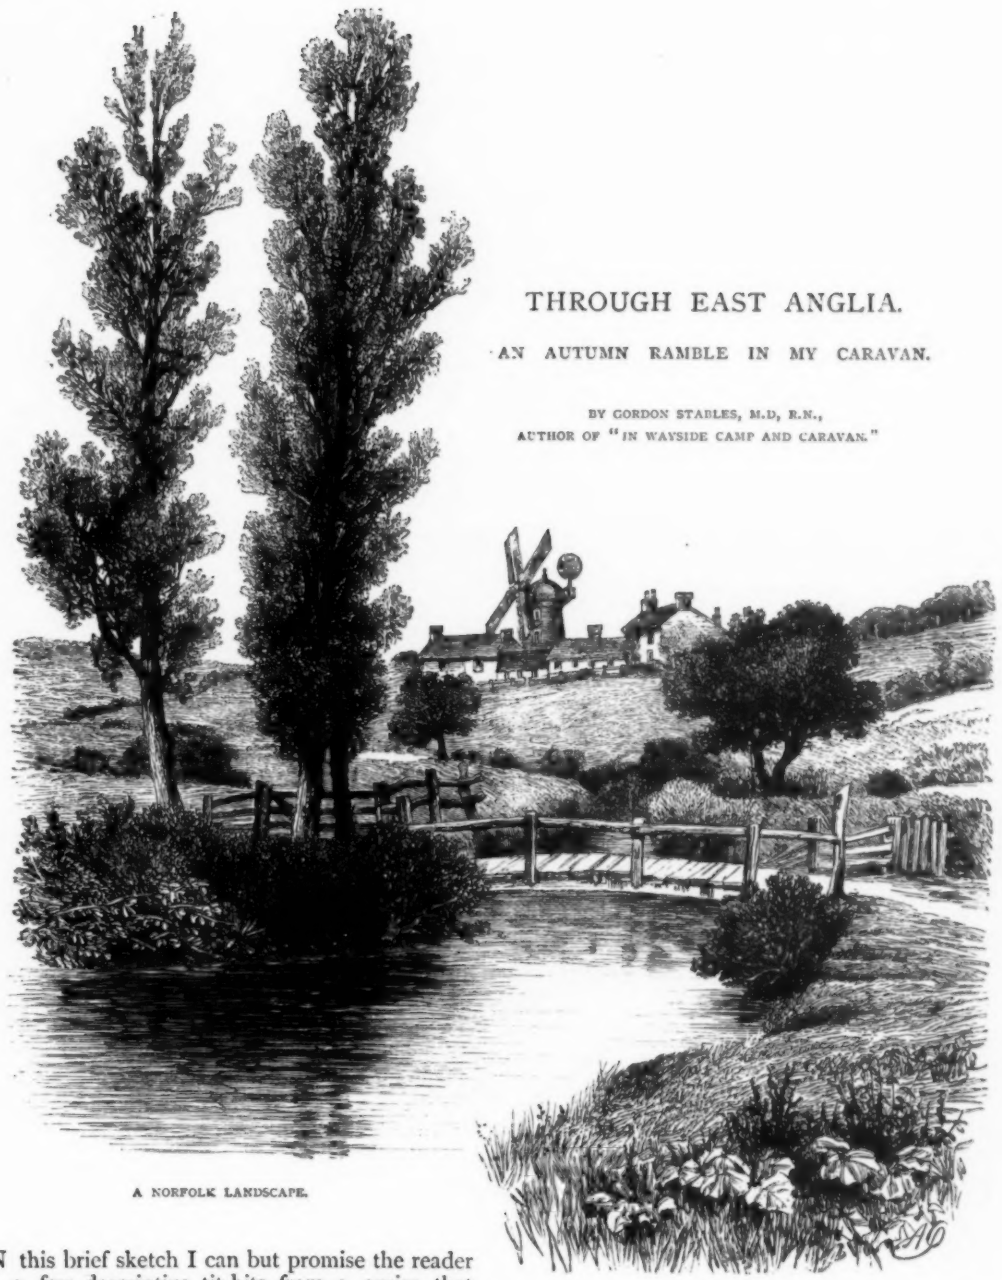
The completion of the now well-known marine laboratory at Wood's Holl, Massachusetts, in August 1885, with every facility for artificial culture, permitted the Commission to inaugurate such experiments as alone could solve the question how to care for large masses of eggs and young after hatching, and whether these operations could ever be accomplished on a scale great enough to influence the supply of lobsters in the markets.

In this country one of the first to deal successfully with the artificial cultivation of the lobster was Mr. Saville Kent. The idea suggested itself to him in 1875, when, in the Manchester Aquarium, he observed of a newly hatched brood, brought forth in one of the tanks (an event of frequent occurrence), that they assembled like a crowd of gnats, and fed freely upon the smaller particles of food introduced into the tank for its ordinary occupants. The usual fate of young so hatched, in this gentleman's experience, is to perish from want of suitable food or to be eaten up by the other fish. It at once occurred to Mr. Kent to isolate this particular brood, and to feed them upon the food for which they had displayed a partiality, and the upshot was that a considerable number of them were reared through the stages of their metamorphoses. They were simply placed in glass jars, each capable of holding about a quart of sea-water, which was changed every morning. Surely, argued Mr. Kent, since such crude efforts are rewarded with success, with the aid of all those perfected appliances which have been brought to bear upon other fishes, systematic and practical cultivation of the lobster is within measurable distance of accomplishment. It will be observed that Mr. Kent did not attempt the artificial cultivation of the eggs. But at one of the conferences held in connection with the London Fisheries Exhibition of 1883 he expressed his opinion that all the conditions of natural incubation could be as efficiently secured by an artificial system of culture. He suggested that the eggs might be spread out on trays or grids allowing the free percolation of well-oxygenated water, a method which has proved pre-eminently successful with the eggs of the salmon and trout ; or, better still, to imitate nature more nearly by bodily removing the bunches of eggs as attached to the swimmerets of the parent, and, by some simple device, to suspend the grape-like clusters in the midst of the circulating currents.

The latter was somewhat the method adopted by the United States Fish Commission. The particular hatching-apparatus selected for the first experiments was that known as the McDonald automatic hatching-jar. The water enters the jar through a long glass tube which reaches nearly to the bottom of the jar, causing an upward current of water through the jar, the force of which is regulated by the amount of inflow. The outlet is by means of a short tube passing only a little way into the upper part of the jar. The inlet tube is of course connected with a supply pipe by rubber tubing, the outlet tube with a waste pipe. The current of water also depends upon the longer tube, which, by being raised or lowered at pleasure, changes its force and character to a certain extent. The flow is continuous and regular, and the jars need be examined but twice a day, to remove the accumulation of sediment. It is wonderful what a strong current must be introduced to raise the eggs above the bottom of the jar, the average amount allowed being nearly a gallon a minute for each, which is so regulated as to give the larger bunches a gentle rotatory motion, thus the tiny bunches often rise high in the jar and are strongly agitated. But this does them no harm, as might be supposed ; rather the reverse, for without it they die, though it has been found impracticable to keep the eggs of more than one lobster in each jar, since the eggs of different individuals vary much in specific gravity, thus rendering it impossible to regulate the flow so as to give all the required motion.

Once reared through to the ambulatory condition the little lobsters, though barely an inch in length, may with safety be liberated in their native element. On being consigned to the sea, they invariably make for the bottom, there to hide beneath stones or other shelter for protection against their natural enemies and as a home to which they may return after search for food.

It is still a matter for consideration whether or not the entire process of hatching the eggs should be carried on artificially in actual practice. Berried females could of course be kept in storage basins attached to the laboratory, and as their eggs reached the last stage of development could be transferred to the jars. This plan, though of course a simple one, entails the feeding of the adult fish during the months that their eggs are ripening.



Lobster-culture has been tried with fair success at Picton, in Nova Scotia, and in Newfoundland ; and not the least of the Newfoundlanders' grievances is that the lobsters they have cultivated the Frenchmen catch and can. At Roscoff, on the coast of Brittany, there is a well-known "lobster park," the stock for which was obtained from Norway, and there are several other parks amid the European and American coasts. In the parking system many of the young lobsters are caught in the open sea and then transferred to enclosed natural basins to grow up to market size ; and some of the parks are used merely as reservoirs in which to keep the surplus catch alive until the state of the market makes it profitable to dispose of them. It is one of the parks in addition to a hatchery that it is now proposed to establish on the Irish coast.

Should the artificial culture of the eggs and young of the lobster be developed into a practical industry, it may be anticipated that it would put a stop to the consumption of the lobster's spawn for culinary purposes. At present no doubt the feeling prevails that we may as well consume the spawn as waste it. But a use once found for it, and a use having such a practical end in view as the restocking of the home fisheries, surely the expression of public opinion would divert the stream now flowing only to the saucepans of the cooks, to the hatcheries of the cultivators

# THROUGH EAST ANGLIA.

## AN AUTUMN RAMBLE IN MY CARAVAN.

BY GORDON STABLES, M.D, R.N.,
AUTHOR OF "IN WAYSIDE CAMP AND CARAVAN."

A NORFOLK LANDSCAPE.

IN this brief sketch I can but promise the reader a few descriptive tit-bits from a cruise that occupied months. I trust, however, they will be interesting in showing how delightful a country East Anglia is.

My caravan was the "Wanderer," my coachman John, who, as on many a previous tour, slept wherever the horses—two bonnie black mares—were stabled at night; and my valet, tricyclist, cook, chief musician and secretary all in one, was Mr. Harmer, a gentleman; while our guard at night was my beautiful black Newfoundland, Queen Bolina. Poor Hurricane Bob has passed away—faithful to the end.

We left Epping Forest Hotel early in August, after rambling about in the southern counties, and sailed away for the north.

Down the Ranger's Road we went, and past the pretty artificial lake, then along the road that leads through the very centre of the forest, and on past

Ambresbury Banks to Epping itself. We often stopped, however, not only to breathe the horses, but that I might explore many a bushy dell and many a ferny sylvan glade, in which, so soft and silent was the scene, I half expected to find fairies still at their revels even in the sunshine.

I found wild flowers round me in some of these retreats, with patches of ferns and brackens, and heather in bloom. Sometimes I came upon lonely quiet ponds surrounded by wind-tossed rushes and sedges, and covered with water lilies in leaf and flower. In some places the dwarf oaks and other trees were a study in the grotesque. It seemed as if they had broken their hearts, because ages ago they had been pollardised, and so had grown crabbed, twisted, knotted, gnarled, and weird.

The entrance to Epping is both pretty and picturesque—especially near the common and the pond—with its quaint old-fashioned slate-roof cottages. Epping itself is but a small town, and very quiet, its principal street is very wide, and the whole place looks clean and healthy. It ought to be healthy, for here we are on ground 350 feet above the sea level.

High Ongar we found to be a mere hamlet, or at least a very tiny village. We saw one church and three public-houses, and the patrons of these latter are only allowed "to be drunk on the premises;" and we saw many children, whose principal occupation appeared to be making mud-castles or filling their caps with dust, and tossing them high in the air, then laughing and shrieking to see them explode. High Ongar has doubtless its points of interest, but we paused not to enquire, and rattled on to Writtle.

There may be people in the world who never heard of this primitive village. It exists nevertheless, and here we were, after a somewhat hard afternoon's drive over indifferent roads. We found the place *en gala*, a cricket match proceeding on the spacious green, tents erected, bits of bunting flying, the men in white flannels, the girls in light dresses, and plenty of clapping of hands and shouting going on intermittently.

The "Wanderer" got a pitch in a nice meadow, where we hoped to lie happy over Sunday. To my horror, however, young horses were turned in during the evening. My representations to the innkeeper concerning the undesirability of such meadow-mates were met with a flat refusal to take them out. So figuratively speaking I had to do what babies do, suck my thumb for consolation. The attentions of those colts, however, were wearisome in the extreme; they wouldn't take a hint to go, not even an Irish hint, they *would* nibble the back steps, and they *would* scratch their necks on the coupé. At nightfall we proceeded to barricade our carriage with pole and ladder. My secretary was ungracious enough to hope the colts would break their heads over our obstructions. In spite of our barricades, the beasts woke us up at 4. A.M., and so on at intervals till 6 o'clock, when we turned out.

Writtle seemed to me a typical village, one of a class met with all over the eastern counties. When an Irishman was asked if he could make a cask, "Shure, it is aisy enough," he replied, "you've only to possess yourself of a bung-hole, and build the barrel round it."

Well, in the building of these villages, the aborigines first possessed themselves of a triangular green, and then built the village round its three sides, leaving space for a road at each corner, and there we have it to this day.

The village children here were amusing, even in their very loutishness. They bunched themselves all round the gate like bees, and rode on the walls, and everything we did sent them into fits of laughter. Queen, rolling on the grass, was indescribably funny, and Harman washing the plates was better than a bonfire; to see me squatting on a rug, book in hand, was as good as a christening; but whenever any of us walked towards the gate there was a general shout of "He's coming!" and the juvenile crowd melted and fled in all directions.

Now I hate children to run from me, I hate to be taken for a bogie man, and in going towards the gate I tried to look pleasant so as not to scare these little rag-tags. I even sang to myself and smiled, in the hopes of proving to them my inoffensiveness. The result was the same, they fled indiscriminately; while one urchin, bolder than the rest, shouted "Hah! ye ain't cotched oi yet, measter."

The thunder and rain of the morning gave place to a clear afternoon, but as the sun sank lower, the gloom of the evening began to settle on my soul.

"Harman," I said, "I am going to write. No chance of visitors in a place like this, I suppose?'

"Shouldn't think so, doctor."

"Why," he added, immediately after; "there's a party of ladies and gentlemen coming now!"

And so there was, and the next minute I was shaking hands with an old acquaintance of mine, a lady who was a guest in Writtle. Her friends were with her. No, I wouldn't go to dinner, having dined already, but would call. And a very delightful evening I did spend with them. Our host, when he heard the story of our horse-broken rest of the night before, soon had the nags turned out, so the next night we slept soundly.

Our stay in Chelmsford was a very brief one. So quickly, indeed, did we get away, that reporters who were sent to interview us, only caught us up on the top of a hill where we were resting, some distance out of the town.

After several pleasant bivouacs in lonely places, and many a little adventure, with interesting incidents cropping up at almost every turn of the road, we found ourselves in the vicinity of Ipswich.

The first peep we got at this town—which I had always admired as I passed in the train—was from between the lofty elm trees that line the steep hill-road down which we came slowly, cautiously, with the break hard on.

The view expands as we near the middle of this brae, till all the town lies before us bathed in bright sunshine; it spreads over the valley; it ascends the hill, roofs, tower-stalks and steeples, clustering to the very top, where it is backed by a cloudlike bank of waving woods.

The Ipswich people had heard of our coming, and when we stayed for letters and to do shopping, the square was crowded. But there is little comfort in a crowd, so we got clear away at last, stopping for lunch in a quieter place, though even here we were, as usual, boarded by reporters.

A SUFFOLK MOATED HALL.

"John," I said to my Jehu, "what do you think of Ipswich?" John's eyes shone, and he smiled.

"Never tasted a better drop of beer in my life, sir."

"John," I said, trying to look severe, "do you know we are now not only in a sweetly romantic old town, but in a famous one. And do you know that Cardinal Wolsey was born here?"

"If you are going to call on the old gent," said John; "hadn't we better put the nose bags on?"

John is not so impressionable as I should like him to be, and in the matter of history he is somewhat behind the times.

We got on to a breezy moor land soon after leaving Ipswich, entirely covered with gorse. It was green then, but what must it be in spring, when all is scented bloom?

We seem to have struck a bit of wild country here, for a mile farther on is another moor of furze and fern, with clumps of larch and fir; and this heather-land continues off and on for miles, with now and then patches of oak and birch trees.

The country all round here is vastly interesting, and though the villages are mostly primitive and poor, except, of course, such places as Wickham Market—so numerous are the halls and mansions and other signs of ancestral wealth, such as splendid woods and parks, that we might easily have fancied ourselves back again in old feudal times.

We had stopped at a little wayside inn, to give the horses oatmeal-and-water, and, as night was coming on, and we were still a long way off our pitch, the outlook with our jaded nags was dreary enough. But I think there must be a sweet little cherub that sits aloft among the elm trees to look after gipsy wanderers, for just then a tall, handsome, and good-natured-looking gentleman passed us. From his dress he evidently had not come far, nor could he be going far.

"Who is that gentleman?" I asked a man to whom he had said "Good evening."

"That, sir," he replied, "is young Mr. D——, of Glenham Hall."

"Harmer," I cried; "mount the cycle and ride on after him and tell him the plight we're in. I'll wager the leg of the gauger he'll fix us."

Harmer, my secretary and general factotum, has a pleasant way with him, and talks good English. In half an hour he had returned. He was smiling all over.

"We are to draw the caravan into a field opposite the lodge gates, and take the horses down to the Hall."

A SUFFOLK VILLAGE.

Here was luck.

So sudden, too.

Half an hour afterwards Harmer was cooking our dinner, and the horses were down at the Hall eating theirs.

Later on Mr. D—— called with Lord E. P——,

young Lord G——, and the Hon. M. N——. We enjoyed a nice long talk, and I was asked to the Hall.

What a fine old mansion it is—of no great architectural beauty, but massive, and square, and antique.

Charles II had once graced the Hall with his presence.

"I wonder," I said to Harmer, as we were mounting for the start next morning, "where we shall be to-night." Harmer looked wistfully at the beautiful pitch in which we had been all night, with the soft, green grass beneath, and swaying songful elms above, and I think he heaved a sigh.

"I wonder, too," he said.

But road-hardened gipsies like myself are apt to take things much as they come, and whether the bivouac be in a tree-shaded park or on a lonesome moor, it is very much the same.

The country we now drove through was beautiful in the extreme, and grandly wooded. The roads in many places were avenues or lovers' lanes, and the day, too, was glorious, sun and shade—cloud-shade, tree-shade—with breeze enough to temper the heat.

We passed many a noble mansion, ay, and many a sweet wee cottage also, embordered in autumn foliage and autumn flowers, out from the doors of which the children ran, sometimes only half-dressed, one stocking off, another stocking on, but never failing to give us a cheer as we went trotting past.

"John," I said enthusiastically:

> "Where's the coward that would not dare
> To fight for such a land?"

There was a cosy bit of a roadside inn, about fifty yards ahead, with lofty elms hanging over it, and cocks and hens and a pig in the middle of the road, and I do believe John saw more poetry about that little "Pub" than he did about any of the fine parks we passed through.

John's face brightened, anyhow, when I said:

"We'll give them a quart of water and a handful of oatmeal in it here, I think."

John went into the house to ask where the well was, and he was wiping his mouth with the back of his hand as he came out. So, as soon as we got fairly on the road again, I fired off a verse or two from Mrs. Hemans at him.

"John," I said, "you have, of course, heard of Mrs. Hemans, haven't you?"

"Oh yes, sir; she kept the 'Bell and Bottle' at Brierton; used to froth your cup up so; didn't like her for that, sir."

I was silent for a time after that.

I have often heard it said that genuine hospitality is, as far as England is concerned, a thing of the past, yet no one could be on the road for even six weeks in East Anglia without finding out how erroneous this idea is. I am not thinking so much about towns as about villages and country places, especially those far removed from the low level of railway stations.

Nor is the hospitality I meet with confined to any particular class. If, for example, my caravan is lying in some small meadow adjoining the wee roadside "Pub" where my horses are stabled, not only shall the squire and his party look me up and invite me out, or ask what they can do for me, or do things without being asked, but the village children, girls at all events, will call and bring me wild flowers.

"Expectant of a penny," sneers the city cynic.

"No, indeed, sir," I thunder in reply; "for it is the almost invariable custom with these shy wee totties to place their little floral offerings on the coupé when I am not looking, then run away."

Again, a working man, miner, farm servant, or otherwise, will often, during my absence, bring a handkerchief full of gooseberries, peas, or beans, with perhaps a new laid egg or two, and a bunch of flowers from the "missus;" and these are given without the slightest expectation of even thanks. Perhaps my valet may be previously appealed to in this fashion:

"The gentleman wouldn't be offended, would he, if I bring round a few nice new potatoes? Mere nothing to us; good crop, you know, and garden full of them."

I value these little gifts quite as much as the brace of grouse or partridges from the big house among the trees. Wouldn't you, reader?

But how, I have often wondered, do people know I am fond of flowers. Or is it that hospitality in England is most easily and charmingly expressed in this way.

I have known, often known, ladies run out from garden gateways to hand up baskets of choice flowers as we went trotting through some village early in the morning, near which we had been encamped all night. Of course they had been watching for us.

"Don't stop, never mind the basket."

And they would disappear before I had time to thank them. Have not actions like these the ring of genuine hospitality?

Here is an afternoon tea-by-the-wayside. We have stopped by a wood and near a large gateway. There is a charming view from this hill-head, and the sound of a purling brook close by makes the horses prick up their ears. They have a bucket of water and oatmeal between them; then the nose-bags are put on. The coachman asks leave to smoke, and lies down on the grass to enjoy his pipe.

The Rippingille cooking range is placed beneath the caravan because I don't like the temperature of the after cabin to mount up to 110°.

I am reading a book on the back steps when the big gate is opened and half a dozen prettily dressed children stand there laughing and wondering.

"They are gipsy folk, and are going to have tea," I hear them say.

Half a dozen fresh faces come instantly to peep, and with them a clergyman. But he does more than peep. He advances, raising his hat.

"You needn't bother making tea," he says, smiling. "It is all ready on the lawn here."

"And may my secretary come too?"

"Certainly, and we'll send some out to your coachman."

It is a children's party that is being held on the lawn here, and I enjoy a right merry hour. Meanwhile the dog is making the best of it, rolling on the grass with the children and being stuffed with cakes and buns.

Well, those youngsters were invited to inspect the caravan four at a time, and much enjoyed it. They had a treat they had not expected—so had we.

The "Wanderer's" pitch at Yarmouth was a very pleasant one, behind the Aquarium, close to the sea, but in private grounds, or rather gardens. The only nights the sanctity of our privacy was really invaded were those of the Regatta, set apart to the display of fireworks. On the second evening the mob around us was computed to be about 20,000 strong; but we partially barricaded ourselves, and with the assistance of one or two policemen, Queen Bolina, and my servants, the crowd was civilly, but determinedly, kept at bay.

Our only neighbours in these grounds were those who lived in the partially built terrace, and these vied with each other in showing us hospitality.

Of course the inevitable Scotchman turned up at Yarmouth. There were several, but the Scot of Scots was an Officer of Customs. He found me out on the very day after my arrival. And very kind and homelike I found this gentleman himself, his wife, and charming children. When I told him at first my rule was never to dine nor sleep out of my caravan, his reply was, "Oh, yes, richt eno' too; but that doesna hold good wi' your ain country folks, you ken."

That settled it.

The first night I supped with him there were grouse on the board. Strangely enough, they had come from the north of Aberdeenshire, sent by one who had been class-mate of mine at the Grammar School of Aberdeen—Sandy Geddes, to wit. His brother was in those days Rector of the Grammar School—quite a classical institute, by the way—and is at present Professor of Greek in the University of Aberdeen. But while packing those grouse in bonnie Hielan heather, little could Sandy have thought that an old school-fellow was to help to eat them.

The night before we left Yarmouth 'twas arranged that my friend's three lassies should go with us on a little pic-nic as far as one of the Broads, and very delighted were they with the prospect.

We were all as fresh as daisies covered with dew. Our road led through the meadows first, and past the Denes for some miles to the old village of Caistor. A little way out of the village we struck off to the left past the church.

There is a curious little mound on the top of this church, in which—so the story runs—lie the mortal remains of a young lady. She had fallen in love with a lieutenant of the Royal Navy, and had betaken herself to the tower to wave her lover an adieu as the ship sailed by. It was a last farewell, for she shortly afterwards fell sick and died, and at her own wish was buried in the tower.

We were all children that day, and what fun we did have, gathering flowers in the green lanes and by the silent and beautiful Broad. And how we enjoyed our luncheon on the grass! The girls were to have left me at the mid-day halt, but we could not make up our minds to part, so on we went till eventide, and I got a delightful pitch in a green level meadow, tree-begirt, behind the Globe Inn at a small village. Here we had tea, gipsy fashion, then adjourned to the roof to see the sunset. When the stars came out, but not before, I found a train, a prosy train, at sight of which romance fled all away, and the girls went back to Yarmouth.

. . . . . .

Not before we were some distance past Thorpe was there evidence that a great city was but two miles ahead of us. I thought I was quite through this "lovely village of the plain," when lo! I found myself at the prettiest end of it. Here the cottages and villas seemed to vie with each other in quaintness of architecture, gayness of gardens, and wealth of climbing foliage. We halted opposite the post-office, where the broad green bank goes sweeping down to the dark gliding river, where splendid trees grow: lordly poplars, magnificent sycamores, and spreading elms. A pensive donkey stood here, watching a boat that held a pair of lovers; some merry children gambolled on the grass, but otherwise all was peace. We were an object of interest to some school-children, the butcher's boy, and the doctor's man, but apparently to no one else. Having washed our wheels and arranged our flowers we rolled briskly on.

No one can help admiring the suburbs of Norwich from this side of the river, the green fields, the cloudlands of trees, and the gardens and villas. It is all as pretty and pleasant as artist or romancist could desire.

But we were soon in the city itself. At the post-office I was met by a young friend, who became my guide to Chapel-field Road, where I had meant to feed my horses and cook my dinner. I had visions of a delightful, semi-rural, peaceful retreat, with verdant grass and shady trees. But lo! my pitch was but a gravel causeway off the street; I myself had been verdant for such vain imaginings. All the way along the street we were followed by about a hundred boys and girls, their lungs speaking volumes for the salubrity of Norwich; and when we drew up so did they.

The crowd kept increasing every minute, and the cry was, Still they come! Had I been a democratic orator I should have felt proud; had I desired a chance to fulminate against the crying evils of my benighted country, what a chance was before me! Had I wished to hold forth as an evangelist, time and place were all in my favour. Curiously enough these good folks did expect me to spout, as they phrased it.

What should I do? How should I inform this kindly-faced multitude that I was no stump orator, that the arrival of the gentleman gipsy in Norwich had no political significance, that I did not cut corns, take photos, nor tell fortunes, that I was possessed of no infallible remedy for the gout, no cure for consumption, no specific for whooping-cough, no ointment warranted to make hair grow wherever it touches; that, in fact, I was but a peace-

ful wanderer, wishing to cook my modest chop, feed my nags, and jog on?

I remember being thus received on the snows of Greenland by a polar bear. He received me with open arms in fact; but I turned and fled. Should I now fly? Should I trip my anchor, put up the back steps, and be off and away to some more pacific ocean?

That seemed the only way out of the difficulty, so, bidding some friends who were with me a hurried adieu, I cleared a passage in the crowd and sailed away, and in less than half an hour we were lying near the pretty wee river end called the Gate. Not a soul was here to crowd us.

But Norwich is a lovely town, and I do feel truly sorry I did not see more of it.

Just another leaf or two from the "Log of the people are invariably civil. But it is not always nice to lie close alongside an inn, because you can hear all that goes on inside. When I turned in about ten o'clock there was a beery kind of argument going on among the harvesters in the parlour. They had got as far as, "But the main point of the argument is this, Jack."

I awoke at two o'clock, just four hours after. The beery kind of argument was still going on. They had got as far as, "Well, Jim, I think the main point of the argument is this——"

I fell asleep again.

Hockering is a very primitive kind of place. It has one doctor, one church, one bell, one parson, and one policeman. The policeman had been to London once. "But you see, sir, that were in the old coaching, etc. etc.," he told me.

OLD INN AT HEIGHAM, NORFOLK.

'Wanderer,'" then I must lay down my pen. I may say here, however, that all throughout this delightful tour, almost in every town and village, I met with readers of the "Leisure Hour," and I need hardly add they were glad to see my caravan.

About six miles from Dereham we reach the very old-fashioned but snug wee village of Hockering, and bivouac for the night on the causeway in front of the Cock Inn.

It must have been a rare thing indeed for a carriage like ours to draw up at the Cock. Such an event had not happened since the old coaching days, and I think people were duly impressed. The hostelry was all but deficient in stabling, but the landlord's neighbour came to the rescue.

"Send the nags across to me," he said. "I've stalls, bedding, hay, and everything they want."

In a homely little village like Hockering the

Hockering is of no particular style of arcnitecture, or rather it is a comminglement of every known English style, and the houses stand just anyhow, some wearing tiles, others thatch.

Hockering has one naughty boy. "The heart," says St. Paul, "is deceitful above all things and desperately wicked." I never felt the full force of that quotation until I encountered that urchin at Hockering.

Not a bad-looking child by any means. About seven or eight years old perhaps, bare feet and legs, and a straw hat on his head. The hat could have had nothing to do with it. It was not the hat, but the head that was in it—a head of tow; a face brimful of impudence, eyes that sparkled with merriment and mischief.

Queen could frighten other children away from the caravan. Queen had no effect on him. He was here, there, and everywhere at the same time

apparently: at the back, at the front, and underneath.

"Boy, do go and play somewhere else," I pleaded.

"I likes here best, mister."

"Be off, I tell you."

"I'll see you furder first."

"What's your name?"

"Haint got one. Have you?"

"I've got a whip, and you shall feel it."

"No you haint neither—saw your coachee take it away. Ha! ha!"

"I'll send for the policeman then."

"I can run faster nor he. Ha! ha!"

Here he threw his straw hat in the air, then a handful of gravel at Queen, and I retired defeated. At gloaming I thought I was rid of him; I went for a walk with Queen. There he was again, his tow head bobbing up behind a hedge and calling me "fat legs."

Next morning he went past on a wagon waving that identical hat. Going to a distant harvest field, I suppose, to have a whole day of doing mischief, and I was by no means sorry to see the last of him.

We got into Swaffham in the afternoon, just as rain began to fall. Swaffham is a good old-fashioned Norfolk town, with good old fashioned people in it, and it stands in the centre of a richly cultivated country, so it ought to be happy if it is not.

We had to drive right away to the other end of it, however, all through the drenching rain, to look for a pitch, which we found in a Mr. Dutchman's meadow.

"A straight road all the way to Downham Market," shouted Mr. Dutchman after us next morning; "you can't possibly go wrong."

It is very nice to feel that you cannot go wrong, a kingly sort of feeling in fact.

What a splendid road! what a charming country! a country of hills and dells and smiling fields, each eminence topped with towering woods.

Smiling? Well, it would be smiling if it were not so wet, for the hills are all half-shrouded in mist.

We must have been fully six miles from Swaffham, but never a milestone had we passed yet—but here is a finger post, and lo! wonder of wonders! the finger that is in a line with our road is pointing to Lynn. We were lost, but to Lynn we went accordingly. All roads are the same to the "Wanderer," and we never go back.

Now Lynn has a very ancient history, and if one takes the trouble to ferret that out and post himself up in it, he may enjoy himself for a week in this town. Otherwise I doubt if he can. The church is certainly a splendid one, and almost like a cathedral. It was also interesting to know that the green, soft sward on which the "Wanderer" lay had once upon a time been a monks' burial ground. But even their ghosts must have been laid long, long ago.

We looked in vain for lions in Lynn. Harmer and I chartered a hansom, and told the Jehu to rattle us round and trot out the lions. He rattled us round—there was plenty of rattle in it, for the narrow streets are wofully cobbly. He showed us Lovers' Lane, and the market place. Then he drove us to the docks, and we descended.

"There's a sight for you," he said proudly.

What we did see was a few ships, some grey walls that might have been brick-kilns, and a river of beautiful mud. I must say this much for Lynn, there isn't finer mud, nor a better display of it, to be found anywhere in the three kingdoms. But Lynn is quiet and old-fashioned even to quaintness.

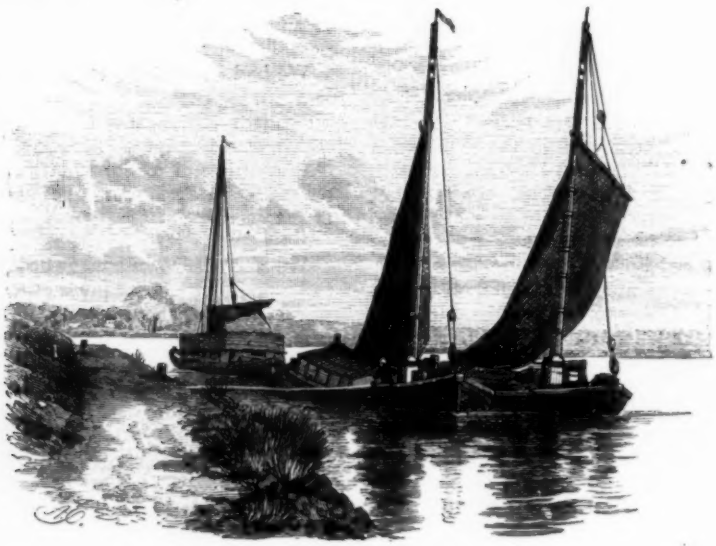
We had certainly no reason to regret the mistake in a turning that took us to Lynn, for the drive to Downham Market was delightful, past Stow Hall, which, standing on an eminence among the grand old woods with a very wide oak-lined long grass drive up to it, is worth going many and many a mile to see.

We found Downham a dear little bright old-fashioned town, literally embowered in rolling woods. We stabled at the Chequers, and encamped in a lovely field on the outskirts and under the shadow of a splendid wide-spreading chestnut. It was more like a park than a field.

Nothing is to be heard save the usual sounds of country life. Westward yonder is a kind of forest land of lovely trees, through which the setting sun is shimmering in a yellow haze. There are trees on every side, and near by a pretty peep of the old town itself, and a quaint and beautiful old rectory. This rectory will bear looking at again and again. It stands on a braeland, the brae being its gardens; its walls are reddish brown, its windows arched, and roof flat and embattled, and the green trees curl lovingly round it.

The silvery sun sinks lower and lower and soon becomes a sun of richest gold, then blood-red and then it is gone. The tree-tints are cooler now, and shadows creep up around them. But the haze grows white and ghostly, yet the sky above is blue, and when I look behind me, lo! there are stars sparkling out in the East.

We make an early start from Downham. The sun is shining in a pure Italian sky, and I am loath to leave so sweet a pitch. The day is hot, but the roads are good and level, and there is plenty of tree-shade, so the horses are not distressed.



We pass round a pretty church and well-kept God's-acre, and are soon quite away in the country, and so settle down to enjoy the drive.

This is a perfect summer day in mid autumn. Summer sunshine, summer wild flowers, summer's green upon the grass, summer's tints upon the trees, heightened by the strong fierce light that pours down from the pearly sky and throws all beneath the branches into strongest shadow, so that any creature crossing the road in front of us comes suddenly from darkness into dazzling light and is swallowed up by darkness again at the other side. But there are no summer birds, their songs no longer echo from tree to tree; and by-and-by even those flitting swallows will fly southwards and away to other climes.

Presently the country becomes more open; we cross the Ouse by a Gothic bridge. The Ouse here is lovely. It comes on towards the bridge like a

winding silver band through green meadows and marshes, passes beneath, and goes slowly winding away once more through other fields and marshes. Now we enter the straggling village of Hilgay. Everything in it looks old and grey. Grey streets, grey walls, grey windmills, and a grey, grey church. But patches of bright gardens and patches of poppies enliven the place a little, while bits of light in the shape of happy children sit on grey doorsteps and cheer us as we pass along.

With these brief sketches of East Anglia, its beautiful scenery, its fine old towns, its quaint villages and hospitable people, the reader must for the present be content.

YARMOUTH WHERRIES.

# An East End Rime.

YES, it's a terrible story; you East End doctors know
Many a terrible story; you see the struggle and woe
That's hidden from folk like us; you see the darkness and blight;
Ay, doctor, and sometimes too you see the splendour of God's own light.

You see the heart of the strife, and better you know than we
How e'en through the blindest dark the soul of a man can see;
How life can conquer death; heaven's purity, earth's foul grime;
And the great eternal beauty slay the ugliness of time.

Poor dead woman, she lay, in the grim post-mortem room.
Nothing but skin and bone was come to that place of gloom:
What did the true wife say, when her breath was all but spent?
"*Don't get your father into trouble!*" the last thing ere she went.

"Doctor, what ailed the woman?" "Nothing!" the doctor saith.
"Why did she die then, doctor?" "Because she was starved to death!"
Think of it, men and women! starved to death was she,
In the great world's greatest town, in the nineteenth century.

Six shillings for rent, and fuel, and food, not for one but five!
Is it not merely a wonder that four should be yet alive?
Stay, 'twas a trifle more; some bread and a block of coal
From a kindly woman and poor, perhaps, and that makes up the whole.

Never a murmur rose from the poor deserted wife,
The deathless love at her heart, the famine clutching her life.
Life of his mother, and lives of three young brothers hung
On the toil of one, O mothers, think, on the toil of one so young!

Out of their mean little room, cityward, up the street,
Every weekday morning, come rain, or fog, or sleet,
The boy went off to his work, the fourteen-year-old son;
She sent the others to school, and lay and starved alone;
All through our terrible winter-tide of ninety, ninety-one.

Suffering and working on, and nobody ever knew!
It's the grand old English way of the race that can bear and do;
Undreaming that aught they did was worthy of any fuss—
There's plenty of good heroic stuff, thank God, in the midst of us.

"Two slices of bread for breakfast, the like for dinner and tea;
"Mother took half a slice only; the rest for the boys and me;
"It was such a lot for me to take!" George Burrett said,
"But mother made me, because it was me was winning the bread;
"And sometimes I'd save a bit for Charles, when he cried with hunger in bed.

"Sometimes the men where I work 'ud give me a bit o' meat;
"I used to take it to mother; she liked it, but never would eat
"More than a little morsel; she said so rich a food
"Was filling; she didn't want so much: it would do the children good.

"'Surely father 'ud send some money to keep the home!'
"Mother would take the cards to see when money 'ud come;
"'If father 'ud only send, if it was but a shilling or two!'
"And the cards they always promised us grand, but the promise never came true.

"'On Friday the money 'll come! the cards are clear about that!'
"But on Friday it never came, and sore she cried thereat;
"She took to her bed at last; it was warmer in bed, said she,
"And besides, there'd be more room at the fire for the little chaps and me.

"No clothes to go to church; on Sundays nothing to eat."
The lad was a chorister once; and I think that a hymn more sweet
Never went up to God from his lips in church than rose
From his life when he had to stay away for lack of decent clothes.

O dear lad, the desire of our souls for you must be
A manhood fair with the glow of your boyhood's chivalry:
Better than aught we give, this name and fame you have gained;
Noble *doer of duty*, see that you keep it for ever unstained.

Will the eater devour for aye? Can meat from the eater come?
Can manhood rise to its height in the depth of a London slum?
Lo! here are the sinews and thews, alike in mother and son,
Of the race that has grappled with all the world, and wrestled a fall, and won.

E. H. HICKEY.

## A FEW NOTES ON INFLUENZA.

So many homes and places of business have been disturbed by the reappearance of the Influenza this year, that a few notes on some of its leading features will probably be welcome to many readers.

The disease, which has reached our shores now over twenty times, is still wrapped in impenetrable mystery, and all our exact methods of research, our bacteriological laboratories, and our instruments of precision have not advanced us far beyond the old Italians, who, unable to find a cause for it, dubbed it Influenza, or 'Influence,' as being due to the influence of the stars.

The word is unfortunate, not so much on account of its origin as from the fact that it has been so largely and erroneously used to denote such an acute cold in the head that the very word suggests a dozen handkerchiefs at least. Hence, when last year we got the real Simon Pure, after forty years' interval, many failed to recognise the enemy as influenza, because the cold in the head, which after all is only an accidental feature, was so often wanting. The painful experience we have now had has served at any rate to prove that influenza has no necessary connection with ordinary catarrh.

It is curious to notice how, like all other epidemics, it persistently travels from east to west. Hence, in Russia, it is appropriately called the Chinese distemper, and in Europe the Russian influenza. We learn from Dr. Symes Thompson, to whom we owe much of our information on influenza, that its first recorded appearance in England was in August 1510. The last two were in 1837 and 1847. One gentleman now living had it in both these years and again last year.

Its general characteristics appear to be a sudden feeling of being ill, with violent shivering as if one

had caught a sudden chill. The face is flushed, there is a bad headache and a feverish temperature often of 101°; the back aches, the muscles are sore all over. In several cases just observed the disease has begun with violent cramp and colic. Sore throats are also common this year. By the third day in favourable cases, or at the end of a week in more severe ones, the worst of the seizure is generally over, the temperature normal, and the patient left much enfeebled, with great loss of weight.

Dengue, or breakbone fever, a comparatively common Eastern epidemic, differs from influenza in having a higher temperature, no chest symptoms, a constant rash, and a much slower convalescence. The rash in influenza, which is somewhat like scarlatina, has only been seen in England in about one per cent. of the cases attacked.

The types of the disease appear to vary considerably with the individual case. Five distinct groups at least may be made out. One, the *general* type such as we have described; another, the *catarrhal*, when there *is* a cold in the head; another, the *gastric*, when there is vomiting; another, when there are *nervous* symptoms and great depression; and finally, a *rheumatic* type, where the pain in the joints is the great symptom.

As to remedies, the usual long lists of vaunted specifics have appeared; but patients appear to do as well who at the very outset of the disease get rest and warmth, with a mild, unstimulating diet, combined with some medicines that will freely open the pores of the skin and produce perspiration. There can be no doubt that bed is *the* place for the first day or two. Amateur doctoring with powerful specifics such as antipyrin, which is a popular craze just now, or even less deadly drugs, is very unsafe, and fatal results have ensued. There is no doubt of the value of quinine and a generous diet in convalescence.

Change of air in convalescence may prove dangerous if there is any risk of catching cold, as the body is at this time *peculiarly susceptible to chest diseases*. It is always wise to see a medical man in these attacks, not only for treatment, but more especially for advice as to when it is safe to resume one's ordinary life. The danger of relapse is very great, and every care should be taken not to run any risks in this truly treacherous disease by curtailing the period of convalescence. As a rule, from ten days to a fortnight is required in ordinary attacks before a man is ready to return to work, and very often this period must be lengthened. If a relapse does occur, it is very likely more serious than the original illness, owing to the chest complications so likely to set in. Death from inflammation and congestion of the lungs was frequent in these relapses last year.

The ordinary death-rate was not more than 1 per cent., and yet so widely did the disease prevail that no epidemic ever raised our general death-rate so much except cholera. In the Bluecoat School, for instance, one-third of the boys suffered; and it is calculated that a million of money was paid by the insurance companies for the increased sickness and mortality. So much more dangerous is influenza to the nation than to the individual. Both men and women were equally attacked, and most suffered between 15 and 40 years of age, children and old people being more rarely seized. Many have never recovered their health since, and in some cases the heart has specially suffered. We repeat, the best way to avoid these dangers is *not to hurry the convalescence*.

It is impossible to give any directions as to how to avoid influenza, for while in some cases the strict isolation of those attacked seems to have prevented the spread of the disease, in many more where there has been no care taken others in the house have equally escaped, while members of the family who were away, and exposed to no known influence, have been attacked. The following case shows that in some cases, at any rate, it is contagious. On Christmas Day, 1889, Dr. Whitehead, of Ventnor, was called to see a stockbroker, who had just arrived from London with influenza. While examining the patient's back the doctor felt he had inhaled the disease. Four days later he was seized with it, there being no other known case in Ventnor, and in four days more four of his children had it, and it soon became prevalent in the town.

It is far more probable, however, that the infection generally comes from the air than from persons. Great efforts have been made to catch the germ—if germ there be. In many cases examined, several germs have been found "loitering about as if for the purpose of committing a felony," but nothing has been as yet proved against them; and all theories that the germ is the product of the fine dust of mingled Yellow River mud and drowned Chinese bodies, from the great inundations in Central China in 1888, remain theories still. Still, though dust may not be the germ, it may serve as a medium for carrying it and dispersing it over vast distances. On several occasions the disease seems to have come from China, and even from Australia. It has commenced in England some eight times in the autumn, six times in the spring, twice in the early summer, and twice in the winter. It certainly does not appear malarial or particularly prevalent in marshy districts.

On the whole, the best preventive appears to be to run away from it altogether; and where this is beneath one's dignity or above one's means, to face it with equanimity, while avoiding, wherever possible, coming to close quarters with it; resting assured that in most cases where serious consequences have ensued there has been some carelessness or mistake in the treatment. In many cases the maintenance of vigorous health by means of abundance of good food, good air, and plenty of exercise wards off disease, but in influenza the strongest and most vigorous are attacked just as frequently as the weak. The writer is well aware of the disappointment of his readers when they find that no efficient precautionary measures can be taken, short of running away, but it is necessary to state the truth. Nothing indeed is more striking in the prevalence of a real epidemic that is carried in the air, than the uselessness of all attempts to avoid it by any preventive measures or drugs. When it is carried by water, or from person to person, we can deal with it much more effectually.

ALFRED SCHOFIELD, M.D.

### The Navvy Woman.

Imagine a great railway cutting in the midst of a somewhat flat country, its sides swarming with men as the layers in a bee-hive do with bees, on its edge on either side a line of white huts of slight construction, evidently more formed for immediate use than wear. These huts are, no doubt, mainly intended for navvy men, but in each of them one woman at least has her abode, filling the position of mother to the unruly household, and rearing also a family of her own. Great, gaunt creatures are these women, with a quite distinct appearance to that of most women whom we have seen or known.

I made their acquaintance during the course of several months which it was my lot to spend close to the navvy huts, and I still retain a pleasant remembrance of the rough, kindly creatures, who welcomed me readily. Curiously enough, although the philanthropy of the neighbourhood was much excited on behalf of the navvy men, it was not the fashion to waste any sentiment on the women who formed the rest of the community. They were said to be more rough than the men, and I can only venture to assert that I was not able to find out the difference.

No, they were kind enough, to me at any rate, these women who shook my arm as if it were the handle of a pump, who were ready to feast me with the heaviest meat and pastry in the midst of a broiling summer afternoon, or to greet me with "How's mother?" as a short and simple manner of inquiring after the health of my family. They did not ask for money, which indeed I never offered to them, or for pity, which I might have been more ready to bestow; they were merely glad to receive me as an acquaintance with whom they could have a chat on a summer's day. Whenever it was in my mind to stroll to the navvy huts, I could be always sure of finding a welcome there.

And these navvy huts—imagine an establishment of three rooms: the bedroom in which the navvies sleep at night, the centre room which is the common day apartment of every one, and beyond that the room where the caretaker, and his wife and family, sleep. And family! Although the navvy lodgers, even when they are married men, are reduced for the time to the condition of bachelors, the huts are not the least in want of babies, for the family of the care-taker is generally large enough. Open-eyed babies are these, of quite a navvy type, with no disposition to cry when there is a stranger in the hut, so used to the society of the roughest company that they are above all the smaller fears of life. A woman told me that her lodgers, for a joke, taught her older child to *hit the baby*—a characteristic specimen of the worse side of navvy life. And yet these children pick up some idea of manners from the instruction of their mothers, or of more educated friends.

"What is the name of this flower?" I asked of a pretty little girl, to whom I had given a rose, and who had assured me that she could tell me what it was called. She replied readily, though in a small, shy voice, "*Thank you!*" It was a pretty answer.

I fear, however, that the shyness does not survive the age of childhood, for the navvy young women are usually bold and unrestrained, and life in the huts is not favourable to the exercise of the more gentle virtues. I remember a little girl who was a servant to one navvy woman after another, a bright, intelligent child, who won favour from her mistresses, and who was ready to relate her miserable family history in the frankest way. This child was an inbred vagrant; she could not remain in any place. Sooner or later, without any special reason given, she would make a flitting by night, and offer her services elsewhere. Finally, I followed her to a public-house in the town, but that place also she left, and I saw no more of her. It was impossible to be sure of tracing her by her name, for she was only too ready to change both Christian and surname—an ominous habit, which I believe is not uncommon in navvy life.

Well, the railway was completed, my friends left their huts, and from that day to this I have not seen or heard of them again; but, as I have said, I keep them in pleasant remembrance, and trust that they are prospering in their rough, wandering life. After all, it suits them; they like huts better than houses, it is not in their nature to be stationary. And if they are in need of improvement—I dare not say otherwise—at any rate I can bear witness that I found them kind and hospitable.

M. A. CURTOIS.

### Arshag Effendi's Nose.

*A true Story.*

Such a nose had never been seen or heard of by any of Arshag's friends or relations. It was a phenomenal nose. It was not that it merely possessed preternatural proportions as to latitude and longitude, there was also a fire and shine about it that baffles all description, and led many who did not know how good a young man Arshag was to suppose that it too often projected over copious libations of generous island wine. But there was no vice about Arshag, and he shunned society. Unlike his dreadful nose the youth's disposition was retiring and unobtrusive, and he set no store on the notoriety that was his. He deemed it a nobler title to fame to be an honest clerk in his uncle's little office in Stamboul, and to conscientiously look after the welfare of the thirteen or fourteen small boys and girls at home whose hope and comfort he was.

Now half-way up the Bosphorus on the Asiatic side there is a beautifully situated village called Kandali, and in this village lived a lovely heiress, Giara Balian, watched over by a dragon of a mother, and an astute little man her father. I never knew how Arshag first got to know the beautiful Giara. It must have happened when he lived at Hissar under the old Seljouk towers, when he used to row in a caïque over to the "Sweet Waters" on quiet sunlit evenings. Be that as it may, he knew her and loved her. He was impressionable; and however strange the statement may seem, his abnormal development of nose in no wise stunted his faculties of heart. When, therefore, the beautiful Giara first met his gaze he was instantly her slave, bound hand and foot in the sweet bonds of love. Poor Arshag! His work in the dark spice bazaar grew distasteful, his rich uncle's penurious ways froze his soul, now throbbing with loftier longings. He became irritable. The coarse chaff of the bazaars stung him to the quick, and his existence was all one horrid nightmare of fear and deferred hope.

But Arshag had a mother—a careful woman, who was also watchful and suspicious, as behoves all good mothers of young men. She noticed many things: scraps of wretched verse on torn pieces of paper—she, good soul, thought it all exquisite, worthy of Gregory the Illuminator himself—noticed, moreover, a distaste for solid food, solicitude about his new clothes, a hankering after caïque journeys to Kandali, and many another well-known token which her woman's soul was not slow to interpret. So she called Arshag to her, told him her suspicions, and asked him who it was. Arshag's rosy cheeks and rosier beacon betrayed him, and he confessed it all. Now here was a lady of business. She lost no time in visiting Giara's mother, and came to the point with com-

mendable promptitude. Her Arshag was the heir presumptive to a good business in spices; he was an excellent young man; he was dutiful, obedient, thrifty; would Mrs. Balian have any objection to discuss the probabilities of matrimony between her Arshag and the fair Giara? Mrs. Balian diplomatically would consult her husband. Next morning the astute father was noticed by the quaking Arshag in close communion with the spice merchant uncle, and the love-sick youth was shortly afterwards asked to join the conference. Astute Balian had never set eyes on his daughter's suitor before, and, therefore, a certain recoil and reserve when Arshag appeared must be attributed to Mr. Balian's disappointment at his would-be son-in-law's personal appearance, which, you must not forget, was made up chiefly of nose. But Balian said nothing about his disappointment, revolving many things in his own mind. When he was satisfied as to Arshag's future prospects he agreed to take him up to Kandalí that afternoon to see Giara. Who can describe the tumult in the boy's breast? From the Golden Horn to Kandalí he passed many a fair sight, but he heeded them not. His mind was rent by two feelings—love of Giara, and hatred of his own nose! Oh, if he had had only less nose! Giara would laugh at him like those wretched boys in the bazaars of Stamboul. Tremblingly he entered the beloved one's abode, and for a few moments he was allowed to see her alone. Now Arshag was a prudent youth, and had taken the precaution to store his mind with many beautiful things to say to Giara—all about nightingales, and the moon and stars, and roses, and southernwood, and spices of all sorts out of his uncle's shop. This battery he brought to bear on Giara, and was proceeding through all his ammunition when he suddenly observed that Giara's eyes were fixed, half in amusement, half in terror, on his nose. Arshag at once shut off the poetry, entreating the girl not to look at his nose, but to listen to his love; and then urged, apologetically, that it was a very good nose, and had done him much service, although its proportions were somewhat unusual, and much more to the same effect. Giara burst into peals of laughter, renewed again and again; but she managed to tell him that she never, never, *never* could love a man with so much nose; and that no matter how lovely his verses were, or how melodious their cadences, she must refuse to link herself for life to a nose like his. Thus she spake—simply and to the point. The unfortunate Arshag never knew how he got away that evening from Kandalí. His beloved nightingales were singing all around, but he heard them not; the "stars of night beat with emotion," but he saw them not; his much be-sung roses were perfuming the path, but he smelt them not, despite his nose. Groaning and bemoaning his hard lot he reached home, and laid his head with all its woes on his pillow. Day followed day, and he longed for excitement and change—anything that would unseat the black horseman that rode behind. Change soon came, and in an unlooked-for quarter. A dangerous fire broke out among the wooden houses above the spice bazaar. Arshag of course was there, looking dreamily at the flames, when crash! and a burning beam from an upper storey fell on his upturned face. No nose, not even Arshag's, could stand the impact of this burning log, so the weaker body gave way to the stronger, and Arshag was shorn of half his nose. But the wonderful part is still to come.

In a beautiful house among the Franks in Pera there lived a wily physician of far fame. To him the shattered remnant of Arshag came. The wily physician at once recognised that here was a complicated case, and that the jagged nose was not the only ill from which his patient suffered. He was an auger of a man, and went boring right through Arshag's secret; moreover he was a kind-hearted doctor, as the sequel will show. He saw his way to a splendid *coup*, and explained matters thus: "If I smooth and pare down that stump of nose of yours into ordinary dimensions, and patch it over with an epidermis in such a way that only the initiated will be able to detect a flaw, if I send you forth be-nosed as other men, will you ——?" and he named a thumping big sum. Unhesitatingly Arshag consented, for the doctor was a great wizard, and could do all things, from drawing a *hamal's* tooth to bolusing a pasha. He told me afterwards that this paring and smoothing process was rather painful, and lasted a long time; but that he was finally placed in possession of the highly respectable and genteel organ which I then saw adorning his face.

Don't be incredulous even yet, for there is something still more wonderful to follow.

The autumn roses were shedding their last petals in the garden of Giara when the remodelled Arshag, with poetic speeches freshly culled from the best authorities, appeared to renew his suit. He was accepted. I knew a man who was present at the wedding.

M. A. M.

**The Congress of Miners.**—In the discussions held during the Conference of the miners in Paris, the influence of the British delegates, though numerically small, was very marked. The desire and expectation that the State or the Government would do much to ameliorate the condition of the working classes could not be maintained, although there were violent appeals in the Tribune, re-echoed by the plaudits of the spectators in the galleries. The decisions of the delegates were comparatively calm and moderate. The English miners have gained much by contrast with their foreign associates.

**Royal Botanic Society and Jenkins' Nursery.**—The Royal Botanic Society was incorporated in 1839. The garden in the centre of the Inner Circle in Regent's Park occupies about eighteen acres, and contains a winter garden and large conservatory covering 18,000 square feet. Besides the usual fruit and flower shows, at which numerous prizes are given, the midnight summer flower show has of late years been a regular institution. There has latterly been, for several seasons, a rose-decorated competition for carriages, copied from the rose fêtes of Nice and Cannes. We lately saw the catalogue of the sale of Jenkins' Nursery, which is now the site of the garden. The sale took place in the months of November and December 1838, the land having to be cleared. It occupied six days, when the whole stock was sold by auction. Mr. John King was the auctioneer. The marked catalogue, belonging to the late Mr. J. D. Sowerby, the first keeper of the garden, father of the present Mr. Thomas Sowerby, shows that not a few plants then flourishing cannot grow now in the open air in London, owing to the increase of smoke and impure atmosphere. Among the plants that fetched large prices at the sale were many of *Andromeda floribunda*, the price being about 50*s.* (now 5*s.*); two *Yucca gloriosa* fetched £1 9*s.*; a hundred small *Accuba* (sic) *Japonica* sold for 5*s.*; a hundred laurels fetched a guinea, Persian lilacs sold at 9*s.* for thirty, fir trees were 5*s.* A large quantity of ash, poplar, oak, larch, and other trees were sold, and also fruit trees.

**Talleyrand's Estimate of Napoleon.**—In his memoirs Talleyrand says of Napoleon: "He was a man endowed with very great intellectual force, but he has not understood veritable glory. His moral force was very small or even null. He was not able to enjoy prosperity with moderation, nor to bear misfortune with dignity, and it is because he lacked moral force that he caused the ruin of Europe and of himself."

**Waterspout.**—The steamship America had a very narrow escape from collision with a colossal waterspout recently, about 100 miles east of Hatteras, whilst steaming for New York from Nassau. The waterspout came roaring down on the ship, shaped somewhat like an hour-glass. The swelling base, frilled with foam, was 40 ft. in diameter, and its top was lost in the clouds in frayed liquid lines. The crew were terror-stricken by the approach of the column, and it became a question whether or not the mate should fire the cannon already loaded on the bridge to break it in case it should threaten to engulf the steamship. The America put on full speed, and the waterspout passed her stern at a distance of only 25 ft. The ship was lifted 26 ft. on the wave, which the waterspout sucked up as it passed. If it had struck the steamer she would, no doubt, have foundered with all on board.

**M. Edmonde de Pressensé.**—On April 19 the funeral service of M. E. de Pressensé took place in the small Chapelle Taitbout in the Rue de Provence. There was a great gathering of Protestant notables. Two Academicians,

MM. Melchior de Vogue and Sully-Prudhomme, were there, and also Father Hyacinthe. Besides the French Protestant pastors in Paris, the laymen included Ribot, Jules Simon, Cochery, and Richard Waddington, and many more. Among the speakers at the Montmartre Cemetery, M. Théodore Monod read an *éloge* by Jean Monod of Montauban, M. de Pressensé's college friend. M. Trarieux spoke on behalf of the Senate, of which the deceased was a member, and M. Aucoc for the Academy of Moral and Political Sciences. Happening not long after the death of M. Bersier, the eloquent preacher, the loss is great to French Protestantism, M. de Pressensé being universally esteemed, and his historical works highly valued.

**McGill University.**—This university, at Montreal, of which Sir W. Dawson is principal, has about 854 students—arts faculty 324, medicine 263, applied science 80, veterinary science 54, law 39—with 104 teachers in training at the Normal School. One third of the students are women, for whom the lectures are re-delivered, by an endowment formed by Sir Donald Smith, of the Canadian Pacific Railway and the Hudson's Bay Company. About 50 students are at affiliated colleges at Quebec, Richmond, and Stanstead.

**County Councils.**—From the composition and functions of the Councils-general in France, much may be learned for the decentralised local government of England. The Council is subsidiary to the Chamber of Deputies, but is an essential part of the commonwealth, and is likely to be more permanent and important in the future. Communes form the canton, cantons the arrondissement, arrondissements the department. Each canton elects a delegate to the Council-general, which sits for six years, meeting twice every year. Among other functions it distributes the direct taxation, voted in a lump by the Chamber. The Council divides the burden among the arrondissements, by whom it is distributed to the communes. The *préfets* of Departments are appointed by Government, and are in communication with the central power.

**Publishers and Booksellers.**—Some reviewers of the recent work, "A Publisher and his Friends," have claimed for Mr. John Murray the Second the honour of lifting the calling of a publisher to a level above that of a bookseller. They speak as if the one were to be viewed as a trade and the other as a profession. But the difference is wholly a matter of personal character. There are "booksellers and booksellers;" and an honourable seller of books may be as much a gentleman as any publisher of them. They both have the same object, viz., the gaining wealth from the works of "authors." The same magazines are read by both, the "Publisher's Circular" and the "Bookseller" being equally in their hands, and read by the same people. In fact, as defined by Dr. Johnson, the bookseller has rather the best of it, being described as "He whose profession it is to sell books," while the publisher is defined as "One who puts out a book into the world"—a literary accoucheur in fact. Let it be the effort of both, by whatever name distinguished, to act in ways worthy of their important calling, and let both honour the "dealer" in old books, in some respects the highest of all booksellers.

**The Emperor of Japan and his dying Prime Minister.**—Prince Sanjo was Prime Minister from 1868 to 1886, when he became Lord Keeper of the Privy Seal. In hereditary and official rank and reputation he towered above all his contemporaries and colleagues. Early on the morning of February 18, 1891, his physicians saw that death was near, and information was at once conveyed to the Emperor, who repaired without delay to the bedchamber of the dying statesman, and there conferred on him the highest rank attainable by a Japanese subject, and which was last bestowed by a Japanese Emperor in the eleventh century. The Emperor is described as manifesting great grief, his voice being broken and his hands trembling. His Majesty then read the following words:—"In the early years of my reign, while I was yet a youth, you were my chief aid. It was you who, not shrinking from a post of weighty responsibility, lent me assistance so constant, so steady, and so true, that you were to me as a teacher and a parent. Never, from first to last, did you falter or fail in the discharge of your large trust. Your services are a model for all subjects of our time. In recognition of your noble fidelity, I confer on you the First Class of the First Rank." The paper containing these words was then laid by the Emperor on the dying man's pillow. Prince Sanjo, though so weak from the fatal attack of influenza that all movement of the limbs had for some time seemed impossible, raised his head and joined his hands in the old Japanese fashion of expressing gratitude. He lingered in a semi-conscious condition until seven in the evening, when he expired.

**Cotgreave's Newspaper and Periodical Rack.**—The Library Indicator, showing at a glance what books or magazines are out on loan, and keeping a record of them, has become an essential fitting in all well managed public libraries. The face of the Indicator being apparent to the applicant outside the library, much time and trouble are spared to the attendants, who would otherwise have to be asked and to answer endless inquiries. By the same experienced and ingenious librarian, Mr. A. Cotgreave, Fellow of the Royal Historical Society, a convenient and useful invention has been patented for holding periodicals and papers. The Cotgreave Rack will be found serviceable in clubs, hotels, and libraries, as well as in public reading-rooms. A rack fixed on the wall occupies little space, one only six feet square sufficing for 200 papers or periodicals, the headings or titles of each being visible. Mr. Cotgreave's presence is always welcome at the annual Congresses of Librarians, where he has read several papers of a practical kind. His skill and industry in making library catalogues have been appreciated, and his latest work in this line is the admirable catalogue of the Guille-Allès Library in Guernsey, the munificent gift of two Guernsey men to their native island after retiring from business in New York.

**Banking and Money in Paris.**—The Bank of France is the only French bank in the English sense of the word. All other banks are really joint-stock companies, combining discount with financial business. Interest is paid on deposits. The principal institutions of this kind are thus given by the "Times":—The Crédit Foncier, with 788,000,000f. deposits; the Crédit Lyonnais, with 760,000,000f. deposits; the Société Générale, with 355,000,000f.; the Comptoir National d'Escompte, with 213,000,000f.; the Crédit Industriel et Commercial, with 123,000,000f.; the Société des Dépôts et Comptes Courants, with 85,000,000f. deposits. Payment by cheques is very little developed as yet in France. Bank-notes for 100 francs are in common use; there are 50 franc notes, but seldom seen; 20 franc pieces or Napoleons being common currency, and silver for smaller purchases and for change. An immense quantity of bronze money has currency, which used to overflow into England, but is now not current in this country. The principal part of the silver and bronze money has the effigy of Napoleon III, who by the substitution of Imperial for Royalist or Republican coins, sought to habituate Frenchmen to the empire.

**The Birds at Houtman's Abrolhos.**—An interesting paper was recently read by Mr. A. J. Campbell, F.L.S. of Melbourne, before the Australasian Association for the Advancement of Science, on the birds of Houtman's Abrolhos. It will be remembered that these islands were the scene of the tragic ending of the Dutch attempt to colonise New Holland, as narrated in the "Leisure Hour" for December 1888. Curiously enough, "The Captain-General," the book in which the story of the expedition is told, found its way out to the island, and, to the author's astonishment and gratification, a letter reached him from that distant spot acquainting him with the fact. On Mr. Campbell's visiting the island he found the author's reply, and, as likely to be of interest, sent him copies of certain published matter descriptive of the present state of affairs, on what was once Batavia's Grave. These silvery coral islets are now the greatest nursery for sea-birds in Australia, and by reason of their geographical position in the sub-tropics, perhaps afford suitable breeding-grounds for a greater number of species than any other distinct or limited spot in the world. On one islet of 300 acres Mr. Campbell found 1,452,000 hen birds sitting on their eggs at one time! "The whole place," he says in his article in the "Australasian," illustrated from photographs he took on the islands, "is actually alive with

birds, some breeding on every bush, some breeding under the bushes, and some breeding beneath the bushes underground. Words fail, utterly fail, to convey a simple idea of the marvellous scene. The birds are perfectly fearless of our presence. We make our way between the dark-coated noddy terns which cover the saltbushes as well as the ground in all directions, making defiant bark-like notes. Others just move out of the way with croaking sounds, exposing their single egg on a secure platform nest of seaweeds. Prolonged guttural screams issue from underneath the bushes from sooty terns, likewise sitting upon a single egg, but on the bare ground, their enraged mates flying about our heads filling the air with squeaking notes of anger, and some being rude enough to strike our hats; while higher still overhead is a cloud of sooties—bachelors probably—calling 'Wide-awake!' everywhere. In conducting practical investigations in such a fascinating field of natural history, there is just one drawback to contend with, namely, the showers of live guano that fall from the cloud of birds above. Locomotion over the ground is rendered extremely insecure, owing to its honeycombed nature, caused by countless burrows of petrels or so-called mutton birds. I can find no better simile to convey an idea of the multitudes of birds than the one I used before the Royal Society when reading my oological notes, namely, the description of quail falling amongst the Israelites of old, for of a truth it seems here as if the whole face of the sea as well as of the earth is covered with birds as it were a day's journey on this side and as it were a day's journey on the other side round about our camp. To commence business I had to clear a patch of birds to find space for my apparatus, the birds resenting such unceremonious intrusion by pecking at the camera legs. While I was enveloped in the black cloth, focussing, one had the temerity to rest upon my head, and when I returned with a slide I found another chap had alighted upon the camera, and would not quit until I had dealt it a blow in the stomach, which I did earnestly and with no little amount of indignation, because one of its mates had fouled the slide lying upon the ground." The islands are worked for the guano, which is from one to four feet thick, dry, powdery, and perfectly offenceless as regards smell; of it, 5,000 tons a year, at about ninety shillings a ton, are exported to Rotterdam, Stettin, Hamburg, and Port Louis. The headquarters of the industry are on Rat Island, so called because when the present occupants of the guano depôt first set foot upon the island, the rats in a most familiar manner after tea jumped upon the table in dozens. In his paper read before Section D of the Australasian Association for the Advancement of Science, Mr. Campbell gave a list of the fauna of the islands. This includes three mammals, a wallaby found in the northern group, a seal, and this rat which probably came from some wrecked ship; five reptiles, one of which is the carpet snake; and no less than thirty-seven species of birds, among them the sea eagle, the white-headed osprey, the welcome swallow, the bronze-wing pigeon, two oyster-catchers, two sandpipers, the curlew, the whimbrel, the reef heron, the pectoral rail, the Tabuan crake, two gulls, nine terns, three petrels, two tropic birds, the pied cormorant, and the Australian pelican.

**Otto of Roses.**—It is reported by the British Vice-Consul at Philippopolis that 6,594lb. of otto of roses was exported during last season, the realised value being £62,000. The price has fallen 12½ per cent. below that of former years, a fall, he says, for which competition and adulteration are responsible. The number of roses must have been enormous to produce the weight mentioned of otto, otherwise called "attar," of roses. It is said that it requires 20,000 roses (*Rosa Damascena*) to yield otto of roses equal in weight to a two-shilling piece. Philippopolis, on the Maritza River, is one of the oldest cities of Europe, having been founded by Philip of Macedon, father of Alexander the Great.

**Perils of Railway Travelling.**—In England, apart from accidents to the trains, there are occasional perils from passengers. But in India such perils seem to be more frequent, as the following notice is said to be seen at roadside stations: "Passengers are hereby cautioned against taking anything to eat or drink from unknown persons, as there are many who live by poisoning travellers. They first of all court acquaintance with passengers in a *sarai* or some other place, and then gain their confidence on the plea of being fellow travellers going to the same place. When they reach a place convenient for the purpose, they poison the water or food of the passengers, who become insensible, and then they decamp with all their property." The caution against drugged spirit-flasks may not be wholly needless even in England, on lonely lines, and where there may be few fellow travellers in a carriage.

**St. Helena in Decadence.**—In the days before steam navigation hastened the voyage to India, St. Helena flourished from the large number of ships touching at the island. The custody of Napoleon prolonged the official importance of the station. It is a different place now. Mr. Antrobus, of the Colonial Office, who has lately been acting as Governor of St. Helena, concludes a recent report on the colony by saying that many of the civil servants have to discharge responsible duties with inadequate pay, and all the inhabitants are suffering more or less from the general depression. "It is melancholy to contemplate the present condition of an island which was once so flourishing and still has so many points to recommend it. There are still the wonderfully healthy climate, neither too hot nor too cold, the beautiful scenery, the mixture of tropical and temperate vegetation, the rare indigenous plants, the clearly marked geological structure, and the historical associations derived from the rule of the East India Company, the imprisonment and death of the great Napoleon, and the visits of Halley and Darwin and other distinguished men of science. But the ruins of well-built country houses, and the deserted cottages, which are to be seen in every direction, as well as the returns of the rapidly diminishing revenue, afford evidence of the change which has taken place in all that constitutes material prosperity; and I regret that there is at present no sign of any improvement."

**Crofter Colonisation.**—The Earl of Aberdeen, when in America last year, visited the stations of Highland crofters, and reported them to be prosperous to the Committee of the House of Commons. Sir George Baden Powell, M.P., who had recently visited the settlement in Manitoba, described the position of the crofters, and gave figures to show that each family had on the average 168 acres of good soil, 37 of which were cropped, 80 head of live stock, 30 head of poultry, 17 tons of hay, and 750 bushels of wheat, which, at the low price of 70 cents, would represent a money value of £110. From all that he could gather every one was well housed, there was a certain amount of stabling, and school accommodation was within easy reach. The crofters were now, therefore, in a far better condition than anything they could possibly have hoped for if they had remained in their homes in Scotland. Prior to their emigration they were poor, indolent, unskilled in farming, and many of them showed a discontented nature, whereas now they were very hopeful and improved in every way, especially in regard to capital.

**American Mail.**—The White Star liner Majestic arrived at Queenstown from New York with an extraordinarily large mail, which comprised 860 sacks of English, Scotch, Irish, and Continental letters, weighing in the aggregate 35 tons. All of these were landed at Queenstown. This is the heaviest mail ever brought across the Atlantic by any one steamer. The numerous sacks were promptly packed into a special train, which consisted of post offices, tenders, and a van. A double staff of letter-sorters, 22 in number, accompanied the mails to Dublin, so as to be able to cope with the exigencies of the case. This mail shows the intercourse between the two countries at the end of April, 1891. During the same month many other vast English sacks passed out, and American mails arrived.

**Nansen's Polar Expedition.**—Dr. Nansen, of trans-Greenland celebrity, starts this month on his new Polar expedition. He proposes to get through Behring Straits to the island of New Siberia, and hopes to find in autumn open water stretching far away to the north. His vessel will carry only eight men, and provisions for five years. He hopes to reach the pole in two years. Strong boats will be carried in case of accident to the vessel, and tents for camping on ice or on shore when necessary

**Profit-sharing.**—An official report to the Board of Trade by Mr. J. Lowry Whittle, published as a Parliamentary paper, contains valuable information. The cases in which the system of profit-sharing has been organised in this country are few compared with those in France, where the principle was more early introduced and more thoroughly carried out. The example of the Maison Leclaire was specially described by Mr. John Stuart Mill in his "Political Economy." It was commenced as long ago as 1842, and Mr. J. L. Whittle gives, in an appendix to his report, the financial result during the whole period down to 1889. It appears that no less a sum than 5,513,142 francs was shared among the workmen in addition to their yearly wages, the rate of increase being as high in one year as 23·27 per cent., and having been maintained steadily for the last nine years at more than 20 per cent.

**Stop! here is a Fool coming.**—Lockhart, Sir W. Scott's son-in-law, tells how Lord Jeffrey was playing with some of his eminent Edinburgh friends at leap-frog on the lawn at Craigcrook, when the host suddenly said to his guests, "Stop! here is a fool coming." The story has been told of others, but the best known version of the anecdote is that given by James Boswell, in the Dedication of the Life of Johnson to Sir Joshua Reynolds. Boswell says, "It is related of the great Dr. Clarke, that when in one of his leisure hours he was unbending himself with a few friends in the most playful and frolicsome manner, he observed Beau Nash approaching; upon which he suddenly stopped—"My boys (said he), let us be grave; here comes a fool."

**Mussulman Inscriptions in Asia Minor.**—M. Huart, the interpreter of the French Embassy at Constantinople, has sent to the Académie des Inscriptions et Belles-Lettres in Paris, a report of the mission, with which he was intrusted by the Minister of Public Instruction, in the ayalet of Karamania (the ancient Lycaonia and Isauria), and especially at Konyah (Iconium), for the purpose of copying the Mussulman inscriptions dating from the dynasty of the Seleucidæ, which reigned in that country for about two centuries. This was a period of relative prosperity for the region over which reigned these princes, who had in turn thrown off the suzerainty of Bagdad and Persia, and had adorned Konyah, their capital, with monuments still visible 30 years ago, and testifying to their interest in art, notably in architecture and decoration. Out of 58 inscriptions, mostly Arabic, which M. Huart copied, 25 belong to the epoch of the Seleucidæ and relate to six of those princes who reigned at Konyah.

**The Safety of Railway Travel.**—In our last month's article on the railroad, an accident occurred in calculating the risk of travel, and though Mr. Gordon was the first to find out his error, he unfortunately did so too late to prevent its appearing in the early part of our edition. The chances of an ordinary passenger being killed on a railway journey is apparently as 1 to 94,271,378, but the risk is really less than this, owing to none of the holders of season or periodical tickets being included. These figures are on the basis of the Government returns for 1889, the last available for purposes of comparison, owing to the Registrar-General's Report for 1890 not having yet been issued. From these 1889 reports, it is somewhat startling to find that not only is it safer to ride on the railroad than to walk through the streets, but that it is actually safer to ride in a railway carriage than in a perambulator, which is the safest of vehicles not driven by steam. A perambulator is twice as safe as a dray, five times as safe as an omnibus, eight times as safe as a tramcar, nine times as safe as a cab, twelve times as safe as a carriage, and ninety-seven times as safe as a van or cart. In 1890, the number of persons killed on the railroads of this island was eighteen, being ten more than during the preceding year, the increase being accounted for by the ten victims of the terrible catastrophe to the Cape Mail at Norton Fitzwarren, on the Great Western.

**Educational Museum.**—At South Kensington Museum there has long been a display of all educational instruments and appliances, books and maps, as well as models of class-rooms and all furniture and fittings belonging to them. Another museum has been established at 74 Gower Street, the headquarters of "The Teachers' Guild," a society of more recent origin than the College of Preceptors. The Guild consists already of about 4,000 members, with branches all over the kingdom. The council recommend the introduction of a bill for compulsory registration of teachers. At present the qualifications of volunteer and adventure teachers are very vague.

**Red Tape.**—An amusing illustration of the excess of "red tape" was given by Captain E. J. Balfour, brother of the Chief Secretary for Ireland, in returning thanks for the Volunteers in an after-dinner speech. A friend of his wanted to have his company photographed in Wellington Barracks, and the commanding officer there accorded permission, if the authorities at the War Office assented. All manner of official questions were asked, and it was not till about twenty letters had passed in reference to the matter, that sanction for the photograph was obtained.

**Sacred Tree near Leh, Ladak.**—At Leh, in Ladak, in Central Asia, there is a sacred tree which is of fabulous antiquity, and connected with ancient superstitions before the time when Mohammedanism reached that remote region. One of the Moravian missionaries, Mr. Marx, has sent a description and sketch of the tree. It is a poplar, and apparently between three and four centuries old. It is sacred to a goddess called Dzug-dor-gyal-mo (*gyal mo*, means queen), who presides over decency and propriety in women and girls. There is no image of this goddess known, and the veneration for her is very slight and formal now, although formerly she was supposed to have great power. Once a year, at the "Lo-Sar," or new year, bloodless offerings of juniper twigs, arrows, and goats' horns, are placed on a stone near the tree, which may represent an altar. The greatest care, however, is taken of the tree, and disasters are threatened in popular belief to any who injure it.

**Tea at £10 12*s.* 6*d.* per pound.**—Much was lately said of the sale of a sample of Ceylon tea, by auction, in Mincing Lane, at an unprecedented price, but the record has been exceeded by the sale of another consignment from Ceylon, which fetched about double the price, or £10 12*s.* 6*d.* From the extent to which use has been made of this sale for advertising a particular company, there is nothing in the price to connect it with extraordinary merit. It is certainly a beautiful tea, made from the tenderest tips of young leaves, from a good plantation.

# Household Queries.

**Violet-Ink Stains.**—*I have let some violet ink fall on a floor of a room. Could you kindly inform me if there is anything I could use to remove the stain?*—Nearly all violet inks—probably all—are aniline dyes, and none but the makers can tell you for certain if any process will get it out again. If the matter is of real importance you should write to them. The only general expedient likely to succeed would be successive applications of chloride of lime, left on

the floor; but there are dyes which would only be the worse for this treatment. It acts on many, however, and time also generally affects these aniline colours.

**Stone Stairs.**—*Can you give me a recipe for the best preparation to use for stone stairs (white), that will not rub off on to carpets, etc.?*—Coming off is best prevented by mixing size in the water. It is a great deal prevented by boiling up the powdered material, whether pipe-maker's clay, mason's dust, or powdered brick, in a quart of water mixed with a quart of beer. These expedients cause a little loss of whiteness, however.

**Fowls Featherless.**—*Would you kindly advise me what to do with my fowls? They seem to be losing all their feathers. I have been feeding them alternately with Indian meal and bran mash, and Indian corn and oats. They have an extensive grass run, and are out all day. After their feed at nine o'clock in the morning I feed with grain at four. They have a dust-bath of peat-earth. Do you think hemp-seed would do any good, with sulphate of iron in their water? Should sitting-hens have grain or soft food?*—Answering the last questions first, sitting-hens are best fed upon whole barley, but never soft food. Hemp-seed would do no good: a little of the iron tonic for a month or two may. The cause of the mischief is probably in your feeding. Discard for the present the Indian meal, bran, and oats (the latter of heavy quality, 40 lbs. to the bushel, are good food, but with bran give too much husky matter, and this may have caused the mischief), and use for grain wheat and barley; for the soft food, what is known as sharps or middlings mashed up with your house scraps or barley meal. As your birds have grass run, Indian corn may be given now and then as grain, but avoid the meal except when fattening. Under this regimen they will probably improve, unless they have contracted the vice of eating each other's feathers, which is, however, very rare upon a grass range.

**Cutting Bottles.**—*Could you inform me of some simple method of preparing melon seeds for fancy work, having tried drying, but find they shrink? Also, is there any way of cutting quart bottles to make them suitable for jam-pots, having tried wool dipped in paraffin, but find they never break evenly?*—Melon seeds contain too much moisture to preserve their shape; you must be content with such naturally hard particles as fish scales, fir-cone scales, etc. We should not have thought quart bottles very suitable when done, having no groove round them, and needing considerable labour to rub down smooth with sand or emery, even when cut. But you should succeed if you dip your thread in turpentine, which burns rather more slowly, and first file a notch with a three-square file, tie the thread round in that, and the moment the thread is burnt dip into cold water; the crack will lead along from the notch. Or you can file a notch all round easily if you dip the file in turpentine. Or (always first filing a small notch to lead the crack from) you can lead it round with a red-hot poker which has been pointed for the purpose; or at some chemists' shops you can buy what they call "pastille" or "spring-coal," which when lighted burns away bright at the end, and answers better than the poker. You must do the parting by gentle rapping all round with the back of a knife.

**Old Air-cushion.**—*I shall be glad if you can tell me if I can do anything to an air-cushion to make it soft; it has been laid aside for some time, and is unpleasantly stiff, and also much soiled. Can it be cleansed and improved?*—After a time india-rubber utterly "perishes," as it is called, and nothing can then restore it. Short of that, the hardness can often be removed by keeping the article for a day or two in a moderately warm room, and then in a very warm one, or near the fire—not to scorch, however. Of course it will wash easily, but the original bright powdery surface cannot be renewed. If it is not spoilt, however, to make a cover is very easy.

**India-rubber Plant.**—*Kindly inform me how to manage an india-rubber plant, which has grown very tall, and had to be transplanted into another and larger pot. It seems as if it was dying at the top. Will it make other shoots lower down, or must it be cut at the top? The leaves are very large and healthy.*—We fear the re-potting was a mistake; these plants do not need nearly such large pots as might be supposed, and by pinching back may be kept in form for years. When potted or re-potted, they generally need stove or warm greenhouse treatment till their roots have got thoroughly established, then gradual hardening off again. The top probably does require cutting back clean to healthy growth; but if you value this particular plant you had better show it to a nurseryman, who will tell you from its exact appearance, pot, &c., what is the best thing to do. Meantime be sure there is plenty of water at the roots, and keep the leaves well sponged. It may need to go into the hothouse; it is only when well rooted and hardened off that these plants will bear ordinary room treatment: then they are about the easiest of all to manage.

**Tomatoes—Icing.**—*Are tomatoes injurious to eat? Do they, as I have heard, tend to produce cancer?* 2. *Can you give me a good recipe for icing a cake? Should it be put on while the cake is hot?*—1. They are not the least injurious, but, on the contrary, one of the most wholesome of vegetables. 2. Supposing it to be a wedding-cake, the almond part of the icing is made by blanching half a pound of almonds and pounding them in a mortar with a pound of finely sifted loaf-sugar; then add a very little orange-flower water, and mix in enough white of egg to make the whole a soft smooth paste. Suppose you put on about an inch and a half deep of this, then it must be allowed to become firm by drying. It is put on the cake cold. The sugar-ice is made by mixing white of egg alone with finely sifted sugar, and a few drops of lemon to taste, the proportion being about half a pound of sugar to the whites of two eggs—only eggs are large and small. This ice is made more liquid, so that it can be spread or laid on. The cake must be put in a dry place to harden gradually, covering over from the dust. The same semi-fluid ice, in a paper cone with a little hole at the bottom, is used for "piping," or ornamental figures, the cone being moved about as the little stream flows out, to make the pattern. Icing is easily painted on in water-colour by any one clever at quick sketching.

**Parrot Plucking Itself.**—A correspondent writes: "Having read in the 'Leisure Hour' an inquiry as to the treatment of parrots who pick out their feathers, I should like to give the result of our experience. When we first had our grey parrot as a young bird, twenty years ago, it was a complete object from picking out its feathers, and we followed carefully the diet prescribed for it in the hopes of curing it; but as in a year or two's time it was no better, we allowed it to take anything it fancied (not parsley), and from that time it entirely recovered, and is in perfect health and beautiful plumage. It eats meat, vegetables (cooked, of course), puddings, sop, cheese, rice, fruit, etc., and I must add, drinks a great quantity of water. Hemp-seed is always in the cage, in which, however, the bird only remains during the night. Of course it has baths whenever it likes."

SUMMERTIDE.

# THE STORY OF FRANCIS CLUDDE.

BY STANLEY J. WEYMAN AUTHOR OF "THE HOUSE OF THE WOLF," ETC,

"BEWARE! BEWARE, UNLUCKY SHOOT OF A CROOKED BRANCH!"

## CHAPTER XVII.—A LETTER THAT HAD MANY ESCAPES.

"HOITY toity!" the Duchess cried again, looking from one to another of us, when Anne had disappeared. "What has come to the little fool? Has she gone crazy?"

I shook my head, too completely at sea even to hazard a conjecture. Master Bertie shook his head also, keeping his eyes glued to the door as if he could not believe Anne had really gone.

"I said nothing to frighten her!" my lady protested.

"Nothing at all," I answered. For how should the announcement that my real name was Cludde terrify Mistress Anne Brandon nearly out of her senses?

"Well, no," Master Bertie agreed, his thoughtful face more thoughtful than usual; "so far as I heard, you said nothing. But I think, my dear, that you had better follow her and learn what it is. She must be ill."

The Duchess sat down. "I will go by-and-by," she said coolly, at which I was not much surprised, for I have always remarked that women have less sympathy with other women's ailments, especially of the nerves, than have men.

"For the moment I want to scold this brave silly boy here!" she continued, looking so kindly at me that I blushed again, and forgot all about Mistress Anne. "To think of him leaving his home to become a wandering squire of dames merely because his father was a— well, not quite what he would have liked him to be! I remember something about him," she continued, pursing up her lips, and nodding her head at us. "I fancied him dead, however, years ago. But there! if every one whose father were not quite to his liking left home and went astraying, Master Francis, all sensible folk would turn innkeepers, and make their fortunes."

"It was not only that which drove me from home," I explained. "The Bishop of Winchester gave me clearly to understand——"

"That Coton was not the place for you!" exclaimed my lady, scornfully. "He is a sort of connection of yours, is he not? Oh, I know. And he thinks he has a kind of reversionary interest in the property! With you and your father out of the way, and only your girl cousin left, his interest is much more likely to come to hand. Do you see?"

I recalled what Martin Luther had said about the cuckoo. But I have since thought that probably they both wronged Stephen Gardiner in this. He was not a man of petty mind, and his estate was equal to his high place. I think it more likely that his motive in removing me from Coton was chiefly the desire to use my services abroad, in conjunction perhaps with some remoter and darker plan for eventually devoting the Cludde property to the Church. Such an act of piety would have been possible had Sir Anthony died leaving his daughter unmarried, and would certainly have earned for the Chancellor, Queen Mary's lasting favour. I think it the more likely to have been in his mind because his inability to persuade the gentry to such acts of restitution—King Harry had much enriched us—was always a sore point with the queen, and more than once exposed him to her resentment.

"The strangest thing of all," the Duchess continued with alacrity, "seems to me to be this, that if he had not meddled with you, he would not have had his plans in regard to us thwarted. If he had not driven you from home, you would never have helped me to escape from London, nor been with us to foil his agents."

"A higher power than the Chancellor arranged that!" said Master Bertie, emphatically.

"Well, at any rate I am glad that you are you!" the Duchess answered, rising gaily. "A Cludde? Why, one feels at home again. And yet," she continued, her lips trembling suddenly, and her eyes filling with tears as she looked at me, "there was never house raised yet on nobler deed than yours."

"Go! go! go!" cried her husband, seeing my embarrassment. "Go and look to that foolish girl!"

"I will! Yet stop!" cried my lady, pausing when she was half way across the floor, and returning. "I was forgetting that I have another letter to open. It is very odd that this letter was never opened before," she continued, producing that which had lain in my haversack. "It has had several narrow escapes. But this time I vow I will see inside it. You give me leave?"

"Oh yes," I said smiling. "I wash my hands of it. Whoever the Mistress Clarence to whom it is addressed may be, it is enough that her name is Clarence! We have suffered too much at his hands."

"I open it then?" my lady cried dramatically. I nodded. She took her husband's dagger and cut the green silk which bound the packet, and opened and read.

Only a few words. Then she stopped, and looking off the paper, shivered; "I do not understand this," she murmured. "What does it mean?"

"No good! I'll be sworn!" Master Bertie replied, gazing at her eagerly. "Read it aloud, Katherine."

"'To Mistress A— B—. I am advertised by my trusty agent, Master Clarence, that he hath benefited much by your aid in the matter in which I have employed him. Such service goeth always for much, and never for naught with me. In which belief confirm yourself. For the present, working with him as heretofore, be secret and on no account let your true sentiments come to light. So you will be the more valuable to me, even as it is more easy to unfasten a barred door from within than from without.'"

Here the Duchess broke off abruptly, and turned on us a face full of wonder. "What does it mean?" she asked.

"Is that all?" her husband said.

"Not quite," she answered, returning to it, and reading.

"'Those whom you have hitherto served have too long made a mockery of sacred things, but their cup is full and the business of seeing that they drink it lieth with me who am not wont to be slothful in these matters. Be faithful and secret. Good speed and fare you well.—Ste. Winton.'"

"One thing is quite clear!" said Master Bertie, slowly. "That you and I are the persons whose cup is full. You remember how you once dressed up a dog in a rochet, and dandled it before Gardiner? And it is our matter in which Clarence is employed. Then who is it who has been co-operating with him, and whose aid is of so much value to him?"

"'Even as it is easier,'" I muttered thoughtfully, "'to unfasten a barred door from within than from without.'" What was it of which that strange sentence reminded me? Ha! I had it. Of the night on which we had fled from Master Lindstrom's house, when Mistress Anne had been seized with that odd fit of perverseness, and had almost opened the door looking upon the river in spite of all I could say or do. It was of that the sentence reminded me. "To whom is it addressed?" I asked abruptly.

"To Mistress Clarence," my lady answered.

"No; inside I mean."

"Oh! to Mistress A—B—. But that gives us no clue," she added. "It is a disguise. You see they are the two first letters of the alphabet."

So they were. And the initial letters of Anne Brandon! I wondered that the Duchess did not see it, that she did not at once turn her suspicions towards the right quarter. But she was, for a woman, singularly truthful and confiding. And she saw nothing.

I looked at Master Bertie. He seemed puzzled, discerning, I fancy, how strangely the allusions pointed to Mistress Anne, but not daring at once to draw the inference. She was his wife's kinswoman by marriage—albeit a distant one—and much indebted to her. She had been almost as his own sister. She was young and fair, and to associate treachery and ingratitude such as this with her seemed almost too horrible.

Then why was I so clear-sighted as to read the riddle? Why was I the first to see the truth? Because I had felt for days a vague and ill-defined distrust of the girl. I had seen more of her odd fits and caprices than had the others. Looking back now I could find a confirmation of my idea in a dozen things which had befallen us. I remembered how ill and stricken she had looked on the day when I had first brought out the letter, and how strangely she had talked to me about it. I remembered Clarence's interview with — not Dymphna, as I had then thought—but, as I now guessed, Anne wearing her cloak. I recalled the manner in which she had used me to persuade Master Bertie to take the Wesel instead of the Santon road; no doubt she had told Clarence to follow in that direction, if by any chance we escaped him on the island. And her despair when she heard in the church porch that I had killed Clarence at the ford! And her utter abandonment to fear—poor guilty thing!—when she thought that all her devices had only led her with us to a dreadful death! These things, in the light in which I now viewed them, were cogent evidences against her.

"It must have been written to some one about us!" said the Duchess at length. "To some one in our confidence. On our side of the door, as he calls it."

"Yes, that is certain," I said.

"And on the wrapper he styles her Mistress Clarence. Now who——"

"Who could it have been? That is the question we have to answer," Master Bertie replied dryly. Hearing his voice I knew he had come at last to the same conclusion to which I had jumped. "I think you may dismiss the servants from the inquiry," he continued. "The Bishop of Winchester would scarcely write to them in that style."

"Dismiss the servants? Then who is left?" she protested.

"I think——" He lost courage, hesitated, and broke off. She looked at him wonderingly. He turned to me and, gaining confirmation from my nod, began again. "I think I should ask A— B—," he said.

"A— B—?" she cried, still not seeing one whit.

"Yes. Anne Brandon," he answered sternly.

She repeated his words softly and stood a moment gazing at him. In that moment she saw it all. She sat down suddenly on the chair beside her and shuddered violently, as if she had laid her hand unwittingly upon a snake. "Oh, Richard!" she whispered, "it is too horrible."

"I fear it is too true," he answered gloomily.

I shrank from looking at them, from meeting her eyes or his. I felt as if this shame had come upon us all. The thought that the culprit might walk into the room at any moment filled me with terror. I turned away and looked through the window, leaving the husband and wife together.

"Is it only the name you are thinking of?" she muttered.

"No," he answered. "Before I left England to go to Calais I saw something pass between them—between her and Clarence—which surprised me. Only in the confusion of those last days it slipped from my memory for the time."

"I see," she said quietly. "The villain!"

Looking back on the events of the last week, I found many things made plain by the lurid light now cast upon them. I understood how Master Lindstrom's vase had come to be broken when we were discussing the letter, which in my hands must have been a perpetual terror to the girl. I discerned that she had purposely sown dissension between myself and Van Tree, and recalled how she had striven to persuade us not to leave the island; then, how she had induced us to take that unlucky road; finally, how on the road her horse had lagged and lagged behind, detaining us all when every minute was precious. The things all dove-tailed into one another; each by itself was weak, but together they formed a strong scaffold—a scaffold strong enough for the hanging of a man, if she had been a man! The others appealed to me, the Duchess feverishly anxious to be assured one way or the other. The very suspicion of the existence of such treachery at her side seemed to stifle her. Still looking out of the window I detailed the proofs I have mentioned, not gladly, Heaven knows, or in any spirit of revenge. But my duty was rather to my companions who had been true to me, than to her. I told them the truth so far as I knew it. The whole wretched miserable truth was only to become known to me later.

"I will go to her," the Duchess said presently, rising from her seat.

"My dear!" her husband cried. He stretched out his hand, and grasping her skirt detained her. "You will not——"

"Do not be afraid!" she replied sadly as she stooped over him and kissed his forehead. "It is a thing past scolding, Richard; past love and even hope, and all but past pity. I will be merciful as we hope for mercy, but she can never be friend of ours again, and some one must tell her. I will do so and return. As for that man!" she continued, obscuring suddenly the fair and noble side of her character which she had just exhibited, and which I confess had surprised me, for I had not thought her capable of a generosity so uncommon; "as for that man," she repeated, drawing herself up to her full height while her eyes sparkled and her cheek grew red, "who has turned her into a vile schemer and a shameless hypocrite, as he would fain have turned better women, I will show him no mercy nor grace if I ever have him under my feet. I will crush him as I would an adder, though I be crushed next moment myself!"

She was sweeping with that word from the room, and had nearly reached the door before I found my voice. Then I called out "Stay!" just in time. "You will do no good, madam, by going!" I said, rising. "You will not find her. She is gone."

"Gone?"

"Yes," I said quietly. "She left the house twenty minutes ago. I saw her cross the market-

place, wearing her cloak and carrying a bag. I do not think she will return."

"Not return? But whither has she gone?" they both cried at once.

I shook my head.

"I can only guess," I said in a low voice. "I saw no more than I have told you."

"But why did you not tell me?" the Duchess cried reproachfully. "She shall be brought back."

"It would be useless," Master Bertie answered. "Yet I doubt if it be as Carey thinks. Why should she go just at this time? She does not know that she is found out. She does not know that this letter has been recovered. Not a word, mind, was said of it before she left the room."

"No," I allowed; "that is true."

I was puzzled on this point myself, now I came

"NOT RETURN? BUT WHITHER HAS SHE GONE?"

to consider it. I could not see why she had taken the alarm so opportunely; but I maintained my opinion nevertheless.

"Something frightened her," I said; "though it may not have been the letter."

"Yes," said the Duchess, after a moment's silence. "I suppose you are right. I suppose something frightened her, as you say. I wonder what it was, poor wretch!"

It turned out that I was right. Mistress Anne had gone indeed, having stayed, so far as we could learn from an examination of the room which she had shared with Dymphna, merely to put together the few things which our adventures had left her. She had gone out from amongst us in this foreign land without a word of farewell, without a good wish given or received, without a soul to say God speed! The thought made me tremble. If she had died it would have been different. Now, to feel sorrow for her as for one who had been with us in heart as well as in body, seemed a mockery. How could we grieve for one who had moved day by day and hour by hour among us, only that with each hour and day she might plot and scheme and plan our destruction? It was impossible!

We made inquiries indeed, but without result; and so, abruptly and terribly she passed—for the time—out of our knowledge, though often afterwards I recalled sadly the weary, hunted look which I had sometimes seen in her eyes when she sat listless and dreamy. Poor girl! Her own acts had placed her, as the Duchess said, beyond love or hope, but not beyond pity.

So it is in life. The day which sees one's trial end sees another's begin. We, the Duchess and her child, Master Bertie and I, stayed with our good and faithful friends the Lindstroms awhile, resting and recruiting our strength; and during this interval, at the pressing instance of the Duchess, I wrote letters to Sir Anthony and Petronilla, stating that I was abroad, and was well, and looked presently to return; but not disclosing my refuge or the names of my companions. At the end of five days, Master Bertie being fairly strong again and Santon being considered unsafe for us as a permanent residence, we went under guard to Wesel, where we were received as people of quality, and lodged, there being no fitting place, in the disused church of St. Willibrod. Here the child was christened Peregrine—a wanderer; the governor of the city and I being godfathers. And here we lived in peace—albeit with hearts that yearned for home—for some months.

During this time two pieces of news came to us from England: one, that the Parliament, though much pressed to it, had refused to acquiesce in the confiscation of the Duchess's estates; the other, that our joint persecutor, the great Bishop of Winchester, was dead. This last we at first disbelieved. It was true nevertheless. Stephen Gardiner, whose vast schemes had enmeshed people so far apart in station and indeed in all else as the Duchess and myself, was dead at last; had died towards the end of 1555, at the height of his power, with England at his feet, and gone to his Maker. I have known many worse men.

We trusted that this might open the way for our return, but we found on the contrary that fresh clouds were rising. The persecution of the Reformers, which Queen Mary had begun in England, was carried on with increasing rigour; and her husband, who was now King of Spain and master of the Netherlands, freed from the prudent checks of his father, was inclined to pleasure her in this by giving what aid he could abroad. His Minister in the Netherlands, the Bishop of Arras, brought so much pressure to bear upon our protector to induce him to give us up, that it was plain the Duke of Cleves must sooner or later comply. We thought it better therefore to remove ourselves, and presently did so, going to the town of Winnheim in the Rhine Palatinate.

We found ourselves not much more secure here, however, and all our efforts to discover a safe road into France failing, and the stock of money which the Duchess had provided beginning to give out, we were in great straits whither to go or what to do.

At this time of our need, however, Providence opened a door in a quarter where we least looked for it. Letters came from Sigismund, the King of Poland, and from the Palatine of Wilna in that country, inviting the Duchess and Master Bertie to take up their residence there, and offering the latter an establishment and honourable employment. The overture was unlooked for, and was not accepted without misgivings, Wilna being so far distant, and there being none of our race in that country. However, assurance of the Polish king's good faith reached us—I say us, for in all their plans I was included—through John Alasco, a nobleman who had visited England. And in due time we started on this prodigious journey, and came safely to Wilna, where our reception was such as the letters had led us to expect.

I do not propose to set down here our adventures, though they were many, in that strange country of frozen marshes and endless plains, but to pass over eighteen months which I spent not without profit to myself in the Pole's service, seeing something of war in his Lithuanian campaigns, and learning much of men and the world, which here, to say nothing of wolves and bears, bore certain aspects not commonly visible in Warwickshire. I pass on to the early autumn of 1558, when a letter from the Duchess, who was at Wilna, was brought to me at Cracovy. It was to this effect :

"Dear Friend,—Send you good speed ! Word has come to us here of an enterprise Englandwards, which promises, if it be truly reported to us, to so alter things at home that there may be room for us at our own firesides. Heaven so further it, both for our happiness and the good of the religion. Master Bertie has embarked on it, and I have taken upon myself to answer for your aid and counsel, which have never been wanting to us. Wherefore, dear friend, come, sparing neither horse nor spurs, nor anything which may bring you sooner to Wilna, and your assured and loving friend, Katherine Suffolk."

In five days after receiving this I was at Wilna ; and two months later I saw England again, after an absence of three years. Early in November 1558 Master Bertie and I landed at Lowestoft, having made the passage from Hamburg in a trading vessel of that place. We stopped only to sleep one night, and then, dressed as travelling merchants, we set out on the road to London, entering the city without accident or hindrance on the third day after landing.

### CHAPTER XVIII.—THE WITCH'S WARNING.

"ONE minute !" I said. "That is the place." Master Bertie turned in his saddle, and looked at it. The light was fading into the early dusk of a November evening, but the main features of four cross streets, the angle between two of them filled by the tall belfry of a church, were still to be made out. The east wind had driven loiterers indoors, and there was scarcely any one abroad to notice us. I pointed to a dead wall ten paces down one street. "Opposite that, they stopped," I said. "There was a pile of boards leaning against it then."

"You have had many a worse bedchamber since, lad," he said smiling.

"Many," I answered. And then by a common impulse we shook up the horses, and trotting gently on were soon clear of London and making for Islington. Passing through the latter we began to breast the steep slope which leads to Highgate, and coming, when we had reached the summit, plump upon the lights of the village, pulled up in front of a building which loomed darkly across the road.

"This is the Gatehouse Tavern," Master Bertie said in a low voice. "We shall soon know whether we have come on a fool's errand—or worse !"

We rode under the archway into a great courtyard, from which the road issued again on the other side through another gate. In one corner two men were littering down a line of packhorses by the light of lanterns which brought their tanned and rugged faces into relief. In another, where the light poured ruddily from an open doorway, an ostler was serving out fodder, and doing so, if we might judge from the travellers' remonstrances, with a niggardly hand. From the windows of the house a dozen rays of light shot athwart the darkness, and disclosed as many pigs wallowing asleep in the middle of the yard. In all we saw a coarse comfort and welcome. Master Bertie led the way across the yard, and accosted the ostler. "Can we have stalls and beds ?" he asked.

The man stayed his chaffering, and looked up at us. "Every man to his business," he replied gruffly. "Stalls, yes, but of beds I know nothing. For women's work go to the women."

"Right !" said I, "so we will. With better luck than you would go, I expect, my man !"

Bursting into a hoarse laugh at this—he was lame and one-eyed and not very well-favoured—he led us into a long, many-stalled stable, feebly lit by lanterns which here and there glimmered against the walls. "Suit yourselves," he said ; "first come is first served here."

He seemed an ill-conditioned fellow, but the business-like way in which we went about our work, watering, feeding, and littering down in old campaigners' fashion, drew from him a grunt of commendation. "Have you come from far, masters ?" he asked.

"No, from London," I answered curtly. "We come as linen-drapers from Westcheap, if you want to know."

"Ay, I see that," he said chuckling "Never were atop of a horse before, nor handled anything but a clothyard ; oh no !"

"We want a merchant reputed to sell French lace," I continued, looking hard at him. "Do you happen to know if there is a dealer here with any ?"

He nodded rather to himself than to me, as if he had expected the question. Then in the same tone, but with a quick glance of intelligence, he answered, "I will show you into the house presently, and you can see for yourselves. A stable is no place for French lace." He pointed with a wink over his shoulder towards a stall in which a man apparently drunk lay snoring. "That is a fine toy !"

he ran on carelessly, as I removed my dagger from the holster and concealed it under my cloak—"a fine plaything—for a linendraper!"

"Peace, peace, man! and show us in," said Master Bertie impatiently.

With a shrug of his shoulders the man obeyed. Crossing the courtyard behind him, we entered the great kitchen, which, full of light and warmth and noise, presented just such a scene of comfort and bustle, of loud talking, red-faced guests, and hurrying bare-armed serving-maids, as I remembered lighting upon at St. Albans three years back. But I had changed much since then, and seen much. The bailiff himself would hardly have recognised his old antagonist in the tall, heavily cloaked stranger, whose assured air, acquired amid wild surroundings in a foreign land, gave him a look of age to which I could not fairly lay claim. Master Bertie had assigned the lead to me as being in less danger of recognition, and I followed the ostler towards the hearth without hesitation. "Master Jenkin!" the man cried, with the same rough bluntness he had shown without, "here are two travellers want the lace-seller who was here to-day. Has he gone?"

"Who gone?" retorted the host as loudly.

"The lace merchant who came this morning."

"No; he is in No. 32," returned the landlord. "Will you sup first, gentlemen?"

We declined, and followed the ostler, who made no secret of our destination, telling those in our road to make way, as the gentlemen were for No. 32. One of the crowd, however, who seemed to be crossing from the lower end of the room, failed apparently to understand, and, interposing between us and our guide, brought me perforce to a halt.

"By your leave, good woman!" I said, and tried to pass round her.

But she foiled me with unexpected nimbleness, and I could not push her aside, she was so very old. Her gums were toothless and her forehead was lined and wrinkled. About her eyes, which under hideous red lids still shone with an evil gleam—a kind of reflection of a wicked past—a thousand crows' feet had gathered. A few wisps of grey hair struggled from under the handkerchief which covered her head. She was humpbacked, and stooped over a stick, and whether she saw or not my movement of repugnance, her voice was harsh when she spoke.

"Young gentleman," she croaked, "let me tell your fortune by the stars. A fortune for a groat, young gentleman!" she continued, peering up into my face and frustrating my attempts to pass.

"Here is a groat," I answered peevishly, "and for the fortune, I will hear it another day. So let us by!"

But she would not. My companion, seeing that the attention of the room was being drawn to us, tried to pull me by her. But I could not use force, and short of force there was no remedy. The ostler, indeed, would have interfered on our behalf, and returned to bid her, with a civility he had not bestowed on us, "give us passage." But she swiftly turned her eyes on him in a sinister fashion, and he retreated with an oath and a paling face, while those nearest to us—and half a dozen had crowded round—drew back, and crossed themselves in haste almost ludicrous.

"Let me see your face, young gentleman," she persisted, with a hollow cough. "My eyes are not so clear as they were, or it is not your cloak and your flap-hat that would blind me."

Thinking it best to get rid of her, even at a slight risk—and the chance that among the travellers present there would be one able to recognise me was small indeed—I uncovered. She shot a piercing glance at my face, and looking down on the floor, traced hurriedly a figure with her stick. She studied the phantom lines a moment, and then looked up.

"Listen!" she said solemnly, and waving her stick round me, she quavered out in tones which filled me with a strange tremor:

> "The man goes east, and the wind blows west,
> Wood to the head, and steel to the breast!
> The man goes west, and the wind blows east,
> The neck twice doomed the gallows shall feast!"

"Beware!" she went on more loudly, and harshly, tapping with her stick on the floor, and shaking her palsied head at me. "Beware, unlucky shoot of a crooked branch! Go no farther with it! Go back! The sword may miss or may not fall, but the cord is sure!"

If Master Bertie had not held my arm tightly, I should have recoiled, as most of those within hearing had already done. The strange allusions to my past, which I had no difficulty in detecting, and the witch's knowledge of the risks of our present enterprise, were enough to startle and shake the most constant mind: and in the midst of enterprises secret and dangerous, few minds are so firm or so reckless as to disdain omens. That she was one of those unhappy beings who buy dark secrets at the expense of their souls, seemed certain; and had I been alone, I should have, I am not ashamed to say it, given back.

But I was lucky in having for my companion a man of rare mind, and besides, of so single a religious belief that to the end of his life he always refused to put faith in a thing of the existence of which I have no doubt myself—I mean witchcraft.

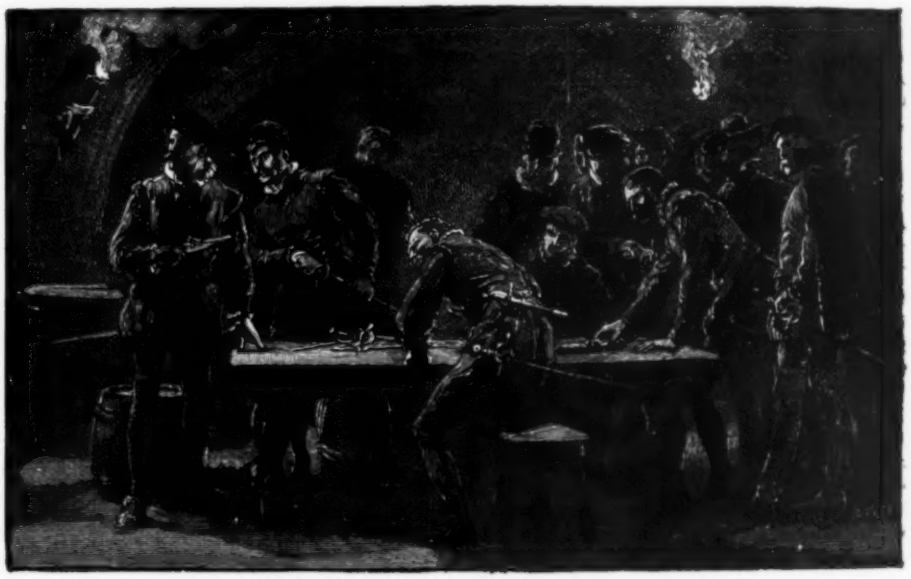
He showed at this moment the courage of his opinions. "Peace, peace, woman!" he said compassionately. "We shall live while God wills it, and die when he wills it. And neither live longer nor die earlier! So let us by."

"Would you perish?" she quavered.

"Ay! If so God wills," he answered, undaunted.

At that she seemed to shake all over, and hobbled aside, muttering, "Then go on! Go on! God wills it!"

Master Bertie gave me no time for hesitation, but, holding my arm, urged me on to where the ostler stood awaiting the event with a face of much discomposure. He opened the door for us, however, and led the way up a narrow and not too clean staircase. On the landing at the head of this he paused, and raised his lantern so as to cast the light on our faces. "She has overlooked me, the old witch!" he said viciously; "I wish I had never meddled in this business"



"Man!" Master Bertie replied sternly; "do you fear that weak old woman?"

"No; but I fear her master," retorted the ostler, "and that is the devil!"

"Then I do not," Master Bertie answered bravely. "For my Master is as good a match for him as I am for that old woman. When He wills it, man, you will die, and not before. So pluck up spirit."

Master Bertie did not look at me, though I needed his encouragement as much as the ostler, having had better proofs of the woman's strange knowledge. But, seeing that his exhortation had emboldened this ignorant man, I was ashamed to seem to hesitate. When the ostler knocked at the door—not of 32, but of 15—and it presently opened, I went in without more ado.

The room was a bare inn-chamber A pallet

"WHAT DO YOU SEEK? CRIED A THREATENING VOICE FROM AMONG THEM.

without coverings lay in one corner. In the middle were a couple of stools, and on one of them a taper.

The person who had opened to us stood eyeing us attentively: a bluff, weather-beaten man with a thick beard and the air of a sailor. "Well," he said, "what now?"

"These gentlemen want to buy some lace," the ostler explained.

"What lace do they want?" was the retort.

"French lace," I answered.

"You have come to the right shop, then," the man answered briskly. Nodding to our conductor to depart, he carefully let him out. Then, barring the door behind him, he as rapidly strode to the pallet and twitched it aside, disclosing a trap door. He lifted this, and we saw a narrow shaft descending into darkness. He brought the taper and held it so as to throw a faint light into the opening. There was no ladder, but blocks of wood nailed alternately against two of the sides, at intervals of a couple of feet or so, made the descent pretty easy for an active man. "The door is on this side," he said, pointing out the one. "Knock loudly once and softly twice. The word is the same."

We nodded, and while he held the taper above, we descended, one by one, without much difficulty, though I admit that half-way down the old woman's words "Go on and perish" came back disquietingly to my mind. However, my foot struck the bottom before I had time to digest them, and a streak of light which seemed to issue from under a door forced my thoughts the next moment into a new channel. Whispering to Master Bertie to pause a minute, for there was only room for one of us to stand at the bottom of the shaft, I knocked in the fashion prescribed.

The sound of loud voices, which I had already detected, ceased on a sudden, and I heard a shuffling on the other side of the boards. This was followed by silence, and then the door was flung open, and, blinded for the moment by a blaze of light, I walked mechanically forward into a room. I made out as I advanced a group of men standing round a rude table, their figures thrown into dark relief by flares stuck in sconces on the walls behind them. Some had weapons in their hands and others had partly risen from their seats and stood in postures of surprise. "What do you seek?" cried a threatening voice from among them.

"Lace," I answered.

"What lace?"

"French lace."

"Then you are welcome—heartily welcome!" was the answer given in a tone of relief. "But who comes with you?"

"Master Richard Bertie, of Lincolnshire," I answered promptly; and at that moment he emerged from the shaft.

A still more hearty murmur of welcome hailed his name and appearance, and we were borne forward to the table amid a chorus of voices, the greeting given to Master Bertie being that of men who joyfully hail unlooked-for help. The room, from its vaulted ceiling and stone floor, and the trams of casks which lay here and there or near the table serving for seats, appeared to be a cellar. Its dark, gloomy recesses, the flaring lights, and the weapons on the table, seemed meet and fitting surroundings for the anxious faces which were gathered about the board; for there was a something in the air which was not so much secrecy as a thing more unpleasant—suspicion and mistrust. Almost at the moment of our entrance it showed itself. One of the men, before the door had well closed behind us, went towards it, as if to go out. The leader—he who had questioned me—called sharply to him, bidding him come back. And he came back, but reluctantly, as it seemed to me.

I barely noticed this, for Master Bertie, who was known personally to many and by name to all, was introducing me to two who were apparently the leaders: Sir Thomas Penruddocke, a fair man as tall as myself, loose-limbed and untidily dressed, with a reckless eye and a loud tongue; and Master Walter Kingston, a younger brother, I was told, of that Sir Anthony Kingston who had suffered death the year before for conspiracy against the queen—the same in which Lord Devon had showed the white feather. Kingston was a young man of moderate height and slender; of a brown complexion, and delicate, almost womanish beauty, his sleepy dark eyes and dainty moustache suggesting a temper rather amiable than firm. But the spirit of revenge had entered into him, and I soon learned that not even Penruddocke, a Cornish knight of longer lineage than purse, was so vehement a plotter or so devoted to the cause. Looking at the others my heart sank; it needed no greater experience than mine to discern that, except three or four whom I identified as stout professors of religion, they were men rather of desperate fortunes than good estate. I learned on the instant the lesson that conspiracy makes strange bedfellows, and that it is impossible to do dirty work even with the purest intentions—in good company! Master Bertie's face indicated to one who knew him as well as I did something of the same feeling; and could the clock have been put back awhile, and we placed with free hands and uncommitted outside the Gatehouse, I think we should with one accord have turned our backs on it, and given up an attempt which in this company could scarcely fare any way but ill. Still, for good or evil, the die was cast now, and retreat was out of the question.

We had confronted too many dangers during the last three years not to be able to face this one with a good courage; and presently Master Bertie, taking a seat, requested to be told of the strength and plans of our associates, his businesslike manner introducing at once some degree of order and method into a conference which before our arrival had—unless I was much mistaken—been conspicuously lacking in both.

"Our resources?" Penruddocke replied confidently. "They lie everywhere, man! We have but to raise the flag and the rest will be a triumphal march. The people, sick of burnings and torturings, and heated by the loss of Calais last January, will flock to us. Flock to us, do I say? I will answer for it they will!"

"But you have some engagements, some promises from people of standing?"

"Oh, yes! But the whole nation will join us. They are weary of the present state of things."

"They may be as weary of it as you say," Master Bertie answered shrewdly; "but is it equally certain that they will risk their necks to amend it? You have fixed upon some secure base from which we can act, and upon which, if necessary, we may fall back to concentrate our strength?"

"Fall back?" cried Penruddocke, rising from his seat in heat. "Master Bertie, I hope you have not come among us to talk of falling back! Let us have no talk of that. If Wyatt had held on at once London would have been his! It was falling back ruined him."

Master Bertie shook his head. "If you have no secure base, you run the risk of being crushed in the first half hour," he said. "When a fire is first lighted the breeze puts it out which afterwards but fans it."

"You will not say that when you hear our plans. There are to be three risings at once. Lord Delaware will rise in the west."

"But will he?" said Master Bertie pointedly, disregarding the threatening looks which were cast at him by more than one. "The late rebellion there was put down very summarily, and I should have thought that country-side would not be prone to rise again. *Will* Lord Delaware rise?"

"Oh, yes, he will rise fast enough!" Penruddocke replied carelessly. "I will answer for him. And on the same day, while we do the London business, Sir Richard Bray will gather his men in Kent."

"Do not count on him!" said Master Bertie. "A prisoner, muffled and hoodwinked, was taken to the Tower by water this afternoon. And rumour says it was Sir Richard Bray."

There was a pause of consternation, during which one looked at another, and swarthy faces grew pale. Penruddocke was the first to recover himself. "Bah!" he exclaimed, "a fig for rumour! She is ever a lying jade! I will bet a noble Richard Bray is supping in his own house at this minute."

"Then you would lose," Master Bertie rejoined sadly, and with no show of triumph. "On hearing the report I sent a messenger to Sir Richard's house. He brought word back that Sir Richard Bray had been fetched away unexpectedly by four men, and that the house was in confusion."

A murmur of dismay broke out at the lower end of the table. But the Cornishman rose to the situation. "What matter?" he cried boisterously. "What we have lost in Bray we have gained in Master Bertie. He will raise Lincolnshire for us, and the Duchess's tenants. There should be five hundred stout men of the latter, and two-thirds of them Protestants at heart. If Bray has been seized there is the more call for haste that we may release him."

This appeal was answered by an outburst of cries. One or two even rose, and waving their weapons swore a speedy vengeance. But Master Bertie sat silent until the noise had subsided. Then he spoke. "You must not count on them either, Sir Thomas," he said firmly. "I cannot find it in my conscience to bring my wife's tenants into a plan so desperate as this appears to be. To appeal to the people generally is one thing; to call on those who are bound to us and who cannot in honour refuse is another. And I will not risk in a hopeless struggle the lives of men whose fathers looked for guidance to me and mine."

A silence, the silence of utter astonishment, fell upon the plotters round the table. In every face—and they were all turned upon my companion—I read rage and distrust and dismay. They had chafed under his cold criticisms and his calm reasonings. But this went beyond all, and there were hands which stole instinctively to daggers, and eyes which waited scowling for a signal. But Penruddocke, sanguine by nature and rendered reckless by circumstances, had still the feelings of a gentleman, and something in him responded to the appeal which underlay Master Bertie's words. He remained silent, gazing gloomily at the table, his eyes perhaps opened at this late hour to the hopelessness of the attempt he meditated.

It was Walter Kingston who came to the fore, and put into words the thoughts of the coarser and more selfish spirits round him. Leaping from his seat he dashed his slender hand on the table. "What does this mean?" he sneered, a dangerous light in his dark eyes. "Those only are here or should be here who are willing to stake all—all, mind you—on the cause. Let us have no sneaks! Let us have no men with a foot on either bank! Let us have no Courtenays nor cowards! Such men ruined Wyatt and hanged my brother! A curse on them!" he cried, his voice rising almost to a scream.

"Master Kingston! do you refer to me?" Bertie rejoined in haughty surprise.

"Ay, I do!" cried the young man hotly.

"Then I must beg leave of these gentlemen to explain my position."

"Your position? So! More words?" quoth the other mockingly.

"Ay! as many words as I please," retorted Master Bertie, his colour rising. "Afterwards I will be as ready with deeds, I dare swear, as any other! My tenants and my wife's I will not draw into an almost hopeless struggle. But my own life and my friend's, since we have obtained your secrets, I must risk, and I will do so in honour to the death. For the rest, who doubts my courage may test it below ground or above."

The young man laughed rudely. "You will risk your life but not your lands, Master Bertie? That is the position, is it?"

My companion was about to utter a rejoinder, fierce for him, when I who had hitherto sat silent interposed. "The old witch told the truth," I cried bitterly. "She said if we came hither we should perish. And perish we shall, through being linked to a dozen men as brave as I could wish, but the biggest fools under heaven!"

"Fools?" shouted Kingston.

"Ay, fools!" I repeated. "For who but fools, being at sea in a boat in which all must sink or swim, would fall a-quarrelling? Tell me that!" I cried, slapping the table.

"You are about right," Penruddocke said, and half a dozen voices muttered assent.

"About right, is he?" shrieked Kingston. "But who knows we are in a boat together? Who knows that, I'd like to hear?"

"I do!" I said, standing up and overtopping him by eight inches. "And if any man hints that Master Bertie is here for any other purpose or with any other intent than to honestly risk his life in this endeavour as becomes a gentleman, let him stand out—let him stand out, and I will break his neck! Fie, gentlemen, fie!" I continued, after a short pause which I did not make too long lest Master Kingston's passion should get the better of his prudence. "Though I am young I have seen service. But I never saw battle won yet with dissension in the camp. For shame! Let us to business, and make the best dispositions we may."

"You talk sense, Master Carey!" Penruddocke cried, with a great oath. "Give me your hand. And do you, Kingston, hold your peace. If Master Bertie will not raise his men to save his own skin, he will hardly do it for ours. Now, Sir Richard Bray being taken, what is to be done, my lads? Come, let us look to that."

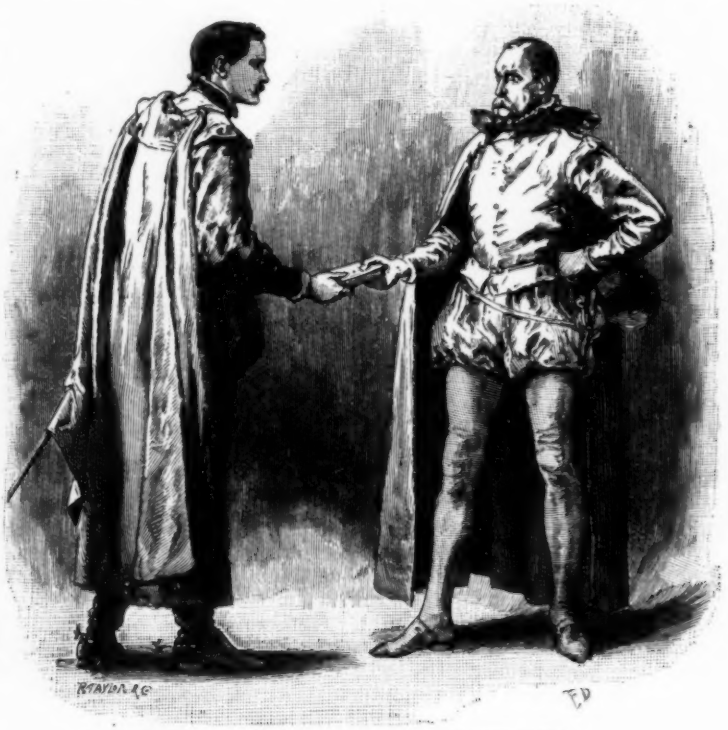
So the storm blew over. But it was with heavy hearts that two of us fell to the discussion which followed, counting over weapons and assigning posts, and debating this one's fidelity and that one's lukewarmness. Our first impressions had not deceived us. The plot was desperate, and those engaged in it were wanting in every element which should command success—in information, forethought, arrangement—everything save sheer audacity. When after a prolonged and miserable sitting it was proposed that all should take the oath of association on the Gospels, Master Bertie and I assented gloomily. It would make our position no worse, for already we were fully committed. The position was indeed bad enough. We had only persuaded the others to a short delay: and even this meant that we must remain in hiding in England, exposed from day to day to all the chances of detection and treachery.

Sir Thomas brought out from some secret place about him a tiny roll of paper wrapped in a quill, and while we stood about him looking over his shoulders, he laboriously added, letter by letter, three or four names. The stern anxious faces which peered the while at the document or scanned each other only to find their anxiety reflected, the flaring lights behind us, the recklessness of some and the distrust of others, the cloaks in which many were wrapped to the chin, and the occasional gleam of hidden weapons, made up a scene very striking. The more as it was no mere show, but some of us saw only too distinctly behind it the figure of the headsman and the block.

"Now," said Penruddocke, who himself I think took a certain grim pleasure in the formality, "be

ready to swear, gentlemen, in pairs, as I call the names. Kingston and Matthewson!"

Lolling against the wall under one of the sconces I looked at Master Bertie, expecting to be called up with him. He smiled as our eyes met; and I thought with a rush of tenderness how lightly I could have dared the worst had all my associates been like him. But repining came too late, and in a moment Penruddocke surprised me by calling out "Crewdson and Carey!"



So Master Bertie was not to be my companion! I learned afterwards that men who were strangers to one another were purposely associated, the theory being that each should keep an eye upon his oath-fellow. I went forward to the end of the table, and took the book.

There was a slight pause.

"Crewdson!" called Penruddocke sharply; "did you not hear, man?"

There was a little stir at the farther end of the room, and he came forward, moving slowly and reluctantly. I saw that he was the man whom Penruddocke had called back when we entered, a man of great height, though slender and closely cloaked. A drooping grey moustache covered his mouth, and that was almost all I made out before Sir Thomas, with some sharpness, bade him uncover. He did so with an abrupt gesture, and reaching out his hand grasped the other end of the book as though he would take it from me. His manner was so strange that I looked hard at him, and he, jerking up his head with a gesture of defiance, looked at me too, his face very pale.

I heard Penruddocke's voice droning the words of the oath, but I paid no attention to them, I was busied with something else. Where had I seen the sinister gleam in those eyes before, and that forehead high and narrow, and those lean swarthy cheeks? Where had I before confronted that very face which now glared into mine across the book? Its look was bold and defiant, but low down in the cheek I saw a little pulse beating furiously, a pulse which told of anxiety, and the jaws, half veiled by the ragged moustache, were set in an iron grip. Where? Ha! I knew.

WHERE HAD I BEFORE CONFRONTED THAT VERY FACE?

I dropped my end of the book and stepped back.

"Look to the door!" I cried, my voice sounding harsh and strange in my own ears. "Let no one leave! I denounce that man." And raising my hand I pointed pitilessly at my oath-fellow. "I denounce him—he is a spy and traitor!"

"I a spy?" the man shouted fiercely—with the fierceness of despair.

"Ay, you! you! Clarence, or Crewdson, or whatever you call yourself, I denounce you! My time has come!"

# THE RECOVERED ARISTOTLE.

## ANOTHER EGYPTIAN QUESTION—NOT THE MAHDI THIS TIME, ONLY A PAPYRUS.

THE tide of time, says Lord Bacon, is wont to carry down trifles while it lets things of solid weight sink beneath the flood. A comedy survives, while a treatise on physiology is engulphed. All the more joy, therefore, is there among the learned when the ocean of time casts upon the shore some of its weightier treasures.

Aristotle's "Constitution of Athens" emerged from the deep last Christmas. Our own British Museum is the happy possessor of this treasure-trove—the greatest piece of literary flotsam and jetsam that this century has yet seen. There in Bloomsbury, it rests, after no one knows what adventures. One of a consignment of manuscripts from Egypt, its turn came at last. Unrolled tenderly, bit by bit deciphered, at last it dawned upon the delighted mind of its scholarly transcriber that this time a genuine antique was before him, and, as the work proceeded, no doubt was left that this was the celebrated treatise on the "Constitution of Athens," so much quoted by ancient writers. Its genuineness is beyond dispute. This is no sequel to the "Women of Salamis" by Xavier Balderdike. It was printed and published with a most learned commentary last Christmas, and is at present occupying with delight the brethren of the scholastic guild throughout Europe. Dryasdustius, Heavysternius, Hairsplitterius are hard at it, emending, reconciling, and illustrating. Think of the delight of building a magnificent sentence out of such fragments as: "He . . . . gr . . . . bushel of . . . . . Thou mayest . . . ."

The manuscript itself is at present on view in the British Museum, and no visitor should leave without seeing it. It has a weird look. As we gaze we feel inclined to address it in the words of the marriage guest in Coleridge's "Ancient Mariner":

> "I fear thee, Ancient Manuscript!
> I fear thy skinny hand!
> And thou art long, and lank, and brown
> As is the ribbed sea-sand."

It is written on rolls of papyrus, and looks as if it might have formed part of the wrappages of a mummy. Could Aristotle have become a mummy in Egypt, and were his own manuscripts made his cerement? If so, the learned world may have enough to do before the play is played out, for the Athenian Constitution was but one of 158, and that leaves 157 to follow. But we forget; it is generally understood that Aristotle never really did become a mummy till comparatively recent times, when he got into the schools at Oxford. He had been drying during the middle ages, but then only did he become thoroughly high and dry.

## THE GREATEST LITERARY FIND OF THE CENTURY.

The manuscript before us dates from the first century A.D. The date is fixed by the fact that it is written on the back of an old ledger, in which Didymus, the Greek bailiff of a farm in the Delta, entered his accounts. On the one side you have an entry as to the payment for manure, on the other as to the payment of the jurors in the Athenian assemblies; on the one side it is a runaway slave, on the other the return of the Alcmæonidæ—a quaint mixture. Papyrus was valuable, and when the master of Didymus, himself a Greek, wanted a copy of a well-known work for his library, he used the clean side of the old roll, unsoiled with all ignoble use. Did not Burns himself, when he wanted a commonplace book, purchase an old ledger, because it was strongly bound, the paper good, and the whole cheap? This old ledger was not a book, it was a roll. The reader unrolled it till he had a page before him, and when that was read he rolled it up with the one hand, unrolling another page with the other hand; and so on, he rolled his way through the manuscript. But a glance at the papyrus itself will tell more than pages of description.

Let the curious visitor gaze and gaze till he feels his heart burn within him and he begins to chew the cud of sweet and bitter fancies. Absorbed in our contemplation, the Present fades upon us; we are losing our hold upon the nineteenth century, and are floating back on the wings of thought across the backward and abysm of Time. The whirr and noise of countless machinery, the steam-engine, the telegraph and the telephone, the torpedo and the 100-ton gun are lost to us. By-and-by America itself, all Australasia, and the greater part of Africa and Asia disappear in darkness. Soon printing goes. We see the studious monk in his cell, copying and illuminating manuscripts. A duller light suffuses the landscape. We are in the dark ages. The light slowly gathers again and increases. We see the Roman driving his roads straight up hill and down dale, administering and legislating; the tramp of his legions is everywhere heard. Again the shadow steals over Italy and Western Europe. Glimmering lights appear around the shores of the Mediterranean, like glow-worm lamps, while in the East there is a steady blaze. Alexander the Great has just been enthroned in Babylon, and Greek culture follows in

the wake of the phalanx. Hovering we descend slowly—

> "Where, on the Ægean shore, a city stands,
> Built nobly, pure the air and light the soil—
> Athens, the eye of Greece, mother of arts
> And eloquence, native to famous wits, or hospitable."

We cast a delighted eye around, linger past temple and portico; but there is something better to be done than to admire choice statuary, or listen to the thick-warbled notes of the Attic bird—the infinite has to be solved, the panacea for human ills must be procured; we hurry across the Ilissus, we are in the Lyceum, and in the presence of Aristotle—

> ". . . him, who bred
> Great Alexander to subdue the world."

### ARISTOTLE'S PERSONAL RELATION TO GREEK POLITICS.

Aristotle was a Greek, but not an Athenian. He was a native of Stageira, on the coast of Thrace: hence his sobriquet of the Stageirite. His family cultivated the art of healing as an hereditary profession. His father was physician to the Macedonian Court, hence the connection which led to Aristotle's being appointed tutor to Alexander. The relations between tutor and scholar seem to have been friendly throughout. Aristotle made a special recension of the text of Homer, which the imitator of Achilles slept with under his pillow; and Alexander gave directions that every means should be placed at the disposal of the sage in pursuing his enquiries into the nature of plants and animals. The conqueror of Persia may perhaps have sneered at Aristotle's political theories, as a German emperor may have done at those of Hegel and Fichte, but he regarded him as harmless.

Aristotle never seems to have taken any part in practical politics. He was banished from Athens, nominally on account of impiety, really on account of his close connection with the Macedonian party. Of course, this was after Alexander's death. It is strange to find a man who could define God as an infinite, eternal, and unchangeable being, separate from sensible things, void of corporeal quantity, without parts, and indivisible, yet moving all things, a man whose whole theory of life was to enter by contemplation into the thoughts of the divine mind—to find such a one accused of impiety by those who had but lately offered divine honours to his pupil is indeed strange. Yet how little has religion had to do with most religious persecutions! Aristotle quitted Athens, lest, as he said, "through him the Athenians might again sin against philosophy, as they had done in the case of Socrates."

The life of Aristotle is contemporaneous with a brilliant, or a sad, epoch in Greek history, according as we choose to regard it. It is interwoven with the brilliant conquest of the East, with the diffusion of Greek language and manners over subject races; while it witnessed the quenching of that which was distinctively Greek—the free life of the citizen. With Alexander the essentially human ceased for ages to be a factor in politics. We are handed over to conqueror after conqueror, to centralised administration after centralised administration, to the reign of brute force wedded to superstition.

About the time of Aristotle's birth the Gauls were pouring down into Italy for the sack of Rome; the year before his death the Roman legions had passed under the yoke on the Caudine Forks. Little was there to indicate that in the school of adversity was being trained a mightier engine of war than the Macedonian phalanx, and those civic virtues were being formed which would give new masters to the world and a new organisation to political life. The constitution of Rome was not one of those included in Aristotle's list.

There is often a touch of irony in the philosopher's position. He is engaged in summing up the achievements of his time, in generalising and systematising knowledge, in analysing, ordering, and arranging; but while he is doing so the world has not stopped: changes are taking place, new facts are already modifying conclusions; while he is dipping his bucket into the water, the stream has already flowed past him. The philosopher is thus often slightly behind his age; while he pauses to think up into unity the results of the past, the present slips through his fingers. Aristotle, busy with his municipal institutions and political ideal, sees not the shadow creeping up behind, is quite unconscious of his own part in polishing the instrument of destruction; the educator of Alexander does not seem to have had the least idea that the Macedonian conquests had given the death-blow to the constitutional development of the Greek city, and that his collection of civic institutions might take its place in the museum of historical curiosities. Aristotle and his speculations are much; but they, too, were somewhat, who, with tongue and sword, defended the liberties of Greece—Demosthenes, whose voice still resounds through the ages, and the unknown men who bled on "that disastrous day fatal to freedom." Was Chœroneia all in vain? Was Senlac?

### ARISTOTLE ESSENTIALLY AN INDUCTIVE PHILOSOPHER.

The Constitution of Athens is probably the most important of those preliminary studies which were made by or for Aristotle as materials for his Politics. He collected, as far as he could, accounts of the different political institutions in the cities and states around him, thus basing his speculations on the firm groundwork of observed facts. Such was ever his method, relatively to his epoch and the means at his disposal. The Greek philosopher laid as much stress on observation and experiment as Lord Bacon himself did. It was ignorance of the real Aristotle which led to his methods being misapprehended. In the middle ages, when knowledge was at a low ebb, the recovery of his writings seemed like the dawn of a new revelation, and Aristotle became one of the authorities of the Church. His conclusions in astronomy and physics—shrewd enough guesses considering his opportunities—became dogmas to dissent from which was heresy. His methods of patient investigation into the realities of things were forgotten, his half-understood words became laws of thought. Galileo

felt what it was to contradict the "prince of philosophers." As late as 1629 an Act of the French Parliament was passed forbidding attacks upon Aristotle. Chaucer testifies to his influence when he says of the Oxford scholar—

> "For him was lever han at his bed's hed
> Twentie bookes clad with black or red
> Of Aristotle, and of his philosophy
> Than robes riche, or fiddle, or gay sautrie."

Dante sees Aristotle sitting on the confines of hell, at the head of the philosophic family—master of those that know. We find him in the "Lay of the Last Minstrel"; the mighty book of the Wizard Michael Scott was neither more nor less than a translation of Aristotle. For centuries Aristotle dominated the intellectual world of Europe. Albertus Magnus, and the "Angel of the Schools," Thomas Aquinas, spent their lives in expounding him and in pouring Christian doctrine into the forms of philosophic thought which had been elaborated by the pagan thinker. The Church of Rome still feeds her acolytes on Christian truths poured from Aristotelian vessels. It was a hint given by Aristotle, in the statement that the world was small and that there was only one sea between the Pillars of Hercules and India, that set Columbus thinking about the discovery of America. But not in the West alone was the Greek sage a mighty name. His greatest triumphs, perhaps, were gained in the East. For 500 years he ruled the schools in Bagdad and Cairo, and it was by way of Cordova, through the Moors, that he re-entered Europe, to dissipate the intellectual darkness of the middle ages. In the East he is still known as a mighty wizard. Professor Eastwick, when endeavouring to explain to an Eastern cook what an Irish stew was, was told by the Oriental that he knew very well about "Aristo." It would not be difficult to show that no one has more profoundly influenced the world of thought than Aristotle; but we must return to the Constitution of Athens.

This is not the place for, nor would our powers be equal to the task of, thoroughly examining the political philosophy of Aristotle. A few reflections that rise to the surface, some glimpses at the obvious, are all that we can present to our readers, content if by any means we may awake in them some sympathy with the Past, without weakening their resolution to realise their ideal in the Present.

The recovered Constitution of Athens, while giving much food for the specialist in the shape of details, which supplement, or have to be reconciled with, other authorities, adds but little to our general conception of the course of Athenian development. It gives us, however, one good story, which comes like a cup of refreshing in the wilderness. Pisistratus, the Tyrant of Athens, who, for a tyrant, seems to have been a very good fellow, kept his government going by a tax of a tenth. Walking one day among the rugged hills of the western part of Attica, he found a countryman toiling away among stones and gravel. "What crop," he enquired, "do you expect to raise there?" "Aches and rheumatism," was the reply; "and may Pisistratus take his tithe of them!" This surely smacks of Dean Ramsay. At all events, there are Scotch crofters on whom the plaid of that Attic farmer has descended.

### THE MODERN STANDPOINT.

There are two things which we miss in this sketch of the Athenian Constitution: two points of view which are not taken, probably because they are modern. There is no attempt to describe social conditions, and no necessary connection is shown between the different stages of political development. We have lists of changes in the political arrangements, just as we have lists of magistrates. The Constitution at any particular time is evidently judged on its merits, in the light of certain ideas as to the proper end of government; that its existence just in that way and at that time was the outcome of certain necessary conditions is not realised. There is no political perspective in Aristotle, any more than in Plutarch: Draco and Solon are neither more nor less historical than Pericles.

It is, no doubt, the difference of standpoint. We in modern times are looking back over 3,000 years of recorded history. Aristotle had not much more than 300 behind him. We are familiar with the decline and fall of nations. Aristotle may have seen the destruction by violence of small communities, but Nineveh he knew not; Egypt and Babylon were still living realities. He could not see, as we do, that the brightest period of Greek life was over.

That period was the age of Pericles. Just before the outbreak of that disastrous war, which for nearly thirty years raged like a conflagration over Greece, and ruined Athens materially and Sparta morally, was one of those halcyon seasons so rare in the history of the human race, when there is a perfect equilibrium of opposing forces, when moral and physical well-being go hand-in-hand, and a nation is clothed with happiness as with a garment. Listen to the description which Pericles gives in the celebrated funeral oration in the second book of Thucydides:

> "We do not copy our neighbours; we are an example to them. We are called a democracy because the many, not the few, govern. But, if all are equal in the sight of the law and entitled to the same protection, this does not preclude special merit from being specially recognised. There is an eagerness amongst us to honour those who by their abilities benefit the State. Poverty or obscurity is no bar to the advancement of talent. In our public life there is no exclusiveness, in our private life there is no narrow-mindedness; our neighbour may do what he likes, so long as it is harmless, without being frowned upon. Our private intercourse is free and hearty, but liberty does not degenerate into licence. While we respect authority and the laws in a reverent spirit, our conduct to each other is especially regulated by those unwritten laws, whose seat is in the heart and whose sanction is the general sentiment of humanity. If our public life is busy, our private life affords us many relaxations. Our home life is simple and elegant; we love the beautiful, but without ostentation, and we pursue intellectual pleasures without loss of manliness. Our wealth we employ for real use and enjoyment, not for display and vainglory."

And so on. The whole passage is remarkable as representing the highest level of present English life. We ask ourselves as we read—What has the

world been about during the vast gap of time which intervenes? We seem to have been wandering about through strange and desert places full of tombs and dead men's bones.

The death of an individual is sad enough, but sadder still is the gradual wasting away of a noble civilisation. No enquiry can be more useful than that which seeks to disentangle the causes of the decline of States, the pathological branch of history. None is more fascinating.

### CAUSES OF ATHENIAN DECAY.

Aristotle finds the cause of the decay of Athens in the corruption of the democracy. When Pericles was gone, who, by the force of his character and abilities, had imposed upon the Republic something of the character of a constitutional monarchy, Athens was left, like a ship deprived of its steersman, to weather the storm of the Peloponnesian War.

The plague which carried off Pericles seems to have been fatal to his party. His whole circle—the men to whom he trusted to carry out his ideas—seem to have been swept away. The calamity was unforeseen, and is a striking example of the danger of depending too much on great men, of involving political questions with the personal character of statesmen. Pericles had been the mind and conscience of Athens. He was elevated above the mass as an ideal figure, as the personification of what was noblest and best in the Athenian democracy. He was at once a guide and a reprover. A very different kind of politician succeeded him. In Cleon we have a statesman of a lower type. Cleon was not consciously dishonest; he seems rather to have posed as the good, straightforward, bluff friend of the people. No subtleties or far-reaching schemes for him. He takes no broad general view of policy as a whole, but goes from step to step, dealing with particulars. His ideal he finds in the wants of a party, which often in themselves seem reasonable enough as directed to some immediate good. Too often the immediate good is purchased by a reversion of calamity. The inherent dishonesty of a politician of this stamp is, that instead of directing he follows; his ideal is to find out what the majority want, not to educate the people to desire the best things. He is like a man crossing a stream on stepping-stones or climbing a crag, who looks no farther ahead than from stone to stone or step to step, and thus finds himself at last, by a perfectly cautious and careful procedure, in a position where there is no going forward or turning back without extreme peril.

Cleon was succeeded by worse men, and in this gradual deterioration of the tone of public life Aristotle finds one of the great causes of the downfall of Athens. It is, no doubt, a serious matter when the men who by their culture and wealth are raised above sordid motives, withdraw from public life; but this in a free State is often much more apparent than real. Where there is work to be done good men and true will step forward and do it. In the case of our own country, where representative bodies seem sometimes to degenerate in quality, it will usually be found that the work has settled into routine, burning questions are quiescent, and the old leaders are turning their energies into other quarters, where fighting has to be done.

The fact is mob-orators and paid committee-men did not destroy Athens. Nor was there in Athens anything like a permanent loss of moral tone. We can see this better than Aristotle could. We see the whole circle of which he only saw an arc, and we look at Greek life free from Greek prejudices. The magnificent patience with which the people of Athens, the ochlocracy as Aristotle calls them, bore up under their calamities, contrasts splendidly with the self-seeking and cruelty of the more aristocratic party. The advantage is on the side of the mass. It is the men of culture and wealth who are the cravens.

Athens lost in the game of war owing to two causes chiefly, both material and both obvious—the one an unavoidable calamity, the other a deliberate blunder. The first was the great plague, which would have settled the struggle at once in the case of any other city with weaker resources and less recuperative energy, and which did, in effect, cripple Athens seriously, and in removing Pericles prepared the way for the fatal blunder of the Sicilian Expedition. This was the one danger which Pericles foresaw. He was well aware of the defects of the Athenian qualities, and he dreaded that his countrymen would give themselves away to their enemies through their light-hearted rushing into distant and speculative expeditions.

Had the Athenians been successful instead of the Spartans, it does not seem likely that the result as regards the development of the Greek race as a whole would have been much different. The Greek city had reached that stage of development when it must either stand still, which in politics is the first step backwards, or allow itself to be modified by new principles. Looking back, we can see that the real problem was, how could the Greek race obtain political unity, so as to present a united front and organised resources against the surrounding barbarism? The little Greek cities were like so many candles which could be blown out one by one, as the Persian did by the Greek cities of Asia Minor. If Pericles could have persuaded Greece to accept his notion of common action, or federation, it would have been more than to succeed against Sparta. But such ideas were probably regarded as outside the pale of practical politics. The narrow exclusiveness of Greek citizenship rendered political growth impossible. The stranger who came to Athens to reside remained outside the State. He could not be naturalised, nor could his descendants. The Greek city remained a select club.

This is Aristotle's ideal. Individual excellence in the citizen is his aim. Such excellence can only be obtained in the best State, and it is to be the aim of the practical politician to organise the State in such a way as to produce the best qualities in the citizen. Hence the State must be small, so that all the citizens may know each other. Slaves are necessary in order that the citizens may have leisure and may not be soiled with ignoble toil. His ideal city must not be on the sea-shore, lest a coarse seafaring population might spoil the amenity, or foreign habits creep too easily in. Nor yet

must it be too far from the sea, but should have a port at a few miles distant, so that it may have the advantages arising from the importation of foreign commodities—a picture very evidently drawn from Athens and the Piræus. And so forth. Everything is to be regulated. Aristotle constructs his State as Praxiteles sculptured his Venus—by taking what he considered the best features of the best constitutions. The characteristics which we recognise are mainly those of Athens and Sparta. The stability of Spartan institutions and the flexibility of Athenian character were to be united in the ideal State. Once this ideal State attained, change ceases: there is to be no growth. The constitution becomes a hard-and-fast mould, into which the citizen is poured and to which he must conform himself.

There were two ideas not yet evolved in Aristotle's time which might perhaps have solved the difficulties felt by thinkers of combining size with delicacy of organisation, and imperial power with the freedom of individual States. These were representative government and federation. The latter just rises above the soil in the case of the Achæan league, only to be crushed by the Roman; the former does not appear at all, unless we see the germ of it in Julius Cæsar's attempt to get representatives to the Senate from the provinces. The assembly which regulated the affairs of a Greek city was composed of all the citizens. It is evident that such an assembly must soon become unwieldy, hence the necessity for limiting the number of citizens. It became also impossible for those who lived at a distance to attend the meetings, hence the development of city life. If the State extended it could only be by conquest, and in the case of a small Greek State those conquests could not be very extensive, otherwise the burden of them became too much for the resources of the State—the branches proved too heavy for the trunk of the tree. Rome is only a seeming exception to this, for the Romans, from the first, were liberal of their franchise, and, as soon as Rome's conquests extended beyond Italy, the knell of Rome's freedom began to sound. The empire was the logical outcome of the impossibility of making free institutions, without representation and without federation, cope with the government of a great territory and diverse nationalities. In the case of England and her possessions and colonies, we see how an immense extent of widely-scattered territory and great populations can be held together and worked into one coherent whole consistently with free institutions. In the case of the Athenian Empire, we saw that the trunk was too weak for the branches; so would it be with England—the burden of world-wide empire would be too heavy for these little islands were not our branches, like those of the banyan-tree, self-rooting, each, while glorying in the general circulation, striking down firm roots of independent growth.

### THE ANCIENT IDEAL CONTRASTED WITH THE MODERN.

The idea of such an accumulation of human beings living together as we have in London would have inspired Aristotle with horror had he been able to conceive the thing as possible. But we must remember that the great discoveries of modern times, the railroad, the steamship, and the telegraph, and all those improvements which have facilitated intercourse, have rendered possible aggregations undreamt of in ancient times. Such inventions as printing and the daily press have made it easy for great bodies of men to become intelligent partakers in government, by vivifying the inert mass with mind and volition. The keen interest taken in modern politics is not inferior to that of the Athenian market-place. Our institutions are not a cast-iron framework which must burst if the body within expands; they are like the protecting bark, which, as the oak within adds ring to ring, grows with its growth and expands with its expansion. All our classes can grasp up into unity the State as an ideal; they are a part of all that is done, just as much as the Greek who was one of a thousand only, while they can count themselves by millions.

There can be no doubt that this ideal citizen for whose production Aristotle would stop the wheels of Time is a noble and beautiful creature. At first sight he seems to stand to the modern elector much as the Apollo Belvedere does to the British artisan. But look closer, and we find that he is, indeed, of marble—there throbs no human heart within that bosom, with suffering there is no sympathy, the poor and the afflicted look to him in vain. It is a beautiful but a selfish ideal. Its conception of goodness is merely that of self-gratification in its most perfect form. The modern ideal is, after all, as fine, and it is essentially human: love and sympathy encircle it with loving arms; and this ideal of life is no dream. In how many happy English homes is it realised at this moment, and far more completely than in ancient Athens! For ancient life was maimed on one side and incomplete. The Athenian wife was not her husband's equal and friend. Her presence did not adorn and refine society. Athenian woman never emerged out of an almost Oriental state of subjection.

But all comparisons between the present and the past are unfair. Let us not forget that where we have excelled the ancients, the credit is not so much ours as that of the times in which we live, which have profited by their example and experience. Greece in especial deserves our gratitude as the emancipator of art and thinking from the crude forms of Eastern symbolism.

Go to the British Museum, and, after you have looked at the recovered Aristotle, walk through the Assyrian, Egyptian, and Greek galleries. Only among the Greeks do you begin to feel yourself at home. In spite of political decay and destruction there will ever be a Greece

> "... whose foundations are
> Built beneath the tide of war,
> Based on the crystalline sea
> Of thought and its eternity."

ADAM RANKINE.

AUSTRIA.—PART II

HERR VON DUNAJEWSKY'S fall, to make way for Doctor Emil Steinbach, was a most unexpected event. For many years public opinion had indicated Steinbach, who is the son of a Viennese jeweller, as a rising politician, but it was expected that the portfolio of Justice rather than that of Finance would fall to his eventual lot. He is no brilliant orator like his predecessors; in his speeches he merely seeks to persuade, and that by the most simple methods. In every sense of the word he is a child of his time, the most modern minister Austria has ever yet possessed. He has been stigmatised as a socialist, but if he is this, he is so in the sense in which Sir William Harcourt, when Chancellor of the Exchequer, said that nowadays we are all socialists. The Dunajewsky era was marked by the attempt to balance the tax administration, the Steinbach era will no doubt be distinguished by an attempt to ensure social conciliation. Dunajewsky represented the fiscal renaissance, Steinbach must represent its economic regeneration.

Count Heinrich Jaroslaw Clam-Martinic died in 1887, but his traditions and his influence have survived. The head of one of those vast estates, of which there are many in Austria, he represented in the Austrian Parliament the autochthonous or historically feudal party of Bohemia, whose real interest in the Czechs goes no deeper than is necessary for the furthering of their own aristocratic ideas. The Bohemian nobility is at heart pretty indifferent to the Czech national movement; it even counts among its members a number ignorant of the Czech tongue. But by means of the activity and intelligence of Count Clam, the essentially democratic movement of the Czech national party was utilised by these Austrian aristocrats for their own purposes, and led to those reactionary demands which caused and are still causing such difficulties in the Austrian monarchy. It was he who created the fiction of the Bohemian state rights, patching together all sorts of arguments that still survived from feudal times. This proved the bait that led the Czech party into paths of which they had never dreamed when their party was formed.

After Count Clam had bound the representatives of the national idea with heavy chains to the triumphal car of the reaction, he became the absolute dictator in the Česky Club; he was its soul, and the prompter of Rieger, who was only an instrument in his hands. Clam personified the old poem which says: "For the Emperor there exist two classes who worthily support his throne; they are the Saints and the Knights. They protect him from every storm, and in payment they take Church and State." Count Clam-Martinic is much more like a Prussian Junker than an Austrian nobleman; the latter are usually more easy-going and insist less upon the hereditary rights of their class. Men like Prince Schwarzenburg, for example, naturally voted with politicians of Clam-Martinic's class in all ecclesiastical and political questions, but they felt themselves far too much *grands seigneurs* to stoop down from their Olympian heights to the popular arena. Clam's aspiration was to be the founder of an ideal federalistic state whose realisation demanded far-reaching changes in political, economic, and ecclesiastical conditions. But the inexorable Reaper does not ask whether any of us have finished our task on earth before he mows us down. Thus Clam died before his hopes had been realised.

Certainly the autochthonous nobility would have been a mere general staff without an army if the lawyer and scientific writer Dr. Franz Ladislaus Rieger had not placed at the dispɔsal of the feudalistic high churchmen the trustworthy army which he had at his rear. A miller's son, he likes to coquet now and again in his speeches with his humble origin, as though he would herewith silence his opponents who reproach him that he, the man of the people, and the leader of the people, should have placed his cause and theirs under the protection of the aristocracy. He replies that all roads are good that lead to Rome, and that even if the Czechs must seem to play with feudalistic toys in order to please the party that holds the power, the main thing is to attain their purpose, and that everything can be arranged after. In short, he was an opportunist. Both in and out of Parliament every measure seemed just and right to Dr. Rieger which should lead to his goal, and which should destroy the ground under the feet of the Parliament in Vienna. He shrank back from no reactionary partnership, no method which according to him can promote the welfare of the "Nation's" cause. His aim is the autonomy of Bohemia. He married the daughter of Palacki the historian, the great apostle of the Bohemian cause, and he held that on his shoulders had descended the mantle of that aged chief. When the Czechs retired from the Parliament of Vienna indignant, and declaring that they had been duped and misled by false promises, Dr. Rieger continued their leader. Nor was he idle in the seventeen years during which he and his party remained absent. But of late his popularity has vanished, on the one hand because it is said he bends his knee to the princes of the Church ; on the other hand, because, while never officially concealing his Panslavistic views concerning Austria's foreign policy, he approves at the same time of the Triple Alliance. And since early last year he signed the compromise bill which it was hoped would settle the Czech demands for ever, the public opinion of the younger members of his nation has outlawed him.

A new party of extremists has sprung up in Bohemia which is dissatisfied with the moderate programme of the Old Czechs, under Dr. Rieger. They have put forward opposition demands, the granting of which would, it is contended, be equivalent to a disintegration of the Empire. And on this ground the Hungarians are quite as stubbornly opposed to the young Czechs as are the Austro-Germans ; indeed, the Hungarians do not at all relish the idea that the very ample independence they prize so highly should be cheapened in the market. But at present it is Gregr's star which is in the ascendant ; Rieger has been cast to the political dead, and the word "Hajmba" (shame) is constantly thrown in his face. He is an old man now, and with the trembling hand of age he has addressed a melancholy farewell to his people, which has been published in the "Pozor." He bids adieu to those who will no longer recognise his leadership, and who so ungratefully reward his lifelong services, his exhausting struggles against the Germans, against mighty governments, even at moments against the Crown itself ; combats which he has conducted with the wild enthusiasm of a Ziska and the passionate ardour of a Hus.

Dr. Rieger has certainly done more for the revival of Czechish nationalism than any other man alive, and to him the Bohemians owe the creation of the Czech University and the Czech Academy of Sciences. In company with his father-in-law he was the first who by pen and tongue stemmed the Germanic current that was fast obliterating all the distinctive nationalist features of Bohemia, and for many years he was the most popular man in the country. Whether he did his Czech compatriots real service by resuscitating their pride in their Slavonic origin, and rendering their amalgamation as Austrians with their German fellow subjects for ever impossible, is a question upon which opinions must differ ; but no one can doubt the sincerity of Dr. Rieger's patriotism, and when the passion of electoral contests has subsided, there must inevitably be a feeling of regret throughout Bohemia that the eloquent statesman should at the last elections have failed to find a constituency to return him.

Time will show whether the demands of the Young Czechs will force Count Taaffe or his successor to abandon the task of trying to conciliate particularist tendencies. Certainly the hopes Count Taaffe held out to the Czechs have proved to be delusive.

Herr Gregr, their leader, is the editor of the "Narodny-Listy." For more than eighteen years he has been always ready for combat. He writes all night and speaks all day. He is the declared adversary of the Germans and the Hungarians. It

was not till 1885 that he was elected into the Reichsrath, though he had often put himself forward as a candidate, but the Old Czechs opposed him because they were afraid of his fierce eloquence and his violent temper. A Hercules in appearance, his oratory has also something of the herculean character, he beats about him with his club, and he is intimidated by no obstacle.

Kasimir Ritter von Grocholski, who died in 1888, was a lawyer and landed proprietor, and the leader of the Polish Club. A wily tactician, he had been admitted a Minister without portfolio into the Hohenwart Cabinet, in order to satisfy the national ideas of the Poles. In the Reichsrath he represented the interests of the Cracow feudalists and clericals. He was a thorough reactionary whose policy was to maintain his influence with the masses. What he really wanted, was to promote a Church and State counter-revolution. He was never happier than when he could give a cut at the Germans, and in so far he was a good Pole, such as they are traditionally depicted.

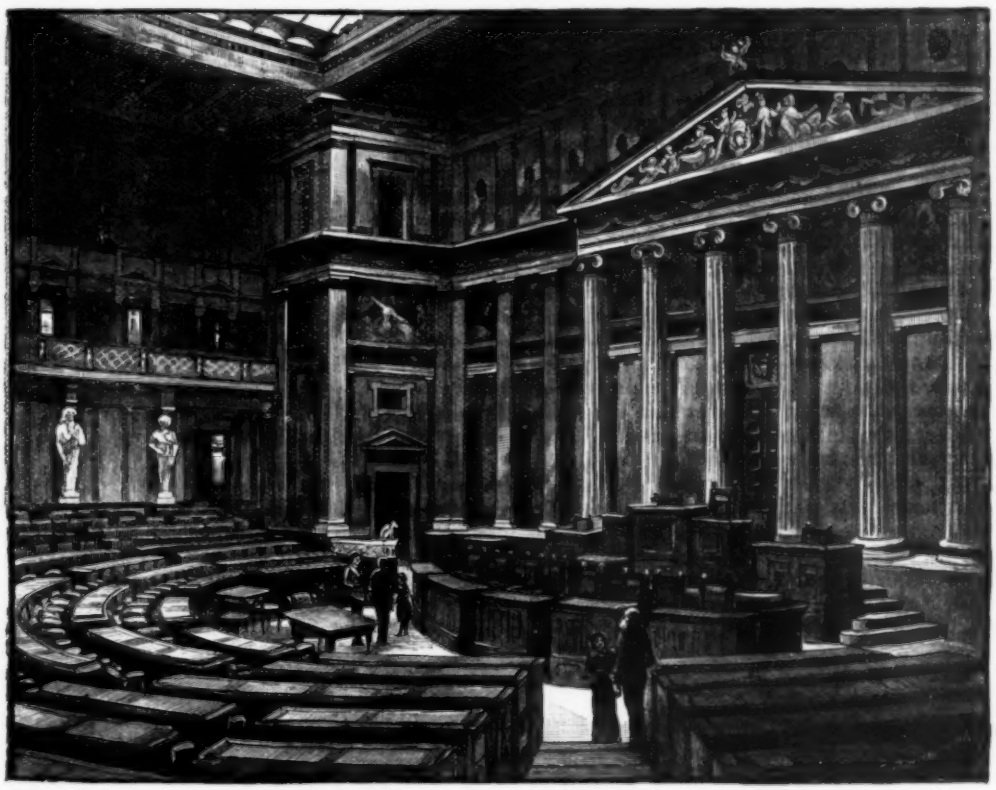
His place has been supplied by M. Jovorski, and in the new Reichsrath the Poles have been returned stronger than ever before. It seems probable that Count Taaffe will have to seek his governing majority from among the German Liberals and the Poles coalesced, for it is Count Taaffe's object and the Emperor's to group all the Moderates together against the young Czechs, Antisemites, German Democrats, and Ultramontanes.

In contrast to Count Clam-Martinic's motto, which might be said to have been "Aut Cæsar aut nullus," Count Hohenwart follows the precept "Festina lente." Born in 1824, he was for many years Governor of Upper Austria, and in 1871, to the general astonishment, was chosen as head of the Cabinet. He is to-day that which he has ever been, the matador of feudalism; he leads in the Reichsrath the Right party, composed of the southern Slavs—that is to say, of the Slovacks from Krain and the coast line, and from certain districts of Karinthia, Styria, the Tyrol, and the Vorarlberg, as well as Salzburg and Upper Austria; a party which is only held together by the cement of Ultramontanism. Count Hohenwart is a man of the middle ages, who has been by accident born in the nineteenth century, and nothing will ever change his religious, social, and political convictions, which belong to an age that is passed away. He is an aristocrat to the backbone, and he does not recognise any person who has not an old ancestry to show. *Bourgeoisie*, people, traders, and all the rest that compose the mass of the population, are for him a vast crowd, an alluvial soil existing only to support the feet of Princes, Dukes, and Counts. He does not even admit the claims of newly created aristocrats, and as for a Jewish Baron he regards him as a smuggled article. At the same time Count Hohenwart is no vulgar nature; he has noble, elevated, and generous sentiments, but they are misapplied, and out of harmony with the time. He is entirely under the influence of Rome, and it was he who demanded in Parliament that the educational laws should be overturned, and the instruction of youth given back into the hands of the clergy—a demand which modern Austria could not and would not listen to for a moment. His programme is anything but conservative, it is revolutionary, for its ultimate goal is a subjection of the State to the infallible utterances of the Pope.

Ritter von Hohenwart counts among the first orators of the Chamber; a discourse by him is always regarded as an event. He was in his youth a gay and brilliant cavalier, and he carries so well the weight of his years, that he appears to have the gift of everlasting youth. At times in the Chamber he may have a tired air, but if he notices that he is observed he draws himself up like a racehorse, and looks young, fresh, and ready for battle. He is cautious and astute, and he hopes by wiles and patience and concessions to obtain in the end everything that his party demands, a party that is only another expression of the intricate tangle of Austrian politics, and the difficulties with which the monarchy has to deal.

Of special importance for the party of the Right are those high Tory members who are so bound by their common nobility and by their relationships to the autochthonous aristocracy of the Cesky club, that it is difficult to say where feudalism leaves off and ultramontanism begins. Chief among these are the two princes Alfred and Alois Liechtenstein, related to the Lobkowitz and the Belcredi. Prince Alois is an eloquent orator, a perfect club-man, and an aristocrat of the old-fashioned type. He has certain ideal leanings towards demagogy: his antipathy is the bourgeoisie, who work, possess, and

PRINCE ALOIS LIECHTENSTEIN.
(*From a photograph by Adèle.*)



fill or aspire to those posts which were formerly the exclusive privilege of the nobles. Both Princes have been carefully brought up by Jesuit fathers; from them they have learned to use the weapons of invective, irony, and pseudo-indignation. The language employed by them in the Chambers is a curious mixture of the Seminary and the Jockey Club, of which latter they are great ornaments. They always speak in favour of the Church, and in this they are supported by another of the principal orators on the benches of the Right, Herr von Lienbachen, formerly imperial councillor, a man of great capacity, whose speeches are always highly charged with venom to his adversaries.

It is unfortunate for the German Liberal party

that death has of late years been so active in its ranks, and mowed down some of its finest orators, among them Giskra, Mühlfeld, Berger, Kuranda. The only surviving member of this group is Herr Herbst, but he is rather a dialectician than a tribune of great vigour. Admirably versed in all business matters, his discourses on the budget are authoritative, and when it is needful to discuss constitutional principles every member of the House crowds round the bench where he sits, to hear him expound the theories of his party and refute those of his adversaries. It is deeply to be deplored that this German Liberal party, so truly progressive in its ideas, so equitable and high-minded in its aims, should have allowed its reason to be troubled, and its heart to be hardened, by its fears of the Czech peoples. Still, on the other hand, their fears were not groundless; nor were they to be wondered at, for the Czechs, like the Poles, are not good legislators, seem incapable of steady government, and have little comprehension of the necessities of parliamentary life and economical and social questions. It is the dogmatic and doctrinaire character of the liberalism that distinguishes Herr Herbst and his followers, which has rendered impossible the fusion between them and the Slav party. They are intolerant in their liberalism and require that their doctrines should be accepted unhesitatingly and unquestioningly. Like those of most Germans, their views are hard, fast, and unpliable.

Coronini, Walterskirchen, Gautsch, Minister for Education; Count Falkenhayn, Minister of Agriculture; Marquis Bacquehem, Minister of Commerce, are all men who play some part in current Austrian political life, but space will not allow us to speak of them at length. Coronini was one of the victims of Herbst's intolerance. Rumour says, but it may be calumny, that he is anxious to succeed Taaffe when that Minister shall fall, as he perhaps may do quite shortly, owing to the Czech dissensions.

Herr Schindler was known in literature as Julius von der Traun. He was for a long time one of the principal orators of the German party, but latterly he lost the confidence of his constituents, who accused him of having grown too rich, and having too little time to attend to their affairs. He died recently.

INTERIOR OF HOUSES OF PARLIAMENT VIENNA

*(From a photograph by Oscar Kramer.)*

Baron von Walterskirchen is the leader of the German democratic party. This party, while scrupulously preserving the German character of the German Liberal party, desires to follow a rather wider policy, more tolerant and more conciliatory, and to find a meeting point with the non-German section of the empire, on the basis of the equality of rights. He is just now without a seat in Parliament.

Herr von Gautsch has distinguished himself by

his strenuous upholding of unsectarian education, notwithstanding all the pressure brought to bear upon him by Feudalists and Ultramontanes. He has incurred on the one hand the hatred of the Czechs, by not allowing their schools to become hotbeds of particularistic propaganda ; and on the other hand, of the German students, whom he would not permit to drink to the destruction of Austria, and to aspirations for the union of the German-Austrian provinces with the new German Empire.

It may be interesting to note that the new Austrian Parliament contains 50 lawyers, 12 doctors, 8 architects and engineers, 29 civil servants, 20 priests, 146 landowners, 30 merchants and manufacturers, 9 authors and journalists, 40 professors, and 6 gentlemen of no profession.

While Austria has its own ministers to manage purely Austrian affairs, there are three ministries for the whole Empire—that is to say, for the Empire of Austria-Hungary. These are the Minister of Foreign Affairs, the Minister of the Imperial Finances, and the Minister of War. The present Minister of Foreign Affairs is Count Gustav Siegmund Kalnoky, who was until 1881 Austrian Ambassador at St. Petersburg. He succeeded Baron Haymerle, and took up his portfolio with the firm determination to continue in the same lines as his predecessors Andrassy and Haymerle. He entered upon his post under favourable auspices, because shortly before his nomination, thanks to Haymerle's diplomacy, Italy was beginning that *rapprochement* towards Austria which led to her ultimate entrance into the German-Austrian League of Peace, and constituted the Triple Alliance which is regarded on the Continent as the best guarantee for the maintenance of concord in Continental Europe.

Shortly after Kálnoky's appointment Herr von Kállay was nominated Imperial Minister of Finance,

HERR VON KÁLLAY.
(*From a photograph by Ellinger Ede.*)

and consequently Minister for Bosnia and Herzegovina, for the two charges go together. Austria had only recently acquired the administration of the Turkish provinces of Bosnia and Herzegovina, and it was a grave question who should be chosen first to fill this most important and arduous office. Kállay was certainly the right man in the right place ; a born Hungarian, he speaks Russian, Servian, Roumanian, and Turkish. He is acquainted with Russia, European and Asiatic Turkey, from personal travels, and for a long while filled the post of Consul-General at Belgrade. The administration of the provinces was taken in hand on European

HERR GAUTSCH, MINISTER OF EDUCATION.
(*From a photograph by Angerer.*)

principles, but at the same time with careful regard for the national and religious prejudices of the people, the greater number of whom are Greek Catholics with a certain admixture of Roman Catholics and Mahommedans. When Kállay undertook the government of the provinces there may be said to have been no roads, and certainly no railroads. Both these have been rapidly constructed ; agriculture, industry, and commerce have grown apace in a country of splendid resources, but absolutely neglected under the misrule of the Turks. An eloquent testimony to this excellent government is the fact that though Bosnia receives no subsidy from the Austrian monarchy, and has to pay the cost of its development out of its own resources, it has already repaid in capital and interest the sum of over two millions lent to it for building its railroads. It is not needful to say more in order to show clearly why Herr von Kállay has gained the hearts of all the Bosnians, who look up to him with affection and gratitude. Herr von Kállay has also distinguished himself in literature. He has written an excellent history of Servia, as well as an able essay on Hungary in its relations to the East and West.

Kálnoky is an ardent supporter of the Triple Alliance, which he regards as the pivot of the whole Austrian foreign policy. His attitude towards the Balkan States is to encourage their free, independent, and organic development. He accords his sympathies to the Government and Prince

of Bulgaria, who he considers are going forward in harmonious concord towards the welfare of their land, and its consolidation as a commercial and soundly financial State. He is satisfied to see that the country holds back from European entanglements, avoids adventures, and occupies itself almost exclusively with its internal affairs. With regard to Roumania, the personal relations between the Austrian and Roumanian sovereigns are good, but their commercial relations have recently become much strained, and it is likely that the world will hear more on this subject. Lord Salisbury remarked some time ago at the Guildhall that it is pigs who nowadays rule the political world. It has been a question of the transit of Roumanian swine that has caused the disagreements with the Vienna Cabinet, and a tariff war with regard to pigs is also bringing about some serious differences between Austria, Hungary, and Servia. It is with a full sense of his heavy responsibility that Count Kálnoky conducts the Austrian foreign policy. He has no easy task, surrounded as he is by small, ambitious, and turbulent States, and determined as he is that European peace shall be maintained, while at the same time Austrian honour shall be held high. He is a pronounced enemy of every form of political adventure, and his ambition is directed to preserving the well-being of his countrymen from the terrible devastations which would be entailed by war. He fully comprehends the difficulties with which he has to deal, and he meets them fearlessly and strives to act in the sense laid down by Prince Bismarck when he founded the League of Peace. His policy is marked by a characteristic trait of moderation and self-control, which is combined with a strong sense of his own and his country's strength. With Kálnoky's appointment as Imperial Minister of Foreign Affairs, the probabilities of European peace have increased. This is his best and finest title to honour.

Such this Cisleithan State, such its perplexities, difficulties, dangers, troubles, and such the men chosen to solve its problems. What may be its fate in the near future no man can foretell. The untimely death of Prince Rudolph, beloved of all the various factions and nations, whom he had known how to conciliate more truly than Count Taaffe, was a heavy blow to its ultimate internal unity, which is maintained by respect for the dynasty, embodied for them in the person of the present Emperor, but an embodiment they may fail to recognise in the distant relation who will now succeed him.

## TWO LONDON PRISONS.

THE great prison at Wormwood Scrubbs, designed to take the place of the famous "Penitentiary" at Millbank, has been completed, and is to a great extent, though not yet fully, occupied. The older structure is closed, and at the moment of writing, negotiations are in progress for its sale and demolition. At the present time, therefore, London is in possession of two great prisons, presenting many interesting points of contrast—typifying, in fact, two periods in the history of our dealings with criminals divided by nearly a century.

"Millbank," says Major Griffiths, at one time deputy-governor, in his interesting book on the prison, "is suggestive of an order that is past. It is one of the last specimens of an age to which Newgate also belongs; a period when the safe custody of criminals could be compassed, people thought, only by granite blocks and ponderous bolts and bars."

In order to understand Millbank, however, it is absolutely necessary to know something of the criminal history of the times in which it was built. The very name of it, says the authority just quoted, contains in itself almost an epitome of our whole penal legislation. Penal legislation, as we understand it, is of far more recent origin than we are apt to suppose. Imprisonment for the purpose of punishment, and specially of reformation, is quite a modern idea with us. The death penalty followed quickly on many offences, until within a recent period. The frightful state of our gaols revealed by John Howard and Elizabeth Fry appears to have arisen, in great measure at least, because prisons were regarded as places of mere temporary detention for debtors, who might liberate themselves by paying their debts or by getting their friends to do it for them, or for persons awaiting trial, or transportation, or death. Gaols were not supposed to be places in which anybody would stay very long. They corresponded, in fact, pretty closely with our modern idea of a house of detention or a "lock-up," and we have seen quite recently how easy it is for all sorts of abuses to creep into the condition and management of such places. A century ago, criminals were not, under ordinary circumstances, sentenced to periods of imprisonment, and nobody ever thought of putting a prisoner to work in gaol.

Shortly after we first acquired possessions in America, it became the practice to ship off our criminals to work in the Plantations there, and in 1717 an Act was passed making this practice a recognised part of our legal system, and for many years convicts were shipped across the Atlantic, to all intents and purposes the slaves of the contractors, who carried them out to the Plantations

in the New World. When, however, we lost those Plantations, this outlet for our criminals was of course cut off. The prisons at home became frightfully crowded with convicts we did not know what to do with, and for a long time the public conscience was more or less uneasy about the condition of them. Very much of what was going on in our gaols, however, was but little known until John Howard laid it all bare, and fairly horrified the nation with his plain unvarnished tales of life in prison—of its crowding and indescribable filth, of its moral pollution and physical suffering and cruel injustice. Reform was felt to be absolutely imperative, and in 1778 an Act was passed the spirit and design of which were set forth in one of its sections, which expressed the hope that, "if any offenders convicted of crimes for which transportation has been usually inflicted, were ordered to solitary imprisonment accompanied by well regulated hard labour and religious instruction, it might be the means, under Providence, not only of deterring others, but also of reforming the individuals and turning them to habits of industry."

But while a scheme was being elaborated for giving effect to this Act of Parliament, we had discovered fresh fields for colonial enterprise in the southern hemisphere, and about a century ago—May 1787—we shipped off our first cargo of convicts to Botany Bay, and thus revived the system of transportation beyond the seas. The "Penitentiary" idea was however revived by Jeremy Bentham, who in his book entitled "Panopticon, or the Inspection House," set forth a bold but fantastic and impracticable scheme for a building in which prisoners were to be kept in solitary confinement, while each should be always under the eye of an inspector and in free communication with such of the public as chose to stroll through the place and talk with them through speaking-tubes. Wild and unworkable though the scheme was in many ways, it was very favourably received in high quarters, and Bentham was commissioned to select a piece of land for it, and he actually bought the plot on part of which Millbank now stands. But Bentham's scheme eventually fell through, and though some of his ideas were no doubt embodied in the building afterwards erected, he really had nothing to do with it.

From this slight sketch the purpose of Millbank may be understood. It was planned and built for the first great experiment in the reformation of criminals in this country, and, though it is commonly spoken of as having been a great failure, it undoubtedly afforded experience without which our subsequent success in criminal reformation could hardly have been achieved, and perhaps we should not have been at the present time rejoicing over the decrease of our criminal population and the reduction of our gaol accommodation, while our population at large is greatly increasing.

The choice of land seems to have been a huge blunder to begin with. It was a mere bog, in which there was the greatest difficulty in getting reliable foundations. Enormous excavations had to be made, and such masses of concrete laid down, that, as Major Griffiths tells us, it justified the familiar saying that "there is more stuff below than above at Millbank." Notwithstanding enormous expenditure of money and material, the first blocks of buildings were by no means secure. On June 27, 1816, the first batch of convicts arrived from Newgate and took possession of such portions of the new prison as were by that time completed, and on the 21st of the following September the governor's diary records: "Arose at six in the morning in consequence of being informed that the passage gates of Pentagon No. 1, next its angle towers, were all fast and incapable of being unlocked by the turnkeys. Went there and found it was so, and that it was occasioned by all the three angle towers having sunk a little lower, which had crushed the arches and wall in several places." He forthwith sent for the clerk of the works, and the clerk of the works sent for the architect. Meanwhile the governor "went again into the Pentagon, and found all the prisoners of Mrs. Todd's division under considerable fear and alarm, and that Ann Turner had just recovered from a fit, which I understand she is subject to. Talked to the prisoners and assured them there was no danger, and succeeded in pacifying them and quieting all further apprehension." Eventually a great part of the new building had to be pulled down and rebuilt, and the same had already been the case with the prison lodge and part of the boundary wall. These were the beginnings of trouble which during the early years of this famous institution came in many forms, and eventually resulted in the final abandonment of the place as a "penitentiary" and its conversion into one of the ordinary prisons, which, however, of late years have all become "penitentiaries" in a very important sense.

Before going further into the history of the place, however, something should be said as to the building itself.

It is as a whole an exceedingly intricate and bewildering building to explore. The writer has been through it more than once, but from his own observations could not have formed the slightest notion of the general plan of the place. He could merely follow his guide, and could bring away with him only a confused idea of winding staircases, rows of cells—in one row, by the way, were babies in arms, some of them born in prison—dark passages, and innumerable doors and gratings. The prison buildings cover about seven acres, and more than another seven acres of land lie round the building within the boundary wall. There are estimated to be some three miles of passages and staircases, and to inspect the whole prison it is necessary to unlock and lock about a hundred doors—not of course including cell doors. "There was one old warder," says Major Griffiths, "who served for years at Millbank, and rose through all the grades to a position of trust, who was yet unable, to the last, to find his way about the premises. He carried with him always a piece of chalk with which he blazed his path, as does the American backwoodsman the forest trees."

But notwithstanding its intricacy of detail the general plan of Millbank Prison is tolerably simple. The central idea of the plan was the reformation of

criminals, and very appropriately therefore the chapel stands in the centre of the space enclosed by the boundary walls. This building is circular, and round it is an open space, bounded by a narrow building three storeys high, forming a hexagon. In this six-sided building are the prison offices, officers' quarters, workrooms, etc., and from each of the six sides radiates a five-sided building, or pentagon as it is called, each pentagon containing three floors of cells for prisoners, the cells being ranged fifteen in a row. A person standing at an angle of a pentagon can see two such rows—thirty cells altogether, and that is the greatest number that can be overlooked from any one point of view. By way of striking contrast, it may be stated that in the large prison at Coldbath Fields there were in round numbers, when it was full, 1,200 prisoners, and all the cell doors, or nearly so, were visible from the centre of the prison.

Millbank Penitentiary was the first building of its kind, and under the incentive of a great and a noble idea Parliament poured out money upon it very freely. "Every part of the prison, visible or invisible, is a mine of building wealth. Hidden amongst its hundreds of cells, its lengths of corridor and passage, beneath its acres of roof, are, without exaggeration, miles of lead piping, hundreds of tons of iron, immense iron girders, gates in dozens—some of wrought iron, some of cast—flagstones without end, shiploads of timber, millions of bricks. When the old place comes to be pulled down, the curious inquirer may perhaps understand why it was that it cost half a million of money." Every cell in the place—and there are about 1,000 of them—cost £500—enough to build a nice little suburban villa. The cost of the new prison at Wormwood Scrubbs is reckoned to be £84 5*s.* per cell.

"The Penitentiary" was the first institution of its kind, and from the industrial employment, the religious teaching, and the solitary confinement, great results were of course expected. But the management of criminals by moral force—now almost reduced to a science—was not a bit understood at that time, and the early discipline of Millbank was as different from that now prevailing at Wormwood Scrubbs and all our other large prisons as the old building is different from the new. Most of the prison governors nowadays are military men, whose militarism however is carefully regulated and controlled by very elaborate system. The first governor of Millbank was a lawyer, and he appears to have endeavoured to combine his rulership inside the prison with a solicitor's practice outside. He seems to have been a good, earnest man, sincerely desirous of carrying out the great work for which Millbank was designed, but was conspicuously lacking in some of the characteristics which would now be deemed essential in a prison governor, and, moreover, the committee charged with the supervision and management of the new prison did much to render its failure inevitable. "Millbank," says the modern deputy governor, "was a huge plaything; a toy for a parcel of philanthropic gentlemen, to keep them busy during their spare hours. It was easy to see that they loved to run in and out of the place, and to show it off to their friends; thus we find its visitor, Sir Archibald Macdonald, bringing a party of ladies, when, to quote from the governor's journal, 'the prisoners read and went through their religious exercises,' which edifying spectacle 'gave great satisfaction to the persons present.'" Again, we are told, the whole of the female prisoners first admitted, finding that there were some nice, pleasant, simple-hearted people at the head of affairs, proved to be liable to fits, and the tendency gave the governor great concern, till it was found that by threatening to shave and blister the heads of all persons so afflicted, immediate cure followed. Judith Lacy, having been accused of stealing tea from a matron's canister which had been put down imprudently too near the prisoner, was so hurt at the charge, that it threw her into fits. She soon recovered, and it was quite evident that she had stolen the tea." The governor in his journal has recorded the release of the first prisoner, a female, who, having been dressed in her liberty clothing, "was taken into the several airing grounds in which were her late fellow-prisoners. The visitor represented to them in a most impressive manner the benefits that would result to themselves by good behaviour. The whole were most sensibly affected, and I think the event will have a very powerful effect on the conduct of many, and prove an incentive to observe good and orderly demeanour." The next day, says Major Griffiths, the whole of the female prisoners were at their cell windows, and shouted vociferously as Mary Turner went off. This, he adds, is but one specimen of the free and easy system of management.

It was very kind, but it was not firm enough for the class of inmates, and troubles grew apace. Early in the spring following the opening, the whole of the inmates broke into open mutiny because the committee of management made some change in the quality of the bread supplied. There appears to have been considerable destruction of property and serious onslaughts upon the officers of the prison, who were compelled to appeal to the Home Secretary for outside assistance. Nowadays, the cat-o'-nine-tails would come freely into play after such insubordination. After repeated outbreaks of turbulence and murderous violence, when all milder forms of punishment had been tried ineffectually, the lash was resorted to at Millbank with a couple of rebels. "But," says our author, "at the time of which I am now writing—in 1830, that is to say, when soldiers, for purely military offences, were flogged within an inch of their lives, and the 'cat' alone kept the slave population of penal colonies in subjection—it is almost amusing to observe what a coil was raised about a single instance of corporal punishment. Were proof required of the exceeding mildness of the rule under which Millbank was governed, we should have it here." In judging of the wisdom of the management of this new reformatory, however, it should be borne in mind that all the inmates were carefully selected individuals. They were, first of all, young prisoners; secondly, they were adults under first conviction; and thirdly,

they were persons "who, from early habits and good character, or from having friends and relations to receive them at their discharge, afforded reasonable hope of their being restored to society corrected and reclaimed by the punishment they had undergone." It was no doubt felt to be desirable to err on the side of leniency rather than severity, and all the details of the place seem to have been arranged on this assumption.

The prison, we are told, was commonly called Mr. Holford's fattening house, and for a long time the luxury of Millbank was a standing joke. The medical superintendent frequently reported that the prisoners suffered from plethora and from diseases consequent on fulness of habit. "Great quantities of food were carried out of the prison in the wash-tubs; potatoes, for instance, were taken to the pigs which the governor admitted he would have been ashamed to have seen carried out of his own house." There was a great outcry about this state of things, which was described, in a pamphlet written by a member of Parliament, as an insult to honest industry and a violation of common sense. The committee were forced to make a change, and they appear to have gone from one extreme to the other.

Millbank, as it has been said, was planted in the middle of a bog, and, notwithstanding the benevolence of its design, its cells were floored with stone, its corridors were all of stone and were cold and draughty, and the system of warming is to this day miserably defective. The place was from the first deleterious and unhealthy, and when the committee suddenly dropped the prisoners from a superabundant dietary to one which was not sufficient to sustain healthy life even under the best of circumstances, disease broke out. "Half the entire population of the place soon showed symptoms of constitutional derangement, the outward marks of which were a sullen countenance and impaired digestion, diminished muscular strength, a feeble circulation, various degrees of nervous affections, such as tremors, cramps, or spasms, and various degrees of mental despondency." A return to a healthier diet, including three oranges a day for each prisoner, after a while got rid of the scorbutic symptoms; but very shortly sickness broke out in other forms, and eventually this costly prison, with its £500 cells, had to be cleared out, and the inmates disposed of as best they could be. Some were sent into hospital and some to the hulks down the river, while the female prisoners received the pardon of the crown, and were set at liberty. For some months the great prison was entirely closed, and then an entirely fresh start was made. Sir Humphry Davy was called in to do whatever he deemed necessary to improve the ventilation, and Mr. Faraday was requested to undertake a thorough fumigation of the interior. A stagnant moat had surrounded the building, and this was connected with the tides of the river. Additional stoves were provided, and arrangements were made for the better exercise of the prisoners. "More schooling was also recommended as a profitable method of employing hours otherwise lost. and breaking in on the monotony and dreariness of the long dark nights. The cells, the committee thought, should be lighted with candles, and books supplied of a kind to combine rational amusement with moral and religious instruction." While all these changes—or at least many of them—were effected in the establishment itself, an entirely fresh body of prisoners were confined here. So that the re-start was very complete.

With it all, however, the course of Millbank was a very troubled one. "Feigned suicides were among the earliest methods of annoyance. Whenever any prisoner was thwarted or out of temper, often, indeed, without rhyme or reason, and whenever the fancy seized him, he tied himself up at once to his loom, or laid hands upon his throat, with his dinner knife or a bit of broken glass. Of course their last idea was to succeed. They took the greatest pains to ensure their own safety, and these were often ludicrously apparent; but now and then, though rarely, these precautions failed of their object, and the wretched victim suffered by mistake." Several illustrative instances are given in which prisoners made sham attempts to kill themselves, and from the standpoint gained by subsequent experience in the management of convicts there is something almost ludicrous in the earnest anxiety with which Captain Chapman, who was governor at that time, strove with this strange mania. A more unscrupulous man would have put down this nonsense by stern severity, but the governor seems to have been a man of heart and conscience, and it evidently was a sore worry to him for a long time. Another great difficulty was that Millbank had not been established very long before it came to be understood by the criminal classes that life in the Penitentiary was a good deal drearier and duller than life on board the hulks, and large numbers habitually misconducted themselves with the deliberate intention of getting transferred to the river.

The women prisoners appear to have been exceptionally difficult to manage. At one time, says Major Griffiths, a strange fancy all at once seized a number of them occupying adjoining cells to drum on their doors with the soles of their feet. A woman lay full length on the cell floor just the right distance from the door, and began. She was immediately answered from the next cell, whence the infection spread rapidly to the next, and so on till the whole place was in an uproar. These cell doors being badly hung, were a little loose; they rattled and shook, therefore, till the noise became deafening and indescribable. Day after day this went on, and in some cases it was proved they had drummed in this way for weeks. Many of them worked themselves up to a state of excitement bordering on hysteria and became prostrate and ill. "In numbers the kicking superinduced diseases of the feet, the whole skin of the sole having been worn away; for it is almost needless to observe that very early in the affray shoes and stockings were altogether destroyed, and it came to be a question of bare feet. Several methods were tried to put an end to this unpleasant practice—strait waistcoats, dietary punishments and so forth—but all without avail. In that particular instance the

disturbances continued till the women fairly wore themselves out."

It would be interesting to follow up the history of Millbank, and to show that although, in one sense, it was held to be a gigantic failure, it was, as it has already been intimated, an all-important stepping-stone to the attainment of the modern ideal of a prison. But it is time to turn attention from this old prison to the new one at Wormwood Scrubbs, which may be taken to be, on the whole perhaps, the finest embodiment of that ideal anywhere in existence.

It is very interesting to observe at the outset that the method of building this new prison has been almost exactly that which the practical sagacity of John Howard led him to advocate when the erection of Millbank was under discussion. The plan actually adopted was to entrust the work to contractors, and to bring the prisoners into the place as fast as sections of it were completed. Howard said, "No; I would have it built in great measure by the convicts. I will suppose that a power is obtained from Parliament to employ such of them as are now at work on the Thames, or some of those in the county gaols, under sentences of transportation, as may be thought most expedient. In the first place, let the surrounding walls, intended as full security against escapes, be completed, and proper lodges for the gate-keepers. Let temporary buildings of the nature of barracks be erected in some part of this enclosure which will be wanted the least till the whole is finished. Let one or two hundred men, with their proper keepers, and under the direction of the builder, be employed in levelling the ground, digging out the foundations, serving the masons, sawing the timber and stone; and as I have found several convicts who were carpenters, masons, and smiths, these may be employed in their own branches of trade, since such work is as necessary and proper as any other in which they can be engaged."

That was written a hundred years ago, and no doubt was considered fanciful and impracticable, but that is precisely how Wormwood Scrubbs Prison has been built. The land, twenty acres in extent, was bought of the Ecclesiastical Commissioners, and, says Major-General Sir Edmund Du Cane, the Surveyor-General of Prisons, "the whole of the buildings composing this prison have been constructed by convict labour under circumstances which make the enterprise somewhat peculiar and interesting."

The first step was to prepare in the workshops of Millbank and Pentonville Prisons temporary buildings of wood and iron to house a hundred convicts. These were taken to the site for the new prison, set up by free labour, and surrounded by a strong and lofty hoarding. This enclosure was then declared a prison, and a hundred convicts conveyed into it, and set to work to erect similar accommodation for another hundred convicts. With these two hundred men, the permanent buildings were commenced.

A very dismal spot indeed was this prison enclosure during the early stages of the work. Wormwood Scrubbs, though close to London, was a strangely out-of-the-world, desolate-looking region of clay-pits and brickfields, cinder heaps and smoke clouds. "During the first month or two," says one of the commissioners' reports, "the weather was extremely severe; at times our only means of communication was by sleds across the snow, or deep tenacious mud which made the track nearly impassable. By degrees the cells in the first hall were completed and the prison population gradually increased," and regular occupation of the permanent cells was commenced at the beginning of 1875. For fifteen or sixteen years past, therefore, this twenty acres of ground at Wormwood Scrubbs has been a scene of varied activity, of a very curious interest, and for a long time gangs of silent, sad-faced, cropped and shaven labourers, clad in the hideous prison garb, were to be seen working under the surveillance of armed warders in the making of roads across the dreary waste outside the grim enclosure.

We must not attempt to follow the work of building this great place, though to the writer, who has several times during its erection had accorded to him the privilege of inspecting the progress of it, it has been exceedingly interesting to watch the gradual evolution of this vast system of order and industry. Down in the midst of this howling wilderness, Government planted a little colony of the lazy and the criminal and the ignorant—the pests and scourges of civilised society—and set them to work. Without haste but without rest, year after year, the work has gone on, and now there stands an extensive range of buildings—vast blocks of cells, light, airy, clean, warm, and comfortable; spacious workshops, kitchens, laundries, baths, a beautiful infirmary, a handsome chapel—the whole of it, from the digging of the clay and the working of the bricks, the creation of this forlorn colony, a large proportion of which consists of men who have become criminals because they either did not know how to do anything useful, or if they did could find no work. Profoundly interesting and very suggestive it is to learn that not only have these buildings, together with a considerable number of pleasant and commodious houses for the officers outside the prison walls, all been erected by convict labour, but the workmen themselves have been created by the carrying out of the work. Says the report of the Deputy-Governor of this new prison: "I have been repeatedly struck by the eager alacrity with which convict learners throw themselves into their new work. At this moment there are ninety-two bricklayers upon the building, and of these only two ever handled a trowel before they entered a prison, the remainder are therefore entirely prison-taught. Forty I have seen pass under my own eyes through the several stages, from the clay to carrying the hod, from the hod to the trowel and interior walls, till finally they have graduated and have been advanced to the honour of 'face work,' which many now execute to entire satisfaction."

It would be difficult to imagine a much greater contrast than that presented in the building of this prison and the old Millbank Penitentiary, and the prisons themselves are as different from each other as the mode of building them. The construction

of Millbank, as we have seen, renders it extremely difficult, indeed quite impossible, to exercise any general oversight of the place. The next advance upon this arrangement is that presented in the "Model Prison" at Pentonville. There, the cell-doors all open into great wards which radiate from a common centre, so that warders stationed at this centre can look down all these wards and see whatever is going on. Most large prisons built of late years have been fashioned on this model. But in the new prison at Wormwood Scrubbs this arrangement has been departed from. "In designing the prison," says Sir Edmund Du Cane, "the plan of making the blocks of cells radiate from a common centre was abandoned, as it was decided that the balance of advantage was against it in this case. The cell blocks, each containing 351 cells, are therefore arranged parallel to one another north and south, separated by a space sufficient to give room for the workshops, kitchens, etc., between them. There are communications between the blocks and these buildings by covered ways. All the cells under this arrangement can have sunlight on them at some time of the day; there are no dank, dark courts and corners, as there must necessarily be on the radiating plan; and the cell windows of one block do not immediately overlook the yard attached to another block."

There are separate cells for 1,377 prisoners. They are all essentially alike. They are lighted by gas, and are warmed and ventilated on the latest scientific principles, and each has its electric bell. There is a fine bath house containing fifty-four separate baths, and there is a well appointed hospital with accommodation for fifty-eight patients; but such are the sanitary excellences of the place that it seems almost literally a fact that except in the case of prisoners who come into the establishment with some ailment or other about them, they get no sickness at all. Such is the advance that science and experience have made in prison building since the grim old "Penitentiary" was set up at Millbank. Here is a colony of 1,000 men and women—half the prison has been given up to female prisoners—in sound health, sufficiently fed, sufficiently clothed, comfortably housed, all of them entirely employed—all the care and competition, the strife and turmoil, the choppings and changings of life outside, barred out by an impassable wall. Really, on a fine summer day, so bronzed and healthy do the inmates look, so clean and pleasant are their cells, so sweet and wholesome does everything look about the kitchens and laundries, and so peaceful and easy does life seem here, that it almost inclines one to become an inmate for a short time. One does not see, in cursorily inspecting the place, the awful monotony, the isolation from friends, the utter absence of interest in life, the benumbing-silence, the never varying pressure of stern rule, the privation from all kinds of petty indulgence. "Oh, if it had not been for the few books I found in the cell," said one who had recently come out from this living tomb to the writer—"if it had not been for the books, I think I must have gone mad!"

G. MILLIN.

# The Prisoner.

"QUEEN of the waves, thy gliding shallop steer,
Where lingering echoes to thy strains awake:
The winds and waters hush themselves to hear,
The very skies are brighter for thy sake."

A captive's song thus floated on the air,
From grated window of a sea-girt keep,
As daily he beheld the fairest fair
Sail by his prison, on the shining deep.

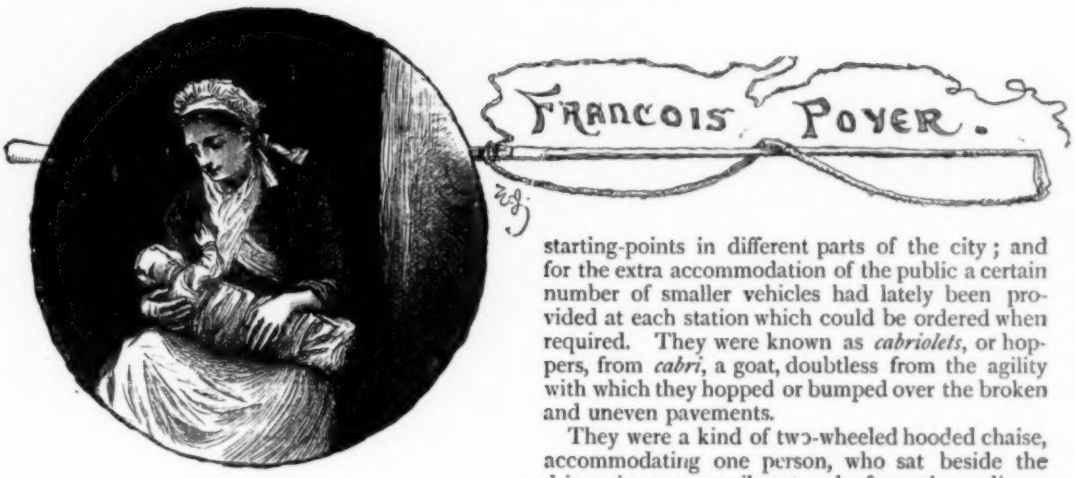
"In this old, silent fort, I pass my years
Of golden youth and strength, no longer free:
My only joy is when thy sail appears,
I long for thee as for my liberty.

"The limpid flood, with loyal pride displays
Thy queenly form in mirrored counterpart:
What is the power thy canvas most obeys?
Is it the zephyr, or the tender heart?

"With ardent hopes my glowing pulses bound,
For even thou may'st burst my prison door:
Rescued by thee, I would, the world around,
Thee follow joyfully for evermore.

"Thou stayest now thy course, perhaps to shed
A tear of pity for my helpless pain;
But, like my hope, alas! too quickly fled,
Thou passest and I pine alone again.

"Is this delusive fancy, false delight?
But no! thy hand points hither, I can see:
A star of life, thou risest on my night,
To-morrow thou wilt shine again for me.



"Queen of the waves, thy gliding shallop steer,
Where lingering echoes to thy strains awake:
The winds and waters hush themselves to hear,
The very skies are brighter for thy sake."

# THE MONTYON PRIZE

## ITS HEROES AND HEROINES

IN the top floor of a very old tumbledown house in one of the old quarters of Paris, now improved out of existence by the Haussmann-Napoleonic energy, there lived, somewhere about the year 1826, the family of François Poyer,—François himself, his wife, and four little children of ages ranging from eight to three. The two elder were girls, the two younger twin boys.

The home, in spite of extreme poverty, was a fairly comfortable one, for Madame Poyer, who before her marriage had been in service, was an able woman and a good manager, while François was a very industrious and steady man, bringing home all the money that he earned, and spending the very little spare time that he had with his wife and children, instead of dissipating it, as so many of his acquaintances did, in the cabarets or at the political clubs with which the quarter abounded.

By occupation François was what we should call a cabdriver, only that at this time there were no cabs. It is curious for us to remember how very many things which now form part of our most everyday life were absolutely wanting in the life of a generation back. The Paris of fifty years ago was scarcely more civilised, scarcely more furnished with the necessaries and conveniences of life, than Morocco at the present day. Dirt, discomfort, and noise seemed to have been its three most striking characteristics, and in the matter of wheeled vehicles French ideas were until quite recently especially primitive. At the time of which we write—of course before the advent of railways—the only means of transit for travellers going any distance were extremely heavy, ill-hung diligences, drawn by four or five horses harnessed with ropes. These, laden high with luggage and passengers, lumbered heavily along the badly paved streets. They had their offices or starting-points in different parts of the city; and for the extra accommodation of the public a certain number of smaller vehicles had lately been provided at each station which could be ordered when required. They were known as *cabriolets*, or hoppers, from *cabri*, a goat, doubtless from the agility with which they hopped or bumped over the broken and uneven pavements.

They were a kind of two-wheeled hooded chaise, accommodating one person, who sat beside the driver, in some peril, not only from the ordinary dangers of the road, but from the menacing whips wielded by his own and other coachmen. There were constant disputes occurring in the narrow, crowded streets as to the right of way, and these, after much noise, were usually settled by sounding cuts of the whip on each side, and it is remarked by a traveller of that time as a curious coincidence, that the worst sufferers in these encounters were always the innocent occupiers of the seats beside the disputants.

François Poyer, then, was driver of one of these nimble vehicles, and was so well liked for his dexterity in avoiding collisions, material and physical, and for his general civility and honesty, that he was in pretty constant employment. But even so, and in spite of his wife's thriftiness, he was still a poor man, the wages which he received being very low, and saddled with many charges and expenses which the *pour-boires* he was expected to receive from his patrons did not always cover. At the same time, as we have said, he was a man of simple tastes and domestic habits, not given to railing even at the hardness of the times, and, in truth, finding life on the whole very fairly endurable.

One evening in winter, at the close of the day's work, François climbed heavily up the seven storeys of his dwelling to his sky-lit quarters—heavily, not

[1] An account of the origin of the Montyon Prize will be found in the "Leisure Hour" for 1889-90 (p. 40). The sketches which followed were from the pen of L. G. Séguin, whose familiarity with French peasant life enabled her to give vivid setting to each case. It was intended to publish a second series, but our purpose was unhappily hindered by her death. The stories that follow now are all that she had completed. They will be supplemented by a few brief illustrations from later times.

by reason of any heaviness of spirit or body, but on account of the enormous weight of overcoat which he wore, and from the extreme clumsiness of the *sabots* which formed part of his ordinary dress, but which seemed to clank this evening with more than their usual clatter on his half-frozen feet. He was cheerful, however, as usual, for, as he plodded up the long, winding stairs, he sang in a loud nasal tone, a snatch of song about a brother in the craft, *Le Postillon de Bonjemeau*, and cracked the whip which he carried as an accompaniment to each refrain. When he at length arrived at his airy castle he announced himself at the door by giving an extra loud crack of the whip, and by uttering a volley of the peculiar and unearthly sounds with which French drivers are in the habit of encouraging their lagging steeds. In response the door was thrown open, and two little girls, in blue cotton blouses and tight white cotton caps, followed by two little boys in blue blouses and closely-cropped heads, took violent possession of their father, clinging, two on each side of him as he entered the room, but with less clamour and outcry than was customary with them, so that François in a moment became conscious that something special had happened. He asked quickly, "What is it? Is anything the matter?"

For answer, the two little girls laid their fingers on their lips and said, "Hush!" and the two little boys put their thumbs into their mouths and said nothing. François, mystified, pushed on, with the four little ones clinging to the tails of his big coat, from the chilly dark stairway into what by comparison seemed the warmth and brilliancy of the dwelling-room, though in truth it was warmed only by a very small wood fire and lighted only by a solitary dip. But the sight which that dip revealed made François stand still and stare, and then, taking off his broad-brimmed beaver hat, he slowly scratched the top of his head.

The sight which thus moved him was the figure of his wife—a neat, pretty little figure, too, in her frilled cap and big apron—seated before the fireplace, with her foot upon the rocker of the old wooden cradle that had done duty for all the quartet now clinging about his skirts, and with a mummified bundle in her arms, which, from previous experience, François knew to be a baby.

"Bless my heart!" he exclaimed. "Do you mean to say there—there's another!"

Lisette, his wife, who was evidently enjoying his surprise, smiled a little, but without so much as turning her head from the all-absorbing baby.

"Yes," she returned calmly, as she rocked the little one to and fro—"yes; there's another!"

"And you never told me—and I never knew," he began—and then stopped, for he suddenly perceived that his wife was laughing.

"I have often told thee before, *mon ami*, that thou wert a goose. I must tell thee now that thou art a bigger goose than ever I gave thee credit for," she said.

"Well, well," said François, putting down his hat and advancing towards the fire. "I was startled to be sure—I fancied at the minute that I must be dreaming. But if it is not ours, pray may I ask whose baby it is?"

"Sit down and I will tell you all about it. It is a lodger."

"Dear me! it doesn't look very big to be a lodger," says François, glancing critically at the infant. "Of course," he goes on, "I can see now that it is none of ours. How very ugly it is, poor thing, and ours used really to be quite pretty!"

"You never said so before," returned his wife. "I'm sure I've quarrelled with you many a time on that point. But this poor little thing is not strong and well, as, thank God, all ours have been. It is a miserable, sickly little creature, and that is why I have taken it."

"Rather an odd recommendation for a lodger, isn't it?" asks François. "But you have not told me yet who it belongs to."

"It is," says Madame Poyer, giving it a motherly hug, "the poor little stray child of Rosalie Tombette."

"Of Rosalie!"

"Yes; she was here to-day in terrible trouble, because the woman in whose charge she had put the baby had evidently neglected and illtreated it. I am sorry, indeed, for Rosalie; I have been her friend, as you know, ever since she was a child, and in spite of all that has happened. She is most anxious to do well by the child."

"And so you are going to take the trouble of it off her hands. Is that it, my little woman? Well, the room did look a bit dreary without the old cradle in it."

"Just what I was saying the other day," returns Lisette; "but don't give me credit for too much benevolence. Rosalie is now in a very good situation, and will pay well for the child. She has, indeed, been paying well for it; and therefore it is all the more shameful that it should have been half starved, as it certainly is, poor mite! Look here!" she goes on, rising with the infant in her arms and taking from a shelf a small heap of coins. "See, here are ten francs, a month's payment in advance—and very handsome payment too. The baby will not cost us half that."

"No; but then there is your trouble to take into account."

"Well, as for that, I don't count it a trouble, as you know I dearly love a baby; and I do believe my hand is getting quite out of nursing, it is so long since those big boys of ours needed it."

"Ah!" returns François, chuckling, "they gave you a pretty good turn of it at the time, I remember. It might well have lasted you all your life. But some people never are satisfied," he added mischievously.

"I am quite satisfied now, monsieur, that I have this poor little darling in my arms; and really I think he begins to look a little less shrivelled up than he did this morning."

"One cannot say he is a pretty child," said François, regarding the infant with a critical eye, his head on one side, as if he were a connoisseur inspecting a piece of cracked china.

It was true. There could scarcely have been a more miserable, sickly, and neglected little atom of humanity than was the child, Edmond Tombette, when he entered the family of the Poyers as lodger;

but, thanks to the care and attention which he received, he very soon began to show signs of improvement. At the end of six months, though still a delicate little fellow, he could never have been recognised as the emaciated scarecrow whom Madame Poyer had received into her motherly embrace. The home was a real home to the child. Between him and the other children no difference was made, unless it might be that, as the youngest and sickliest, he received the greatest amount of kindness. He was the pet of the house, as great a favourite with the elder children as with François and his wife.

So far all went well; the child's mother came occasionally to see him, and seemed highly pleased with the progress he was making; and though the money for the boy's maintenance was sent somewhat irregularly, it was always paid.

At length, however, Rosalie's visits and the remittances both ceased; and when some months had passed and still there was no sign of either, a family council of two was held.

"Something must have happened to Rosalie," said François. "Do you know where she is living?"

"Yes," returned his wife, producing a slip of paper with an address scribbled on it. "She gave me this."

François went that day to make inquiries, but returned somewhat crestfallen, for the name of Rosalie Tombette was quite unknown at the address given. "It looks bad," he said to his wife. "Do you know anybody who knows anything about her?"

"Yes," says Lisette; "I know a sort of cousin of hers; but she lives a long way off from here. Still, I might find her out."

In the course of the following days Lisette made a pilgrimage to the other side of Paris to find Rosalie's cousin; but the information received was not satisfactory. Some months back, so said the cousin, Rosalie had called to say that she was leaving Paris for good; but she did not give any clue as to her destination, nor did she so much as mention the child, whom her cousin indeed believed to be dead.

Upon this information another family council was called. "What is to be done?" asked Councillor Number One.

"Done! Why, of course we can't help it. We must keep the child."

"Of course," returns Councillor Number One. "Who would think of doing anything else? The only thing is that, unfortunately, five children cost more to keep than four; and they all, thank God, have such good appetites—even the dear baby."

"Umph! well we must consider how we can arrange matters," says Councillor Number Two."

There is a short silence, and then Councillor Number Two, otherwise François, says cheerily, "I have it, little mother. I have been adding up the cost of our living, and I think if you and I gave up our glass of *vin ordinaire* every day, and drank water, we should save—say a franc a week."

"That I will readily do," returned Lisette, "though I do think that, after all your hard work in the wet and the cold, a little wine is almost necessary for you."

"Not at all," returned her husband.

"At any rate," Lisette went on, "I am now making a nice little sum by needlework, and I shall go on sewing two hours later every night, and let our dear little Edmond have the benefit of the extra money gained."

Somehow, by one means and another, by the united exertions and good will of the kindly couple, the thing was managed, the strained ends were made to meet, and little Edmond remained a member of the Poyer household.

Always delicate and requiring an unusual amount of care and frequently of nursing, the child added no inconsiderable item to the anxieties as well as to the expenses of the little household of which he formed a part; but care, love, and, so far as they had it at command, money, were unstintingly devoted to him. The result of all this kind and careful treatment was that little Edmond did really grow and improve, and at the age of three was developing into a nice-looking, fairly healthy child.

At this time, two years and a half since her disappearance, Rosalie Tombette suddenly returned. Without a word of warning she walked one day into the Poyers' apartment as though she had left it only yesterday. Madame Poyer and the children were alone there, François being, as usual, away at his work.

Rosalie embraced her child with much appearance of affection. She explained that she had been, since the date of her last visit, constantly travelling about in the service of a lady of rank, but that she had now come to settle in Paris, and would be able to look after her child. She was profuse in her expressions of gratitude for the kind care which had been bestowed upon the boy, promising an immediate settlement of the long outstanding account. She then expressed a wish to take little Edmond out with her, that she might buy him a few things, and enjoy the pleasure of his society for a little while, at the same time stating her intention of bringing him back in an hour or two, unless a relative of hers whom she was going to see was very urgent in wishing them to stay overnight, when she might possibly not return till the next day.

When François returned home in the evening he was surprised not to find little Edmond waiting as usual to receive him and coax him into a game of play.

"It is extraordinary," he said to his wife, "how we miss the dear child. I shall be glad, somehow, when we get him safely back again."

The next day, towards afternoon, Rosalie appeared, but without the child—this time running up against François, who had come home earlier than usual, so anxious was he to have news of the return of little Edmond.

Rosalie had a long and somewhat rambling story to tell. Some friends, with whom she had been the day before, had advised her to send the child to the country, to a relative who was willing to adopt and educate him, and she had therefore sent him off at once.

"You have taken him away from us," said Madame Poyer, beginning to cry.

"It is not, believe me, that I am ungrateful for

all your goodness to him," said the mother. "On the contrary, I feel that I have burthened you too long; but now his future is secured, and, as I am relieved from all anxiety about him, I shall at once be able to discharge my debt to you—at the latest in a few days."

François Poyer looked very narrowly at the woman as she talked, and listened silently. When she had done, he said: "To what place in the country have you sent the child?"

"To Tours," returned Rosalie, after a moment's hesitation.

When she had gone he still went on silently thinking, while his wife sat crying. Presently he said: "I do not like the look of things at all, Lisette. I do not believe that that woman is speaking the truth. I feel very unhappy about it."

The next day, François, who was well known at all the diligence offices of Paris, drove to the office of the Touraine line of diligences.

He inquired if any child answering the description of Edmond Tombette had travelled to Tours on the day mentioned by Rosalie. There was no recollection of any such passenger; and to assist François in his inquiries the clerk in charge of the booking office allowed him to examine the books in which the names and descriptions of all travellers were inscribed. There was no entry that could possibly be taken to refer to little Edmond Tombette. Thinking that, for some reason or other, Rosalie had wished to mislead him as to the destination of the child, he next visited one after another the booking offices of Paris; but with always the same result. He went home after each failure very much dispirited.

"My impression is," he said, "that our poor little fellow is still in Paris; and if he is alive I will find him."

"How will you do that?" asked his wife.

"I will not leave a corner unsearched," said François.

Every evening when he came home Lisette would ask her husband the same question. "Have you heard anything of our boy yet?" And every evening the reply was only a shake of the head, or a grunt, or a short "No, not yet." But there was always a certain hope implied by the "yet." How many times François had jumped suddenly off his cabriolet, to the alarm of his "fare," and dashed down some dark entry or court with which Paris at this time abounded, in pursuit of some small blue-bloused figure who bore a certain resemblance to the missing child, it is impossible to say; and of these false hopes he did not care to tell Lisette, for he knew she would only fret the more after her lost charge. As it was, she fretted a good deal.

One day she was beset by a horrible fear. "Suppose she has murdered him, poor darling!" she said to her husband.

"Why should she do that? He had a good home with us. Why could she not leave him alone unless she was able to do well by him?"

"Why, indeed?" returned Lisette, conquered but not convinced. "All the same, I have a feeling sometimes that he is no more."

"Fiddlesticks!" returned François, bravely; yet a sort of shudder crept over him at the possibility of such a fate to the child he had so often cradled in his arms, and whose first word had been one of endearment for himself.

At length it happened one day that after throwing the reins on the horse's back and making, as usual, a rapid raid into a narrow close in one of the lowest quarters of the city, in pursuit of a small child who was dabbling in the gutter, François was led to confide something of his troubles to the astonished occupant of the carriage, who was naturally bewildered by so unusual and alarming a proceeding on the part of his charioteer.

"What in the name of patience is the matter?" he inquired. "Are you gone mad?" as François returned, breathless and dejected, with the information that it was only "another mistake."

"A thousand pardons for abandoning Monsieur in such a way," François said apologetically. "Not that Monsieur need have been anxious, Boulotte, good brute, being as steady as a rock, and is besides used to it."

"A very worthy animal, no doubt," returned the traveller. "But is it not rather an odd habit to have got into? If I saw right, you only seized that dirty small child to shake him, and put him down again."

"Pardon, Monsieur; I did not shake him intentionally," said François a little guiltily, for his disappointment made him feel inclined to shake all the children who were not his own lost favourite. "The thing is, Monsieur, I am looking for a child."

"You have lost one, you mean."

"Not one of my own exactly, Monsieur, but as dear to me as if he were," says François; and then, in a few words, he tells the story of little Edmond Tombette.

"It is very odd," says the stranger. "She, the mother, is odd; and you, who are not the father, are odd too; and your wife is odd!"

François was not quite sure that he liked this criticism, especially the reflection on his wife. He sat silent beside the stranger, and cracked his whip a little viciously.

In a minute or two the stranger spoke again. "Have you inquired at the *Enfants Trouvés*? Perhaps the child has been taken there."

"The *Enfants Trouvés*!" François pulled Boulotte up with a jerk, and turned so that he could look at the speaker. "No, Monsieur," he said, "I have not tried there." The very name was a name of horror to the Paris workman. "But why," he went on, after a pause—"why in the world should she take him there?"

"Who knows?" returned the traveller. "Perhaps because women are the most irrational and unaccountable creatures under the sun. But for that—who knows why anybody does anything?"

On that evening François returned home rather late, wet and tired; and when Lisette made her usual inquiry: "Have you had any news yet of Edmond?" François was inclined to be cross.

"You certainly are very odd," he said, "to be always asking the same question as if you thought I was not doing all I could to find him. At the

same time it is odd that you should keep on fretting so after this poor sickly child, who was an immense trouble to you."

"What!" cries the wife in astonishment.

"It only shows," says François, "that women are the most irrational and unaccountable creatures under the sun."

"What farce is this? What nonsense are you prating, hypocritical monster that you are," says the wife, administering a correcting slap on her husband's ear. "Who, I should like to know, frets about the poor little one more than yourself—who?"

"That is true, my girl," says François, interrupting, and, in Biblical fashion, returning a kiss for a blow. "At the same time it is certain that women are unaccountable creatures, or else why should that wretched Rosalie have made away with our boy? But," he went on, in a lower tone as if to himself, "there was certainly a good deal of truth in what the gentleman said to me to-day, and I shall go off to-morrow to the *Enfants Trouvés* and make inquiries there."

The next day and the following days were, however, exceedingly wet and disagreeable, and François and his cabriolet were so much in request that he had no time to devote to private affairs. But at the end of the week he was lucky in setting a passenger down in the then deserted Luxembourg quarter, in which is situated the Hospital for Foundlings. He at once turned his horse's head in the direction of the Rue d'Enfers, where the old monastery of the Oratorians served as a refuge for the most helpless and desolate of human beings—the unfortunate infants whom no one wanted.

Outside the porter's lodge, let into a long blank wall, was a sort of box or cradle, swung on a pivot, and large enough to hold a child. Beside it hung a big bell with a long iron handle. Into this box at all hours of the day and night, with no other ceremony than a touch of the iron bell-handle, unfortunate infants were secretly dropped by despairing or reckless hands. The weight of the child made the box turn on its pivot, and before the clang of the bell had ceased, or the porter could answer its summons, another nameless and unloved one had joined the great society of the nameless and unloved in the Hospital of the *Enfants Trouvés*, secure, indeed, of food and shelter, but shut out, till manhood or womanhood, from all natural ties and interests—a child only of the State.

François Poyer glanced at the box in the wall with a little shudder, as he had often done before. To a man of his affectionate nature, and with his warm love of his own children, there was something very painful in the thought of this vast assembly of little outcasts, deprived of all their natural rights and privileges by those who should have been most ready to cherish and protect them. He drove quickly on and came to the gate in the wall, with a cross above it, which was the entrance to the hospital. Here, throwing the reins on Boulotte's back, he jumped down, and rung at another bell, with a long iron handle, which hung beside the door. Almost immediately the shutter was pushed back from a small square grating in the upper part of the door, and an elderly woman's face, with a kind of conventual cap, appeared.

François at once took off his hat, and stood bareheaded.

"What do you want?" she inquired in a somewhat harsh voice; and before he could answer, catching a sight maybe of the carriage, she went on: "I hope you have not come to bring us another child, for I assure you we are so crowded now that we scarcely know where to find room for them all."

"Madame," said François, respectfully, "a thousand pardons for disturbing you; but I am come to inquire after a little boy whom I have lost, and I thought—that is, I hoped—I mean I thought it possible he might have been brought here."

"Well and good," responded the woman, more cheerfully. "That is another matter. You had better walk in, and let me send for the Mother Superior."

With a good deal of perturbation, as if he was doing something presumptuous if not wicked, François crossed the threshold, and for the first time in his life found himself beyond the barrier which the Roman Catholic Church sets up between the religious and the secular life. The hospital was a convent of the Sisters of St. Vincent de Paul, who established the charity, and was conducted on conventual principles, which always present an idea of something melancholy and awe-inspiring. So at least the place seemed to François. The silence, the order, the subdued manner and gliding movements of the white-stoled sisters who flitted here and there, even the echo of his own sabots on the bare, silent quadrangle, and the deep-voiced clang of the bell he had disturbed, seemed to have something solemn and unearthly about them.

He followed his conductress, hat in hand, across the courtyard to a little room, apart from the main body of the building, used for the reception of strangers, and which was so absolutely spotless, so bare, and so severe in its purity, that François was simply afraid to sit, as he was bidden, on the snowy wooden bench which ran along one side of the walls, but stood turning his broad white beaver hat uneasily in his hands, while the portress disappeared in search of the Mother Superior.

In a few minutes, not the Mother herself, but one of her subordinates, a gentle-voiced, placid-faced lady, in the picturesque blue dress and white coif of the sisters of St. Vincent de Paul, entered and asked in what manner she could be of service.

"Madame," said François, gathering a little confidence from her gentle demeanour—"Madame, if you would not think it impertinent, I would wish to inquire if by any chance a boy of about three years old, a delicate little fellow, has been left here any time these last six weeks?"

"I cannot exactly say," returned the sister; "but, for that matter, they are all delicate and sickly poor little things who find their way here. The Mother Superior writes down an exact description of every child received into the house, but she is

engaged at this moment. Is it your own child who is lost, my good man?"

"Not exactly my own," said François, and then in a few simple words he told his simple tale.

The good sister seemed much interested in the recital.

"I am sure," she said, "we should be very glad if we could help you to find your little pet. Would you like to go round the wards with me, and see if you can recognise him amongst the other children?"

François thanked her, and gladly accepted the offer.

Following her across the quadrangle, they entered the main building of the ancient monastery, once occupied by some of the most learned scholars of France, and now devoted to the needs of the most unlearned of its citizens. Yet here was still something which pretended to be a school. The first room which François and Sister Marie entered was used for this purpose, but the results did not appear to be particularly brilliant, judging by the listless and uninterested faces of the little creatures who jostled one another, and the long rows of forms. François was struck by the extreme plainness of the children as a whole—the prevailing want of vivacity, owing, doubtless, though he was unable to argue the matter, to the low types of humanity from which they sprang, and to the dull routine and strict discipline of the conventual life.

"No, he is not here," he said, with a sort of thankfulness.

"What age is the child you are looking for?" asked a sister-in-charge.

"Three years old."

"Then he is not here."

They next visited the nursery, where the scene was a more cheerful one, for the sisters were doing their best to distract and amuse their infant charges.

"He is not here," says François, with yet another sigh of relief.

"We will go to the Infirmary," says his guide. This is the saddest sight of all. Rows and rows of little cots, each with its suffering little occupant—carefully tended, to be sure, by the sisters, but yet, in their pain and helplessness, presenting as sad a spectacle of child-life as it should *not* be, as can well be imagined!

"Is this all?" asks François, speaking low and treading softly, for he has left his sabots outside the door.

"No, there is yet another room, reserved for the worst—for the surgical cases," returns his guide; and she opens the door of a long room, the windows of which are covered with blue curtains so as to subdue the light, and where, in a row of little beds ranged against the wall, lie, in various attitudes of weariness or distress, poor emaciated little children of all ages.

Very softly François passes along from cot to cot. But suddenly he stops and bursts into tears. He has found his boy! But in what a condition! Six weeks ago he had parted from him a fairly healthy, fresh-looking child of considerable beauty—now he finds a pinched, wizened little creature, with yellow cheeks, nearly blind, from tumours on the eyes.

The child had a difficulty in recognising him, but he knew the voice in a moment.

"Is that you, pa-pa?" he asked. "I can't see you, it's so dark, and my eyes hurt so—but I think——"

"Yes, my treasure, it is me, sure enough," says François, taking a thin little hand and putting it to his lips.

"But how came you here? And how is it you are so ill?"

"Ah! this poor little fellow," says the sister, "was, I remember now, brought to us almost in a starving condition from the Passport Office, where it is believed he was deserted purposely by a woman, supposed to be his mother. He was also covered with bruises when he came here, and being so weakly he has suffered much from ophthalmia, which is always a danger where so many poor children are gathered together."

"His eyes were tender from infancy," says François, "but latterly they became so much better."

"I want to go to ma-ma. Take me home, pa-pa," says the child.

"He means my wife, the only mother he has ever known," says François.

"It was not, then, his mother who deserted him," asks the sister.

"Assuredly it was she who deserted him; but why she has played us such a fool's trick as this I do not know."

"Take me home, pa-pa; take me home at once," pleads the child.

"Of course I will, my dear one. If one of you ladies will kindly dress the child," he went on, turning to the sisters, "I will carry him away at once, wrapped up in my greatcoat, and I have my cabriolet waiting below in the street. We will be home in a trice, never fear, Edmond!"

The good sisters looked at one another and spoke together in a low tone.

"We must fetch the Mother Superior," said Sister Marie. "We dare not do anything without her leave."

"Very well," said François, sitting on the edge of the child's cot, with a certain air of determination; "we can wait."

The "Mother Superior," a venerable, sweet-faced woman, soon appeared, and seemed much interested in the story of little Edmond. She added some details known only to herself, viz., that a smartly-dressed young woman had, in the first instance, brought the child to the hospital and asked that it might be admitted, but was refused on the ground that she and the child appeared to be in too good circumstances. Some days later the boy was found, as has been stated, in the Passport Office, at the Prefecture of Police.

"That ma-ma was a bad lady," said the child, referring to these experiences; "she beat me, and I was very cold and hungry."

And now a new disappointment was to arise for François and his little adopted son. "You cannot possibly take the child away with you," said the Mother Superior. "It is against our rules."

"Not take him!" cried poor François aghast. "Why, how is this?"

"There are certain rules and regulations to be observed," said the Mother Superior; "no child brought in here may be taken out again without a written permission from the Council of Administration, and a legal document attested by a notary."

"Perhaps Madame will tell me how to get all this done," said poor François, rather alarmed by the big word "legal."

"Come down with me to the business-room and we will talk the matter over," says the Mother Superior, kindly.

When the matter was looked into it was found, to François' horror, that the act of adoption, as it was called, required to be ratified by the payment to the Hospital of two hundred and fifty francs, which sum would be paid back to the child on his attaining his majority.

Two hundred and fifty francs!

"Where in the world am I to get such a sum as that?" asks François, in a very downcast tone.

"I do not know, my poor man," says the Mother Superior. "I am very sorry for you, but I know that you cannot have the child without the money.

François thinks for a few moments—then, "I will get it somehow," he says—"only let me go and tell Edmond that he must be patient for a little while."

Filled with his great purpose, François leaves the Hospital and finds Boulotte sleeping soundly where he had left him, with the reins upon his back. Waking him up, he drives briskly home to tell the wonderful piece of good fortune to Lisette, and to consult her as to ways and means.

If it were not for that unlucky two hundred and fifty francs!

Lisette, however, was a woman of many resources, and in such a good cause as this was ready to come promptly to her husband's aid. She had a gold brooch and a pair of earrings, the gift of a Norman aunt, and there were a few silver spoons in an old trunk, a legacy from a long since dead grandfather. These, and indeed every article of the smallest value in their possession, were readily sacrificed for little Edmond's benefit, but yet the required sum was not made up. After much anxious consideration it was decided to beg the loan of the remaining sum from the livery stable keeper in whose employment François had for many years been.

Not without much heart-beating and mental distress did François bring himself to ask this favour, and he was as much astonished as relieved by the ready kindness with which it was granted.

Three days after his first visit to the Hospital he was back again, with his ten pounds in his pocket, ready, if he might do so, to carry off his prize.

But again there were delays. The legal document had to be drawn up and submitted to the Council, and various other small ceremonies to be gone through.

By the kind aid of the Mother Superior, however, who was much interested in the case, matters were arranged as expeditiously as possible, so that at the end of a few days more François received a formal permission to remove the child.

No time was lost now. The cabriolet was once more requisitioned, with Boulotte's head turned in the direction of the Rue d'Enfers; and two hours later, a laughing, crying, screaming, struggling little group of happily excited people received the lost child in their arms, and seemed almost ready to tear him in pieces in their joy. But it was in Lisette's bosom that he nestled the most fondly.

Edmond Tombette after a few years outgrew the delicacy of his childhood, developed into a fine handsome lad, received a good education at the expense of his adopted father, and was by him, at the age of thirteen, apprenticed to a cabinet-maker.

It was about this time, in the year 1839, that the singular devotion of François Poyer to the child of his adoption was made known to the French Academy, by the very traveller whose criticisms nine years before François had been rather inclined to resent, but to whose suggestion of the *Enfants Trouvés* the restoration of little Edmond was in truth due.

It was a sort of poetical justice that from him François should first learn that a Montyon prize of the value of three thousand francs had been adjudged him for exceptional disinterestedness.

"What in the world does that mean?" asked François, half laughing and half crying when he received the news.

"It means, my good Poyer, as I have always told you, that you are very odd," said the traveller in explanation.

L. G. SÉGUIN.

## The Reformed Recluse.

ABROAD to wander! what delight is rarer!
The bird is ransomed after years encaged!
Surely in life there is a mission fairer
Than pipe and book with which to be engaged?
Let selfish misanthropes learn wisdom only—
"It is not good for man to live all lonely!"
My dreams are ended. Lovely visions ever
Did come between my tome and me confined.
My heart is conquered. Reinstate me never,
But in my aching heart let love be 'shrined.
So then abroad I walk. May Heaven befriend me
And guidance give to find what He intends me.
Then may two transformed souls from desolation
Together rise for sacred consecration!

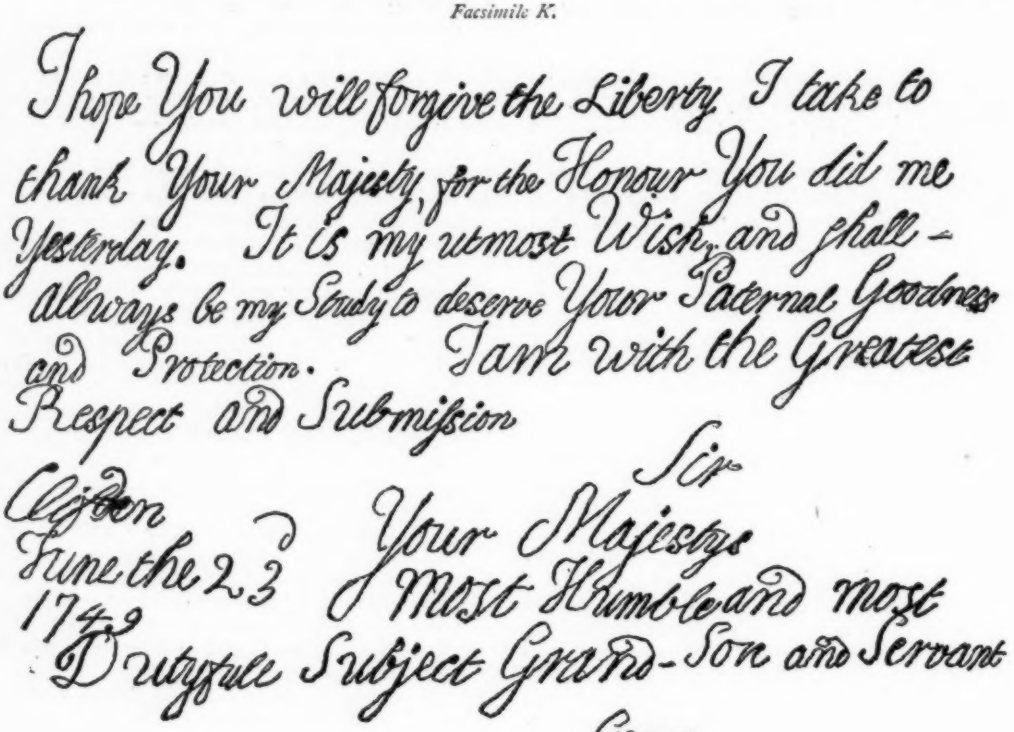
# THE HANDWRITING OF OUR KINGS AND QUEENS.

BY W. J. HARDY, F.S.A.

## GEORGE III AND QUEEN CHARLOTTE.

George III has left us some specimens of his handwriting penned at a very early age. The following was written when he was just eleven years old, the period when his mother, regarding with annoyance the influence which the Ministers of the country had with her father-in-law, was for ever reminding him "to be King," in deed and not only in word, when he ascended the throne.

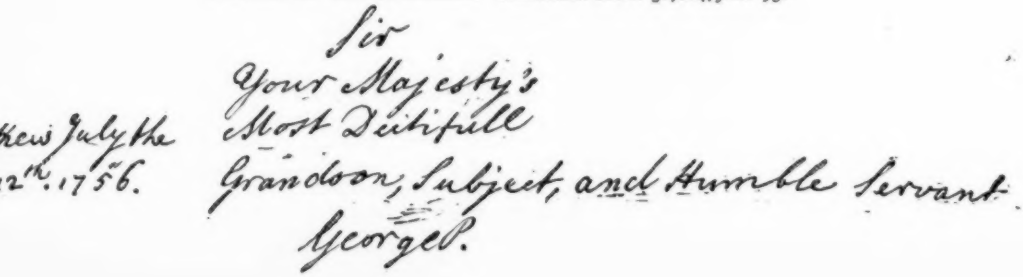


*Holograph. Original at the British Museum. Additional MSS.* 32,684, *folio* 78. *See facsimile K.*

"I hope You will forgive the Liberty I take to thank Your Majesty, for the Honour You did me Yesterday. It is my utmost Wish and shall Allways be my Study to deserve Your Paternal Goodness and Protection. I am with the Greatest Respect and Submission

Clifden
June the 23d
1749

Sir
Your Majesty's
Most Humble and most
Dutyfull Subject Grand-son and Servant
GEORGE."

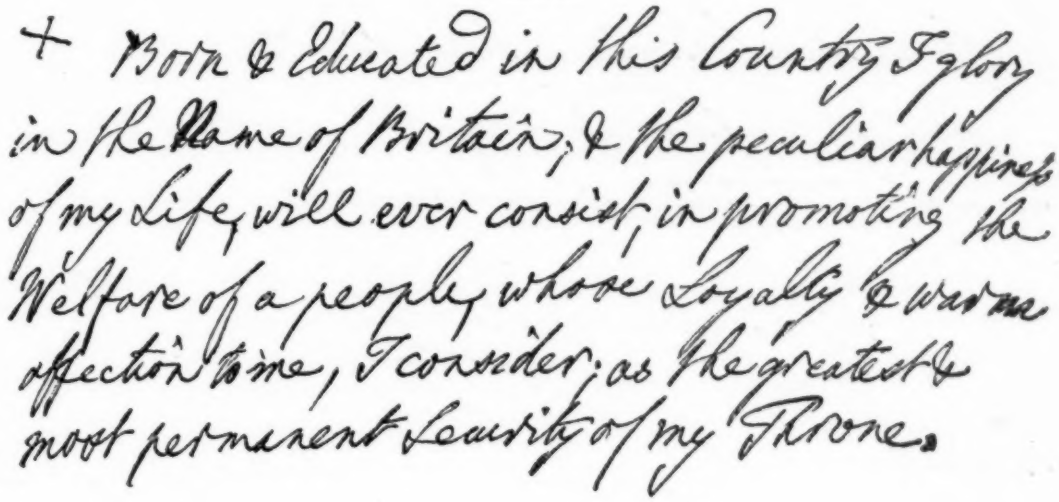


*Facsimile K.*

The favour alluded to was probably a visit or some mark of attention which the grandfather was fond of paying to his grandson, though he kept aloof from the boy's father.

His writing seven years later is shown below in the conclusion of another letter to his grandfather.

*Facsimile L.—British Museum. Additional MSS.* 32,684, *folio* 93.



The death of George II, four years later, put upon the throne of England the first King of the Hanoverian line who could boast of English birth and bringing-up. The following paragraph in his first speech to Parliament, written with his own hand, shows that George III was himself proud of this circumstance :—

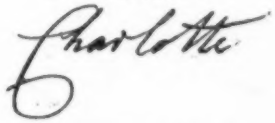
*Original at the British Museum, amongst the Newcastle Papers. See facsimile M.*

Born and Educated in this Country I glory in the Name of Britain ; & the peculiar happiness of my Life, will ever consist, in promoting the Welfare of a people whose Loyalty & warm affection to me, I consider as the greatest and most permanent Security of my Throne.

He never regained his powers, though he lingered on for ten years, his condition being for the greater part of that time truly pitiable. Queen Charlotte, whom he had married during the year following his accession, died in 1818. As it is said that she captivated George III by a letter which, as a girl, she addressed to the King of Prussia, begging him to spare her country—Mecklenburg-Strelitz—this example of her signature, appended to a letter addressed to the Earl of Effingham, treasurer of her household, given below (*facsimile O*), may be of interest.

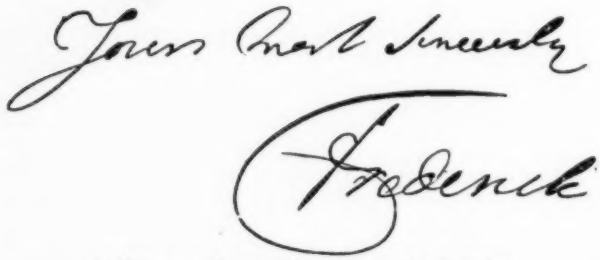
*Facsimile M.*

The last attack of insanity with which the King was afflicted demonstrated itself in the early spring of 1810. His handwriting at this date—an example appears below—attached to royal warrants and documents of a similar nature, presents evidence of his complete mental incapacity before he ceased discharging public duties.



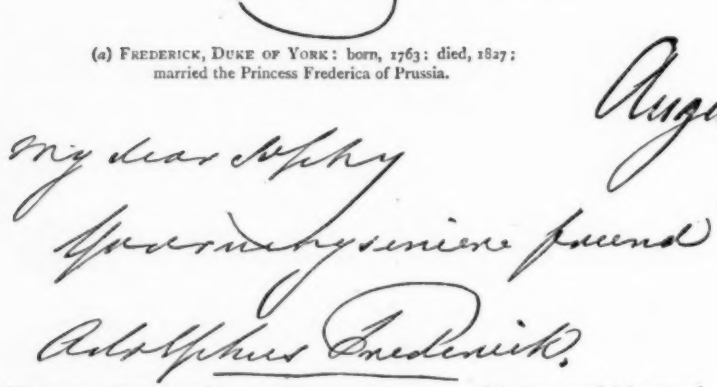
On the adjacent page are examples of the handwriting of some of the King's numerous children.

*Facsimile N.*



GEORGE III, WHEN INSANE.

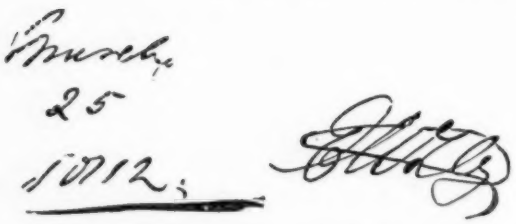
*Facsimile O.*
*British Museum. Additional MSS. 27,543, folio 16.*



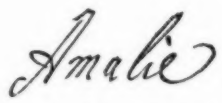
QUEEN CHARLOTTE, WIFE OF GEORGE III.

(*a*) FREDERICK, DUKE OF YORK: born, 1763: died, 1827: married the Princess Frederica of Prussia.

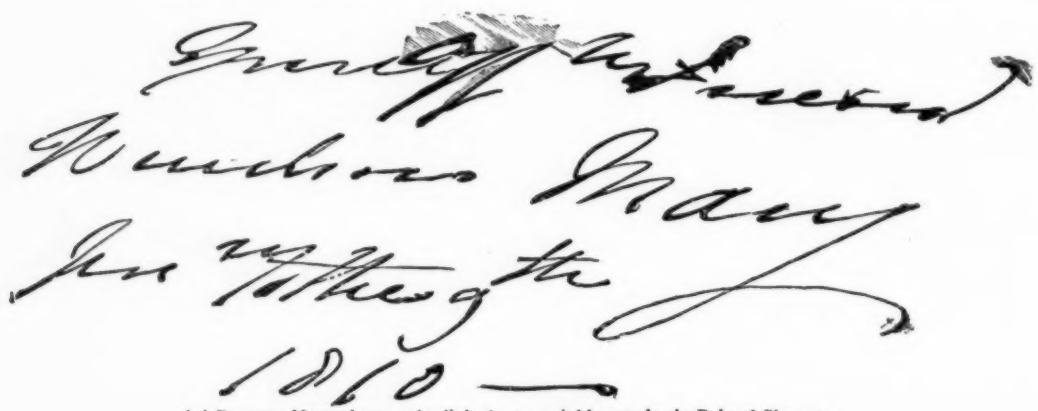
ERNEST, DUKE OF CUMBERLAND AND KING OF HANOVER: born, 1771; died, 1851; married Frederica of Mecklenburg-Strelitz.



(*c*) ADOLPHUS FREDERICK, DUKE OF CAMBRIDGE: born, 1774; died, 1850; married Augusta of Hesse-Cassel; *father of the present Duke of Cambridge.*



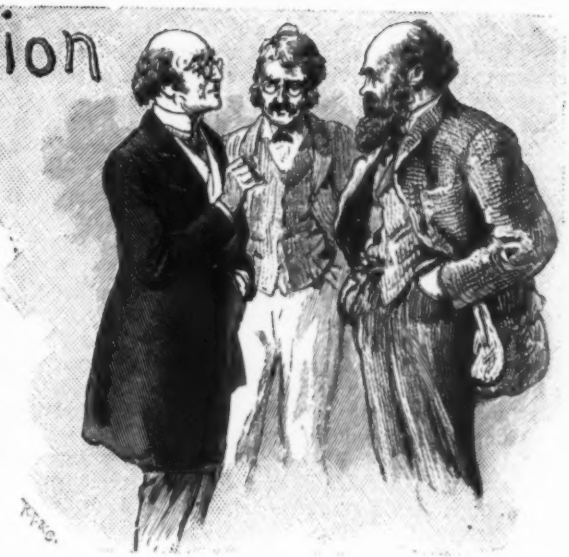
(*e*) PRINCESS AUGUSTA SOPHIA: born, 1768; died, unmarried, 1840.



(*d*) PRINCESS CHARLOTTE: born, 1756; died, 1828; married the King of Wurtemberg

(*f*) PRINCESS ELIZABETH: born, 1770; died, 1840; married the Landgrave of Hesse-Homburg.

(*h*) PRINCESS AMELIA: born, 1783; died, unmarried, 1810.



(*g*) PRINCESS MARY: born, 1776; died, 1840; married her cousin, the Duke of Gloucester.

---

*** NOTE.—The Duke of Kent's signature will appear in a subsequent part.

# Under Discussion

## THE BURDENS OF LIFE.

BY THE AUTHOR OF "VOICES FROM THE HIGHWAYS," ETC.

"I KNOW I am not tired out with the work I do!" cried Penelope. "But it is with the work I cannot do! And, as I say, I have seen such curious results grow out of one's work, that I can do nothing in the joyful assurance I used to have, but rather wonder whether I am really doing good or harm; while, if anything seems to run along successfully and triumphantly, it gives me but a foreboding that it will end in the drearier failure!"

"But if experience has made you unable always to resist that doubt, dear," said Pleasance, "does it not suggest another side—that some of the events which to-day bring us nothing but disheartenment and apparent defeat are the more likely to show us a brighter aspect at some future time? And that seems to be the view of life which has always obtained among those who have looked down among life's deep things. It is he who 'goeth on his way weeping, bearing the measure of seed,' who 'shall come again with joy, bringing his sheaves with him.' Who knows what joy may be growing for us within the bitter rind of disappointment?"

(I, who know the secret of Pleasance's unhappy love story, know that her faith is no cheap re-issue of another's wisdom. She has lived herself into it. Without this trust in the ultimate ends of Providence, she knows her life would be torture; with it, she finds it is peace.)

"Of course, it is not one's own disappointment which one cares for," said Penelope, "but that one is disappointed in saving lives from terrible evil, and souls from such deadly damage! And it often seems to come about in such random, unnecessary ways; perhaps all the care and labour of many, suddenly defeated by the caprice or mere negligence of one! Think of a story I have lived through just now. There is a boy whom we have been anxiously watching for years—a bright, clever little creature, who barely escaped with life from a course of parental neglect which has left him stunted and crippled. We offered to take him from his wretched home, where there was never any 'work,' and where drunkenness and debauchery ruled supreme, and to put him into some school. His father, who had discharged no 'duty' towards him, exercised his 'right' of refusing permission. It was evidently felt at home that the boy would be more valuable without good training and character than with them. 'He will steal for the family,' prophesied one of his best friends. Her forecast was justified. The father withdrew the boy so wholly from our influence that, when next we heard of him, he was a lad of seventeen in gaol for a very clever theft. In court, his father pleaded 'no control' over his son! We caused the boy to be followed to his prison cell. A minister of great experience and tact in such work, and well known to the authorities, visited him and told him that if he desired an honest life, friends would meet him at the prison door and give him a chance. Arrangements were made with the gaol authorities that, on the day of the expiry of his sentence, the lad should be set free, in the charge of such escort. A Salvation Army captain undertook the task. She took the boy to her rooms, and was greatly interested in his bright and amiable manner. He had no horror of his late prison; he said it was 'a fine place'—he had 'never been so comfortable before except when he was in the hospital.' He had no wish to see his parents or to return to his home. Arrangements were being made for his speedy transit to a 'nome' and a 'workshop,' when, only a few hours after his release, the gaol officials appeared on the scene—determined that it was their bounden duty to restore the boy to his father! This man had presented himself at the prison and had threatened all sorts of legal steps; and although the lad was above the age of legal guardianship, and although the father was well known to the police as a confirmed drunkard of the worst antecedents, yet they did this at his behest! They came round to the houses of those who had interested themselves in the lad, and, though these tried to withhold information, they managed to trace him to the Salvation Army captain's charge, and from her they simply demanded the boy! She told me she could never forget his reproachful glance as they

led him away. From that day to this it has been impossible to get any hold on him. The parents, who are doubtless quite aware that their power over him is nil, will be wise enough to do all they can to strengthen their influence over one from whom they look for 'great gain'! And the misery of the whole thing is that the extraordinary official action was due to the ignorance and blundering of some subordinate functionary. The governor of the gaol himself, who knew all about the case, and had himself conferred with the visiting minister, chanced to be from home on the day of the release, and had forgotten to leave special instructions. A mere mistake, a little Bumble-like stupidity, threw away that boy's best chance—perhaps his last—and wasted all our efforts!"

"And I should think the worst part of it is that it must shake your faith in the powers that be," said Horace Penrith; "it must give you a kind of feeling that instead of their existing for the terror of evil-doers and the praise of those who do well, they are rather terrified at evil-doers, and inclined to blame those who do well!"

"Ay," answered Penelope. "One thing that disheartens me terribly is, that I feel so strongly that the greatest obstacle and stumbling-block in the progress of good does not lie with those whom we call the criminal or outcast classes, but with a strange development of the social fabric which somehow makes it so easy to be bad, whether in the sense of crime, or of sin, or of what is often called 'mere frivolity and worldliness.' Temptation seems all on that side. And there is so little encouragement towards good, and the higher the type of the good, the less encouragement for it!"

"It has often struck me," said Horace Penrith, "that we might all get on better, see a more cheerful side of things, and yet effect greater progress, if we took less notice of evil and devoted more attention to the development of good already existing. I remember a worthy old lady who used to say, 'Never mind the tares, plant in the wheat.' When I was at college it often struck me that much greater weight might have been brought to bear upon the fast men and 'wasters,' had they seen the steady and hard-working students carefully singled out for social honour and consideration, while they themselves remained under a wholesome neglect, so long as they chose to retain their character! A maudlin endeavour to obtain 'an influence for good' by first pandering to the idleness, vanity, and base inclinations of those sought to be 'benefited,' can do nothing but harm all round."

"Really, when one notices some of the movements in this direction," said Pleasance, "one thinks their promoters must have reduced their whole Bible to St. Paul's single utterance about 'becoming all things to all men, lest by any means he might save some.' Certainly, they ignore the Master's own instruction, 'Give not that which is holy unto the dogs, neither cast your pearls before the swine, lest haply they trample them under their feet and turn again and rend you.'"

"My own student-reflections on this matter were revived the other day," resumed Horace, "by reading in a recent magazine article, that certain soldiers had confided to the writer that they found it good policy to be occasionally in disgrace, as it brought them under the more particular notice of their officers, and then when they went on fairly again, it was the more likely to be said, 'So-and-so has been doing well for a long time now: we must give him some encouragement.' Imagine the moral effect of the pursuance of this policy!"

"Oh!" cried Penelope, "it is all that I see in this direction that makes me ready to despair! I notice, too, that very few people—so few!—hardly any!—will put forth a hand to help another with a burden he is trying bravely to bear! If at last he throws it down in frenzy, they are ready enough to blame or punish him; if he drops it and dies beside it, they break out in pathetic lamentations over him! But if, before it was too late, he had come to them asking for counsel, for furtherance, even for brotherly sympathy, some would have said they did not like to interfere in other people's business; under some circumstances they would assert there must be something to be said on both sides (though they would make no effort to hear it!); under others, they would proceed to criticise, or to insinuate suspicions of all sorts. Their general attitude would be that they did not care who was being wronged, who was suffering, so long as their own pleasure or profit was not interfered with."

"It is this tendency of common humanity to censure and suspect whoever is suffering which originates such proverbs as the Spanish saying, 'If an ass kicks you, don't tell anybody,' the significance being, 'or they will say you deserve it,'" said I. "I suppose it is the survival of the savage instinct of abandoning the sick; and you see it in ill-taught children who are apt to slap a companion who cries."

"I suppose it works out a part of human development by encouraging endurance," observed Horace Penrith. "For my own part, I think many sufferings are more easily borne when they are not spoken about."

"So do I," assented Penelope, eagerly. "But there are others where the sense of justice is outraged,—where the power is on the side of the oppressor,—where right is called wrong and wrong is called right,—when I am certain the consciousness of being understood, the sincere sympathy of a dispassionate onlooker, would make all the difference between patience and desperation! It is easy to believe in the Eternal Justice and Love while they look at us through even one pair of human eyes! It is not only murderers who ask Cain's question: 'Am I my brother's keeper?' I feel sure that some tragedies which have actually ended on the gallows might have had a far different climax if 'respectable' people had not asked that question years and years before, while the misery wore on, and wrong and injustice and cruelty corroded nerve and inflamed brain. True, they don't always do this. They make some people into saints! Oh, if you only heard a few of the histories that I hear—if you only saw some of the sights that I see! It is for the very sake of such that I feel ready to faint and despair. Why, there are real heroisms which are trampled underfoot! There

are genuine martyrs whom no one can recognise, because those who destroy them are actually able to make them look mean, and sometimes even wicked, to the eyes of other men."

"My dear," said Mrs. Yeldham, gently, "Jesus Christ Himself suffered as a transgressor. It is only the mist of ages which has veiled the soldiers' spittings and mockings from us, and transformed a scene of bitter degradation into one of sublime tragedy. Those who bear the worst of earth's agonies are but the more 'partakers of those sufferings of Christ.'"

"I think," observed Pleasance, "that Penelope may realise that some who most stir her sympathy do not greatly pity themselves."

"Ay," cried Penelope, "they are often so bright and sweet—but that seems only to make it more cruel. How can God bear to see them look up and smile at Him, while He leaves them to be so smitten?"

"Don't you rather think," said Pleasance, "that some of our disappointment and bewilderment comes from our having confused things which are inevitably separate? We see certain spiritual graces and we seem to think they have a right to secular recompenses. Now there is a type of virtue which merits material reward, and which generally obtains it, at least in that moderate degree which keeps it from degenerating into temptation. Diligence and foresight, and common sense, seldom miss a fair share of prosperity and recognition. But these are not virtues of the higher life—not necessarily Christian attributes—being quite compatible with selfishness and greed and parsimony; and, indeed, the more these homely virtues are alloyed by these vices, so much the greater usually are the worldly prosperity and power they attain. But the Christian graces belong to the inner life, and must meet their recompense there. It is not the kingdoms of the world, but the Kingdom of Heaven—that kingdom 'which is within,' which is promised to the poor in spirit and to those who are persecuted for righteousness' sake. And however much more remains to be fulfilled, this promise is sufficiently fulfilled already, when, as you say, the stricken hearts are nevertheless full of a genuine joy."

To my surprise, at this point Horace Penrith actually laughed! "I beg your pardon," he said, "but it struck me that after all it is really funny to think how we seem to wonder that God does not give sumptuous dinners and a brougham to those who have given all their lives to Him! When one looks at it in the right light, it is as if we actually expected our Heavenly Father to act on the level of that squire who gave a speech and a pair of breeches as a special reward to an old labourer who had worked on the estate all his days, and who would have to go to the workhouse at last."

"I was greatly pained the other day," I said, "when a dear friend wrote to me concerning another, who is suffering from a peculiarly sad and fatal malady: 'One cannot feel that she needed or deserved this.' Is not the Christian view rather that 'whom God loveth He chasteneth,' and that we should 'count those happy who endure.' Who can fathom the mystery of Pain?—nay, I would rather say the mystery of Joy, below and beyond Pain. I think that in this present world we see enough of pain as a mere process, to entitle us to the strongest faith that it is always so, and that therefore such pain as seems most aimless and resultless is nevertheless also working out ends beyond the present grasp of our understanding."

"The mistaken point of view which often generates the disheartened sense of 'everything going wrong,' can be scarcely better expressed than in some lines which I learned when I was a girl, and with which I have often reassured myself," said Pleasance. And she repeated them thus:

"How seldom, friend, a good, great man inherits
  Honour or wealth for all his worth and pains!
It sounds like stories from the world of spirits
If any man obtain that which he merits,
  Or any merit that which he obtains."
"For shame, dear friend, renounce this canting strain:
What wouldst thou have a good great man obtain?
Place? Title? Salary? A gilded chain?
Or thrones of corses, which his sword hath slain?
  Greatness and goodness are not means, but *ends!*
  Hath he not always treasures, always friends,
The good great man? Three treasures: Love and Light
  And calm thoughts regular as infant's breath;
And three firm friends, more sure than day and night—
  Himself, his Maker, and the Angel Death."

"And yet there is another side to all this," said Horace Penrith. "For if we are to look at sacrifice as the greatest enjoyment of saints, and at all suffering as a purifying and refining agency, why should we contend against the sins which demand sacrifice and the evils which beget suffering? Yet one feels, of course, that it must be right to do this, and wherever that contending duty is neglected we find that sacrifice and pain lose their beauty and power, and become mere voluntary self-torture. Now, how can pain or suffering of any kind be at once an evil and not an evil?"

"Because," said I, "whether or not pain be blessed to those who suffer it, its infliction, whether by active cruelty or by neglect and indifference, is always an unmitigated evil. And the true progress of the world is by its progress as a whole, and there is no true progress if one part loses what the other gains. I think it is Ruskin who has somewhere said that it is not the will of God that we shall suffer and die for each other, but that we shall be joyful and live for each other, and that wherever the former state of things comes in, it is a sign that the will of God has somehow *not* been done and can be only restored in this way."

"What I want to insist on," said Mrs. Yeldham, "is, that we feel and see enough, not only within the historical memory, but within our own, to warrant the most hopeful faith that the world's movement is onward and upward. Our too usual fashion is to take some glorious period of past national history, usually when in some particular country some great trial and struggle had brought forth staunch and heroic virtues. In contrast with this we hold up the picture presented to us by Society journals of customs and fashions now in vogue in limited licentious and luxurious circles in a few fashionable places of resort. Now, is such a con-

trast fair? We do not think of asking what was going on in the rest of the world while the brave Cromwellian Ironsides were ruling England as one godly household. Nor do we reflect on the enlarged sphere of the present-day world's peaceable, industrial, and domestic life, while we animadvert on card scandals and the escapades of vulgar millionaire 'plungers.'"

"And then one hears people cry out, 'Is this all Christianity has done for us?'" said Horace Penrith. "I've often done so myself, but now I see the fallacy. It arises from that loose way of thinking which looks at Christianity and civilisation as identical, and the latter as a product of the former. Christianity involves true civilisation, but there is a civilisation with which it is even more at variance than with barbarism. Christianity came to a civilisation as elaborate, as luxurious, and as shameful as any we know to-day, and it came to contend with and bear witness against that civilisation. It is doing the same to-day: where it fails to do so, it is not Christianity, but the world masquerading in its name. We have not yet begun to see what Christianity can do for the world. We have seen what it can do for individuals, but when these are numerous enough to have a real hold on the practical life of communities and nations, then it seems to me that all the most beautiful forecasts of prophet or poet will ripen to fulfilment! When anybody tells me that Christianity is a failure, I tell them they cannot say that, for it has not yet been really tried!"

"Ah," said Pleasance, "the realization of that brightens one's hopes and quickens one's energies! One does not mind how slowly anything blooms, if one is always watching fresh blossoms and not a spreading blight."

Said Mrs. Yeldham, "I often wonder if we have not allowed our ideas of the Lord's second coming to crystallise into too definite form. The Jews looked for Him before literally as a King and a Conqueror, and were thus mistaken and disappointed in the Babe of Bethlehem. But of one thing we may be sure, that earnest looking for His Coming means doing all we can to make our world such that we should be glad to see Him here. How could we bear to let Him find homeless children, and forsaken old age, sweated labour and perverted innocence? For we know He would make common cause with these, saying, 'Inasmuch as ye have allowed these to suffer, have ye also crucified me.'"

"Speaking of undoubted advancement made within our own memory," continued Pleasance, "let me mention one particular instance of progress—the altered regard which is given in this country to the animal creation. I am only a middle-aged woman, and I belong to a family which had, hereditarily, a specially sympathetic affection for the brute creation, and I distinctly remember when I was a girl that our expressions of this were sneered at or smiled down as they are not now. Dogs are not left starving about the streets as they used to be when I was a school-girl and saved my spare coppers to buy stale buns to bribe off the canine beggars who somehow understood that I was vulnerable to the beseeching of their hungry eyes. Many of the most cruel sports have absolutely disappeared, and animals fill an important niche in our most wholesome art and most pleasant literature. There is an active society for their legal protection, and the social tone concerning them distinctly recognises their rights, even where it does not yet fully secure them."

"I'm sure there's enough disregard for them still," wailed Penelope. "Did I not see a young lady on a platform at a religious meeting last week with a poor little dead singing-bird for the ornament of her hat? And did I not turn nearly sick, only this morning, with reading an article concerning the reckless cruelty going on in the Transatlantic cattle traffic? And that is a thing beginning only in the last decade!"

"But, my dear," said Pleasance, "a hundred years ago the young lady would have had the singing-bird in her hat—and you, had you been there, would not have been shocked at the sight. And a hundred years ago, human beings, on convict-ships and slavers, were suffering all, and more than the cattle do nowadays, and there was nobody to inquire and protest and strive to put it down, as many good people are doing in the interests of the dumb animals to-day."

"Then too," said I, "we hear a great deal more of everything than did our forefathers, and it is an old adage that 'ill news travels fast.' The newspapers cannot make sensational paragraphs out of the decent doings of thousands of worthy people, as they can of one man's mad folly, or one woman's sin, or a single deed of cruelty. I remember hearing an old Highland woman once say that the land must be getting full of murders, when there were so many in the papers, whereas when she was a girl she had never heard of but one—and that was when a corpse lay stark on her own moor! Increase of knowledge is indeed likely to be increase of sorrow, if we allow our egotism to feel that what we begin to know then first begins to exist!"

"Don't you think," suggested Mrs. Yeldham, "that happiness is so native to us, so instinctively claimed by our souls as their normal atmosphere, that we are too apt to accept all we get as a matter of course, while crying out bitterly for the one or two details of which we are deprived? I believe that one of the greatest blessings to be derived from sharp sorrows and blank losses is that they rouse us to some realisation of the value of what remains. I remember once, years and years ago, hearing a wise man say, 'Sorrows come to save hearts from sadness.' I wondered then, but now I think I understand what he meant. I recollect, too, some old verses which ran:

> 'We scarcely notice the earth is fair
> Till something has passed away'

from our own hearts; yet just think what a perennial source of pure delight may be found in sky and sea and mountain, nay, in homely flower-bed or humble hedgerow? So I think there is truest philosophy in the precept, 'Count your blessings,' i.e., dwell on those many items of life's sum-total which you have, rather than on the one or two which are omitted."

"Ay," assented Penelope, with a rueful glimpse of her accustomed humour flashing across her face like a watery sunbeam, "it might be wiser to do that than to follow the example of a strange old man in my district, who keeps a book wherein he sets down, as in a ledger, all the wrongs and affronts which are put upon him, or which he thinks are put upon him, by his neighbours and acquaintances."

"A renowned writer of this century," I remarked, "a man who has known all the pleasures of wealth, rank, and fame, has enumerated the real blessings of life as coming under the following heads: enjoyment of nature—work—household duty—human sympathy—and bodily health. Now, very few of us are long withdrawn from a fair share of these things, or most of them, if only we know how to value them, and not to forfeit them for so-called 'pleasure,' or for ambition or avarice. 'God's best things lie close about our feet.'"

"Do you know," said Pleasance, "I think there is nothing more apt to give one a feeling of melancholy than casual association with large numbers of people. One never sees the best of anybody in a crowd—and the worst side of the worst people is apt to be the most manifest! Then again, large circles of acquaintance, by using up time and energy, preclude those close friendships and intimate associations in which we see the best of each other—yes, I say deliberately the best of each other—the real self. For I maintain that real faults are far better than artificial virtues! It is because God knows each soul, down to the depths of it, that the secret cry of each soul is, 'Let me fall into the hand of God and not into the hand of man.' But 'greetings where no kindness is,' chat which never gets below the superficial side of things, give the heart a sense of unreality; it moves in a misty dream, a world in which attenuated simulacra of humanity flit about, moping and grimacing, like the 'melancholy sprites' of a pagan Hades. And perhaps this is doubly so when we are constantly associated with many others in the more routine part of 'organisations' for religious or charitable work. Sometimes, it seems such a mountain to produce such a mouse! Or we are so painfully conscious of the formalism and dryness which rise to the surface, that we find it hard to remember the underlying sincerity and tenacity of purpose."

"Also, I think we don't cultivate fun enough," said Mrs. Yeldham, "simply because we cultivate pleasure too much. So many of us have grown so determined to have plenty of amusement always on hand, that we keep it potted, as it were, and it lacks the fine flavour which you get when you gather it fresh at the right moment. If we prepare too much we don't snatch our opportunities! Many things in modern life tempt us to feel as if pleasure, laughter, and fun must lie apart from our work and our regular duty, whereas the former ought to be the very atmosphere of the latter! Separate the two, and who shall say which is the duller or drearier? Do you ever see wearier or sadder people than those who have no business in life except to 'enjoy themselves'?"

Said Pleasance, "I know an author who says that whenever he feels he wants stimulus he goes out for a walk, and he goes down the poor streets, where the working people are. He especially likes a market on Saturday night. He says when he sees how much real pleasure can be brought out of a shilling, it makes him feel quite rich!"

An hour or two later, when all our other visitors were gone, Mrs. Yeldham put her hand gently on Penelope Boughton's shoulder, and said in her kindest of tones:

"I am going to give you a lecture!"

"I begin to feel I deserve one," answered Penelope, with a deprecating smile.

"You are a faithless child!" said our dear old friend. "You can't trust the world with our Father! It is quite right that you must be about your Father's business: only that means doing what you can, and not what you can't! You think with justifiable horror of men who overwork those they employ and withhold them from so much of the enjoyment of life. And yet you seem to think that the service of God requires you to overwork, and to deny yourself the refreshment which He has prepared for all His creatures. And so you will tempt others—as personified by poor Mrs. Baraclough—to say that God is a hard Task-master!

"My dear, God does not ask us to bear the sins and sorrows of the world on our own hearts and minds. They would soon crush us down, so that we should have no strength to help or cheer the fellow-creature at our side. God alone is strong enough to bear the weight of the whole, without losing patient tenderness with the one. We are disappointed by the falls and failures of those for whom we have striven, just as little children get vexed with lesser children who seem to them too slow in learning something they try to teach. But the Father is not disappointed; very often He names differently what men name 'failing.'

"We cry out with sympathetic anguish at the sight of lives about which we can see nothing but wrong, and pain, and lack; but He can enter within all these, and take care that no soul goes without its comfort, just as surely as

'Ilka blade o' grass keeps its ain drop o' dew.'

We must trust Him for others as well as for ourselves.

"If we would rightly do His work, we must not spurn His food and His wages; His appointed times for quiet sleep; His preparations of soothing beauty in sunset sky or woodland walk; His counsel and comfort in the stored words of His servants, in sweet music or pleasant picture; His human joy in friendly faces and cheerful intercourse.

"How would you like it if you had a child who professed so much zeal for its lessons or its household tasks that it would not sit down to the meals you spread for it, nor accept any enjoyments you prepared? Would not the light of your countenance gradually withdraw from it?—and then how could it be happy at lessons or work, which could have no other real end but your pleasure and approval?

"God needs our work, my dear, only for our own sake—not for the work's sake. He could accom-

plish it all without us. My own father taught me that in a little unconscious parable. When I was a tiny girl, he called me every week to help him in some little duty he regularly performed. My task was to hold open a cupboard door. Oh, how pleased my father was when he found me standing there, waiting, without being called! 'Now *we* will get on grandly,' he used to say. It was only in later years, and after he had gone to God, that I found the cupboard door could have stood open without any little hand to hold it. My father had not needed my help, but he had needed me and my goodwill.

"Oh, my dear, we should not be so tired and so disheartened, if we dwelt less on how much 'work' we can do, and thought more of how we can best please God. He 'loves a cheerful giver,' not only of money, but of labour and of life. And when we begin to get gloomy and faithless, we should do well to pause and ask where we must have taken a wrong turning. We are apt to do that when we run too fast. Elijah's feats before the chariot of Ahab ended in his lamentation in the wilderness of Beersheba."

"And God comforted him with a sound sleep, and pleasant food and a friendly voice," said Pleasance; "and Penelope and I mean to take a week's holiday."

## A Song of Death.

SING me a song of death,
A mighty mysterious thing
To the worm that creeps on the clay,
To the bird that soars on the wing!

Sing me a song of death,
A fearful, a terrible thing
To the beggar that lies in the mire,
To the high-throned pomp of a king!

A strange thing is death to a child
When first its eyes may behold
A bird, a sweet-singing bird,
On the ground all stiff and cold

Strange and sad to a child,
On a gray and comfortless day,
When the dark-stoled mourners come
With a car in dismal array,

To carry away in a chest
A father dear or a mother,
To heap the cold weight of the clod
On playmate or sister or brother!

Nothing more common than death,
The wise man says on the shore,
As he looks on the crinkled shells
Thick as the sand on the floor;

Hundreds of hundreds of deaths,
Thousands of thousands are there,
Breasted up on the beach,
So pure and so white and so fair!

Every shell had a life,
With soft sea-pulses swelling,
Soft as the pulse of the babe
That sleeps in its cradle-dwelling.

But there swept a storm o'er the sea,
And a blast with terrible blore,
That flung out their bodies to rot,
And their houses to bleach on the shore.

Who can deliver from death?
Can Gold, can Love, can Power
Keep back the fugitive breath
In the fainting heart for an hour?

Who can deliver from death?
What drug, what magic, or charm
Can maim that atomy grim,
Or snatch the scythe from his arm?

Who can deliver from death?
Can prayer or chant or mass,
From presbyter, priest, or pope,
Bid the dread spectre pass?

God can deliver from death!
Walk thou in His ways, and He
From the power of sin and of death
Can make His loved ones free.

God, He brings summer from winter,
And leaves from the dry old tree!
God, He from chaos redeemed
The march of fair things that we see.

God, He lessoned the grub
From its slimy humiliation
To rise and float in the sun
With troops of the wingful nation!

Trust in Him, for He knows;
Fret not, nor ask for a sign,
But live true-hearted to Him,
While to live and to work may be thine.

JOHN STUART BLACKIE.

# THE TRIAL OF MARY BROOM

BY MRS. COGHILL.

## CHAPTER III.—NEGOTIATIONS.

"WELL, FATHER, HE WILL NOT GET ME—AND HE DOESN'T WANT ME—AND THERE'S AN END"

AND so it came to pass that the girl and her lover had the chimney-corner all to themselves that evening for an hour or more, and Ralph was not such a laggard in love as to lose his opportunity. Long and delightful was the talk that filled their solitude; and when Mrs. Broom, growing tired of retirement, and feeling it to be near supper-time, came downstairs, she found Mary's knitting on the floor and Mary's hand in Ralph's, while they were so absorbed in each other that even her substantial tread did not disturb them.

"Heyday!" she said, as Mary jumped up and fled to the other side of the kitchen. "You young folks are busy, it seems!"

"We *have* been," answered Ralph, laughing; "and now we just want you to settle the matter, Mrs. Broom. I've been telling Mary she is the prettiest and best girl in the world, and the only wife for me, and she does not say no. So we want you to speak to Mr. Broom."

"You do, do you? And what do you think Mr. Broom will say to a young fellow without a penny, or a trade to make one by?"

But Mary had crept back to her mother's side, and now threw coaxing arms around her neck.

"He has a trade," she said. "Father says he'll make a capital potter."

"Mrs. Broom," said Ralph, seriously, "I have been an idle fellow, but I promise you if I may have Mary I will do everything that comes to my hand to do. I will work for her and care for her so that you shall say she has the best husband in Staffordshire."

"Ay, ay," said Mrs. Broom rather sadly. "It's all promises now, and very easy. But still, my girl," she added, "if you like Ralph I'll not say you nay unless your father does."

"He won't," cried Mary. "Oh, mother, Ralph is such a favourite already. 'Twill be all right."

And so it seemed, for next day, after a talk with George Broom, Ralph sought Mary with a beaming face.

"It's settled," he said. "I am to have you, Mary, with your father's consent, on one small condition."

"What is that?" she asked eagerly.

"Forty pounds to put into the pottery," he answered calmly.

"Forty pounds!" cried Mary, aghast. "And where is it to come from?"

"Well, sweetheart, I don't quite know at this moment, but I shall find it. Meantime, we are to keep our secret—if we can." He kissed her, laughing as he spoke, but she looked grave.

"Ralph, forty pounds is not to be picked up by the roadside."

"No, indeed, except with the help of a good horse and a pistol; and you might not like me to get it that way? But I am not quite penniless, as your mother said, nor quite friendless. There is a fair prospect of getting part of it."

"How?"

"Well, while I was at my uncle Leader's I did a good bit of work for the Squire—mending some old carvings and putting in new pieces, and a few bits for the church, and I sold the Squire's lady a cure for ague that I got in America, so that altogether I made ten pounds. That my uncle is keeping for me, as I did not know what I should do next. And he'd give me another ten pounds, I know," he added, laughing, "to be rid of me. So that's twenty, you see."

"That's half," said Mary, "and then you and I between us could save something—five shillings a week, I daresay—but oh! it is a lot of money!"

"At five shillings a week, sweetheart, we should be two years saving the twenty pounds—and I'm not going to take *your* savings. No, you may trust me, I'll find quicker ways than that."

He had been laughing but a moment ago, and he had spoken merrily and tenderly of *her* savings. Yet at the closing words of his sentence there came into his face the change Mary had seen in it once before—the change that frightened her.

"Ralph!" she cried in a breathless way, as though she had just received a blow. "Oh, be careful, Ralph; do nothing wrong for *my* sake."

"Wrong, sweetheart?" he answered. "Why, what are you dreaming of? And is not all fair in love and war? But I mean nothing. I see nothing at present right or wrong that I can do. I must think."

"Think, then," she said, with a long sigh that tried to shake off the painful impression. "My father likes you so well, Ralph, I am sure things will come right."

They said no more on the subject just then, but Ralph coaxed back her confidence, and began to talk of other things, until she parted from him smiling.

Ralph now worked regularly at the Pottery, and sometimes was away in the evenings or on Sundays like her father and brothers. But she was generally quite happy. She never doubted, nor had the slightest reason to doubt, his devotion to her, and it would have seemed absurd to her if he had been constantly with her in his leisure hours, especially as their engagement was in a fashion kept secret.

A week—the week stipulated—had passed before George Broom saw anything more of either of the brothers Elers. It was Saturday again, and Mary had been since last Saturday the promised wife of Ralph Leader, when John Elers walked up to Seton's Green and asked for the master. Broom was at the Pottery engaged upon his accounts and alone when Elers entered, and the salutations of the two men were to all appearance as friendly as they had ever been.

"Well?" Broom said presently. "Have you found out anything against my proposal?"

"I am not sure that I know what your proposal was," Elers answered.

"It was pretty plain, I thought. That you take yourself and your new-fangled ways out of England."

"Oh, but that is more than I am at all likely to give in to. Out of Staffordshire we *might* go, but that would be hard enough, as we came here for the sake of certain clays which we have found, and found good."

"And which are they?"

John Elers smiled.

"Mr. Broom," he said, "I will sell you that information, if you like; I will not give it to you or any man."

"Sell? Umph! I fear your price would be too high."

"That you shall judge for yourself. I will sell you the exact knowledge of more than one clay; of the exact ways of mixing and treating them; and I will share with you the skill in decoration, which we have, for three considerations. First, we are to enter into partnership—you, my brother, and I, on equal terms. Secondly, we are to employ what foreign workmen we please, provided their number is not greater than that of the English workmen in our service. Thirdly, and as in both the first two articles you will be immensely the gainer, I am to be the gainer in the last by becoming your son-in-law."

Broom had been listening intently, ticking off the stipulations on his fingers. At the first he nodded approvingly. At the second he shook his head as doubtful, but not altogether displeased. At the third he let his hands fall on his knees and gazed at the young man with a face of the utmost astonishment.

"But I have only one daughter," he said, in a feeble voice.

John Elers, who had flushed hotly as he made his proposal, could not refrain from a laugh.

"I only want one, Mr. Broom," he said.

The completion of Broom's sentence would have been "and she is promised to Ralph Leader," but he congratulated himself that he had not spoken those words. They had remained unspoken. And now could not Ralph be got rid of?

"I suppose so, I suppose so, Master Elers," he said aloud, "unless your brother wants an English wife too?"

"Not yet, at all events. Mr. Broom, give me

what answer you can. The last part must depend on Mistress Mary, I know; but if you like the bargain you can perhaps persuade her to let me try."

"I don't mislike the bargain," Broom said slowly. "There would be a deal to talk over, and, after all, there's the neighbours to think of—but I don't say I mislike it."

"You and I," Elers went on, "need not mind the neighbours. In fact, you would bring me undisturbed chances of work, and I should bring you certain profit. Most men would see at once that yours is the best share."

"But you want to throw Mary into yours, do you? Suppose it can't be done?"

"Then I will go, and forget I ever proposed a treaty."

"What should you do that for? If I had not a daughter at all we might go into partnership, mightn't we?"

"I think not. A single man can easily move from any one place to any other. A man who has wife and home cannot—or will not—if he can help it."

"It all depends on Mary then? Young men will be fools, I suppose, and you can't expect young women to be wiser."

The last phrase was said more to himself than to John Elers. Why had Mary been such a fool as to give her promise to Ralph? and why had he himself not sooner perceived her commercial value? But to Elers it sounded encouraging.

"It must all depend on her," the young man answered. "Without her I do not care to make any bargain. I will try to carry on my trade so as to hurt yours as little as possible. That is all I can do."

There was a minute's silence, in which Broom was labouring to weigh the chances of persuading or forcing Mary to give up Ralph. It was lucky, at all events, that their engagement had been kept quiet. To do him justice, he understood two things—one was that to tell Elers of Mary's attachment would be to make him relinquish at once the idea of winning her, and the other was that anything like brute force, such as he would have used unhesitatingly to a man, could not possibly be used to his daughter.

"I'd rather be friends than fight," he said presently. "I've seen more of your work since that bit of broken pot, and I know there's nothing so good or so handsome made in Staffordshire. If you won't take any price but Mary for your secrets I'll try to get her for you. But she'll do after her own notions, my lad. A wilful woman will have her way."

"And I would not have her without her will. When can I speak to her, Mr. Broom? It's your way in England for maidens to answer for themselves, is not it?"

"Ay; but in this case I must tell her what you want her to say," said Broom, laughing, but not quite naturally. "So you must wait till to-morrow."

"Shall I come to-morrow?"

"I'll send or bring you word. If it should be a 'No' that I can't turn into a 'Yes,' you'll have to take that answer, I'm afraid—and yet 'Yes' would please me."

A vainer man would have thought *his* persuasions might have a better chance with a girl than those of her father; but John Elers thought little of his own merits (except as a potter) and much of Mary's. He saw, too, that Broom was really caught by the idea of a partnership, and would try to bring it about. He rose, not dissatisfied.

"Good-bye, then," he said, "till to-morrow," and as he walked away briskly down the hill, Broom began to think as hard as he could about the best way of getting rid of Ralph, and settling the terms of the new business.

It was all wasted thought, however. He had seen at the first moment, and he saw just the same an hour later, that the only thing possible to be done was to persuade Mary to change one lover for another. To him the exchange seemed so very advantageous. Ralph was a jolly young fellow, full of fun, and full also of cleverness of a sort. Elers, on the other hand, was a man already established in life as a master potter, and moreover endowed with a specially productive kind of ability. But then Mary was certainly a resolute young woman, and probably her resolution would be in favour of folly. He must speak to her at any rate, and he chose the time when he went into the house for his afternoon mug of ale. Nobody beyond the fashionable world had yet thought of drinking tea, but a well-to-do man like George Broom found a draught of his wife's home-brewed very acceptable towards four o'clock in the day. And on this day it was specially acceptable, for the task before him was not altogether pleasant.

It was always Mary who brought her father his mug well crowned with foam, and to-day he called her to carry it out of doors into the sunshine. It was March now, and though the mornings and evenings in that moorland region were still biting, the sunshine while it lasted had a pleasant warmth and brightness, and made the seat under the great thornbush quite fit for occupation. George Broom sat there with his pipe, and as he took the ale from Mary's hand he said, "Sit down, my lass, I've a word to say to you."

She sat down cheerfully, thinking it not unlikely her father had something to say to her about Ralph, and quite prepared, if necessary, to fight his battles. But altogether beyond words was her astonishment when she understood what was really the subject to be discussed.

"You know the saying, Mary, 'marry in haste and repent at leisure?' Well, seems to me you've given your promise in too much haste; lucky you've not wedded before the right man came."

"The right man, father? But he is come!"

"That's what I say; but he only came to-day, and his name's not Ralph."

"Not Ralph?" she repeated, amazed.

"Not Ralph, I tell thee, lass. The right man for thee is a neighbour of ours that thou and thy mother have taken to kindly, and that can make thee a rich woman and me a rich man."

"Eh, father, what *are* you talking of?" cried the girl, not a ray of suspicion falling in the right direction.

"Well, in two words, Mary, it is just this. John

Elers will either make me or ruin me—and he wants to have me for a partner and thee for a wife."

"John Elers!" she cried, and then burst into a violent fit of laughter. "Oh, father," she said when she could speak, "you just want to make a gowk of me."

"Hush, you silly wench. I tell you the man has been here to-day about it. And it's not an offer to be laughed at. You know well enough there's pottery being made at Bradwell that beats all the rest of Staffordshire, but you don't know *how much* it beats us. It's better and finer clay, and better kneaded, and better slip, and if we found out all these—which we *might* perhaps some day—it's better decorations, lass, and that will beat us for ever. And if you're but wise and as good a daughter as I think, we Brooms will have all the benefit—we'll learn how to make the ware, and we'll have a share in the profits of what we can't learn. Come, now, what do you say?"

"Father, I am very sorry you should have such an offer if you have to refuse it, but Ralph loves me and I have given him my word."

"Ay, ay; but John Elers is as good a man as Ralph any day—a fine young fellow, and will make you a good husband that you can be proud of."

Mary's cheeks flushed angrily. She could not understand this sudden wooing—it even passed through her mind that it was an insolent jest, or (for that was *too* unlikely) that her father had offered her to Elers.

"I have nothing to say to the matter," she replied impatiently. "It is not only I who have promised Ralph, but you too. And we have both got to keep our word."

"As for me," said Broom, "I promised Ralph I would agree if he could show me forty pounds of good money. It is nothing to what Elers offers; but, all the same, Ralph has not got it, and so *my* promise goes for nothing. And though I don't say I can make you marry Elers, I can forbid you to marry Ralph, and I will."

"No, father!" cried Mary, "you cannot do that. You fixed no time for Ralph to get the money in, and neither he nor I ever thought of less than half a year at the very shortest. You'd never break your word? But if you mean to do it I'll go to Mr. Elers and tell him the truth. He's an honest, brave man, and will understand."

"You'll hold your tongue, wench, and stop where you are," said Broom, angry in his turn, and holding her by the arm with a good strong grasp. "Unless Ralph can satisfy me that he'll have the money in the course of three months at furthest, I will make an end of *his* love-making, I promise you, and you may marry Elers or die an old maid."

"I'll do neither, father," Mary said, with spirits a little revived. "Ralph will find a way to prevent that. But what is all this nonsense for? If Mr. Elers wants to make you his partner, it's not for my sake, I suppose? Why, he never said a word of the kind to me."

"He's quite ready to, now, then."

"It's just a bit of trade, that's all. You settle it without me, father. If it's such a good bargain, sell the farm and pay him for a partnership."

"That's not what he wants, lass."

"Well, father, he will *not* get me—and he doesn't want me—and there's an end."

She had slipped her arm from her father's hold, and with the last word ran away towards the house. Broom called after her, "I'll do as I tell you," but he made no effort to stop her. He sat there, angry and baffled, and quite unconscious that, had Mary's heart been ever so free, he had done nothing to win it for his ally. He had let her go, indeed, without the slightest suspicion that Elers loved her, and that, simply for her love, he was offering large bribes to her father.

An hour or two later, when Ralph, at the end of his day's work, came to look for Mary, he found her very downcast and her eyes red with tears.

"Ralph," she said despondingly, "are you really very fond of me?"

Ralph answered satisfactorily, but she still looked distressed as she went on. "There is going to be trouble for us, I'm afraid. Do you think, Ralph, you could anyhow earn more money?—or could I earn some? Father says we must have that forty pounds in less than three months."

Ralph uttered a dismayed whistle. "Well," he said, after a minute, "I don't see my way at present; but tell me all about it. Why and when did he say that?"

Mary related the conversation with her father. She had tried to persuade herself that she could tell part only, but the attempt failed at the last moment, and, as it had truly seemed to her only a business bargain that had been proposed, she felt much less embarrassed than if she had suspected the truth. And if Ralph had any suspicions of his own he kept them to himself. But of the matter as a business affair he thought very seriously. George Broom had said little to anyone about the Elers since the day when Wat brought home the broken pot, but Ralph was shrewd enough to guess now, from what Mary repeated, that he had been thinking much of their doings, and satisfied himself that the superiority of their ware was a real danger to the other potters. Now, George Broom was, in his own trade, and in what regarded his own interest, a decidedly clever man; it followed then that the secrets of the Elers' methods were, as Ralph had already suspected, secrets worth money to buy.

He said nothing for some time while he was turning over these ideas, and Mary waited with a sinking heart.

Suddenly he looked at her with a smile. "I've got a plan," he said.

"What is it?" she asked eagerly.

"Not quite settled yet," he answered; "but never mind. I see daylight, and I'll tell your father so at once."

He jumped up without another word and hurried off to find Broom, leaving Mary cheered indeed, but very uneasy to know what his plan was and whether it would succeed.

Broom, however, had gone away to Burslem, and did not come home till bed-time. Ralph, by-and-by, went off in the same direction, and they did not meet until early next morning.

Mary kept as much as possible out of her father's

way. She had a few words with Ralph as she came in from milking in the morning, but all he would say was, "Never fear, Mary, I shall get the money."

After breakfast, he and Broom were deep in conversation for a short time within sight of Mary's anxious eyes. She felt certain that Ralph said very little more to her father than he had done to her; for Broom, though he finally nodded as if accepting a proposition, certainly looked puzzled. However, Ralph went to his work, and Broom after a time walked away towards the town, without anything further reaching Mary's ears.

She told all her troubles to her mother, but Mrs. Broom could give neither help nor counsel. She thought Elers would be an excellent husband and a most profitable partner, and it did not comfort Mary much to hear it. There was nothing for her but to wait and see what the day would bring forth.

George Broom walked to his meeting with John Elers in anything but a pleased frame of mind. He found the brothers waiting for him, and if he had been a little more observant than Nature had made him, he might have seen that the elder was pale and anxious.

"I'm fairly beat," he said, when the door was closed on the three. "Can't you make a fresh proposal, Mr. Elers? I've a great mind to the partnership, but my girl has not."

"She refuses?" said John, in a voice as indifferent as he could make it, but yet full of the sudden pain of disappointment.

"Ay, she refuses. Says she likes another man. But why should that matter?"

"I told you yesterday, Mr. Broom, one reason why it matters. At present my brother and I are free to leave here whenever we please, with no other loss than that of a small portion of our property. In our present position we should not think of taking any partner. If I had a home"—he hesitated a minute—"if I had a wife who could make a home for us both, then we should be anxious not to move from here."

"If you can't have Mary, then, you won't have me?" asked Broom, realising at last, with no small indignation, that it had not been for *his* sake the offer had been made.

"I will speak this time, John," said Franz, seeing the angry flush on Broom's face. "Mr. Broom, we only want to be quiet folks and good neighbours. My brother loves your daughter, and it would have made us both very happy if she would have married him. But if she prefers somebody else, that is at an end, and don't you see that it would be very hard for him to be connected in any other way with her family? We must just work on by ourselves."

"Oh, that's it, is it?" said Broom. "And you think we shall all sit by and see you take the bread out of our mouths?"

It was odd how in a moment he had veered back to the old mood. If Elers would have entered into that partnership—if Mary had been accommodating—why then the bread might have been taken out of the mouths of all the other potters. But, now, he too was excluded, and these outlandish fellows must be made to suffer. They should suffer—he was swiftly and strongly convinced of that, and he made no further attempt at civility, but walked out of the place with a grunted "Good-day to ye."

Broom had by no means forgiven Mary, however, and was so irritable with her that she was much surprised to find him quite friendly to Ralph, and to see the two men sitting close together by the thorn-tree in deep consultation. Ralph was talking in a way common enough to him, but quite unlike the slow speech of most men she knew—talking fluently and with certain gestures that betokened thorough enjoyment of what he was saying. Then her father called Wat, and there was more eager talk, and finally the two young men started off together, taking the road to Burslem, and apparently altogether occupied with their subject as they walked.

This was so extraordinary a proceeding on a working day, that Mary called her mother to look and wonder at the sight. But neither of them could guess what it meant, and Mary consoled herself for the disappointment of her curiosity by saying, "Oh, Ralph will tell me when he comes back.

Ralph came back towards supper-time, in the highest spirits. He joked, laughed, told stories, and made himself so excessively amusing, that the meal lasted twice as long as usual, and it was getting towards bed-time when all was washed up and made tidy for the evening. This was the moment when the two generally could enjoy a little of each other's society; and to-night Mary was brimming over with questions: What had her father said? What had they all been talking about? Where had Ralph been?

But Ralph had little to tell her. It was all right. He was pretty sure he should get the money. He had been to Burslem with Wat on business—this was all. And he had so many delightful things to say to her about herself, and his love for her, and there was so little time to say them in, that she was presently content to let him be as reticent as he chose on other matters.

Next evening, however, he sought her with something very definite and not agreeable to tell her. He had heard of a way, he said, by which he could earn the missing twenty pounds in a few weeks; it was a wonderful chance, but to profit by it he must leave Seton's Green.

"Go away?" cried Mary. "But where? And what can you do to earn all that in a few weeks?"

"It's a pity I must go, sweetheart," he answered; "and it's a pity I can't tell you exactly how I shall earn the money. I'm only going to *try*, you see; and I may fail, though I don't mean to. But your father says I should go, and we may get married as soon as I come back."

"What, without the forty pounds?"

"No. He sticks to that. But I'll have it, my dearest—I vow I will."

"*How? How?*" Mary repeated, but he only kissed her and evaded the question.

"You shall know all about it when it's done," he said, laughing.

"And where are you going? And when?"

"I'm going to Liverpool to-morrow," he answered. "Off at daylight, that I may come back to you the sooner."

"Oh, Ralph!" Mary cried, tears filling her eyes. "I can't *think* why you must go. I don't like your going to that great place so far away. I believe you will never come back."

"Sweetheart," Ralph said with unusual seriousness, "if I loved you one bit less, or if I could see any other way of getting the money that will make you my wife, I never would go on this errand. It is not easy nor pleasant, and to leave you for weeks is not what I ever meant to do. But it can be done, and must be done, for I have promised."

"Promised, Ralph?" she said quickly. "Whom have you promised?"

"Your father, of course," he answered, laughing; but she felt that he hesitated a moment, as if he had been going to say something different.

For some reason he would have no more serious talk on the subject. He told her wild stories of what he was going to do, and made her laugh in spite of herself, even though she must needs cry heartily after she had gone to bed.

Next morning at dawn he was off. All the family were astir, for in those days hours were very early, and there was no chance for a moment's talk apart between the two. Wat went with Ralph to Newcastle, where he would join the Liverpool road; and then the household at Seton's Green went on in all its former ways just as if the young man had never been a part of it.

## CHAPTER IV.—DEAF HUGH.

SOME weeks passed uneventfully. To Mary the time was full of disquiet; she lamented Ralph's absence, and looked anxiously for his return; but she was not even herself fully conscious how many complications there were in her feelings. Her life, until lately, had been a smooth-flowing stream, undisturbed by keen sensations or conflicting sympathies. A number of new elements seemed to have developed at once in these days, and the stream flowed smoothly no longer. She clung to the idea of Ralph with added purpose of fidelity, since she knew that her father wavered in his views for her, and her thoughts of John Elers were curiously variegated with threads of liking, respect, and anger. This novel disturbance of mind wearied and worried her, and all she said to herself in her impatience was: "Why did Ralph go away? Why does he not come back?"

People in her rank of life were not then in the habit of writing or receiving letters except on very important occasions, and she had said nothing to Ralph, nor he to her, about writing to each other. Yet she did hope, as time went on, that he would send her some account of his doings; and at the beginning of the third week a letter came. It was headed "Liverpool," but told her nothing of where, in that already large town, he was living. Nor did it say what he was doing; but it was not until she had read every word two or three times over, and carried the letter with her everywhere for twenty-four hours, that Mary noticed these omissions. For it was her first love-letter, and certainly deserved that name. Ralph wrote of his love for her, and longing to be with her, and at first she thought only of these things. As he loved her, she said to herself, so she loved him; but after a while an ache stole back into her heart. If he loved her so much, why was he hiding from her that which he knew she longed to be told? And next night, when she dreamed of him, she saw him looking as he had twice done for a moment to her waking eyes, and she woke sobbing and trembling as if she had been witness to some ill-deed.

During this time no intercourse took place between the Elers and the Broom family, except that on Sundays Mrs. Broom and Mary saw the brothers at church. The first time this happened a civil greeting was exchanged and nothing more. The second and third time the two couples walked together (as they had fallen into a way of doing) as far as the turning to Seton's Green, and on the last of these Sundays it was Mary and John Elers who did most of the talking. Mary had felt a little shy at first, but rather as she might have done had she been guilty of some incivility, than as a girl does who has refused a man's love. She never supposed he loved her; and therefore after the first meeting, when he appeared to her just as usual, she was quite able to talk to him and be interested in what he said. Neither she nor her mother said anything of these encounters when they got home, for the simple reason that all the men of the family seemed now united in abusing the foreigners beyond all measure, and on every occasion; and they had the feeling (not a very uncommon one among women either then or now) that to argue with their menfolk was a mere waste of time and temper.

Mingled with the hearty abuse of John and Francis Elers which she was obliged to hear, Mary began gradually to distinguish a kind of exultation which, when it had once attracted her attention, made her extremely curious and increasingly uneasy. There were also half-spoken threats of violence uttered, not only by her father and brothers, but by visitors to the house; and even old Tailor Harper had a word to say.

"Seen the Dutchmen lately, mistress?" he asked Mrs. Broom. "They're going on at a fine rate, I hear; but they'll come down yet, and a good clouting they'll get one of these days. Teach 'em to come here again!"

"Why shouldn't they come here?" said Mary sharply, and got no answer but a sage, slow shake of the head. She felt sure, however, that there really *was* mischief brewing, and was glad in her heart that Ralph was away and could have no hand in it.

Thus the fifth Sunday of her lover's absence came round and there was no further news of him. The day was one of the wildest wind and rain—so stormy, from beginning to end, that neither of the women so much as thought of going out. What was more unusual was that the men also stayed at home, sitting by the fireside and talking slow talk all the morning, with their pipes and mugs of home-brewed beer.

The early dinner had been eaten, and the family again settled down to Sunday idleness. Mrs.

Broom had spread the big "Picture Bible" open on the table, and was peacefully dozing over it. Mary had taken the black leather-covered copy of the "Pilgrim's Progress" to a smaller table near the window, but though she loved her book, and was not a little proud of possessing it, she read but fitfully. Every now and then her thoughts interrupted the narrative. She leaned back in her high-backed chair and gazed dreamily out into the rainy afternoon.

Sitting thus, just before the dull daylight began to darken towards night, she was startled into sudden alertness. There was a step on the wet stones, and instantly a man's face looking in at the window—a stranger, fully visible for one moment, and then drawing back and blurred out by the rain. Mary gave a cry—there was sudden pushing back of chairs about the fire, and Wat Broom passed his sister and went out hastily, shutting the door behind him.

Mary had turned towards her father. At the sight of her scared face a roar of laughter broke from the men.

"What art feared of, lass?" said Broom. "'Twas but deaf Hugh, and he's gone;" and they all roared again, not with amusement only, but with a fierce laugh of triumph.

Triumph—why? That was what Mary asked herself. For some doings of that horrible-looking creature who had been for a second face to face with her? She could see him still—long, shaggy, reddish hair and beard—one eye covered by a patch—a look of idiotcy—a look of exultant cunning—a ragged and filthy smock covering his shoulders. She said nothing, but as she looked at her father and Jack she saw in a moment that the visit had been an expected one; that what they had been waiting for had happened; and in the same moment she connected the expectance and its gratification with the Elers.

What did it mean? she asked herself, knowing that it would be useless to ask anyone else. The men of the neighbourhood believed, with a most practical faith, in the virtue of hard knocks, but they did not care to have women mixed up in these masculine affairs, leaving to the very roughest and lowest of the gentler sex the right to distinguish themselves by a stand-up fight now and then. George Broom and his sons might themselves fight on occasions, or belabour an enemy if they found a chance, but they would not tell Mrs. Broom or Mary what they were going to do.

Mary went back to her seat. She could not follow Wat out of doors, but as the others were now all astir with excitement, she thought that on his return something would be said that would explain the mysterious visit.

Wat was absent about ten minutes and came back alone and full of exultation. He handed his father a roll of paper carefully wrapped up in cloth, and said: "There! that's all we want. He brought it. Hurrah for deaf Hugh!"

George Broom unwrapped the paper. It was in three or four pieces, and there seemed to be rough drawings or plans on it as well as a good deal of writing. The three men gathered round, looking at it with the greatest eagerness, and all talking together and laughing as if at some excellent joke.

"Here, Wat," said Broom presently. "Take and read it out aloud. I'm no great hand at your written stuff."

Wat sat down, smoothed out the papers, and began. He read slowly and with a great many blunders which had to be laboriously corrected, but there could be no doubt as to the purport of the writing. It was a full, clear, and intelligent account of the work done by the Elers: of the materials they used, the processes they had invented, the manner of their firing—everything, in short, in which they had excelled the neighbouring potters, and in which, by the help of this document, the neighbouring potters might equal them.

Mary's cheeks tingled with indignation as her father and brothers followed exultingly the reader's slow utterance. She could not but rage inwardly as they mastered the details of those inventions that had cost John Elers years of study and labour—inventions stolen from him now evidently by some treachery, and rejoiced over as if they had been mastered in all honesty and fairness.

It was not the Brooms indeed who had accomplished this shameful theft, that was some little consolation; nor were they likely to be the only or chief gainers by it. She heard once or twice a mention of the Wainwrights, who were potters on a much larger scale than Broom—to whom, therefore, this ill-gained knowledge would be of much more consequence. The Wainwrights might have devised and carried out the theft. She did not know them, nor would their guilt affect her.

When the reading was quite finished, and various parts had been gone over two or three times, she asked quietly:

"How did you get that, father?"

"Ay, how did I get that, lass? That's a question. And but for thee I might have gotten it easily and all to myself, instead of sharing wi' half a dozen."

"Did the Wainwrights get it?"

"What matters if they've got it now? And all the rest of them, pest on it! And all along of an obstinate wench."

"'Twasn't us got it, nor Wainwrights," said Wat, chuckling. "'Twas deaf Hugh."

"What do you mean? Who is deaf Hugh?"

"A clever fellow——"

"Hold thy tongue, Wat," interrupted his father. "And thou, lass, thou'dst better hold thine too. It's naught to thee."

But this was just what Mary could not agree to. She could hold her tongue, certainly, and would for the present; only she longed to steal that treacherous paper and burn it. Quite impossible, for her father had gone jubilantly to an old oak bureau where he kept his valuables, and put it under lock and key. Beside, what use would its destruction have been? Other people as well as her own had read it, and probably there were copies. Who was deaf Hugh, the creature whom she had seen? and how had he obtained his knowledge?

This was a puzzle, but one not entirely un-

answerable. She knew that the brothers were exceedingly cautious as to admitting strangers within their gates. She had heard it often said that the only workmen trusted by them were countrymen of their own, the Englishmen employed being kept outside of any important portions of the work. The quantity of ware they made was not large even for those days, its profit being altogether dependent upon its superior quality. How, then, could an Englishman, and, above all, a man capable of producing the clear account of their materials and methods which she had heard, have been admitted into the very recesses of the pottery?

and no way to treat neighbours. "But it's no use for us to fret," she concluded. "Everybody will know how to make as good pots as them now, and that they'll soon find out."

"Well," said Mary, "at any rate I hope they'll be left in peace. I don't believe they'll stop long in the Potteries."

But, in spite of herself, she could not feel satisfied that the foreigners *would* be left in peace. There was a little talk about them at breakfast in the morning, and it was more, and not less, savage than usual. One or two words passing between her two brothers suggested an attack upon them

"YOU'D NEVER HA' KNOWED HIM, NEVER."

Evidently he must have imposed upon the brothers, and, shrewd as they undoubtedly were, that must have been done with no common skill in deceiving. Some man, rarely qualified for his base undertaking, must have assumed the deafness, and probably the stupidity, which would make him seem harmless; and if it were he whom she had seen, he must indeed be clever to hide so much skill under so degraded an appearance.

The evening and night passed. Mary found an opportunity of talking the matter over with her mother, but little came of that. Mrs. Broom did not feel the iniquity of what had been done as Mary did, but she agreed that "it was a shame,"

close at hand, and she determined she would try to send a word of warning.

This determination, easy to come to, proved very difficult to carry out. She had no trusty messenger, and to go herself on such an errand was not to be thought of. Beside, the advancing spring, though still cold, had brought a good deal of additional farm work, and she was kept busily occupied all day.

Eyes and ears, however, were on the alert. To think of the two men who had been guests at her father's table, who had been pleasant and kindly neighbours, who had desired (according to her father's account) to be more than neighbours—to think of them robbed and deceived was bad enough

—if they were to be further injured it would indeed be a crowning wickedness, and the positive knowledge of such a plot must, she felt, drive her into action. During the day there were several visitors to Seton's Green, but they all went straight to the Pottery, and did not even come to the house for a mug of ale. At dinner-time Wat and Jack were excited, but reticent—not a word would they or their father say of yesterday's event.

But, perhaps because of the self-control they exercised in one direction, they were apparently inclined to indulge in another. Instead of going back to work after dinner, Broom called for a new jug of ale, and sat drinking it. Jack stayed and shared it, and presently fetched another. Then came a neighbour and joined the two, and their voices began to rise in incautious speech.

Mary had to pass near them two or three times, but she dared not stop to listen, and what she heard was too fragmentary to tell much. Roars of laughter over the cleverness of "Deaf Hugh" reached her once, and she heard the visitor say:

"You'd never ha' knowed him, never. Why, he looks the greatest softy ever you saw, and not a thing done in the place but he knows all about it."

"Ay, he's earned his money—there's no saying aught against that," said Broom; and Mary clenched her fist at the thought of the traitor.

Then, later on, she again heard: "No fear of them. There's not a man, woman, or child would tell 'em, even if the women and children knew. We'll have their new-fangled notions beaten into their heads, I warrant."

"Or we'll burn the rat-trap, rats and all," said Jack.

At last Broom and the visitor went off together. Neither of them was sober, but Broom was sober enough to shout out to his wife:

"Missus, I'm off to the Wheatsheaf on business, and shanna be back till late. Get you to bed at right time, and Mary too."

## SEA PERILS IN INSTANCE AND PERCENTAGE.

IN the year of the Naval Exhibition it is only natural that interest should be taken in the sailor and his ways, an interest not confined to the navy, but extending to the merchant and fishery services as naval reserves or otherwise. And the gentleman of England who sits at home at ease, thinking not only of the danger but of the security of the seas, has had an additional subject for thought in the recent proposal of the Shipping Federation to give a Free Life Insurance or Deferred Annuity to every holder of one of their membership tickets.

The idea of a pension fund for merchant seamen is not new. To say nothing of the old fund started in 1747, which was wound up in a state of bankruptcy in 1851, some such scheme has been again and again recommended by Royal Commissions. The old fund took a shilling a month from the seaman's wages in return for a very small benefit in the form of pension for old age or allowance to widow and orphans. Mr. Chamberlain's Commission proposed to take two shillings a month from the masters, eighteenpence from the mates, and one shilling from the seamen, offering increased benefits and placing the control under the State. Even in this matter of State control there was nothing new, for France, Italy, and Belgium all have their funds, the object being not only to improve the condition of the sailor, but to keep him to the flag—for fighting purposes if need be.

In the so-called "Free" Life Insurance there is also nothing new. Twelve years and more ago, the present writer, immediately after the Princess Alice disaster in 1878, was led to think that our system of life insurance was overweighted with organisation and might be simplified and popularised; and, after much tabulating and calculating, invented the scheme he described in the first, and only, number of the original "Thrift." In that scheme a penny periodical took the place of the premium receipt, and the purchaser of any one number became insured for twelve months from the date of its publication; a fractional part of the cash realised by the sale of the number being transferred to the hands of trustees to meet the liability. Though he could find no one of position to believe in the good faith of the proposal at the time, the seed sown broadcast took root in unexpected places, and some years afterwards bore fruit in France and in this country, with—as is customary—neither thanks nor acknowledgment to the sower. The only difference between the original proposal and the present working is the substitution of the newspaper proprietor for the trustees of position whom the author sought in vain; but, providing the proprietor be honest, and the benefit not excessive, the system is quite sound, the fractional income being well able to bear a high benefit owing to the saving in working expenses over the ordinary system, which requires policy, premium, agency, stamp, and a dividend for shareholders.

As with the newspaper system, so with the ticket system of the Federation, who, for the one shilling for the ticket and the very small cost to themselves of a trifling percentage on the wages, can well afford to give the benefits they propose. And there is no reason why such a system should not be introduced into all trades where the proprietors, as in the case of the newspaper, are sufficiently

sound, or where they could have their soundness for these insurance purposes guaranteed by trustees, or a public company, or the State.

The foreign shipping trade is in an exceptionally favourable position for a scheme of insurance. The risks are notoriously less than the public are aware; they bulk largely in instances, but dwindle astonishingly when we come to percentages. Of the safety of our passenger vessels twelve years ago the late Thomas Gray cited several instances in his "Under the Red Ensign." Among these were the Union Line to the Cape, with only one passenger lost in twenty years, and four seamen dead in three years; the Castle Line, with no passenger lost, and only one seaman lost in three years; the P. and O., with only one seaman dead a year on their forty boats, and no passenger lost during three years; the Inman liners, with no passenger lost out of a million, and only eleven seamen dead during five years; the Cunarders, with no passenger lost in three years, and only nine seamen dead. The cargo boats, of course, tell a different story, but among them there has been considerable improvement of late, owing to the good work done by Mr. Plimsoll and others in persistently insisting upon instances. In short, the average safety of a sailor's life under the British flag has long been known. The tables of occupational mortality based on our census returns have shown this at every decade, and the confirmation is never wanting in the abstracts given in the annual Casualty Blue Book.

Last year this was more the case than ever. Notwithstanding the increased number of vessels, the losses were considerably lower as regards both vessels and tonnage than in any of the twelve preceding years, and the losses of life were also below that average. In 1880–81 there were lost 1,310 vessels, with a total tonnage of 348,186; in 1887–88 this had sunk to 906 vessels, with a tonnage of 262,048; in 1888–89 this had further improved to 753 vessels, with a tonnage of 233,708. As with the vessels so with the lives. For ten years preceding 1886–87 the average per year of lives lost at sea in British vessels all over the globe was 2,584; in 1886–87 the number lost was 3,454; in 1887–88 it was 2,534; in 1888–89 it had become 2,233, and this number was greatly swelled by the 703 native passengers lost in the little Vaiturna of sixty-four tons, which went a-missing on a coasting voyage in India. When we consider that during this last year there were afloat over 13,000 British ships, with a combined measurement of nearly 7,000,000 tons, we can cease to wonder at the small premiums at which underwriters are now willing to insure, and at a proposed Free Life Insurance for the men.

The Blue Book giving these statistics contains not only the wreck chart of the British Islands, but that of both hemispheres, which is less familiar, and of which a portion is here reproduced. A glance at it will show that the long-voyage mariner has the safest life. It is not in the open waste that vessels meet with disaster. The dots on the great ocean are few and far between. It is where vessels most do congregate, and among the fishing and smaller craft in such places as the North Sea and round our frequented coast, that trouble is most prevalent. There the dots crowd thickly. The most dangerous part of our littoral is that between Flamborough Head and the North Foreland, including as it does both the Humber and the Thames. The next most dangerous district is that between Anglesea and the Mull of Cantyre, which includes the Mersey and the Clyde. Next comes that between Hartland Point and St. David's Head, which includes the Bristol Channel. The district between the North Foreland and St. Catherine's, including of course the Straits of Dover, comes but fourth on the list.

Let us follow this matter as there is interest in it. According to the year's return of localities, the most dangerous of our sands are the Goodwin. Next to them come the Harborough Sand off the coast of Norfolk, and then come the Maplin Sand off the coast of Essex, Scroby Sand off Yarmouth, the Boulmer Rocks off the coast of Northumberland, Redcar Rocks off the coast of Yorkshire, the Binks Sand at the entrance to the Humber, the Cross Sand off Yarmouth, Drake's Island at Plymouth, Shoeburyness and the Long Sand off the Essex coast, the Holme Sand in the Humber, Inchkeith in the Firth of Forth, the Kentish Knock in the Thames estuary, the Platters at the Skerries off Anglesea, the Pole Sands at Exmouth, and the Shipwash Sand off the coast of Suffolk. Taken altogether, the outlying sands and rocks round our islands are responsible for 272 strandings.

In our home harbours and rivers, a year's casualties amounted to 2,760. Of these by far the largest number, 1,165, took place in the Thames above Gravesend. Next to the Thames came the Mersey with 256 disasters; next came the Tyne with 145, followed by the Avon, the Wear, and Plymouth Harbour. The last had only 99 casualties; next to it, after a long interval, came the Clyde with only 55. Of foreign harbours and rivers visited by British merchantmen, the most dangerous is Suez; next to that comes the Elbe; and then, in gradual approximation to safety, are the Nervion, the Danube, the Scheldt and the Hooghly.

From the year's returns it would seem that a ship is in most danger when laden with timber, and that she is in almost as dangerous a state when she is in ballast. She is safest when laden with wines and spirits. The smaller she is the more dangerous she is, or rather the most dangerous class of vessel is that between two hundred and three hundred tons; if she is over two thousand tons she is absolutely safe! One of the most remarkable things brought out in the tables is that a ship is in exactly the same danger of collision by day as by night. Half of the ships that meet with disasters are from fifteen to thirty years old. Ships have long lives; last year one was lost that was over ninety years old, but she was a sailing barge, that sank from old age in sight of Dawlish beach.

Dealing with percentages the losses look small; but what would be thought of a man who held back from the lifeboat because the percentage of deaths from wreck was infinitesimal? Surely that were a reason for a continuance of the effort until the loss was wiped out entirely! It is not by staying to

THE YEAR'S WRECK CHART OF THE ATLANTIC.

congratulate each other on percentages that the world is improved, but by helping on every means of rescue and precaution, and striving with the instances, and leaving the percentages to be calculated after the work is done.

Of these instances let us have an example; it will save us from overmuch minimising of the perils of the sea and show us the other side of the shield. Let us spend yet another day with the Lifeboat, and let the day be Monday, October 7, 1889. This was one of the stormiest known even to Manxmen. During the night the gale had risen, and in the morning it was roaring and blustering in full fury as the waves leapt over the breakwater, sweeping the shore road from end to end, and hiding Peel Castle in a screen of spray. About ten o'clock a large ship was in sight labouring heavily some ten miles off, and many of the Peel people came to the windows to look. As the ship came nearer the interest in her grew, and a momentary glance as she rose showed that the two masts that had been supposed to be hidden by the sea were actually missing. She had nothing standing but the mizen, and on the stump of the broken topmast flew a signal of distress. There she rolled and rose and fell, with even her bowsprit gone, and this one mast useless except as a signal-post at danger.

A few minutes after the state of affairs was discovered there was a mustering of the Rocket Brigade, and the rattling of their cart round to the West Quay, and a hurrying of the apparatus into readiness for action. And soon the lifeboat came out into the gathering crowd, and was launched laboriously into the troubled water, and, hoisting sail, went off to the rescue. As she rounded the breakwater into the full force of the storm it seemed as though her effort to reach the ship would be in vain. So strong was the north-westerly gale, that she fell off before it and perceptibly drifted to leeward; but slowly, very slowly, her bow edged up, and gathering way each instant, off she went to windward, and tack by tack held her own while the distressed vessel came driving on before the wind. At last they were alongside each other, the ship and the lifeboat, but to get a line from one to the other was not easy. Round the ship was the wreckage of her masts, and this kept the boat off. The usual life-buoy sent from the boat became entangled in the wreckage; then a hawser parted and one of the boatmen was hurt; then there was another failure; and so on, failure after failure, until by perseverance the tackle was at work from ship to boat.

The first to be rescued was the captain's wife. As soon as she was in safety, she screamed for her baby; and following her came one of the ship's crew with the child in a canvas bag strapped on to his shoulders. Then one after the other came the rest, all saved; and back came the lifeboat with twenty-three more than she went out with, all plucked from death out of the doomed St. George, which became a total wreck before the boat reached the quay. There were firings of cannon, and cheerings and shoutings of the excited crowd as the captain's wife was handed out, and then the child, and then the men; and then some one pointed to the westward, and out on the grey, angry sky came a beautiful rainbow to make the picture complete.

That was at Peel, in the Isle of Man. South-eastward, at Lytham, the same day in the same storm, there was another lifeboat triumph. The steam-tender Florence parted one of her chains and collided with another steamer, to their mutual damage. On board the tender was the engineer, whom two shore boats tried to rescue in vain. So heavy was the gale, that it seemed as though the tender would founder, and out went the lifeboat, while five fishing boats and several open boats were sinking at their moorings. And the man was saved.

Further south, at Llandudno, two trawlers were anchored, and one, getting in a bad way, hoisted signals of distress. Away went the new lifeboat, cheered by the crowd which had run to the pier-head. Foot by foot she worked into the open, and, in the sight of all, reached the trawler, rescued the crew, and brought them to land. No sooner were they ashore than the other trawler signalled for relief, and out again went the lifeboat through the heavy breaking sea to complete her errand of mercy.

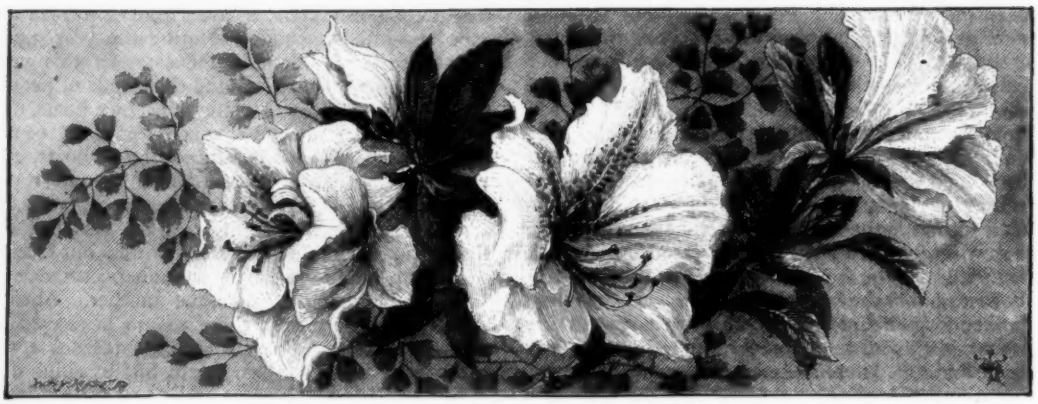
West of Llandudno is Holyhead. There also the lifeboat was busy. At four o'clock in the morning a signal of distress had been reported outside the breakwater, and out had gone the boat in the darkness and thick weather, and there she had been beating about till daylight, trying in vain to light upon the object of her search, which, when the dawn came, was found in Church Bay, in tow of a steam-tug that had succeeded in bringing her into safety.

South of Holyhead, and also in Anglesea, is Rhoscolyn, also with a lifeboat. Labouring on this eventful day was seen the Dronning Sophie, a Norwegian barque. A mile and a half off the shore she let go both her anchors, but she rode heavily, and the waves broke over her, and soon she hoisted signals of distress. Then off in the tremendous waves went the lifeboat to work to windward of the Norwegian, anchor, and run down and in workmanlike fashion pick off the whole of the crew, eleven in number, who had betaken themselves to the rigging in imminent danger of being washed away.

South of Rhoscolyn, just round the Carnarvon peninsula, is Abersoch. Here again came a barque, this time the Inveresk from Nova Scotia, running under bare poles direct to destruction on St. Patrick's Causeway. Away went the Abersoch lifeboat to board her and help her. At the coxswain's advice up went the Inveresk's jibs and staysails, and under such fore-and-aft canvas she was persuaded to look a little more into the wind, and, with the lifeboat showing the way, was led into a berth of calm.

South of Abersoch, in the same Cardigan Bay, is Aberystwith, from which on this Monday morning a vessel in distress was also descried. Down came the lifeboat to the edge of the wildest sea she had ever faced. But to launch her was not easy. It was low water and the carriage would not move through the sand. There she stood motionless, with the wheels stuck fast and the grey sea and foam washing among the spokes. That she must

go was obvious, however; the mixed crowd of boatmen and tradesmen and students of the University College having been got together at the ropes at last gave her a start, and with scores of men so far out in the water that the waves broke over their heads, she floated. But her troubles were not over. The wind was dead on the shore, and to get sufficient way on the boat to prevent her being blown on the rocks the men set to work to row. For an hour they pulled and scarcely moved from the spot; great white seas broke over the boat, drenching the men to the skin, and carrying her back each time as far as she had advanced. Again and again she would be carried on the crests of the waves towards the shore. Sometimes she would be thrown on end until she almost stood upright and then fall into the trough of the sea and be hidden. For two hours the struggle went on; six oars were broken; again and again there was a narrow escape from upset; and then three or four huge billows came and rolled her into smooth water near the pier. Then more oars were thrown into the boat, and five volunteers joined the crew, one of them jumping into the sea and swimming to her. To work went the strengthened crew with the oars; the wind still blew and the waves still broke with unabated force, but doggedly the boat left the beach; sometimes lost in the trough of the sea, sometimes buried in the spray, sometimes hanging with bow or stern in mid-air, she steadily made headway until she got offing enough to permit of the sails being trusted to; then in came the oars, and under canvas away she went as close to wind as the coxswain could keep her. One tack; two tacks; three tacks; and she was alongside the sorely-beaten Arklow, still holding on to her anchors. A huge wave went completely over the boat and washed three of her crew overboard; these were picked up after some trouble; and then remaining alongside she rendered such assistance as was requisite; and at midnight she came back.



At Exmouth, in the same storm, on the same day, the lifeboat went out and saved a fishing cutter and three men. At Gorleston, on the east coast, the boat was out and saved a man who was drifting helplessly on to the Scroby Sand. At Lowestoft a three-masted schooner went ashore on the middle of the Holm Sand. In ten minutes from the alarm being given the lifeboat was leaving the harbour in tow of the tug. Halfway through the Stanford Gat the tow rope was let go and she ran down to the stranded vessel. As she neared her three big seas came aboard, completely submerging the boat and washing overboard one of the crew, who by the next sea was washed in again. Soon the schooner was reached, and out of her main rigging were taken her whole crew of six men and safely brought ashore. And with that we finish one day's work, a glorious day for the Royal National Lifeboat Institution, with nine boats out at once, and all doing well.

But though the work of the Lifeboat is a familiar story, it may come as a surprise to many to find that the majority of lives saved from shipwreck are saved by other agencies. During the year 3,740 lives were saved round the coast. Of this very small number, considering the thousands of people afloat, 1,495 were saved by the ship's own boats, 929 by ships and steamboats, 404 by luggers, coast-guard boats and small craft, 360 by lifeboats, 281 by the rocket and mortar apparatus and ropes from the shore, and the remainder by other means than individual exertion, it being the first time for five years that no life was saved within our coastal waters by the apparently common occurrence of one man jumping in to rescue another. Abroad it was the same story; there was no life saved by individual effort. But out of 4,779 rescues 2,741 were made by ship's own boats, 884 by ships and steamboats, 296 by luggers and small craft, 295 by the rocket apparatus and shore ropes, and only 166 by lifeboats. Taking the deaths on British vessels everywhere, it is curious that more lives are lost from disease and crime than from wreck and casualty, the loss from the former being 2,072, while that from wreck, etc., is 1,949. Still more striking is the fact that from wreck and casualty during the year, 1,949 lives were lost, and 8,519 were saved.

Of the ships that never returned there were but 67, 60 of them being sailing vessels with an average tonnage of 284, and 7 of them being steamers with an average tonnage of 570; and these 67 vessels account for 1,444 out of the 2,233 lives lost in British vessels all over the world. The ship that goes a-missing is a favourite subject of the novelist, who rarely stops to think that every such vessel finds its place in the annual Government Blue Book. The last report contains vessels of all ages, as usual, from the 85-year-old Sally of Bideford, to the brand-new 2-ton lugger Welcome Home, which sailed from Scalloway on her first and only trip; and vessels of all classes, from the Little Nell Cornish dandy with her crew of 2, to the steamer Vaiturna with her 43 Indian crew and 703 Indian passengers, the one disaster accounting for a third of the lives lost under the British flag.

But we are back among the totals and incidentally showing how a contemplation of instances is likely to mislead in the consideration of any scheme necessarily based on percentages. It is the story of the railroad over again. The one accident, the one wreck, is remembered, while the thousand safe voyages are forgotten; and it is by fastening on to the one disaster and making the most of it, that the general safety is improved, the working age lengthened, the death-rate lowered, and "free" insurance schemes made possible.

W. J. GORDON.

# THE GARDEN OF GOD

A STORY FOR CHILDREN OF EIGHT TO EIGHTY.

BY THE AUTHOR OF "A DEAD MAN'S DIARY."

## I.

IT was broad noonday in the garden, and so hot that one could see the air palpitating and quivering above the gravel paths in undulant haze of heat. Even the butterfly gasped for breath, and grumbled because the swaying of the grasses set stirring a warm puff, which was like the opening of an oven. The sun seemed so near, and was trying so hard to be hot, that the daisies said they could see him spinning and panting as he stood above them; but that, I think, was only their fancy, although it is true that he was shining so exactly overhead, that there wasn't a streak of shadow where one could creep for shelter from the sweltering heat. All the flowers were parched and drooping, and, except for the passing *buzz* where a bee went drowsily by, or buried himself with a contented *burr* in the heart of a pansy, not a sound stirred the sultry silence.

All at once there was a sudden scurry among the birds. A cat which had been basking and purring in the sunshine—opening and shutting an eye every now and then to make believe that she wasn't sleepy—had dropped off into a doze, and now yawned and awakened; and this was the signal for a general stir.

"Phew! but it is hot, to be sure!" exclaimed the butterfly, as he darted up for a stretch from the poppy-head on which he had been sitting, and went waltzing, anglewise, down the gravelled path of the garden, lacing the long green lines of the boxwood bordering with loops of crimson and gold.

"I hope my weight won't inconvenience you!" he said with airy politeness to the lily, dropping himself lazily, and without waiting for an answer, upon her delicate head, which drooped so feebly beneath her new burden that several scented petals fluttered fainting to the ground; "but really, if one is to endure such weather in comfort, an agreeable seat is absolutely a necessity."

"I am grieved to see you looking so sadly," he continued, after he had settled himself to his liking; "but what on earth, my good soul, makes you lean forward in that uncomfortable attitude? There is a charmingly shady spot under the shelter of the wall behind you. Why don't you lean in that direction? As it is, you are going out of your way to make yourself uncomfortable, besides which, I should very much prefer being out of the heat."

"I should be glad to move into the shade," said the lily gently, "but my sweetheart, the rose, has fallen asleep by the border, and I am leaning over her to keep the sun from her buds."

"How very charming you are!" lisped the butterfly languidly, and in a tone of polite contempt which seemed to imply, "and what a fool!" "But your ideas are a little crude, don't you know? though of course interesting. It is easy to see you are not a person of the world. When you have travelled about, and learnt as much as I have, you will come to look at such things in a different way."

"Yes, you have travelled, and lived in the world, and seen a great deal," said the lily; "but I have *loved*; and it is by loving, as well as by living, that one learns."

"Don't presume to lecture me!" was the impatient answer. "Fancy a flower finding fault with a butterfly! Don't you know that I am your superior in the scale of being? But, tell me! does this love of which you speak bring happiness?"

"The greatest of all happinesses," whispered the lily almost to herself, and with infinite tenderness—her white bells seeming to light up and overflow, like human eyes, as she spoke. "To love truly, and to be loved, is indeed to be favoured of heaven. All the good things which this world contains are not worthy to be offered in exchange for the love of one faithful heart."

"Then I must learn to love," said the butterfly decisively, "for happiness has always been my aim. How am I to begin?"

"*You'll* have to begin by unlearning," put in a big double-dahlia, which was standing by like a sentinel, and looking as stiff and stuck-up as if he had just been appointed flower-policeman to the garden.

"Don't you be afraid that any one's going to fall in love with you," was the spiteful rejoinder of the butterfly, edging himself round and round on a lily-bell as he spoke. "Your place is in the vegetable garden, along with the cauliflowers and artichokes. There is something distinguished about a white chrysanthemum, and the single-dahlias are shapely, although they do stare so; but the double-dahlias!" and the butterfly affected a pretty shudder of horror which made the double-dahlia stiffen on his stem with rage.

"How dare you speak slightingly of my family!" he said indignantly. "And as for those big chrysanthemums! why they're just like tumbled heaps of worsted, or that shaggy-eyed skye-terrier dog that we see sometimes in the garden—untidy, shapeless, lumpy things, I call them!"

The butterfly, who had been alternately opening and shutting his wings, as if he thought the sight of such splendour was too dazzling to be borne continuously, but really because he knew that the sombre tinting which they displayed when closed, heightened, by contrast, their gorgeous colouring when open, was nothing if not well-bred, so he simply pretended to stifle a yawn in the dahlia's face, and to make believe that he had not heard what was said.

"After all," he said, turning his back pointedly upon the dahlia, and shutting up his wings with a final snap—just as a fine lady closes a fan—"after all, my dear lily, I don't know whether it's worth my while to learn to love; for, by this time next year, you and I will be dead, and it will be all the same then to us as if we had never loved, or even lived at all."

"I know nothing about what comes after death," replied the lily; "but no one who loves can doubt immortality, and if the rose and I are not already immortal, I believe that our love will make us so."

"What is this immortality?" said the butterfly. "I have heard the word used a great deal in my wanderings, but I never quite knew the meaning of it."

"It is the finding again after death of those we have loved and lost; and the loving and living with them for ever, I think," answered his companion.

"I don't believe you know anything about it," said the butterfly, decisively. "All the men and women I've met—and they ought to know—used ever so much longer words."

"Perhaps you are right," replied the lily quietly, bending forward to shield a stray rosebud from the burning sun; "but to be for ever with those I love would be immortality enough for me. And I heard the maiden, who walks in the garden, speaking yesterday, and I remember that she said it was more godlike to love one little child purely and unselfishly than to have a heart filled with a thousand vast vague aspirations after things we can neither know nor understand."

II.

How strangely still it was in the garden! Summer had gone, and October was nearly over, but the day had been so bright and warm that every one said the winter must be a very long way off.

But since the sun went down, the air had been getting more and more chilly, and the stars were glittering like cold steel, and the moon looked so bright and large, that the flowers, which had awakened with an icy pain at their hearts, could scarcely believe that it was night, and not daytime, for every tiny grass-blade and buttercup stood out with startling distinctness on the grass. A strange, sharp scent was in the air, and a singular stillness was abroad.

There was no "going" in the trees, nor bough-swing among the branches, but all stood rigid and motionless as if intently listening.

"Perhaps they are listening for the first footfall of the winter—the winter which is coming to kill us," said the lily sadly, bending down, as she spoke, to twine herself protectingly around the rose.

"Perhaps we are dead already," said the rose, with a shudder, "and are but ghost-flowers in a ghostly garden. How cold and wan are my rosy petals in this pallid light! And is this grey place—blanched and silent and still as death—our sweet-scented and sunny garden, that glowed with warm colour and was astir with life?"

Just then, and before the lily could answer, they heard a sudden cry of pain.

It was the butterfly who had fallen, half dead with cold, from a sycamore bough, and now lay shelterless and shivering on the frozen path. "Creep up upon my leaves, dear butterfly," said the lily tenderly, as she bent towards him, "and I will try and find a warm place for you near my heart."

"Oh, I'm so frightened! I'm so frightened!" he sobbed. "The world is dying; even now the trees seem still and dead. Soon the stars will fall out of the sky into the garden. Shall we be left in darkness when the moon goes out? Already her face is deadly pale, although she shines so brightly. And what has come to the trees? On every bough there sparkle a thousand lights. Are they the stars which have dropt from the sky?"

"They are not stars at all," said the lily, bending over him and hushing him to her heart as a mother hushes a frightened child, "but diamonds from the Frost King's crown. I think we shall die to-night. Are you asleep, dear rose? The end is coming: at least let us meet it waking, and in each other's arms."

"It is coming, dear heart, and coming soon,"

said the rose, with a cry. "Already I can scarcely speak for pain. The night grows colder, and ever more cold. How strangely bright the moon is! And what was that streak of silver across the sky? A shooting star?"

"Nay, I think 'twas the shining angel God sends to fetch us," answered the lily, simply. "Dear love, the end will soon be here. Already the pain has reached my heart; already I begin to die."

"And I too," said the rose. "I sink—I faint—the sharp pain stings and bites! Hold me fast, darling! I scarce can see you now."

"Nor I you, sweetheart!"

"Hold me closer—closer; everything is falling from me."

"Everything but love, dearest; and where love is, all is. At least we shall die together."

Icier and more icy grew the air; brighter and whiter shone the moonlight on the garden, until the sunflower's shadow lay like ebony upon silver along the grass; colder and more steely glittered the stars through the limpid atmosphere; and closer crept the pain to the heart of the dying flowers.

Rigid and motionless the long night through stood the silent trees, but now they listened no longer, for winter was come indeed, and on every branch the frost-fires shone and sparkled.

And when morning dawned the butterfly lay dead for ever, but the lily and the rose were the fairest flowers abloom in the garden of God.

## MY PET TROUT.

MY pet trout occupies a little zinc tank which stands in a room below that in which I am now writing. From the vigorous manner in which he took his food when I gave him his breakfast a short time ago, and the lively gambols he subsequently indulged in when the water was being refreshed, he appeared to be as merry a little fish as ever lived, gracefully gliding through the water, and at times turning on his side, exposing to view the beautiful colouring on the posterior section of his plump but well-proportioned body.

I am in a position to recount fully the life-history of Tommy, as he is familiarly called. He has been under my close observation from the time when he burst from the egg together with several other tiny little creatures, all of which first saw the light in the identical tank in which Tommy now remains in sole and undisputed possession. Tommy's father and mother were Surrey-bred fish. That is, he is the offspring of trout reared in the ponds belonging to Mr. Thomas Andrews, the famous pisciculturist, at Haslemere, on the borders of Surrey and Hants. It may be indeed that he has a touch of Loch Leven blood in him; or perchance a drop of the fontanalis, as these varieties abound in abundance in the Haslemere waters. To my eye, however, he appears as bonny a specimen of the true *fario* as could well be wished for. The embryo from which Tommy sprang was spawned from a trout of about two and a half pounds weight, by Mr. Andrews on November 9, 1888. Mr. Andrews kindly offered me as many eggs as I liked to take; but I did not wish to trespass on his kindness. So I accepted some fifty. They were a mixed lot, consisting of the ova of fontanalis, Levenensis, S. fario, and hybrids. These I carefully conveyed to London in a pickle bottle, and placed them that very night in their hatching quarters. The eggs commenced to hatch out on January 7, 1889. In due course the umbilical-sac was absorbed, and I think my hatching operations may have been said to have been successful, as my losses were small, and nearly all the eggs had developed into lively little alevins.

Among the fry were several monstrosities. I had an example of a veritable Siamese twin; one of them rejoiced in the possession of two tails. These, however, died, as is usually the case with such specimens, shortly after the yelk-sac had disappeared. One alevin with two heads survived, however, for a long time, and grew to some size. It is now to be seen preserved in spirits in the collection of Mr. F. M. Halford, the "Detached Badger," who has some rare examples of malformed fish.

As time went on, the fry continued to flourish, and I had every hope of rearing a nice lot of fish; but an unfortunate accident occurred, by which, like Macduff, I lost "at one fell swoop," with the exception of Tommy, "all my pretty chickens." One stormy wet night an overflow from a rain pipe got into the tank, and washed away the little fish. They were found dead on the ground in the morning, my pet trout alone surviving.

I had at first the intention of giving to this little paper the heading of "My Tame Trout," but on due consideration of the matter, it appeared to me that such a proceeding would obviously be misleading, for, although Tommy has been bred and reared altogether under artificial conditions, he is anything but a tame fish. On the contrary, indeed, he displays in a remarkable degree all the varying moods we are accustomed to associate with wild fish frequenting their native streams. At times he is in sooth bold enough, and will wildly dash at any thing in the way of food that is placed before him, and sometimes even leap out of the water before a dainty morsel is put on the surface. Immediately the food is secured, he will speed rapidly away under the watercress with which the tank is always supplied. At other times he is shy and cautious. You see him peeping from under the weeds, and then it is difficult to lure him from his hiding-place.

Occasionally he will go at the food as if with the intention of taking it; but instead of doing so, he looks at it, perhaps touches it with the tip of his snout, and then turns quickly aside, and allows the food to fall disregarded to the bottom of the tank. Perhaps for several consecutive days he will feed greedily, and then for some time scarcely take anything at all. Tommy is not easily diverted from getting his food, when once he has made up his mind to have it.

Occasionally he misses his shot by a very close shave. This, however, is not a usual occurrence. As a rule, he seldom misses. When it happens that he is not successful, and when in a humour not to be thwarted of his purpose, it is beautiful beyond description to see the quick and short turns he takes in the water to regain the lost prey. As many as three times I have seen him turn round in his efforts to gain the bait. I think there is a good deal of expression, if I may so call it, in the different movements of a fish in the water. When Tommy is in a good humour and is given what he considers a particularly dainty piece of food, he expresses satisfaction by wagging his tail in an essentially lively manner; but when he is sulky and does not get what he likes, he returns slowly under the weeds, evidently discontented.

When away in the country last autumn I had quite made up my mind that I should never see Tommy alive again. Alarming accounts were sent me that he refused to take any food. The daily bulletins as to his condition were all most unsatisfactory, and when I got a letter one day announcing the significant fact that he had not tasted food for four days, I gave up all hope and sent instructions to have preparations made for preserving his body in spirits. Two days later I received the joyful intelligence that he had regained his appetite and was all right, and when I got home a week afterwards he appeared to be in the best of health and spirits. Tommy, as I have said, lives alone in the tank. In the early days of his babyhood he had a companion—a minnow. It was an adult fish and was considerably larger in body than Master Tommy. The two got on apparently very well together for a long time. They never quarrelled, and seemed to live in happy content and the sweet enjoyment of companionship. The trout grew on apace, and in due time outstripped the growth of his mate. As Tommy increased in size the minnow appeared to become possessed of uneasy forebodings, and for some days before he met with his untimely fate—for he, alas! did come to a tragic end—he gave the trout a wide berth, and kept himself concealed as best he could, hidden in the watercress. Indeed, he appeared so wretched that I decided to shift him to other quarters. When preparing the food for the fish one morning and considering how I could best dispose of the minnow, I heard a great splash in the water, and on looking into the tank I saw that Tommy was in a very excited state, while the poor minnow was lying in the weeds bleeding and tailless. Cruel Tommy, what a base way to serve an old comrade and only friend of your babyhood! After that escapade I have never given him another companion. He does not appear to be discontented with his solitary confinement. He is still growing, and seems to enjoy his tank life amazingly.

Tommy's principal food is raw beefsteak. This is occasionally varied by worms, and during the summer months with any dead flies that may be found about the house. He is very fond of the latter, and when in a feeding mood he will take them as quickly as they are given to him. When a number are thrown on the water at the same time it is highly amusing to watch his excitement. He will make for one, suck it in, dash down under the watercress only to remain for a second or two, when with a mighty rush up he comes again at another fly, making that splash—splash, which sounds like music to the angler's ear. So on he continues until the flies are all cleared off the surface of the water, and then he returns to his hiding-place absolutely gorged with flies, but evidently highly satisfied with the hearty meal he has just partaken of.

The greatest excitement the fish has ever shown was when a worm was given to him for the first time. He went at it without the least hesitation, and when he had it in his mouth he rushed about the tank in wild agitation. He sometimes dropped the wriggling creature, only to seize it again. At times it fell on the bottom of the tank, but he nimbly picked it up again, and when he finally swallowed it he swam about, evidently looking out for another, and when he got one the same performance took place.

The way my trout takes his food varies considerably. Sometimes the meat appears to be quickly despatched; but not unfrequently he masticates it for some time and then ejects it from his mouth. In the case of the worms too, after chewing them he throws them from him and the remains can be seen lying about the tank. Whether the rejection of the food arises from the fact that it is tough and therefore not very palatable I cannot say, but I know that on some occasions when the meat has been of the tenderest description he refuses to swallow it. I wish Tommy could speak—perhaps he might enlighten us on the matter. He was very lively this morning, and dashed at the food in a most sporting style. Can it be that he had some inkling that his history was about to be written and was therefore anxious to appear to the best advantage? I certainly can give him a good character for gameness. Indeed, I consider him as sporting a trout as any wild fish that ever was, and this notwithstanding the fact that he has been brought up altogether under artificial conditions and surroundings. His little tank measures but twenty-two inches in length and fifteen inches in width, and with a depth of water of seven inches. Except during his fry-life he has never seen another trout. He is a handsome coloured, well-proportioned fish, and is, as I have said, still growing, and would be considered along many rivers a really good-sized fish. Tommy was two years old on January 7 last. He has been a source of great enjoyment to me and to several of my friends who come to view him occasionally, and I shall on no account part with him unless I see that his quarters are too confined for him to live a comfortable and healthy life.

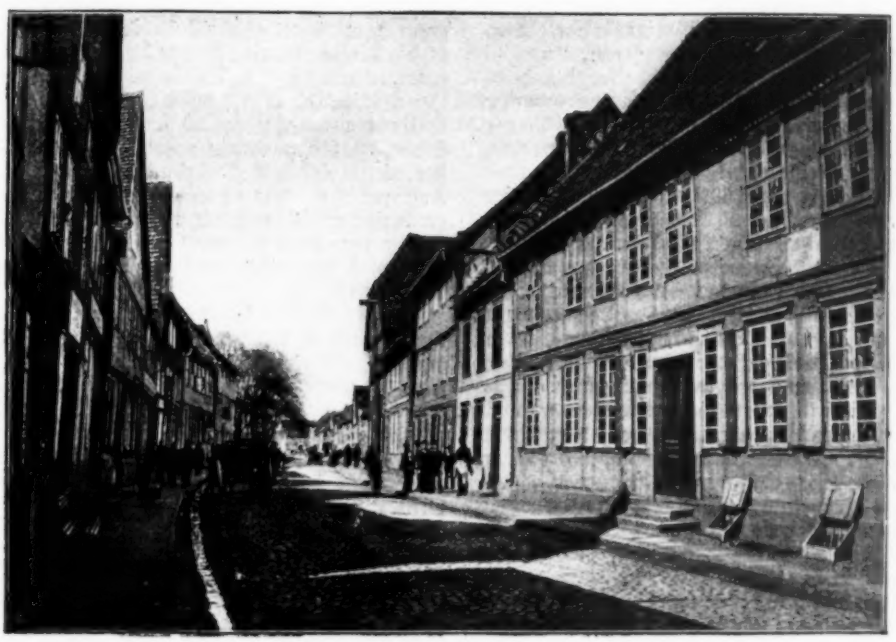
In his inaugural address at the Fisheries Exhibition in 1883 Professor Huxley said: "It is now somewhat more than twenty years since I was first called upon to interest myself especially in the sea fisheries, and my astonishment was great when I discovered that the practical fisherman, as a rule, knew nothing whatever about fish, *except the way to catch them.*" These remarks were vividly brought to my mind the other day when speaking to a fishmonger and telling him that I had a trout which I had hatched out from eggs I had obtained from a fish in a Surrey pond. He seemed highly interested in what I told him, but what was my amazement when he seriously asked if the water they were hatched out in had always to be kept to *boiling point!* In this case I think it may be truly said that this particular fishmonger knew nothing whatever about fish *except the way to sell them.*

HENRY FFENNELL.

## FIELD-MARSHAL COUNT VON MOLTKE.

SUDDENLY, but quietly and painlessly, on the evening of April 24 last, passed away one of the most remarkable men of the present century. Hellmuth Karl Bernhard von Moltke was born, October 26, 1800, at Parshim, in Mecklenburg, where his father, previously a captain in the Prussian army, had retired, impoverished in circumstances, to an estate which he inherited. When little Hellmuth was three years old, his father, Baron Moltke, settled at the free town of Lübeck, the once famous head of the Hanseatic League. Here, in 1806, on the retreat from the disastrous battle of Jena, Marshal Blücher, who like Von Moltke was of Mecklenburg origin, sought refuge with his shattered troops; and little Moltke was a witness of the sack and plunder of the town by the troops of Napoleon, his father's house being one of those that suffered most severely. It is said that the incidents of this event made a lasting impression upon the mind of the boy. At the age of nine, with his elder brother Fritz, young Hellmuth was placed under the care of Pastor Knickbein at Hohenfelde, near Horst, a scholarly man of a kindly and genial disposition, for whom he always retained a deep regard. His sense of indebtedness appears in the inscription which he wrote on the title-page when forwarding to him a copy of his first work, his Letters from Turkey: "To my dear teacher and fatherly friend to whom I owe so much, I send this, my first work, as a slight testimony of respect."

The favourite recreation of the two brothers while here at school was playing at war, as perhaps was natural at such a period. They were accustomed to collect the peasant boys of the village and divide them into two rival armies, Fritz commanding the one, and Hellmuth the other. Once when the mimic warfare was at its height the weaker force of Hellmuth was routed, and some were taken prisoners. Called upon to surrender, Hellmuth cried out, "All is not lost!" and hastily rallying his men he marched them straight to a pond in Pastor Knickbein's garden, and hurried them to a little island which the boy himself had constructed with great labour, and accessible only by a single plank. Facing the enemy with a few of his strongest men, he kept them at bay until all his troops had passed into the fortress, he himself being the last to enter. Then the drawbridge was raised and the victory won. The island, preserved by the good Pastor, long since gone to his rest, still exists, and is pointed out with great pride by the villagers to curious visitors as the scene of one of the early exploits of Germany's greatest strategist.

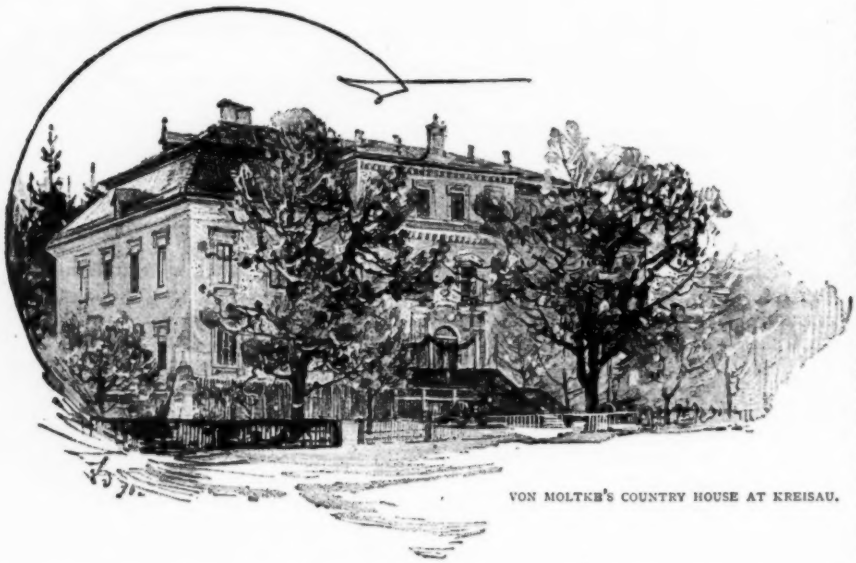


His experiences at the Royal Academy at Copenhagen, to which he was sent at the age of twelve, were not of the happiest. Relating his reminiscences of that period, in reply to the question, "Do you retain pleasant recollections of cadet life?" he remarked, "I have little reason to do so. Without relations or acquaintances in a strange city, we spent a joyless youth. The discipline was strict, even hard, and now, when my judgment of it is unprejudiced, I must say that it was too strict, too hard. The only benefit we received from this treatment was that we became accustomed to deprivations"

Passing over the period of his service in the Danish army, and his entrance into that of Prussia, we find him, after making heroic efforts on his scanty pay to acquire foreign languages, in which he attained in after life so remarkable a proficiency, attached to a commission for topographical surveys in Silesia and the Grand Duchy of Posen.

Consolidating and extending his knowledge of military science and of foreign peoples, as in the case of his visits to the East, Russia, Rome, and elsewhere, Moltke rose steadily in his profession. In 1845, he became aide-de-camp to the invalid Prince Henry of Prussia, uncle of the King; and subsequently, after holding commands of increasing importance, he was made first aide-de-camp to the Crown Prince Frederick. Ultimately in 1859, he was appointed permanent Chief of the Staff. His later military career, and brilliant successes against the Danes, Austrians, and the French, and the various honours accorded him, are so well known and have been so often and so recently narrated, that any further reference to them in this present sketch is unnecessary, the purpose of our notice being to briefly indicate some of the leading points of the great Field-Marshal's character. One fact is memorable, that he had passed the age when men frequently retire from the public service before the time of his greater achievements. His splendid career began to the eye of the world at sixty-five.

The guiding principle of his life is well illustrated by the ancient motto of his family, *Caute et candide* (warily and gently), and by his own favourite maxim, *Erst wägen, dann wagen* (first weigh, then venture). He was slow, cautious, and careful in laying his plans, but having formed his design, he was bold, daring even to the verge of apparent recklessness in its execution. The same calm, immovable spirit characterised him even in moments when most ordinary mortals—he was a man *sui generis*—might, with some show of reason, be perturbed or excited. Even in the most critical period of the Franco-German war his unruffled quietness remained the same, sterner perhaps in look, more silent than ever. Though the warrior King amidst the carnage of the battle-field might feel depressed, though Bismarck, man of "iron and blood," might be anxious at the progress of events, Moltke, seated on his great black horse, calmly surveyed, telescope in hand, the movements of the troops, and awaited the result undismayed. When war was declared by France against Germany a friend encountered him in the Behrenstrasse, with the remark: "You must indeed be overworked at present." "No," replied the General, "the work was done beforehand; all orders are gone out; I really have nothing to do."



Married in 1842, shortly after his return home from the East, to Miss Burt, an English lady, he lived with her in the bonds of a rare union of happiness, concord, and mutual sympathy. On the occasion of her death, which took place Christmas Eve 1868, he withdrew still more from public life, and found in quiet, studious, and laborious life some slight relief for his grief. Very touching was his devotion to the memory of his wife. Upon his estate at Kreisau he built a little mausoleum, situated on a beautiful eminence, embowered in foliage. This little chapel, constructed of red brick and sandstone, was lined inside with black and white marble, and in front of the altar was placed the simple oak coffin in which the remains of his wife reposed, covered at all seasons of the year with wreaths. Sculptured in the apse was a finely carved figure

HOUSE WHERE MOLTKE WAS BORN.

of our Lord in an attitude of blessing, copied from Thorwaldsen. Above were inscribed the words of St. Paul, "Love is the fulfilment of the Law." When at his country seat the aged warrior visited the tomb morning and evening. Now at her side slumbers the veteran, awaiting with her the signal of the resurrection.

Of his bearing in the time of his bereavement, the following incident was related by the late Mr. George Bancroft, the distinguished historian, at that period United States Minister at Berlin. Mr. Bancroft was one of the favoured few who were accustomed to accompany Von Moltke in his daily rides in the Thiergarten or to the Grunewald. Seeing the General on horseback, "my first impulse," said Mr. Bancroft, "was to trot into another lane. On second thoughts, however, I turned my horse alongside his, remembering that it was for him to talk or be silent. To my surprise, he forthwith began a lively conversation, describing the happiness with which Miss Burt had blessed her husband, and expatiating upon her manifold virtues as one crushed by an overwhelming, irreparable loss. Then of a sudden he grew silent, as if a new current of thought had carried him sheer away. 'Do you know,' he said, when his lips were again opened, 'it has just been brought home to me that, after all, perhaps it was better that this happened now than at another time? You see, I am convinced that a French invasion is impending; it will burst upon us sooner or later, whatever the plea may eventually be. Now think if the fortune of war was to be adverse to our arms! Why, her grief over the country's adversities must have cut her life short. No, no; that would have been worse!'"

VON MOLTKE'S COUNTRY HOUSE AT KREISAU.

Von Moltke was a passionate lover of children, and is said to have been quite the slave to the caprices of his little grandnephew, the son of Major Hellmuth von Moltke, the aide-de-camp of the Count, whom the Emperor, as a special mark of his royal favour, immediately after the funeral of his chief, made one of his own aides-de-camp.

As far as Count von Moltke's religious views could be ascertained, they were of a simple type, and characterised by a strict adherence to the path of duty and virtue. Daily was he accustomed to read his Bible, one of ancient date, its well-marked pages indicating how frequently its owner was in the habit of consulting its inspired pages. An extract from a letter the aged Field-Marshal wrote on the eve of his eightieth birthday is peculiarly interesting. "I stand," said he, "close upon the end of my life; but how different from that here will be the measure in a future world according to which our earthly actions will be judged! Not the brilliancy of success, but the purity of our endeavours and faithful perseverance in duty, even when the result was scarcely visible, will decide as to the value of a man's life. What a wonderful displacement of high and low will be witnessed at that great review! We do not even know ourselves what we have to ascribe to ourselves, to others, or to a higher will. It will be well not to set too great a value on externals." In a passage in one of his books, referring to our Lord's life here upon earth, he remarks: "His life was humble. He was the descendant of a people in bondage, and He had not a place where to lay His head. To the fishermen He talked in parables about God; He healed the sick, and died the death of an evil-doer. And yet there has never been anything on this earth that could be purer, more elevated, and also—even seen from the worldly point of view—more successful than His conduct, His teaching, and His death."

The old soldier's habits of life were, like those of the majority of really great men, extremely simple and singularly free from ostentation of any kind. Very characteristic of the late Field-Marshal are the following data of his life, written by himself on the occasion of his ninetieth birthday. An Austrian Association for the Promotion of Popular Knowledge last year addressed a number of interrogatories to various European celebrities of great age, which were to explain the circumstances and conditions under which an exceptionally long life might be attained. The answers received were collected in a book and subsequently published.

Field-Marshal von Moltke answered the questions

submitted to him in his own peculiarly laconic manner, as follows :

*Q.* In which year of your life and on which date did you begin to learn, and for how many hours a day ?—*A.* 1808, in my eighth year, with four ; after 1810, with ten hours a day.

*Q.* Was your health in your youth delicate or robust ?—*A.* Tough nature.

*Q.* Did you grow up in the country or in town ?—*A.* Up to my tenth year in the country.

*Q.* How many hours did you spend in the open air ? Regularly ?—*A.* Irregularly, and but few hours.

*Q.* Did you cultivate hardening games and other exercises ? —*A.* Not methodically.

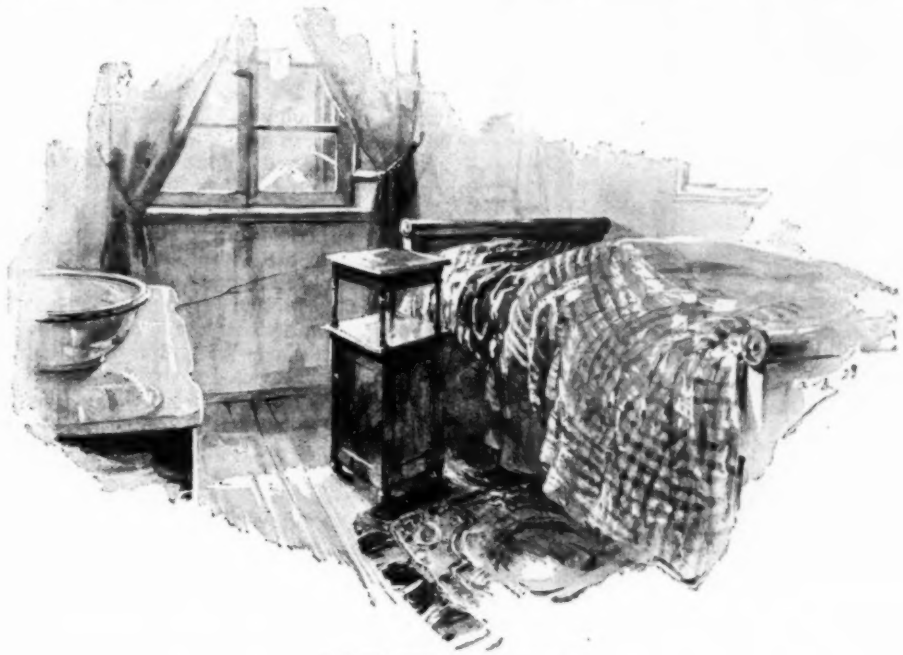
*Q.* How many hours did you sleep in childhood ?—*A.* Ten hours.

*Q.* Special remarks ?—*A.* Joyless youth, scanty nourishment, absence from the paternal home.

*Q.* Where did you complete your studies—in town or in the country ?—*A.* In town.

*Q.* How many hours a day do you devote to mental work ? —*A.* Very different.

*Q.* Do you attribute to any particular habit of your life a favourable influence upon your health ?—*A.* Moderation in all habits of life. In all weathers exercise in the open air. No day altogether at home.



*Q.* How long did you sleep at a mature age ?—*A.* From eight to nine hours on an average.

*Q.* What alterations have you made at an advanced age in your mode of life ?—*A.* None.

*Q.* How long did you work daily in your fiftieth, sixtieth, seventieth, eightieth years ?—*A.* Quite as circumstances required ; often, therefore, very long.

An interesting anecdote is related, apropos of his dislike to display, on the occasion of the opening of new barracks at Frankfort-on-the-Oder, to which, as the oldest and most distinguished officer of the regiment in which he first served, he was invited. His acceptance of the invitation was accompanied by the stipulation that no ceremony should be made ; but the officers, desiring to do honour to their illustrious guest, had provided the best carriage that the town afforded to meet him at the station. On his arrival, the Field-Marshal thanked the officer in waiting, took a common cab, and with his nephew, who was with him as aide-de-camp, drove off to the barracks, to the astonishment of the honest burghers.

His favourite recreations were chess, in which he excelled ; music, especially that of the school of Schubert and Mozart—he entertained very decided opinions about the "music of the future"—and whist, which he rarely missed playing after dinner, even when at the seat of war. The Count was an authority on the culture of roses, and at Kreisau, where he spent most of his time after his retirement from more active service, he possessed one of the finest and most unique collections of roses in Germany, a fact which lends an additional grace to the tribute of respect paid to the Field-Marshal's memory, when, the day after his death,

MOLTKE'S BEDROOM AT KREISAU.

*Q.* What were your recreations ?—*A.* Riding on horseback up to my eighty-sixth year.

*Q.* How many hours do you spend in the open air ?—*A.* Now, in summer, on my estate, half the day.

*Q.* How long do you sleep at present ?—*A.* Always eight hours still.

*Q.* What are your habits with regard to eating, etc. ?—*A.* I eat very little, and take concentrated food.

*Q.* To what circumstances do you particularly attribute your stalwart old age (which may God long preserve !) ?—*A.* To God's grace and temperate habits.

the Empress visited the headquarters of the General Staff and placed a magnificent wreath of his favourite flower upon the bed of the departed hero.

Had not his reputation as a military strategist overshadowed his other gifts, the Count would have gained distinction in the world of letters. In the 'twenties, while engaged in the Topographical Department, he wrote a pamphlet, published at Berlin, entitled "Holland and Belgium," by H.

von Moltke, in which he calls the attention of Europe to the Belgian Revolution; this was followed, in 1845, by a critical military work of great merit, "The Russo-Turkish Campaign of 1828–29 in European Turkey," which created a deep impression in military circles, and proved of considerable service in the Russo-Turkish campaign of 1877–78. Moltke's pithy and laconic style was founded on the model of his chief, General von Müffling, his instructor in practical and theoretical tactics, in which the members of the German General Staff are required to excel. He was a graphic writer and shrewd observer of men and things, as his charming letters from Russia, France, Turkey, and other places show. Especially sagacious were his observations

A FAVOURITE DIVERSION.

on the Turks, made to his sister, married to Mr. John Burt, an Englishman settled at Holstein, in which he affirms that the kingdom is rotten, that Turkey had fallen under a ban, and that ban the Koran, which teaches so warped a doctrine that its laws and decrees must of necessity oppose all social progress. His views on Russia, as indicated in his letters written in the form of a diary to his wife on the occasion of his visit in 1856, when accompanying Prince Frederick William at the coronation of the Czar Alexander II at Moscow, show the same keen powers of observation. He considered that Russia had a great future before her, but this could only be realised when her officials became more honest. "Honesty among Russian officials," he thinks, "can only be brought about by many years of iron severity." Of the difficulty of governing the French nation, he wrote, when visiting the court of Napoleon III: "It would be as impossible to allow the liberty of the press in France as to admit discussion of the orders given by generals to their armies when in the field." We have not the advantage of knowing his views on England and the English on the three occasions, in 1856, 1858, and 1861, when he visited our country in company with the Crown Prince to be present at his betrothal and marriage to the Princess Royal, and again at the funeral of the Prince Consort. How highly his opinion as an authority was esteemed as early as 1867, is seen by an incident which occurred during the Universal Exhibition, when Count Moltke, in company with King William of Prussia and Count Bismarck, dined with Napoleon III at St. Cloud. Subsequently, the Emperor and Moltke engaged in an animated conversation apart from the rest. At this moment Marshal Randon, Minister of War, walked across the room, and the Emperor, noticing him, raised his voice, saying, "Come here, Marshal. General Moltke says that with the needle gun he would be strong enough to fight even the French army." Marshal Randon drew near, and, turning towards Moltke, said in a tone loud enough to be heard by all in the room, "Pardon me, General; but, in spite of the high opinion I have of your judgment, I cannot share your belief. I venture to affirm, that even with the needle gun, the French army would not suffer the fate of the Austrian army;" and the conversation continued without the bystanders being able to follow it. But after the departure of the King of Prussia and his suite, Napoleon III, struck by these words, energetically busied himself in overhauling the equipment of the French army. He examined various models of guns that were submitted to him, and among these the Martini rifle, which he found excellent, but which was after all rejected for the Chassepôt. The making of this gun was pushed forward so actively that the French army was provided with it by 1870.

In respect of his literary efforts, as of his military achievements, Moltke was singularly modest. Herr G. von Bunsen tells us how, "meeting the General one day at a dinner-party, I expressed my regret at his having neglected to write some letter-press to accompany his well-known map of the environs of Ancient Rome. 'But a companion book for it was written,' he replied; 'or rather,' correcting himself, 'he had begun writing one at Rome, and was prevented from finishing the MS. when the Government ordered him to convey Prince Henry's body to Berlin, and there set him engrossing tasks to do.' Hereupon I ventured to ask him for a loan of this fragment. Of course he believed it to be lost; but, as a matter of course likewise, it was brought to my door by an orderly at an early hour next morning. When returning the MS., I advised the publication of parts of it, which would be found acceptable independently of his being the author; and if my humble advice should be followed, would he accept my humble services as editor? His reply," adds Herr von Bunsen, "has been carefully preserved. Its purport was that he must lay down three conditions: First, I must omit what I pleased; secondly, transpose at my pleasure; and thirdly, *alter the text* wherever it seemed desirable." "Will any editor in the world," Herr von Bunsen

pithily remarks, "hesitate to confirm my belief that no MS. of the last unfledged stripling of an author was ever offered on similar conditions?"

Fitting tributes of respect and admiration were paid to the aged Field-Marshal on the occasion of his celebrating his 90th birthday, on the 26th of October 1890. Telegrams from all sorts and conditions of men poured in upon him, including, among the princes and sovereigns of Europe, one from our own Queen, who held Count von Moltke in high esteem. The 26th falling upon Sunday, the schools throughout the length and breadth of Germany were closed on the previous Saturday to enable the scholars to add their quota to the general rejoicing. In Berlin a torchlight procession of vast extent, composed of 20,000 students, artists, members of trades and guilds, marched with banners, and groups of historically dressed personages and impersonifications, from the old grey Schloss down the Linden, through the Brandenburg Gate to the Königsplatz, where are situated the buildings of the Grand Staff. Here addresses were presented to Von Moltke.

On the following day, in the Conference Hall of the General Staff, the Emperor, surrounded by the military magnates of the Reichsrath, the generals of the twenty army corps specially summoned to be present, the officers of the General Staff, Chancellor von Caprivi, successor to Prince Bismarck, the King of Saxony, the Grand Dukes and the Duke of Connaught, addressed the Marshal in the following terms:—

"I thank you in the name of those who have fought together with you, and whose most faithful and devoted servant you have been. I thank you for all you have done for my House and for the greatness of the Fatherland. We greet in you not only a Prussian leader who has won for the army the reputation of being invincible, but one of the founders of the German Empire. The presence of the King of Saxony, who has made a point of personally congratulating you, recalls the time when he and you fought for Germany's greatness. The distinctions conferred upon you by my grandfather leave nothing in which I can personally show my thanks to you. I beg you to accept the only evidence of my profound regard which I can bring you. It is with special pride that I renounce for to-day the privilege of a monarch—namely, to have the flags of the army standing in his antechamber; and I beg you to take possession of the flags of the Guards, which have waved over you in so many battles. As a personal memento, I ask you to take the Field-Marshal's staff" (this was a handsome silver baton inlaid with stars and crowns of rubies and diamonds), "which you have already won before the enemy, as a symbol of my regard, devotion, and gratitude. I call upon all those present to express their feelings of gratitude that Field-Marshal von Moltke has known how not to stand alone in his greatness, but to form a school of leaders of the army for time to come, and for all future generations, by giving cheers for his Excellency."

This, the last occasion on which public honours were accorded to the Field-Marshal during his life, appropriately emphasized the universal esteem in which "Father Moltke," as he was affectionately designated by the army, was held as one of the founders of the German Empire.

# Varieties.

### Further Facts on Influenza.

This mysterious epidemic contains so many curious features not yet generally known, that it may be worth while saying a few words more about it.

It is still extremely doubtful whether it be due to a microbe or some other cause, and whether the infection may or may not be carried by persons as well as by the air. Certainly it can travel with amazing rapidity, as the following recorded facts prove.

In 1729–30, during five months it overran all Europe. In 1782, in St. Petersburg, in one night, 40,000 were seized with the influenza. In the same year, in many towns, in eight hours from its appearance in a place, half the inhabitants were seized with it.

In 1803 it appeared simultaneously at several widely-detached parts of the kingdom at once.

In one day the whole population of Nismes were seized, with scarcely an exception. It has overrun all Europe in six weeks. It attacks vast regions at once, and, what is still more remarkable, descends on remote and isolated districts and on ships in mid-ocean. All these phenomena show that if there be a microbe it must exist in enormous numbers carried with great rapidity by the air.

On the other hand, the epidemic of 1803 appeared at Manchester, and diverged thence as from a centre according to the amount of intercourse with the neighbouring towns. This was observed in many other towns. The late outbreak in the House of Commons was attributed to the presence of witnesses from Sheffield connected with the proposed line from the north.

Close observation, however, in the present attack does not support the view that the disease is contagious.

The large proportion of members of Parliament attacked, and of employés working together in warehouses and offices, certainly seems to show that any aggregation of individuals in an imperfectly ventilated atmosphere increases the liability to the disease.

The most remarkable characteristic of the present outbreak is that the urgent symptoms in the great epidemic of 1837, consisting of great pain in the head, soreness of eyes and nose, with sneezing, violent, irritating cold in the head, are now almost wholly absent. The present epidemic has spread pretty well over England and Scotland, while Ireland has almost entirely escaped. Though it cannot be proved whether mild or cold weather is most favourable to its spread, it is certain that wherever the epidemic appears most extraordinary vicissitudes of weather are experienced.

Nearly all notices of previous epidemics call attention to this fact. Sometimes it is "thick, noisome fogs, and musty-smelling atmosphere, or 'offensive fogs more noisome than the darkness of Egypt.'" At others, "irregularity and frequent changes of the weather," or "great heat and dryness, followed by a strong cold north wind," or "sudden changes with easterly winds."

As a rule its course is from east to west and south to

north; though in this last epidemic it appears to have travelled back from America to the central districts of England, and thence to have spread south to London and north to Aberdeen.

One or two curious facts further may be noted.

In 1803, when a school of 400 boys at Ackworth were suffering from scarlatina, though influenza raged all round, none were attacked. At Burton-on-Trent, also, where there was much scarlatina, measles, and whooping-cough, there were hardly any cases of influenza.

In London, in 1803, influenza seems to have taken the place of the usual contagious diseases, there being hardly any measles or scarlatina. At Aberdeen, in 1775, influenza raged for five weeks, but never touched Frazerburgh, where another contagious fever was raging at the time. At Rochester, in 1803, an eruptive fever appeared, which only attacked those whom the influenza had spared. At Navan, in 1803, an endemic low fever almost entirely disappeared during the influenza epidemic.

In America, also, it has been noticed that scarlatina disappears when influenza arrives, and returns after it has gone.

In the present epidemic, as compared with 1890, there seems to be an increase in throat and head symptoms, and still more marked evidence of its strong effects upon the nervous system. One or two remarkable cases have been noted of the *disappearance* of bronchitis on the advent of influenza, while on the other hand the concurrence of an infectious and fatal form of inflammation of the lungs has been very common. Far more have died from chest diseases than from nervous exhaustion.

A final survey of all the facts at our disposal seems to show that although the disease has been carefully observed for four hundred years by the most skilled and trained observers, we are still ignorant of the cause of influenza, of the exact character of the disease, of the mode of its spread, and, above all, of any method of effectually checking and preventing it.

We do not yet understand all things in heaven and earth, and a disease like the present forms a wholesome corrective to the somewhat too complacent belief in our scientific and medical omniscience.

ALFRED T. SCHOFIELD, M.D.

**Seed Time and Harvest.**—"If you want to make any impression or exercise any influence for good upon your neighbours, you must take them as you find them, and not expect too much of them. You must work in faith, and you must work upon the material that presents itself. 'The sower soweth the Word.' The mistake we commit so often is in assuming that because we sow—which is our duty—therefore we have a right to reap the crop and garner it. 'It grows to guerdon after-days.'"—*The Trials of a Country Parson, by Augustus Jessop, D.D.*

**Peace Congress.**—It is announced in the "Star of Peace" that an international peace congress will be held in Rome this autumn under the presidency of M. Bonghi, member of the Italian Parliament. Among members of the Committee are Senators Villari, Canonico, and Prince Ruspoli, also several influential deputies and professors.

**Aristotle and the Gospels.**—No classical scholar of any repute in England doubts that the books which now pass in the name of Aristotle are substantially his, and substantially represent his teaching. As regards these books, there is an interval of 300 years from the time of the death of Aristotle before they are mentioned at all. The story which is told by the geographer Strabo with regard to the history of these books is so remarkable that, if time sufficed, I should like to refer to it; but I will merely mention now that these books, which for generations have been accepted and studied by scholars all the world over, were absolutely lost sight of for three centuries, except that they were mentioned at the end of the second century after Aristotle's death. They were corrupted and despoiled; they bore no signs of Aristotle's hand; and, what is more, the commentators, such as Diogenes Laertius, who gave an account of the works of Aristotle existing in their day, not only do not mention the titles of these books which we possess, but mention quite other titles as being titles of the works of Aristotle; and although this is so, and though there is this inherent difficulty with regard to the works of this great classical authority, I say there is hardly a scholar who hesitates to accept these books as having the authority of the great philosopher whose name they bear. Now it seems to me perfectly unreasonable that men who will accept classical books upon such meagre authority as I have described, should refuse to accept the Gospels, when it is acknowledged that the Gospels were known and respected and reverenced throughout the Christian world in a period of time which is just about half of the period which elapsed before the books of Aristotle are mentioned at all.—*The Rev. J. E. C. Welldon, of Harrow.*

**Caterpillars on Trees.**—Miss Ormerod, the accomplished and experienced entomologist to the Royal Agricultural Society, after many trials of various substances to protect trees from the ravages of caterpillars, recommends the poisonous spray of "Paris green" to the bark of the main trunk and chief branches as the most efficient application.

**Arbitration Act, 1889.**—By the Arbitration Act, 52 and 53 Vict., Chap. 49, consolidating many previous enactments, it is provided that "submissions, by consent," shall have the same effect as if made by an order of Court. The arbitrator, or arbitrators, can summon witnesses, make and enforce awards, and fix costs, to be paid in a case, or between solicitor and client. The "submission" must be by written agreement.

**Martin Luther's last Will and Prayer.**—The last will of Luther is less known than some of the events of his life, and in it the circumstances and character of the man are grandly displayed. It closes thus:

"O Lord God, I thank Thee that would'st have me to be poor upon the earth: I have no house, land, possession, or money, to leave. Thou hast given me a wife and children: to Thee I leave them; nourish, teach, and save them, as hitherto Thou hast me, O Father of the fatherless, and Judge of the widows.

"O my heavenly Father, the God and Father of our Lord Jesus Christ, the God of all consolation, I thank Thee that Thou hast revealed Thy Son Jesus Christ to me; on whom I have believed, whom I have professed, whom I have loved, whom I have celebrated; whom the Bishop of Rome and all the multitude of the wicked do persecute and reproach.

"I pray Thee, O Lord Jesus Christ, receive my soul. My heavenly Father, although I am taken out of this life, though I must now lay down this body, yet I certainly know that I shall dwell with Thee for ever, neither can I by any be plucked out of Thy hands. God so loved the world that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life. John iii. 16, x. 28; 2 Timothy iv. 6, 7, 8."

**An East African Stalactite Cavern.**—The "Norddeutsche Allgemeine Zeitung" reports that in the immediate neighbourhood of Tanga, in German East Africa, an important series of stalactite caverns has been lately discovered. They are in a system of Jurassic limestone. The caverns far surpass any similar ones in Europe, both in extent and size. The floor is thickly covered with a deposit of stuff resembling guano. Millions of bats seem to be the only present occupants of the interior.

**"Little Dombey."**—Many are the eyes that have grown dim while reading the touching story of the little deformed and afflicted child, Paul Dombey. At last Paul was laid on the bed from which he was never to rise; and as he lay he dreamed of a dark river running to the sea: and the boat that bore him glided smoothly on, till a shore was seen, and One stood there. Who stood on the bank? Little Paul saw, and put his hands together, as he had been used to do at his prayers. And when the end came, and all was still in the chamber of death, there are few who can help the tears falling over that page written by a master of pathos, even while taking it to be a page of fiction. But it is no imaginary tale; and the original of Little Dombey was his own nephew, Harry Burnett, as Charles Dickens himself told

his sister, the mother of the boy. Harry had been taken to Brighton, as little Paul is represented to have been; and had there, while lying for hours on the beach with his books, given utterance to thoughts quite as remarkable as those which are put into the lips of Paul Dombey. But little Harry loved his Bible, and he evidently loved Jesus. The child seemed never tired of reading his Bible, and his hymns, and other good books suited to his age; and the bright little fellow was always happy. He died in the arms of one who had been a friend of his mother; and the story of Mrs. Burnett, as well as of her poor little Harry, has been told in a book of records of ministerial life, "Memories of the Past," by the Rev. James Griffin, of Hastings, formerly of Rusholme Road Chapel, Manchester.

**Artists' Payments.**—It is stated that the amount paid to American artists for the paintings and water-colour drawings in all the annual exhibitions throughout the Union is less than what is paid every month to the draughtsmen in black and white for two New York magazines. The "art-work" of these magazines must include the engraving as well as drawing of illustrations.

**Women as Inventors.**—In a return recently made to the United States Government of the statistics of the Patent Office at Washington, we learn that, from 1790 to July 1, 1888, there were 2,300 patents taken out by women. They embrace all subjects, from dress-improvers to submarine telescopes. For ten years before 1815 there were only two or three female patentees, but every decade since has shown a rapid increase. Probably in last year alone there were nearly 200.

**Dijon.**—Many tourists and travellers visit Dijon, or make it a halting-place *en route* to Switzerland, on account of the many interesting historical antiquities and associations of the place. The Municipality of Dijon lately decided, by a majority of seventeen against three, to pull down the castle built by Louis XI, in order to make a new boulevard. This castle, over the main entrance of which is the hedgehog (emblem of Louis XII, by whom it was completed), was used as a State prison during the eighteenth century, and among the persons confined there were the Duchess de Maine, the Chevalier d'Eon, Mirabeau, and General Toussaint-l'Ouverture. A portion of it has since been converted into quarters for the gendarmerie, while another part serves as a town museum. Four of the large towers built by Louis XI are still in existence, and one of them, the Tour Guillaume, has four storeys still intact.

**Animalcula in Cheese.**—The French scientific paper "La Nature" gives some startling facts as to almost invisible inhabitants of cheese, compared to which mites are giants. M. Adametz, the distinguished microscopist, announces that from an examination of Emmenthal, a soft variety of Gruyère cheese, he has obtained the following results: In each gramme of the cheese, when fresh, from 90,000 to 140,000 microbes are found. This number increases with time. Thus a cheese seventy-one days old contains 800,000 bacteria per gramme. The population of a soft cheese twenty-five days old and much denser than the preceding is 1,200,000, and that of a cheese forty-five days old is 2,000,000 microbes per gramme. But the population of a cheese is not everywhere distributed the same in it. The centre is but moderately inhabited with respect to the exterior portion. The population of a soft cheese near the periphery is from 3,600,000 to 5,600,000 microbes. According to the mean of these two figures, there are as many living organisms in 360 grammes of such a cheese as there are people upon the earth.

**French Wine-Harvest of 1890.**—The Director-General of Indirect Taxes in France has published the results of the vintage in 1890. It amounted to 27,416,327 hectolitres, being an increase of 4,182,755 hectolitres on last year, but 2,260,768 less than the average of the last ten years (1880-89). The area under vine cultivation was 1,243 hectares less than in 1889, a proof that the efforts to restore this branch of farming are not succeeding. This is far from the average produce of 50 millions of hectolitres, as about the year 1870 The average price of the hectolitre has fallen from 38 to 36 francs; but, taking into account the great increase in quantity of this year's produce, the total value (988,794,000 francs, or, in round numbers, £39,551,760) is greater by about 107,726,000 francs (about £4,309,000). The average production was 15 hectolitres per hectare, against 13 last year. The manufacture of artificial wines is on the increase, amounting for 1890 to 2,429,285 hectolitres, being 605,156 hectolitres, or over 30 per cent., more than last. No allowance is, of course, made in these figures for illicit manufacture. Sweetened wines amounted to 1,947,000 hectolitres, or 468,000 (over 30 per cent.) more than last year. The Algerian reports show yearly a steady increase in viticulture. In 1890 the produce was 2,844,000 hectolitres, being an increase of 332,000 over last year.

**Nature.**—An expression used by Romanes (the commentator on Darwin) appears to him to give a satisfactory explanation of the mission of evolution in nature. He says, "Nature selects the best individuals out of each generation to live." Here nature must be an intelligent agent, or the statement is simply nonsensical. The same alternative applies to much of the use of the favourite term "natural selection." In short, those who use such modes of expression would be more consistent if they were at once to come back to the definition of Seneca, that nature is a certain divine purpose manifested in the world.—*Evolution as related to Revelation and Science*, by SIR WILLIAM DAWSON, F.R.S.

**St. Lawrence's, Isle of Wight.**—This is said to be the smallest church in England, being 20 feet long, 12 broad, and 8 feet in height, to the eaves.

**The Midnight Sky.**—A new edition of this work includes the most recent discoveries in the heavens. Although called the "midnight" sky, the relative position of the stars can be taken for 10 P.M., or any hour, upon maps of other months. Well does the book merit the praise given to the first edition by Thomas Carlyle, who said, "It surpasses in clearness and useful work all I have seen before in the planisphere way. No reader but, by help of these maps, may find, with a minimum of trouble, the star he seeks." Mr. Dunkin's name, as past-president of the Astronomical Society, and Chief Observer at Greenwich Observatory, is a guarantee of the completeness and accuracy of the maps. There have been many imitations of the work, but none with any pretensions to the thoroughness of the "Midnight Sky," which should be used by all students.

**Indians in the United States.**—The Census Bureau nas given as the number of American Indians in 1890, 244,704, or nearly a quarter of a million. The recent outbreaks in the western reservations give new interest to this enumeration. There is a proposal to transfer the care of Indian affairs from the special department, now charged with it, to the War Department. There have been gross abuses in the Indian bureau, the agents and inspectors, as is usual with contractors, often defrauding the Indians, while adjoining settlers covet the reservations. Short supply of food and clothing may have partly caused discontent, as well as the "Messiah delusion."

**The British Association.**—The following have been appointed to preside over the sections at the Cardiff meeting of the British Association in August next:—A—Mathematics and Physics, Professor O. J. Lodge, F.R.S.; B—Chemistry, Professor Roberts-Austen, C.B., F.R.S.; C—Geology, Professor Rupert Jones, F.R.S.; D—Biology, Mr. Francis Darwin, F.R.S.; E—Geography, Mr. E. G. Ravenstein, F.R.G.S.; F—Economics, Rev. Dr. W. Cunningham; G—Mechanical Science, Mr. T. Forster Brown, M.Inst.C.E.; H—Anthropology, Professor Max Müller.

**Quillimane and the Disputed Gold Lands.**—In a book by Mr. T. Baines, F.R.G.S. (some time the travelling companion of Livingstone), published in 1877, the following passage refers to the new claims of Portugal:—"I received a letter from his Excellency Senhor Carlos Pedro Barrahona E. Costa, Governor of Quillimane, informing me that the land north of the Limpopo was a part of the district of Sofala, in the province of Mozambique, and that I could not be allowed to explore for gold, or to make treaties with the natives, except by permission, to be first obtained

from his Most Faithful Majesty the King of Portugal. To this I answered that, while I honoured the memories of the early Portuguese voyagers for their achievements, I was not aware that they ever held territorial right in Matabeleland; and that if they had, the country was long ago abandoned, and had been conquered by Umzelegasi, whose son, Lo Bengula, had conferred on me the right of working in it.

"On reaching Potchefstroom I had the honour of meeting his Excellency, who showed me a map, on which the different districts were defined, and I pointed out the position of Lo Bengula's grant to me, as being so far west and south-west of the boundaries of Sofala and Tette, that it not only did not approach the Portuguese territory, but was so far distant from it that a broad belt of independent native population actually existed between us. His Excellency, however, made a general claim to all South Africa, from the Indian Ocean to the Atlantic, in virtue of a cession made by the conquered Emperor of Monomotapa three hundred years ago; and I answered, that if conquests were a valid right, Umzelegasi had conquered, forty years ago, the country now called the northern gold-fields, and his son, Lo Bengula, had given it to me. His Excellency said he had done his duty by protesting, and should not take any active measures to hinder me."

**Lake Tchad.**—The French have organised several expeditions from the Congo on the south, and Senegal and Gaboon on the west. One of these, led by M. Crampel, has secured a footing in Bagirmi on the Upper Congo. Another expedition, under M. Dybowski and M. Brunache, of Constantine, Algiers, is intended to reach Lake Tchad, where it is hoped that French interests in Algiers, Tunis, the Soudan, and the Congo will unite. The scheme is under the auspices of the "African Committee," which, although not a Government organisation, is understood to look after French political as well as commercial interests in Africa. The expedition of M. Dybowski started in December 1890 from Loango, well armed and equipped.

**The Lobster.**—In our paper on the threatened extinction of the lobster it was stated that the decrease of the catch along the American coast had been from 50 to 75 per cent. during the last seventy years; it appears that the decrease has been much more rapid, the seventy being really twenty. It has also been pointed out that the marine laboratory at Wood's Holl was only partially completed at the date given.

**The Jews in Poland.**—According to the last census, as quoted by Mr. Grant, the British Consul-General at Warsaw, in a recent report, the number of Jews in Poland is 1,380,000 in a total population of 8,250,000. In the town of Warsaw they now represent 40 per cent. of the population, and the average in all the other towns is 50 per cent., while in the villages it falls to 7 per cent., and in the rest of the country to *nil*. Trades and industries in the city of Warsaw are almost entirely in the hands of the Hebrew population. In the higher branches of commerce the ratio is 16 Jews to 3 Christians, in the lower branches 19 Jews to 2 Christians, and in the agency and brokerage business 43 Jews to 1 Christian. Of the large industrial enterprises of the city, 63 per cent. are in the hands of Jews, and only 18 per cent. belong to native Christians. As common workmen and menials the proportion is the other way, only 11,000 Jews, or 8 per cent. of the total Jewish population, being so employed, against 43,000 Christians, or 20 per cent. of the total Christian population.

**General Booth's Windfall.**—The late Mrs. Bell, who has bequeathed above £60,000 to "General" Booth and the Salvation Army, is a sister of Sir Francis Orr, head of the firm of Francis Orr and Sons, manufacturing stationers, Renfield Street, Glasgow.

**Census of Coloured People in the United States.**—The official census of the coloured people in the United States reveals some remarkable facts. The compilers declare that the widespread fears as to the Negro rate of increase are illusory. Even in the "Black Belt"—that is, the South Atlantic and South Central States—the Blacks have increased within the ten years only by 13·90 per cent., while the Whites have increased by 24·67 per cent., a rate nearly double that of their rivals. At this pace, it will be 100 years before the Blacks number 20,000,000. No explanation is offered of the difference in the rate of increase, but it is probably due to the mortality among Negro children, owing to insanitary conditions. It is found that freedom does not tempt the Negroes to move northward, their tendency, which, though slight, is perceptible, being towards the States of the Gulf, and the warmer climates generally. The return will allay many apprehensions.

**International Copyright Act.**—The New York "Nation," in reference to the compelling an English author to manufacture his book on American soil, says it is "as much a piece of tariff barbarism as to oblige foreigners to provide themselves with a suit of American-made clothes on landing, in order to entitle them to police protection, or the access to American courts of justice."

**Naseby Monument.**—The inscription on the obelisk marking the site of Naseby is an ingenious effort not to offend any reader in regard to the Civil War. It is said to be "a useful beacon to British kings never to exceed the bounds of their just prerogative, and to British subjects never to swerve from the allegiance to their legitimate monarchs."

**A Kindly Deed.**—It is an ancient custom for twenty-one of the aged widows of the parish of St. Bartholomew-the-Great, the oldest church in London, to find a new sixpence laid upon an old tomb, the lettering upon which is wholly effaced by time and weather. There being no record of the donor the ancient gift was about to be dropped, when Mr. J. W. Butterworth, F.S.A., law publisher, kindly provided a fund for its continuance, as we learn from the "Stationery Trades Journal."

**Value of Land in Glasgow.**—Notices often appear of the value of land in the City of London. That of ground in the business part of the City of Glasgow is evidenced by the sale of two lots in Buchanan Street, one of 540 square yards for £43,000, or £76 15*s.* per square yard, and the other of 647 square yards for £35,000, or £54 per square yard.

**Trade in American Cattle and Sheep.**—The increase of the trade with the United States is shown by the fact that, while in 1877 there were sent to Great Britain 11,523 cattle and 13,120 sheep, there were imported in 1890, from the States, 294,391 cattle and 384,646 sheep, while from Canada came 83,538 cattle and 121,309 sheep. In 1877 the trade was confined to Glasgow, Liverpool, and Southampton. Now London, Bristol, Cardiff, Hull, Aberdeen, and Dundee have ships expressly built for the carriage of cattle from particular American ports, and many chartered vessels, "tramps," go out on chance of finding freight where it may be found.

**Anecdotes of the Royal Family.**—The year 1848, that year of great upheaval in all Europe, had a faint revolutionary echo also in England. Then occurred the abortive Chartist demonstration, which, thanks to the national good sense, aided by the national wet weather, came to nothing. During the course of these troubled months, the Queen read no less than twenty-eight thousand despatches sent out or received at the Foreign Office—an amount of work which few of the Queen's male subjects would have accomplished without complaints of overwork, not to mention that she had besides given birth to a child, the Princess Louise. No wonder a holiday was required; and Balmoral was for the first time visited. A visit paid to Ireland in 1849 ought to have convinced her that here, too, she had loyal, warm-hearted subjects. The royal children in especial pleased the people, and an old woman in the crowd shouted, "Oh, Queen, dear, make one o' them darlings Prince Patrick, and all Ireland will die for ye." And the next royal baby was indeed called Patrick; but, unfortunately, the Duke of Wellington's name, Arthur, which preceded it, was the one by which he became known, so even this innocent little satisfaction was denied the Irish people. This was the seventh child. Here is the Prince's announcement of the birth to his grandmother: "May Day 1850.—This morning, at about a quarter past eight . . . a little boy glided into the light of day, and was received by the sisters with *jubilates*. 'Now we are just as many as the days of the week,' was the

cry, and a struggle arose as to who was to be Sunday. Out of well-bred courtesy the honour was accorded to the new-comer." The end of 1851 saw the *coup d'état* of Napoleon III, and a good deal of ill-feeling resulted in England, with fear of war between the two countries. But before long the nation and its rulers resigned themselves to the changed state of things. Napoleon and his wife visited the English Court, and were received as equals, the Queen and Prince Albert returning their visit the same year. After seeing on this occasion the tomb of the Great Napoleon, the Queen writes: "It seems as if in this tribute of respect to a departed dead foe, old enmities and rivalries are wiped out, and the seal of Heaven placed upon that bond of unity which is now happily established between two great and powerful nations." The little Prince of Wales, who was with his parents, then acquired that love for the French capital which has since distinguished him. He tried hard to persuade the Empress to keep him and his sister in Paris after the departure of their parents. The Empress said she could not do so, as the Queen and Prince could not spare them. "Oh yes," was the reply, "they can; there are six more of us at home."—*The Sovereigns and Courts of Europe. By Politikos.* (Fisher Unwin.)

Many of our readers will be glad to be thus reminded of the republication of the series of papers which appeared in our pages last year. They have been issued in a handsome volume, with some few additions, amongst them an interesting paper on the English Court.

**Twinkling of the Stars and Planets.**—Though apparently the phenomenon of scintillation is observed only in the fixed stars, and not in the planets, the latter are in reality also affected. When near the horizon a slight tremulous motion in planets is sometimes visible to a practised eye, and when in higher positions a scintillating movement is occasionally noticed at the edges of the planetary discs when viewed through a telescope. All celestial objects, therefore, more or less, display this phenomenon. The explanation of the different effects of scintillation on stars and planets is very simple, assuming that they are produced by a rapid change in the intensity and colour of the rays of light while passing through the earth's atmosphere, in which the progress of the stellar rays is interfered with by unequal refraction as they pass through the various aerial currents of different temperatures and densities. With planets, although not equally apparent to us, the same interference with the direct course of the rays of light takes place, but there is an important distinction. In stars the images that we see are mere points of light, and the rapid slight deviations of not more than three or four seconds in their positions, produced by the unequal heating, density, or humidity of the different atmospheric strata, are therefore sensible to the natural vision; but in planets, whose discs have an apparent diameter of perhaps from twenty to forty seconds, the eye is not sufficiently delicate to appreciate any change of position in an arc of four seconds, though they may be affected by a similar scintillation as the stars. Hence, to the eye, planets appear to shine with a steady light. The scintillation of the stars is decidedly more in winter than in summer, especially near the horizon, where the rays of stellar light have to pass through a denser atmosphere. In tropical countries, and on the summits of Mont Blanc and other high mountains in Switzerland, this phenomenon has seldom been observed to affect the fixed stars at a high elevation above the horizon.

EDWIN DUNKIN, F.R.S.

**Vice-Chancellor Kindersley and the Rev. Robert Hall.**—On a trial in the Court of Chancery, in 1863, the opinion of Robert Hall was quoted by Lord Cairns, the opposing advocate. He endeavoured to lessen the force of the saying by urging that the sentiments might have another meaning. The Vice-Chancellor interposed with the remark that "the Court will not hear anything disparaging to the testimony of Robert Hall. I was in the habit of hearing him when I was at Cambridge as a student, and I must affirm that his honesty and truthfulness were as great as his eloquence, and that was unrivalled." Mr. S. R. Pattison, solicitor, tells that he was taken when young to the annual meeting of the Bible Society in the old Town Hall at Leicester. He can well recollect the earnestness with which he recommended the work of the Society to his fellow-townsmen. He remembers to this day the effect of the speaker's forcible and eloquent utterances. The fame of his eloquence has been attested by many witnesses. Professor Adam Sidgwick, himself one of nature's orators, has said that he never felt or witnessed in any other man the same power of eloquence. "I have listened," he says, "with admiration to the greatest orators in both Houses of Parliament, and to many good and heart-moving preachers, but I never heard one who was to my mind on the same level as Robert Hall."

**The Mandarin's Diamonds.**—In the "Citizen of the World" Oliver Goldsmith tells in a brief anecdote how little the possessor of treasures may sometimes excel in enjoyment the poor passenger by the way. A Chinese mandarin, appearing in a blaze of diamonds, was ostentatiously thanked for them by a bystander in the street. The speech was so odd that the mandarin asked the man what he meant, saying, "I never gave you any of them." "No," replied the man, "but you have let me look at them, and looking at them is all the use you can make of them yourself; so that there is no difference between us, except that you have the care and trouble of watching them, and that is an employment I do not much desire."

# Household Queries

**Ants in a House.**—A correspondent writes as follows concerning this unpleasant difficulty:—"We have found the following remedy most simple and effectual. Take a sponge (a rather coarse and open one is best), damp it, and then sprinkle thickly with castor sugar; place this where the ants have been found, and in a few hours it will be full of them. The sponge should then be plunged in boiling water, which will, of course, kill the ants at once, and at the same time wash them out of the pores. Two years ago we heard of this, and tried it in two cupboards which had been almost disused on account of the ants; and after a short time, I think about ten days or a fortnight, we completely got rid of them. I don't know whether all were destroyed, or if some instinct taught them to keep away from the danger. Last summer we noticed a few in one of the cupboards, but applied the sponge at once and after two or three times saw no more of them. I am sure your querist will find this worth trying."

**Worms in Book-case.**—*I have an oak book-case (it was made for us two years ago) which on one side is getting full of tiny holes, out of which oozes a fine powder like sawdust. I was told to insert turpentine into these holes in order to kill the worm; I have done so, but still the holes increase. Can you tell me of any efficient remedy?*—Rubbing in paraffin two or three times will probably be effectual. If this impairs the polish, the latter must be done again.

**The Hands.**—*Kindly say what is the best receipt for whitening and softening the hands?*—More particulars should have been given: thus, a lady may wear gloves for rough work, while a man cannot in his. But generally, for immediate treatment, the best plan is to wash the hands with

tepid soft water and mild soap the last thing at night, then anoint them freely with vinolia or cold cream, and put on an old pair of gloves to sleep in. Avoid very cold or hot water, and if the hands are soiled and rough use a sand-ball or oatmeal. Always thoroughly dry them after washing.

**Painting on China.**—*Can you inform me if hand-painting on china ought to be varnished before it is sent to the pottery to be burnt in? Also, do the colours change when burning in?*—Many commence this art and few persevere, the difficulties of fired work being considerable. The colours do change considerably in firing, and one of the first things beginners have to do is to paint a tile or something over with different colours in squares, to serve as a sort of key, noting each carefully. Several stages and firings are often needed for one piece of work. It is not varnished, but fluxes, as they are called, are used with some colours to aid in firing. More firing is needed with terra-cotta or under-glaze work than with over-glaze work. Most amateurs soon become tired of kiln work, and resort to oil- or water-colour painting upon terra-cotta or other ware, which presents no difficulty.

**Cleaning White Gloves.**—*Will you tell me how to clean white evening Suède, and kid gloves?*—Another correspondent also asks this. A reply was given to a similar query in the part for April last, p. 432. As we have before said, however, white is a very unsatisfactory colour for domestic treatment, and it is generally much better to collect a few pairs and then send them to be done.

**Stained Teeth.**—*Would you tell me how I could clean my teeth? I had a strong solution of iron put on them some time ago to stop my gums from bleeding, and they have been black ever since. I have tried a good many things, but it doesn't do them any good. Could you also tell me how I could get the rust out of a good knife which has been lying by?*—You cannot apply anything with safety, and must trust to time, which generally mends matters, unless the iron treatment has been very long continued. But even if so, anything strong enough to act chemically would injure the teeth seriously. Choose as a tooth-powder merely precipitated chalk, with two drachms each bicarbonate of soda and borax to every ounce, with, if you like, a little orris root and scent.—Rub the knife with fine emery-powder and oil.

**Tarnished Brass Lacquer.**—*Can you give me a recipe for cleaning and improving gas-brackets as above, other than having them relacquered?*—Apart from this, you can only clean lacquered brass by either washing gently, say with "Monkey-brand" soap, or scouring the lacquer off with putty powder, and so cleaning up as plain bright brass; or it can be enamelled.

**Flat Roof.**—*On part of my house I have a flat roof which is used daily in the summer as a recreation ground. It is covered with cement, but as this cracks and lets the wet through, I am desirous to get something to prevent this. Would a mixture of tar and paint answer, and would it dry sufficiently hard?*—Tar and paint destroy each other. Probably the best thing you can do is to have a thin coat of asphalt laid over, any cracks in which, by providing a little material in store, can be easily mended from time to time. A great deal depends, however, upon how the existing cement is laid, and you should ask a respectable builder to advise after seeing it.

**Buying a Dog.**—*Can you tell me where I should be likely to get a good King Charles spaniel, and what would be the cost of a young one?*—Examine the advertisements, or advertise yourself, in the "Bazaar, Exchange & Mart." Of course you must be cautious, but with prudence can get what you desire. There is no current price for such animals.

**Cake—Jam.**—*Please give a recipe for making light cakes, and another for rhubarb jam.*—As to cake, you should have been more specific; but the following is the exquisite French cake called *Brioche*, light and not too sweet. To have a light cake the flour must be thoroughly *dried* and then sifted. You want 1 lb. of flour, ¾ lb. of eggs (according to size), 10 oz. of butter, ½ oz of German yeast, a teaspoonful of salt, and a dessert-teaspoonful of powdered sugar. Put a quarter of the flour on a marble or slate slab and make a well in the middle; dissolve the yeast in a little warm water and put it in the well. Gradually add water enough to make into a paste, just as you make pie-crust; knead well, roll into a ball, and put in a warm place to rise to three times its bulk. Take the rest of the flour and again make a well; beat the butter to a cream; dissolve the salt and sugar in a little water, add the butter and eggs, and mix the whole well; it can only be properly done with the fingers, and you need not fear over-handling, as the lightness depends on the sponge that is rising. When well mixed, the risen sponge is added and all kneaded together; this must be more gentle, and there is knack required. Put by in a floured basin in a cool place till next day. The next morning mix together again, put by another hour or two in the cold, and do this a second time also. It should now be elastic and full of tiny air-bubbles, and is ready to bake. Press it down in a hoop with the hands, egg it over, if you like, with a brush, and bake—about an hour and a half—covering over the top with a sheet of buttered paper as soon as it changes colour, to avoid burning. You can mix in this cake different candied fruits, and such rich cake is far superior to the heavy English "plum" kind.—The following is the best rhubarb jam we know of. Cut the rhubarb without peeling in pieces about 2 inches long, weigh it, and put in a moderate oven in a close-covered earthen pot to draw out some of the juice. Pour this juice into the preserving pan, and boil it with the sugar (taking ¾ lb. of sugar to 1 lb. of rhubarb, or even 1 lb. each may be used) for a short time while the scum rises, then add the rhubarb and boil about an hour. A great many people prefer to add about 3 oz. preserved ginger to every pound of rhubarb, with a little shredded lemon-peel, but these things are matters of taste.

**Oil Painting.**—*You will oblige me very much by telling me where I can get in London a book concerning the art of oil painting, and at what price?*—Like so many others, the question is indefinite. If, as we suppose, you mean house-painting, the best is "House-Painting," by E. A. Davidson. 5*s.* Crosby Lockwood & Son. For higher instruction in design and decorative work, take Field's "Grammar of Colouring," same publishers.

**Dyeing Wool.**—*Will you do me the favour of informing me the best way to dye or colour the wool on a dressed sheep-skin?*—There is no method really within the reach of ordinary domestic treatment, except the use of Judson's or any similar dyes prepared specially for such domestic use, and which give all necessary directions.

**Varnishing Oil Painting.**—*Would best crystal varnish act as well as picture mastic varnish or copal varnish for varnishing oil-colours newly painted?*—The question is not quite clear. If, as we suppose, you mean a picture, "crystal" varnish is a perfectly indefinite term used for many things, and you would be unsafe in using it without advice at an artists' colour-shop on the identical article.

**Discoloured Brass.**—*Can you tell me a remedy for discoloured brass candlesticks?*—If only black with dirt use "Monkey-brand" soap; if oxidised, Harris's or any other polishing paste.

C. ROULLIER.

# THE STORY OF FRANCIS CLUDDE.

BY STANLEY J. WEYMAN, AUTHOR OF "THE HOUSE OF THE WOLF," ETC.

## CHAPTER XIX.—FERDINAND CLUDDE.

I TREMBLED AS SHE RAISED HER HAND AND, STANDING OTHERWISE MOTIONLESS, POINTED AT ME OUT OF THE GLOOM.

THE bitterness of that hour long past, when he had left me for death, when he had played with the human longing for life, and striven without a thought of pity to corrupt me by hopes and fears the most awful that mortals know, was in my voice as I spoke. I rejoiced that vengeance had come upon him at last, and that I was its instrument. I saw the pallor of a great fear creep into his dark cheek, and read in his eyes the vicious passion of a wild beast trapped, and felt no pity. "Master Clarence!" I said, and laughed—laughed mockingly. "You do not look pleased to see your friends. Or perhaps you do not remember me. Stand forward, Master Bertie. Maybe he will recognise you."

But though Master Bertie came forward and stood by my side gazing at him, the villain's eyes did not for an instant shift from mine. "It is the man!" my companion said after a solemn pause—for the other, breathing fast, made no answer. "He was a spy in the pay of Bishop Gardiner, when I knew him. At the Bishop's death I heard that he passed into the service of the Spanish Ambassador, the Count de Feria. He called himself at that time Clarence. I recognise him."

The quiet words had their effect. From full one half of the savage crew round us a fierce murmur rose more terrible than any loud outcry. Yet this seemed a relief to the doomed man; he forced himself to look away from me and to confront the dark ring of menacing faces which hemmed him in. The moment he did so he appeared to find courage and words. "They take me for another man!" he cried in hoarse accents. "I know nothing of them!" and he added a fearful oath. "He knows me. Ask him!".

He pointed to Walter Kingston, who was sitting moodily on a tram outside the ring, and who alone had not risen under the excitement of my challenge. On being thus appealed to he looked up suddenly. "If I am to choose between you," he said bitterly, "and say which is the true man, I know which I shall pick."

"Which?" Clarence murmured. "Which?"

This time his tone was different. In his voice was the ring of hope.

"I should give my vote for you," Kingston replied, looking contemptuously at him. "I know something about you, but of the other gentleman I know nothing!"

"And not much of the person you call Crewdson," I retorted fiercely, "since you do not know his real name."

"I know this much," the young man answered, tapping his boot with his scabbard with studied carelessness, "that he lent me some money, and seemed a good fellow and one that hated a mass priest. That is enough for me. As for his name, it is his fancy perhaps. You call yourself Carey. Well, I know a good many Careys, but I do not know you, nor ever heard of you!"

I swung round on him with a hot cheek. But the challenge which was upon my tongue was anticipated by Master Bertie, who drew me forcibly back. "Leave this to me, Francis," he said, "and do you watch that man. Master Kingston and gentlemen," he continued, turning again to them, and drawing himself to his full height as he addressed them, "listen if you please. You know me if you do not know my friend. The honour of Richard Bertie has never been challenged until to-night, nor ever will be with impunity. Leave my friend out of the question and put me in it. I, Richard Bertie, say that that man is a paid spy and informer, come here in quest of blood-money! And he, Crewdson, a nameless man, says that I lie. Choose between us. Or look at him and judge! Look!"

He was right to bid them look. As the savage murmur rose again and took from the wretched man his last hope, as the ugliness of despair and wicked, impotent passion distorted his face, he was indeed the most deadly witness against himself.

The lights which shone on treacherous weapons half hidden, or on the glittering eyes of cruel men whose blood was roused, fell on nothing so dangerous as the livid, despairing face which, unmasked and eyed by all with aversion, still defied us. Traitor and spy as he was, he had the merit of courage at least; he would die game. And even as I, with a first feeling of pity for him, discerned this, his sword was out, and with a curse he lunged at me.

Penruddocke saved me by a buffet which sent me reeling against the wall, so that the villain's thrust was spent on air. Before he could repeat it, four or five men flung themselves upon him from behind. For a moment there was a great uproar, while the group surrounding him swayed to and fro as he dragged his captors up and down with a strength I should not have expected. But the end was certain, and we stood looking on quietly. In a minute or two they had him down, and disarming him, bound his hands.

For me he seemed to have a special hatred. "Curse you!" he panted, glaring at me as he lay helpless. "You have been my evil angel! From the first day I saw you, you have thwarted me in every plan, and now you have brought me to this!"

"Not I, but yourself," I answered.

"My curse upon you!" he cried again, the rage and hate in his face so terrible that I turned away shuddering and sick at heart. "If I could have killed you," he cried, "I would have died contented."

"Enough!" interposed Penruddocke, briskly. "It is well for us that Master Bertie and his friend came here to-night. Heaven grant it be not too late! We do not need," he added, looking round, "any more evidence, I think?"

The dissent was loud and, save for Kingston, who still sat sulking apart, unanimous.

"Death?" said the Cornishman, quietly.

No one spoke, but each man gave a brief stern nod.

"Very well," the leader continued; "then I propose——"

"One moment," said Master Bertie, interrupting him. "A word with you apart, with our friends' permission. You can repeat it to them afterwards."

He drew Sir Thomas aside, and they retired into the corner by the door, where they stood talking in whispers. I had small reason to feel sympathy for the man who lay there tied and doomed to die like a calf. Yet even I shuddered—yes, and some of the hardened men round me shuddered also at the awful expression in his eyes as, without moving his head, he followed the motions of the two by the door. Some faint hope springing into being wrung his soul, and brought the perspiration in great drops to his forehead. I turned away, thinking gravely of the early morning three years ago when he had tortured me by the very same hopes and fears which now racked his own spirit.

Penruddocke came back, Master Bertie following him.

"It must not be done to-night," he announced quietly, with a nod which meant that he would explain the reason afterwards. "We will meet again to-morrow at four in the afternoon instead of at eight in the evening. Until then two must remain on guard with him. It is right he should have some time to repent, and he shall have it."

This did not at once find favour.

"Why not run him through now?" said one, bluntly. "And meet to-morrow at some place unknown to him? If we come here again we shall, likely enough, walk straight into the trap."

"Well, have it that way, if you please," answered Sir Thomas, shrugging his shoulders. "But do not blame me afterwards if you find we have let slip a golden opportunity. Be fools if you like. I dare say it will not make much difference in the end!"

He spoke at random, but he knew how to deal with his crew, it seemed, for on this those who had objected assented reluctantly to the course he proposed. "Barnes and Walters are here in hiding, so they had better be the two to guard him," he continued. "There is no fear that they will be inclined to let him go!" I looked at the men whom the glances of their fellows singled out, and found them to belong to the little knot of fanatics I had before remarked: dark, stern men, worth, if the matter ever came to fighting, all the rest of the band put together.

"At four, to-morrow, then, we meet," Sir Thomas concluded lightly. "Then we will deal with him,

never fear! Now it is near midnight, and we must be going. But not all together, or we shall attract attention."

Half an hour later Master Bertie and I rode softly out of the courtyard and turned our faces towards the city. The night wind came sweeping across the valley of the Thames, and met us full in the face as we reached the brow of the hill. It seemed laden with melancholy whispers. The wretched enterprise, ill-conceived, ill-ordered, and in its very nature desperate, to which we were in honour committed, would have accounted of itself for any degree of foreboding. But the scene through which we had just passed, and on my part the knowledge that I had given up a fellow-being to death, had their depressing influences. For some distance we rode in silence, which I was the first to break.

"Why did you put off his punishment?" I asked.

"Because I think he will give us information in the interval," Bertie answered briefly. "Information which may help us. A spy is generally ready to betray his own side upon occasion."

"And you will spare him if he does?" I asked. It seemed to me neither justice nor mercy.

"No," he said, "there is no fear of that. Those who go with ropes round their necks know no mercy. But drowning men will catch at straws; and ten to one he will babble!"

I shivered. "It is a bad business," I said.

He thought I referred to the conspiracy, and he inveighed bitterly against it, reproaching himself for bringing me into it, and for his folly in believing the rosy accounts of men who had all to win, and nothing save their worthless lives to lose. "There is only one thing gained," he said. "We are likely to pay dearly for that, so we may think the more of it. We have been the means of punishing a villain."

"Yes," I said, "that is true. It was a strange meeting and a strange recognition. Strangest of all that I should be called up to swear with him."

"Not strange," Master Bertie answered gravely. "I would rather call it providential. Let us think of that, and be of better courage, friend. We have been used; we shall not be cast away before our time."

I looked back. For some minutes I had thought I heard behind us a light footstep, more like the pattering of a dog than anything else. I could see nothing, but that was not wonderful, for the moon was young and the sky overcast. "Do you hear some one following us?" I said.

Master Bertie drew rein suddenly, and turning in the saddle we listened. For a second I thought I still heard the sound. The next it ceased, and only the wind toying with the November leaves and sighing away in the distance came to our ears. "No," he said, "I think it must have been your fancy. I hear nothing."

But when we rode on the sound began again, though at first more faintly as if our follower had learned prudence and fallen farther behind. "Do not stop, but listen!" I said softly. "Cannot you hear the pattering of a naked foot now?"

"I hear something," he answered. "I am afraid you are right, and that we are followed."

"What is to be done?" I said, my thoughts busy.

"There is Caen wood in front," he answered, "with a little open ground on this side of it. We will ride under the trees and then stop suddenly. Perhaps we shall be able to distinguish him as he crosses the open behind us."

We made the experiment; but as if our follower had divined the plan, his footsteps ceased to sound before we had stopped our horses. He had fallen farther behind. "We might ride quickly back," I suggested, "and surprise him."

"It would be useless," Bertie answered. "There is too much cover close to the road. Let us rather trot on and outstrip him."

We did trot on; and what with the tramp of our horses as they swung along the road, and the sharp passage of the wind by our ears, we heard no more of the footstep behind. But when we presently pulled up to breathe our horses—or rather within a few minutes of our doing so—there it was behind us nearer and louder than before. I shivered as I listened; and presently, acting on a sudden impulse, I wheeled my horse round and spurred him back a dozen paces along the road.

I pulled up.

There was a movement in the shadow of the trees on my right, and I leaned forward, peering in that direction. Gradually I made out the lines of a figure standing still as though gazing at me; a strange distorted figure, crooked, short, and in some way, though no lineament of the face was visible, expressive of a strange and weird malevolence. It was the witch! The witch whom I had seen in the kitchen at the Gatehouse. How then had she come hither? How had she, old, lame, decrepit, kept up with us?

I trembled as she raised her hand, and, standing otherwise motionless, pointed at me out of the gloom. The horse under me was trembling too, trembling violently, with its ears laid back, and, as she moved, its terror increased, it plunged wildly. I had to give for a moment all my attention to it, and though I tried, in mere revolt against the fear which I felt was overcoming me, to urge it nearer, my efforts were vain. After nearly unseating me, the beast whirled round and, getting the better of me, galloped down the road towards London.

"What is it?" cried Master Bertie, as I came speedily up with him: he had ridden slowly on. "What is the matter?"

"Something in the hedge startled it," I explained, trying to soothe the horse. "I could not clearly see what it was."

"A rabbit, I daresay," he remarked, deceived by my manner.

"Perhaps it was," I answered. Some impulse, not unnatural, led me to say nothing about what I had seen. I was not quite sure that my eyes had not deceived me. I feared his ridicule, too, though he was not very prone to ridicule. And above all I shrank from explaining the medley of superstitious fear, distrust, and abhorrence in which

I held the creature who had shown so strange a knowledge of my life.

We were already near Holborn, and reaching without further adventure a modest inn near the Bars, we retired to a room we had engaged, and lay down with none of the gallant hopes which had last night formed the subject of our talk. Yet we slept well, for depression goes better with sleep than does the tumult of anticipation ; and I was up early, and down in the yard looking to the horses before London was well awake. As I entered the stable a man lying curled up in the straw rolled lazily over and, shading his eyes, glanced up. Apparently he recognised me, for

"YOU CRACK THE NUT."

he got slowly to his feet. "Morning!" he said gruffly.

I stood staring at him, wondering if I had made a mistake.

"What are you doing here, my man?" I said sharply, when I had made certain I knew him, and that he was really the surly ostler from the Gatehouse tavern at Highgate. "Why did you come here? Why have you followed us?"

"Come about your business," he answered. "To give you that."

I took the note he held out to me. "From whom?" I said. "Who sent it by you?"

"Cannot tell," he replied, shaking his head.

"Cannot, or will not?" I retorted.

"Both," he said doggedly. "But there, if you want to know what sort of a kernel is in a nut, you don't shake the tree, master—you crack the nut."

I looked at the note he had given me. It was but a slip of paper folded thrice. The sender had not addressed, or sealed, or fastened it in any way ; had taken no care either to insure its reaching its destination or to prevent prying eyes seeing the contents. If one of our associates had sent it, he had been guilty of the grossest carelessness. "You are sure it is for me?" I said.

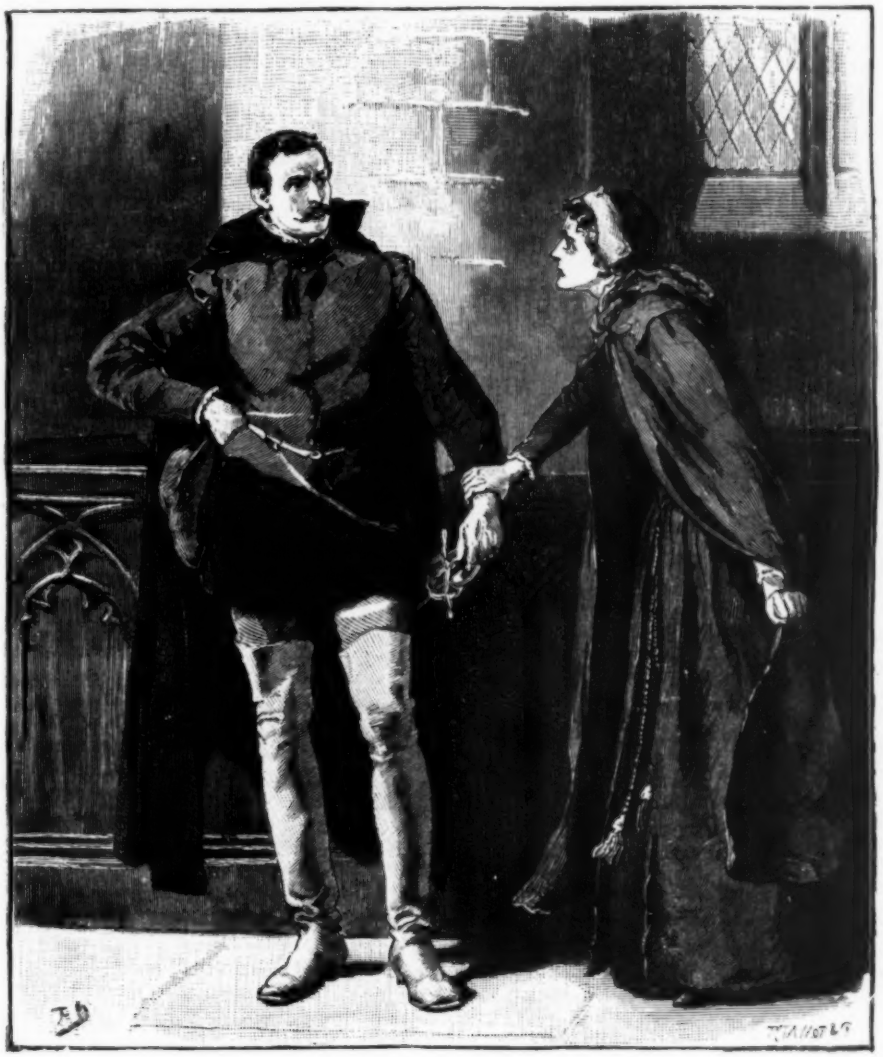
"As sure as mortal can be," he answered. "Only that it was given me for a man, and not a mouse! You are not afraid, master?"

I was not ; but he edged away as he spoke, and looked with so much alarm at the scrap of paper that it was abundantly clear he was very much afraid himself, even while he derided me. I saw that if I had offered to return the note he would have backed out of the stable and gone off there and then as fast as his lame foot would let him. This puzzled me. However, I read the note. There was nothing in it to frighten me. Yet, as I read, the colour came into my face, for it contained one name to which I had long been a stranger.

"To Francis Cludde," it ran. "If you would not do a thing of which you will miserably repent all your life, and which will stain you in the eyes of all Christian men, meet me two hours before noon at the cross street by St. Botolph's where you first saw Mistress Bertram. And tell no one. Fail not to come. In Heaven's name, fail not!"

The note had nothing to do with the conspiracy, then, on the face of it; mysterious as it was, and mysteriously as it came. "Look here!" I said to the man. "Tell me who sent it, and I will give you a crown."

"I would not tell you," he answered stubbornly, "if you could make me King of England! No, nor King of Spain too! You might rack me and you would not get it from me!"



His one eye glowed with so obstinate a resolve that I gave up the attempt to persuade him, and turned to examine the message itself. But here I fared no better. I did not know the handwriting, and there was no peculiarity in the paper. I was no wiser than before. "Are you to take back any answer?" I said.

"No," he replied, "the saints be thanked for the same! But you will bear me witness," he went on anxiously, "that I gave you the letter. You will not forget that, or say that you have not had it? But there!" he added to himself, as he turned away, speaking in a low voice, so that I barely caught the sense of the words, "what is the use? She will know!"

She will know! It had something to do with a woman then, even if a woman were not the writer. I went in to breakfast in two minds about going. I longed to tell Master Bertie and take his advice, though the unknown had enjoined me not to do so. But for the time I refrained, and explaining my absence of mind as well as I could, I presently stole away on some excuse or other, and started in good time, and on foot, into the city. I reached the rendezvous a quarter of an hour before the time named, and strolling between the church and the baker's shop, tried to look as much like a chance passer-by as I could, keeping the while a wary look-out for any one who might turn out to be my correspondent.

The morning was cold and grey. A drizzling rain was falling. The passers were few, and the appearance of the streets, dirty and with littered kennels, was dreary indeed. I found it hard at

once to keep myself warm and to avoid observation as I hung about. Ten o'clock had rung from more than one steeple, and I was beginning to think myself a fool for my pains, when a woman of middle height, slender and young in figure, but wearing a shabby brown cloak, and with her head muffled in a hood as though she had the toothache or dreaded the weather more than ordinary, turned the corner of the belfry and made straight towards

"WHAT HAVE YOU DONE WITH HIM?"

me. She drew near, and seemed about to pass me without notice. But when abreast of me she glanced up suddenly, her eyes the only features I could see.

"Follow me to the church!" she murmured gently. And she swept on to the porch.

I obeyed reluctantly: very reluctantly, my feet seeming like lead. For I knew who she was. Though I had only seen her eyes, I had recognised them, and guessed already what her business with me was. She led the way resolutely to a quiet corner. The church was empty and still, with only the scent of incense in the air to tell of a recent service. It was no surprise to me when she turned abruptly, and, removing her hood, looked me in the face.

"What have you done with him?" she panted, laying her hand on my arm. "Speak! Tell me what you have done with him?"

The question, the very question, I had foreseen! Yet I tried to fence with her. I said, "With whom?"

"With whom?" she repeated bitterly. "You know me! I am not so changed in three years that you do not recognise me?"

"No; I know you," I said.

There was a hectic flush on her cheeks, and it seemed to me that the dark hair was thinner on her thin temples than when I had seen her last. But the eyes were the same.

"Then why ask with whom?" she cried passion-

ately. "What have you done with the man you called Clarence?"

"Done with him?" I said feebly.

"Ay, done with him? Come, speak and tell me!" she repeated in fierce accents, her hand clutching my wrist, her eyes probing my face with merciless glances. "Have you killed him? Tell me!"

"Killed him, Mistress Anne?" I said sullenly. "No, I have not killed him."

"He is alive?" she cried.

"For all I know, he is alive."

She glared at me for some seconds to assure herself that I was telling the truth. Then she heaved a great sigh; her hands fell from my wrists, the colour faded out of her face, and she lowered her eyes. I glanced round with a momentary idea of escape—I so shrank from that which was to come. But before I had well entertained the notion she looked up, her face grown calm.

"Then what have you done with him?" she asked.

"I have done nothing with him," I answered.

She laughed: a mirthless laugh. "Bah!" she said, "do not tell me lies! That is your honour, I suppose—your honour to your friends down in the cellar there! Do you think that I do not know all about them? Shall I give you the list? He is a very dangerous conspirator is Sir Thomas Penruddocke, is he not? And that scented dandy Master Kingston! Or Master Crewdson—tell me of him! Tell me of him, I say!" she exclaimed, with a sudden return from irony to a fierce eagerness, a breathless impatience. "Why did he not come up last night? What have you done with him?"

I shook my head, sick and trembling. How could I tell her?

"I see," she said. "You will not tell me. But you swear he is yet alive, Master Cludde? Good. Then you are holding him for a hostage? Is that it?" with a piercing glance at my face. "Or, you have condemned him, but for some reason the sentence has not been executed!" She drew a long, deep breath, for I fear my face betrayed me. "That is it, is it? Then there is still time."

She turned from me and looked towards the end of the aisle, where a dull red lamp hanging before the altar glowed feebly in the warm scented air. She seemed so to turn and so to look in thankfulness, as if the news she had learned were good instead of what it was. "What is the hour fixed?" she asked suddenly.

I shook my head.

"You will not tell me? Well, it matters not," she answered briskly. "He must be saved. Do you hear? He must be saved, Master Cludde. That is your business."

I shook my head.

"You think it is not?" she said. "Well, I can show you it is! Listen!"

She raised herself on a step of the font, and looked me harshly in the face. "If he be not given up to me safe and sound by sunset this evening, I will betray you all! All! I have the list here," she muttered sternly, touching her bosom. "You, Master Bertie, Penruddocke, Fleming, Barnes: all. All, do you hear? Give him up or you shall hang!"

"You would not do it!" I cried aghast, peering into her burning eyes.

"Would not do it? Fool!" she hissed. "If all the world but he had one head, I would cut it off to save his! He is my husband! Do you hear? He is my husband—my all! Do you think I have given up everything, friends and honour and safety, for him, to lose him now? No! You say I would not do it? Do you know what I have done? You have a scar there."

She touched me lightly on the breast. "I did it," she said.

"You?" I muttered.

"Yes, I, you blind fool! I did it," she answered. "You escaped then, and I was glad of it, since the wound answered my purpose. But you will not escape again. The cord is surer."

Something in her last words crossed my memory and enlightened me.

"You were the woman I saw last night," I said. "You followed us from Highgate."

"What matter! What matter!" she exclaimed impatiently. "Better be footsore than heartsore. Will you do now what I want? Will you answer for his life?"

"I can do nothing without the others," I said.

"But the others know nothing," she answered. "They do not know their own danger. Where will you find them?"

"I shall find them," I replied resolutely. "And in any case I must consult Master Bertie. Will you come and see him?"

"And be locked up too?" she said sternly, and in a different tone. "No. It is you must do this, and you must answer for it, Francis Cludde. You, and no one else."

"I can do nothing by myself," I repeated.

"Ay, but you can—you must!" she retorted, "or Heaven's curse will be upon you! You think me mad to say that. Listen! Listen, fool! The man whom you have condemned, whom you have left to die, is not only my husband, wedded to me these three years, but your father—your father, Ferdinand Cludde!"

### CHAPTER XX.—THE COMING QUEEN.

I STOOD glaring at her.

"You were a blind bat or you would have found it out for yourself," she continued scornfully. "A babe would have guessed it, knowing as much of your father as you did."

"Does he know himself?" I muttered hoarsely, looking anywhere but at her now. The shock had left me dull and confused. I did not doubt her word, rather I wondered with her that I had not found this out for myself. But the possibility of meeting my father in that wide world into which I had plunged to escape from the knowledge of his existence, had never occurred to me. Had I thought of it, it would have seemed too unlikely: and though I might have seen in Gardiner a link between us, and so have identified him, the greatness of the Chancellor's transactions, and certain

things about Clarence which had seemed, or would have seemed, had I ever taken the point into consideration, at variance with my ideas of my father, had prevented me getting upon the track.

"Does he know that you are his son, do you mean?" she said. "No, he does not."

"You have not told him?"

"No," she answered with a slight shiver.

I understood. I comprehended that even to her the eagerness with which, being father and son, we had sought one another's lives during those days on the Rhine, had seemed so dreadful that she had concealed the truth from him.

"When did you learn it?" I asked, trembling too.

"I knew his right name before I ever saw you," she answered. "Yours I learned on the day I left you at Santon." Looking back I remembered the strange horror, then inexplicable, which she had betrayed; and I understood it. So it was that knowledge which had driven her from us! "What will you do now?" she said. "You will save him? You must save him! He is your father."

Save him? I shuddered at the thought that I had destroyed him! that I, his son, had denounced him! Save him. The perspiration sprang out in beads on my forehead. If I could not save him I should live pitied by my friends and loathed by my enemies!

"If it be possible," I muttered, "I will save him."

"You swear it?" she cried. Before I could answer she seized my arm and dragged me up the dim aisle until we stood together before the Figure and the Cross. The chimes above us rang eleven. A shaft of cold sunshine pierced a dusty window and, full of dancing motes, shot athwart the pillars.

"Swear!" she repeated with trembling eagerness, turning her eyes on mine, and raising her hand solemnly towards the Figure. "Swear by the Cross!"

"I swear," I said.

She dropped her hand. Her form seemed to shrink and grow less. Making a sign to me to go, she fell on her knees on the step, and drew her hood over her face. I walked away on tiptoe down the aisle, but glancing back from the door of the church I saw the small, solitary figure still kneeling in prayer. The sunshine had died away. The dusty window was colourless. Only the red lamp glowed dully above her head. I seemed to see what the end would be. Then I pushed aside the curtain, and slipped out into the keen air. It was hers to pray. It was mine to act.

I lost no time, but on my return I could not find Master Bertie either in the public room or in the inn-yard, so I sought him in his bedroom, where I found him placidly reading a book; his patient waiting in striking contrast with the feverish anxiety which had taken hold of me. "What is it, lad?" he said, closing the volume, and laying it down on my entrance. "You look disturbed?"

"I have seen Mistress Anne," I answered. He whistled softly, staring at me without a word. 'She knows all," I continued.

"How much is all?" he asked after a pause.

"Our names—all our names, Penruddocke's, Kingston's, the others: our meeting-place, and that we hold Clarence a prisoner. She was that old woman whom we saw at the Gatehouse tavern last night."

He nodded, appearing neither greatly surprised nor greatly alarmed. "Does she intend to use her knowledge?" he said. "I suppose she does."

"Unless we let him go safe and unhurt before sunset."

"They will never consent to it," he answered, shaking his head.

"Then they will hang!" I cried.

He looked hard at me a moment, discerning something strange in the bitterness of my last words. "Come, lad," he said, "you have not told me all. What else have you learned?"

"How can I tell you?" I cried wildly, waving him off, and going to the lattice that my face might

HE CAME AND LAID HIS HAND ON MY SHOULDER.

be hidden from him. "Heaven has cursed me!" I added, my voice breaking.

He came and laid his hand on my shoulder. "Heaven curses no one," he said. "Most of our curses we make for ourselves. What is it, lad?"

I covered my face with my hands. "He—he is my father," I muttered. "Do you understand? Do you see what I have done? He is my father!"

"Ha!" Master Bertie uttered that one exclamation in intense astonishment; then he said no more. But the pressure of his hand told me that he understood, that he felt with me, that he would help me. And that silent comprehension, that silent assurance, gave the sweetest comfort. "He must be allowed to go, then, for this time," he resumed gravely, after a pause in which I had had time to recover myself. "We will see to it. But there will be difficulties. You must be strong and brave. The truth must be told. It is the only way."

I saw that it was, though I shrank exceedingly from the ordeal before me. Master Bertie advised, when I grew more calm, that we should be the first at the rendezvous, lest by some chance Pen-

ruddocke's orders should be anticipated; and accordingly, soon after two o'clock, we mounted, and set forth. I remarked that my companion looked very carefully to his arms, and, taking the hint, I followed his example.

It was a silent, melancholy, anxious ride. However successful we might be in rescuing my father —alas! that I should have to-day and always to call that man father—I could not escape the future before me. I had felt shame while he was but a name to me; how could I endure to live, with his infamy always before my eyes? Petronilla, of whom I had been thinking so much since I returned to England, whose knot of velvet had never left my breast nor her gentle face my heart —how could I go back to her now? I had thought my father dead, and his name and fame old tales. But the years of foreign life which yesterday had seemed a sufficient barrier between his past and myself—of what use were they now? Or the foreign service I had fondly regarded as a kind of purification?

Master Bertie broke in on my reverie much as if he had followed its course. "Understand one thing, lad!" he said, laying his hand on the withers of my horse. "Yours must not be the hand to punish your father. But after to-day you will owe him no duty. You will part from him to-day and he will be a stranger to you. He deserted you when you were a child; and if you owe reverence to any one, it is to your uncle and not to him. He has himself severed the ties between you."

"Yes," I said. "I will go abroad. I will go back to Wilna."

"If ill comes of our enterprise—as I fear ill will come—we will both go back, if we can," he answered. "If good by any chance should come of it, then you shall be my brother, our family shall be your family. The Duchess is rich enough," he added with a smile, "to allow you a younger brother's portion."

I could not answer him as I desired, for we passed at that moment under the archway, and became instantly involved in the bustle going forward in the courtyard. Near the principal door of the inn stood eight or nine horses gaily caparisoned and in the charge of three foreign-looking men, who, lounging in their saddles, were passing a jug from hand to hand. They turned as we rode in and looked at us curiously, but not with any impertinence. Apparently they were waiting for the rest of their party who were inside the house. Civilly disposed as they seemed, the fact that they were armed, and wore rich liveries of black and gold, caused me, and I think both of us, a momentary alarm.

"Who are they?" Master Bertie asked in a low voice as he rode to the opposite door and dismounted with his back to them.

"They are Spaniards, I fancy," I said, scanning them over the shoulders of my horse as I too got off. "Old friends, so to speak."

"They seem wonderfully subdued for them," he answered, "and on their best behaviour. If half the tales we heard this morning be true, they are not wont to carry themselves like this."

Yet they certainly were Spanish, for I overheard them speaking to one another in that language; and before we had well dismounted, their leader, whom they received with great respect, one of them jumping down to hold his stirrup, came out with three or four more and got to horse again. Turning his rein to lead the way out through the north gate he passed near us, and as he settled himself in his saddle took a good look at us. The look passed harmlessly over me, but reaching Master Bertie became concentrated. The rider started and smiled faintly. He seemed to pause, then he raised his plumed cap and bowed low—covered himself again and rode on. His train all followed his example and saluted us as they passed.

Master Bertie's face, which had flushed a fiery red under the other's gaze, grew pale again. He looked at me when they had gone by with startled eyes.

"Do you know who that was?" he said, speaking like one who had received a blow and did not yet know how much he was hurt.

"No," I said.

"It was the Count de Feria, the Spanish Ambassador," he answered. "And he recognised me. I met him often, years ago. I knew him again as soon as he came out, but I did not think he would by any chance recognise me in this dress."

"Are you sure," I asked in amazement, "that it was he?"

"Quite sure," he answered.

"But why did he not have you arrested, or at least detained? The warrants are still out against you."

Master Bertie shook his head. "I cannot tell," he said darkly. "He is a Spaniard. But come, we have the less time to lose. We must join our friends and take their advice; we seem to be surrounded by pitfalls."

At this moment the lame ostler came up, and grumbling at us as if he had never seen us in his life before, and never wished to see us again, took our horses. We went into the kitchen, and taking the first chance of slipping upstairs to No. 15, we were admitted with the same precautions as before, and descending the shaft gained the cellar.

Here we were not, as we had looked to be, the first on the scene. I suppose a sense of the insecurity of our meeting-place had led every one to come early, so as to be gone early. Penruddocke indeed was not here yet, but Kingston and half a score of others were sitting about conversing in low tones. It was plain that the distrust and suspicion which we had remarked on the previous day had not been allayed by the discovery of Clarence's treachery.

Indeed, it was clear that the distrust and despondency had to-day become a panic. Men glared at one another and at the door, and talked in whispers and started at the slightest sound. I glanced round. The one I sought for with eager yet shrinking eyes was not to be seen. I turned to Master Bertie, my face mutely calling on him to ask the question. "Where is the prisoner?" he said sharply.

A moment I hung in suspense. Then one of

the men said, "He is in there. He is safe enough!" He pointed, as he spoke, to a door which seemed to lead to an inner cellar.

"Right," said Master Bertie, still standing. "I have two pieces of bad news for you nevertheless. Firstly I have just been recognised by the Spanish Ambassador, whom I met in the courtyard above."

Half the men rose to their feet. "What is he doing here?" they cried, one boldly, the others with the quaver very plain in their voices.

"I do not know; but he recognised me. Why he took no steps to detain or arrest me I cannot tell. He rode away by the north road."

They gazed at one another and we at them. The wolfish look which fear brings into some faces grew stronger in theirs.

"What is your other bad news?" said Kingston, with an oath.

"A person outside, a friend of the prisoner, has a list of our names, and knows our meeting-place and our plans. She threatens to use the knowledge unless the man Clarence or Crewdson be set free."

There was a loud murmur of wrath and dismay, amid which Kingston alone preserved his composure. "We might have been prepared for that," he said quietly. "It is an old precaution of such folk. But how did you come to hear of it?"

"My friend here saw the messenger and heard the terms. The man must be set free by sunset."

"And what warranty have we that he will not go straight with his plans and his list to the Council?"

Master Bertie could not answer that, neither could I; we had no surety, and if we set him free could take none save his word. *His word!* Could even I ask them to accept that? To stake the life of the meanest of them on it?

I saw the difficulties of the position, and when Master Kingston pronounced coolly that this was a waste of time, and that the only wise course was to dispose of the principal witness, both in the interests of justice and our own safety, and then shift for ourselves before the storm broke, I acknowledged in my heart the wisdom of the course, and felt that yesterday it would have received my assent.

"The risk is about the same either way," Master Bertie said.

"Not at all," Kingston objected, a sparkle of malice in his eye. Last night we had thwarted him. To-night it was his turn; and the dark lowering looks of those round him showed that numbers were with him. "This fellow can hang us all. His accomplice who escapes can know nothing save through him, and could give only vague and uncertain evidence. No, no. Let us cast lots who shall do it, get it done quickly, and begone."

"We must wait at least," Bertie urged, "until Sir Thomas comes."

"No!" retorted Kingston, with heat. "We are all equal here. Besides, the man was condemned yesterday, with the full assent of all. It only remains to carry out the sentence. Surely this gentleman," he continued, turning suddenly upon me, "who was so ready to accuse him yesterday, does not wish him spared to-day?"

"I do wish it," I said, in a low tone.

"Ho! ho!" he cried, folding his arms and throwing back his head, astonished at the success of his own question. "Then may we ask for your reasons, sir? Last night you could not lay your tongue to words too bad for him. To-night you wish to spare him, and let him go?"

"I do," I said. I felt that every eye was upon me, and that, Master Bertie excepted, not one there would feel sympathy with me in my humiliation. They were driven to the wall. They had no time for fine feeling, for sympathy, for appreciation of the tragic, unless it touched themselves. What chance had I with them, though I was a son pleading for a father? Nay, what argument had I save that I was his son, and that I had brought him to this? No argument. Only the appeal to them that they would not make me a parricide! And I felt that at this they would mock.

And so, in view of those stern, curious faces, a new temptation seized me—the temptation to be silent. Why should I not stand by and let things take their course? Why should I not spare myself the shame which I already saw would be fruitless? When Master Kingston, with a cynical bow, said, "Your reasons, sir?" I stood mute and trembling. If I kept silence, if I refused to give my reasons, if I did not acknowledge the prisoner, but merely begged his life, he would die, and the connection between us would be known only to one or two. I should be freed from him and might go my own way. The sins of Ferdinand Cludde were wellnigh forgotten—why take to myself the sins of Clarence, which would otherwise never stain my name, would never be associated with my father or myself?

Why, indeed? It was a great and sore temptation, as I stood there before all those eyes. He had deserved death. I had given him up in perfect innocence. Had I any right to call on them to risk their lives that I might go harmless in conscience, and he in person? Had I——

What, was there after all some taint in my blood? Was I going to become like him—to take to myself a shame of my own earning, in the effort to escape from the burden of his ill-fame? I remembered in time the oath I had sworn, and when Kingston repeated his question, I answered him quickly, "I did not know yesterday who he was," I said. "I have discovered since that he is my father. I ask nothing on his account. Were he only my father I would not plead for him. I plead for myself," I murmured. "If you show no pity, you make me a parricide."

I had done them wrong. There was something in my voice, I suppose, as I said the words which cost me so much, which wrought with almost all of them in a degree. They gazed at me with awed, wondering faces, and murmured "His father!" in low tones. They were recalling the scene of last night, the moment when I had denounced him, the curse he had hurled at me, the half-told story of which that had seemed the climax. I had wronged them. They did see the tragedy of it.

Yes, they pitied me; but they showed plainly that they would still do what perhaps I should have done in their place—justice. "He knows too

much!" said one. "Our lives are as good as his," muttered another—the first to become thoroughly himself again—"why should we all die for him?" The wolfish glare came back fast to their eyes. They handled their weapons impatiently. They were longing to be away. At this moment, when I saw I had indeed made my confession in vain, Master Bertie struck in. "What," he said, "if Master Carey and I take charge of him, and escorting him to his agent without, be answerable for both of them?"

"You would be only putting your necks into the noose!" said Kingston.

"We will risk that!" replied my friend—and what a friend and what a man he seemed amid that ignoble crew!—"I will myself promise you that if he refuse to remain with us until midnight, or tries wherever we are to raise an alarm or communicate with any one, I will run him through with my own hand? Will not that satisfy you?"

"No," Master Kingston retorted, "it will not! A bird in the hand is worth two in the bush!"

"But the woman outside?" said one timidly.

"We must run that risk!" quoth he. "In an hour or two we shall be in hiding. Come, the lot must be drawn. For this gentleman, let him stand aside."

I leaned against the wall, dazed and horror-stricken. Now that I had identified myself with him I felt a great longing to save him. I scarcely noticed the group drawing pieces of paper at the table. My every thought was taken up with the low door over there, and the wretched man lying bound in the darkness behind it. What must be the horror, the black despair, the hate and defiance of his mind as he lay there, trapped at last like any beast of prey? It was horrible! horrible! horrible!

I covered my face and could not restrain the cry of unutterable distress which rose to my lips. They looked round, two or three of them, from the table. But the impression my appeal had made upon them had faded away already, and they only shrugged their shoulders and turned again to their task. Master Bertie alone stood apart, his arms folded, his face grave and dark. He too had abandoned hope. There seemed no hope, when suddenly there came a knocking at the door. The papers were dropped, and while some stood as if stiffened into stone, others turned and gazed at their neighbours. It was a knocking more hasty and imperative than the usual summons, though given in the same fashion. At last a man found tongue. "It is Sir Thomas," he suggested with a sigh of relief. "He is in a hurry and brings news. I know his knock."

"Then open the door, fool," cried Kingston. "If you can see through a two-inch plank, why do you stand there like a gaby?"

Master Bertie anticipated the man, and himself opened the door and admitted the knocker. Penruddocke it was; he came in, still drumming on the door with his fist, his eyes sparkling, his ruddy cheeks aglow. He crossed the threshold with a swagger, and looking at us all burst into a strange peal of laughter. "Yoicks! Gone to earth!" he shouted, waving his hand as if he had a whip in it. "Gone to earth—gone for ever! Did you think it was the Lords of the Council, my lads?"

He had left the door wide open behind him, and we now saw in the doorway the sea-faring man who usually guarded the room above. "What does this mean, Sir Thomas?" Kingston said sternly. He thought, I fancy, as many of us did, that the knight was drunk. "Have you given that man permission to leave his post?"

"Post? There are no more posts," cried Sir Thomas, with a strange jollity. He certainly was drunk, but perhaps not with liquor. "Except good fat posts," he continued, smacking Master Bertie on the shoulder, "for loyal men who have done the State service, and risked their lives in evil times! Posts? I shall get so drunk to-night that the stoutest post on Ludgate will not hold me up!"

"You seem to have gone far that way already," my friend said coldly.

"So will you, when you hear the news!" Penruddocke replied more soberly. "Lads, the Queen is dying!"

In the vaulted room his statement was received in silence: a silence dictated by no feeling for the woman going before her Maker—how should we who were plotting against her feel for her, we who were for the most part homeless and proscribed through her?—but the silence of men in doubt, in doubt whether this might mean all that from Sir Thomas's aspect it seemed to mean.

"She cannot live a week!" Penruddocke continued. "The doctors have given up hope, and at the palace all is in confusion. She has named the Princess Elizabeth her successor, and even now Cecil is drawing up the proclamations. To show that the game is really up, the Count de Feria, the Spanish Ambassador, has gone this very day to Hatfield to pay his respects to the coming queen."

Then indeed the vaulted roof did ring—ring and ring again with shouts of "The Coming Queen!" Men over whom the wings of death had seemed a minute ago to be hovering, darkening all things to them, looked up and saw the sun. "The Coming Queen!" they cried.

"You need fear nothing!" continued Penruddocke, wildly. "No one will dare to execute the warrants. The Bishops are shaking in their mitres. Pole is said to be dying. Bonner is more likely to hang himself than burn others. Up and out and play the man! Away to your counties and get ready your tar-barrels! Now we will give them a taste of the Cujus Regio! Ho! drawer, there! A cup of ale!"

He turned, and shouting a scrap of a song, swaggered back into the shaft and began to ascend. They all trooped after him, talking and laughing, a reckless, good-natured crew, looking to a man as if they had never known fear or selfishness—as if distrust were a thing impossible to them. Master Kingston alone, whom his losses had soured and who still brooded over his revenge, went off moodily.

I was for stopping one of them; but Master Bertie directed my eyes by a gesture of his hand to the door at the far end of the cellar, and I saw that the key was in the lock. He wrung my hand hard. "Tell him all," he muttered. "I will wait above."

# Commons and Commoners.

FAR, far back into the good old times, into the uncertain twilight of the middle ages, into the days of knights and serfs and villeins, we must look for the origin of those common "rights," which, in spite of man's earth hunger, have secured us the possession of those beautiful open places known as Commons. Waste land! a term not infrequently applied to these stretches of country which know not the bright blade of the plough; waste land, forsooth, where man can breathe the pure air of heaven free from the contaminations of his own greed, where he can roam at will, getting from nature in spite of himself restful ease and soothing, refining influences; surely here is not only waste! Here in England that men should have fought, are fighting still, and will no doubt continue to fight, for these few acres of waste land, is an index to the character which gave origin to the Great Charter, and which has made the name of England a power. There is scarce a stretch of common land in England but what has been a battle-field; a bloodless one 'tis true, a struggle in many instances of the weak against the powerful, where now the loiterer wanders, little recking of the "unsung" warriors who fought for the blessed privilege of a right to a few acres of this earth's surface. And the wonder grows, when one considers the insignificant acreage of this small country with its teeming population, that so much land should have escaped the grasping hand of greed, backed up as it is by endless legal fictions.

We are told, for example, that the public in general have no *rights* whatever upon waste or what is known as common land; that the commoner may turn his cattle out to graze, but he himself or his children are in actual fact trespassers even though they be tolerated, if they go there for any other purpose. The highway, the foot-path, the lake, the flowing river even, are all "owned" by somebody; that there is no such thing as "no man's land," as is the common term for certain odd bits of land to which no one seems to be able to lay a just claim, and which in consequence are left waste. Even the shifting foreshore of the sea between high and low water-mark is the property of the Crown. In a general way, however, it signifies but little to the commoner as to who owns the common he

turns his cattle out upon, or the foot-path over which he walks, or the bed of the river upon the surface of which he plies his oar, or the stretch of sand where he listens to the pounding of the tireless wave. It is not the real surface, earthy or

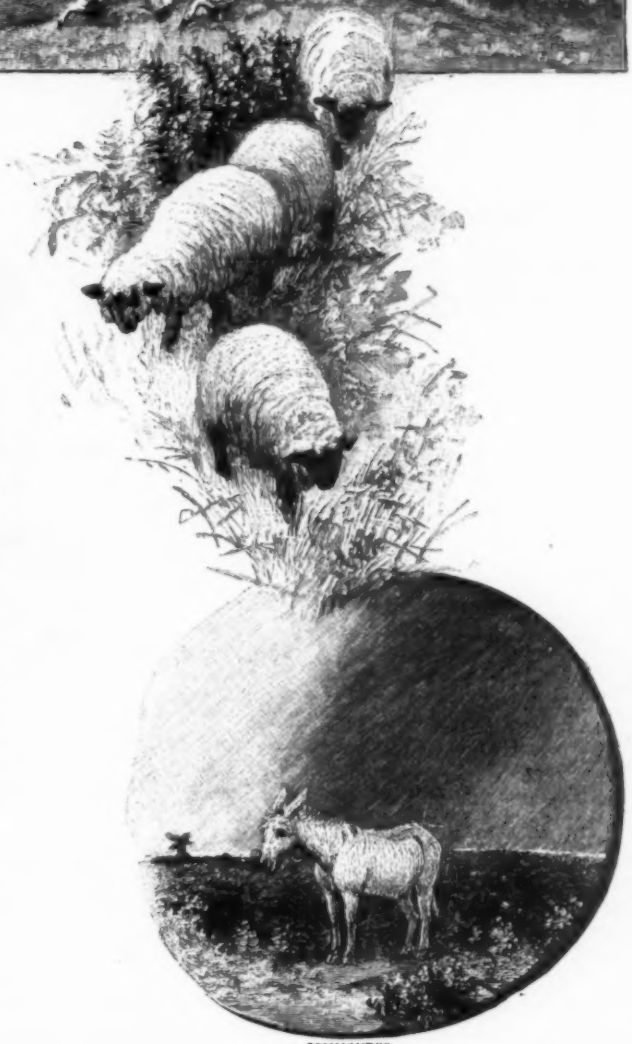
"COMMON" FRUIT.

aqueous, he wants, but the right to traverse it freely and unincumbered. Let them keep their mouldy parchments, with claims set forth in the usual redundancy of legal words made obscure by their very effort at preciseness, as long as he preserves his right to the superficial enjoyment of the water or soil, which he wishes not either to divert or to plough. This ownership, which carries but little else with it than the empty title, although vested in the individual, is curious even to being amusing, and the seeming paradox is only explained when we look back long ages and trace the history of common land. To do this we must go back even as far as before the Conquest, when commonalty seems to have been the form of property in land.

The territory then occupied by the community was known as the "Mark," and over the waste or common land which was not used for cultivation there existed rights of pasturage, wood-cutting and the like. After the Conquest the manorial system arose, when the land was parcelled out into certain great manors, the rights concerning which were defined by the Norman lawyers, thus forming the legal basis of property in land. These manors were granted by the Crown to certain lords, who exercised over them both civil and criminal jurisdiction.

The land was regarded as the king's, and the lords who were his tenants were allowed to have tenants of their own. The lord granted the land to these free tenants in lieu of certain rents and services, thus originating the class of freeholder. The villeins or serfs who cultivated the lord's own land ultimately formed the class of copyholders.

The waste or uncultivated lands were left uninclosed, and over these the tenants as well as the lord enjoyed certain rights, such as are known as the common of turbary, that is, the right to cut turf for firing; the common of estover, meaning the right to cut furze for a similar purpose. There is also what is known as the common of piscary, being the right of fishing in certain waters. In addition to these was the general right of turning out cattle and sheep for pasturage.

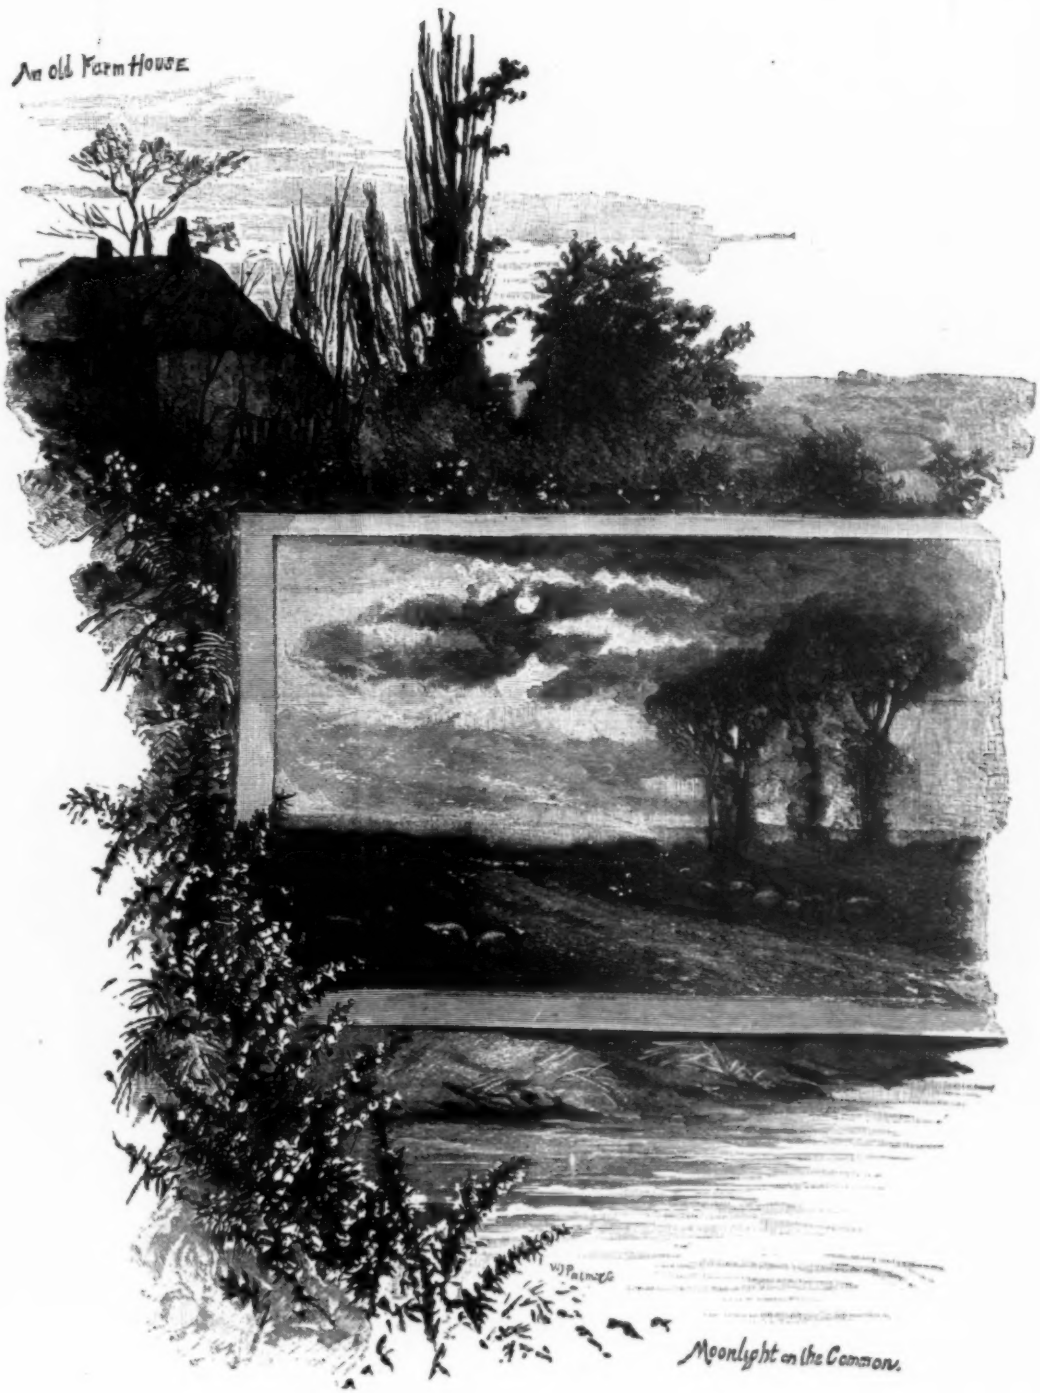


It would appear that in return for these Crown grants the lords were hampered with certain onerous duties, such as furnishing military assistance in time of war at their own expense, besides being under certain obligations to their tenants — the commoners. The king too at his pleasure could take possession of any wooded land to enable him to enjoy the pleasures of the chase—in fact, these forestal rights still exist in the neighbourhood of London and other large towns; but here, as in the case of the common and footpath, the same paradoxical state of things exists that the ownership of these appropriated lands still continues with the subject.

With the lapse of time, the increase of population, and the consequent alteration of these semi-feudal conditions, it is easy to understand the slow but sure aggressions made on the popular rights, not only by the lords of the manor, but even by the commoners themselves; volumes, indeed, might be written tracing up the gradual encroachments of the lord, the various statutes created to check or direct them, the endless litigation and struggles between the legal owner and the user of these waste lands. The first reliable statute concerning the right of the lord to "approve" or inclose common land seems to be what is known as the Statute of Merton, made in the reign of Henry III; but the difficulties of carrying into effect the purposes of this Act, owing to the conflicting rights of freeholders and copyholders, appear to have rendered it obsolete. With a view to obviating these difficulties and as a means of increasing the national wealth, Sir John St. Clair, as chairman of a committee of the House of Commons, in the years 1795, 1797, and 1800, was instrumental in passing the Enclosures Act, by which a vast extent of land formerly waste was enclosed and made suitable for cultivation. By the report of the committee it was estimated that in 1795 out of 73,000,000 acres of land in Great Britain nearly one third was waste land. Several other Acts followed this of 41 Geo.

111 ; the general Act now in force originating in the present reign, wherein the undesirability of enclosing open spaces is maintained. There was, of course, a period when every acre of land brought under cultivation counted as national gain ; but not only have the requirements of agriculture changed, the value of open spaces has greatly increased in view of the growth of the cities and the various needs of the people. Already in 1845, by the General Enclosure Act, village greens were declared exempt from enclosure, but it was not until 1866 that, by the Metropolitan Commons Act, the metropolitan commons enjoyed a like exemption. So that we now see a revulsion of feeling as to the advisability of the further restriction of common land ; and the rights of the commoner transcend even those of the lord, who is now to be bought out as any other encumbrancer. But this state of things has not been arrived at without a long struggle, and it is still only by extreme watchfulness that unlawful encroachments are prevented.

The Commons Preservation Society has in this particular done yeoman service, the reports of its transactions showing how, through the stand made by a few



COMMONERS.

interested in the preservation to the public of various open spaces threatened with annihilation by the aggression of manorial lords or by the indifference of government, as in the case of forest lands, the rights of the commoner have been maintained, and thousands of acres preserved for ever as grounds for public recreation.

One notable instance of popular resistance is the case of Epping Forest, where, had the enclosing of the land been allowed to proceed at the rate that ruled up to 1865, there would soon have been scarcely an acre of common ground left. It has been often told how a labouring man was one of the first to resist these encroachments by bringing a suit in assertion of his right to lop trees in the forest. A case of a somewhat similar kind, in which an agricultural labourer was the champion of popular rights, was recently decided by the Court of Appeal. The question raised was one of right of way over certain footpaths, where obstructions had been placed by the owner of the soil and removed by the defendant labourer. A description of this case and the facts leading up to it will give a fair idea of the surroundings generally attending similar cases of encroachment, and concerning which dwellers in towns have usually but little idea.

Whatever may be said as to the indifference of the average peasant concerning political matters or social problems, there can be but one opinion as to his intense interest in the preservation of the rights of way or common enjoyed by himself and his ancestors. As he sits over his pint of beer in the Jolly Farmer, the intelligence of the fall of a government will scarcely call forth a look of surprise. But let him but hear of the blocking of an old footpath or the enclosing of a bit of common, and he rises at once to the seriousness of the situation. Now in this instance, the news was bruited about

An old Farm House

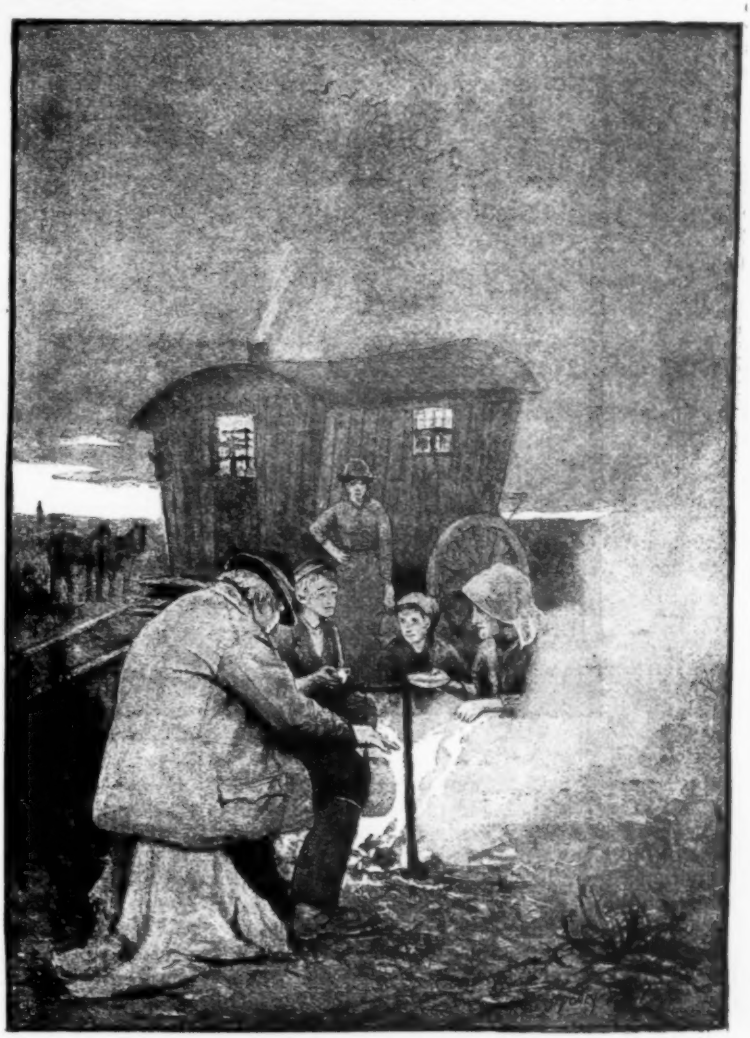
BLACKBERRYING.

that posts had been placed in a certain ancient and well-known footpath, thereby interfering with the free passage of the commoners. In the law as to commons one point seems to have been definitely settled, and that is, that the commoner is within his right in removing any obstruction placed by the lord with idea of illegal enclosure; so why not in the case of a right of way, where the rights of the owner are in the soil and not over it?

It is not to be supposed, however, that any such questions of legal *finesse* entered into the heads of the group of labourers as they proceeded on the first holiday to remove the objectionable posts. Picturesque, indeed, although they were from the point of view of realism,—in their rusty hats, and weather-stained garments, of the earth, earthy, their corduroys strapped at the knees, their hobnailed boots of the tone of the soil on which they trod—not even the most penetrating novelist would have been able to discern on those swarthy features, glowing with the colour begot of exposure, any play of expression betokening the import of the deed they were about to perpetrate.

The disputed ground is reached. A mob of onlookers cheer the exponents of their rights. And there, too, is the landlord: beyond remonstrances, he offers no opposition. Stalwart arms are soon clasped about the deep-fixed obstruction, which they only succeed in loosening; and then a great, stout, herculean labourer pushes aside his companions, and with one mighty tug draws the post

from its bed, and amidst cheers places it quietly by the side of the path.



After this first declaration of right the crowd peaceably retires. Soon afterwards, for the "law's delay" is not apparent until after the law has been invoked, a summons is served on the labourer. In due course he is placed in the dock before the magistrates. In the small ante-chamber of the court-room is gathered a crowd of rustic friends, with here and there the better coat of some one who is interested in the proceedings, while the wife stands almost weeping in one corner, bewailing the day. The various legal formulæ are gone through with. But the labourer has not only a friend behind the scenes, but a friend at court in the person of an able barrister, who, although he is not able by his legal acumen to convince the Bench of the justice of his client's cause, succeeds, after the imposition of a fine, in getting them to state a case for a higher court. The fine is paid, and the labourer leaves the court with his trembling wife, who saw visions of the scaffold, or at least of transportation for life. In a few months' time the London papers produce a report of the case, and it then appears: Judgment of the magistrates reversed; all fines and costs to be refunded to plaintiff in appeal. And now, totally oblivious of the fact that he has immortalised himself legally, perhaps nationally, the man's "whoa back" rings out to his team as of yore, as he guides the glittering blade of his plough along the life-giving furrows.

As in the case of the labourer at Epping, this bloodless battle was fought with results of untold value to posterity, results of which the prime movers were in blissful ignorance.

Through the instrumentality of the Society, the New Forest, Dean Forest, and Burnham Beeches have been secured to the public, besides innumerable home and provincial commons which from time to time have been threatened by encroachments.

The Society has likewise taken up the interesting question of roadside wastes or strips, those pleasant bits of grass or furze-covered land which frequently line the highways and relieve their otherwise dusty monotony. The ownership of these strips is chiefly vested in the owners of the adjoining land, and not, as in the case of commons, in the lord of the manor. The generally received impression that all that can be claimed by the public as a highway is thirty feet is erroneous. In law the public have a right of way over the whole space between the hedges. The preservation to the public of these roadside strips may not seem a matter of great importance, but those who have walked or travelled the straight roads, say, of France or America, where scarce an accident of curve or grassy bank breaks the dull monotony, can estimate the value of these little waste spaces which contribute so much to the rural beauty of England.

A strict definition of rights is sadly wanting, founded as they chiefly are on conflicting testimony and the unwritten laws of immemorial usage. But these encroachments on common land have not only been perpetrated or attempted by the favoured of Mammon. The commoners themselves have not been guiltless in this respect, although their mode of procedure is as a rule more subtle than that of the lords. One of the simplest ways by which they aggrandise their property is by the

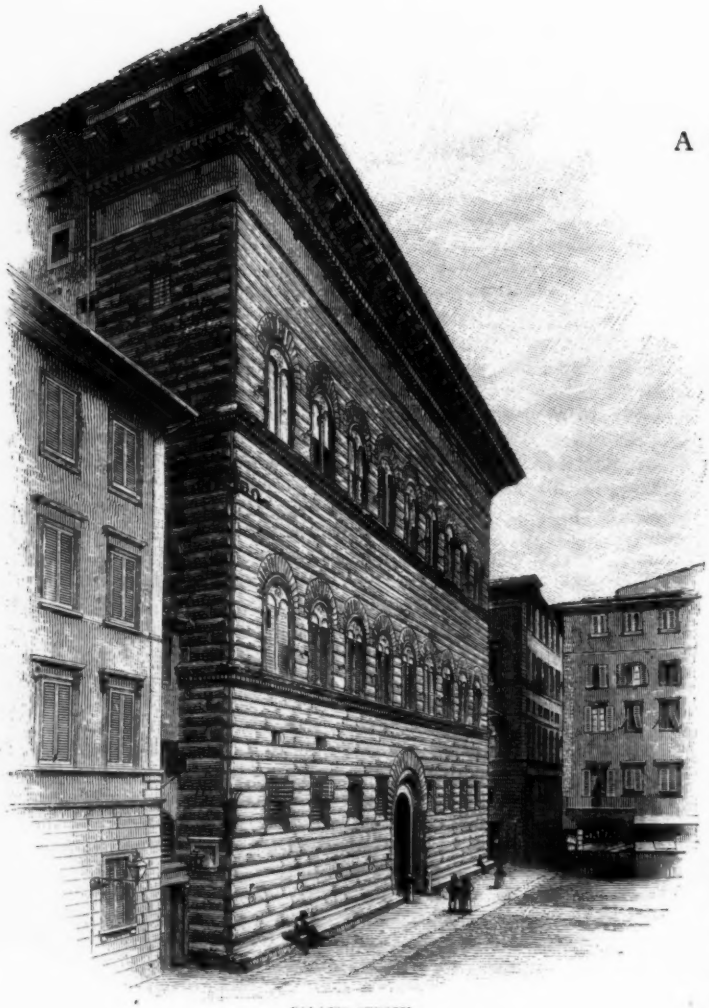
THE EVENING MEAL

slow advancement of a hedge. This pushing out of a hedge is a slow but a sure and simple process, given only a little labour and a great deal of time. At the first start of ownership a wooden fence surrounds the plot of ground facing, of course, on a bit of common. As the years roll on, stealthily and unobserved this fence moves gradually forward; then a hedge is started, and this too, by a process of ditching in front, is gradually advanced, until the small plot grows: so that in many districts, and these not many miles removed from London, inhabitants not of the oldest will point out to you trees now in the middle of a nice little piece of ground which they in their youth remember as having stood by the gate and outside limit of the demesne.

Another way by which commoners of the commonest sort have appropriated bits of waste land has been by a species of squatting. It seems scarcely credible in a country as old as England and of such small acreage, but it is nevertheless true, that many valuable pieces of common land have become private property owing to a period of years of undisturbed possession. Such a thing is impossible now; but in the rural districts the oldest inhabitant will point to now stately villas where as a youth he remembered some gipsy had paused with his caravan, paused indeed until the wheels rotted or were taken off the uncanny structure; and then a fence or earthen wall grew up round about, to be demolished now and again by the sparse neighbours, only to be replaced by the persistent squatter, who at last by his perseverance tired out the would-be exponents of common rights, and was left in peaceable possession of his deedless estate. There are many such places in the county of Berks,

BRINGING HOME GORSE FOR FIRING.

undoubtedly at one time waste or forest land, where the odd bits of road-side strips and common, and the small holdings interspersed here and there, point to this sort of appropriation of common land. The only titles to be found for these bits of property lay in the legal dictum that "possession is nine points of the law."



It is a pleasure to turn from the legal to the natural aspects of the Common, leaving behind the verbosity of Acts of Parliament and the wranglings of discontented commoners. To wander over these verdure-clad stretches of waste land, among the confused clumps of gracefully twining bramble, the prickly furze crowned with its golden bloom, the thistle with its silken cap, the great ferns with their delicately chiselled fronds; to hear the musical tinkling of the sheep bell coming from the quietly grazing flock; to see the ducks and geese mirrored on the unruffled pond; to hear the drowsy cropping of the horse or donkey; or listen to the strange note of the cuckoo's mate, or to hear from the neighbouring copse the mournful cry of the cuckoo himself; while overhead is a summer sky flecked with white messengers, to reach which the soaring, singing lark seems bent in his flight—these are familiar delights. What a glorious sense of freedom is here, what a fellowship with beast and bird, what a companionship even in the coarse wild growths.

To give more animation to the scene, there is the old commoner cutting the furze in the exercise of his right of estover, to bow still more his already bent back as he bears the huge bundle home for firing. Or on some autumn day there are the merry children peeping out from among the brambles in search of the juicy blackberry; or towards evening the gipsies' caravan rises dark against the lowering sky, while round the flickering fire is gathered a strange and motley assemblage of these wanderers on the earth, their faces strangely illumined by the warmth-giving flames.

Through all the varying seasons, from when first the spots of gold shine out here and there in the gorse, until the snow lies thick on spiky stem or prickly bough, these wastes are never-ending sources of pleasure. While this love of the country lasts, England will remain, as it is to-day, pre-eminent for the peaceful rural beauty of its landscape, to which in no mean way contributes that peculiar English institution of the Common.

# A NOBLE MOTHER.

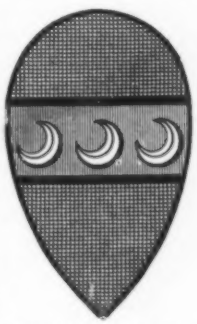
PALAZZO STROZZI.

IT was a rainy day in Florence. The streets even of the Town of Flowers looked deserted and dismal, when, coming up from the Arno and the S. Trinità Bridge, our eyes were suddenly arrested by the great, soaring mass of the Strozzi Palace. We had passed it before many a time and oft, but by some strange chance seemed to see it now for the first time. Sombre in the sunlight, amid the throng of the street and the flower-sellers around its base, it rises up, looking, if possible, even more grandly calm in bad weather than in fine, its great grey blocks of rugged stone, dry under the far-projecting roof, harmonising with grey sky and wet pavements. A veritable fortress is this Palazzo Strozzi, yet so admirably proportioned, and designed with such artistic skill, as to convey a sense of extreme lightness and grace. It appears scarcely to rest on the ground, it seems to spring from it. The lower windows, high out of reach, are heavily grated ; the upper ones, of airy lightness, are delicately arched, and have a median shaft of white marble gleaming amid the surrounding gloom. At the corners hang the spiked iron lamps, familiar to all students of ironwork, and which are still used as patterns in Florentine shops and private houses ; while around its base, at about a man's height from the ground, are fixed the sockets for the torches which in past days girdled the stately mansion with leaping flames and threw weird lights and shadows up its overhanging eaves.

Such is the palace which Filippo Strozzi, the returned exile and rich banker, began to raise for himself as his private residence at the end of the fifteenth century. He died before it was completed, and was laid to rest in the glorious church of S. Maria Novella, the fashionable church of Boccacio's "Decamerone," surnamed by Michael Angelo "La Sposa" (The Bride) because of its beauty. In this church, of which our own Mrs. Browning has also sung the glories, Filippo Strozzi was buried, in the private chapel that still bears his name. Paintings by Filippino Lippi and sculptures by Benedetto da Maiano there attest to the wealth and artistic tastes that proved him a true member of the family already possessing, in the same church, a chapel which Andrea and Bernardo Orcagna covered with their world-famous frescoes of Heaven and Hell.

They were stirring times, historically and intellectually, in which Filippo Strozzi lived. Florence, a republic only in name, was on the point of rising, under the astute rule of the house of Medici, to its zenith of political, artistic, and literary radiance. Brunelleschi's wondrous dome already crowned the Cathedral ; and this immense temple—a poem of

beauty congealed into enduring marble—had been consecrated by the Pope in person. For the purpose he had passed from the steps of S. Maria Novella, where his residence added lustre to the glory of the city, to the very doors of the Cathedral, along a splendid causeway built for the occasion, a quarter of a mile in length, raised high above the crowd and covered with rich carpets and costly draperies. Cardinals, princes, bishops, ambassadors, the Eight Magnifici Signori, illustrious governors of the city, followed in his wake, and the highest officers of state, the Gonfaloniere, bore up his train.



In those times even kings sought the alliance of the brilliant city, and were received with all pomp by the "Eight," who graciously deigned to come out on to the iron balcony perched high on the wall of the Palazzo Vecchio, and welcome their guest as he entered the city. A king or a king's son might return the welcome from his horse, one of meaner birth must dismount. Nay, the very Emperor of the West himself, hard pressed by the Turks, with the Patriarch of Constantinople and a long train of bishops, came to Florence to assist at a Synod which the Florentines had known how to draw away from Ferrara, where it had first met, and in which a reconciliation was effected between the Eastern and Western Churches—a reconciliation which naturally vanished together with the political necessities which had imposed it. Great were the rejoicings held in honour of such guests as these; dances, masks, tourneys, even hunts on the Piazza before the church of Santa Croce, whither, on one occasion, "there were led, besides the lions which the Republic was accustomed to rear, wolves and wild boars and gregarious wild beasts, and where a giraffe, a creature unknown at that time, was shown."

Florence in those days was perhaps the most active in the politics of the peninsula; allied first with one power, then with another; now carrying her arms by means of her mercenaries into the heart of Lombardy, now seeing her territory wasted up to her very gates, and her peasants with their cattle crowding into the town for safety. Her citizens, trained to statesmanship from childhood, were well versed in the arts of diplomacy, and were always ready to leave shop or counting-house to go on some embassy to Milan or Venice, say to soothe the ruffled spirits of a Visconti, or to persuade the Republic of the Adriatic to help them gain possession of Lucca. The Ferrarese expressed with some bitterness their sense of the all-invading spirit of the Florentines when they saw the Pope and Emperor break up the Synod and remove to Florence. "You want the Pope," they said, "you want the Council, you want Lucca; before long, you will want everything."

Certainly neither the literature nor the art of the day were unworthy of so splendid a republic. Greek works scattered at the fall of Constantinople were eagerly read and commented on by the citizens, who wrote Latin letters at their desks in the intervals of the business connected with their wool or silk weaving, and were willing to spend large sums for rare manuscripts, priding themselves on the value of their libraries. Painting was expanding, thanks to Leonardo da Vinci, Fra Lippo Lippi, Sandro Botticelli, Fra Bartolommeo, and a host of less known artists; while sculpture attained its perfect blossoming in the middle of this sixteenth century.

Yet while thus outwardly splendid, the Florentine Republic bore within itself the seeds of decay. The people were in fact held in chains—none the less chains that they were golden—and these chains had been forged for them by the great house of Medici. Cosimo and his descendants, making an astute show of liberality and love of freedom, had enlisted the support of the populace against the principal aristocratic houses, and ruled the city at their will. In every Italian court were to be found Florentine exiles of noble birth. Tax after tax was imposed on the town to maintain the costly wars and pageants of the ruling family, and they were imposed in such a manner as to weigh with crushing force on the families and relations of these unhappy exiles. The prisons were full to overflowing with State debtors. These would from time to time escape and have to be shot down, or, worse still, had often to be bought off to ensure their silence and support. Oppressed noble families at home, exiles abroad, were ever ready to take advantage of the discontent which showed itself from time to time, and to foment the riots, which, however, always failed to overturn the firmly seated Medici power.

Among those whom Cosimo banished at the very outset of his tyranny were two members of the Strozzi family, the celebrated Messer Palla Strozzi, and Matteo (who had "matriculated in the art of wool" in 1415, and who was a descendant of a different branch, but closely united in friendship with Palla's sons). Banished, like Aristides of old, from mere caprice (Cosimo was tired of seeing them about him, he said), both these men, citizens of high repute, accustomed to the most delicate missions of State, left Florence in 1434, and died out of sight of home and wife, knowing that their children would be wanderers on the face of the earth even as they were, and believing that their family were entirely ruined.

ARMS OF THE STROZZI.

That Matteo's branch of the family did but gain glory from their thirty-two years of banishment—indeed, that they returned to Florence at all, instead of settling abroad like their cousins, was due chiefly if not entirely to Matteo's wife, Alessandra Macinghi negli Strozzi, a young woman of rich and noble family, who finding herself alone in the world at the age of twenty-eight with five children to rear, and about again to become a mother, braced herself courageously to the life of struggle before her. When she died thirty-five years after, at the age of sixty-three, she had her reward. All her sons had been recalled to Florence; by her means all were rich and powerful; her widowed house was brightened by a pretty Florentine daughter-in-law and made glad by babbling grandchildren.

It was a brave heart that beat in this young widow's breast, and by a happy chance all knowledge of her has not passed away with her time. Among the archives of the Strozzi family are preserved a long series of letters written by her to her exiled sons, whose business she conducted in their absence, whose interests she had ever at heart. Enthralling letters they are to read, in their naïve simplicity, their native good sense, their mother-wit. In them this brave soul unconsciously lays bare all her active energy, her shrewd practical wisdom, her mother's fearfulness for her boys' morals, her patient longing to see them fraternally united. Every now and again, but rarely on the whole, across the calm of the fully occupied matron who finds in religion and in a clean conscience a very tower of strength, comes a wail for human sympathy, the sympathy of her children.

MEDAL OF THE STROZZI.

"You do right to remember me," she says to Filippo, thanking him for the caviare he had sent her, "for now I have need of *vezzi* (little caressing attentions) from you; but I wish you were near me! I pray God we may soon be near each other, that together we may find consolation as I desire."

And again:

"It is not you who should beg me to tend my life for love of you, but I who should beg you to tend your life for love of me, for I live in your life and your health. May it please God long to preserve you both, through His mercy, in that health which I desire for body and for soul.

"Truly, I gladly see your letters, so that I await Wednesday or Thursday, when the messenger should arrive, with pleasure, expecting a few lines from your hand; and when I do not receive them, my mind grows big with expectation awaiting the next messenger; and not getting anything, I send to the office for news. If I find they have letters from you, I take comfort that you are in good health.

"When I read yours I can never restrain tears of tenderness. May God grant you as many blessings as I have shed tears for you."

Such utterances, wrung from a hungry mother-heart, are all the more touching as occurring but here and there among the matter-of-fact narration of the activity of her life—an activity unswervingly directed to one end, the recall of her sons to Florence, and the preservation of the dignity of the family into which she had married. Very strange is it to follow the stream of this life flowing on beneath the eager civic life, in contact with it, yet never absorbed by it—the life of this mother, related by blood or marriage with nearly all the historic families of the time, who, when she chose to give an opinion on politics, did so with astonishing shrewdness and insight, and who yet kept herself entirely aloof from public matters. She looked on the Medici, the Pitti, the King of Naples, simply as men whose influence might give her back her sons; and with this sole object in view, and from the quiet home where the Palazzo Strozzi now stands, taught her son-in-law to play off in the most masterly and statesmanlike manner the dreaded Piero dei Medici against the irascible Luca dei Pitti. Her spelling is erratic, her style devoid of literary pretension; she mentions her husband's library only to speak of its sale; but her tact, her unflinchingness, her gentleness, the sweet resignation which never sapped her activity, even the slight and perfectly natural tendency apparent about the end of her life towards overmanagement of her son's intimate affairs,—all these things endear her to us. In her strength and in her weakness, she is a winning heroine.

The series of letters opens August 24, 1447. Filippo, then nineteen years of age, and his brother Lorenzo, seventeen, are engaged in their uncle's banks; Filippo in Naples, Lorenzo at Barcelona. Matteo, then eleven, is still at home with his mother, and is her darling, the child of her widowhood. Besides, there is Alessandra, a girl of thirteen, and Caterina, aged fifteen, and just about to be married. The first letter, which, like all the others, commences with the words, "In the name of God," tells Filippo of this marriage. The mother is delighted with her son-in-law, Marco Parenti, a silk weaver of good family, who, she says, seems as though he never could make enough of his bride.

"I could have put her into a nobler family," she writes, "but at the cost of a dowry of 1400 or 1500 florins, which would have been your ruin and mine; and even then I don't know if the girl would have been happy, for, except for the position, there

was nothing desirable, and a good deal that was undesirable. So, having considered the matter, I thought it was better to place her comfortably, and not trouble myself about so many things; and I think she will be as comfortable as any girl in Florence." Then, with motherly pride and indulgence, she adds, "She is never tired of having pretty things made; for she is really beautiful, and would like to seem even more so; for truly there's not another in Florence made as she is; and she has every attraction as many think." Caterina herself sends her brother a message, asking if he has any of "that soap," or if there is no water or anything else good for the complexion to make her beautiful, and if so she begs him to send it quickly, and by a trusty carrier who is not likely to change it for some inferior article on the road. "She will have the worth of 400 florins on her person when she goes to her groom," remarks the mother, proud to have done so well, in spite of all the difficulties of her position, for this her first marriageable daughter. She then describes the crimson velvet mantle lined with marten, the dress of the same stuff, "the finest cloth there is in Florence," the garland of peacock's feathers and pearls, and the two wreaths of pearls which Parenti had given his bride, whom it seemed to give him pleasure to adorn. The bridegroom gives further particulars in his journal, describing the crimson girdle ornamented with worked silver gilt and gold, the buckle with its sapphires and gold; and he enters the price of the shrine of carved wood for the bedroom, *all'antica*, with its painted Virgin cut in relief, the painted and gilded mirrors, cupboards, and chests.

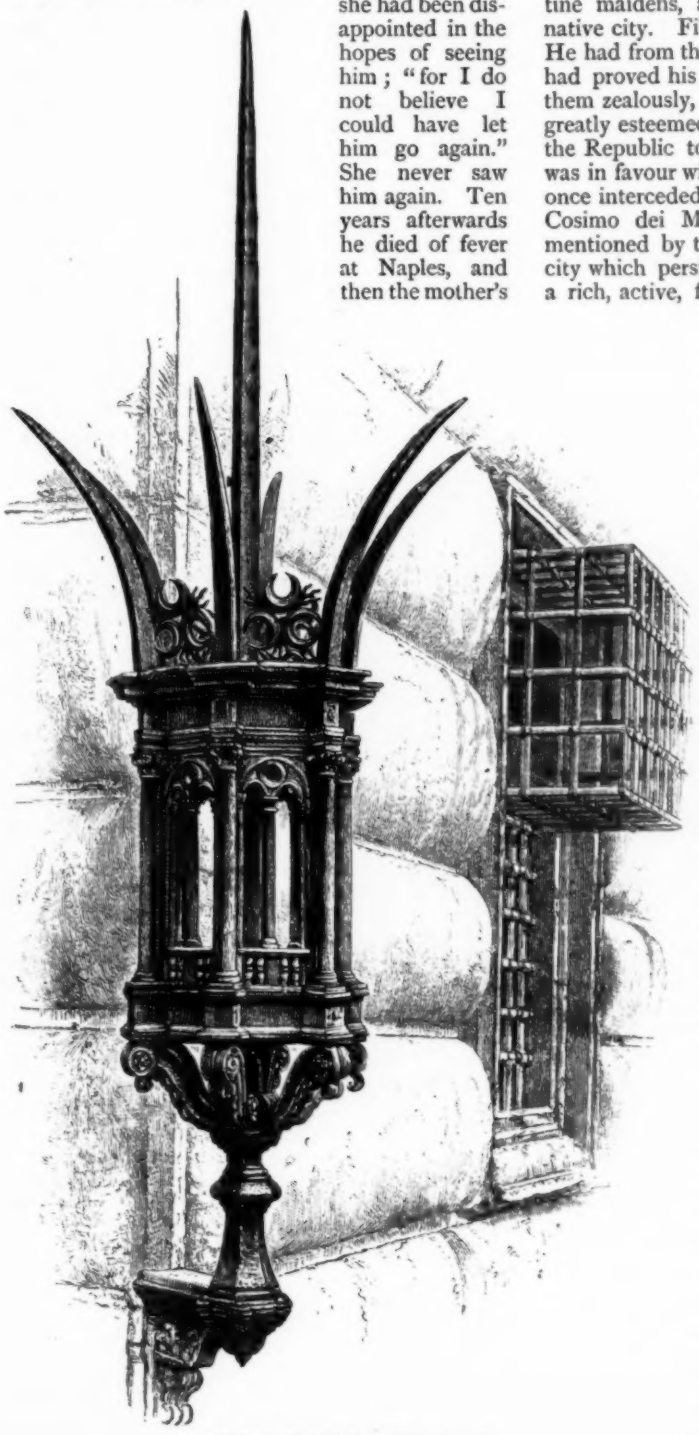
BRACKET ON THE PALAZZO STROZZI.

The outburst of girlish vanity natural in a pretty, sixteen-year-old bride does not seem to have injured Caterina's character. She made an excellent wife, and died at the age of fifty much regretted by her husband, who had her buried with all pomp in the Cathedral. Marco, a man of good parts and great energy, attached himself warmly to the Strozzi family; kept the absent brothers well informed of the course of political affairs in Florence; advised and helped the mother in all business matters; joined her in her search and negotiations for brides for her sons; and exerted himself to the utmost to obtain the exiles' recall. His accounts of a couple of visits he paid to Luca Pitti in this last connection are very characteristic of the man's observation and caution.

On his first visit he is very much puzzled to know how to interpret Luca's change of colour at the reception of Filippo's letter. "When I looked up I saw him very red," he says, "and his extraordinary courtesy! He would not hear me unless I sat down by his side. I made great resistance—still, seeing it was his will, I did so." Then he discusses the reasons of Luca's perturbation, and thinks that it may have been the mention of Piero dei Medici's name, "since he might think that another would

earn the praise of the return of these exiles. Whatever it may be, the facts will clear it all up." On his second visit Marco gave Luca to understand that he was sorry not to have found him the day before, as he had wanted to see him before going to Piero.

"And there I stopped, to see what he would say. He asked me at once, with great good-humour: 'Bè! Haven't you said anything to Piero?' I answered No. He replied, as though half complaining: 'Perhaps it might have been better to have said something so that he might be better disposed when the time comes.' . . . When I first went into his presence there were a great many people; but he called me to him at once, and asked me, 'Bè! What has been done?' I answered him that I was very sorry he had been at his country-house, as I had not been able to have his advice earlier; and proceeded as I have just told you. . . . All this I did, thinking such to be the temper of this instrument, which, as you say, is very difficult to tune, and is much more so even than seems to you out there. And I am in great perturbation and fear, for he is more delicate than a harpsichord."



Marco and his friends tuned the instruments into harmony, however; for Filippo and Lorenzo were ultimately recalled by the united forces of Piero dei Medici and Luca Pitti.

The second daughter, Alessandra, was married three and a half years later "to Giovanni, son of Donato Bensi, who is a distinguished young man, and has so many good parts, that I am sure she will be as comfortable as myself." Giovanni was twenty-two years older than his bride, and seems, towards the end of his life at all events, to have been good-natured indeed, but shiftless and thriftless. Madonna Alessandra had to take him and all his family into her house, and his friends make fun of all the bottles of wine they will uncork at dinner. Our heroine remarks, too, in one of her letters, that when Alessandra wants to mend her dress she has to put on her mantle to cover herself. Giovanni's feelings on the question of his age are amusingly expressed in his first letter to his brother-in-law. "Filippo, you are too perfect a gentleman to address me with *voi* (the term of respect), and you should not do it for many reasons, and especially not so as to hurt Alessandra; because you would make her believe I am too old for her. So I beg you not to use it." Filippo accordingly used the more intimate *tu* (thou).

Thus Madonna Alessandra had placed both her daughters, and could turn her attention to the sons, on whom rested the future of her house. "If God gives me life for some years yet," she had written to Filippo, "and I get Alessandra off my hands, I will so furnish your house with linen, that you shall have all you want. For in truth, while one has the girls in the house, one only thinks of them; so that when she is gone I shall have only you three to attend to." Even before she found a husband for Alessandra, however, the mother watched most actively over her boys' bodily comforts. A very large proportion of the letters make mention of cheeses, fennel (probably dried for flavouring), shirts, handkerchiefs and towels of her own weaving. "The small ones are to put on when you have your hair done," she once remarks. For she was a notable housewife, who spun diligently, and found a ready market in Florence itself for her handiwork, which, according to the custom of the age, she saw no degradation in selling. Most characteristic are some of her letters in this respect. She will give her description of her relations with the government. "I have been bothered by no fewer than four offices for the 240 florins I have to pay as taxes," she says. "For the last six months I have done nothing but go now to this office, now to that. Now, with God's help, I have made an arrangement with them up to February; paying, all included, about nine florins a month." Then she will pass to a little discussion on politics, always in their bearing on the taxes, of course, and will probably finish up with directions for the despatch of fresh flax, a few words on the prospects of the year's crop, and information as to the price at which she had sold the last.

To Madonna Alessandra's great grief, the three sons for whom she was working were reduced to two, rather more than two years after Alessandra's marriage. From Matteo, her Benjamin, she had torn herself early in 1449. "I can't send him yet," she says in 1447; "when Caterina is married I shall be too lonely. I haven't the heart to send him now. . . . If he is good I will keep him here. . . . He is learning to write; and I will put him into the office and he will stay there this winter." He learnt to write well. A letter of his, written at eleven years of age, is a model of good sense and reflection. Madonna Alessandra had reason to cling to him, to keep him by her as much as possible. At last, persuaded by her son's letters and the representations of her relations, she decided "to keep of three sons not one to have near her in her need." And she put his wardrobe entirely in order, that is, "a new cloak of the shape that Goldo (his cousin) told me; and a purple tunic, and a doublet of the same, and shirts and other things which I think he will want; such as knives, and slippers, like the friars wear, and balls to play (*palle*), and everything that Matteo asked for has been bought." This was in July, however, and it was very hot. A fear of the plague was abroad, and, to Madonna's ill-dissembled joy, everybody advised her to put off the departure. "Have patience, then, for his health's sake, a month or two at the most; for if he died on the road, neither you nor I would have him." In the following February the wrench took place. Matteo went away with his uncle, and Madonna, writing a couple of days later, says, "I have not yet come to myself." Continually does she recommend her youngest born to Filippo's care. "Don't strike him, as you did Lorenzo," she says; "you'll get more out of him by kindness." "Show him little attentions; he does not know how to take care of himself." "See that he keeps himself clean. He has good habits, but he's such a child yet." Marco Parenti also writes to Filippo about him: "You must needs, for the great desire I see you have to make something of him, have patience to teach him, not what you would have him learn all at once, but what he can learn in several lessons. And I want to remind you of another thing, that there is no reproof less tolerable than that of a brother, because

it seems that they have almost the same rights in everything, and they want to have equal liberty in whatever they do together." Never did Madonna Alessandra cease hankering after this youngest son. "It is better, after all, that Niccolò (his uncle) could not bring him through Florence," she writes, when she had been disappointed in the hopes of seeing him; "for I do not believe I could have let him go again." She never saw him again. Ten years afterwards he died of fever at Naples, and then the mother's heart forgot its own grief in sympathy for Filippo who had nursed him.

LAMP AT CORNER OF PALAZZO STROZZI.

All Madonna's hopes rested now on Filippo and Lorenzo. Her great desire was to see them united in business and in fraternal love, married to Florentine maidens, and recalled with honour to their native city. Filippo had caused her little anxiety. He had from the first laid her maxims well to heart; had proved his gratitude to his uncles by serving them zealously, had risen high in their favour, was greatly esteemed by the numerous ambassadors of the Republic to the Court of the King of Naples, was in favour with the King himself, who more than once interceded in strong terms on his behalf with Cosimo dei Medici, was known and favourably mentioned by the most influential families of the city which persistently kept him in exile. He was a rich, active, flourishing merchant, keeping open house, and owning a large number of men- and women-servants. Madonna wonders what this household can be like, and no doubt figures to her thrifty mind the waste that must go on in it. "I hear from Francesco Strozzi," she writes before her loss, "that you will have no more need of boys just now; and that you have plenty of maids (slaves, she calls them) too; and if Matteo has to keep them in order, his duties will not be light. I expect you are a nice household."

For Lorenzo, who from Valenza had gone to Bruges, she had experienced more anxiety. He was a bright, witty young man, who worked more quickly than any other clerk in his uncle's office, but who made his employers anxious by his insatiable appetite for play and gaiety. The mother writes him one touching letter in 1452. He had written in a time of much difficulty to ask her to send him some bird-nets. She replies she has been to see about them, and finds they cannot cost less than six florins each. Then she makes a list of all she owes for taxes, and sums up.

"So, having to pay the Goverament, and carry on the last suit with Niccolò Soderini, I think we may leave the nets to themselves. Pay attention to matters of greater importance. It will be better for you. . . . You are old enough to behave better than you do, and by this time you ought to correct yourself, and give your mind to living virtuously; for up to this time you have lived a child's life; but now it should be no longer, both on account of your age, and because no one can attribute your misdoings to ignorance or to not knowing what you do; for you are of such good parts that you know good from evil; and especially when you are reproved

by your elders, I hear you do not behave as I should like you to; so that I am grieved, and live in great fear that some day you may be overtaken by ruin, and find yourself less than comfortable; for he who does not do what he ought, receives what he least expects. So that, of all the other troubles that I have, yours is the greatest."

The conclusion of the letter is very touching. "I remind you not to turn your back on my reproofs, for they are given with love and tears. And I pray God to dispose you to do what I desire."

One of their uncles being dead, and the other established at Rome, Madonna saw Filippo and Lorenzo realise her wishes, and set up a united business in Naples. She now turned her attention to finding brides for them, uneasy at their long life of celibacy in a house "that seemed an inn." "In good company a man finds consolation for body and soul," she writes to Filippo, urging him to bestow on her a pretty daughter-in-law and grandchildren before her death. She would come then, if their return was hopeless, to make one house in Naples, with the sons whom she seems to have half lost.

Interesting is the gallery of Florentine maidens whom Madonna Alessandra's letters pass in review before us; maidens with fair hair, oval face, darkish complexion, such as sat to Botticelli for Madonnas and Judiths, and such as we meet in portraits from Raphael's hand. One of these maidens Madonna saw for the first time in a church, whither she had gone to see another who had been mentioned to her. "Not knowing who she was, I placed myself beside her, and paid attention to this girl, who seemed to me to be beautiful and well-made; she is as tall as Caterina or taller; good complexion, not of those white ones; of pleasing appearance; the face long, not delicate features and yet not coarse; and in her movements and her visage she seems only half awake. The sum of it is that I think that, if other things are suitable, she would not disgrace the bargain; for she will be honourable." Long were the negotiations for this maiden; but they fell through as so many others did. It was in fact very difficult to find a good girl, of honourable family, with even a small dowry, whose parents would marry her out of Florence; and Madonna, in spite of all her efforts, saw one *partie* after another slip through her fingers. Even she was beginning at last to despair.

Four years of happiness, however, were to crown her life of sacrifice; four years of the domestic joys which she had struggled so bravely to obtain. In 1466 her two sons were recalled; in 1467 Filippo brought a charming bride, Fiammetta degli Adimari, to enliven the dark Strozzi house which stood on the site of the modern magnificent palace. One of Madonna's last letters to this son, famous at home and in Naples (whither he had gone on business), tells of the babbling grandson, Alfonso, who did not like learning to read, but who had a good memory, and climbed up one evening to whisper "Papa at Naples"; and of the birth of a daughter "like Fiammetta, as fair as she is, and featured like her."

Active and loving, Madonna Alessandra's life was fraught with importance to this famous Florentine family, many generations of which have risen up to call her blessed. Filippo tenderly records her death in his journal: "The 11th of March 1470. This day in the morning, between the hours of ten and eleven, Madonna Alessandra passed from this life with all the sacraments, dying most sweetly. She was buried most honourably in our sepulchre in Santa Maria Novella. She lived sixty-eight years. *Requiescat in pace.*" He goes on to give a list of the charities to which she left her private effects, incorporating even an interesting letter of thanks from the Superior of a convent to which Madonna Alessandra was specially attached.

Filippo had by this time risen to great importance in Florence. Avoiding rather than seeking public honours, his immense wealth, great liberality, and well-known excellent good sense made it impossible that he should live a retired life. Il Magnifico Lorenzo dei Medici called him to the Government, and entrusted him with delicate affairs of State. He appears, in fact, to have been one of the most splendid and powerful Florentine nobles, when in 1489 he resolved to build himself a fitting habitation. The story of the first inception of this house is quaintly told by his son and biographer:

"Filippo, then, having abundantly provided for his children, desirous rather of fame than of possessions, finding no better or safer way of leaving a memorial of himself, being by nature inclined to building, and having no little understanding of this art, resolved to construct an edifice which should give a name to himself and all his family both in Italy and abroad. But there was in this no small difficulty; for, since he who was reigning[1] might fear that another's glory should obscure his own, he was afraid to do anything which might excite envy. Therefore he began to spread abroad that he had so many children (he had eight in all), and so small a habitation, that he must, since he had generated them, think how he could house them, and that he could do this much better during his life than after his death."

So he began to talk with builders and architects, sometimes showing himself ready to begin at once, sometimes appearing undecided, continually repeating that he wanted a comfortable, good-looking house, useful and not showy, even proposing to have shops along the base for the convenience of his descendants. The architects, as their manner is, continually urged him to greater splendour. He opposed them, saying "that he would rather not have begun to build at all than find himself in such a labyrinth." Still he was by no means offended at their suggestions.

The matter soon reached the ears of the Magnifico himself (as Filippo had intended it should), who examined and approved the plans, inciting Strozzi to continue the work on the splendid scale on which he had begun it, and making suggestions for the exterior of the palace. Still Filippo apparently hesitated, but ended by letting himself be persuaded to build; and "with sagacity and industry accomplished that which otherwise would have been denied to him, or rather would have injured him not a little."

Not yet quite sure of the continuance of the Magnifico's good intentions, however, Filippo begged him, in his will, to superintend the build-

[1] Lorenzo il Magnifico.

ing, if he died before it was finished, and his sons had not completed it by 1496.

Indeed, Filippo did not live to see it completed. He died, as we know, shortly after its commencement, in 1491. At his funeral, "besides the ordinary crowd of citizens and representatives of the religious orders, with relations and servants dressed in black, there were present (a spectacle unheard of in our city) all the chief men and youths of his profession, together with the architects, carpenters, smiths, masons, stone-cutters, and all the rest of the low crowd which was working at the palace he had begun to build, clad also in black, and with so much devotion and grief as to move to tears all those who had come together to see the funeral pomp."

Thus Madonna Alessandra's life-work was accomplished. The influence of this one brave woman, thrown on her own resources in times of the greatest difficulty, young, beautiful, accustomed to protection and luxury, had not only saved from miserable extinction the noble house into which she had married, but had brought it about that the thirty-two years of exile which were to have crushed it, were but the cause and prelude of its more splendid blossoming. Of a truth this quiet Florentine gentlewoman was one of the strong ones of the earth.

HELEN ZIMMERN.

# For Once.

SHE was my friend of many years,
Glad for my joy, and sad for my tears;

And unto many as unto me
She gave the grace of her sympathy.

All our griefs and our joys she knew,
Suffering and rejoicing too.

Hers to give, and ours to take;
Tacit covenant nought should break.

None of us ever guessed or thought
Our Lady of Comfort needed aught;

For as for her, her soul was fed
From the very source of life, we said.

Before that lovely presence of hers
Our souls undid their barriers;

And the stonework of reserve fell low,
Even as the walls of Jericho,

When seven times seven the ark had gone
Around, and the trumpets' blast was blown.

But we never thought that she could swerve
From her gracious calm and sweet reserve;

She who walked with a stately mien,
Over herself and her world a queen.

But once this woman let me see
The quivering heart of her agony.

She laid her head upon my knees,
And spake in words like unto these:

"Let me weep for a little while;
Me who so long have worn a smile!

"Let me sob for my broken joy,
As a little child for its broken toy.

"I have laughed with friends and cheered their way:—
Oh, let me weep for myself to-day!

"I have not suffered mine heart's distress
Upon the heart of the world to press.

"I have taught my lips to be bravely dumb
About the gone that no more may come.

"But to-day the big tears blind mine eyes;
I have but played at being wise.

"To-day my sobs are deep and long;
I have but played at being strong.

"God, give me mine own, own drink and food!
I have but played at being good."

Strong and calm through good and ill,
I had thought her before, and I think her still;

None the less great because I saw
The tears that awed as a man's might awe;

And heard her low full voice sustain
A weight that was heavier than pain.

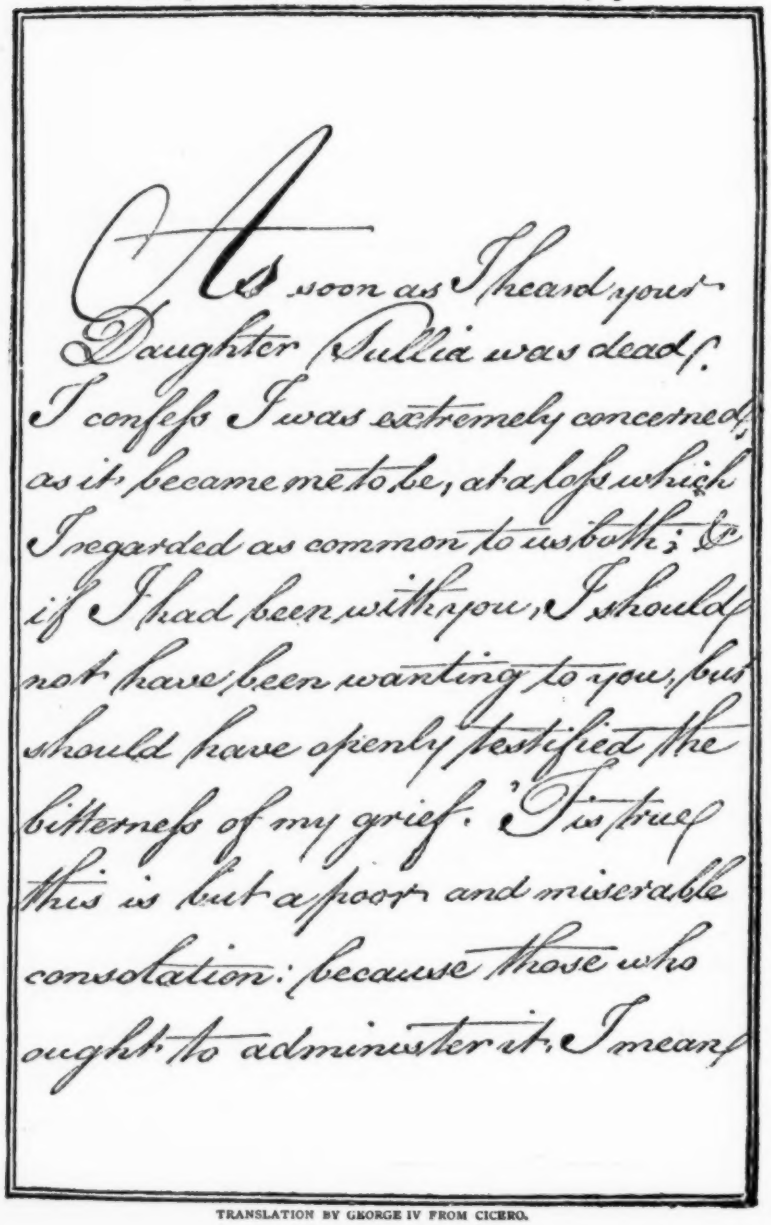
And when she rose and kissed my cheek,
I knew she knew I would not speak

Concerning aught I had seen that day:
And she went upon her wonted way.

And I was just as I used to be;
Except that now I had learned to see.

So there was never fear nor pride
Betwixt us twain till the day she died.

E. H. HICKEY.



# THE HANDWRITING OF OUR KINGS AND QUEENS.

BY W. J. HARDY, F.S.A.

## GEORGE IV, QUEEN CAROLINE, AND THE PRINCESS CHARLOTTE.

GEORGE IV was born about a year after his parents' marriage. Both he and his brother Frederick, born in 1763, were, in 1771, placed under the governorship of Lord Holderness, who, after holding this appointment for five years, seems to have been glad to resign it. The reports he sent from time to time to George III revealed the difficulties of his situation, not, it should be said in fairness to the boys, wholly owing to their troublesomeness, but quite as much to the want of unanimity existing amongst the teachers as to the best course of study to be adopted. Still, despite these disadvantages, the boys—especially the Prince of Wales—picked up a good deal of knowledge, though they had little application. How much of the translation of Letter XVII in the Fourth Book of Cicero—which was sent home for the King's perusal when George was about fifteen—is the boy's own work, and how much it was "touched up" by his tutors, we shall never know, but the following facsimile of the first page of the MS. shows that the Prince wrote a good plain hand (*see Facsimile P*).

*Facsimile P.—British Museum. Additional MSS.* 20,023.

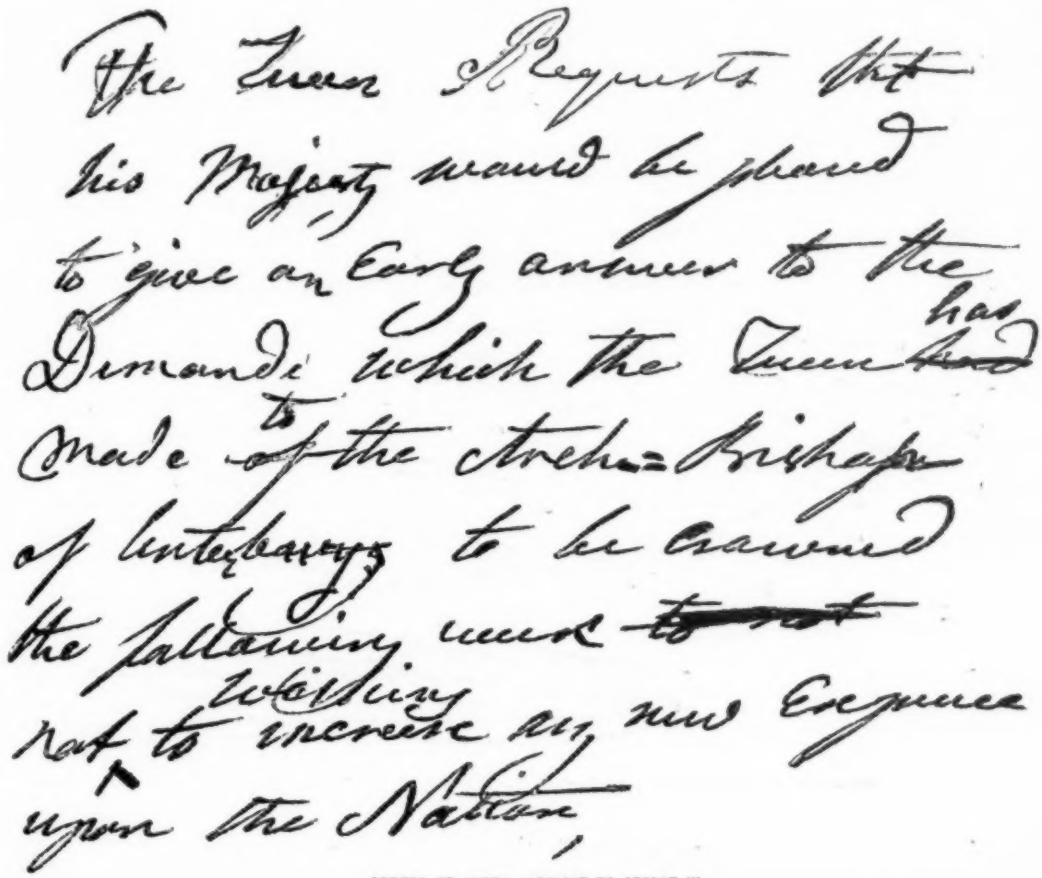
As soon as I heard your
Daughter Tullia was dead;
I confess I was extremely concerned;
as it became me to be, at a loss which
I regarded as common to us both; &
if I had been with you, I should
not have been wanting to you, but
should have openly testified the
bitterness of my grief. 'Tis true
this is but a poor and miserable
consolation: because those who
ought to administer it, I mean

TRANSLATION BY GEORGE IV FROM CICERO.

As he grew up, the Prince showed signs of an inclination to embrace and follow a moral code very different from that of his father; hence the quarrel between the King for the time being and the Prince of Wales for the time being, which the English people must have taken as a matter of course, since they had witnessed a similar disagreement, though not for the same cause as this, between the Sovereign and his eldest son ever since the House of Hanover had come to reign over them. George III's Ministers showed the Prince every mark of disapprobation of his conduct; and it was with some reluctance that the

Regency Bill, after the commencement of the King's last illness in 1810, was agreed to. His signature as Prince Regent appears below.

*Facsimile Q.—Original on Royal Warrant. Public Record Office.*



GEORGE IV WHEN PRINCE REGENT.

On the next page is his signature as King attached to the coronation oath. How far he kept that oath towards his country is a matter unnecessary for discussion here.

To turn the Prince of Wales from the course of life he was following, George III and his Ministers were for ever urging him to contract a royal union, but the Prince as often rejected all proposals of the kind, till at length, driven almost to distraction by the state of his finances, he yielded to the tempting offer made by the King of a liquidation of his debts, and an increased income if he would marry his cousin, the Princess Caroline of Bruns-

LETTER OF QUEEN CAROLINE TO GEORGE IV.

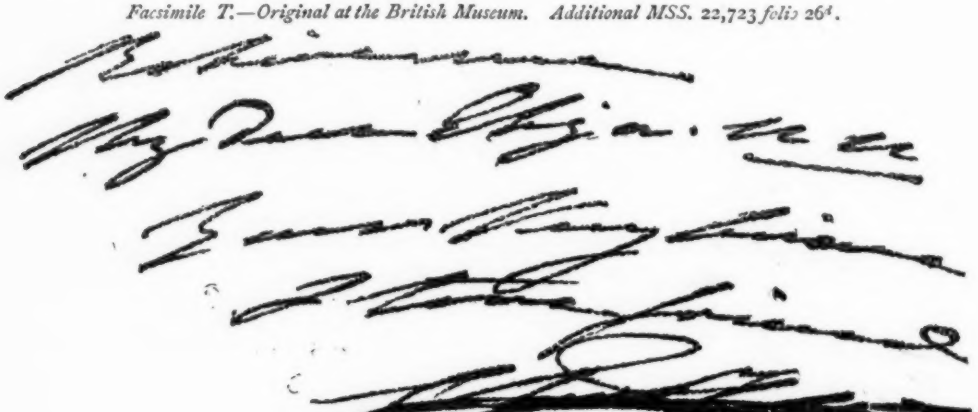
wick. The marriage, we know, turned out as might have been expected, though perhaps the lengths to which the Prince carried the indignities heaped upon his wife may have astonished even those most nearly acquainted with him. There is

upon the Nation the Queen must trust that after the Publik insult her Majesty has Received to day, the King will grant her just Rights to be crowned as next Monday, and that his Majesty will command the Arche-Bishop of Cantibury to fulfill the Queen's particular desire to confer uppon her that Sacred and August Ceremony.

*Facsimile S.*

GEORGE IV WHEN KING

no need to recall the incidents of this treatment, which culminated in George IV's refusal to allow the Queen to take part in, or even be present at, the ceremony of his coronation at Westminster, July 19, 1821. The accompanying letter was evidently written on her return from the Abbey, from the doors of which she had been actually forced back.



*Holograph. Draft. Original at British Museum. Additional MSS.* 24,182, *folio* 17. *See facsimile R.*

The Queen Requests that his Majesty would be pleased to give an early answer to the Demande which the Queen has made to the Arche-Bishop of Canterbury to be Crowned the following week, not wishing to increese any new Expense

The Queen also communicates to His Majesty that during the King's absence in Irreland Her Majesty intends visiting Edinburgh.

The Queen's request was refused, and under this last mortification she rapidly sank, dying on August 7 following. The chief comfort of her life was her only child, the Princess Charlotte, who was born in 1796. The Princess's learning and charity are matters that need no enlargement upon here. In May 1816 she became the wife of the late King Leopold of Belgium, and died in childbed the following year. Below is an example of her handwriting in the conclusion of a letter, written in 1813, to her friend Mrs. Wightman.

*Facsimile T.—Original at the British Museum. Additional MSS.* 22,723 *folio* 26[1].

SIGNATURE OF LETTER BY PRINCESS CHARLOTTE, DAUGHTER OF GEORGE IV, TO MRS. WIGHTMAN.

# THE TRIAL OF MARY BROOM.

BY MRS COGHILL.

## CHAPTER V.— TO THE RESCUE.

THE TRAITOR DISCOVERED.

IT was late in the afternoon when Mary saw a certain Tom Wheeler, a friend of her brother Wat, come swinging up the lane at a brisk pace, and go straight to the yard where Wat was busy packing pots into a crate. It was after ordinary working hours, but there were crates to be sent off next day, and the Brooms, while they were sober, were not men to leave work undone rather than do it themselves. So Wat was packing, and working with such haste that he did not even stop for a moment when Tom Wheeler walked into the yard. After a few words exchanged, Tom perched himself on a pile of empty crates and settled down for a chat.

All this Mary could see from the window of the dairy, where she had been busy with the afternoon's milk. And it occurred to her that very likely the two young men in their talk might have something to say about the Elers. She knew how she could probably hear this talk, and in her anxiety she determined if possible to do so.

She walked out of the dairy and, crossing the farmyard in full sight of the two, went into the cowhouse. She did this very openly, for she said to herself: "I'll give them the chance of not talking secrets. Wat would not tell me right out if there's mischief afoot, but he may speak to Tom, even if he knows I'm within hearing."

They took no notice of her as she passed near them, but went on joking and laughing as if something delighted them very much; and she had hardly entered the cowhouse before she knew that they were in reality talking of the Elers. The wall of this cowhouse formed one side of the yard of the pottery, and as Wat's work was under a rough shed adjoining, every word penetrated the ill-joined stones and reached Mary's ears.

"Father didn't want to go," said Wat. "He had a hankering after those fellows from the first. If John Elers had not put some affront on him he'd have stood by them all the time."

"Well, there'd be plenty without him," answered

Tom; "but it will be fun to see their solemn faces when we're inside their castle. Hey for a smash!"

"A smash! Ay, and they'd better take it quietly. There's more than one will be half drunk, and our pottery lads have no light fists when they take to 'em."

"Well, it won't hurt you or me if there's broken bones about. But I'm for making a bonfire of the place."

"I suppose we're sure to get in?" said Wat. "That Elers is a sturdy rascal."

"No fear. Come, when shall you have done?"

"Presently. You did not see Ralph, did you?"

Mary's heart stood still. Ralph? Oh, not her Ralph, of course. There were plenty of others—the name was common enough in that region.

"No," Tom answered. "You see, Mr. Wainwright being the biggest man and paying the most of the money, Ralph settled——"

"Yes, I know all that," said Wat; "and he threw the packet out of window yesterday, and Bob got it and kept it till he could get out. But I thought he expected to get to the Wheatsheaf last night?"

"Not he. And all he said was: 'Be in the lane as soon as it's dusk, and listen. When you hear a cat mew inside close to the wall, strike *there* and nowhere else, for I've got all ready for you.'"

"Ha! ha! ha!" roared Wat. "A cat indeed. 'When the cat's away the mice may play,' eh? He's a clever fellow, deaf Hugh."

"Ha! ha! ha!" giggled Tom in chorus, "and they never once thought such an innocent was finding out all their secrets. But what does Mistress Mary think of him? Is not she proud of him? He's her sweetheart, isn't he?"

"I've done it now!" cried Wat. "Mary! Mary!" he shouted, and getting no answer hastily put down the mugs he was packing and hurried out of the yard towards the door of the cowhouse.

"I'm a precious fool!" he said as he went. "I saw her go into the cowhouse and clean forgot it afterwards."

He reached the farmyard. There was no sign of Mary. He hurried into the cowhouse. "I promised Ralph," he said to himself, and called again, but all was silent. "She must have gone back to the house," he thought; "there's no harm done after all," and he hastened to finish his work and start with Tom Wheeler to Burslem.

"Is not she proud of him?" A cry burst from Mary's lips which Wat might have heard but for his own loud exclamation. And but for the loudness of that exclamation she would certainly have been caught. It steadied her senses and sent her flying swiftly and silently. Leaving the cowhouse she ran close to the wall as far as the shelter of a large empty dog-kennel and crouched behind it. Daylight was growing dim, and the corner where the kennel stood was shadowy. Wat passed near, but never saw her, and when he entered the cowhouse she fled again, as she had done many a time when they were both children, slipping from shelter to shelter and gaining the house at last to rush to her own bedroom, and fling herself down breathless, stunned, and wretched, to think of what must next be done.

What *she* must do, for she knew perfectly well that she could not sit still and endure this monstrous wrong. There was no advice and no help for her, for Mrs. Broom had gone to the town. It was she only who must hinder what still remained of the wickedness of deaf Hugh—of Ralph—her lover, whom she had loved.

There was but little time for thought. Of one thing Mary was clear—clearer even than of that other thing: that the man she had loved had vanished from the world into which her faith had created him. If the two brothers would fly and save themselves they must have the chance. Men who had sat at her father's board, and whom she and her mother had treated as friends, should not be hunted to death without a word of warning. She troubled herself very little about John Elers' proposal; her father had spoken to her of it as only one of the terms of a treaty having his profit for object, and she had put it aside with but little feeling of personal interest, certainly not enough to make her hesitate now about what she was to do. She went quietly into her mother's room and took from its chest a long and full cloak of dark grey cloth with a hood, which she knew would serve her purpose. Slipping downstairs and out of doors with this on her arm, she paused in a sheltered corner to put it on and draw the hood well over her face. So dressed she might have passed any mere acquaintance in full daylight without being recognised, and in the early twilight, which was now creeping up from the valleys, she would not have feared to pass her father himself.

Faster and faster she went down the long slope and up towards the scattered town, but when she drew near to houses and began to meet here and there a stray passenger, she dropped into an ordinary pace and gathered her courage and her ideas together as best she could. And all the while, flying along the lonely roads or walking steadily in the frequented ones, there was a horrible iteration going on in her brain: "Deaf Hugh—Ralph, Deaf Hugh—Ralph—" so it went on. She knew now that she had mistrusted Ralph before this revelation. There came back to her with a shuddering recollection certain moments when he had seemed to change before her eyes, and when it had required all the charm of his real love for her to make her resume her content. She knew now that there had been falsehood in the very truth of his love—poison in the pleasantness of her cup; and her overmastering terror was lest, by failing to warn the brothers, she should become an accessory to the wrong done them. She hurried on in the growing darkness till she turned partly aside from the outskirts of the town towards the less known neighbourhood of Bradwell.

In her childhood she had more than once been with her father when some errand had taken him to the old Bank at Bradwell, but the recent changes put her a little astray, and she wasted a few minutes before she found the door. This done, she took up a stone from the road and knocked sharply, trembling, in the interval of silence that followed, with a thrill of nervous excitement and fear that almost deafened her.

"Must she knock again?" she thought; and

then there was a step close to her, and Frank Elers himself opened the door. She could see him plainly enough, and also with one quick glance could make sure there was no one else about the yard. But he was puzzled for a moment by the tall figure loosely muffled in grey, and held the door open indeed, but not quite so that she could pass it.

"Mr. Francis," she said, in a low quick tone, "is your brother here?"

"Mistress Mary!" he cried, but she interrupted him.

"Let me in; I must see you both—alone."

He drew back in no small astonishment, and, when she had entered, locked and bolted the door. "Across there," he said, and without waiting for him she sped across the yard to where a gleam of light was shining out from John Elers' office. She went quickly to the threshold, but there she paused. Suddenly there came upon her a rush of self-consciousness. This man whom she was seeking alone, and in the dusk of evening, was the same who, only a month ago, had desired to make her his wife. The door that had admitted her into his precincts was already locked behind her. She drew a deep breath; it was for an innocent man's life that she was there, and her face was calm if it was pale as she crossed the second threshold.

She had kept the hood closely over her face, but now, seeing that no one was in the little room but John Elers, and that the two other doors were shut, she pushed it back and moved hurriedly forward to his desk.

He started up with an exclamation, but she raised her hand for silence.

"Are your workmen gone?" she asked in a low voice; "your English workmen?"

"All but Deaf Hugh," he answered, too amazed to do anything but reply promptly and directly; "and he sleeps on the works."

"Where is he?"

"Probably in there," pointing to the second door; "asleep by this time."

"Not asleep," she said quickly, "nor deaf. Can you and your brother seize him and tie him fast?"

"That can we," said Francis, close behind her. "But why?"

"Oh!" she cried, but still in an undertone, "stop for no questions, but do it."

She was wringing her hands together in her desperate earnestness. Her eyes had fallen upon a clock, and it was later than she expected. There was no time!

"We will," John Elers said. "Franz, there is a rope in the packing-shed; get it and come. We will hear why afterwards."

They went out and Mary remained alone. She had seen the start with which John Elers had heard her say "Nor deaf." For a moment she thought she had done enough in betraying the traitor, and might go; then she remembered this was but half her task. Besides, how could she go? Francis Elers had the key of the door. She heard a sound of voices and of something being dragged along. They had him then, and at least there would be a pause before the drama could go further. The door flew open, and, with hands fast bound, "Deaf Hugh" was thrust into the room. He had ceased to resist, but at the sight of Mary he fell to the ground, and with a smothered cry dropped his head upon his breast so that the matted hair might fall and partly veil his face. "Deaf Hugh," the filthy, degraded object she had seen on Sunday, a squalid beaten traitor, that was Mary's thought of him. Scarcely a gleam of recollection for the moment in her mind that this was her lover, her hero! Nay, if there was a hero here at all it was John Elers, standing calm and grave in the presence of an unknown danger, waiting for her to speak.

"Do you know who he is?" she said, and her voice sounded strange to herself from the quick beating of her heart. "He belongs to us. He offered to come here, to deceive you, to find out your secrets, and he has done it. They know everything—what you use and how you make your ware. My father and brothers have learned it all from him. My people have stolen your secrets, through him."

She was speaking to the two brothers, but her eyes were fixed on the prisoner. He had turned away as far as he could, but he raised his head sharply and looked at her as John Elers now came to her side and took her hand.

"Hush!" he said; "why hurt yourself by saying all this? If our secrets are gone, they are gone; perhaps we may find out new ones yet."

"Oh, not here!" she cried passionately. "There is more. He has found some way by which he can let them in, and they are coming to-night—to-night as soon as it is quite dark. Even without him they may get in. They are half drunk, they hate you, and my father does not hold them back now. Make haste; I can show you a way they will not take. You must get away, both of you, *now*, without wasting a minute."

She had snatched her hand from John, she had turned to Francis, and then back to the elder, pleading with all her might. It was most strange to her, in the intense excitement of her own mind, to see them stand, not unmoved certainly, but unflurried, glancing at each other.

A loud voice from outside broke upon the stillness just as she uttered the last word, and she gave a cry: "Too late! They are come!" But it was only the shouted song of a drunken wayfarer, and she dropped into the chair Francis had put for her many minutes ago.

"Franz," said John, "can we hold our castle, think you? The paling is high and strong."

"But of wood—and wood burns."

"Will they try to burn us out, Mistress Mary?"

"Yes."

"Then the first thing to think of is your safety, our sweet and brave ally."

"I am perfectly safe. Do you think you two can fight fifty?"

"We can shut ourselves up and keep them out, I think. We shall try, at any rate."

"I came here," she said, "to save you. Do you think I should have done that if I had not *known* you could not save yourselves? You may lose all you have, and be killed as well. Is that better than losing all but your lives?"

"No, John," said Francis. "Why should we refuse her help? I give my voice for flight. Tell us, sweet mistress, which way must we go?"

"Franz," John interrupted, "you may fly if you like. It will be quite dark in a few minutes. I will see you and Mistress Mary safely through the gate, and then arrange my fortress."

"If one stays, both stay," said Francis, with a shrug of his shoulders. "Are you sure," he went on, turning to Mary, "that you can reach home safely? I fear we should be a bad escort."

John had gone to the door and was looking anxiously into the deepening darkness of the yard. He would have given much to have known Mary safe in her father's house; he would willingly have given everything he possessed in the world if he could have fled from this inhospitable England with her as his companion. But he had accepted fully the fact that she loved another man, and he thought that other man would surely be among his assailants, and would see that she came to no harm. Since he himself might not have her and protect her, he had no mind to fly from the one who might. No; let him be killed if such was his fate; prosperity had been stolen from him and love denied him; why should he care for life?

He had stood but a second or two with these thoughts in his mind, and his eyes raised to the bit of sky over the yard, where stars were now beginning to show faintly, when he felt a gentle touch upon his arm. Mary stood beside him full of an anguish of anxiety.

"They must be quite near now," she said. "Don't you see that you are sacrificing your brother? They will go to the other side first, where he was to let them in. The lane here is still clear. Come, Mr. Elers—oh come, for my sake at least."

"For your sake? Why?" he cried.

"Think," she answered. "It is *my* people who have done this—those I loved. How can I ever forgive them or myself unless you are safe?"

He turned round towards her with a sudden change in his whole look and attitude.

"There is one of them you love and will forgive even if they kill us," he said.

"Never," she cried. "Why should you think it of me?" Then she suddenly remembered the prisoner, who had once been her lover, and stopped breathless; but he answered her quickly:

"Mary, if that man had not been between us, would you have thought of me? Speak truth, even if it be 'no.'

"How can I tell?" she faltered; "and now there is no time."

"John!" cried Francis, from the further door of the office. "They are there, in the lane outside. Peter and Jacob are on guard with their pistols. I am going to them. Keep watch on this side."

"I will watch," John called back. "Now," he said, in a lower tone, "I am going to open the gate. Run quickly to the left. The moment you turn the corner you are safe, and I shall stand at the gate till then."

He ran across the yard and began to draw back the bolts.

"Your brother has the key," Mary said, standing beside him.

"One of two," he answered, as he took the duplicate from his pocket.

The door was unfastened—was just beginning to open, when she laid her hand upon it.

"Will you come?" she said, "and call the others to come?"

"No!"

"Then I stay. Fasten the door again, and I will speak to them from the window on the other side."

"This is madness!" he cried. "Your warning has saved us, for we are armed; but you shall risk yourself no further. Stay," he added; "yes, come with me to the other side."

He made lock and bolts safe again, and then led her back to the office.

She could not speak, but was trying to think how best she could make her father hear her voice and listen to her entreaties, as she followed John Elers through a passage adjoining the office, and then into a small sitting-room. The room was bare, and, being situated in the very heart of the pottery works, had no window but a skylight. A bright fire burned on the hearth and made the place warm and cheerful; but Mary thought they were simply going to pass through it.

"Wait for me here," her guide said, as he stood aside for her to pass into the little room, and in another moment he was gone and the door closed. She heard a bolt drawn and flew to an opposite door. That yielded, but beyond it was nothing but a cupboard, where there had apparently once been an opening to the lane. As she drew back, dismayed to find herself imprisoned, she heard a murmur from outside which she knew must be the sound of many voices suppressed, but gradually rising in excitement.

The little crowd of assailants was there, and she guessed they were growing impatient of their spy's delay in admitting them.

She ran once more to the door by which she had entered, and knocked loudly on it. There was no answer, and she knew now what it meant. Elers, seeing no other safety for her, had shut her up in the safest part of the place, surrounded by the solid walls of the old farmhouse. And here she must stay until the event of the night should be decided, until the men she had come to save should be utterly vanquished or the men of her own household confounded.

She walked up and down the small room with agitated steps. "Had she done right?" she asked herself; and her conscience said "Yes;" but, having done it, what now remained for her? At that thought she broke down. Falling into a chair by the table, she hid her face on her arms, and the bitterest weeping she had ever known shook her from head to foot. What should she do? Where were her love, her quiet life, her happiness and her self-respect? Everything had been shattered in the stress of that day's storm. Ralph existed no longer; he had become "Deaf Hugh." He would never dare to come near her, and if he did she

would never again look at the man who had almost tricked her into receiving the wicked wages of treachery.

Outside, while she wept, there were fitful sounds of voices, but no such noise as should betoken an onslaught, and gradually she sobbed herself into silence. Would anyone come to her? Where was John Elers? and what was that he had said to her: "Speak truth!" Had he really cared so much then? Oh, if she could get away now and hide herself from them all! He did care, and yet he had never troubled her.

### CHAPTER VI.—A TREATY OF PEACE.

MEANTIME John Elers, from the moment when, determined she should run no further risk except at the cost of his life, he had turned the key upon her, was prompt and swift in what he had to do. He went back to his office and took from a case in one corner a gun of one of the best kinds then in use. He rapidly looked to the loading, and then with it in his hand joined his brother and the workmen in a shed whose wall, as they both judged, must be that through which "Deaf Hugh" had prepared to make an opening for the entrance of the invaders. Francis had found a place where part of the masonry had been cautiously picked away, leaving the wall so thin that half a dozen blows of a crowbar would send it crashing inwards. Over this he was standing sentinel himself, keeping meantime absolute silence, since their momentary safety depended on those outside not knowing where to make their attack.

John understood the position instantly when he saw the half-destroyed wall, and the pile of pieces of plank and other things with which the mischief had been concealed. He went to the spot.

"Go to the door on the other side," he said softly to his brother, "and if they come round there whistle loudly. Peter must take your place here."

Francis obeyed without a word, and, as Peter took his place, disappeared in the direction of the office. John gave an order to each of the men, and then hastened back into the small dwelling-house, and upstairs. In a bedroom there was the only window belonging to the place which opened upon the back lane; and, without kindling a light, he went to this and very softly opened it. The narrow lane or alley seemed to be full of men. True a small number would fill it, but he guessed that there must be forty or fifty, and ten to one against his little garrison was terrible odds. They were growing impatient, and every now and then one would tap sharply on the wall. There were one or two lanterns among them, the wavering smoky lights showing now one group of rough figures and now another, and it was evident from their speech and their gestures that many of them were very far from sober.

But they had clearly no idea that any alarm had been given, nor any doubt as to success in their savage purpose. And if it had been a mere question of driving them off for the moment, John Elers felt sure that he and his three helpers, all possessed of and used to firearms, could have done it. But this would not satisfy him. A retreat from Staffordshire might be inevitable, but at least he would try to retreat with the honours of war.

After his rapid survey he spoke:

"Is anything the matter down there?" he said in the most matter-of-fact tone possible.

There was a kind of howl in response, and then a voice said:

"Is that one of the Dutchmen?"

"It is John Elers, at any rate. What do you want?"

"To do for thee and thy gang," said the same voice.

"Very well. But we are peaceable men in our own house. Do Englishmen generally try to break into their neighbour's house at night and murder him?"

"Thou'rt no neighbour of ours," began one man; but another cried:

"We'll thrash thee, but we donna want to murder thee."

"Thank you, but I don't want to be thrashed. And we are armed, and don't intend to be thrashed."

A roar of mingled voices rose at this, but Elers could presently make himself heard again:

"We can defend ourselves. Look; I will prove it."

A man at a little distance was holding up a lantern, trying to see the speaker. The lantern thus became an excellent mark. In a moment a shot from Elers' gun had dashed it from the owner's hand in shivers.

Firearms are serious things to face. It was half comic to see the way in which a small circle was cleared round the wreck of tin and horn. This was so very different from what they expected.

"Is Mr. Broom there?" Elers called out before the effect subsided.

"I am here," a sulky voice answered, and the burly figure of Mary's father stepped into the light of another lantern. "I am here to punish the man that stole my trade."

"If we talk of punishing," Elers said, "how should I punish your spy? I have him safe, and I promise you his life shall pay for any one of ours. If we must fight we will; but I have been a soldier and had enough of it. I am willing to bargain for peace."

"No peace as long as thou and thy outlandish crew stay amongst us!" cried a fresh voice.

"It is not a Paradise to live in," said Elers. "But Mr. Broom has been my best friend and my worst enemy. If he chooses to speak for the rest of you, I'll see what can be done. Hold, there!" he cried, for at that moment he saw a crowbar approaching the long since disused and fastened door of Mary's prison. "I shoot any man who tries to force a way into my house."

The crowbar fell, and again George Broom showed himself. He was sober now; sober enough, at any rate, to be conscious that a beginning of failure had made their enterprise look even more mean and unfair than he had ever fancied it could do. In the bottom of his heart he despised Ralph, and wished Mary had married this man. Now all the neighbourhood knew the Elers' process, but the

secret, if it had been between the brothers and himself, would have made his fortune.

"Well?" he said, more sulkily than before.

"Mr. Broom," Elers began, "you and your friends have now possession of my method of making earthenware. It cost me many months of hard work to discover the method, and you have robbed me of it. This is one reason why I do not care to live among you; and the other is, that I object to having to protect myself as if I were in an enemy's country. Therefore I propose to leave this place, but only after I have had reasonable time to sell my property here and make fresh plans. Secondly, I propose either to give your spy the thrashing you intended for me, or to hand him over to the nearest magistrate. And, thirdly, I have another condition, which I can only talk over with you in private, and which does not concern any one here except you and myself."

"And how if we will have no conditions?" shouted one of the crowd.

"Then my friend here must speak for me," Elers answered. "Your white smock, Master Harper, is nearly as good a mark as the lantern."

Old Harper shrank back, and a roar of laughter rose round about him. The crowd were, in fact, no longer ferocious; the cold and darkness, the calm voice and prompt action of the man assailed, even the length of parley, had cooled them down, and one or two had actually dropped off, feeling that the alehouse fireside was more desirable than this dismal lane.

"You're ready to go, are you?" said Broom, round whom a cluster of the ringleaders had formed itself while Elers was speaking.

"Not ready by any means. I said I required time to sell my property."

"Who dost think will buy it?" cried a voice.

"Not you, at any rate, Master Gosling. I must sell to a man who can pay."

A jeering laugh again followed the retort, and John could see that the crowd was now beginning to divide itself. The nucleus was more compact, but stragglers were continually dropping away from the outer ends, lounging off as if tired of the business now the exciting prospect was growing tamer. They seemed to be going away, but they might be only going to the door which Francis was guarding alone. A pang of apprehension quickened Elers's words:

"Come, Mr. Broom, do you agree?"

"What say you, masters?" Broom asked of those surrounding him. They were genuine potters, and it was their decision which would rule the rest.

There was a minute's discussion in gruff tones before any audible answer came.

"How long do you want to stay?" Broom asked presently.

"Until I sell my property," John Elers answered. "I have said so before. One week, or three, or four."

"Will you sell at once if I find you a buyer?"

"Yes, at a fair price."

"You must give us Deaf Hugh," called another voice.

"That I will not. I will give him up to none of you."

"Dost thou know he's a friend of Broom's?"

"More's the pity. If I give him up to any one it shall be to Mr. Broom or his family."

"Wilt thou give him up safe and sound?"

"I will, if we come to terms."

"Swear it."

"I swear it."

Again there was a consultation. Then the voice that had lately spoken said again:

"Broom shall speak for us. What he settles we'll stand to. Talk away."

"Not here," said Elers. "Mr. Broom, are you afraid to come inside?"

"I'll come if you let me in peaceably."

"Bid these kind neighbours go away *peaceably* then, and when they are all gone come round to the door. If you like to bring two to protect you, do so; but you are perfectly safe alone."

"I believe I am, Master Elers, and any way I'll bring none," said Broom, and walked slowly away towards the front of the pottery. All those who had surrounded him moved off also, and in two or three minutes the lane was empty.

John Elers waited till the whole crowd had dispersed. Then he went downstairs, and, calling Peter, bade him stand at the window, and, in case of any one returning, fire his pistol not at but over the marauder. Next he hurried to the door where his brother, unmolested, still stood sentinel, and told him very shortly what had happened.

"Broom will be here directly," he said. "When he comes bring him to the office, and I will be with you in a minute or two."

And then, with a tremor of the nerves he had known nothing of during the last quarter of an hour, he opened the door of the room where he had left Mary.

She was sitting at the table with her head buried in her hands, but she looked up quickly at his entrance, so quickly that he saw the tears in her eyes and on their dark lashes.

"Forgive me," he said, standing before her, suddenly abashed by these tears and not knowing what else to say.

"Are they gone?" she cried, rising from her seat, and seeing no signs of harm upon him. "What has happened?"

"Thanks to you, they are gone," he said. "Will you not forgive me for locking you up? Indeed, it might have been safest. Now your father is here alone. Will you go to him? or shall Franz take you home?"

"My father here?" she repeated. "But he was one of them?"

"We have made a treaty. Only there are one or two things he and I have to settle."

Her face glowed with delight.

"Really a treaty?" she said. "Are you friends?"

"If we are not," he said—and then hesitated. "Would you like to make us friends?" he said, with a quick look at her.

"Oh yes," she answered, and wondered why she must needs blush at that moment.

"Come, then, I will put you where you can hear all that is said, and show yourself or not, as you please."

The passage outside the room was quite dark. He took her hand and guided her a few steps, then through a door; and then, by a gleam from a half-dead fire, she saw they were in the workshop adjoining the office. They could hear the voices of Broom and Francis speaking on the other side of the door, and Mary trembled.

"Will you stay?" Elers whispered, "or shall Franz come and take you away?"

"I will stay," she said, for she could not understand what all this meant.

Elers passed into the office, leaving the door ajar, and she stood in the shadow and listened.

"Well, Mr. Broom," Elers said, "the disturbance is over for to-night, I suppose? I must ask you to give me your word that we shall not be attacked again."

"I have said you shall not," Broom answered. "The business has been bungled."

"On our side? We have allowed your spy to outwit us, it is true. However, we may as well let the fellow go now."

He went to the corner where "Deaf Hugh," unable to rise without help, still lay bound, and concealed from Broom by the high desk. "Get up," he said, and with Francis's help dragged him to his feet.

"So thou'rt caught, Ralph?" cried Broom contemptuously.

"'Ralph'!" said John Elers under his breath, but only his brother heard.

"Ay, fortune of war," "Deaf Hugh" answered, with an uneasy laugh.

"Untie his legs, Franz!" said John. "Mr. Broom, what is this man's name?"

"Ralph Leader, to be sure; or 'Deaf Hugh,' if you like it better."

"The man you preferred to me?"

"Nay, he's a clever fellow; but I'd have had Mary take thee. He's her choice, not mine."

"He was her choice," Elers said; and, in spite of his self-control, he could not help a look of contempt resting on the unsightly figure of the spy.

"And he has shown himself clever enough to outwit me, and earn, I daresay, a handsome wage; but yet I think I would rather be myself than him, Master Broom, for good women do not love those they despise."

"Thou knowest little about them, I'm thinking, friend," Broom answered with an angry laugh, and then Ralph spoke:

"Let me go," he said. "I've played my cards and I'm beaten, though I've got one stake to take up. The Dutchman is right; Mary will never look at me again."

"So much the better," Broom growled; "but I'm not so sure. Thou'lt not be fool enough to tell her, I reckon?"

"No need to tell her; 'twas she found it all out."

Broom turned quickly to Elers

"Is that true?" he said.

The door behind which Mary had been standing was pushed open, and with white cheeks and glowing eyes she stood in the room.

SHE TURNED HER EYES RESOLUTELY AWAY.

"Father, it is true," she cried in a trembling voice. "It was so late, I had only just time."

"Am I mad?" shouted Broom. "How does my girl come here, Master Elers?"

"It was all my doing," Mary went on, gathering courage. "I heard all, and I came. Oh, father, I had to come and tell them, and then it was too late to get away, and now I can go home."

Elers had placed a chair for her, and she sat down panting and trembling. But she turned her eyes resolutely away from Ralph, and he knew it.

"Let me go," he said hoarsely.

"Mistress Mary," Elers said, "this man is your prisoner; have you anything to say to him, or shall he go?"

"Let him go," she echoed faintly, and covered her face with her hands.

Ralph staggered to the door. He was a little cramped by the ropes that had been tied round his ankles, and he wanted to vanish quickly from this scene of humiliation. Franz opened the door and

not ungently helped him down the steps and went away with him across the yard.

The three were left alone. Broom stood leaning on his stick and looking stolidly at Mary, who still kept her face covered. Elers was the first to speak.

"Are you satisfied, Mr. Broom?" he said.

"Nay, there's none too much satisfaction that I can see," Broom answered. "All Burslem has got thy secrets, and I—seems I've lost my daughter."

"Why? Because she has saved bloodshed and mischief? Nay, Mr. Broom, I have been robbed of the profit of years of work, and I shall lose in solid money besides, but if your daughter would but go with me on my wanderings, I should think the day when I was robbed the luckiest day of my life."

"More fool you, then. Though she's not a bad wench—has not been a bad wench till now, any way. But you should have had her with my goodwill."

"Father! Father!" Mary implored, rising from her chair. "Let me go home."

"Mary!" Elers said suddenly, and his voice was so deep and thrilling with earnestness that it sounded in the depths of the girl's heart. "You know what our fate is—Franz's and mine. Though you have saved our property, and perhaps our lives, yet we are impoverished and banished. We shall not leave England; there are other places than this where we can set up our pottery, and we shall do well, I am certain; but I want more. I want to see you again. I am slow and dull at saying what I mean, but let me come and say it to you before I go. Mr. Broom, if I had your goodwill before, speak a word for me now!"

"Ay, Mary," Broom said gruffly. "Thou'st been a wilful lass, and now all thou canst do is to follow good counsel. I'll take thee home, and thou'lt keep to thy mother's apron-string for awhile. My missis has always been a friend of yours, Master Elers; you'll come to say good-bye to her?"

Mary had drawn her hood closely over her face, and Elers could not see her eyes.

"I will come," he answered, "unless Mistress Mary bids me not."

But Mary was silent; this new wooing was too sudden. It was a *new* wooing truly, for she was now first realising her value to the man she had saved. Only she could not say, "Do not come."

And perhaps this was all Elers hoped for just then. As he opened the door and let her and her father pass out, she raised her head for a moment, and he saw her eyes shining through tears; but yet he thought there was a lovely softness in them that was for him, and watched the two figures move away into the darkness with a strong assurance that this evening that was to have been so fatal to him, had really brought him the happiness of his life.

This was the story Mary Elers' grandchildren knew, and it was told to them in the parish of Lambeth about the year 1740.

## Sunset.

Oh for to seize this moment ere it flies,
Breathe it in verse, as with a painter's skill
On canvas bid it stand for ever still,
Embalm it in mysterious harmonies!

Far in the glow of sunset nature lies,
Her features all—the ocean, earth, and air—
Fired and aglow as with the sudden glare
Of some transcendent joy, some great surprise.

Can she have heard what we of Adam's race
Have listened for, until our hearts grow sore
And sick and all seems misty and unreal?
The chariot wheels of Him who from her face
Shall smile away the tears that heretofore
Have dimmed the beauty of the pure Ideal?

B. W.

# THE GREAT CANADIAN.

John Alexandonald

ON June 6 died Sir John Alexander Macdonald, the greatest of colonial statesmen. Even in these days, when the mourning for a politician ceases with his funeral, the nation he made still mourns his loss. That nation is not more numerous than the Dutch, the Danes, the Swedes or the Swiss, but its territory is as large as Europe, its possibilities are at least as large, and the man to whose ability and enterprise the vast federation was due will not easily be replaced. With many opportunities of wealth, he died comparatively poor. Inconsistent as he was in the details of his politics, he was consistent in his patriotism, and his long public life was devoted to his country's good.

Born in Glasgow in the year of Waterloo, he sailed with his family to Canada in 1820, and first went to school at Kingston in Ontario. Ontario ought to be the most cherished of our colonies. Settled by the Americans who refused to live under Republican institutions when the United States gained their independence, and who moved across the frontier to follow the old flag, rejecting the Stars and Stripes with scorn, it has always been loyal in its leanings and was the fittest home for him whose boast was to have been born a British subject and whose hope was to die one.

Of "John A." at school there are the usual contradictory accounts from his schoolfellows, who look back through partisan spectacles. The intelligent lad, with pleasing face and prominent nose and strange, fuzzy-looking hair, was, according to some, distinguished in mathematics and penmanship, and was quite the pride of the school; while, according to others, he excelled in classics, and was not very great in them, and, indeed, was mainly noted for his adroitness in escaping punishment, so much so that his master advised him to become a lawyer. A lawyer he became, and from sixteen to twenty-one spent his time on an office stool as the most diligent of students. Skilful, courteous, attentive, and persevering, and above all things wide-awake, he from the first began to make way. Called to the bar in 1836 as soon as he had attained his majority, he had only to wait two years for his chance. It came appropriately enough in the defence of a cause in which he did not believe, and the miserable Pole with his gang of invaders or marauders from the United States border is now only remembered for having been defended by young Macdonald with an eloquence and ability that won both praise and employment.

Three years after the Schultz case Kingston became the capital of Canada, and it was as Progressive-Conservative M.P. for that limestone city that Macdonald began his Parliamentary life. He had a cordial reception, and soon his wonderful knack of pouring oil on troubled waters led to his being put on the Standing Orders Committee, and

three years afterwards to his appointment as Receiver-General, with which his long run of office began. But his first experience of official life was not lengthy, and when the Draper Ministry was thrown out, Macdonald found himself in opposition as one of nineteen against eighty-four. It was a fortunate thing for him that among so few he was easily conspicuous; and in fighting the uphill battle he gained his mastery of Parliamentary tactics and procedure, and perfected himself in the management of men. The narrow party man was often enough disgusted at Macdonald's lack of consistency or "singular fluidity of mind," as it was called, but to the onlookers there was much that was admirable as well as amusing in the way in which he would give credit to all for honesty, and act with any one who could help him at the moment; Englishman, Frenchman, Rebel, Annexationist, Ultra-Protestant, Roman Catholic or Secessionist, singly and collectively and in many curious combinations, all felt the influence of the magnetism of opportunity which has been rather unfairly described as his chief characteristic.

When the Liberals or "Grits" were defeated in 1854, Macdonald returned to office as Attorney-General in the MacNab and Morin combination, which was pledged to settle the then burning question of the secularising of the Clergy Reserves. Two years afterwards the mantle of MacNab fell on the shoulders of Macdonald, and for the following thirty-three years "the Chieftain" was the leader of the Canadian Conservatives. In 1858 came the "capital" crisis, which, although it shook Macdonald out of office, also shook him in again within forty-eight hours.

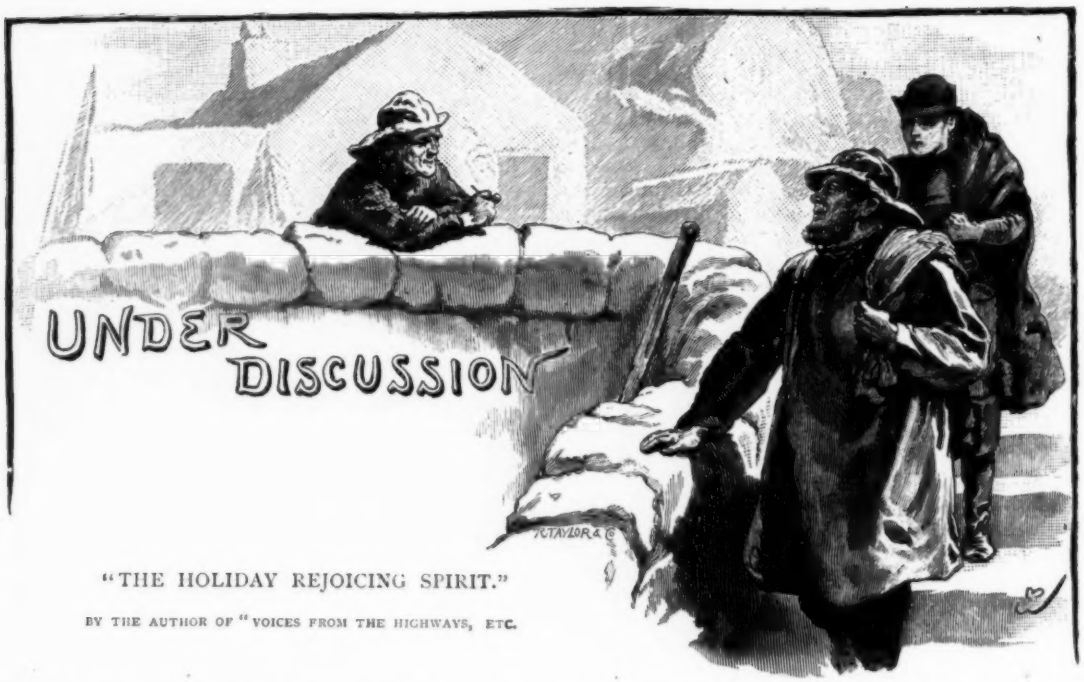
Owing to local jealousies, the capital of Canada had become the despair of geographers and school-children. In 1841, as we have seen, Kingston was the seat of government. In 1844, just before Macdonald's first election, a move had been made to Montreal; in 1849 the mob of Montreal broke into riot, smashed the Governor's carriage, and burnt the Parliament buildings, and, in consequence, a move was made to Toronto. Four years afterwards a move was made to Quebec, whence, after four more years, another move was to be made to Toronto, and so on, until in fact the absurdity of this perpetual motion became irresistibly apparent, and it was decided to settle the capital question once for all. But it was not so easy to do so. Lower Canada had claims, and Upper Canada had claims, and the several towns had claims, and jealousy made agreement so hopeless that it was resolved to refer the matter to Queen Victoria and abide by her selection.

As is well known, the Queen chose Ottawa. The slighted cities were angry at the choice, and George Brown, the leader of the "Grits," thought he saw an opportunity of damaging the Macdonald Government on Macdonald lines, by rallying together the discontented. He carried by a majority of six what was practically a vote of censure on the Queen. The House immediately saw its error, and on a motion for adjournment defeated the Liberals; but Macdonald insisted on resigning, and George Brown became Premier, to be routed in the first division that was taken, so that he had to resign and give place to the astute "Chieftain," who had thus seated himself firmly for another four years, when the Militia question threw him out. Two years afterwards he was back in office under Taché, who led the Lower Canadians, and soon he had to face another difficulty greater by far than that of the clergy reserves, the choice of the capital, or the militia.

When the two Canadas were united in 1841, Lower Canada had the larger population, but it was agreed that it should have the same number of members as Upper Canada. Upper Canada, however, went ahead at a much faster rate, and with the increase of population demanded an increase in her representation. But the French province refused to revise the written constitution. When George Brown complained that the county of Bruce, with 80,000 people, had no representative, Cartier retorted that if heads were to be counted the codfish in the St. Lawrence would give Lower Canada the majority; and Brown, instead of capping the fish joke with an allusion to Ontario's per-headage in birds and insects, and consequent superiority in numbers and intelligence, betook himself to obstructions and deadlocks which rendered legislation impossible. Macdonald found the solution of the difficulty in Federation; but although he has been called the Father of the Dominion, he really only availed himself of other men's work—as is the custom of the modern statesman.

The subject had been mooted by Uniacke in 1808, and as far back as 1849 the British American League had been in existence for the purpose of bringing about the union of the North American colonies which Macdonald now made the work of his life. He saw his opportunity; the question was ripe, and he brought it into practical politics; and, whatever may be said against him—and much has been said against him, owing to his calling himself a Conservative and favouring Protection—there can be no doubt that all he did was for Canada's prosperity. He found her a group of isolated provinces almost at war with each other, and mere clearings in a wilderness, and he made her a nation, showed her the only way in which she could hope to become a power, knit her together with railways and canals, and gave her a high-road from ocean to ocean. Convinced that she was not yet strong enough to walk alone, he was never weary of pointing out how she would lose all individuality by absorption in the United States. To him her only hope was, at present at all events, as a satellite of Britain. "Why," he was wont to say, "it will be but an hour in the lifetime of nations before we in Canada number twenty millions, and the same may be said of the other colonies. The present danger of England is her limited area; but with England as a central Power, with Canada, Australia, and South Africa as auxiliaries, united for offence and defence, where would there be a possibility of international war?"

The first step was to get the leaders of both parties in the Canadian Parliament to agree as to



the general advisability of the Federation proposal. This was easily accomplished by Macdonald, who was always great at coalitions and compromises. The next step was to stop the partial Federation of the maritime provinces; and to the Conference at Charlottetown, held for the purpose of a purely maritime confederation, Macdonald was sent as delegate from the Canadas. By his tact and persuasive eloquence he and his associates managed to convince the seaboard colonies that the larger union of all the North American provinces was by far the better plan; and a few months afterwards a convention of the delegates of all the colonies was held at Quebec and the plan of union formed. In the Canadian Parliament the political deadlock, and the consequent commercial depression, made union imperative, and the proposal was carried by ninety-one to thirty-three. We need not trace the development of the movement step by step. Suffice it to say, that Macdonald was the president of the London Colonial Conference, and the real author of the British North America Act which, in 1867, united the provinces of Upper and Lower Canada, Nova Scotia, and New Brunswick. Rupert's Land and the North-Western Territories joined the Dominion in 1870; the Hudson Bay Territory, under the name of Manitoba, was added in the same year. Next year British Columbia came in, and in 1872 the present Dominion was completed by the inclusion of Prince Edward Island.

Macdonald entered the new Dominion Parliament in 1867 as member for Kingston, and was appointed Minister of Justice and Attorney-General. Two years afterwards he became Premier of Canada, and thenceforward Canadian politics resolved themselves into keeping "the Chieftain" in or getting him out; and, though there might be Liberal majorities in the different local legislatures, yet, with one eclipse, he held a majority in the Dominion Parliament for the rest of his life, and in his last long turn of office achieved the distinction of winning four contested elections in succession.

"Sir John"—he received the K.C.B. for his work in founding the Dominion, and the G.C.B. followed—was the one strong man of Canadian politics, the one statesman of world-wide fame the colony has produced. Not unlike Disraeli in feature—"Disraeli with a dash of Milner Gibson"—he rather resembled him in his Parliamentary methods. As a debater he was unrivalled. The lithe figure was never still, the bright, birdlike eyes were observant of every sign given by his audience and instantly noted every change of feeling. Beginning low and indistinctly, he seemed to hold himself on the alert ready to score off an opponent at any interruption—which he would do as pleasantly and considerately as if he were scoring off himself—and then, having made sure of his ground, he would warm up to eloquence, and with much gesture and variation of voice make the most of his case and give not the ghost of an advantage. A tough antagonist was "Old To-morrow," as his opponents called him. Plucky, cheery, resourceful, well-read and widely informed, apt at jest and repartee, and always on the winning side, "many," as the Marquis of Lorne says, "seemed to have an idea that, however much they disagreed with him, there was no use opposing Sir John."

In constructive statesmanship his work of the Dominion speaks for him, but in diplomacy he took almost as high a rank. At the Washington Convention of 1871 he was the ablest representative of Great Britain, and a difficult position he was in, for the interests of Canada were not identical with those of the mother-country. Bitterly was he attacked when the treaty came on for ratification, and perhaps the best speech he ever made was that in which he replied to his assailants, who had very little to complain of after all, inasmuch as the result of the subsequent commission was an award in favour of Great Britain of £1,100,000 as representing the value of the fishery privileges granted to the United States, over and above the concessions made to Canada under the Washington Treaty.

The Canadian Pacific Railway is his monument. It was Macdonald's line from the commencement, and one of his last public acts was the subsidising of the armed steamers from Hong Kong to Vancouver so as to carry the mails under the British flag the short way round the world. But he did something more than found the Dominion, secure the payment of a million of money from the States, build the best of trans-continental railroads and establish direct steam communication across both the Atlantic and Pacific. He improved the Canadian criminal law, consolidated the statutes, extended the franchise and the municipal system, introduced the inspection of reformatories, prisons and asylums, reorganised the Civil Service, and organised the Canadian defensive forces. These are all solid achievements, and he took his time about them—a Minister can do much in the third of a century—but he did them well, and they are really remarkable, considering the conflicting interests with which he had to deal.

## "THE HOLIDAY REJOICING SPIRIT."

BY THE AUTHOR OF "VOICES FROM THE HIGHWAYS, ETC.

WE all began to get the benefit and joy of that holiday from the moment that Pleasance and Penelope resolved to take it, though it did not come off for more than a fortnight afterwards.

For any place grows real to one when one begins to think one may soon be there! Then one realises what quaint old cities there are—what lovely villages—each with its own history deeply rooted in the Past, and its own social interest strong and lively to-day. It was not that the holiday-makers set themselves any very wide horizon. At the very first, while all lay under the mere mist of suggestion, there was a hint of Norway, or Normandy. But these were swiftly put aside. The time available was too short, and they wanted to "make the most" of it, in the true sense of rest and genuine enjoyment, not of rushing over the greatest number of miles. Besides, the sea lay between us and these countries not only in going out but inevitably in coming back, and Pleasance was not very sure of herself as a sailor, and did not want to waste half of her outing in recovering from the effects of *mal de mer*, and the other half in dreading its return! Besides, as neither Pleasance nor Penelope were very skilful linguists, a visit to any foreign country would have involved either keeping to very beaten tracks, or else encountering a good deal of worry and excitement. Pleasance had heard, too, that for those suffering from nervous exhaustion or excitability, the constant sound of an unfamiliar tongue is in itself an unwholesome strain, and she was quite determined not to expose Penelope to this discomfort.

She had her own holiday-prescriptions for Penelope, but, like all wise healers, she did not discuss these with her patient. Pleasance held that what one knows is intended to do one good never does as much good as it should. But she let me into her confidence.

"We must not go to a very solitary place," she said, "for Penelope's whole nature is so tired out that she won't be able to begin to rest till she has first been cheered and soothed. You know sick people or wearied children get the better sleep after you have shown them some pictures or sung to them, and this is the same sort of thing."

"But at this time of year," I remarked, "all the 'resorts' are so over-crowded, that I cannot imagine either of you finding peace or pleasure in any of them."

Pleasance laughed and shook her head. "We are going to none of those," she assured me. "Why, that would be the last straw to break poor Pen's heart! The sight of crowds of rich people who might have the best of life, but have no taste for it, is even more distressing and distracting than the sight of throngs of poor folk who seem to have no chance in life at all. Why, if you took Pen to a fashionable spa, where the ladies don three different 'toilettes' every day, and spend the hours in walking up and down to the enlivening strains of a brass band, she would be haunted all the while by the ghosts of the weary sewing women and starving

children, and all the other Lazarus forms who are perishing for lack, not so much of what Dives uses, as of what he does not care to use or carelessly wastes. I remember reading somewhere that Lazarus faints, not for the cordial which refreshes Dives, but for that with which Dives surfeits himself. The sensitive heart is not comforted concerning misery and need by the mere sight of luxury and wealth. Rather it seems to add the last drop to the cup of woe in an element of human cruelty and regardlessness! No, I must take Penelope where she will see some simple, hard, happy living, unhandicapped by anything but the wholesome disciplines of Nature. I think we will go first to the outskirts of some little Northern coast town, where we can see the herring fleet go out!"

Before the decision was finally made, Penelope herself joined in a more impersonal discussion as to whether mountains, woods, or coasts had the strongest influences of healing and refreshment.

"I love woods," she said. "I used to dream whole forests out of the rather sparse trees in the old Bloomsbury Square where I played when I was a little child. I loved to lie down against a tree trunk, and hold my head back, and gaze up, up, up, through the interlaced green boughs, at the blue sky beyond. You can't think what woodland visions I used to get! I've been in many 'real forests' since those days, but I've never seen one that quite came up to what my imagination could do, with that slight basis to work from.

"And yet," she went on, "whenever I have been ill or very weary, I have noticed that it is a vision of the sea—or at least of some great water—which rises like a mirage before me." And even as she spoke there came upon her face a mysterious, far-gazing expression. The sea stands to us for symbol of so much. And of what is it the symbol when we are told that in the great Home Land "there shall be no more sea"?

"Oh, we have quite made up our minds that we will go to the coast!" Pleasance reassured her. "That does not mean that we leave all the trees behind. I know plenty of places where there are pine woods on the very shore—ay, of northern seas too. But we won't go where we can't see a coast beyond. I have discovered that it is the distant limit which gives width to the horizon. I found that out when I went across the Atlantic years ago. One was steaming at a great rate across a boundless ocean, and yet, after the first novelty wore off, one's own impression was rather of stagnation without any outlook. Since then I have found the feeling put into words by the American naturalist, Burroughes. Let me read to you what he says. 'A voyage at sea is more impressive to the imagination than to the actual sense. The world is left behind: all standards of size, of magnitude, of distance, are vanished. There is no size, no form, no perspective; the universe has dwindled to a little circle of crumpled water that journeys with you day after day, and to which you seem bound by some enchantment. You cannot see or realise the vast and vacant surrounding; there is nothing to define it or set it off. . . . A voyage across the Atlantic is an eight or ten day sail through vacancy. . . . Yesterday, to-day, and to-morrow you are in the same parenthesis of nowhere. . . . The eye becomes ahunger for form, for permanent lines, for a horizon wall to lift up and keep off the sky, and give it a sense of room.'"

Penelope looked up with a bright glance. "In what you are saying I seem to see all sorts of spiritual applications," she said. "Do you remember Miss Bushnell's poem, 'Horizons'? I think I can give you the last verse:"

> "I thank thee, Lord, that thou dost lay
> These near horizons on my way.
> If I could all my journey see
> There were no charm of mystery,
> No veiled grief, no changes sweet,
> No restful sense of tasks complete.
> I thank Thee for the hills, the night,
> For every barrier to my sight,
> For every turn that blinds my eyes
> To coming pain or glad surprise,
> For every bound Thou settest nigh,
> To make me look more near, more high,
> For mysteries too great to know,
> For everything thou dost not show.
> Upon thy limits rests my heart,
> Its safe horizon, Lord, Thou art."

And all the while we were talking we were busily preparing the travellers' wallets, the question always being, as Pleasance expressed it, "not what we must have, but what we can possibly do without." When that is one's aim it is wonderful to what simple elements one can reduce one's "necessities."

Pleasance regarded no detail as too small for serious consideration. "The infinitesimal is very important in creation, and so it is in comfort," she was wont to say. Each lady was resolved to take but one portmanteau, of a size which she could, at a pinch, lift in her own hands—not a difficult thing, since the contents were only the light alpaca or beige skirt, which was to be an evening or wet day change from their trim serges with capes made *en suite*, one or two jersey bodices, bright and simple, edged at neck and sleeves by fine handmade crochet, which could be kept fresh and dainty by being washed in a bedroom basin, "pulled out" by deft fingers, and dried in the sun at the window. Each was to travel in a dark straw hat, light on the head and shady to the eyes, and to carry dainty little "toques" of the same serge as the dresses, made so that they would fold flat among the luggage, and fall into shape when put on the head. These were for showery or gloomy days, while the addition of a tiny lace veil and the pinning on of one or two yards of good ribbon would transform them into quite presentable "Sunday bonnets," if there should be any need for such homage to the conventionalities. A full change of linen, sundry pairs of stockings (of varied thickness), and a very easy pair of slippers, with a waterproof shawl, and small umbrella packed up in a strap, completed each little outfit.

"And to tell you the plain truth," observed Pleasance, in a stage whisper, "I think that if we arranged our wardrobes at other seasons rather

more on these travelling principles, life altogether would be much easier and lighter. One heaves many a sigh that life is too full and too short for the accomplishment of much one wants to do or to be, yet for those purposes we could make it longer by months counting up even into years, if we would set free the time and strength which we now spend on planning, and purchasing, and making up, and folding away, and shaking out, and fighting with moths, and saving from fire and thief! And speaking of 'the duty of beauty,' of course, I won't say anything about myself;" she laughed, "but I never saw Penelope look more bewitching than she does in the garments she is just trying on. They seem to belong to her and to her life, like the feathers to the swallow or the fur to the seal."

"The Russian novelist, Dostoieffsky," said I, "goes so far as to declare that even worn dress only makes ladies look more dignified, and that this is always the case with women who know how to arrange humble attire."

"And yet some women who are very careless as to the trim charm of the clothes in which they do their true work, or take their genuine pleasure among those whom they really love," returned Pleasance, "are often the very ones to preach about the 'duty' of presenting a 'pleasing appearance.' The practice they tag on to their preachment means 'fashionable' dress, however ill-suited to their personal age or looks, and often secured by a disproportionate expenditure in cash, and a reckless waste of time, nerve, and temper."

"I wonder," said I, "how many middle-class women lay out in any one year on books, for the enjoyment and instruction of their households, as much as they spend in the same time on frippery of that kind which can be only worn at those unentertaining 'entertainments' when people who don't care a straw for each other go to eat or to dance together, and to exchange, not convictions and consolations, but plagiarisms and platitudes!"

"I suppose it is very naughty of me," laughed Penelope. (She had begun to laugh again already!) "But when I see women—and I have seen myself in days gone by!—who I know have very real lives and get through a great deal of work, who yet will burden their scanty leisure with the trifles you speak of, and then go forth in evening glory, with yards of silk dragging behind them, as if, alas, their dresses were falling from them (since the material is rather on the floor than on the shoulders!) I never can help thinking that they look like useful hens bedizened with peacocks' tails, or singing birds borrowing parrots' plumage! And this type of women always look so worn out and worried in finery, for you know nothing discordant can ever be restful. I remember once, in a crowded and smart soirée, being struck by the atmosphere of sweetness and repose which surrounded one lady who, belonging to some religious working guild, stuck loyally to her uniform of plain dark grey stuff, with dainty cap and fichu of simple lawn. She had been toiling all day, in face of some of the bitterest problems and tragedies of the world, but when one looked at her, one felt only an impression of rest and strength. If one could have imagined her in trains and chiffons and diamonds, possibly she would have looked as fagged and flurried as did the surrounding wearers of those luxuries."

"We should save ourselves much worry in our lives," said Pleasance, "if we would realise that it is no mere metaphor, but a simple truth, that here we have 'no continuing city,' but are on the 'journey' of life, in which the chief aim is to keep ourselves disentangled from everything that will hinder us in our real progress. As it is, in our times of prosperity, we are often like children out for a summer holiday, who in the sunny hours tear up great bunches of wild flowers (though they wither almost as soon as they are gathered) and load themselves with boughs of trees and shells, and even with stones which look so pretty while they are lying wet on the sea-shore! And when it is time to be moving onward, there are cryings and frettings to know what may be taken and what must be left, and finally a great deal too much is taken. The walking homeward is so weary, and the poor draggled flowers which might have been still growing in the wood are dropped off one by one along the dusty road; and the shells fall and are smashed, and when they look at the stones that were so rich in colours and so quaint in markings, lo, they are all dry and dull and drab, fit only to throw down from hands already weary of their weight, and by the time home is reached, the boughs of trees are fit for nothing but to light the fire. And meantime, there have been sharp words spoken, and everybody has been tired and cross, and nobody has taken much notice of the sunset sky and the evening lights upon the hills; and all this for the sake of things that were so happy and sweet in their place, only not fit to be brought into the Home!"

"You have made a very complete parable, Pleasance," said I, "and I must say that I have known many instances in which human life has been made poorer instead of richer because of 'the things which a man hath.' We see this when considerations of 'furniture,' of mere dead matter of some sort, are allowed to cripple healthy action, or to overbalance the claims of living love. The American Thoreau says that such things are truly 'traps,' and that if we have got to drag one of them, we shall be wise to take care that it is at least a light one, that does not nip in a vital part. I have thought much over this," I added rather pensively, "because I am very sensitive to the charm of old associations and memorials of affection. But the longer I live, the more plainly I see the wisdom of what my husband always said, that we must not allow the feelings and emotions of immortal love to cling too much about anything less immortal than itself, and that such 'mortal longing' as may not go quite unsatisfied should be steadily limited to the least mundane of all our possessions, say, to our wedding rings, the best of our books, and perhaps a picture or two, being the very last things of which the changes of life or fortune are likely to deprive us."

There were a few other little arrangements to be discussed. Each traveller took a Bible, Penelope

having her Revised Version, and Pleasance a little leathern bound copy she had carried all her life, so that thus, as she said, they represented intellectual progress, and reverence for old "use and wont." They had one Common Prayer-book with its hymns, and for books they took a little translation of Epictetus and Wordsworth's Poems. Pleasance said those were certainly quite enough to save them from intellectual vacuity, and of lighter literary fare they would provide themselves on the spot.

"I have been disgusted," she said, "at the sight of travellers and holiday folks reading illustrated papers in the midst of the grandest scenery, or poring over novels and 'shockers,' while they know nothing of the legends or ballads of the country of their sojourn. Why, I have come across some of the choicest artistic and literary work which even in these days is scarcely known outside its own particular district! No, no! Penelope and I mean to get as much fresh air and change as possible, both for our minds and our bodies."

She used the same plea to set aside the strip of crewel work for which Penelope pleaded on the score that it would take such little room, and she was always happier with something in her hand! Naturally, Penelope does not do much fancy-work, and that strip of embroidery has been got out, again and again, for the last two years. She did some when she had sprained her foot. She did some more during the week that she spent with a dear relative in a sick room which was soon a death chamber. She had added to it at every season of depression or indisposition which has come upon her since she began it. "No," decided Pleasance, "do not take it. If we wish, we will find something to do wherever we go. Then I mean you to be our provider and planner, because at home housekeeping is my work, but as it is not yours, it can be your holiday. And above all, remember that in the words of an old Scotchwoman, 'We are going to do our resting.' Let us even be lazy! There is some truth in the old negro's saying that 'Laziness is the bery life o' critters.' That is a homely paraphrase of Wordsworth's asseveration that:

> "We can feed this mind of ours,
> In a wise passiveness."

Half of work lies in knowing how to be idle. A friend of mine, who has done far more than most of us, was once told that she was 'a perfect mistress of the art of doing nothing.' And she knew it was true and accepted it as a compliment."

Aside to me, Pleasance went still further. "There can be nothing worse," she said, "than when we go for rest and change, to carry with us any hint of an occupation that is associated with those trials and sufferings which have made us need refreshment. This is to keep the jaded senses in their worn groove, and then they are apt to drag the sentiments after them! What I want Penelope to do is to start forth as if there was no 'yesterday!' I want this for the very sake of 'to-morrow.'

> "We for the year to come may take
> Our temper from to-day."

Holidays should be epochs from which we return to our old life enriched with all the experience of its Past, and yet purified from the stain and dust in which we acquired that experience."

And then at last they were off. For I must have made it understood by this time that I was not going with them. My share of this holiday was only in its preparation, and in the letters which would come home, and in the welcome back! And let me assure you, there is a great deal of holiday in all this. One person may stay at home in a household where all stay at home, and another in a household where everybody else comes and goes, and nobody can imagine there is no difference in the experience and outlook of those two stay-at-home people! As a witty American writer has said, "When you've found exactly what there is to go for, as you only do find out when somebody is really going, why, then you've almost been. And when the letters have come back, you're as good as there."

And while they were gone, I carried out some household re-arrangements and repairs and "clearings away," so that when they came back, Pleasance and I might enjoy together a sort of prolongation of "holiday rejoicing."

The very first letter that came bore the post-mark of the far-away little north-eastern fishing town. The travellers had found a resting-place in a house on the hill behind the old burgh, and from the windows they could look down upon the bay, and see the herring fleet going in and out with sunlight on its sails. They could watch all the bustle of the fishing quarter. Even lying in their beds they could see the sun rise over the sea and flood their chambers with his red morning smile. And they could look across the Frith, and dream about the unknown lands whose misty hills rose beyond its blue waters. Their lodgings were very homely, scantily set forth with out-of-date furniture and old chintz washed almost to rags. Penelope enjoyed purveying, puzzling out the quaint speech of the people, and appreciating the frank personal interest they took in strangers. Their landlady gave most willing attendance, but she was so old and frail that they liked to help her, and doing so was their best opportunity for making her acquaintance, which they soon found was something well worthy of cultivation. For she was brimful of traditionary lore, and of interesting family histories abounding in valuable suggestions. A woman, too, with a story of her own: the one sister of nineteen brothers, all of whom she had survived: the widow of a skipper who had been drowned off his own coast one stormy night, while his wife lay praying at home: the mother of three little children all buried among the old trees of the little inland churchyard where the people liked to walk on Sunday afternoons. Absolutely alone in the world now, but loved and honoured by her neighbours, and holding up her old head with an honest independence and even a certain gentle grace, though she owned nothing in the world but the crazy cottage and the ancient furniture. "A bracing woman," wrote Penelope. "She makes one ashamed of being afraid of anything that Life—or Death—can bring."

"As Pleasance prophesied," added Penelope, "I

have 'found some work as I go along.' My landlady is teaching me to knit stockings! She was quite shocked to think that I, professing to help people in London, did not know how to do that.

"'Woven stockings can be bought so cheaply,' I urged. 'But they're no sae guid,' said she. 'They're aye rinnin' down. An' what do the lassies do wi' their hands in their spare time; but maybe they've na spare time, puir bodies.' 'Oh yes, they have,' I told her, 'and they mostly amuse themselves with crochet-work.' 'Crochet-wark,' she said thoughtfully; 'weel, it's weel enough, but they could do without crochet-wark, and it's the first duty o' ony human body to learn to do for themselves wi' their ain hands what they canna vera weel do without.'"

The second letter said: "Our landlady won't hear about the former times being better than these—a text I have been inclined to take from her own fine, old-fashioned ways. 'Hoots, na,' she says. 'I'm going to show you our gran' castle, and there you'll see a big chamber, where they put in scores o' people to get on how they could for air and decency, and ye'll see the holes in the walls whaur they fixed up the hands o' some o' them, and a wee hole in the floor, whaur they whiles dropped one through, to die his lane i' the dark. An' I'm no saying that them who bore those things might na ha' done something unco' like them, gin their turn came, though I think they were the Lord's people, and doubtless His grace would do muckle to keep down their human nature. But we dinna want those times back again—we want to get awa frae them further and further, for if the auld dungeons themselves are stannin' yet i' the land, I reckon it's no likely that the spirit that built them is a'thegither vanished frae the heart o' man. But its gaein', an' it's boun' to gae.'"

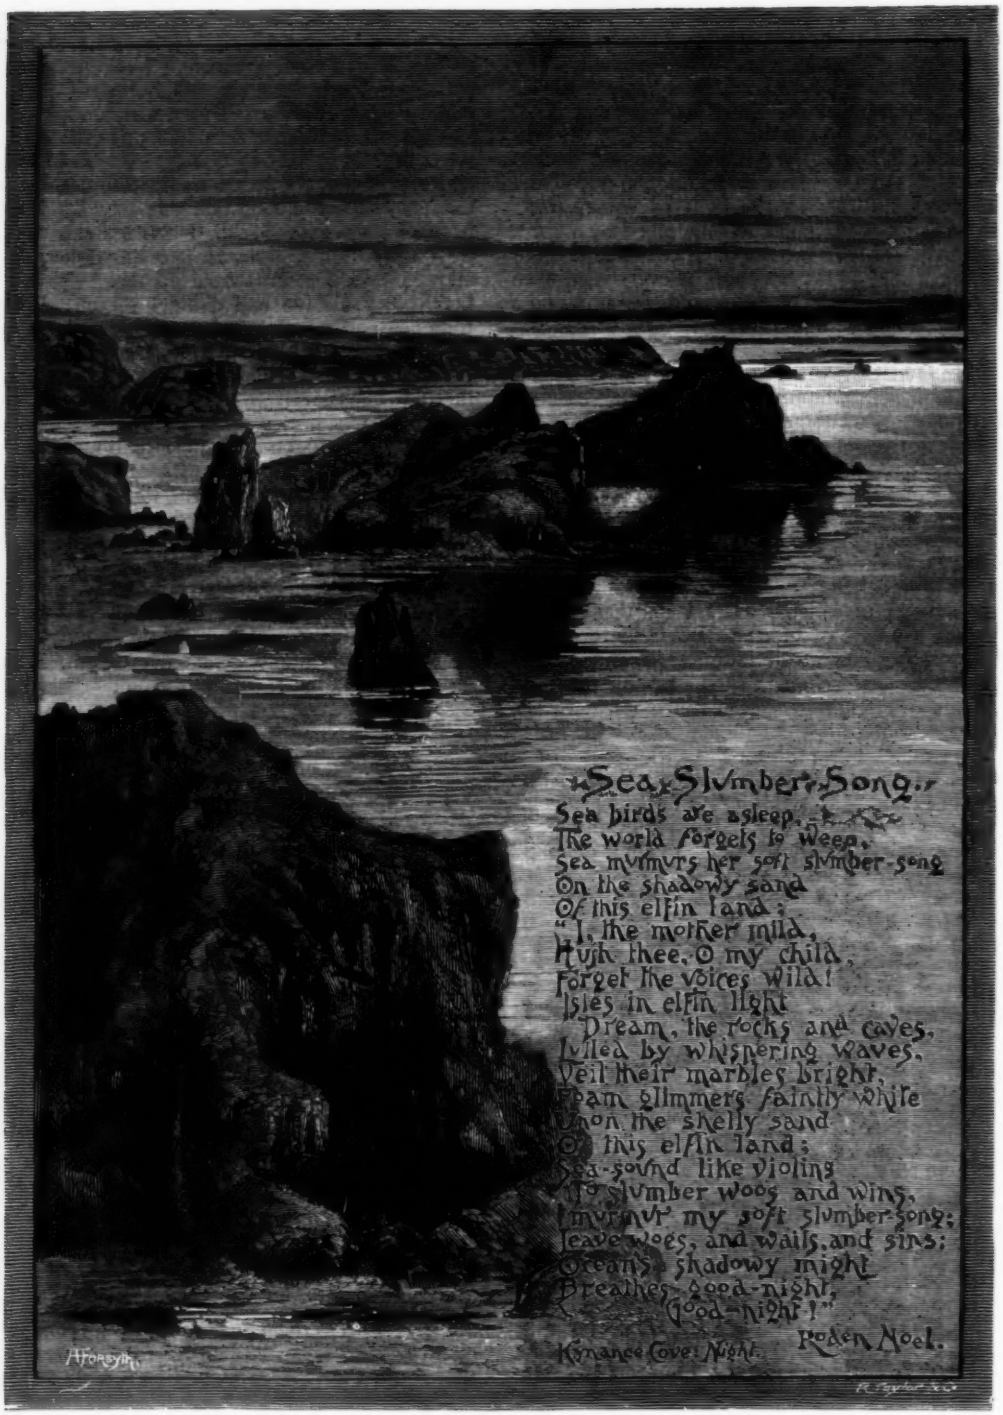
Then again: "There are one or two larger houses, higher on the hill, which are rented furnished for the summer by middle-class families who bring their own servants. And the sole ambition of some of these seems to be to live here as nearly as possible as they do at home. They bring scores of packing-cases with them, from which they produce all their accustomed elaborated arrangements of plate and napery, and they buy or hire luxurious chairs and lounges to supplement the simpler appointments they find prepared for them. They do not care for the delicious fish fresh from the sea, or the fruit they can gather in the garden with their own hands. They may make a great point of these for the first few days, but they soon tire of them, and make a business of getting down by rail consignments of exotic fruits and all sorts of potted and preserved luxuries and wines and liqueurs. We do not see much of these people, because they seldom come out to sit among the rocks or to stroll on the beach, but usually stay in their own gardens except when they go for their daily drive. I don't think they care much for this place; it has none of the 'amusements' which attract this type of humanity, and I think they come here only when it suits some convenience of business, or when some member of the family has been ill and has been ordered 'quietness.' They are too few here to make a very harmful impression on the inhabitants. But they tend in that direction. They seldom go to any of the churches; if they do, they go in, looking about and whispering as if they were at a show. And they delight to jingle all sorts of flippant airs on their pianos when the congregations are dispersing, and to tempt the fisher lads to take them out in boats on Sunday.' Our landlady sees grandly ahead on that matter. 'If working men gie up their Sundays connivin' at sic pleasurin',' says she, 'they'll soon fin' the pleasurin' turn into grindin' wark, and they willna get their Sunday again till they've maybe paid dear for it wi' blood an' tears.' She tells us that once a very great lady was staying beside a remote Northern loch, and she ordered some of the boatmen to row her about on Sunday afternoon, and they sent back the glorious answer that they were in her service all the week, but on the Sabbath they were in the service of the King of kings. 'And there was nobody honoured them more for this than did the great lady herself,' says our landlady, 'for she saw quick eno' that it wasna the rowin' i' the loch that was the wrang—that might ha' been done for necessity or for luve—but it was the selling for hire o' the few hours that God wills every man to hae for Himsel'.'"

The next letter reported: "We have made friends with such delightful people. They actually live in one of the furnished houses on the hill, but they are quite different from those I wrote about last time. They are a brother and two sisters, who come with an old servant who has lived in their family for many years, and is like one of themselves. They have been here before, and so of course they know our landlady, and it was through her we were introduced. They have all seen a great deal of the world, and known many interesting people. The brother is a great naturalist, and he has imparted some of his tastes to many of the young folk here, who keep up a correspondence with him all the year round. They send him specimens, and he answers their questions, or tells them where they can get information. He has given two or three lectures in the parish schoolroom, and the people are so glad to pay a trifle to hear him that the 'takings' have been a great help in forming a little parish library. The sisters are charming women, very cultured and domestic, and we have got such a good idea from them! We mean to put it in practice ourselves (though it is rather late in our day), and we should like to suggest it to all the young people we know. When these ladies were girls they began keeping blank books, which they lettered outside 'Our Holidays.' They have quite a collection of these now. They took these books with them wherever they went, and jotted down notes of everything interesting—the way about, and what it cost, the nice lodgings, and the 'moderate' hotel, what they did day after day, and who they met, the quaint character, or the great man—now an anecdote they heard, then a memorandum from a sermon. They put in little sketches too, and one sister can strike off a portrait very happily, and the other excels in landscape, while the brother made botanical and zoological observations. This practice of theirs has now extended over nearly twenty

years, so that the books contain records of visits to great historic cities, to the quaintest old-world English villages, to the farthest Highlands and Islands, to Orkney and Shetland and Jersey, to all parts of Ireland, to Iceland, to Canada, and a few places on the Continent. Not a much wider range than many people have taken in these travelling days, but how much more these have made of it! Unlike the lady in the Yankee story, who remembered Rome as the place 'where she bought the cheap stockings,' these ladies can recall the tiniest quiet village in the light of some strong human interest, or sometimes illumined by a spark of very genius! I believe such a holiday record could be kept with advantage by everybody, even those whose holidays mean but a day's outing on a cheap excursion."

Pleasance wrote the next letter. "Through those acquaintances of whom Penelope wrote," she related, "we have made another friend, a most remarkable man, who lives in a rather important city not very far from our quiet resting place. They took us with them to visit him. He had written books which we poor Londoners do not hear of, because, like the faithful artist that he is, he has devoted himself to write of what he knows, so that few of us can appreciate his descriptions of ways of life and thought of which we know nothing (though they are the ways of life and thought of thousands of the most weighty and worthy of our fellow-subjects). He has made such a perfect record of customs and modes of speech which are now passing away that competent judges declare his works will be mines of wealth for the antiquaries of the future. Our friends enthusiastically declare that he is in literature what Millet is in art, the uncompromising and yet tender delineator of the life of working men and toiling women. He is certainly a power in his place, the friend of the friendless, the universal counsellor, the stand-by against the oppressor. They have told us many stories of what he has done in these directions, and one of them adds that, for her, he is the human illustration of Isaiah's words: 'And a man shall be an hiding-place from the wind, and a covert from the tempest, as rivers of water by a dry place, as the shadow of a great rock in a weary land.' We found him in his own quiet house among his neighbours, who all know how good he is, but who do not all understand that he is also great. There he was, surrounded by the most affectionate household reverence, seated in his big arm-chair, with his favourite cats at his feet; a man of over threescore years, but with the bloom of his country youth still strangely mingling with the sagacity of the philosopher and the prophet, the whole lit up by the humour flashing in the eyes, deep-set beneath penthouse brows. We shall never forget the evening we spent in his house. The world is the warmer and the richer for knowing such a man is in it, and we feel as if Father Time had let us into the secret of one of the treasures which he has hidden where it will take more than one generation to discover it."

Penelope wrote the last letter of the holiday.



"Dear friend," she said, "we are coming home, and I feel like a new creature. I realise now how entirely true and right was all that Mrs. Yeldham said to me. It does one so much good to live awhile among people one can look up to, and to have time and opportunity to look into one's own heart, and to find that one has more need to despair of it than of the world, but that one may safely trust both of them with God! I can scarcely confess to you how much, in my zeal to be 'doing,' I had allowed myself to drift from all that helps us 'to be.' Now, I have had a brief season of quiet thinking and reading—of quiet talks both with my fellow-creatures and my Heavenly Father. What I called 'my work' had grown, to my own morbid consciousness, to occupy all creation. Whatever was not in some way associated with it seemed to me to be little more than nothing. Of course the Nemesis came with my own hours of disheartenment, for when that which I had made into everything was darkened, then all was dark indeed! I think now that I have grown wise enough to see that what I called 'my work' is, in God's Providence, as the life-labour of one of those infinitesimal creatures whose fossilised remains we trample in the dust beneath our feet. And the moment one can take in that deep truth, one can also enter into the high consolation:

> "Of broken shells He maketh when He wills
> The everlasting marble of His hills."

I think I am returning home in the spirit of Miss Waring's hymn:

> "My heart is resting, O my God,
> I will give thanks and sing;
> My heart is at the secret source
> Of every precious thing. . . .
>
> And I long to do some work of love
> No spoiling hand could touch,
> For the poor and suffering of Thy flock
> Who comfort me so much.
>
> But the yearning thought is mingled now
> With the thankful song I sing,
> For Thy people know the secret source
> Of every precious thing.
>
> The heart that ministers for Thee
> In Thy own work will rest,
> And the subject spirit of a child
> Can serve Thy children best."

I was only too delighted to prepare for the home-coming. For I had had an adventure of my own during their absence, and had a great deal to tell them.

## Sea-Slumber-Song.

Sea birds are asleep.
The world forgets to weep,
Sea murmurs her soft slumber-song
On the shadowy sand
Of this elfin land;
"I, the mother mild,
Hush thee, O my child,
Forget the voices wild!
Isles in elfin light
Dream, the rocks and caves,
Lulled by whispering waves,
Veil their marbles bright,
Foam glimmers faintly white
Upon the shelly sand
Of this elfin land;
Sea-sound like violins
To slumber woos and wins,
I murmur my soft slumber-song;
Leave woes, and wails, and sins;
Ocean's shadowy might
Breathes, Good-night,
Good-night!"

Roden Noel.

Kynance Cove: Night.

# THE CRICKET OF THIS YEAR.

HEALTHY exercise out of doors means health indoors, and sanitarians are naturally pleased at the increased official recognition given to the people in their playtime. Now that the London County Council have taken outdoor sports more thoroughly in hand, and charged themselves with the care and regulation of match-grounds for summer and winter games on the different open spaces under their control, the cause of health has made a distinct advance.

The accommodation, however, is notoriously inadequate, although it is not easy to see what more the Council could do unless they were to subsidize some quasi-public undertaking; and to expect them to do that would be unreasonable even if Parliament had given them the powers. Were the excellent London Playing Fields Committee more generally supported, we should have a few more playgrounds, but the extension would have to be on a very large scale to ameliorate the "congestion" and meet the constantly growing demand. We should be all the better for a ring of playground surrounding London, a neutral zone on which the builder should cease from building and the grass should be at rest during working hours; but how this is to be brought about is a problem which the future may or may not solve.

Our great summer recreation is cricket, and it is only natural that most of the public spaces should be devoted to pitches for our national game; but from all sides we hear of really deserving clubs being crowded off their old haunts and unable to get a place on the new match-grounds, every yard of which seems to be engaged for the season; for not only do more people play cricket now than ever did, but the numbers are greater in proportion to the population; and notwithstanding the great men who lived before our cricketing Agamemnons, the standard of play all along the line from first-class downwards is assuredly no worse than it used to be.

Though all Englishmen are not cricketers, the majority affect, if they do not feel, a liking for the game, and the current season is not without attraction to outsiders, although we have neither Australians nor Americans to visit us. One of the chief events has been the publication of Dr. Grace's book.[1] The book was, of course, inevitable. It was not likely that a few stray articles and part of a small manual were all we were to have from the "champion" who has made 37,000 runs in first-class matches at an average of 42 an innings, and taken 2,300 wickets for only 16 runs apiece in the same high grade company.

Never was there a treatise with such a weight of authority behind it; and although it might have been better had it consisted entirely of the personal and practical, it is undoubtedly one of the most noteworthy volumes on any game we know. Dr. Grace has for a quarter of a century been cricket personified, and by his personal effort has done more than any man, present or past, for a people's healthful pastime. He, of all men, should be held responsible by the London County Council for the congested state of their playgrounds on Saturday afternoons in the summer-time. Even the Greek lawgivers who officially fostered the games of old did less than this man has done by his example. To none but him has it been given to make 93 first-class "centuries," but how many are there who have been led into cricket, and on in cricket, by the magic of his name?

There are thousands more nowadays paying at the gates of our cricket-grounds than visited the Nemean, Olympian, Pythian, and Isthmian Games all put together; and considerably more play cricket than took part in the old athletics. How old and yet how young we are! Even in the Olympiads people were busy over the great question of amateur and professional, the winners at the national games being nearly always professionals, although an amateur occasionally had a chance. And it is delightful to discover—unless we have been all too willingly misled—that Pythagoras was none the worse for being amateur two-hundred-yards' champion, nor Plato for having in his year also held the Amateur Championship of the stadic sprint—or whatever it was—nor Cleanthes, of the noble hymn to Zeus, for having also been an Amateur Champion of some dolichic course of unknown laps; though Cleanthes must have had some difficulty in establishing his claim to amateurship, and probably slipped through on showing that he only worked at water-drawing in the darkness of the night, and consequently earned his living by invisible labour.

Cricket, like the Greek athletics, will only flourish on certain soils. As Fulvius tried, and failed, to permanently establish athletics in Rome, so have many moderns tried to introduce cricket abroad. It is only in England and the Australian colonies that the game really thrives. Our men-o'-war's men take it all round the world, but it seems to defy chronology, and in no case can a date be given for its introduction. One thing is certain, it has been encouraged but never introduced by the travelling teams, who have in all cases found players to meet them on arrival.

At the end of this season we are to have a grand cricket expedition to Australia under the command of Lord Sheffield.

Eleven of these expeditionary elevens have now been to Australia, eight to America, one to South Africa, and one to India, that is, twenty-one elevens in all from George Parr's American trip in 1859

[1] "Cricket." By Dr. W. G. Grace. (Arrowsmith.)

to Mr. Vernon's Indian trip in 1890, and of these at least half have consisted of the pick of the cricketers of their day. Of many of these men, and of many more of equally extended reputation, Dr. Grace has something to say in a pleasant chapter of "ana," in which even the most unsympathetic footballer or lawn-tennis enthusiast would take delight.

Here is a glimpse of Mr. Hornby which is not without interest :

I should say Mr. Hornby, with the exception of myself, has gone in to bat first man oftener than any man in England or out of it, and his record for first wicket down in the matches he has played—Lancashire county matches in particular—should be exceptionally high. He has a wonderful eye, and at his best was very quick on his legs for a short run, at times accomplishing extraordinary things which electrified his opponents and the spectators. I know he used to be the terror of some batsmen who were in with him, and one or two have said they never knew whether they were on their head or their legs while the partnership continued ; but I never had any difficulty with him. If I said "No" he was prompt to respond ; and no matter how far up the wicket he might be, he could always get back in time. On one occasion, at Prince's, when we were in together, instead of trying to punish the bowling and make as many runs as we could, we played tip and a run for half an hour, and completely demoralised the bowlers and fieldsmen. Each tried to outdo the other in desperate endeavour, and I should say that that half hour was about the liveliest seen on a cricket field. One run was a curiosity. I played a ball in front of me, and, without looking where it was going, yelled "Come on, Hornby!" I had no need to say "Come on" to him, for he was up like a flash of lightning, and had crossed before the words were out of my mouth. The ball travelled straight up the pitch to Willsher, the bowler, who ran up a yard or so to meet it, and I thought it was all over with me ; for I was not more than half way when he picked it up. I had the sense to keep running, and Willsher hearing my feet thundering behind him lost his head, and instead of putting the wicket down quietly, as he might have done, let fly with all his force and missed it by yards !

The Carlylean idea of genius was a capacity for taking pains. Dr. Grace's notion of his gift is much the same. He tells us how his father, during his student days, used to be up on Durdham Downs playing cricket between the hours of five and eight in the morning, that being the only time he could be absent from work, and how, when he married and the children came, he realised that he would be compelled sooner or later to make time to help them if he desired to keep in touch with them physically and mentally. "He was strong in the belief that if you want to educate and influence a boy thoroughly, it is as important to play with him as to work with him." And so he took time by the forelock, and had a cricket pitch laid in front of the house—not much of a pitch, nor full size, but large enough to teach the rudiments on. "My memory carries me back to my sixth year. Most boys at that age have more to do with the nursery than a cricket-ground, but it must be remembered that my family was a cricketing one in every sense of the word, and a cricket-ground in front of one's home at that time rare and exceptional." And further, as to his uncle's teaching : "I did all that—in my own mind—as conscientiously and persistently as any boy works at anything he loves ; but somehow I could not make the progress I longed for. Too soon would come a ball on the blind spot, and I was beaten. I should like to be able to say that I had no difficulty in learning, and that proficiency came to me much easier than it comes to other boys. The reverse is the truth. I had to work as hard at learning cricket as I ever worked at my profession or anything else. Very quickly I learned that there was no royal road there, and that if I wanted to be a good cricketer I must persevere. I was fortunate in having a good tutor and a strong gift of perseverance." And there we will leave the doctor at a very early stage, in order that the result of this perseverance may be read in the book itself.

Yet one more note before we end, as to what is, perhaps, the most important feature in the matches of the season. Cricket in 1891 is, as far as the counties are concerned, in a continuation of the healthy state of chaos in which it has for some time flourished so amazingly, the pretty little scheme of classification proposed last year having been adjourned *sine die* with the County Cricket Council which proved unable to make up its mind concerning it. And under the circumstances the gallant effort of Somerset to make its way into first-class company in the good old style by playing first-class matches and proving itself worthy of the position it seeks, is an event of interest.

As the first-class counties now stand, Nottinghamshire has been at the top seven times, Surrey and Yorkshire each four times, Gloucestershire and Lancashire each twice, and Middlesex and Sussex each once ; while Sussex has been at the bottom ten times, Surrey and Gloucestershire each four times, Kent twice, and Middlesex once. Kent has never been champion county since county cricket really took shape ; and neither Lancashire nor Nottinghamshire nor Yorkshire has ever been last. Of the 1,642 matches played by these counties, between 1870 and 1890, Surrey has won 112, Nottinghamshire and Yorkshire 108 each, Lancashire 91, Gloucestershire 67, Kent 60, Middlesex 48, and Sussex only 39. The difference is so marked that the dead-set made against the weak member of the eight is only natural, but it remains to be seen if the old county will not, after all, play up to its old reputations, and, even if it be only as one of nine, hold its own against the rising county of the west.

THE latter part of the eighteenth century presents us with an unusual number of remarkable personages, but they are, for the most part, remarkable rather for the ill than for the good which they wrought upon their fellow men. Only here and there from out the seething mass of humanity, each unit of which seems struggling for personal ends of advancement or glory, do rare exceptions stand forth, bright with the radiance of unselfishness.

Philanthropists in every age are scarce. In the venal and corrupt eighteenth century they are perhaps rarer than at any other time of the world's history; but in any period such a life as was that of Jean Frederick Oberlin must compel the admiration of all honest-minded men. And his name has been handed down with respect even by those who in many vital points differed from him.

He may fitly be called the apostle of Alsace. The work which he did there was purely missionary work; for until the time when he took up his post as pastor of Ban de la Roche, the inhabitants of that remote and isolated district were almost as heathen and uncivilised as though they had been South Sea islanders, born and bred.

Alsace had nearly a hundred years before the time referred to been annexed to France by the treaty of Nimeguen; but in feeling, in language, in ideas, and in faith she still remained completely alien. In Strasbourg and the larger towns this was sufficiently evident, but it was still more plain in the remote and rural districts, which were for the most part completely cut off from outside influences. Enclosed within their own living fortresses of mountains and forests, they were through the greater part of the year absolutely inaccessible by reason of the entire absence of roads.

The condition of an ignorant peasantry thus left to itself for nearly a hundred years may be to some extent imagined. They were not, to begin with, a wild and lawless people, or they would have developed in the interval into a tribe of bandits. They had a good deal of the solid German character about them. Crimes of violence were of course not unknown among them, but with these they did not trouble the outside world. Had they done so, a crusade might have been raised against them. But if not aggressive, they had sufficient reputation for savagery to keep them safe from intrusion in their unexplored mountain fastnesses. They were acknowledged to be Protestants by religion; but the dragoons of Louis XIV made no attempt to ravage their wild valleys, even at the time when religious persecution waxed so rampant in France after the Revocation of the Edict of Nantes. The people of Alsace were indeed protected by certain treaties as to the exercise of their religion; but it is probable they owed their immunity less to such provisions than to the general feeling that they were too savage and uncivilised to have any religious opinions worth the trouble, or rather the danger, of combating.

Now, as generation after generation had passed away, they were sinking deeper and deeper into absolute barbarism. The instincts of the savage were growing upon them. They had ceased to build, to till their fields, to plough, or to sow. They were becoming content to live on such prey as their forests afforded, or on such wild roots and herbs as came to them without labour or skill. Books were altogether unknown among them, and their very language was becoming an unintelligible jargon. The wildest superstitions were rampant; immorality was wellnigh universal, and the few families or

tribes which composed each scattered village were separated by the deadliest feuds.

Such was the unpromising district of Ban de la Roche when, in the year 1767, Jean Frederick Oberlin was appointed pastor to the five widely-scattered villages which were included under that name. These hamlets, through which the river Brusche tumbled and tossed, were situated in the most rocky and inaccessible valleys of the Vosges, and were so completely isolated that there was actually no road or pathway between one village and the others.

Oberlin was of course no stranger to the character of the people to whom he was called upon to minister. Indeed, he had himself applied for the charge. Born at Strasbourg, he had lived all his life there, where his father was a professor in the university; and he was a man whose attainments as a scholar might well have procured him a very different position. But the neglected and miserable condition of his fellow-countrymen in these secluded mountain valleys, so near and yet so far off, appealed very strongly to his nature, in which the missionary instinct was largely developed. It seemed horrible to him that behind the barrier of forest-clad rock whose jagged outlines were always present to his eye, there should exist ignorance as dense and manners as corrupt as in some distant undiscovered clime. And he resolved that no difficulties should deter him from the task of humanising and Christianising these poor forsaken sheep on the mountains.

In this noble resolution he was warmly supported by one from whom he might naturally have expected, if not opposition, at least dissuasion. Salome Witter, the young girl to whom he had been for some years affianced, was the very person who was most eager in urging upon him the duty of undertaking this missionary labour; declaring from the first that, for her own part, she was willing to be his companion and helpmeet in the good work, and was ready to take her full share of both dangers and difficulties. This pledge she most nobly redeemed through many years of cheerfully-borne privation and hardship.

Possibly, however, Oberlin himself was scarcely prepared, even after all the accounts which he had received of the wretchedness, the squalor, and the want of the most ordinary necessaries of life, for that which met him when first entering on this very unpromising vineyard. Nothing daunted, however, he took up his abode in a ruinous stone hut which had been assigned him, and employed his first energies in making it decently habitable.

Such of his new flock as passed by stood and stared with scornful amazement at the labours of the new pastor. What more could any man want, they wondered, than a roof under which to shelter, and a hole to carry off the smoke. After a while, however, he induced some of the more intelligent to assist him in cutting down and planing wood; and being himself a somewhat skilful mechanic, he was able to direct them in their work.

Again and again he made the toilsome and perilous journey backwards and forwards to Strasbourg—a pathless journey over absolutely trackless rocky wastes and through thick forest—in search of such materials as he had need of; and by-and-by his hut stood forth a wonder to all beholders, actually fitted with doors and windows, a chimney, and a division which separated it into four rooms. He then began to clear the bit of rough forest ground which surrounded it, and to plant it out into a garden.

It seemed to him absolutely necessary, first of all, that these wild people should have some ideas instilled into them of decency and order, before any attempt could be made to influence them spiritually. On Sundays, and as often as he could collect them round him, he would talk to them of higher things; but it was evident that the meaning of his words failed in great measure to reach their dulled understandings. He must proceed gradually in his self-appointed task of evangelisation. He had great hopes of the influence which would be exerted by the example of a happy Christian home—such as he trusted his would be—established in their midst; and both he and Salome were naturally anxious to begin their life together as speedily as might be.

Many anxious talks and consultations were held on this matter between the pair during Oberlin's expeditions to Strasbourg. Salome's friends were, as may be supposed, somewhat terrified for her sake at the prospect of her future, and did all in their power to delay, and indeed to dissuade her altogether from the marriage. Salome, on her side, was patient, but equally determined that no inducement should make her break faith with Oberlin.

At length, about a year after taking up the charge of Ban de la Roche, the wedding-day was fixed; and for a time Oberlin remained in a state of blissful anticipation. Then a revulsion of feeling took place. All at once it seemed borne in upon him what a frightful sacrifice he was demanding from this gently nurtured girl in thus separating her from all that was pleasant and bright in her life. He looked round with dismay at the bare walls and earthen floor of his rude stone hut; he groaned as he criticised with unfriendly eyes the dwelling which to the view of his parishioners appeared such a palace. He compared it mentally with the comfortable, well furnished, and spotless home to which Salome had been used; and at last, driven by remorse, he started off one summer's morning, as the sun was rising, on a perilous journey over crag and cliff, never stopping until he reached the deep-gabled old house where Salome lived. He had come, not to claim his bride, but to beg her in the most solemn manner to give up the idea of uniting herself to him. His prayers do not, however, seem to have met with a favourable response, for when Jean Oberlin was found tempting the difficulties and dangers of the way back to Ban de la Roche, his wife was there to bear him company.

She was fortunately, like himself, strong and active, a good climber, and full of enterprise. Armed with a long stout stick, and with the help of her husband's arm, she made light of many difficulties which he would have thought insurmountable by her. Oberlin had himself been backwards and forwards so many times now, that he had in a measure mastered the worst dangers of the road where road there was none; but in order to avoid these it was necessary to take a very

circuitous route, and even then the mountain fastness could not be reached without a good deal of hard climbing. In some places they were obliged to follow the course of a torrent, wading backwards and forwards many times, to say nothing of crossing the deep and rapid river Brusche which flowed through the Ban de la Roche, and which was provided with neither ford nor bridge nor boat. The inhabitants of the valley were proud of this river, which, as they believed, afforded them security from all attack from the outside ; and they were exceedingly jealous of the secret means which they had of crossing it, viz. by some slippery stepping stones which were at all times covered by the water, and were not infrequently several feet beneath its surface. Fortunately for Salome the river was low at this time, so that this last obstacle was passed with discomfort rather than danger ; but the home-coming of the pastor's wife was certainly a strange one, and when at last, in dripping and torn garments, she reached the door of her husband's hut, it needed all the bravery of her brave and true nature to enable her to look forward hopefully.

To a woman the absence of every home comfort and nicety is necessarily far more of a trial than to a man. Oberlin had been shocked by his cottage in its roughest state ; but he had come by this time to feel even a little pride in it on his own account, unworthy though he felt it to be as the home of his love.

To Salome it seemed—well, perhaps it was well for Oberlin's peace of mind that he could not at the moment look into the depths of his young wife's heart as he first led her over the threshold of her new home. But she was in truth, as has been said, a brave and good woman ; and after a brief moment of abject despair, she set to work, bringing all her woman's wit into play ; and gradually she managed to turn the dreary little hut into something like a home, though a home of the humblest sort. All Oberlin's hopes and expectations in this matter were fully realised, and the parsonage became in very truth that candle set upon a hill which, shining steadily and bright, sheds light all around in a dark place.

It soon, however, became evident to Oberlin that very little could be done to humanise his flock so long as they maintained an obstinate separation from the rest of the world ; and he strongly urged upon them the necessity of making roads, not only from one hamlet to another, but even to Strasbourg itself. The idea was at first scoffed at as an impossibility. The distance was not great, but the obstacles were pronounced to be insurmountable. Moreover, there was a prejudice against such an innovation. That it would be unlucky to any who should begin it, was the popular conviction. Possibly the feeling that isolation had in former times procured the inhabitants of the district immunity from religious persecution, may have had something to do with this idea. Still Oberlin combated it by every means in his power. And at last, finding argument useless, he determined to try what example would do. If any ill-luck was to come, he was at least resolved to draw it down upon his own head. So one day he and his wife, shouldering pickaxe and spade, set to work together, and began to clear what was afterwards to be the high road to Strasbourg. This example was not without its effect, and in a short time a strong contingent of active young peasants gathered about the energetic pastor, who continued to work with them and direct their efforts.

At first a foot or bridle-path only was designed, for the very good reason that the inhabitants of Ban de la Roche, or the greater number of them, had never seen a cart, and could not possibly be brought to understand the use of such a thing. Indeed, no wheeled vehicle could possibly have been brought over the river, with its water-washed stepping-stones. And as for building a bridge, no sort of arguments on the part of Oberlin could persuade these primitive people to entertain the idea. Thus to throw open the door of their rock-bound home to all the world, seemed to them simply an invitation to violence and robbery.

Some years later the bridge was actually made, and under Oberlin's direction ; but not until the pastor, whom his flock had by this time come to love and reverence with no common love, had narrowly escaped drowning by falling into the river at flood-time, while trying to cross it in order to visit a sick parishioner.

In the meanwhile, however, Oberlin's efforts were mainly directed towards teaching these backward pupils of his some of the lost arts of civilisation ; above all, he was anxious that they should learn to cultivate their land. A plot of ground near his own house he turned into a potato field, to the intense amazement and wonder of all beholders. When the potatoes were actually grown and dug up, the admiration and astonishment of the people were unbounded. As it appears, the cultivation of this humble article of food had formerly been known among the inhabitants of Ban de la Roche, but had, with every other kind of industry, been allowed to fall into disuse, and become forgotten.

Early and late, at every spare moment, Oberlin and his indomitable wife were to be seen hard at work in their field or garden, sowing, planting, weeding, reaping, according to the season,—always busy, cheerful, and contented. As time went on they were accompanied by one, then by two, then by three toddling little helpers, whose hearts were more willing than their hands ; and they also found a co-labourer, as willing and more efficient, in Louise Scheppler, who by this time formed one of their little household.

This young girl was taken by the Oberlins into their family at the age of thirteen, after the birth of their fourth child. Pastor Oberlin, feeling that his wife was now overweighted with domestic cares, looked about for some means of relieving her. The idea of a servant naturally suggested itself. But what servant, coming from any civilised community, could be found willing to endure the hardships and discomforts of such a life as that patiently borne by the missionary and his wife. Help, if it was to be had, must be found within the charmed circle of Ban de la Roche ; but there was no young woman in the district whose training or morals could permit of her entrance within the pastor's

house. "I think," said Madame Oberlin, laughing, one day, when the matter was under discussion, "that if we want a servant we shall have to make one."

"Exactly," returned her husband; "that is what you must do." Later on he added, "And I think I shall be able to find you the material. There is the orphan child of that poor Scheppler." He it was in whose behalf Oberlin was nearly drowned in the swollen waters of the Bensche. "She seems a bright little creature," the pastor went on, "and since her father's death I think she has been grossly ill-treated by the other relatives. It might be a good plan to try her."

Madame Oberlin laughed softly. "My dear," she said, "if the child is being ill-used, by all means let her come to us, and I will treat her as one of my own children; but as for her being of use, why even you, you simple-hearted man, ought to know that it is as hard to get anything out of these poor ignorant people, as it is to put anything into them."

In spite of this, however, or rather in consequence of little Louise's distressed state, it was resolved by Oberlin and his wife, after further consultation, to take her into their household.

Louise, as she made her first entrance into the parsonage, in her one scanty cotton garment, which reached little below her knees, with bare legs and feet, and dishevelled hair through which neither brush nor comb had ever been passed, looked, it must be confessed, somewhat unpromising as the material out of which a good and useful servant was to be made. But Madame Oberlin having, not without success, attempted to make the wilderness about her blossom, was not to be daunted by mere appearances. There was something about the girl's face which attracted her, as it had done her husband; while the story of her loneliness and her devotion to her father through a long illness appealed to the motherly heart of the pastor's wife.

In truth Oberlin had, in choosing Louise Scheppler as an inmate of his home, given only one among many proofs of his rare discrimination and insight into character. Under the kindly and refined influence of the Oberlin family, the little Louise very soon lost a great deal of her native roughness; but the sterling good qualities which the pastor had observed in her remained, and under the guidance of her kind friends developed day by day. Louise was by nature industrious and gentle. She was humble and patient, and most anxious to be of use. Under Madame Oberlin's teaching it was therefore not wonderful that she gradually became not only a capable servant, but something far beyond and above this.

We hear very little about her in the years of her apprenticeship. Indeed, of her early girlhood, after her first introduction into the pastor's family in the year 1778, we are told little or nothing. We learn more about this period of her life later on from the grateful reminiscences of the pastor's seven children, to whom she had always been as a second mother. It is not surprising to hear that Madame Oberlin's health gradually failed under the weight of maternal and family cares, and the continual privations of her life. In the year 1786 she died, and dying laid her hand in that of Louise Scheppler. "Stay with my children if you can," she pleaded, "and teach them as I have taught you."

Louise, bathed in tears, and with a voice choked with sobs, gives a promise out of a full heart. "I will never leave them," she cries. "I will talk to them of you. I will try to make them worthy of you." From this time the serious work of Louise Scheppler's life begins. She is now twenty years old, and she suddenly finds herself at the head of her master's household, with a family of seven children—the youngest an infant in arms—to rear and care for, with all the daily needs to supply; with the fields to till, and the cattle to tend; with the bread to bake, the butter to churn, and the clothes to wash;—but besides all this, with the whole parish, as it were, upon her shoulders, since the pastor's household was in a sort the pivot upon which the entire social life of the district turned. And for a time Oberlin was so depressed and overwhelmed by his terrible grief that he was unable to rouse himself, or to bear the friction of contact with the rude uncultured souls about him. It was to Louise that he too looked, not only for the control of his household, but virtually for counsel and help in the affairs of his parish.

Fortunately, Louise was equal to all the strain which was put upon her. Never a more willing, never a more purely unselfish soul could have been found than was possessed by this untutored young peasant. That she was a woman of some genius, too, is evident from the clear grasp which she laid upon every subject presented to her, and from the extraordinary influence which she was able to exert upon those around her. More and more, as time went on, she came to be the central figure to whom each member of the family group was tied by tenderest bonds of gratitude and affection, and to whom each one in turn looked for guidance. Her active brain was never idle any more than were her active hands. Advising and encouraging here, restraining there, if need were, softening differences, smoothing difficulties, suggesting new schemes of usefulness—these were the labours in which she delighted and in which she excelled. And all was done with such great humility, with such an utter absence of self-consciousness, that the ruling never galled, the advice never seemed obtrusive, the suggestions never savoured of impertinence.

Had she not been a woman of most ingenuous and simple mind, one would say that she must have been possessed of extraordinary *tact*; but in truth there are so many better qualities which tact only simulates, that it would be unfair to identify her with such a doubtful quality. She held a position in which only true honesty of purpose and purity of heart could have kept her free from reproach, and she lived a long life through, honoured and loved by those among whom she made her home, and revered by all with whom she was brought into less close relationship.

The chief sentiment of her life was a devoted attachment to the memory of her dead mistress; for while, as far as was possible, supplying her place to the children, she never failed to keep the memory of their dead mother green within their hearts. As to the pastor himself, she maintained through all

the years of their long and necessarily intimate intercourse the most absolute deference and respect, never allowing herself to be treated in any other manner than as a servant, although, from the simplicity of their manners, her place was naturally at the head of his table.

As years rolled on, the people of the Ban de la Roche had become in a measure civilised and Christianised by the labours of the brave pastor. Yet he was always spending himself in the endeavour to still further improve their material or intellectual condition. He had established schools for both boys and girls. In these, especially in the girls' school, Louise was his constant helper, as his wife had been during her life. And Louise delighted in teaching these future wives and mothers of the hamlets all the useful domestic arts which her beloved mistress had taught her. In Louise's class, sewing, darning, washing, ironing, and cooking were held to be of even greater consequence than the abstruse sciences of reading and writing, though these were by no means neglected. The boys Oberlin attempted to lead a little farther along the thorny road of learning, but to them also the teaching given was eminently practical; one of his favourite methods of instruction being to take the lads out for a walk into the woods and fields, and while endeavouring there to open out to them some of the wonders and beauties of natural history, to guide their minds at the same time to a reverent contemplation of the Creator's power and goodness as shown in even the meanest and most ordinary of His works.

Oberlin established a book-club and lending library in the Ban de la Roche, and was actually the first foreign correspondent of the Bible Society of London, by whom he was supplied with copies of the Scriptures for the use of his people. He also put a dispensary in working order, he himself being able from his intimate knowledge of herbs and simple drugs to give valuable practical assistance on this head.

These were, of course, somewhat beyond the sphere of Louise Scheppler, but two, at least, of the most useful public works which engaged Pastor Oberlin in the later years of his life were directly due to her suggestion and quick powers of observation. She noticed, for example, that the villagers were keenly alive to praise in their efforts after civilisation, that they scarcely considered the fruit of their labour as sufficient reward for the toil involved without some added incentive; and it occurred to Louise that it would be well if, like children, they could be encouraged by the hope of gaining a prize. This idea, which was carried out by Oberlin in the Ban de la Roche, was the beginning of what has since developed into enormous proportions throughout the world, producing who shall say what remarkable results in the shape of international competitions and monster exhibitions? The germ of the whole, evolved from the shrewd practical brain of the Alsatian peasant girl, is to be found in the little agricultural show which Pastor Oberlin instituted in his wild valley, and where year after year the progress in tillage, in the use of agricultural implements, in the production of vegetables and cereals, and in the rearing of cattle and poultry, was duly registered, and at the conclusion of which prizes were, with much solemnity, awarded to those whom the pastor decided worthy of the highest distinction.

The old order had changed and given place to a new. Instead of an uncultivated waste of rocky desert, or a tangle of pathless forest, inhabited only by beasts of prey, and human beings little removed from them in manners or morals, there was now an industrious, orderly, peaceable community, living in decent houses, and in some measure of comfort, since by the cultivation of the potato and flax, together with various vegetables and fruits, their material wealth had been enormously increased. In course of time the valley was able not only to supply its own wants, but even to export, by means of the new road to Strasbourg, various productions, in return for which actual money, the use of which had not been known in Ban de la Roche within living memory, found its way into the hands of the astonished peasants.

In order to urge his people along the road to progress Pastor Oberlin constituted himself a sort of agricultural agent, selling to them at cost price, or sometimes at less, the more necessary implements of labour, in the use of which he gave practical lessons. He was also ready to supply the peasants with seed for sowing their land, and indeed with almost all the necessaries of their simple lives, even down to that necessity of modern existence *ready cash*, of which they quickly began to feel the need.

To meet this want Louise Scheppler's active brain was called into play, and with the pastor's consent she established what is known in France as a *Mont de Piété*, by us less reverently called a pawn-shop; but which in this case was surely deserving of the more dignified title. The peculiarity of the establishment presided over by Louise was, that sums of money were lent to those requiring them upon the security of certain articles deposited; but the loan was a loan, pure and simple, and when the money was repaid, the pledges were returned without any interest being required for the accommodation. By this means money was made to circulate in the hamlet, and the prosperity of the little community was largely increased.

The community itself was also growing in a remarkable way. At the time when Oberlin first began his work in Ban de la Roche, the entire population had consisted of eighty households. Less than forty years later the number of families had risen to six hundred. Not only was the district now brought into a state of cultivation which compared favourably with other parts of France; not only did the fields produce good crops of potatoes, flax, and corn; not only were the newly planted orchards and fruit gardens giving an ample return for the labour bestowed on them, but various other industries, such as cotton-spinning, weaving, and dyeing, straw-plaiting and clock-making, were now carried on in the valley, under Oberlin's supervision. Still there seemed constantly to arise a need for further employment; and in the year 1814 a Swiss manufacturer named Legrand, an old friend of Pastor Oberlin's youth, came at his earnest request to the Ban de la Roche and estab-

lished a ribbon factory there. This opened out a new life and a new source of wealth to the rising population of the hamlet; and here again we find Louise Scheppler foremost in learning the more delicate manipulation of the industry, ready to instruct others, charging herself with the care of the women and young girls employed in the mill, providing for their intellectual advancement, and carefully watching over their moral as well as their physical health.

It was in connection with this phase of her work that Louise conceived and carried out one of her most remarkable ideas, an idea which, like her notion of the agricultural prizes, has since been adopted in many other lands. The "idea" came to her in this way. She noticed that in their eagerness for work and wages, the young married women of the district were tempted to leave their infant children either without any care at all or in the hands of other children scarcely old enough to take care of themselves. So it occurred to her to set up a public nursery in which the little ones should receive all due attention. The idea once started, it was not long before Louise's energy carried it into execution. The first *crèche*, and indeed we may also say the first *Kindergarten*, were thus established at Ban de la Roche. An empty cottage was obtained, and fitted up for the reception of the little ones. It was furnished with cradles, cots, and toys, and plentifully adorned with gay-coloured pictures for the amusement and instruction of its future occupants. Two or three girls from Louise's school, and carefully selected by her, were appointed as nurses; and here all the neglected little ones were gathered together, literally from the dustheaps and gutters, which had previously been their playground, while many mothers who had been unwilling to leave their children untended were thankful to avail themselves of the opportunity thus afforded them of earning good wages with a quiet mind.

The great principle of Louise's nursery was that the children must be made happy. Those who were old enough to be taught received instruction, but it was under the guise of amusement. Picture-books, stories, games, which were accompanied by little songs, set to the rhythmic movement of sturdy little limbs, whiled away the winter hours, while in summer-time the children were taken into the forest, where they were encouraged in small efforts at gardening and in rough healthy exercise, Louise taking a special delight in teaching them the names of common plants and wild flowers, and in showing them how to distinguish useful from noxious herbs.

Many years later England adopted the idea of the *crèche*, and from England it travelled back again to France. It is now, to the comfort of many a hardworking mother, firmly established in countless towns and villages; but few of those who advocated these public nurseries, and few of those who have shared in their benefit, know to whose kindly instincts they are indebted for them. Curiously enough, it is to one whose maternal instincts were all expended upon the children of others. For Louise never married. Indeed, her life seemed too full of anxiety and care for the well-being of others to have any room left in it for considerations of a personal kind. She found her best happiness in diffusing happiness all around her.

In the year 1826 Pastor Oberlin died, at the age of eighty-six, and after having spent almost sixty years in labouring among the people of Ban de la Roche. His funeral was attended not only by the whole of his congregation, but by many civic dignitaries from various parts of France, and even by representatives from foreign countries, for his reputation as a philanthropist, as a reformer, and as a man of most noble and self-denying life, had spread far and wide, and earned him well-merited honours.

By this time Louise Scheppler was herself becoming an old woman, for she was now past sixty, and in his will Oberlin makes her a special subject of bequest to his children. "I leave you," he says, "my faithful helper the indefatigable Louise. Since her thirteenth year, when your good mother first took her into our house, she has laboured unceasingly for us. When that tender mother was taken from us, all too soon, Louise's cares for us redoubled. In my service and in the service of God she has spent not only her time and talents, but her very life and health. You may think that she has been duly repaid by the good wages which I have paid her. On the contrary she has always refused to accept anything from me, not even her clothes, which she has always bought with the proceeds of her own strip of land. Judge then, my children, to what an extent you and I are indebted to her, and how impossible it would be for us ever to repay her. How could we ever compensate her for the care and devotion which through so many sicknesses, of yours and mine, she has shown—for her wakeful nights, for her anxious watchings, for her devotion! I can but leave her to you, and feel sure that you will, in your turn, each one of you, be to her, as occasion may arise, all that she has been to you, and show by the care which you take of her your respect for the last wishes of your father."

The family of Pastor Oberlin unanimously desired that Louise should take a daughter's share of the property left by him; but this she absolutely refused to do, and begged only to be allowed to remain in the position she had held for so many years among the children she had brought up, and whose children's children were by this time toddling about her knees. She also desired that the public nursery might still be left in her hands, and up to the day of her death she devoted herself unremittingly to it.

In the year 1829 the career of this remarkable woman was brought before the notice of the Evangelical Synod, and by that means came to the knowledge of the French Academy. A prize of five thousand francs was at once voted to Louise Scheppler from the Montyon fund, in recognition of her exalted character and lifelong services in the cause of civilisation and religion. It was a grant which from its unsectarian character did perhaps as much honour to the august body who voted it as to the noble woman whom it designed to honour.

L. G. SÉGUIN.

# REBECCA AND HER DAUGHTERS.

WHAT were known as the "Rebecca riots" took place in South Wales about fifty years ago, and form a curious and exciting chapter in the history of that portion of the Principality.

Far beyond the memory of the oldest inhabitant the people there had been going on in a quiet way, attracting little notice and giving no trouble. All of a sudden, however, they developed into moonlighters, running wild between supper and breakfast time, taking the law into their own hands, and demolishing public property in a wholesale fashion.

There was a good deal that was comic about their proceedings, and the impression made on the rest of Great Britain was much what would be produced in ourselves if some of our decorous friends were, without any preliminary intimation, to take to playing the part of clowns and mountebanks. The rioters at first were almost frolicsome, and if peaceful districts were turned upside down it was done with such good-humour that outsiders felt more inclined to laugh than regard it seriously.

Those who took an active part were invariably headed by a man dressed in woman's clothes, who went by the name of Miss Rebecca. The costume might have been assumed because it made a good disguise, but ill-natured people were not wanting who held it to be a concession to the popular notion that there is a woman at the bottom of every mischief. Many of those who accompanied Rebecca were disguised in the same fashion, so that they looked like a family party, and came, naturally enough, to be known as "Rebecca and her daughters."

The first cause of all the disturbance was toll-gates. These were objects of Rebecca's hatred, and to pull them down and smash them in pieces was the end of her midnight expeditions. She got her name, indeed, through this destructive occupation. They called her Rebecca in allusion to Genesis xxiv. 60—"And they blessed Rebekah, and said unto her, Thou art our sister, . . . . and let thy seed *possess the gate* of those which hate them."

It was no imaginary grievance. The tolls then levied in South Wales constituted an unfair and intolerable burden. Every town and almost every village was approached by a gate, the road trusts of South Wales being eager to lay hands on money, for through bad management they were, without exception, deep in debt.

The people lived in a perfect network of toll-gates and bars, and going even a few miles meant sometimes a heavy expense. Farmers and dealers making their way to fair or market, not unfrequently found by the end of their journey that they had paid away in tolls more than the value of their load. One man trading in the neighbourhood of Merthyr Tydvil told that he had four turnpike gates to pass through within six miles.

There were five different trusts leading into the town of Carmarthen, and it was stated by the clerk of one of these, that any person passing through the town in a particular direction would have to pay at three turnpike gates in a distance of three miles. This might not seem objectionable to a man driving to see his sweetheart, but no one can wonder at hard-working people in pursuit of business finding it a hardship. It was all the worse because times were bad and the greater number of those using the roads had little capital to boast of except their own industry.

Who first suggested making war on these gates is unknown. The first act in the campaign occurred in the summer of 1839. Four gates had been erected in a trust called the Whitland Trust, on the borders of Pembroke and Carmarthen, and it was generally held that the erection was illegal. It might have been so, but the trustees had large powers, and in Carmarthenshire at least they would have been within their rights had they established a gate and demanded toll at intervals of a hundred yards each throughout the country.

The gates had not been up a week when the country people assembled one fine evening about six o'clock and pulled them down "amidst all sorts of noise and disturbance and great jollity." The fun of the thing seems to have been considerable, and the rioters made no attempt at concealment. No one interfered with them, and when the gates were demolished they dispersed quietly to their homes.

The trustees resolved to re-erect the gates, but a number of noblemen and gentlemen of the county who sympathised with the people qualified as trustees, and by their votes overturned this decision. Peace was now secured for a time, but the enemies of toll-gates felt they had scored a victory, and laid their heads together to plan destruction on a grand scale.

The plot took some time in hatching, and nothing happened till the early part of 1843. Rebecca then began operations with a large following, well mounted and sometimes armed.

The demolition of gates began in Carmarthenshire, and the infection quickly spread, extending first to the neighbouring counties of Pembroke and Cardigan, and then to Radnorshire and Glamorganshire. The only one of the south Welsh counties that escaped the influence of Rebecca was Brecknock.

Gate after gate disappeared before the axe and hatchet. In what was known as the Three Commons Trust in Carmarthenshire there were twenty-one gates and bars, and all were made an end of but two. In many other trusts the damage done

was on the same scale; some had not even a single gate left standing. When the outbreak began there were in the county of Carmarthen alone between a hundred and a hundred and fifty gates. Of these between seventy and eighty were soon swept away.

The method adopted was a rough-and-ready one, and as cheerful as Rebecca and her lively family could make it. The toll-collector and his family, all snug in bed, are wakened about midnight by a clattering of horses' hoofs outside. Then half a dozen horns blow a blast, and a thundering knock comes to the door.

The collector, knowing too well that it announces the end of his occupation, looks out, and by the light of the moon sees a considerable troop of horsemen. There are a few men on foot, but the greater number are mounted. One dressed as a woman seems to be taking the lead—that is Rebecca. About her is a bodyguard, with shirts over their clothes and faces blackened, and wearing bonnets or the tall hats of their Welsh wives.

The door being opened, they assure the inmates that they mean no personal harm, Rebecca making war not against people, but against toll-bars. "Get out your furniture," says that mysterious commander, "and then be off with you!"

They set to work to remove the furniture, Rebecca's troop meanwhile devoting attention to the gates. The strong oak posts are sawn off close to the ground, and then with hatchets and handbills the gates themselves are broken in fragments.

Tables, chairs, beds, and bedding are soon piled up by the wayside, after which the word of command is given, and willing hands begin the destruction of the house, and never leave off till nothing remains but a dusty heap of bricks, laths, and plaster.

Their work ended, they make the gatekeeper kneel down and swear never again to earn a living by collecting tolls on the Queen's highway. They mount their horses, there is a triumphal performance on the horns, and off they gallop, leaving the *débris* of the toll-gates and toll-house littering the road, and the collector, with his wife and children, watching over their "bits o' sticks" and wondering whether the whole affair is not a dream.

Who the destroyers of gates were and whence they came no one knew, and whither they went when their work was done no one knew either. They left no trace any more than if they had been spirits of the air and their leader the queen of ghosts and shadows. The country day by day, after their midnight pranks, was as quiet as one could wish it to be. It was evident that they were well organised and disciplined, and fully aware of the importance of keeping their own counsel.

Many guesses were hazarded on the subject of Rebecca. Some said she was a "disappointed provincial barrister"—an improbable solution of the mystery. Others would have it that she was a political agitator, bent on making the abolition of tolls the seventh point in the Chartist programme, and "dark hints were dropped and mysterious stories told of strangers seen here and there, and men in gigs, of suspicious appearance and without ostensible business, who were, beyond all doubt, connected with the movement."

"But," says a contemporary writer, "the supposed sole chief and director of the campaign must have been gifted with ubiquity, for Rebecca was in three or four counties at the same moment—

'Methinks there be *two* Richmonds in the field!'

With one hand she smote an obnoxious toll-gate in Radnorshire, and with the other she cleared a free passage for the traveller to the wild coast of Pembroke."

The probability is that each district had its own Rebecca, who planned the various enterprises, and was recognised as chief by the rest of the band. Whether the districts worked independently, or had a common centre of action, is uncertain.

The forces of Rebecca for a while had pretty much their own way; indeed, the contest with the authorities was a very unequal one. Of all the counties affected, only Glamorganshire at that time possessed any paid constabulary, or any force that could be of service.

When a gate had been pulled down it was labour thrown away to re-erect it, for Rebecca was sure to pay another visit and level it to the ground again. One gate was destroyed five times in succession.

Finding that restoring gates, rebuilding houses, and offering large rewards for the apprehension of the rioters failed to produce any satisfactory result, the trustees lost heart. Roads were left free of toll, and people went to and fro without having any longer to put their hands in their pockets every two or three miles.

This was a popular triumph, and brought to a close the first act in the comedy of Rebecca.

The appetite for agitation grew by what it fed on. One subject for discontent suggested another, and so on, till many of the imaginative natives of South Wales began to consider themselves the most ill-used people under the sun.

The cry of down with toll-bars had added to it down with a dozen other grievances. For the discussion of these, meetings were held on hillsides, by mountain streams, and in all sorts of out-of-the-way places. They were attended chiefly by small farmers, an industrious and thrifty class but almost entirely without education, and incapable of estimating at their true value any assertions that might be made to them.

Amongst the subjects of complaint were the operation of the Poor Law Amendment Act, the cost and difficulty of recovering small debts, and the payment of tithes. Then Englishmen in office in South Wales were objected to, so were high rents, so were increased county rates, so were fees paid to magistrates' clerks in the administration of justice—in short, Rebecca was called upon to deal with everything inconvenient and unpopular.

Their growing confidence and excellent spirits now induced Rebecca and her daughters to vary their midnight exploits by showing what they could

do by the light of day. A demonstration was planned for the 10th of June, and the scene of it was to be the ancient town of Carmarthen.

About noon on that day a large body of rioters was seen approaching Water Street gate from the country beyond. Fear multiplied their numbers, and the news ran like wildfire through Carmarthen that there were thousands of them. A band of music came first, thundering forth the warlike strains of "The Men of Harlech." Next came Rebecca's regiment of infantry, an irregular host, in which some bore inflammatory placards, and others cudgels, saws, axes, and hatchets, whilst a few carried brooms to let people know how they intended to sweep away every sort of grievance. After these rode Miss Rebecca, and the rear was brought up by about three hundred farmers on horseback.

At Water Street Gate they met with no obstacle: the gate, in fact, had been cleared out of the way by them some time before. They swarmed up the narrow steep streets, gathering in numbers as they went. All the loafers joined them, so did all the mischievous and all the discontented of the town. Scores of women, too, fell into the ranks.

When they reached the Guildhall the magistrates were there consulting as to what steps should be taken for the public safety. The mob hooted at them and then turned away to execute the main business that had brought them together. That was the destruction of the Union Workhouse.

They found the lodge-gate and porter's door of the unpopular edifice securely fastened, and there was a high wall running right round the building. A few of the more nimble climbed the wall, got possession of the keys, and let in the rest. As they did so the clangour of the alarm bell, tugged at by the governor of the workhouse, was added to the martial music of their own band. The horsemen rode into the yard, whilst the rioters on foot entered the building and began pulling down doors and partitions and throwing beds out of the windows.

But they were not going to get it all their own way for long. Information of the intended rising had been obtained by the authorities some days before, and in consequence a troop of the 4th Light Dragoons had been ordered to march to Carmarthen from Cardiff.

The morning of the 10th saw them on the road. Just after passing through Neath, thirty-six miles from their destination, an express met them with an entreaty to make haste, for the demonstration had been fixed for that very day. They pushed on, riding the last fifteen miles in an hour and a half. Two horses fell dead from fatigue just as they entered Carmarthen.

The rioters were warming to their work when the dragoons arrived. With the dragoons came a magistrate, who pulled out the Riot Act, and charged all present "immediately to disperse themselves and peaceably to depart to their habitations or to their lawful business."

Rebecca's children made answer by a rush on the soldiers. But they got the worst of it. The dragoons charged, using the flat of their swords, and the rioters soon took to their heels, many who were in the courtyard finding it wise to escape over the wall. About a hundred were taken prisoners, and amongst the spoils were several horses abandoned by their riders. Some of the prisoners were afterwards tried and convicted.

Ill-disposed and designing people now got the upper hand in the councils of Rebecca, and the movement, as every lawless movement is sure to do, went from bad to worse. Under pretence of exposing public wrongs, those who had any private grievances contrived to gratify their spite. Every man who had fallen out with his neighbour and wished to do him an ill turn had now an opportunity.

Letters signed "Rebecca," or "Becca," or "Rebecca and her Daughters," began flying about, conveying hints of vengeance to those who refused to comply with the demands of the writers. They were directed to tithe-owners, turnpike commissioners, toll collectors, magistrates, landlords, and all who for any reason had incurred popular displeasure.

The vice-lieutenant of Carmarthenshire, for example, was informed that a grave had been dug for him in the park of his father, Lord Dynevor, and that he would be laid in it before a day named. To the vicar of two small rural parishes on the coast of Cardiganshire, Rebecca sent word that if he did not make restitution of a sum he had unjustly received he would soon find the balance on the wrong side.

"Unless you give back the money," she wrote, "I, with five hundred or six hundred of my daughters, will come and visit you and destroy your property five times to the value of it, and make you a scorn and reproach throughout the whole neighbourhood."

This clergyman states that his existence was rendered miserable by the letters he received, and that it had nearly killed his wife. "We never," he says, "go to bed without having a wardrobe moved to the window as a protection against fire-arms."

Besides firing shots in at windows, the discontented followers of Rebecca embarked in incendiarism and set many a haystack in a blaze. One farmer in Carmarthenshire had five fires in one week, in addition to having a horse shot and agricultural machinery broken and thrown into a pit.

They took to dictating to landlords the terms on which they were to let ground to tenants, and to tenants the terms on which they were to rent ground from landlords. The leaders, too, began to levy blackmail on farmers who took part in the riots. A note would come—"You must send such and such a contribution to Rebecca on such a night," and the farmer who declined knew what to expect.

The humour of Rebecca was at an end. From being a humorist she had become a tyrant. Even the destruction of toll-gates lost its grotesque side and grew to be little else than a matter of ruffianism. Previously, the gate-keepers had been

very leniently dealt with, no attempt, except in rare instances, being made either to injure them or to destroy or plunder their property. Now, however, they had a bad time of it, for when a gate was demolished a beating for the man who had kept it came to be the customary termination of the proceedings.

An encounter marked by some ugly features took place at a gate on the borders of Glamorganshire and Carmarthenshire. Something was suspected, and eight policemen had been told off to hide in a neighbouring field.

About midnight the forces of Rebecca, including a hundred horsemen, made an attack on the gate. It was soon in pieces, but before the work of destruction was finished the eight constables jumped over the hedge and rushed forward, hoping to secure the ringleaders.

The rioters at once discharged a volley. The police in turn drew their pistols and fired, wounding several and killing the horse of the captain of the gang.

A tough fight followed, ending in Rebecca's men running off. Six prisoners were left in the clutches of the police, two of them severely wounded. One of these prisoners was a young farmer, who on being tried was sentenced to transportation for life.

A still more unfortunate incident happened at a gate between Llanelly, in Carmarthenshire, and Pontardulais. It was kept by an old woman—she was over seventy years of age. Numerous letters had been received by her to the effect that if she did not leave the gate her house would be burned over her head; but she took no notice of them, and stuck to her post.

About three o'clock one Sunday morning she awoke to find that the threat was being put in execution—the thatch of her dwelling was in a blaze. She jumped out of bed and ran to a cottage close by, calling on the inmates for help to put out the fire. They, however, would do nothing — for fear, they said, of Rebecca's vengeance.

The old woman hastened home to save what little she could of her humble furniture, but had hardly reached the door when a shot struck her, fired apparently by one of the band who had set alight to the thatch. She died within a few minutes.

It was asserted afterwards—but the evidence is not conclusive—that the fatal shot was "the random act of a lad who accompanied the party, and was fired without any previous or deliberate intention to take her life." What is certain is, that this was the first life sacrificed in Rebecca's raids.

Quiet people began to feel uncomfortable, for there was no saying what might happen next. Government was appealed to and urged to do something by way of restoring order. As a first step in that direction troops were sent down to South Wales, and the command of the disturbed districts was entrusted to an officer of experience.

Soldiers were now quartered in the neighbourhood of every remaining toll-gate; they gave protection to those who had excited popular ill-will, and kept an eye on all suspected persons. Select companies of London police also appeared on the scene, and were dotted about in villages and hamlets.

This brought to a close some of the more objectionable doings of Rebecca, but did not end her crusade against toll-bars. She and her daughters knew the country a great deal better than those who had been sent to circumvent them, and under cover of night could swoop down on a gate and demolish both it and the collector's dwelling, without a single soldier or policeman in the vicinity being aware of their goings on.

The military and police were not even wise after the event, for the sympathies of the country people, not to speak of their interests, being with Rebecca, one and all when questioned assumed an impenetrable air of ignorance and reserve. The in-comers too were sadly hampered in their inquiries by not knowing a word of Welsh. Occasionally, Rebecca, by way of a joke, would circulate false reports, and troopers would be sent in hot haste over hill and dale to protect gates that were in no danger, finding on their return that the real point of attack had been at the other end of the district.

The restoration of order was greatly helped by the appointment of a Government Commission of Inquiry, whose business it was to investigate on the spot the various grievances of the natives of South Wales.

This Commission began its sittings in Carmarthen on the 25th of October, and in the beginning of the following year issued a report, which, by its temperate statement of the hardship of the toll-gate, secured the passing of an Act known as the South Wales Turnpike Act, its chief provision being that no gate should be erected within seven miles of another unless they freed each other. This satisfied most people. Rebecca and her daughters retired into private life, and the lively chapter they had contributed to the history of the Principality came to a close.

JAMES MASON.

# NOTES ON CURRENT SCIENCE, INVENTION, AND DISCOVERY.

## EDISON'S LATEST INVENTION: THE KINETOGRAPH.

MR. THOMAS A. EDISON, the famous American inventor, has just launched upon the world a description of the highly sensational feat he believes he has accomplished in the hopeful sphere of photo-electric kinematics. By means of a highly composite mechanism which is to be known as the "kinetograph," or motion-picture, he proposes to combine the agency of electricity, photography, and the phonograph for the purpose of reproducing sights and sounds which have their origin far beyond the range of our natural vision. He promises even more than the ingenious dervish of the "Arabian Nights' Entertainments," whose magic mirror, it will be remembered, was only pledged to reveal to the spectator the scenes in the inner room of the distant palace at Bagdad, and not to reproduce the strains of the Caliph's band. According to the account he has given to a correspondent, the great American electrician would seem in the first place to have solved one of the chief problems of the last fifteen years of science, that of "visual telegraphy," or seeing by electricity, an idea which had already been independently conceived, and prematurely announced as an accomplished fact in more quarters than one. It is a striking tribute to the high standing of Mr. Edison, and no small evidence of the unique reputation of this marvellous man, that as soon as the problem was known to be in his hands, it was at once regarded as being, if not within measurable distance of success, at least within the range of serious and practical science. As we shall have occasion to scrutinise the claims which Mr. Edison makes for his kinetograph, and to ask the nature of the advance which he has made upon an interesting and well-known line of experiment, it will be right to give a description of the apparatus in the inventor's own words.

"The kinetograph is a machine combining electricity with photography, so that a man may sit in his drawing-room and see reproduced upon a screen the stage of a distant theatre, may observe the actions of the actors exactly, and also hear the voices of the players or the music of an opera. So exact is the instrument that every muscle of the face and every expression is faithfully reproduced. The machine will, for instance, reproduce a boxing match. The whole scene is reproduced, every blow struck is seen perfectly, and even the sound of the blows can be heard. The kinetograph has only to be placed upon a table in front of the stage. The machine photographs the scene, and records the minutest sound. It begins to work as soon as the curtain is raised, recording the motions of the actors at the rate of forty-six impressions per second. This is sufficient to give a continuous picture of what is happening. The photographic slips are then developed and replaced in the machine and a projecting lens is substituted for the photographic lens. Now, by adjusting the phonograph and by means of a calcium light, the whole scene may be reproduced in your drawing-room. As the impressions are permanently taken, the scene may be reproduced years later and as many times as any one desires to see it. The photographs are reproduced in miniature or in life-size, so that nothing of the performance need be lost."

This is a very straightforward account of the general nature of the apparatus employed, so far as the photographic method is concerned, and those who have followed the development of photography during the last few years, especially if they were present at the *soirée* of the Jubilee Penny Post in London last winter,[1] and saw Messrs. Preece and Hughes's electrophonoscope at work, will have no difficulty in understanding what it is that Mr. Edison claims to have done. As one of his most friendly and competent critics at once remarked on reading the letter: "Except for the combination of the phonograph with the projecting apparatus there was really nothing shown which has not been accomplished in America, in this country, or on the Continent, by several different workers." Of course it remains to be seen whether Mr. Edison's apparatus is not, as it very well may be, a great improvement on those of his predecessors.

The kinetograph, according to the correspondent, is a camera arranged in a new manner to do new work. In a small box containing the camera, Mr. Edison places a roll of gelatine film $\frac{3}{4}$ of an inch wide, and of any length desired. The interior of the camera is arranged in the ordinary way. The gelatine strip is unrolled from one spindle and re-rolled upon another, and it is in passing from the first spindle to the second that it is carried before the lens of the camera. The shutters of the camera are arranged to be worked by a shaft attached to a cylinder of a phonograph. This shaft also works the spindles which carry the rolls of film, and the mechanism of the camera is so arranged that when the shutters are open the spindles stop, and the gelatine film is fixed before the lens. In less than the forty-sixth part of a second the photograph is taken, the shutters snap, and the spindles turn the gelatine strip, which moves on for a new photograph. Upon this point Mr. Edison said:

"The trouble in all attempts heretofore made to reproduce action and motion by photography was that the figures were not taken in a series with sufficient rapidity to get accurately the motion it was desired to reproduce. Mr. Hemment, the man who photographs running horses in the thousandth part of a second, had the idea, but he failed because he could only take half a dozen photographs at a time, and these photographs, if reproduced in

[1] "Leisure Hour" for 1890, p. 783.

a series, would have shown a jerky and imperfect motion. My idea was to take a series of instantaneous photographs of motions so rapidly that in the reproduction photographic representations would become dissolved in pure motion instead of a series of jerks."

The photograph shown to the correspondent represented one of the boys employed in Mr. Edison's laboratory. The pictures were about half an inch square, taken on the film at intervals of about one inch. They represent the boy in the act of taking off his hat and bowing. Between the first view and the last of the series, the complete motion of removing the hat and making the bow was clearly discernible, and there was no apparent change of position between any two consecutive views. The boy's hat was upon his head in the first view, and his hand was at his side. The hand was gradually raised towards the head, which gradually inclined forward, the hat was removed, and the bow completed, after which the hat was placed upon the boy's head.

This is admirably described, and is quite convincing. But so far we are told nothing new. By the recent visits of Mr. Muybridge to England during the last three years, large audiences in all our great towns have been familiarised with the same kind of phenomena as shown on the lantern-screen, some of his feats being more complex than the one here described. Mr. Muybridge's pictures of animals in motion were taken with a number of different cameras operating in very close succession to each other, so as to record every phase of the action of a trotting horse or a somersault-thrower in a circus. These, when combined in the well-known toy called the zoetrope, or when thrown on the screen by the inventor's zoopraxiscope, were perfectly successful, and the law of continuity of vision which asserts itself when the eye is looking at a close succession of moving objects gave absolutely correct representations of the movements of animals. A very slight jerkiness in the motion left perhaps just the margin for further successful manipulation of which a man of Edison's genius would probably avail himself. Mr. Muybridge's success has since been equalled by operators in France, Germany, and England, but in no case had the resulting pictures, produced at the rate of forty-six per second, been more than mere silhouettes of the figures reproduced, unless indeed they were sunlit scenes. The practical photographer (see "Engineering," June 6) at once meets Mr. Edison with the reminder that when he comes to the magic lantern representation of stage plays, he will find that no artificial light at present available, and no daylight which can get into an interior, will give detailed photographs at the rate of forty-six per second. Until further advance is made in the sensitiveness of photographic plates, Mr. Edison will have to content himself with sunlit scenes for pictures taken at the rate in question.

The employment of electricity for transmitting a picture to a distance, or recomposing its various parts in a room, is a part of the invention in which contemporary science is largely concerned, and it would have been interesting to know what Mr. Edison has accomplished in this direction. It is now some fourteen years since physicists began to realise the means which had gradually come into their possession for the construction of apparatus which should reproduce a luminous image at a distance, with no link of connection but electric conductors. The transmission of a mere sketch by such means is of course a simpler problem, and the method has recently been described in these pages.[1] But in this arrangement light plays no part. The science of telephotography which is used by Edison for his purpose has for at least ten years past given rise to a number of ingenious devices for solving the problem, and for seeing as in a mirror a scene which is not only distinct but is cut off from the observer by opaque obstacles. It would be impossible in a short space to describe the successive experiments which now seem to have ripened the problem for practical solution.[2] It may be enough to state that in nearly all of them advantage is taken of the well-known sensitiveness of the selenium cell to the action of light, and the diminished resistance it offers under such circumstances to the electric current. The resistance of the selenium cell becomes less in proportion as a brighter light shines upon it, and therefore the amount of electric current passing will have a certain ratio to the intensity of the light shining on the cell. With a sufficient number of transmitters sensitive to various degrees of illumination, and of receivers in sympathy with them, the resulting picture is seen as a kind of mosaic, in which the lights and shadows of the original are more or less adequately reproduced. But the number of line wires required is considerable, and the experiment, as hitherto conducted, is both cumbrous and costly. Nevertheless, the successive improvements which have been recorded seem to show that the experiments have been made upon the right lines.

To sum up. Edison's kinetograph adds nothing to our knowledge of the production of moving pictures on the system familiarised to us by Muybridge. It is, however, probable that he has succeeded in increasing the sensitiveness of the photographic plate, and it is certain that his great mechanical ingenuity and command of mechanical appliances would otherwise improve the apparatus hitherto in use. What is chiefly lacking in his own report of the apparatus is an account of the transmission of his pictures by electricity, and the nature of his photo-electro motive cell. This is the most critical part of the kinetograph, upon which its claims will stand or fall. As a scientific amusement or recreation, perhaps, nothing on so ambitious a scale has ever been contemplated, and here, as in other cases, recreative science may prove to be a rehearsal of means which shall hereafter find utilitarian and beneficent employment.

### THE ROYAL SOCIETY'S SOIRÉE.

The annual summer conversazione of the Royal Society, always an interesting index to the scientific

[1] "Leisure Hour," 1887, p. 571; and 1888, p. 65.

[2] A useful summary of these will be found in the "British Journal of Photography" for May and June, 1891, and a more exhaustive account in Liesegang's "Beitrage zum Problem des electrischen Fernsehens. Düsseldorf, 1891.

horizon, was on the last occasion quite worthy of its traditions and of the repute of the distinguished President, Sir William Thomson. Inevitably the names of the older and more famous of our British leaders of science figure less frequently year by year; but the newer generation of workers, more especially in electricity, physics, and biology, are showing themselves admirably competent, remarkably well equipped, and in active possession of the newer and larger field which their elders have bequeathed to them. At the meeting under notice, the branches of science chiefly represented were electricity (statical), optics, anthropology, astronomy, botany, geology, and metallurgy, with a few of their applications. A tour round the rooms, and a brief glance at the more remarkable of the exhibits, will bring before the mind some of the lines of research which are now occupying the newer generation of our scientists.

The prettiest and most popular exhibit in the rooms was unquestionably the chameleon top worked by one of Mr. James Wilmshurst's electrical influence machines, and presenting the first example ever seen of a motor operated by static electricity. Hitherto it has been a reproach against influence machines that they belong to the past age of mere electro-statics—the age of resin, and sealing-wax, and glass, and other means of producing mere frictional electricity. It is quite true that these machines are now overshadowed by the enormous success of the more powerful apparatus for producing current electricity, as employed in commercial and industrial life—by batteries, as in the electric telegraph, and by dynamo machines, as in electric lighting. Yet the influence machine is a remarkably instructive and beautiful apparatus, and its phenomena are by no means yet fully understood. It is *par excellence* the electric machine for the class-room or for private use, and it is often made for home use by intelligent mechanics at the cost of a few shillings. To enter a workman's cottage, and pass into a dark room where the machine is in motion, giving off streaks of harmless lightning, is one of the most pleasing of experiences of science in humble life. The two large, well-varnished glass discs, placed vertically face to face, rapidly rotating, and the whole machine bristling with electricity, present a most beautiful appearance, the entire apparatus being literally bathed with brush discharges. The motor revolving the chameleon top by means of the current obtained from the machine is, as already stated, the first that has ever been constructed to be operated by static electricity, and attracted a very large amount of attention.

The alternating current influence machine is the latest and most improved type of the Wilmshurst plate apparatus. It consists of a varnished glass disc, mounted on an axis, and rotating within a square wooden frame fixed in the plane of the disc. The frame carries four square glass plates, each of which has one corner cut away so as to clear the boss of the disc: these plates are placed one at each corner of the frame, alternately on the two sides, and the disc revolves between them. There are thus two plates on one side of the disc situated at opposite ends of a diagonal of the frame, and two on the other side of the disc, at opposite ends of the other diagonal. Tinfoil sectors fixed to the outer sides of the plates act as inductors, and wire brushes connected with them touch the disc about 90° behind the centre of the inductors. The alternations occur about every three-quarters of a revolution, the suspended paper discs used as an electroscope remaining apart for that period, and collapsing during the next quarter of a turn. Plain varnished glass is the best as regards the quantity of electricity produced. The machine can be used to produce direct as well as alternating currents by removing two of the inductors. When it was first put in motion, Professor Sylvanus Thompson congratulated the inventor on the most interesting machine he had ever brought before the Society, and there can be no doubt that it will lead to considerable modification of the numerous influence machines now in use in all public institutions, and for educational and private purposes.

Professor John Perry's new speed-indicator for steam engines will be found practically useful. In the very fast engines now in vogue the trepidations bring in most extraordinary and untrustworthy figures. In the new instrument, the steam pressure acts on an elastic metal disc, the slight motions of which are magnified by a little mirror, after the fashion of a Thomson galvanometer. The diagram thus produced can be photographed. Professor Carus Wilson's simple optical instrument for examining the strains in bent glass beams seems likely to attain real practical usefulness. It is well known that in existing mathematical calculations the influence of the direct load is sometimes omitted. The action of the strained glass on polarised light enables the precise state of strain all over the beam to be ascertained. In the meldometer Mr. Joly has produced a method of determining the melting points of minute quantities of substances by comparison with bodies of known melting points. The method consists in measuring the thermal expansion of a ribbon of pure platinum when a minute quantity of the substance to be melted is dusted on its surface and observed through a microscope. Quartz, and indeed most or all of the silicated minerals, may be melted on the meldometer.

Mr. Francis Darwin, pursuing the patient researches of his father, exhibited a cup-micrometer, for measuring the rate of growth of a plant. A thread is attached to the upper end of the plant, passes over a pulley, and is fastened to a weight. The descent of the weight (which is a measure of the growth of the plant) is estimated by adjusting a micrometer screw carrying a small cup of oil until a needle point on the weight touches the surface of the fluid. The method, a modification of that used by physicists to measure the rise or fall of a fluid surface, was designed by Mr. H. Darwin, of the Cambridge Scientific Instrument Company.

Mr. Edward Whymper exhibited some of the beautiful engravings to his "Travels among the Great Andes of the Equator," a book which has been expected for years. The work, with 200 illustrations and four maps, will be published in the present year by Mr. John Murray. In these days of poor and abundant simulacrum in the illustration

of books, it is gratifying to find that Mr. Whymper still maintains the almost long-lost art of wood engraving.

A curious optical illusion was shown by Professor Sylvanus P. Thompson, F.R.S. On two rotating discs, A and B, were spiral patterns in black and white, which seemed to move radially inwards and outwards respectively. The observer gazes fixedly for about one minute at the centre of A, and then suddenly transfers his gaze to any object—say, the face of a friend; he will see that object apparently enlarging from the middle outwards. After similarly gazing for a minute at B, and then looking at any object, he will see it apparently diminishing. This experiment disproves the theory of M. Javal (Director of the Opthalmological Laboratory of the Sorbonne), that the complementary subjective illusions of motion are due to involuntary slipping of the muscles of the eyeballs. They cannot slip radially in all directions at once. This interesting exhibit again showed the power of Professor Sylvanus Thompson to adapt himself to a popular audience by showing an optical illusion that can be readily appreciated.

Professor Norman Lockyer, F.R.S., showed some important photographs of the great Egyptian Temples at Karnak and Edfou, intended to illustrate the very striking line of inquiry which he is now working out. They were taken in January 1891, in the first instance with reference to the "orientation" of the temples; but they are now likely to reveal other and perhaps more interesting facts. The photographs show that a long covered way extended through the entire length of the chief temple at Karnak, 600 yards in extent. The orientation of this passage is such that the Naos, or Holy of Holies, would at the summer solstice be illuminated at sunrise. A beam of horizontal light coming through the central door would enter over the heads of the people flocking into the temple, and pass uninterruptedly into the Sanctuary. Mr. Lockyer's interpretation of the interior structure of the temple is so interesting as to lead us to give it in his own words:

"From one end of the temple to the other we find the axis marked out by narrow apertures in the various pylons, and many walls with doors crossing the axis. There are seventeen or eighteen of these limiting apertures, and in the other temple, which is back to back to this one, we have pylons in exactly the same way limiting the light which falls into the Holy of Holies or the Sanctuary. This construction gives one a very definite impression that every part of the temple was built to subserve a special object, viz. to limit the sunlight which fell on its front into a narrow beam, and to carry it to the other extremity of the temple—into the Sanctuary—which extremity was always blocked. There is no case in which the beam of light can pass absolutely through the temple.

"The idea is strengthened by considering the construction of the astronomical telescope. Although the Egyptians knew nothing about telescopes, it would seem that they had the same problem before them which we solve by a special arrangement in the modern telescope—they wanted to keep the light pure, and to lead it into their Sanctuary, as we lead it to the eyepiece. To keep the light that passes into the eyepiece of a modern telescope pure, we have between the object-glass and the eyepiece a series of what are called diaphragms; that is, a series of rings right along the tube, the inner diameters of the rings being greatest close to the object-glass, and smallest close to the eyepiece; these diaphragms must be so made that all the light from the object-glass shall fall upon the eyepiece, without loss or reflection by the tube. These apertures in the pylons and separating walls of Egyptian temples exactly represent the diaphragms in the modern telescope."

On the summer solstice (Midsummer Day) observations were to be made to see whether the axis of the Temple of Karnak is directed exactly on to the point of sun-rising—in fact, to see if the sun rises exactly in the same spot as it did 6,000 years B.C. If the axis were originally laid out on that line it would have been displaced in the interval owing to the precession of the equinoxes, but it would be possible to compute at what approximate date it was in the exact position. It will be interesting if the date given can be confirmed, although the astronomical calculations leave room for a margin of error of 500 years. At the present moment Mr. Lockyer has observations going on at Karnak and Stonehenge, while similar observations are being made in Mexico. There is no doubt that Mr. Lockyer has here initiated a line of inquiry which may lead to interesting results.

Another exhibit of historical interest was the collection of iron tools and utensils of the Roman period, found together in a pit in the Romano-British city at Silchester, Hants, in September 1890. These objects, about sixty in number, include an anvil, a pair of blacksmith's tongs, hammers, axes, gouges, chisels, adzes, a large carpenter's plane (the only example yet found in Britain), two shoemaker's anvils, two plough coulters, a standing lamp, a gridiron or portable cooking stove, a bronze scale-beam, etc. These were kindly exhibited by the Executive Committee of the Silchester Excavation Fund (by permission of the Duke of Wellington).

Professor Sekiya's model of a Japanese earthquake was a striking example of ingenious apparatus by a young Japanese *protégé* of Professor J. A. Ewing. The model is a copy, executed in bent wire, of the highly complex path pursued by a particle on the surface of the ground during an actual earthquake. The earthquake was felt at Tokyo, on January 15, 1887, and the motion of the ground was recorded by Professor Ewing's three-component seismograph.[1] From the seismographic records of the three components, Professor Sekiya has reproduced the actual motion, and shows it in the model magnified fifty times. Numbered labels, attached to points on the wire, marked the successive seconds of the time during which the disturbance lasted.

[1] A figure of an earlier form of earthquake register, Professor Ewing's pendulum seismograph for automatically registering the motion of the ground during earthquakes, will be found in the "Leisure Hour" for 1887, page 210.

# Varieties.

## Forez and its People.

"Neere the Ancient Cittie of Lyons, towards the West, lieth that part of the Country called Forrests, which in its little circumference comprehends more varieties than the rest of France: for being divided into Plaines and Mountaines, both of them so fertile, and seated in such a temperate Aire, that the soile is capable of whatsoever the industrious Husbandman can expect or desire. In the heart of the Country is a most pleasan plaine circled about as with a strong wall by its Neighbour hills, and watered with the River Loyre; which from its (not farre off) originall, glides gently through the midst of it, without any swelling pride. Many other Rivulets doe in divers places bestow their chrystall streams, the chiefe of which is Lignon, which though extravagant in its course, as well as delectable in its Scource, runs Meander-like through the plaine neere unto the lofty mountains of Servieres and Chalmafel unto Feures, where the Loyre receiving it, and swallowing up its name, carrieth it as tribute unto the ocean.

"Upon the bank of these delighting Rivers are continually to be seene abundance of shepheards, who though little beholding to fortune, yet by reason of the aires naturall sweetness and the soile's fertilitie do live in abundance of contented happiness." [1]

Thus commences a celebrated romance of the seventeenth century, of which the scene is laid in that part of France whence we get our frontispiece. Forez is a region of some extent, and lies in three departments, Puy de Dome, Loire, and Haute-Loire, mainly however in the first two. It is in the neighbourhood of the volcanic region of the Auvergne, and is mainly a land of granite mountains, well wooded, with winding fertile valleys through which gentle streams find their way into a large plain of meadow-land, shut out from the rest of the world by a circle of mountains. The population in the Puy de Dome portion is almost entirely rural, but in the Loire district it tends to change by the ever-increasing development of the coalfields of St. Etienne, and the manufactures dependent on them.

Puy de Dome affords an example of a people steadily diminishing in numbers under conditions of material progress. Statistics show that Puy de Dome stands, in the order of absolute wealth, thirty-fifth among the eighty-five departments of France; nevertheless, the population has been decreasing since 1846, so that in 1881 its numbers had fallen to the extent of 35,530. The immediate cause is the infrequency of marriages and the few children born of those which take place.

There is a parallel case, only still more striking, in the department of Eure in Normandy, one of the most prosperous in France. In 1848, 430,000 inhabitants; in 1872, 378,000 inhabitants, a loss of 52,000 in twenty-four years. This is stated by Reclus in his Geography of France. He says it is the same with the rest of Normandy, and the cause is the same as in Puy de Dome, abstinence from marriage. In "La France Pittoresque," it is said concerning the department Puy de Dome that, "from statistics going back fifteen years from 1881, it appears that out of 1,000 men and 1,000 women only 66 marry, and that out of 1,000 couples only 161 children were born."

This unwillingness to incur the responsibilities of family life arises from an overwhelming dread of poverty, due to the new era of individual competition supplanting and destroying the age-long communistic society which prevailed even to a recent period in some parts of Forez.

As late as 1788 there were several village communities in the neighbourhood of Thiers, where all the property was in common, and where the people governed themselves, electing as their ruler one whom they styled Father of the Village. He was the treasurer of the common fund, and directed all the business and public affairs of the little republic. A Mother was also chosen to direct all domestic affairs, but it was unconstitutional to choose her from the same family as the Father. It was feared, no doubt, that as husband and wife, or as brother and sister, they might become too powerful. The community, moreover, retained power to depose either at any time, and no hereditary claim was allowed. At the same time the Father was honoured in so far that the marriage of his eldest son was made a general festival, to which neighbouring village communities were invited. In this primitive democracy there was aristocracy of sex—the males dined first, the women only eating after they had finished, and then standing. If a girl married out of the village, she received a dowry of 600 livres, but after that had no further claim on the community. Common prayer was customary every evening in the chapel. Thus for many generations the old time passed peacefully away. And so it may be that Messire d'Urfé's romance was not altogether imaginary when he speaks of the numerous shepherds to be seen on the banks of the charming rivulets of Forez, living in abundance of contented happiness. For the soil was fertile, the air delightful, and there was enough for all and to spare.

> "And thus, as happy as the day,
> These shepherds wore their time away."

Now that the era of individual competition has come, and each one must look out for himself or herself, a much greater amount of wealth is produced, but everybody is far more anxious, and consequently much less happy.

> "Mostly men's many-featured faces wear
> Looks of fixed gloom or else of restless care."

The Forezians in Loire are said to be naturally sweet and good, loving their homes and families, and inclined to be religious, or as some might say, superstitious. They are conservative by nature, love old customs, evidenced, for example, by never wearing anything but the "sabot." Shoes in Forez are a luxury only well-to-do peasants indulge in, and that only on Sunday. But with railways ever increasing in traffic, and the certainty of more lines, all the old-world life of Forez must quickly pass away, and such quiet bits as this painted by M. Christian Roullier become more and more rare.

R. HEATH.

[1] "Astrea," by Messire Honoré D'Urfé, translated by a Person of Quality. Lond. 1657.

## Benefit Clubs and Societies for Mutual Succour: Should Women be Admitted as Members?

The question of the admission of married women as participating members of mutual benefit clubs has been often discussed.

In England the vast majority of such societies exclude women, for the following alleged reasons: 1st, that they would occasion larger demands on the funds than men; 2nd, that they are able to earn less and contribute less than male workers, and that allowances to them would involve disproportionate demands on the fund; and 3rd, that their wants and their claims would be troublesome in the administration of the fund, and that they would be more likely to abuse the conditions for relief.

It may be briefly stated that the benefit societies here referred to deal mainly with these circumstances—the right to medical attendance and medicine in sickness; payment of money during sickness or disability to work; and burial expenses. In relation to these circumstances let us consider the objections to the membership of women.

First, as to the greater expense for sickness. It is true that women have slight illnesses more frequently than men, but the duration of the maladies is on the average shorter, and they are less exposed to serious accidents. Official statistics have demonstrated this. In a report obtained of the authorised *Sociétés de Secours Mutuels* in Paris, it was found that the average number of days of sickness in a year was in the proportion of 5·71 for males, and only 4·66 for female members.

As to the other objections, the entrance fees and assessment of contributions can in each society be regulated by special laws, provided only that the principle is admitted of the wives as well as the husbands having right to medical attendance and other benefits common to all members. With regard to difficulties in the administration, men are often at least as troublesome, and as prone to frauds as women are, and on the whole more likely to come on the sick fund by misconduct than the wives are. Female visitors as well as male visitors must watch against occasional faults; but the general experience in such societies shows an honour and a loyalty which women are as capable of as men.

The veteran French statesman and economist, Jules Simon, in his work "L'Ouvrière," while saying that women have even more need of societies for mutual help than men, utters eloquent and sensible words as to the advantages of wives being associated with husbands in the same benefit clubs. "When we think of the number of homes," he says, "where the husbands for one or for two days in the week do not work, but depend on the work and the thrift of the wives, it seems a barbarous arrangement to reserve for men alone the benefit of association for mutual help. The husband receives in his illness the visits of the doctor, and the medicines, and also pay during his rest from toil. If his wife who has nursed him, and attended on him, and sat up at nights during his illness, is herself laid down with the fever, she is left on her bed of sickness and suffering, alone, and without remedies or attendance, to which she might have a right through membership. What is the equity of married life, and what the solidarity of weal or woe which consecrates that life? The society for mutual succour becomes a selfish and one-sided institution, and separates instead of more strongly uniting those who ought to be as one. The wife, being a member, ought rather to strengthen the family bond by encouraging and fostering the tenderness of the husband and father. From this community of interest and of feeling, the sanctuary of the family receives its moral greatness and grace."

Whatever may be the arrangements practicable or desirable as to the admission of women as participating members of particular benefit clubs, the generous words of Jules Simon may suggest reflections as to the share belonging to wives in the strength and the happiness of homes.

In London and large towns, where there are so many workshop and factory clubs, and "house funds," the majority of the members being young and unmarried, the admission of women is not often practicable. In cases like the post-office or telegraph services there is no reason why the mutual benefit should not be for all who are employed. In villages, and definite districts of towns, the principle of common interest in family life is carried out usefully in "Medical Provident Institutions," of which there are several in London. These ought to be multiplied, and by the help of contributions from "honorary members," the working classes can be liberally helped, without any compromise of their independence; their payments as participating members giving them claim to assistance, and for all branches of the family, in accordance with the rules of each institution

**British Association.**—The sixty-first meeting of the British Association is held at Cardiff from August 19 to 26, under the presidency of Dr. Huggins, F.R.S., whose researches on light, molecular motion, and other departments of science are well known. The Mayor of Cardiff, the Marquis of Bute, is head of the reception committee. No county is superior to Glamorgan for interesting excursions, and as geological and archæological matters abound for observation and discussion, there is every reason to expect a successful meeting. The geology of the region will be seen in the accompanying map.

2. Upper Silurian. 3. Mountain Limestone. 4. Devonian. . Coal-measures. 10. Millstone grit. 12. Marl.

**"Mithering" the Prisoners.**—The late Mrs. Frederick Hill, *née* Martha Cowper, sister of Professor Cowper of King's College, London, took great personal interest in prisoners, her husband, Mr. Frederick Hill, having been H.M. Inspector of Prisons in Scotland, previous to his appointment as Assistant Secretary to the General Post Office. She visited, along with her husband, the prisons in Edinburgh, and took delight in restoring many male and female convicts to honest labour after their release. This was fifty years ago, before "Prisoners' Aid Societies" became popular and notable. She often quoted the saying of one man, who attributed his changed life to the prison matron, who, he said, "so *mithered* him that he could not go wrong." Mr. Hill introduced useful work in place of treadmill labour: and overtime work for wages, with other improvements, in Scottish prisons. Mr. and Mrs. Hill were deeply interested in Sheriff Watson's Industrial Schools in Aberdeen, the beginning of many "ragged schools" and other beneficent work. The last thirty years of her bright useful life were spent at Hampstead, where her venerable husband still lives an active life as a magistrate, and in the performance of official duties with wonderful public spirit in one so advanced in years.

**Seljuks.**—We are indebted to a Cambridge correspondent, E.B.C., for pointing out a misprint in the June Varieties, p. 575. Seleucidæ is printed for Seljukidæ, in the paragraph on "Mussulman Inscriptions in Asia Minor." The division of the ancient Turkish empire of the Seljuks is described in Gibbon, ch. 57. One of its branches fixed itself in Roum, i.e. Anatolia.

**Scio Cui Credidi.**—I know in whom I have believed; I am not ignorant whose precious blood hath been shed for me. I have a shepherd full of kindness, full of care, and full of power: unto Him I commit myself; His own finger hath engraven this sentence on the tables of my heart, "Satan hath desired to winnow thee as wheat, but I have prayed that thy faith fail not." Therefore the assurance of my hope I will labour to keep as a jewel unto the end, and by labour, through the gracious mediation of His prayer, I shall keep it.—*Richard Hooker.*

**Handel and a Gloucester Canon.**—The following anecdote of Handel is told by Dr. Edward Miller (the composer of the tune "Rockingham") in his "History of Doncaster" (1804). "During the latter part of Handel's life, when a boy," says Miller, "I used to perform on the German flute at his oratorios. About the year 1753, a minor canon of Gloucester Cathedral offered his services as a singer, which Handel accepted, and he was employed in the choruses.

Not satisfied with this department, Handel acceded to the canon's request that he should sing a solo, so that his voice should appear to better advantage. But he sang so badly that the audience hissed him. When the performance was over, by way of consolation Handel made him the following speech: 'I am sorry, very sorry for you, indeed, my dear sir; but go you back to your church in de country. God will forgive you for your bad singing; dese wicked people in London, dey will not forgive you.'"

**Diamond cut Diamond.**—In his fables, the Russian Kriloff tells how the rogues in the "thieves' market" cheat one another: "See, cousin," says one, "how God has helped me to-day. I have sold for three hundred roubles some Polish cloth that was not worth half the money; it was to an idiot of an officer, whom I persuaded that it was fine Dutch. See, here is the money—thirty fine red bank notes, absolutely new." "Show me the notes, friend. They are every one of them bad! Out upon you, fox! Do you let yourself be cheated by a wolf?"

**Emigration and the Poor Law.**—As long ago as January 19, 1850, it was said in a leader of the *Times*, "We have no doubt that before a long time has elapsed the organisation of a continuous system of emigration will become the most useful, as it certainly will be one of the most rational, developments of the Poor Law." After forty years, and after many discussions and reports of committees, the relief of overpopulation continues still to be left to the struggling and straggling efforts of societies and of "agencies," instead of by an organised system, whether by the Government, or by local Boards by help of rates. Let us hope that County Councils and Poor Law Guardians will take up the question, daily becoming more urgent.

**Twenty Storeys High.**—For the Grandest Show in the Universe, to be opened in May 1893, at the Columbus Anniversary, at Chicago, the Temple of twenty storeys or stages in height is being busily constructed. The upper storeys will be reached by lifts, and at the top is to be a garden and an observatory.—*Revue de Travail National.*

**Thanksgiving for Victory.**—The Governor-General's notification of December 25, 1845, calls upon the troops to render acknowledgments to God, and the ecclesiastical authorities in Calcutta subsequently circulated a form of thanksgiving. The feeling which prompted the troops of Cromwell or Gustavus to kneel and return thanks to God on the field of victory must ever be admired and honoured, for it was genuine, and pervaded all ranks, from the leader downwards, and it would equally have moved the soldiers to reproaches and humiliation had they been beaten. But such tokens of reverence and abasement come coldly and without a vital meaning in the guise of a "general order" or "circular memorandum;" and perhaps a civilised and intelligent government might with advantage refrain from such tame and passionless assurances of devotion and gratitude, while it gave more attention to religious exercises in its regimental regulations. God should rather be kept ever present to the minds of the armed servants of the State by daily worship and instruction, than ostentatiously lauded on the rare occasion of a victory.—*History of the Sikhs, by Captain J. D. Cunningham.*

**Canadian Farm-Life.**—In the report of the deputation of English farmers, sent to examine the condition and prospects of agricultural life in Canada, many practical hints are given. Of the actual life of a young settler, here is a picture: This gentleman, the son of a clergyman in Dorsetshire, England, when with me as a pupil led quite an easy life, riding round the farms, and merely carrying out my orders to the respective foremen under him. Here I found him with his farm of 320 acres, at a cost of five dollars an acre, nearly all cropped, a good house and buildings well placed, but no soul in the house to cook or do any kind of housework save himself and a single man-servant. The first thing was to run about a mile to get extra bread to carry us over Sunday, when we cooked our supper, and to bed on the floor. My object in recording this is simply to show that, in spite of all these apparent drawbacks, Canada has charms. Here you have a man in every respect, by education at Oxford, a gentleman, ploughing his own land, cooking his own food, washing up, making beds, &c., with the help of one man-servant, making a fairly good living and thoroughly enjoying the life.

**Potato Disease.**—Sulphate of copper has been found in Belgium the most certain remedy for the diseased potato. The plant was not injured, and the percentage of unsound roots was reduced from 30 to 7 per cent. If it is the sulphate that is efficacious, trial with sulphate of iron would be much cheaper than sulphate of copper.

**Channel Islands Trade with London.**—According to statistics contained in the annual report of the Guernsey Chamber of Commerce, the exports of stone from the ports of that island to London in 1890 showed an increase of 17,710 tons as compared with the preceding year, the respective quantities being 246,519 and 256,229 tons. The export of fruit, flowers, and vegetables, the culture of which has become the insular staple industry, also shows a very large increase on the year, amounting in the aggregate to 26 per cent. over that of 1889, the number of packages in 1890 totalling nearly half a million (493,391), as compared with 391,906. In the seven years 1882–9 this source of trade nearly trebled itself, while in one month (August) of last year the number of packages exported was 120,000, or more than the total output of 1882. The returns of passenger traffic, too, consequent on the improved service of the Great Western and South-Western Companies, show that the island was in 1890 visited by some thousands more tourists than in any preceding year.

**The Generosity of Dumas.**—A regiment of needy people sponged on him always: he could not listen to a tale of misery but he gave what he had, and sometimes left himself short of a dinner. He could not even turn a dog out of doors. At his Abbotsford "Monte Cristo," the gates were open to everybody but bailiffs. His dog asked other dogs to come and stay; twelve came, making thirteen in all. The old butler wanted to turn them adrift, and Dumas consented and repented. "Michel," he said, "there are some expenses which a man's social position and the character which he has had the ill-luck to receive from heaven force upon him. I don't believe these dogs ruin me. Let them bide! But in the interests of their own good luck see that they are not thirteen, an unfortunate number!" "Monsieur, I'll drive one of them away!" "No, no, Michel; let a fourteenth come. These dogs cost me some three pounds a month," said Dumas. "A dinner to five or six friends would probably cost thrice as much money, and, when they went home, they would say my wine was good, but certainly that my novels were bad."—*From "Essays in Little," by Andrew Lang.*

**Maple Sugar-making.**—Professor Cook, of the Michigan State Agricultural College, states that the annual expense of working a twenty-acre "sugar-bush" of 600 trees is about £36, this sum including 10 per cent. interest on the £260 invested in land, building, and machinery. The annual yield of sugar being worth £48 to £60, there is a profit of from £12 to £24 per annum. Professor Cook impresses upon American farmers the need of fostering this profitable industry, and protests against the reckless manner in which the maple trees of the United States are being destroyed by settlers.

**Hellenic Studies.**—At the Annual Meeting of the Hellenic Society a summary was given by Professor Jebb of the unusually rich discoveries and researches of the past year. In archæology, many explorations had been carried on, in Eubœa at Eretria, at Megalopolis in the Peloponnesus, in Asia Minor, Cyprus, and in Egypt. As to literary events, the discovery of Aristotle's treatise on the Constitution of Athens was the most notable, and discussion is abundant since the publication by the British Museum of this lost treasure of history. Another important discovery is that of a defence of Christianity, addressed, early in the second century, to the Emperor Hadrian by an Athenian named Aristides. This Apologia is contained in a manuscript

romance, "The Life of Barlaam and Josaphat," found in the Convent of St. Catherine at Mount Sinai. A full report of Professor Jebb's address will be found in the "Times" of June 25. He concluded by expressing regret that the exploration of Delphi had not fallen to British hands, but wished all success to the French savants who had undertaken the work under permission of the Greek Government. The obituary record of the year includes not a few learned and zealous Hellenists: Archbishop Thomson; Dean Church; Canon Liddon; Samuel Lewis, of Cambridge; Anthony Rich, of the "Dictionary of Antiquities"; Sir Robert Fowler, Bart., one of the founders of the Society; and Dr. Schliemann. Reference was made to the third edition of Smith's "Dictionary of Greek and Roman Antiquities," the second edition of which appeared in 1848, and has now to be almost wholly re-written.

**Stoke Poges in 1818.**—The most remarkable thing here is Mr. Penn's house at Stoke. It has an air of magnificence in its architectural appearance, its library, and its ornamental grounds. He has raised a fine monument to the poet Gray, with a very fortunate inscription, for it stands in the midst of the scenery which is identified with his poetry. Gray resided at Stoke, and the churchyard, in the midst of Mr. Penn's grounds, is the one which inspired the Elegy. In the churchyard is the tombstone raised by the poet to his aunt and his mother.—*Isaac D'Israeli to John Murray.*

**Irish Holdings.**—The following statistics may be useful for future reference in regard to the state of Ireland. A Parliamentary paper gives a return of the holdings, their number and valuation. The total number is 552,349, valued at £10,136,493. The following list shows the several numbers and valuations of the holdings:—£4 and under, 151,901, at an aggregate valuation of £326,902; over £4 and not over £15, 232,084, of £1,958,895; over £15 and not over £30, 88,361, of £1,871,204; over £30 and not over £50, 38,731, of £1,497,459; over £50 and not over £150, 34,497, of £2,769,394; over £150 and not over £200, 3,051, of £526,834; over £200, 3,724, of £1,185,805. A second Parliamentary paper gives a return showing, to March 31, 1891, the amount of advances made for the purchase of holdings under the Purchase of Land (Ireland) Acts, 1885 and 1888. The total amount of advances was £6,235,033, and the total number of purchasers 14,657. If these numbers be classified according to the valuation of the holdings, it will be found that to 11,665 purchasers of holdings not exceeding £30 an average of £208 was advanced; up to £50, 1,465 purchasers—average £738; up to £100, 1,039 purchasers—average £1,347; up to £150, 308 purchasers—average £2,271; over £150, 180 purchasers—average £3,431.

**A Social Magazine.**—A veteran worker on social questions, the Rev. Henry Solly, is issuing a monthly magazine—"Our Magazine" he calls it (Simpkin & Co.)—for discussion of questions on political economy, labour and capital, and other subjects of kindred class. Mr. Gladstone and others heartily wish success to Mr. Solly's attempt to deal with the industrial questions in his programme.

**Swiss Military Administration.**—At the beginning of 1891 the active army numbered 127,937 men, the Landwehr 80,272, and the Landsturm 272,124; a small army compared with that of the great European Powers, but efficient for defensive warfare. The Engineers and Artillery are excellent.

**Ivory-carving at Dieppe.**—The British Consul at Dieppe in his last report refers to the art of ivory-carving as carried on there for now about 200 years. "The exquisite delicacy of the carving is in many instances surprising; indeed, the talent of some of the artists entitles them to rank with genuine sculptors. They range from clocks and albums, ornamented with carved flowers and armorial bearings or representations of bacchanalian scenes, hair-brushes, Prayer-books, looking-glasses, paper-knives, cigar-boxes, watch and spill stands, candlesticks, figures, fans, hand-mirrors, thermometers, etc., to carved vases, crucifixes, and statuettes, sculptured after the most perfect art models. Many of the crucifixes are worth £30 to £40, and there are ten or twelve workmen employed all the year round doing nothing else but carving crucifixes. The ivory-work of the Chinese, Japanese, and Indians is well carved and worked, and is in many respects very fine, but it is not comparable with the composition and elegance of execution of models of the best working sculptors of Dieppe."

**Clive "shaking the Pagoda Tree."**—Lord Clive was one of the first who returned to England laden with the spoils of India. Mr. Boswell in his "Life of Dr. Johnson" says that Brown, the famous landscape-gardener and architect, "Capability Brown," was once at the seat of Lord Clive, who showed him at the door of his bedchamber a large chest which he said was once full of gold, upon which Brown observed, "I am glad you can bear it so near your bed-chamber." Before the Committee of the House of Commons, when examined as to his Indian exactions, Clive exclaimed, with an oath, "Mr. Chairman, at this moment I stand astonished at my own moderation."

**George Fox.**—Nothing becomes George Fox more in his whole character than his perfect self-possession. Sometimes it was outwardly winter with him, and sometimes it was summer, but it was always the same with him inwardly. I cannot detect him unbelievingly depressed. I cannot find him unduly exalted. If he is bound in prison, he does not despise a poor girl who is there detained for execution, but draws up a petition on her behalf that her life may be spared; and when he visits Oliver Cromwell—let me say a right royal man, a true king—he is not at all abashed before the Protector, but speaks to him just as plainly as he speaks to the poor girl in the jail at Derby; he does not forget the little, or fear the great. When he writes to "Friend Charles II"—who, by the bye, scarcely deserves so honourable a title—it is just in the self-same bold but courteous style. There is not a grain of the fear of man about him. He is humble before God, but there is no affectation of humility in the presence of kings or princes. He never held men's persons in admiration because of advantage, but spoke to men as his fellow mortals, and as God's servant he was bold to tell them the Lord's mind concerning them.—*C. H. Spurgeon's Lecture on George Fox.*

**Serjeant Maynard's Happy Compliment to William III.** Serjeant Maynard, born in 1602, in the reign of Queen Elizabeth, survived till 1690, two years after the Revolution which placed William of Orange on the British throne. He took his Oxford degree under James I in 1620; was called to the Bar under Charles I in 1625; was made Serjeant-at-law under Cromwell in 1654, and the Lord Protector's Serjeant in 1658; Solicitor-General under Richard Cromwell; knighted by Charles II in 1660; appointed King's Serjeant by James II in 1685; and Lord Commissioner of the Great Seal by King William in 1689. In that year, when eighty-seven years of age, he had a conversation with the king, who said: "At your age you must have outlived all contemporary lawyers." Maynard replied as a courtier and patriot, "Yes, and I was like also to have outlived the law itself, if your Majesty had not come to the rescue."

**Garrick's Generosity.**—Dr. Johnson often said that, when he saw a worthy family or person in distress, it was his custom to collect charity among such of his friends as he knew to be rich; and on those occasions he received from Garrick more than from any other, and always more than he expected.

**Scott's "Waverley."**—The following statement is made by Sir Richard Phillips, the author of that extraordinary book "A Million of Facts":—"Scott's 'Waverley' was offered anonymously to the editor of that volume. The price asked for it was refused. It then appeared as 'W. Scott's'; but in a few days the name and placards were withdrawn, and the author said to be *unknown*." That Scott made some difficulty about the price is evident from Lockhart; Constable offering £700, Scott suggesting £1,000—the former declining the suggestion, and ultimately publishing the work "on the footing of an equal division of profits between himself and the author."—*Notes and Queries.*

**Mr. Gladstone on Public Libraries.**—At the opening of the Public Library of St. Martin's-in-the-Fields this spring Mr. Gladstone made one of his happiest speeches. He said that his presence was due to his being almost the oldest parishioner, for, though not now resident, he had lived in St. Martin's from 1837 to 1876 inclusively. He paid a just tribute to the memory of Mr. Ewart, by whose exertions the Act of Parliament was carried in 1850, establishing these useful institutions. Referring frequently to the Handbook of Mr. Thomas Greenwood, where all the history and statistics of public libraries are found, he stated that from 1850 to 1886 there were 133 places which availed themselves of the benefits of that Act. Since 1886 the progress of enlightenment has been more rapid; up to 1890 no fewer than seventy-seven new libraries have been opened, a ratio of seventeen new places each year instead of four as in the early period. In London there were in 1886, thirty-six years after the passing of the Act, only two free libraries in the metropolis; there are now nineteen. Other projects now under consideration will probably soon increase the number, without the necessity of resorting to a rate. The city of London, and two or three of the largest parishes, still refuse to establish them. We are glad to learn that another edition of Mr. Greenwood's valuable book is being published. Mr. Greenwood is inclined to advocate grants from the Government for rural districts, but Mr. Gladstone says there are few parts of the kingdom where the wealthy could not give their poorer neighbours the benefit of a library. He has shown a very splendid example on his own property at Hawarden. In less populous districts they might affiliate themselves with town libraries.

**Liquid Oxygen.**—At a lecture by Professor Dewar at the Royal Institution, chiefly on the researches of Faraday, there was exhibited the rare spectacle of liquid oxygen, boiling, at a temperature of 400° below the freezing point of Fahrenheit. This was achieved by subjecting oxygen gas to extreme cold (produced by ethylene) and enormous pressure. This was an experiment suggested by Faraday, but which in his time he was unable to accomplish.

**Increase of Population.**—The returns of the census of 1891 give about 29,000,000 as the population of England and Wales, as against 26,000,000 in 1881. The increase is in the ratio of nearly eleven and a half per cent. in the decade. Scotland has increased from 3,735,573 to 4,033,103 in the ten years. Ireland, which at no remote period had eight millions, is now reduced to less than five millions, and if the same ratio relatively is continued of increase and decrease, Scotland will pass Ireland before the next census! The number of representatives in Parliament ought certainly to be reconsidered for the two countries.

**Canadian Forest Fires.**—During the summer of 1891 the extent of forest fires has been beyond all former precedent. In the Mivamichi Valley seas of flames have extended for dozens of miles, and hardly a house or barn is left standing. Railways have in many places been destroyed, stations, telegraph poles, and carriages all consumed. In June, navigation on many parts of the St. Lawrence was suspended. The steamers were unable to proceed through the dense smoke, both sides of the river having fires raging for 200 miles. Near Lake St. John, ten square miles of timber land was at one time ablaze, and immense damage done. It is said that not a tree, house, or farm has been left between Beaudet and Macignac Station, a distance of sixty miles.

**Writing Experts.**—An amusing anecdote is told of the self-confident audacity of writing experts. In a certain case the directors of a company declared certain signatures to be forgeries. This declaration had no effect upon the expert, who asserted their genuineness. "But," suggested Lord Coleridge, "suppose the directors swear they did not sign them, would that alter your opinion?" "Not the slightest," was the reply. The Lord Chief Justice next tried, "Suppose they were men of high character?" "Then I am sorry for them," was the unabashed rejoinder. "I suppose," suggested the judge, "the judgment of a judge and jury would not alter your opinion?" "Not the slightest," said the witness!

**Soldiers' Daughters' Home at Hampstead.**—At the 86th anniversary meeting this summer, under the presidency of Field-Marshal Sir J. Lintorn Simmons, it was stated that there were 191 children in the Home, every one present, not a single girl on the sick list. This speaks well for the care taken of the inmates as well as for the healthiness of Hampstead. The average cost of maintenance per head is under £20 10s. Some of the regiments of the army do not help this excellent institution, but the majority do, and the Royal Engineers support nine boarders in the Home.

**Cart and Weighing-Machine combined.**—At the last Smithfield show, where implements as well as animals are exhibited and rewarded, a novel and useful machine was seen, a combination of cart and weighing. The delay in transmission of goods, whether dead packages or live stock, has been often complained of, as well as the increased cost from the necessity of unloading to get weighed. The machine invented by Mr. Jenner, of Taunton, allows of freight being weighed without removal from cart or truck, and by adding a crate for loose commodities or a pen for live-stock, the weight is readily obtained. The bottom of the vehicle forms the platform of the weighing machine, the steelyard, and index being visible on the outside. The transit of goods, especially by rail, ought to be facilitated by this invention.

**Swiss Revenue.**—The financial accounts of the Federation of the Cantons of the Swiss Republic show the receipts for 1890 to amount to 67,621,251 francs, and the expenditure to 66,688,381 francs. This is of course only the Federal revenue, each canton having its local taxation and expenditure.

# Household Queries.

**Killing a Cat.**—*I have more than once seen it stated that the most humane way of killing a cat is by chloroform. But no directions were given. I should be much obliged if you would insert the information.*—Chloroform or morphia is the kindest way. Of morphia, get the chemist to make a pill or bolus of ten grains with some extract of liquorice. The only trouble is giving this: the animal will never wake again. To chloroform her, pour some chloroform on a handkerchief; hold this close to her nose, and as she begins to be quieter, wrap all around the nose so that she inhales the vapour nearly pure. There is no sure sign of death for an ordinary person; but if you keep the handkerchief supplied with chloroform for two or three minutes, you may be sure. An ounce bottle would be plenty and to spare. If the cat is restive, and you can get her to take two teaspoonfuls of syrup of chloral in milk, that will send her to sleep, and you can then apply the handkerchief easily. Any chemist's assistant would do it.

**Skeleton Leaves and Ceramic-Mosaic Work.**—*Can you enlighten me as to how to prepare the former, also to mount them, and any information as regards the latter will be most acceptable?*—Leaves are best prepared naturally, by laying selected perfect specimens in shallow pans full of rain-water, and exposing to the sun for periods ranging from three weeks to three months, until the fleshy portion is soft enough to come away. The water becomes offensive, but must not be changed, only filled up now and then as it evaporates. The rays of the sun as long as possible are important in this method. A quicker method is to dissolve five ounces of soda in a quart of boiling water, adding two ounces quicklime, and boiling together for twenty minutes. When cool and settled pour the clear liquid off, and stew the leaves in it gently for an hour, adding boiling water as the fluid boils away. When soft and pulpy the leaves are taken out and soaked and washed in clean water, but are more brittle and easily injured than by the other process. In either case the softened leaves are lifted carefully with a china or glass slice something like a fish-slice, held just under the surface of clean water, and "dabbed" with a brush to remove the flesh, occasionally washing the particles off. Camel-hair thick brushes are used for very delicate leaves, and bristle- or tooth-brushes for stronger ones. Both sides are treated in turn, and of course care must be taken not to injure the skeleton. The skeleton is finally dried between blotting paper. The skeletons are afterwards bleached in a solution of chloride of lime, and then well washed and finally dried. If the stems have broken off, stems of fine covered wire are glued on them at the back, and the various portions of a bouquet are attached together by cotton to sprays of covered wire, or even a nice branching twig from a hedge; a touch of gum on the cotton keeps it from unwinding again, as tying is dangerous to the fragile leaves. For further details you must consult some book on decorative pursuits, or an article, which the subject really requires to treat fully: there is a good one in Cassell's "Book of the Household." The only mosaic work we have ever come across suitable for domestic practice is with coloured beads, or coloured glasses broken into small fragments. Such work would also require an article to treat fully, and we can only say here that the beads or fragments are best laid on mastic cement, made by dissolving mastic in as little alcohol as will keep it fluid, and mixing this under heat with isinglass dissolved in brandy; finally dissolving also a little gum-galbanum. The ground is covered with this hot, and a little is again applied with a small brush where work is being done, from time to time, the bottle of cement being kept in hot water while in use. When the design is complete, a sheet of paper is laid on it and the whole flattened with a hot flat-iron. Finally linseed oil is laid over all and allowed to run in, and fine whiting sprinkled over and well worked with a brush into the interstices, which cleanses the surface and at the same time solidly embeds the beads or fragments. The whole is finally wiped with a soft rag. We should think this process might be used for any mosaic work on a small scale. Either mahogany or metal should be used for the groundwork, unless the mosaic is done on a piece of wall.

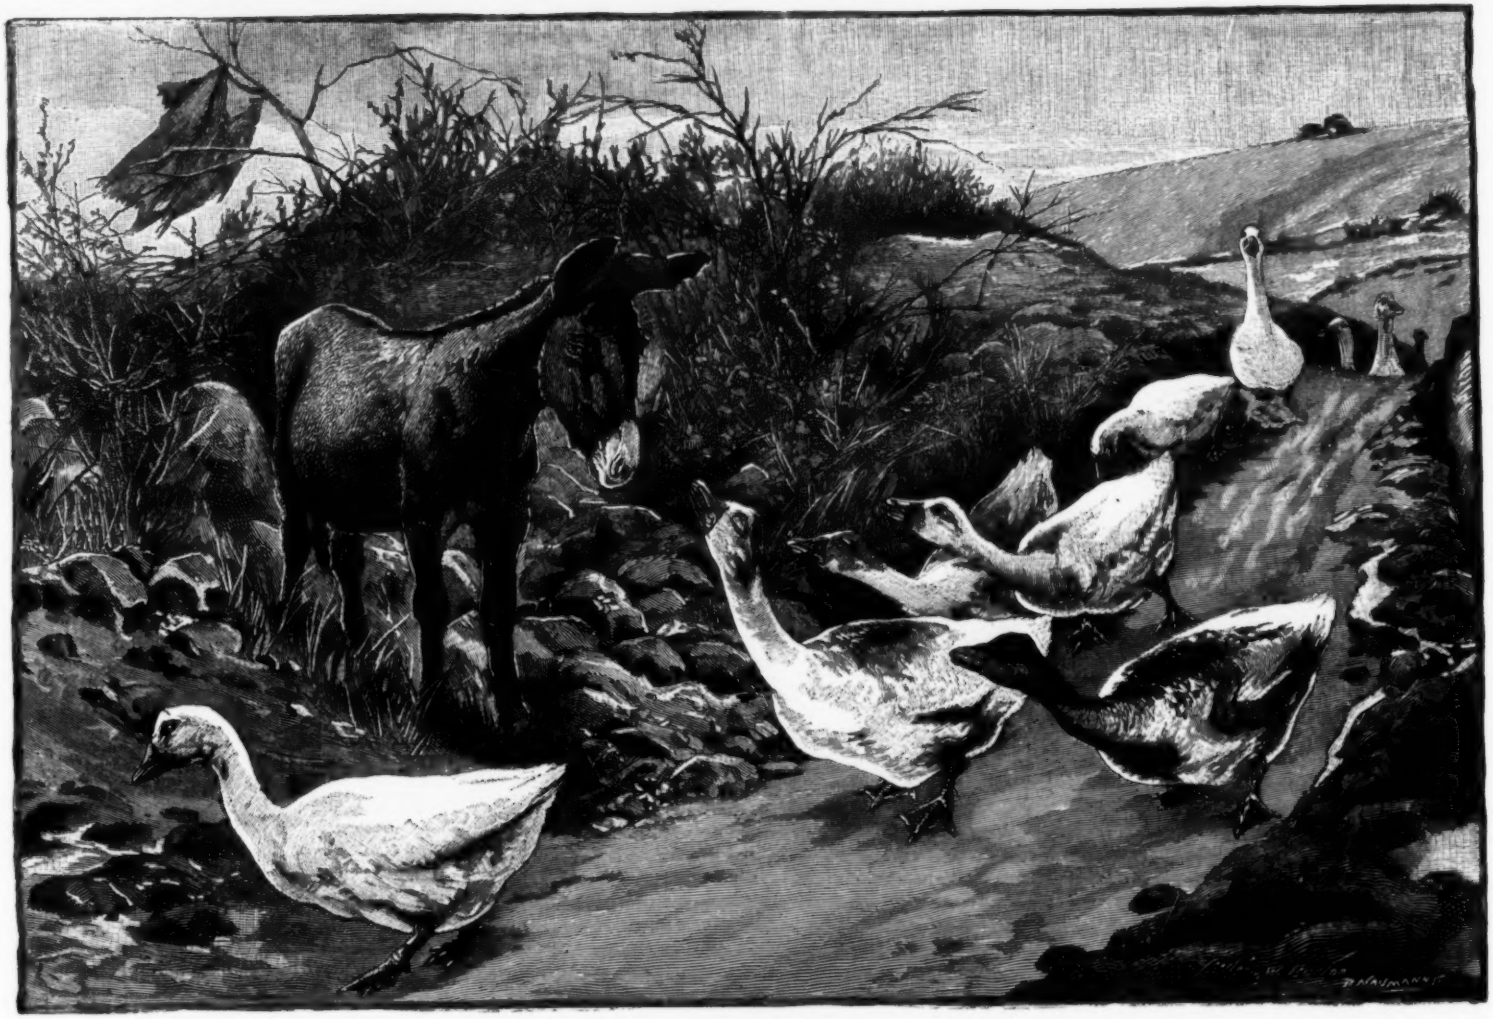
**Sweet Walnuts.**—*I should be glad to know how to pickle walnuts sweet, said to be good for digestion, and recommended by a physician.*—You probably mean what is sometimes known as walnut jam or preserve, which has gentle laxative properties, and in small quantities may be regarded as a digestive tonic, and in larger as a pleasant domestic medicine. Take, say, fifty nuts in which the shell has not begun to form, prick them well and deeply all over, and boil in water till quite soft. Throw this water away, put a clove in each nut, and stew over them two ounces bruised ginger. Make a syrup of half a pint of water and 2½ lbs. coarse brown sugar, stirring over the fire till all is well dissolved; then put in the walnuts and boil or simmer gently for twenty to thirty minutes, stirring constantly to prevent them burning. Pot off as usual.

**Tarnish on Silver.**—*Kindly inform the writer of the best method for removing tarnish (so dark as to be nearly black) from silver and silver-plated articles. Have tried ammonia at several stages of strength, and used whiting without success.*—Ammonia would be no use; but if you use whiting with methylated spirit, we know by experience that it is perfectly effectual. Of course bad tarnish may need a great deal of rubbing. Any of the non-mercurial plate-powders, or ordinary jewellers' rouge, may also be used.

**Smell of Onions.**—*I would like to know how to get the taste of onions out of silver forks after they have been used for stews, or salads containing onions. Have tried many things recommended, but all in vain.*—Stick them into the earth and leave them twenty-four hours: then wash and clean thoroughly. This plan is well tested and thoroughly effectual.

**Pigeons.**—*Would you mind telling me if dyeing pigeons under the wings would hurt them or interfere with their flight, also if Homing Pigeons should be fed at stated hours, or have their food always by them?*—Dyeing will not injure them in any way. Homing Pigeons are best fed at stated times, fancy pigeons do better with food by them.

**Cockroaches.**—*Could you advise me as to the best method of putting away black beetles?*—Leave about a few slices of cucumber, or cucumber rind; and every night put some powdered borax down their holes. This last has been found the most effectual means of any, and if persevered in daily for three weeks, generally answers.



**Jackdaw's Plumage.**—*I have a poor jackdaw, picked up, badly used by someone, the head feathers plucked out, the wings cut; it seems a weakling. I have had it just one year and there seems no sign of new wings or tail. The head is nicely clothed. Do you think the wings will grow; they tell me the old wing-feathers must be pulled out ere the new ones grow. Is that so? He has no signs of a new tail either.*—If he had been ill-used and weak, the abnormal season might prevent his moulting properly. Plucking would be no use, but a little pinch of powdered sulphur two or three times a week and a little scraped cuttle-fish bone may probably help him to moult soundly this autumn. He will have the best chance if you can let him be loose, and see that he has some live insect food.

**Albo-Carbon Light and Paint.**—*Will carbon, burnt with gas to get a purer light, have an injurious effect upon painted walls, in such a way that it prevents any future coats of paint from properly drying, and causing it to go discoloured? If so, how can it be remedied?*—The carbon has no such effect; on the contrary, so much less gas is burnt that things are less affected. It is possible that if there were bad leakage in the vessels so as to let out vapour unburnt, it might have some effect, but the intolerable smell would soon betray this. We have known cases of paint not drying where carbon was never used; but the cause is in the paint itself. Not necessarily the painter's fault, but in these cheap days, when "things are not what they seem," what he buys may be faulty.

THE SALUTE.

# THE STORY OF FRANCIS CLUDDE.

BY STANLEY J. WEYMAN, AUTHOR OF "THE HOUSE OF THE WOLF," ETC.

"THE QUEEN IS DEAD!"

### CHAPTER XXI.—MY FATHER.

TELL him all? I stood thinking, my hand on the key. The voices of the rearmost of the conspirators sounded more and more faintly as they passed up the shaft, until their last accents died away in the room above, and silence followed; a silence in strange contrast with the bright glare of the torches which burned round me and lit up the empty cellar as for a feast. I was wondering what he would say when I told him all—when I said "I am your son! I, whom Providence has used to thwart your plans, whose life you sought, whom, without a thought of pity, you left to perish!—I am your son!"

Infinitely I dreaded the moment when I should tell him this, and hear his answer; and I lingered with my hand on the key until an abrupt knocking on the other side of the door brought the blood to my face. Before I could turn the key the hasty summons was repeated, and grew to a frantic, hurried drumming on the boards—a sound which plainly told of terror suddenly conceived, and in an instant full-grown. A hoarse cry followed, coming

dully to my ears through the thickness of the door, and the next moment the stout planks shook as a heavy weight fell against them.

I turned the key, and the door was flung open from within. My father stumbled out.

The strong light for an instant blinded him, and he blinked as an owl does brought to the sunshine. Even in him the long hours passed in solitude and the blackness of despair had worked changes. His hair was greyer: in patches it was almost white, and then again dark. He had gnawed his lower lip, and there were bloodstains on it. His moustache, too, was ragged and torn, as if he had gnawed that also. His eyes were bloodshot, his lean face was white and haggard and fierce.

"Ha!" he cried, trembling, as he peered round, "I thought they had left me to starve! There were rats in there! I thought——"

He stopped. He saw me standing holding the edge of the door. He saw that otherwise the room was empty, the farther door leading to the shaft open. An open door! To him doubtless it seemed of all sights the most wonderful, the most heavenly! His knees began to shake under him.

"What is it?" he muttered. "What were they shouting about? I heard them shouting."

"The queen is dying," I answered simply, "or dead, and you can do us no more harm. You are free."

"Free?" He repeated the word, leaning against the wall, his eyes wild and glaring, his lips parted.

"Yes, free," I answered, in a lower voice—"free to go out into the air of heaven a living man!" I paused. For a moment I could not continue. Then I added solemnly, "Sir, Providence has saved you from death, and me from a crime."

He leaned still against the wall, dazed, thunderstruck, almost incredulous, and looked from me to the open door and back again as if without this constant testimony of his eyes he could not believe in his escape.

"It was not Anne?" he murmured. "She did not——"

"She tried to save your life," I answered; "but they would not listen to her."

"Did she come here?"

As he spoke, he straightened himself with an effort and stood up. He was growing more like himself.

"No," I answered. "She sent for me and told me her terms. But Kingston and the others would not listen to them. You would have been dead now, though I did all I could to save you, if Penruddocke had not brought this news of the queen."

"She is dead?"

"She is dying. The Spanish ambassador," I added, to clinch the matter, for I saw he doubted, "rode through here this afternoon to pay his court to the Princess Elizabeth at Hatfield."

He looked down at the ground, thinking deeply. Most men would have been unable to think at all, unable to concentrate their thoughts on anything save their escape from death. But a life of daily risk and hazard had so hardened this man that I was certain, as I watched him, that he was not praying nor giving thanks. He was already pondering how he might make the most out of the change; how he might to the best advantage sell his knowledge of the government whose hours were numbered to the government which soon would be. The life of intrigue had become second nature to him.

He looked up and our eyes met. We gazed at one another.

"Why are you here?" he said curiously. "Why did they leave you? Why were you the one to stop to set me free, Master Carey?"

"My name is not Carey," I answered.

"What is it then?" he asked carelessly.

"Cludde," I answered softly.

"Cludde!" He called it out. Even his self-mastery could not cope with this surprise. "Cludde," he said again—said it twice in a lower voice.

"Yes, Cludde," I answered, meeting and yet shrinking from his questioning eyes, "my name is Cludde. So is yours. I tried to save your life, because I learned from Mistress Anne——"

I paused. I shrank from telling him that which, as it seemed to me, would strike him to the ground in shame and horror. But he had no fear.

"What?" he cried. "What did you learn?"

"That you are my father," I answered slowly. "I am Francis Cludde, the son whom you deserted many years ago, and to whom Sir Anthony gave a home at Coton."

I expected him to do anything except what he did. He stared at me with astonished eyes for a minute, and then a low whistle issued from his lips.

"My son, are you! My son!" he said coolly. "And how long have you known this, young sir?"

"Since yesterday," I murmured. The words he had used on that morning at Santon, when he had bidden me die and rot, were fresh in my memory—in my memory, not in his. I recalled his treachery to the Duchess, his pursuit of us, his departure with Anne, the words in which he had cursed me. He remembered apparently none of these things, but simply gazed at me with a thoughtful smile.

"I wish I had known it before," he said at last. "Things might have been different. A pretty dutiful son you have been!"

The sneer did me good. It recalled to my mind what Master Bertie had said.

"There can be no question of duty between us," I answered firmly. "What duty I owe to any one of my family, I owe to my uncle."

"Then why have you told me this?"

"Because I thought it right you should know it," I answered, "were it only that, knowing it, we may go different ways. We have nearly done one another a mischief more than once," I added gravely.

He laughed. He was not one whit abashed by the discovery, nor awed, nor cast down. There was even in his cynical face a gleam of kindliness and pride as he scanned me. We were almost of a height—I the taller by an inch or two; and in our features I believe there was a likeness, though not such as to invite remark.

"You have grown to be a chip of the old block," he said coolly. "I would as soon have you for a son as another. I think on the whole I am pleased. You talked of Providence just now"—this with a laugh of serene amusement—"and perhaps you were right. Perhaps there is such a thing. For I

am growing old, and lo! it gives me a son to take care of me."

I shook my head. I could never be that kind of son to him.

"Wait a bit," he said, frowning slightly. "You think your side is up and mine is down, and I can do you no good now, but only harm. You are ashamed of me. Well, wait," he continued, nodding confidently. "Do not be too sure that I cannot help you. I have been wrecked a dozen times, but I never yet failed to find a boat that would take me to shore."

Yes, he was so arrogant in the pride of his many deceits that an hour after Heaven had stretched out its hand to save him, he denied its power and took the glory to himself. I did not know what to say to him, how to undeceive him, how to tell him that it was not the failure of his treachery which shamed me, but the treachery itself. I could only remain silent.

And so he mistook me; and, after pondering a moment with his chin in his hand, he continued:

"I have a plan, my lad. The Queen dies. Well—I am no bigot—long live the Queen and the Protestant religion! The down will be up and the up down, and the Protestants will be everything. It will go hard then with those who cling to the old faith."

He looked at me with a crafty smile, his head on one side.

"I do not understand," I said coldly.

"Then listen. Sir Anthony will hold by his religion. He used to be a choleric gentleman, and as obstinate as a mule. He will need but to be pricked up a little, and he will get into trouble with the authorities as sure as eggs are eggs. I will answer for it. And then——"

"Well?" I said grimly. How was I to observe even a show of respect for him when I was quivering with fierce wrath and abhorrence? "Do you think that that will benefit *you*?" I cried. "Do you think that you are so high in favour with Cecil and the Protestants that they will set *you* in Sir Anthony's place? You!"

He looked at me still more craftily, not put out by my indignation, but rather amused by it.

"No, lad, not me," he replied, with tolerant good-nature. "I am somewhat blown upon of late. But Providence has not given me back my son for nothing. I am not alone in the world now. I must remember my family. I must think a little of others as well as of myself."

"What do you mean?" I said, recoiling.

He scanned me a moment with his eyes half-shut, his head on one side. Then he laughed, a cynical, jarring laugh.

"Good boy!" he said. "Excellent boy! He knows no more than he is told. His hands are clean, and he has friends upon the winning side who will not see him lose a chance, should a chance turn up. Be satisfied. Keep your hands clean if you like, boy. We understand one another."

He laughed again and turned away; and, much as I dreaded and disliked him, there was something in the indomitable nature of the man which wrung from me a meed of admiration. Could the best of men have recovered more quickly from despair? Could the best of men, their plans failing, have begun to spin fresh webs with equal patience? Could the most courageous and faithful of those who have tried to work the world's bettering, have faced the downfall of their hopes with stouter hearts, with more genuine resignation? Bad as he was, he had courage and endurance beyond the common.

He came back to me when he had gone a few paces.

"Do you know where my sword is?" he asked in a matter-of-fact tone, as one might ask a question of an old comrade.

I found it cast aside behind the door. He took it from me, grumbling over a nick in the edge, which he had caused by some desperate blow when he was seized. He fastened it on with an oath. I could not look at the sword without remembering how nearly he had taken my life with it. The recollection did not trouble him in the slightest.

"Now farewell!" he said carelessly, "I am going to turn over a new leaf, and begin returning good for evil. Do you go to your friends and do your work, and I will go to my friends and do mine."

Then with a nod he walked briskly away, and I heard him climb the ladder and depart.

What was he going to do? I was so deeply amazed by the interview that I did not understand. I had thought him a wicked man, but I had not conceived the hardness of his nature. As I stood alone looking round the vault, I could hardly believe that I had met and spoken to my father, and told him I was his son—and this was all! I could hardly believe that he had gone away with this knowledge, unmoved and unrepentant: alike unwarned by the Providence which had used me to thwart his schemes, and untouched by the beneficence which had thrice held him back from the crime of killing me—ay, proof even against the longsuffering which had plucked him from the abyss and given him one more chance of repentance.

I found Master Bertie in the stables waiting for me with some impatience. Of which, upon the whole, I was glad. For I had no wish to be closely questioned, and the account I gave him of the interview might at another time have seemed disjointed and incoherent. He listened to it, however, without remark: and his next words made it clear that he had other matters in his mind.

"I do not know what to do about fetching the Duchess over," he said. "This news seems to be true, and she ought to be here."

"Certainly," I agreed.

"The country in general is well affected to the Princess Elizabeth," he continued. "Yet the interest of the Bishops, of the Spanish faction, and of some of the council, will lie in giving trouble. To avoid this, we should show our strength. Therefore I want the Duchess to come over with all speed. Will you fetch her?" he added sharply, turning to me.

"Will I?" I cried in surprise.

"Yes, you. I cannot well go myself at this crisis. Will you go instead?"

"Of course I will," I answered.

And the prospect cheered me wonderfully. It gave me something to do, and opened my eyes to the great change of which Penruddocke had been the herald, a change which was even then beginning. As we rode down Highgate Hill that day, messengers were speeding north and south and east and west, to Norwich and Bristol and Canterbury and Coventry and York, with the tidings that the sombre rule under which England had groaned for five years and more was coming to an end. If in a dozen towns of England they roped their bells afresh; if in every county, as Penruddocke had prophesied, they got their tar-barrels ready; if all, save a few old-fashioned folk and a few gloomy bigots and hysterical women, awoke as from an evil dream; if even sensible men saw in the coming of the young queen a panacea for all their ills—a quenching of Smithfield fires, a Calais recovered,

"SUCH A FAIR YOUNG QUEEN, MEN REPORT."

a cure for the worthless coinage which hampered trade, and a riddance of worthless foreigners who plundered it—with better roads, purer justice, a fuller Exchequer, more favourable seasons—if England read all this in that news of Penruddocke's, was it not something to us also?

It was indeed. We were saved at the last moment from the dangerous enterprise on which we had rashly embarked. We had now such prospects before us as only the success of that scheme could have ordinarily opened. Ease and honours instead of the gallows, and to lie warm instead of creaking in the wind! Thinking of this, I fell into a better frame of mind as I jogged along towards London. For what, after all, was my father to me, that his existence should make me unhappy, or rob mine of all pleasure? I had made a place for myself in the world. I had earned friends for myself. He might take away my pride in the one, but he could never rob me of the love of the others—of those who had eaten and drunk and fought and suffered beside me, and for whom I too had fought and suffered!

. . . . . .

"A strange time for the swallows to come back," said my lady, turning to smile at me, as I rode on her off-side.

It would have been strange, indeed, if there had been swallows in the air. For it was the end of December. The roads were frost-bound and the trees leafless. The east wind, gathering force in its rush across the Essex marshes, whirled before it the last trophies of Hainault Forest, and seemed, as it whistled by our ears and shaved our faces, to grudge us the shelter to which we were hastening. The long train behind us—for the good times of which we had talked so often had come—were full of the huge fire we expected to find at the inn at Barking—our last stage on the road to London. And if the Duchess and I bore the cold more patiently, it was probably because we had more food for thought—and perhaps thicker raiment.

"Do not shake your head," she continued, glancing at me with mischief in her eyes, "and flatter yourself you will not go back, but will go on making yourself and some one else unhappy. You will do nothing of the kind, Francis. Before the spring comes you and I will ride over the drawbridge at Coton End, or I am a Dutchwoman!"

"I cannot see that things are changed," I said.

"Not changed?" she replied. "When you left, you were nobody. Now you are somebody, if it be only in having a sister with a dozen serving-men in her train. Leave it to me. And now thank Heaven we are here! I am so stiff and cold, you must lift me down. We have not to ride far after dinner, I hope."

"Only seven miles," I answered, as the host, who had been warned by an outrider to expect us, came running out with a tail at his heels.

"What news from London, Master Landlord?" I said to him as he led us through the kitchen, where there was indeed a great fire, but no chimney, and so to a smaller room possessing both these luxuries. "Is all quiet?"

"Certainly, your worship," he replied, bowing and rubbing his hands. "There never was such an accession, nor more ale drunk, nor powder burned—and I have seen three—and there was pretty shouting at old King Harry's, but not like this. Such a fair young queen, men report, with a look of the stout king about her, and as prudent and discreet as if she had changed heads with Sir William Cecil. God bless her, say I, and send her a wise husband!"

"And a loving one," quoth my lady, prettily. "Amen."

"I am glad all has gone off well," I continued,

speaking to the Duchess, as I turned to the blazing hearth. "If there had been blows, I would fain have been here to strike one."

"Nay, sir, not a finger has wagged against her," the landlord answered, kicking the logs together—"to speak of, that is, your worship. I do hear to-day of a little trouble down in Warwickshire. But it is no more than a storm in a wash-tub, I am told."

"In Warwickshire?" I said, arrested, in the act of taking off my cloak, by the familiar name. "In what part, my man?"

"I am not clear about that, sir, not knowing the country," he replied. "But I heard that a gentleman there had fallen foul of her Grace's orders about church matters, and beaten the officers sent to see them carried out; and that when the sheriff remonstrated with him, he beat him too. But I warrant they will soon bring him to his senses."

"Did you hear his name?" I asked. There was a natural misgiving in my mind. Warwickshire was large; and yet something in the tale smacked of Sir Anthony.

"I did hear it," the host answered, scratching his head, "but I cannot call it to mind. I think I should know it if I heard it."

"Was it Sir Anthony Cludde?"

"It was that very same name!" he exclaimed, clapping his hands in wonder. "To be sure! Your worship has it pat!"

I slipped back into my cloak again, and snatched up my hat and whip. But the Duchess was as quick. She stepped between me and the door.

"Sit down, Francis!" she said imperiously. "What would you be at?"

"What would I be at?" I cried with emotion. "I would be with my uncle. I shall take horse at once and ride Warwickshire way with all speed. It is possible that I may be in time to avert the consequences. At least I can see that my cousin comes to no harm."

"Good lad," she said placidly. "You shall start to-morrow."

"To-morrow!" I cried impatiently. "But time is everything, madam."

"You shall start to-morrow," she repeated. "Time is not everything, firebrand! If you start to-day what can you do? Nothing! No more than if the thing had happened three years ago, before you met me. But to-morrow—when you have seen the Secretary of State, as I promise you you shall, this evening if he be in London—to-morrow you shall go in a different character, and with credentials."

"You will do this for me?" I exclaimed, leaping up and taking her hand, for I saw in a moment the wisdom of the course she proposed. "You will get me——"

"I will get you something to the purpose," my lady answered roundly. "Something that shall save your uncle if there be any power in England can save him. You shall have it, Frank," she added, her colour rising, and her eyes filling, as I kissed her hand, "though I have to take Master Secretary by the beard!"

### CHAPTER XXII.—SIR ANTHONY'S PURPOSE.

LATE, as I have heard, on the afternoon of November the twentieth, 1558, a man riding between Oxford and Worcester, with the news of the queen's death, caught sight of the gateway tower at Coton End, which is plainly visible from the road. Though he had already drunk that day as much ale as would have sufficed him for a week when the queen was well, yet much wants more. He calculated he had time to stop and taste the Squire's brewing, which he judged, from the look of the tower, might be worth his news; and he rode through the gate and railed at his nag for stumbling.

Half way across the Chase he met Sir Anthony. The old gentleman was walking out, with his staff in his hand and his dogs behind him, to take the air before supper. The man, while he was still a hundred paces off, began to wave his hat and shout something, which ale and excitement rendered unintelligible.

"What is the matter?" said Sir Anthony to himself. And he stood still.

"The queen is dead!" shouted the messenger, swaying in his saddle.

The knight stared.

"Ay, sure!" he ejaculated after a while. And he took off his hat. "Is it true, man?"

"As true as that I left London yesterday afternoon and have never drawn rein since!" swore the knave, who had been three days on the road, and had drunk at every hostel and at half the manor-houses between London and Oxford.

"God rest her soul!" said Sir Anthony piously, still in somewhat of a maze. "And do you come in! Come in, man, and take something."

But the messenger had got his formula by heart, and was not to be defrauded of any part of it.

"God save the queen!" he shouted. And out of respect for the knight, he slipped from his saddle and promptly fell on his back in the road.

"Ay, to be sure, God save the queen!" echoed Sir Anthony, taking off his hat again. "You are right, man!" Then he hurried on, not noticing the messenger's mishap. The tidings he had heard seemed of such importance, and he was so anxious to tell them to his household—for the greatest men have weaknesses, and news such as this comes seldom in a lifetime—that he strode on to the house, and over the drawbridge into the courtyard, without once looking behind him.

He loved order and decent observance. But there are times when a cat, to get to the cream-pan, will wet its feet. He stood now in the middle of the courtyard, and raising his voice, shouted for his daughter. "Ho, Petronilla! do you hear, girl! Father! Father Carey! Martin Luther! Baldwin!" and so on, until half the household were collected. "Do you hear, all of you? The queen is dead! God rest her soul!"

"Amen!" said Father Carey, as became him, putting in his word amid the wondering silence which followed; while Martin Luther and Baldwin, who were washing themselves at the pump, stood with their heads dripping and their mouths agape.

"Amen!" echoed the knight. "And long live the queen! Long live Queen Elizabeth!" he

continued, having now got his formula by heart. And he swung his hat.

There was a cheer, a fairly loud cheer. But there was one who did not join in it, and that was Petronilla. She, listening at her lattice upstairs, began at once to think, as was her habit when any matter great or small fell out, whether this would affect the fortunes of a certain person far away. It might, it might not; she did not know. But the doubt so far entertained her that she came down to supper with a heightened colour, not thinking in the least, poor girl, that the event might have dire consequences for others almost as dear to her, and nearer home.

Every year since his sudden departure a letter from Francis Cludde had come to Coton: a meagre letter, which had passed through many hands, and reached Sir Anthony now through one channel now through another. The knight grumbled and swore over these letters, which never contained an address to which an answer could be forwarded, nor said much, save that the writer was well and sent his love and duty, and looked to return, all being well. But, meagre as they were, and loud as he swore over them, he put them religiously away in an oak-chest in his parlour; and another always put away for her share something else, which was invariably enclosed—a tiny swallow's feather. The knight never said anything about the feather; neither asked the meaning of its presence, nor commented upon its absence when Petronilla gave him back the letter. But for days after each of these arrivals he would look much at his daughter, would follow her about with his eyes, be more regular in bidding her attend him in his walk, and more particular in seeing that she had the tit-bits of the joint.

For Petronilla, it cannot be said, though I think in after times she would have liked to make some one believe it, that she wasted away. But she did take a more serious and thoughtful air in these days, which she never, God bless her, lost afterwards. There came from Wootton Wawen and from Henley in Arden and from Cookhill gentlemen of excellent estate, to woo her. But they all went away disconsolate after drinking very deeply of Sir Anthony's ale and strong waters. And some wondered that the good knight did not roundly take the jade to task and see her settled.

But he did not: so possibly even in these days he had other views. I have been told that, going up once to her little chamber to seek her, he found a very singular ornament suspended inside her lattice. It was no other than a common clay house-martin's nest. But it was so deftly hung in a netted bag, and so daintily swathed in moss always green, and the Christmas roses and snowdrops and violets and daffodils which decked it in turn were always so pure and fresh and bright—as the knight learned by more than one stealthy visit afterwards—that, coming down the steep steps, he could not see clearly, and stumbled against a cook-boy, and beat him soundly for getting in his way.

To return, however. The news of the queen's death had scarcely been well digested at Coton, nor the mass for her soul which Father Carey celebrated with much devotion been properly criticised, before another surprise fell upon the household. Two strangers arrived, riding late one evening, and rang the great bell while all were at supper. Baldwin and the porter went to see what it was, and brought back a message which drew the knight from his chair, as a terrier draws a rat.

"You are drunk!" he shouted, purple in the face, and fumbling for the stick which usually leaned against his seat ready for emergencies. "How dare you bring cock-and-bull stories to me?"

"It is true enough!" muttered Baldwin sullenly: a stout dour man, not much afraid of his master, but loving him exceedingly. "I knew him again myself."

Sir Anthony strode firmly out of the room, and in the courtyard near the great gate found a man and a woman standing in the dusk. He walked up to the former and looked him in the face. "What do you here?" he said, in a strange, hard voice.

"I want shelter for a night for myself and my wife; a meal and some words with you—no more," was the answer. "Give me this," the stranger continued, "which every idle passer-by may claim at Coton End, and you shall see no more of me, Anthony."

For a moment the knight seemed to hesitate. Then he answered, pointing sternly with his hand, "There is the hall and supper. Go and eat and drink. Or, stay!" he resumed. And he turned and gave some order to Baldwin, who went swiftly to the hall, and in a moment came again. "Now go! What you want the servants will prepare for you."

"I want speech of you," said the new-comer.

Sir Anthony seemed about to refuse, but thought better of it. "You can come to my room when you have supped," he said, in the same ungracious tone, speaking with his eyes averted.

"And you—do you not take supper?"

"I have finished," said the knight, albeit he had eaten little. And he turned on his heel.

Very few of those who sat round the table and watched with astonishment the tall stranger's entrance knew him again. It was thirteen years since Ferdinand Cludde had last sat there; sitting there of right. And the thirteen years had worked much change in him. When he found that Petronilla, obeying her father's message, had disappeared, he said haughtily that his wife would sup in her own room; and with a flashing eye and curling lip, bade Baldwin see to it. Then, seating himself in a place next Sir Anthony's, he looked down the board at which all sat silent. His sarcastic eye, his high bearing, his manner—the manner of one who had gone long with his life in his hand—awed these simple folk. Then, too, he was a Cludde. Father Carey was absent that evening. Martin Luther had one of those turns, half-sick, half-sullen, which alternated with his moods of merriment; and kept his straw pallet in some corner or other. There was no one to come between the servants and this dark-visaged stranger, who was yet no stranger.

He had his way and his talk with Sir Anthony, the latter lasting far into the night and producing

odd results. In the first place, the unbidden guest and his wife stayed on over next day, and over many days to come, and seemed gradually to grow more and more at home. The knight began to take long walks and rides with his brother, and from each walk and ride came back with a more gloomy face and a curter manner. Petronilla, his companion of old, found herself set aside for her uncle, and cast, for society, on Ferdinand's wife, the strange young woman with the brilliant eyes, whose odd changes from grave to gay rivalled Martin Luther's; and who now scared the girl by wild laughter and wilder gibes, and now moved her to pity by fits of weeping, or dark moods of gloom. That Uncle Ferdinand's wife stood in dread of her husband, Petronilla soon learned, and even began to share this dread, to shrink from his presence, and to shut herself up more and more closely in her own chamber.

There was another, too, who grew to be troubled about this time, and that was Father Carey. The good-natured, easy priest received with joy and thankfulness the news that Ferdinand Cludde had seen his errors and re-entered the fold. But when he had had two or three interviews with the convert, his brow, too, grew clouded, and his mind troubled. He learned to see that the accession of the young Protestant queen must bear fruit for which he had a poor appetite. He began to spend many hours in the church—the church which he had known all his life—and wrestled much with himself—if his face were any index to his soul. Good, kindly man, he was not of the stuff of which martyrs are made; and to be forced, pushed on, and goaded into becoming a martyr against one's will—well, the father's position was a hard one. As was that in those days of many a good and learned clergyman bred in one church, and bidden suddenly, on pain of losing his livelihood, if not his life, to migrate to another.

The visitors had been in the house a month—and in that month an observant eye might have noted much change, though all things in seeming went on as before—when the queen's orders enjoining all priests to read the service, or a great part of it, in English, came down, being forwarded by the sheriff to Father Carey. The missive arrived on a Friday, and had been indeed long expected.

"What shall you do?" Ferdinand asked Sir Anthony.

"As before!" the tall old man replied, gripping his staff more firmly. It was no new subject between them. A hundred times they had discussed it already, even as they were now discussing it on the terrace by the fish-pool, with the church which adjoins the house full in view across the garden. "I will have no mushroom faith at Coton End," the knight continued warmly. "It sprang up under King Henry, and how long did it last? A year or two. It came in again under King Edward, and how long did it last? A year or two. So it will be again. It will not last, Ferdinand."

"I am of that mind," the younger man answered, nodding his head gravely.

"Of course you are!" Sir Anthony rejoined, as he rested one hand on the sundial. "For ten generations our forefathers have worshipped in that church after the old fashion—and shall it be changed in my day? Heaven forbid! The old fashion did for my fathers; it shall do for me. Why, I would as soon expect that the river yonder should flow backwards as that the church which has stood for centuries, and more years to the back of them than I can count, should be swept away by these Hot Gospellers! I will have none of them! I will have no new-fangled ways at Coton End!"

"Well, I think you are right!" the younger brother said. By what means he had brought the knight to this mind without committing himself more fully, I cannot tell. Yet so it was. Ferdinand showed himself always the cautious doubter. Father Carey even must have done him that justice. But—and this was strange—the more doubtful he showed himself, the more stubborn grew his brother. There are men so shrewd as to pass off stones for bread: and men so simple-minded as to take something less than the word for the deed.

"Why should it come in our time?" cried Sir Anthony, fractiously.

"Why indeed?" quoth the subtle one.

"I say, why should it come now? I have heard and read of the sect called Lollards, who gave trouble a while ago. But they passed, and the church stood. So will these Gospellers pass, and the church will stand."

"That is our experience certainly," said Ferdinand.

"I hate change!" the old man continued, his eyes on the old church, the old timbered house—for only the gateway tower at Coton is of stone—the old yew-trees in the churchyard. "I do not believe in it, and, what is more, I will not have it. As my fathers have worshipped, so will I, though it cost me every rood of land! A fig for the Order in Council!"

"If you really will not change with the younger generations——"

"I will not!" replied the old knight, sharply. "There is an end of it!"

To-day the Reformed Church in England has seen many an anniversary, and grown stronger with each year; and we can afford to laugh at Sir Anthony's arguments. We know better than he did, for the proof of the pudding is in the eating. But in him and his fellows, who had only the knowledge of their own day, such arguments were natural enough. All time, all experience, all history and custom and habit as known to them, were on their side. Only it was once again to be the battle of David and the Giant of Gath.

Sir Anthony had said, "There is an end of it!" But his companion, as he presently strolled up to the house with a smile on his saturnine face, well knew that this was only the beginning of it. This was Friday.

On the Sunday, a rumour of the order having gone abroad, a larger congregation than usual streamed across the Chase to church, prepared to hear some new thing. They were disappointed. Sir Anthony stalked in as of old, through the double ranks of people waiting at the door

to receive him; and after him Ferdinand and his wife, and Petronilla and Baldwin, and every servant from the house save a cook or two and the porter. The church was full. Seldom had such a congregation been seen in it. But all passed as of old. Father Carey's hands shook, indeed, and his voice quavered; but he went through the ceremony of the mass, and all was done in Latin. A little change would have been pleasant, some thought. But no one in this country place on the borders of the forest held very strong views. No bishop had come heretic-hunting to Coton End. No abbey existed to excite dislike by its extravagance or by its license or by the swarm of ragged idlers it supported. Father Carey was the most harmless and kindest of men. The villagers did not care one way or the other. To them Sir Anthony was king. And if any one felt tempted to interfere, the old knight's face as he gazed steadfastly at the brass effigy of a Cludde, who had fallen in Spain fighting against the Moors, warned the meddler to be silent.

And so on that Sunday all went well. But some one must have told tales, for early in the week there came a strong letter of remonstrance from the sheriff, who was an old friend of Sir Anthony, and of his own free will, I fancy, would have winked. But he was committed to the Protestants, and bound to stand or fall with them. The choleric knight sent back an answer by the same messenger. The sheriff replied, the knight rejoined—having his brother always at his elbow. The upshot of the correspondence was an announcement on the part of the sheriff that he should send his officers to the next service, to see that the queen's order was obeyed; and a reply on the part of Sir Anthony that he should as certainly put the men in the duck-pond. Some inkling of this state of things got abroad, and spread as a September fire flies through a wood; so that there was like to be such a congregation at the next service to witness the trial of strength, as would throw the last Sunday's gathering altogether into the shade.

It was clear at last that Sir Anthony himself did not think that here was the end of it. For on that Saturday afternoon he took a remarkable walk. He called Petronilla after dinner, and bade her get her hood and come with him. And the girl, who had seen so little of her father in the last month, and who, what with rumours and fears and surmises, was eating her heart out, obeyed him with joy. It was a fine frosty day near the close of December. Sir Anthony led the way over the plank-bridge which crossed the moat in the rear of the house, and tramped steadily through the home farm towards a hill called the Woodman's View, which marked the border of the forest. He did not talk, but neither was he sunk in reverie. As he entered each field he stood and scanned it, at times merely nodding, at times smiling, or again muttering a few words such as, "The three-acre piece! My father enclosed it!" or, "That is where Ferdinand killed the old mare!" or, "The best land for wheat on this side of the house!" The hill climbed, he stood a long time gazing over the landscape, eyeing first the fields and meadows which stretched away from his feet towards the house; the latter, as seen from this point, losing all its stateliness in the mass of stacks and ricks and barns and granaries which surrounded it. Then his eyes travelled farther in the same line to the broad expanse of woodland—Coton Chase—through which the road passed along a ridge as straight as an arrow. To the right were more fields, and here and there amid them a homestead with its smaller ring of stacks and barns. When he turned to the left, his eyes, passing over the shoulders of Barnt Hill and Mill Head Copse and Beacon Hill, all bulwarks of the forest, followed the streak of river as it wound away towards Stratford through luscious flood meadows, here growing wide, and there narrow, as the woodland advanced or retreated.

"It is all mine," he said, as much to himself as to the girl. "It is all Cludde land as far as you can see."

There were tears in her eyes, and she had to turn away to conceal them. Why, she hardly knew. For he said nothing more, and he walked down the hill dry-eyed. But all the way home he still looked sharply about, noting this or that, as if he were bidding farewell to the old familiar objects, the spinneys and copses—ay, and the very gates and gaps and the hollow trees where the owls built. It was the saddest and most pathetic walk the girl had ever taken. Yet there was nothing said.

### CHAPTER XXIII.—THE LAST MASS.

THE north wall of the church at Coton End is only four paces from the house, the church standing within the moat. Isolated as the sacred building, therefore, is from the outer world by the wide-spreading Chase, and close-massed with the homestead, Sir Anthony had some excuse for considering it as much a part of his demesne as the mill or the smithy. In words he would have been willing to admit a distinction; but in thought I fancy he lumped it with the rest of his possessions.

It was with a lowering eye that on this Sunday morning he watched from his room over the gateway the unusual stream of people making for the church. Perchance he had in his mind other Sundays—Sundays when he had walked out at this hour, light of heart and kind of eye, with his staff in his fist and his glove dangling, and his dog at his heels; and, free from care, had taken pleasure in each bonnet doffed and each old wife's "God bless ye, Sir Anthony!" Well, those days were gone. Now the rain dripped from the eaves—for a thaw had come in the night—and the bells that could on occasion ring so cheerily, sounded sad and forlorn. His daughter, when she came, according to custom, bringing his great service-book, could scarcely look him in the face. I know not whether even then his resolution to dare all might not, at sound of a word from her, or at sight of her face, have melted like yesterday's ice. But before the word could be spoken, or the eyes meet, another step rang on the stone staircase and brother Ferdinand entered.

"They are here!" he said in a low voice. "Six

of them, Anthony, and sturdy fellows, as all Clop ton's men are. If you do not think your people will stand by you——"

The knight fired at the suggestion. "What!" he burst out, turning from the window, "if Cludde men cannot meet Clopton men the times are indeed gone mad! Make way and let me come! Though the mass be never said again in Coton church, it shall be said to-day!" And he swore a great oath.

He strode down the stairs and under the gateway, where were arranged, according to the custom of the house on wet days, all the servants, with Baldwin and Martin Luther at their head. The knight stalked through them with a gloomy brow. His brother followed him, a faint smile flickering about the corners of his mouth. Then came Ferdinand's wife and Petronilla, the latter with her hood drawn close about her face, Anne with her chin in the air and her eyes aglow. "It is not a bit of a bustle will scare her!" Baldwin muttered, as he fell in behind her, and eyed her back with no great favour.

"No—so long as it does not touch her," Martin replied in a cynical whisper. "She is well-mated! Well-mated and ill-fated! Ha! ha!"

"Silence, fool!" growled his companion angrily. "Is this a time for antics?"

"Ay, it is!" Martin retorted swiftly, though with the same caution. "For when wise men turn fools, fools are put to it to act up to their profession! You see, brother?" And he deliberately cut a caper. His eyes were glittering, and the nerves on one side of his face twitched oddly. Baldwin looked at him, and muttered that Martin was going to have one of his mad fits. What had grown on the fool of late?

The knight reached the church porch and passed through the crowd which awaited him there. Save for its unusual size and some strange faces to be seen on its skirts, there was no indication of trouble. He walked, tapping his stick on the pavement a little more loudly than usual, to his place in the front pew. The household, the villagers, the strangers, pressed in behind him until every seat was filled. Even the table monument of Sir Piers Cludde, which stood lengthwise in the aisle, was seized upon, and if the two similar monuments which stood to right and left below the chancel steps had not been under the knight's eyes, they too would have been invaded. Yet all was done decently and in order, with a clattering of rustic boots indeed, but no scrambling or ill words. The Clopton men were there. Baldwin had marked them well, and so had a dozen stout fellows, sons of Sir Anthony's tenants. But they behaved discreetly; and amid such a silence as Father Carey never remembered to have faced, he began the Roman service.

The December light fell faintly through the east window on the Father at his ministrations, on his small acolytes, on the four Cludde brasses before the altar. It fell everywhere—on grey dusty walls buttressed by grey tombs which left but a narrow space in the middle of the chancel. The marble crusader to the left matched the canopied bed of Sir Anthony's parents on the right; the Abbess's tomb in the next row faced the plainer monument of Sir Anthony's wife, a vacant place by her side awaiting his own effigy. And there were others. The chancel was so small—nay, the church too—so small and old and grey and solid, and the tombs were so massive that they elbowed one another. The very dust which rose as men stirred was the dust of Cluddes. Sir Anthony's brow relaxed. He listened gravely and sadly.

And then the interruption came. "I protest!" a rough voice in rear of the crowd cried suddenly, ringing harshly and strangely above the Father's accents and the solemn hush. "I protest against this service!"

A thrill of astonishment ran through the crowd, and all rose. Every man in the church turned round, Sir Anthony among the first, and looked in the direction of the voice. Then it was seen that the Clopton men had massed themselves about the door in the south-west corner—a strong position, whence retreat was easy. Father Carey, after a momentary glance, went on as if he had not heard; but his voice shook, and all still waited with their faces turned towards the west end.

"I protest in the name of the queen!" the same man cried sharply, while his fellows raised a murmur so that the priest's voice was drowned.

Sir Anthony stepped into the aisle, his face inflamed with anger. The interruption taking place there, in that place, seemed to him a double profanation.

"Who is that brawler?" he said, his hand trembling on his staff; and all the old dames trembled too. "Let him stand out."

The sheriff's spokesman was so concealed by his fellows that he could not be seen; but he answered civilly enough.

"I am no brawler," he said. "I only require the law to be observed; and that you know, sir. I am here on behalf of the sheriff; and I warn all present that a continuation of this service will expose them to grievous pains and penalties. If you desire it, I will read the royal order to prove that I do not speak without warrant."

"Begone, knave, you and your fellows!" Sir Anthony cried. A loyal man in all else, and the last to deny the queen's right or title, he had no reasonable answer to give, and could only bluster. "Begone, do you hear!" he repeated; and he rapped his staff on the pavement, and then, raising it, pointed to the door.

All Coton thought the men must go; but the men, perhaps because they were Clopton, did not go. And Sir Anthony had not so completely lost his head as to proceed to extremities except in the last resort. Affecting to consider the incident at an end, he stepped back into his pew without waiting to see whether the man obeyed him or no, and resumed his devotions. Father Carey, at a nod from him, went on with the interrupted service.

But again the priest had barely read a dozen lines before the same man made the congregation start by crying loudly, "Stop!"

"Go on!" shouted Sir Anthony in a voice of thunder.

"At your peril!" retorted the intervener.

"Go on!" from Sir Anthony again.

Father Carey stood silent, trembling and looking

from one to the other. Many a priest of his faith would have risen on the storm and in the spirit of Hildebrand hurled his church's curse at the intruder. But the Father was not of these, and he hesitated, fumbling with his surplice with his feeble white hands. He feared as much for his patron as for himself; and it was on the knight that his eyes finally rested. But Sir Anthony's brow was black: he got no comfort there. So the Father took courage and a long breath, opened his mouth and read on, amid a hush of suppressed excitement, and of such anger and stealthy defiance as surely English church had never seen before. As he read, however, he gathered courage, and his voice strength. The solemn words, so ancient, so familiar, fell on the stillness of the church, and awed even the sheriff's men. To the surprise of nearly every one, there was no further interruption: the service ended quietly.

So after all Sir Anthony had his way, and stalked out, stiff and unbending. Nor was there any falling off, but rather an increase in the respect with which his people rose, according to custom, as he passed. Yet under that increase of respect lay a something which cut the old man to the heart. He saw that his dependents pitied him while they honoured him; that they thought him a fool for running his head against a stone wall—as Martin Luther put it—even while they felt that there was something grand in it too.

During the rest of the day he went about his usual employments, but probably with little zest. He had done what he had done without any very clear idea how he was going to proceed. Between his loyalty in all else and his treason in this, it would not have been easy for a Solomon to choose a consistent path. And Sir Anthony was no Solomon. He chose at last to carry himself as if there were no danger—as if the thing which had happened were unimportant. He ordered no change and took no precautions. He shut his ears to the whispering which went on among the servants, and his eyes to the watch which by some secret order of Baldwin was kept upon the Ridgeway.

It was something of a shock to him, therefore, when his daughter came to him after breakfast next morning, looking pale and heavy-eyed, and, breaking through the respect which had hitherto kept her silent, begged him to go away.

"To go away?" he cried. He rose from his oak chair and glared at her. Then his feelings found their easiest vent in anger. "What do you mean, girl?" he blustered, "Go away? Go where?"

But she did not quail. Indeed she had her suggestion ready.

"To the Mere Farm in the Forest, sir," she answered earnestly. "They will not look for you there; and Martin says——"

"Martin? The fool!"

His face grew redder and redder. This was too much. He loved order and discipline: and to be advised in such matters by a woman and a fool! It was intolerable!

"Go to, girl!" he cried, fuming. "I wondered where you had got your tale so pat. So you and the fool have been putting your heads together! Go! Go and spin, and leave these matters to men! Do you think that my brother, after travelling the world over, has not got a head on his shoulders? Do you think if there were danger, he and I would not have foreseen it?"

He waved his hand and turned away, expecting her to go. But Petronilla did not go. She had something else to say, and, though the task was painful, she was resolved to say it.

"Father, one word," she murmured. "About my uncle?"

"Well, well! What about him?"

"I distrust him, sir," she ventured, in a low tone, her colour rising. "The servants do not like him. They fear him and suspect him of I know not what."

"The servants!" Sir Anthony answered in an awful tone.

Indeed it was not the wisest thing she could have said; but the consequences were averted by a sudden alarm and shouting outside. Half a dozen voices, shrill or threatening, seemed to rise at once. The knight strode to the window, but the noise appeared to come, not from the Chase upon which it looked, but from the courtyard or the rear of the house. Sir Anthony caught up his stick, and, followed by the girl, ran down the steps. He pushed aside half a dozen women who had likewise been attracted by the noise, and hastened through the narrow passage which led to the wooden bridge in the rear of the buildings.

Here, in the close on the far side of the moat, a strange scene was passing. A dozen horsemen were grouped in the middle of the field about a couple of prisoners, while round the gate by which they had entered stood as many stout men on foot, headed by Baldwin and armed with pikes and staves. These seemed to be taunting the cavaliers and daring them to come on. On the wooden bridge by which the knight stood were half a dozen of the servants, also armed. Sir Anthony recognised in the leading horseman Sir Philip Clopton, and in the prisoners Father Carey and one of the woodmen; and in a moment he comprehended what had happened.

The sheriff, in the most unneighbourly manner, instead of challenging his front door, had stolen up to the rear of the house, and, without saying with your leave or by your leave, had snapped up the poor priest, who happened to be wandering in that direction. Probably he had intended to force an entrance; but he had laid aside the plan when he saw his own retreat menaced by the watchful Baldwin, who was not to be caught napping. The knight took all this in at a glance, and his gorge rose as much at the Clopton men's trick as at the danger in which Father Carey stood. So he lost his head, and made matters worse. "Who are these villains," he cried in a rage, his face aflame, "who come attacking men's houses in time of peace? Begone, or I will have at ye!"

"Sir Anthony!" Clopton cried, interrupting him, "in heaven's name do not carry the thing farther! Give me way in the queen's name, and I will——"

What he would do was never known, for at that last word, away at the house, behind Sir Anthony, there was a puff of smoke, and down went the

sheriff headlong, horse and man, while the report of an arquebuse rang dully round the buildings. The knight gazed horrified; but the damage was done and could not be undone. Nay, more, the Coton men took the sound for a signal. With a shout, before Sir Anthony could interfere, they made a dash for the group of horsemen. The latter, uncertain and hampered by the fall of their leader, who was not hit, but was stunned beyond giving orders, did the best they could. They let their prisoners go with a curse, and then, raising Sir Philip and forming a rough line, they charged towards the gate by which they had entered.

THE REPORT OF AN ARQUEBUSE RANG ROUND THE BUILDINGS.

The footmen stood the brunt gallantly, and for a moment the sharp ringing of quarter-staves and the shivering of steel told of as pretty a combat as ever took place on level sward in full view of an English home. The spectators could see Baldwin doing wonders. His men backed him up bravely. But in the end the impetus of the horses told, the footmen gave way and fled aside, and the strangers passed them. A little more skirmishing took place at the gateway, Sir Anthony's men being deaf to all his attempts to call them off; and then the Clopton horse got clear, and, shaking their fists and vowing vengeance, rode off towards the forest. They left two of their men on the field, however, one with a broken arm and one with a shattered knee-cap; while the house party, on their side, besides sundry knocks and bruises, could show one deep sword-cut, a broken wrist, and half a dozen nasty wounds.

"My poor little girl!" Sir Anthony whispered to himself, as he gazed with scared eyes at the prostrate men and the dead horse, and compre hended what had happened. "This is a hanging business! In arms against the queen! What am I to do?" And as he went back to the house in a kind of stupor, he muttered again, "My little girl! my poor little girl!"

I fancy that in this terrible crisis he looked to get support and comfort from his brother—that old campaigner, who had seen so many vicissitudes and knew by heart so many shifts. But Ferdinand, though he thought the event unlucky, had little to say and less to suggest; and seemed, indeed, to have become on a sudden flaccid and lukewarm. Sir Anthony felt himself thrown on his own resources. "Who fired the shot?" he asked, looking about the room in a dazed fashion. "It was that which did the mischief," he continued, forgetting his own hasty challenge.

"I think it must have been Martin Luther," Ferdinand answered.

But Martin Luther, when he was accused, denied this stoutly. He had been so far along the Ridgeway, he said, that though he had returned at once on hearing the shot fired, he had arrived too late for the fight. The fool's stomach for a fight was so well known that this seemed probable enough, and though some still suspected him, the origin of the unfortunate signal was never clearly determined, though in after days shrewd guesses were made by some.

For a few hours it seemed as if Sir Anthony had sunk into his former state of indecision. But when Petronilla came again to him soon after noon to beg him to go into hiding, she found his mood had altered. "Go to the Mere Farm?" he said, not angrily now, but firmly and quietly. "No, girl, I cannot. I have been in fault, and I must stay and pay for it. If I left these poor fellows to bear the brunt, I could never hold up my head again. But do you go now and tell Baldwin to come to me."

She went and told the stern, down-looking steward, and he came up.

"Baldwin," said the knight when the door was shut, and the two were alone, "you are to dismiss to their homes all the tenants—who have indeed been called out without my orders. Bid them go and keep the peace, and I hope they will not be molested. For you and Father Carey, you must go into hiding. The Mere Farm will be best."

"And what of you, Sir Anthony?" the steward asked, amazed at this act of folly.

"I shall remain here," the knight replied with dignity.

"You will be taken," said Baldwin, after a pause.

"Very well," said the knight.

The man shrugged his shoulders, and was silent.

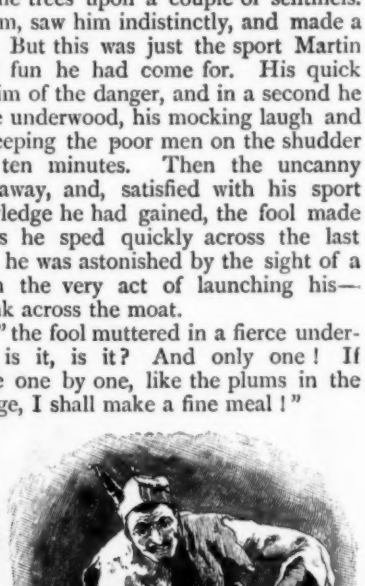
"What do you mean?" asked Sir Anthony, in anger.

"Why, just that I cannot do it," Baldwin answered, glowering at him with a flush on his dark cheek. "That is what I mean. Let the priest go. I cannot go, and will not."

"Then you will be hanged!" quoth the knight warmly. "You have been in arms against the queen, you fool! You will be hanged as sure as you stay here!"

"Then I shall be hanged," replied the steward sullenly. "There never was a Cludde hanged yet without one to keep him company. To hear of it would make my grandsire turn in his grave out there. I dare not do it, Sir Anthony, and that is the fact. But for the rest I will do as you bid me."

And he had his way. But never had evening fallen more strangely and sadly at Coton before. The rain pattered drearily in the courtyard. The drawbridge, by Baldwin's order, had been pulled up, and the planks over the moat in the rear removed.



"They shall not steal upon us again!" he muttered. "And if we must surrender, they shall see we do it willingly."

The tenants had gone to their homes and their wives. Only the servants remained. They clustered, sullen and sorrowful, about the hearth in the great hall, starting if a dog howled without or a coal flew from the fire within. Sir Anthony remained brooding in his own room, Petronilla sitting beside him silent and fearful, while Ferdinand and his wife moved restlessly about, listening to the wind. But the evening and the night wore peacefully away, and so, to the surprise of everybody, did the next day and the next. Could the sheriff be going to overlook the matter? Alas! on the third day the doubt was resolved. Two or three boys, who had been sent out as scouts, came in with news that there was a strong watch set on the Ridgeway, that the paths through the forest were guarded, that bodies of armed men were arriving in the neighbouring villages, and that soldiers had been demanded—or so it was said—from Warwick and Worcester, and even from a place as far away as Oxford. Probably it was only the sheriff's prudence which had postponed the crisis; and now it had come. The net was drawn all round. As the day closed in on Coton and the sun set angrily among the forest trees, the boys' tale, which grew no doubt in the telling, passed from one to another, and men swore and looked out of window, and women wept in corners. In the Tower-room Sir Anthony sat awaiting the summons, and wondered what he could do to save his daughter from possible rudeness, or even hurt, at the hands of these strangers.

There was one man missing from hall and kitchen, but few in the suspense noticed his absence. The fool had heard the boys' story, and, unable to remain inactive under such excitement, he presently stole off in the dusk to the rear of the house. Here he managed to cross the moat by means of a plank, which he then drew over and hid in the grass. This quietly managed—Baldwin, be it said, had strictly forbidden any one to leave the house—Martin made off with a grim chuckle towards the forest, and following the main track leading towards Wootton Wawen, presently came among the trees upon a couple of sentinels. They heard him, saw him indistinctly, and made a rush for him. But this was just the sport Martin liked, and the fun he had come for. His quick ear apprised him of the danger, and in a second he was lost in the underwood, his mocking laugh and shrill taunts keeping the poor men on the shudder for the next ten minutes. Then the uncanny accents died away, and, satisfied with his sport and the knowledge he had gained, the fool made for home. As he sped quickly across the last field, however, he was astonished by the sight of a dark figure in the very act of launching his—Martin's—plank across the moat.

"Ho! ho!" the fool muttered in a fierce undertone. "That is it, is it? And only one! If they will come one by one, like the plums in the kitchen porridge, I shall make a fine meal!"

He stood back, crouching down on the grass, and watched the unknown, his eyes glittering. The stranger was a tall big fellow, a formidable antagonist. But Martin cared nothing for that. Had he not his long knife, as keen as his wits—when they were at home, which was not always. He drew it out now, and under cover of the darkness crept nearer and nearer, his blood glowing pleasantly, though the night was cold. How lucky it was he had come out! He could hardly restrain the "Ho! ho!" which rose to his lips. He meant to leap upon the man on this side of the water, that there might be no tell-tale traces on the farther bank.

MARTIN CROUCHED DOWN ON THE GRASS AND WATCHED.

But the stranger was too quick for him in this. He got his bridge fixed, and began to cross before Martin could crawl near enough. As he crossed, however, his feet made a slight noise on the plank, and under cover of it the fool rose and ran forward, then followed him over with the stealthiness of a cat. And like a cat too, the moment the stranger's foot touched the bank, Martin sprang on him with his knife raised—sprang on him silently, with his teeth grinning and his eyes aflame.

# ROBERT BROWNING.

ROBERT BROWNING, the most subtle thinker if not the greatest poet of our time, lived his poetical life for years without public recognition. Genius, when it rejects familiar forms of expression, is a puzzle rather than a delight, and it really seemed, though we now know that this was not the case, that Mr. Browning delighted in eccentricities of style. There can be no doubt that he wrote frequently in what one may call poetical shorthand, which it needed time and patience to interpret. That to the last, with his great and ever-growing fame, he did stand in need of an interpreter is proved by the existence of the Browning Society—a strange and somewhat humorous necessity for a living poet, which he appears in the frankness of his heart to have gratefully acknowledged.

Criticisms upon this great writer abound, and we do not propose to add to them except incidentally in this paper, but a recent publication affords an opportunity for relating very briefly the story of his life.[1]

The poet's father, like his grandfather, was a clerk in the Bank of England, in days when the position was far more profitable than it is now. In youth he showed his conscientiousness by throwing up a lucrative employment, which he had held for a short time on his mother's West Indian property, in disgust at the system of slave labour which was still in force there. The father was indeed worthy of the son, and never was parent better beloved. A scholar, a lover of art, and a great reader, "he never personally cared for money except as a means of acquiring old, that is, rare books, for which he had, as an acquaintance declared, "the scent of a hound and the snap of a bull-dog." A man of a healthy, joyous nature, he lived to be eighty-five, cheered by the love and friendship that should accompany old age. The poet's mother, to use his own words, was a "divine woman." He loved her so much that "even as a grown man he could not sit by her otherwise than with one arm round her waist." As long as he lived under his mother's roof it was his rule never to go to bed without giving her a good-night kiss. Thus he began life blessed with the immeasurable advantage of parents whom he could both reverence and love.

Robert Browning was born at Camberwell, May 7, 1812, "soon after," as his biographer is careful to observe, "a great comet had disappeared from the sky." The anecdotes related of his childhood are not remarkable. His love of animals is a love shared by most sensitive children, and his eagerness in acquiring knowledge has been felt by many a boy whose manhood is not especially remarkable for intellectual development. It is more significant of his destiny that he composed verses long before he could write, and, like Pope, may be said to have lisped in numbers. Like Pope, too, Browning was privately educated, and never enjoyed the advantages of a University training. How far a poet is likely to benefit by such a training is a question difficult to answer. We know, however, that, with two or three exceptions, all the great English poets from Spenser to Lord Tennyson have received a University education; and we know, also, that the poet, like the man who is less gifted, can best gain his mental freedom through discipline, and is likely to suffer from "the weight of too much liberty." That Browning should have been allowed to leave school altogether at fourteen, and to depend from that early age on private tutors or his own self-directed industry, seems to show that the father's faith in his son was for once stronger than his judgment.

Home education had, however, its peculiar advantages. The study of music and of French was pursued more thoroughly than would have been possible at college, but mathematics and logic appear to have been neglected, and he lost the clash of mind with mind so needful for a clever young man conscious of his powers. That this isolation had a bad effect on the poet he acknowledged in after-years, and was "always ready to say that he had been worth little in his young days." According to his sister, he had outgrown his social surroundings and chafed under them. He had some friends while living in the Camberwell home, but he needed society.

When Milton chose poetry for his vocation his father sanctioned his choice, and when Robert made a similar choice it was also with the full consent of the elder Browning, at whose expense his early works were published. The young man began his literary career "by reading and digesting the whole of Johnson's Dictionary."

In 1833 appeared the poet's first poem, "Pauline: a Fragment of a Confession." It was published anonymously, and, although recognised as a work of genius by one or two critics, made no impression on the public. A three months' visit to Russia is the next fact to be recorded in Browning's biography, and a more important one was the publication two years later of "Paracelsus," a poem as characteristic, perhaps, of the writer's analytic skill as any of his later works. Then, as in after-years, Browning showed that he had much to say, but found it difficult to express himself. The imaginative power that moulds poetic art into a perfect form of beauty was frequently denied to him; while, at the same time, his abundant command of language encouraged a too copious and familiar use of words. Unfortunately the poet's admirers have been apt not only to tolerate, but to praise the defects which so long retarded, and will

[1] "Life and Letters of Robert Browning." By Mrs. Sutherland Orr. (Smith, Elder & Co. 1891.)

probably always in some measure obstruct, the full recognition of his genius. If these remarks apply to such early poems as "Paracelsus" and "Sordello," they are also true with regard to the poems of his old age, but when in his highest mood no poet has ever written in a more luminous style.

A removal from Camberwell to Hatcham is the next incident to be noted in the even tenour of the Browning family. Here the poet gained, we are told, a humble friend in the person of a toad, which became so much attached to him that it would follow him as he walked.

"He visited it daily, where it burrowed under a white rose tree, announcing himself by a pinch of gravel dropped into its hole; and the creature would crawl forth, allow its head to be gently tickled, and reward the act with that loving glance of the soft full eyes which Mr. Browning has recalled in one of the poems of 'Asolando.'"

Although unknown to the general public, the young poet had now obtained a footing in literary society, and some of the first men of the day recognised his genius and ranked themselves among his friends. In the winter of 1835 Browning was introduced to Macready, who notes in his diary that he was much pleased to meet the author of "Paracelsus," whose face was "full of intelligence." And he added after reading the poem, "the writer can scarcely fail to be a leading spirit of his time." So greatly was Macready struck by the young poet's genius that he spoke or wrote of it frequently, and at length he asked him to write a drama for the stage. "Shall it be historical and English," was the reply; "what do you say to a drama on Strafford?"

The drama raised its author's reputation, but its performance was only partially successful, despite the consummate ability of Macready and of Miss Helen Faucit.

A voyage to Italy, the fair, rare land which was ultimately destined to be the home of his brightest and saddest hours, took place in 1838. The weather was stormy, and Browning suffered greatly, yet he was able before reaching land to write one of the most vigorous of his lyrics,—"How they brought the Good News from Ghent to Aix," and also "Home Thoughts from the Sea." Mrs. Orr states, and the fact is indicative of the poet's genial nature, that "by the time they reached Trieste, the captain, a rough north-countryman, had become so attached to Mr. Browning that he offered him a free passage to Constantinople; and after they had parted, carefully preserved, by way of remembrance, a pair of very old gloves worn by him on deck."

At the age of twenty-eight Browning published "Sordello," a poem describing the development of a soul in eleven thousand lines, the greater number of which are incomprehensible without much weariness of thought even to intelligent readers.

"Twenty-three years after its appearance," writes Mr. Stedman, "he owned that its 'faults of expression were many,' and added, 'but with care for a man or book such would be surmounted.' The acknowledgment was partial. 'Sordello' is a fault throughout, in conception and execution; nothing is expressed, not even the 'incidents in the development of a soul,' though such incidents may have had some nebulous origin in the poet's mind. It is asking too much of our care for a book or a man that we should surmount this chaotic mass of word-building. . . . I cannot persuade myself to solicit credit for deeper insight by differing from the common judgment with regard to this unattractive prodigy."

A strange contrast to "Sordello" is the lovely dramatic poem of "Pippa Passes," published a year later. A quarrel with his friend Macready, in which the great actor does not show to advantage, led to a failure, or partial failure, of "A Blot in the 'Scutcheon," a drama for which Charles Dickens expressed "almost passionate admiration." This play, like "King Victor and King Charles," "Colombe's Birthday," and "The Return of the Druses," is perhaps better fitted for quiet reading than for presentation on the stage.

It will not do to say that Browning is too intellectual for general appreciation, or how can we account for the wide recognition of Shakespeare's genius? but what may be termed the popular element is never lacking in Shakespeare, and in this Browning is deficient. His depth is more conspicuous than his breadth.

In 1841, writing to Miss Haworth, one of his dearest friends, Browning says: "I dined with dear Carlyle and his wife (catch me calling people dear in a hurry, except in letter-beginnings!) yesterday. I don't know any people like them." Yet on another page of the biography we read that he always thought Mrs. Carlyle a hard and unlovable woman, and that he felt aggrieved with Carlyle for warmly praising his work in private, and never publicly expressing his admiration. "If only," he once said, after mentioning a eulogium received from Carlyle in earlier days—"If only those words had been ever repeated in public, what good they might have done me!"

Another visit to Italy must be recorded, and then the reader reaches the chapter which is the most significant and the most beautiful in the story of Robert Browning's life.

In telling it we must go back to 1839, when the poet met, for the first time, Mr. Kenyon, a schoolfellow of his father's, and a friend of Wordsworth, Southey, and Landor. "He was," says Professor Knight, "one of the best of human beings, with a general sympathy for excellence of every kind." Kenyon was a cousin of Elizabeth Barrett, whose writings had already gained for her a high place among the poets of her country. In 1844, when Browning returned to England, Wordsworth had still six years more to live, but as a poet he might be accounted dead, and, with the exception of Tennyson, Miss Barrett was the best known and the best loved of living poets. Browning was deeply impressed by her poetry, and Mr. Kenyon begged him to write and tell her so. "My cousin," he added, "is a great invalid and sees no one, but great souls jump at sympathy." Browning did write, a correspondence followed, and after a time he begged to be allowed to visit her. "There is nothing to see in me," she replied, "nothing to hear in me. I am a weed fit for the ground and darkness;" but her objections were overcome, and we are told that the first interview sealed Browning's fate. At this time Elizabeth Barrett was so great

an invalid that she could not sit up, and lived in a darkened room, in complete isolation from things and persons without. "I lie all day, and day after day, on this sofa," she writes, "and my windows do not even look into the streets." Her doctor had said that her only chance of even comparative recovery lay in spending the coming winter in the South. Her father, however, although devoted to his daughter, would not hear of this, and probably regarded her case as hopeless. Yet love was destined to enter the room which she had lost the hope of leaving, and with love came new life and the invigorating sense of joy. What Elizabeth Barrett felt may be read in the wonderful series of "Sonnets from the Portuguese," in which the ardent love of the woman gave wings to the inspiration of the poet. Listen to one of them—

"Is it indeed so? If I lay here dead,
Wouldst thou miss any life in losing mine,
And would the sun for thee more coldly shine
Because of grave-damps falling round my head?
I marvelled, my Beloved, when I read
Thy thought so in the letter. I am thine—
But—*so* much to thee? Can I pour thy wine
While my hands tremble? Then my soul, instead
Of dreams of death, resumes life's lower range!
Then love me, Love! look on me—breathe on me!
As brighter ladies do not count it strange
For love to give up acres and degree,
I yield the grave for thy sake, and exchange
My near sweet view of heaven, for earth with thee!"

If love lifted Elizabeth Barrett into a new world, not less absorbing and complete was its influence on her poet-lover.

"There is no cause for surprise," his biographer writes, "in the passionate admiration with which Miss Barrett so instantly inspired him. To begin with, he was heart-whole. It would be too much to affirm that, in the course of his thirty-two years, he had never met with a woman whom he could entirely love; but if he had, it was not under circumstances which favoured the growth of such a feeling. She whom he now saw for the first time had long been to him one of the greatest of living poets; she was learned as women seldom were in those days. It must have been apparent, in the most fugitive contact, that her moral nature was as exquisite as her mind was exceptional. She looked much younger than her age, which he only recently knew to have been six years beyond his own; and her face was filled with beauty by the large, expressive eyes. The imprisoned love within her must unconsciously have leapt to meet his own. It would have been only natural that he should grow into the determination to devote his life to hers, or be swept into an offer of marriage by a sudden impulse which his after-judgment would condemn. Neither of these things occurred. The offer was indeed made under a sudden and overmastering impulse. But it was persistently repeated, till it had obtained a conditional assent."

The responsibility of secretly marrying Miss Barrett, and of conveying his invalid wife safely to Italy, rested upon Browning, and a mariner sailing upon unknown seas could not feel more keenly the peril of his position. Never was there a more genuine passion, and never had lovers a more difficult part to play. When he made his offer, he only knew that the lady he had chosen was regarded as a confirmed invalid, and "his very ignorance of her condition left him without security for her ever being able to stand." Elizabeth Barrett knew also that her father would never sanction the marriage, and no home-loving woman of thirty-seven, even if blessed with health, could regard a runaway match with a light heart.

"Mr. Barrett," we quote once more from the biography, "was one of those men who will not part with their children; who will do anything for them except allow them to leave the parental home. . . . His attitude was the same, under the varying circumstances, with all his daughters and sons alike. There was no possible husband or wife whom he would cordially have accepted for one of them."

The lovers were privately married at St. Pancras Church on September 12, 1846, and a week later Mrs. Browning, accompanied by her maid and by Flush, the little dog immortalised in her verse, stole away from her father's house while the family were at dinner. Browning was, of course, at hand, and that night they sailed for Havre on their way to Paris. A little time previously Miss Barrett's friend, Mrs. Jameson, had left England for the French metropolis, and Elizabeth had written regretting her inability to call and say good-bye, as she was "forced to be satisfied with the sofa and silence." Great, therefore, was Mrs. Jameson's astonishment, soon after reaching Paris, to learn that the chronic invalid of Wimpole Street had risen from her couch to undertake a wedding journey.

"I have here," she wrote to a friend, "a poet and a poetess—two celebrities who have run away and married under circumstances peculiarly interesting, and such as render imprudence the height of prudence. Both excellent; but God help them! for I know not how the two poet-heads and poet-hearts will get on through this prosaic world. I think it possible I may go on to Italy with them."

Mrs. Jameson did so, and her niece, then a girl of sixteen, remembers how they visited Vaucluse, and how Browning took his wife up in his arms and, carrying her across the shallow water, "seated her on a rock that rose throne-like in the middle of the stream. Thus love and poetry took a new possession of the spot immortalised by Petrarch's loving fancy."

The winter was spent in Pisa—a city which they both liked extremely—and in the spring of 1847 they removed to Florence, and found a cheerful home in the Guidi Palace. In the spring of 1849 a son was born; but to Browning the joy was greatly marred by grief, for his mother was dying at the time. "My husband," his wife wrote several weeks later, "has loved his mother as such passionate natures only can love, and I never saw a man so bowed down in an extremity of sorrow—never. Even now, the depression is great—and sometimes when I leave him alone a little and return to the room, I find him in tears. I do earnestly wish to change the scene and air—but where to go? England looks terrible now. He says it would break his heart to see his mother's roses over the wall and the place where she used to lay her scissors and gloves—which I understand so thoroughly that I can't say, 'Let us go to England.'"

The depression seems to have lasted for months, and we read of loss of sleep and of appetite. With great difficulty Mrs. Browning allured him from home, and rooms were taken at the Baths of Lucca,

where they had "mountain air without its keenness sheathed in Italian sunshine." There the babe's great cheeks, according to his mother's report, grew rosier, and her own health improved wonderfully. She was able to climb the hills with her husband, and became stronger and stronger. "Where it is to stop," she writes, "I can't tell really."

In 1851 Mrs. Browning published her fine poem, "Casa Guidi Windows," and in the same year her husband mustered courage to accompany her to England. Mrs. Orr writes :—

"Then, as on each succeeding visit paid to London with his wife, he commemorated his marriage in a manner all his own. He went to the church in which it had been solemnised and kissed the paving-stones in front of the door. It needed all this love to comfort Mrs. Browning in the estrangement from her father, which was henceforth to be accepted as final. He had held no communication with her since her marriage, and she knew that it was not forgiven ; but she had cherished a hope that he would so far relent towards her as to kiss her child, even if he would not see her. Her prayer to this effect remained, however, unanswered."

From London they went to Paris, accompanied by Carlyle, who, in his ignorance of French, would have been miserable without Browning's help. He could not ask for anything, he said, but they brought him the opposite. In Paris they made the acquaintance of George Sand—"a noble woman under the mud" in Mrs. Browning's judgment ; and there, too, her husband won the friendship of M. Joseph Milsand, a distinguished man of letters worthy of his regard.

In the summer of 1852 the twin poets were once more in London, enlarging their circle of acquaintance. Before the winter, however, they returned to the peaceful seclusion of their Italian home. Mrs. Browning was not strong enough for society engagements, and it is said that during the fifteen years of his married life her husband never, except on one occasion, dined from home. When they went, in the summer of 1853, for a second time to the Baths of Lucca, it was with "a stiff resolve of not calling nor being called upon." The next winter was spent in Rome, which was spoilt, to Mrs. Browning at least, by the loss of a friend's child. The first day in Rome was spent by a death-bed, the first drive-out, to the cemetery, and Mrs. Browning confessed that she was horribly weak about these things. "I can't look on the earth-side of death—I flinch from corpses and graves, and never meet a common funeral without a sort of horror. When I look deathwards, I look *over* death, and upwards, or I can't look that way at all."

In 1855 Browning and his wife were once more in London, where a furnished house was taken ; and there Tennyson read "Maud" to Mrs. Browning, while Rossetti privately drew his likeness in pen and ink. Mr. Ruskin, whom they liked much, was one of the valuable acquaintances made this year in England.

In 1856 Mr. Kenyon died, leaving 10,000 guineas to the Brownings in his will, and this loss of a true friend was followed by the death of Mr. Barrett.

We must not linger over the fifteen years of domestic happiness, which were also full of the keenest intellectual life. The only serious difference which ever arose between Browning and his wife was on the subject of Spiritualism, in which Mrs. Browning believed, while her husband laughed it to scorn and "absolutely denied the good faith of all the persons concerned. . . . Mr. Browning never denied the abstract possibility of spiritual communication with either living or dead ; he only denied that such communication had ever been proved, or that any useful end could be subserved by it."

It was a drawback to the life in Italy that the Brownings found it impossible to remain long in one place, and Florence—much as they loved it—was probably too hot in the summer and too cold in the winter. It was not a cruel punishment, however, as Mrs. Browning observes, to have to go again to Rome in the winter of 1859-60. In a letter written probably at that time, she gives such an interesting account of her husband that space must be found for a portion of it even in this brief narrative. After saying that he had been copying busts from the antique, she adds :—

"Reading hurts him ; as long as I have known him he has not been able to read long at a time—he can do it now better than at the beginning. The consequence of which is that an active occupation is salvation to him. . . . Nobody exactly understands him except me, who am in the inside of him and hear him breathe. For the peculiarity of our relation is, that he thinks aloud with me and can't stop himself. . . . His treatment in England affects him, naturally, and for my part I set it down as an infamy of that public—no other word. . . . Ah, dear Sarianna—I don't complain for myself of an unappreciating public. *I have no reason.* But just for *that* reason, I complain more about Robert—only he does not hear me complain—to *you* I may say, that the blindness, deafness, and stupidity of the English public to Robert are amazing."

Browning himself always maintained that *she* was the poet and he the clever person by comparison, who had been helped by uninterrupted health and strength, and by practice with the world. And when a lady once said that she preferred his poetry to hers, he exclaimed, "You are wrong—quite wrong. She has genius ; I am only a painstaking fellow. The true creative power is hers, not mine."

Mrs. Browning's fragile health suffered severely during the winter of 1860. The loss of a beloved sister weighed heavily upon her, and in the ensuing summer the death of Cavour, "that great soul which meditated and made Italy," gave her the final blow. She died, smilingly and happily, in her husband's arms, her head upon his cheek. "God took her to himself," he wrote, "as you would lift a sleeping child from a dark, uneasy bed into your arms and the light. Thank God . . . . Her last word was when I asked, 'How do you feel?' —'Beautiful!'" Mrs. Orr, who notes the disappearance of a great comet upon Browning's birth, relates also that his wife's death was signalised by the appearance of another brilliant comet which passed so near the earth as to come into contact with it.

For a time Browning seemed to be wholly crushed by the blow. "I want her, I want her," was his pathetic cry—a cry inwardly uttered by many a bereaved one who does not, like the poet, express

the desolation of the heart in words. He left Italy shortly afterwards, and never saw Florence again. After spending some time with his father and sister in France he came to London, where his wife's sister was living, and took a house near to her in Warwick Crescent. If all joy had for a while at least gone out of his life, the strong sense of duty remained. He had his son to care for and to educate; he was still in the full vigour of manhood, and had long years of poetical work before him. Some of his finest poems—"The Ring and the Book," for example—were written after his wife's death; he won new friendships, and gained by degrees what had been so greatly denied to him in her lifetime—the fame which a poet loves. Then, too, he became a lion in London society, and not his gifts alone but the extreme affability of his manners made him everywhere a welcome guest. He was born for society rather than for the lonely contemplation of Nature in which some poets delight, or, perhaps, imagine they delight. Nature has indeed a soothing influence, an exhilarating strength, and there are moments when in the joy of Nature we cease to be alone. But few of us can feed long on natural beauty without human love, and we are told that Browning during his residence in London cared chiefly for the country as a means of regaining health. "You have not a great love for Nature, have you?" asked a friend. "Yes, I have," was the reply, "but I love men and women better." In his later years, however, he found, we are told, increasing enjoyment in the beauties of Nature, "above all as they opened upon him on the southern slopes of the Alps." In 1878 he carried his sister to Italy, avoiding Florence and Rome, and this he did for several succeeding summers. All this time he was not only adding to his laurels by some very fine and exceedingly characteristic work, but writing also poems sufficiently difficult to give zest to the labours of the Browning Society.

In 1885 he was joined in Venice by his son, and proposed purchasing a house there which might serve as a home for both; but the Manzoni Palace, which he had chosen, was pronounced insecure, and the negotiations were not carried out. Then the autumn was spent at Llangollen, within easy reach of Sir Theodore and Lady Martin, and a memorial tablet in the parish church of Llantysilio now marks the spot where "the sweet grave face and the venerable head were so often seen." And this may be the place to say that the biographer's account of Browning's religious belief is coloured apparently by her own. No one can read his poetry with the seriousness it demands without being assured of his devout belief in God, not only as our Creator and Sustainer, but as revealed in Jesus Christ. In this respect chiefly, and in other respects also, the volume is disappointing. A wise reticence is indeed a virtue in days like these when all that is most sacred in a great man's life is too often regarded as public property, but it can scarcely be doubted that more might have been told of Browning than Mrs. Orr has deemed fit to tell, without injury either to the living or the dead. Apart from Mrs. Browning's delightful letters the biography is almost wholly without charm. It may be read for information, but scarcely, as a poet's life should be, for delight.

A few more words must conclude this short narrative. In 1887 the poet removed from Warwick Crescent to De Vere Gardens, and in the same year his son married an American lady. During the following winter his friends saw that a change had come over him, and that he had at last grown old. In the spring of 1888 he began revising the latest edition of his works, and in August he left for Venice. The winter and spring of 1889 were, however, spent in England, and in the summer he revisited his beloved Asolo, and then, accompanied by his sister, he moved on to Venice as the guest of his son and his wife, of whom he writes as "most dear and precious to us all." Six weeks later, on December 12, owing to a bronchial attack and to an enfeebled heart, he breathed his last. All our readers know that the poet was buried in the great Abbey, where among the English poets of three centuries his place is with the worthiest. "Asolando," his final volume, was published on the day in which Browning breathed his last; and thus his poetical life, which began almost in boyhood, ended only with his death.

The time is not yet come to estimate Browning's genius with complete impartiality; it will not, perhaps, be accounted extravagant praise if we say with Landor that, since the time of Chaucer,

> "No man hath walked along our roads with step
> So active, so inquiring eye, or tongue
> So varied in discourse."

JOHN DENNIS.

# STATESMEN OF EUROPE.

## HUNGARY.

COUNT SZECHENYI.

LOUIS KOSSUTH.

FRANCIS DEÁK.

THE THREE PATRIOTS.

"THE England of the East" was for many years the favourite denomination of Hungary by complaisant Magyars, desirous to impress upon foreigners that sense of their own importance in the rank of the nations which has ever been a characteristic of this proud and somewhat ostentatious people. And in a sense this epithet was just: Hungary, amidst all the storms that have ravaged Europe in the last centuries, was the only Continental State that managed to uphold unimpaired its uninterrupted traditions of legal freedom. Like England, Hungary could point to an unbroken continuity of ten centuries of constitutional development, with a flexible unwritten constitution capable of alteration by the regular methods of legislation. As in England, the all-pervading,

deep-rooted feeling of the supremacy of the national interest is the keynote of the life and thought of the people; nevertheless for twelve years the very name of Hungary as a State was erased from the map of Europe. Ground down as the country was under the heel of Austria's bureaucratic absolutism, it was not till the collapse of that system at Sadowa, when the centre of gravity of the Austrian Empire was thrown southward and eastward, that the ardent aspirations of the Hungarians at last found favourable hearing, and that the present dual monarchy of Austria-Hungary was constituted.

The representative committee of the diet which conducted and completed the new constitutional arrangements was headed by Deák, and the presidency of the first Ministry was given to Count Andrássy.

It is indeed to three patriots that Hungary owes her political regeneration. The first of these is Count Szechenyi, who with rare disinterestedness consecrated his life and his fortune to the material and moral progress of his country, and who placed himself at the head of all the reforms for social ameliorations. Himself the representative of the aristocracy, he made common cause with the revolutionary government. Francis Deák, who died in 1876, and was called "the Solomon of Hungary," was the second. A distinguished lawyer, as deputy he became chief of the opposition, as Prime Minister he had the courage to propose a tax upon the property of the nobles, who had up to that time been exempt from all taxation. He was essentially the representative of the middle classes, the presiding master spirit of the party of reformers. Last, but not least, was Louis Kossuth, who, rising from the ranks of journalism, communicated the fire of his enthusiasm to the whole country, and decided the constitutional contest in favour of the emancipation and enfranchisement of the lower orders, and the adoption of a system of responsible parliamentary government.

These three men personified modern Hungary and their country's triumph in the struggle for independence. Two are dead, the third lives in exile; but their influence survives; and above all Deák seems still to survive. It was Deák who persuaded the Emperor of Austria to have himself crowned King of Hungary at Buda-Pest, a ceremony that flattered the pomp-loving, semi-oriental nation of Hungary. To this day, though Deák died in 1876, his party survives, and bears his name. Yet though while living Deák had the parliamentary majority with him, he always resolutely refused absolute power; he knew his vainglorious, innately aristocratic Magyar countrymen, and judged rightly that they would prefer a noble to a simple burgher as their representative man. Count Andrássy was therefore chosen, with the full consent of Deák, as the first Prime Minister, and the land made great advances under his ægis. When he was called away to Vienna to fill the post of Minister of Foreign Affairs, three several ministers succeeded him, without being able to command a parliamentary majority.

At last choice fell upon Koloman Tisza, the man who for fifteen years was to hold this post, and whose fall in 1890 occasioned almost as much surprise as had that of Bismarck. Yet originally Tisza was entrusted with office by way of a stop-gap. He was tolerated by the Hungarian nobility as one who might enjoy office until they had settled among themselves as to the proper person to wield power. He was welcomed by the Austrians because they hoped for the breakdown of the dual government, and thought him too weak to avert its collapse. By a curious irony of fate both the haughty Magyars and the vindictive Austrians found their master where they looked only for a tool.

Koloman Tisza von Borosjemö, landed proprietor and politician, was born on the 16th December, 1830, at Geszt, in the Comitat of Biharer.

COUNT TISZA.
(*From a photograph by Ellinger Edc.*)

He was the son of a nobleman owning vast estates, and both his parents were Calvinists. At the University he followed legal studies, and in 1848 he obtained employment in the Ministry of Education. After the outbreak of the Revolution he retreated to Geszt for a while, and then travelled extensively throughout Middle Europe. In 1855 he was chosen assistant Curator in the reformed parish of Nagy-Szalontaer; in 1859 he made his first public speech, defending the autonomous Protestant Church organisation against the attacks of the Austrian Minister of Religion, Count Leo Thun. In 1861 he was elected to represent in the Reichstag the town of Debreczin, known as the "Calvinistic Rome," and after the suicide of Count Ladislaus Teleki, he became the leader of the left centre, an opposition post he maintained until 1872. In 1875 he finally resigned his attitude of opposition, and so made it possible for the left centre to combine with the Deák party, which henceforward was simply named the Liberal party. Under the ministry of Wenkheim, instituted in 1875, he was entrusted with the portfolio of Minister of the Interior, and on the 21st of October of the same year, after the splendid victory achieved by the new Liberal party at the

general elections, he became Prime Minister himself.

Tisza has not only made the Dual Empire work, but he has won for the Hungarians a very large share of its benefits, and a powerful voice in the direction of the Imperial policy. Certainly nothing at the outset of his premiership indicated that he could ever wield solid power. To begin with, he was not one of the combatants of '48, and so enjoyed none of the prestige which belonged to the heroes of the War of Independence. Then, in neither opinions, character, nor manner of living has Tisza a trait in common with the mass of Hungarians. A Calvinist, a Liberal, a man of bourgeois simplicity, modest in his surroundings and petty in his expenditure, he is the exact opposite of those dashing, spend-thrift, cavalier magnates whom he governed with so light but firm a touch. He came to the Premiership at a time of great political confusion and financial distress—during the Turkish wars with Servia and Russia. Hungary longed to join her ancient Mahomedan enemies, and was with difficulty restrained from so imprudent a step. Tisza was made the scapegoat by these impatient Magyars for seconding Austria in withholding them from this mad enterprise.

Thus, to begin with, he had against him all the aristocratic, Catholic, and feudal elements of the monarchy. Abused, misunderstood, derided, left defenceless and often with the slenderest of parliamentary majorities, Tisza, however, quietly plodded on his tranquil way, undaunted by his unpopularity, unobtrusively making his will felt, his influence acknowledged, until public opinion suddenly woke to find that this man whom they had despised was making their land a pattern of a free nation; that he not only upheld but extended its dignity; that on all occasions when it was needful for him to appear at Vienna he did so, not as the simple servant of a monarchy, but as the spokesman of a free parliament, and obtained for his country substantial advantages; so much so that under his leadership the Austrians seem almost justified in grumbling that in the partnership between the two halves of the monarchy, Hungary always stickles for the biggest share of the profits and the smallest share of the risks.

Indeed, in commercial matters Hungary's attitude under Tisza's government has been one of rare sharp practice towards its Austrian partner. In the renewal of commercial treaties, for instance, it seems doubtful justice that Austria's interests as a manufacturing country should yield to those of Hungary. Thus Roumania closed her frontiers to Austrian goods to the value of 50,000,000 gulden annually, because Hungary would not allow the free export of Roumanian cattle. But in this, as in other matters, such as the aggrandizement of the port of Fiume at the expense of Trieste, Tisza always bargained with dogged inflexibility. To the joy of his countrymen, he followed a line of policy which tended to give them absolute sovereignty in all custom questions, an attitude which was entirely contrary to the initial pact entered into between the dual States. By skilful diplomatic management, the Hungarians gradually acquired for themselves even the financial control of the great railway systems which traverse, and therefore concern, the whole Empire. If Austria did not rebel against this want of good faith on the part of her co-partner, it was because, since the advent of Count Taaffe to power, she found herself too much embarrassed by her reconciliation policy, which had alienated the Germans of the Empire and flattered and fostered Slav aspirations.

Now Hungary, although it has representatives in Parliament, and its voice in the imperial policy belongs entirely to the Magyars, consists nevertheless of a most heterogeneous population. There is perhaps no place in the world where people belonging to more varied and distinct stocks live together side by side than in Hungary, where on an area of equal extent more languages, entirely unconnected, are spoken, where the allegiance to faith is divided among more numerous religions. Speaking in rough numbers, there are six and a half million Magyars, two and a half million Roumans, nearly three million Croato-Serbs, two million Germans, nearly the same number of Slovacks, 350,000 Ruthenes, and about 100,000 of diverse motley minor nationalities, such as Wends, Italians, Armenians and Gipsies; while the list of religions includes Roman, Greek, and Armenian Catholics, Calvinists, Lutheran Protestants, Unitarians, and Jews. The interests of all these people must be regarded; at the same time the dominant sentiment of the country is and cannot but be Magyar, not in virtue of any privilege in law, but simply because it is the Magyar element that has formed and upheld the Hungarian nation, because it has been the nucleus around which the other parts of the populations have rallied.

Having to deal with such mongrel elements, Tisza looked on with no displeased eye at the dissensions aroused by Count Taaffe's policy. It prompted him to pander to Magyar chauvinism and love of dominion, reckoning, and rightly, upon the fact that a government which was at feud with the Austro-Germans could not afford for the sake of its very existence to arouse the anger of the Magyars also. While Taaffe was vainly trying to reconcile the irreconcilable in Austria, the Magyarisation of the Slovacks and Germans was carried on at high pressure. Tisza recognised the dangers that might arise at any moment to the Hungarian monarchy, should the numerical majorities awake to a sense of their power, a power which grows more rapidly in so far as it depends upon numbers, than that of their Magyar masters. If by a change, which might easily be effected, they were admitted to a full share of political influence, the united front which is now presented by Hungary to Austria and the world would disappear for ever. This heterogeneous population differs profoundly in education, in political ideals, and in susceptibility to foreign influence, from the Magyar rulers of the land. In some far-off future they might perhaps be trusted to develop a sense of loyalty to existing arrangements, but nothing can be much clearer than that their appearance under present conditions as claimants for their full share of political power would be fraught with so much danger to the Dual Monarchy that its chances of survival would be small. The aim of Tisza has been to avert that catastrophe by

impressing moderation upon Magyar pretensions, while striving at the same time to destroy in these various elements the too strong and preponderant sense of their racial differences. For a time all went well; but racial feelings are not so easily destroyed, and seem to be among the strongest factors of our human nature. The more the administration was placed upon a Slav basis in the western half of the monarchy, the higher rose the resentment of the Hungarian Slavs; the more their patriots obtained power in Austria, the more the attempts to Magyarise them increased in the domain of St. Stephen's Crown. That the Cabinet of St. Petersburg fostered these dissensions is beyond question. A rebellion even broke out in Croatia, of which the influences are still felt.

While Tisza was thus busy raising the Hungarian State to a position of leading factor in the Dual Monarchy, he somewhat neglected the humdrum duties of government, especially that department of administrative reform absolutely needful for Hungary, if it was to become in reality a modern State. For Hungary is politically much as England was a hundred years ago; the great landowners are very lords upon their estates, pocket boroughs abound; there is no ballot, but open voting, subject to the attentive supervision of land-stewards. In the boroughs bribery and treating are the rule at elections, and when these agencies are likely to fail, the administrative screw is applied without compunction to every voter who has anything to fear or to hope from the government. The power of the local *Comitat*, which had already at the outset of Hungarian independent life been stigmatised by one of the Ministers as "the bulwark of Asiatic barbarism," increased mightily under Tisza's *régime*. Repeatedly was his attention drawn to this circumstance in the House, and by no one more energetically than by Désiré Szilagyi. It was especially the Croatian portion of the monarchy which was to give Tisza much trouble. Encouraged by the success of the Czechs in Austria, the Croatians demanded an autonomy of their own, and a reconstitution of the old kingdom: Croatia, Slavonia, Dalmatia, in conjunction with Bosnia and Herzegovina, which together with the Carniola and the Adriatic Littoral should be regarded as a large independent sovereign Slavonic group, putting into the place of the dualism which had hitherto existed a triple government. These Slavs never ceased their efforts in their patriotic aim for the realisation of their dreams of unity and ambition.

"The Roman and German people," sings the poet of Panslavism, Kollar, "walk in a beaten path; we follow them with a slow step, for the road is strewn with difficulty; but we are a young people, we know, and we see what others have done, but they cannot tell what we are destined to become in the annals of humanity."

With great adroitness Tisza has played off the different nationalities against each other, and held in check their discontent. Fiume has been a special bone of contention. Geographically it really belongs to Croatia, but Hungary will never willingly resign her only seaport; and the inhabitants of the city, notwithstanding their Croatian nationality, sympathise with Hungary, which neglects no opportunity of raising this port at the expense of Trieste. Beyond question it is owing to Tisza that Hungary has really become an independent Hungarian State. In future history Tisza will stand out as a firm, determined statesman, true to his principles, who never departed a single hair's breadth from the rules which he had laid down, as a wholesome influence towards the consolidation of his fatherland. He ever went on fearlessly towards the realisation of his aims; he neither toadied for the approbation of the great, nor truckled for popularity with the masses; even *vis-à-vis* of the Crown he did not abate his demands one jot.

This man, who for many years has filled a large place in the public life of his country, was by his personality in no ways suited to inflame their ardent Oriental imaginations. Whoever has beheld the small thin figure, clad in curiously fitting garb, with its long flowing hair, thin beard, and large blue spectacles, would imagine with difficulty that he saw in this undignified form the Prime Minister of a people devoted to show and pomp. Tisza has neither the glowing temperament of Gladstone, nor the wise moderation of Deák. He does not possess the art of winning over the crowd; he is not a great man, and nevertheless he is a remarkable one. In order to get to know him, it was necessary to frequent Parliament and the party clubs; both here and there he showed himself ever ready for combat, a debater who was never at a loss for a reply, surveying his domain with sure looks, detecting in cool blood the weaknesses of his adversary, and utilising them with patience and self-possession. He always improvised his speeches; their main construction was clear and logical, but their language left much to be desired. Thus parenthesis succeeded parenthesis, until, when his periods were finished, they were a very labyrinth. Tisza can therefore be called a skilful, remarkable, and thoughtful speaker, but he was certainly not an orator. His voice, too, especially in later years, was so low and quavering, that the whole House had to be hushed to hear him. He was undeniably a master in the art of truthful evasion. He spoke often, and was always ready relentlessly to expose any loose statements that might be made by his colleagues or adversaries. He intimately knew every pulse-beat of his party, and he instinctively understood what influence the parliamentary speeches would have upon the nation. He surveyed with a master's eye the intricate interests which reign in the party programmes of a Chamber. Thus it came about that he so often found the right word to characterise a situation; and this is why his speeches, notwithstanding their polemical character and their involved grammar, are so frequently the mirror of the most intimate feelings of his supporters. Tisza was not alone the leader, he was also the friend of his party; with wise tact he represented their aspirations at the steps of the throne; he never denied their tenets; he was patient to their faults; he was grateful for every political sacrifice that was made to him. The hem of his garment sometimes touched pitch because he could never resolve to let fall

a member of his party. He held that he had formed their principles, and that therefore he was not justified in departing from them. He was a truly Liberal minister who refused to combat with force even riotous expressions on the part of the masses. He shrank from curtailing in any manner the liberty of speaking, writing, or meeting, even when these were violently directed against himself. He would reply from his place in the Chamber to public criticism, but he would never call for the public prosecutor to defend him, for he was true to his motto, "They may beat me as much as they like, but Hungary they must not touch." Tisza was above all else a Hungarian.

What was his fatherland when he took up the reins of power, and what is it to-day? Dualism has been carried out to its last consequence, the aspirations toward a polyglot State have vanished. Hungary has become a factor in Europe; a net of railways traverses the land; a policy of well-being favours the population; the country has become richer and economically stronger. Tisza has saved Hungary from financial ruin: he has raised its credit. It fell to him twice to renew the *Ausgleich*, or ten years' treaty which binds Hungary to Austria, and on both occasions he obtained substantial advantages for his country. He was justified in his proud complacency when he said, on his retirement from public life, that the lines of Hungary's policy have now become so deeply grooved that every ministry must govern as he has done, and that consequently he can well be spared.

Whether he is right in this assertion the future will decide. It seems improbable that Hungary's position in the Monarchy could be maintained under a succession of weak Cabinets; and it must ever be remembered that Austrian bureaucrats watch the liberties of Hungary with a jealous eye.

One of the main problems a Hungarian minister has to solve is how to avoid conflicts with Austria. The only serious mistake Tisza ever made was that he did not earlier bring into his Cabinet some of the many statesmen of great ability which Hungary can boast. Like many other statesmen, his wish to be served by pliant instruments led him for a long time to choose men of second-rate capacities as his colleagues, and when his loss of popularity consequent upon the Army Bill made him turn to stronger men, these proved unamenable to discipline. Until the entry of men like Weckerle, Baross, Szapary, and Szilagyi into the Cabinet, Tisza had been accustomed to see himself the true chief of all the departments for the transaction of public business. On a smaller scale, he was a sort of Bismarck, who resumed in himself all the government, and to whom his colleagues were but so many aides-de-camp, popularisers, and distributors of his policy.

In 1889, Tisza proposed to take in hand the administrative reform which had become such a crying necessity in Hungary. He succeeded in prolonging the legislative period to five years, and in modernising the old-fashioned or traditional organisation of the House of Magnates. In foreign affairs Tisza was a stout supporter of the Triple Alliance; and it was in a large measure due to his support that Austria upheld a peace policy. He was not, however, to carry out the reforms that he had planned; the fact is, that Tisza had for some time outlived his power. The circumstance that led to his fall was rather an accident; the times were ripe for his retirement, and for the entry of other men into office who should bring in new ideas. It was on March 7, 1890, that Tisza gave up his post. A debate concerning Kossuth's right of citizenship had been brought forward in the House, because in Hungary, as in Germany, those who live for ten years abroad lose their right of citizenship, unless they go through certain formalities in the presence of an ambassador, or of a legal delegate from their country. This Kossuth had always refused to do, because he would never recognise the kingdom of Hungary as it had been constituted under Francis Joseph; he was a partisan for a republic or a federal union; nevertheless many Hungarian cities had bestowed upon him their honorary citizenship. Tisza had contended in the Chamber that this made him a Hungarian citizen, and that the question need not be mooted. The fact was, he held that it was better to leave the subject alone, seeing that Kossuth had spoken disrespectfully of the constitution and of the Crown, and that it was not advisable to make a special law in favour of one man, even if that man were one of Hungary's greatest patriots. And this exceptional law was the less requisite, as Kossuth had repeatedly declared that he had no intention whatever of returning to Hungary, as he did not wish to be a subject of Francis Joseph. Pressure being put upon Tisza, he finally, to please the populace, promised that a Bill should be presented to the House making an exception in favour of Kossuth. When, however, he wanted to bring it forward, he found that his colleagues in the Cabinet were not with him. They resented the Prime Minister making an engagement without consulting them, and, rather to assert their right to individual opinion than from opposition to Kossuth, they refused to accord Tisza their support. Tisza, who had so long ruled unhampered, was unaccustomed to meet with checks of this nature. He contended, however, that he could not break the promise he had given to the House, and that therefore nothing else remained for him to do but tender his resignation to the King. He recommended Count Julius Szapary as his successor.

Tisza knew well that the cause of his fall had been a mere pretext, that it was the clerical aristocracy who had wielded this weapon against him, angered at the law concerning mixed marriages that he had allowed to pass. The aristocracy, the clergy, highborn ladies, all agitated against this law, which, though it passed the House, has remained a dead letter. This agitation gave a new power to the aristocracy, who had ever been irreconcilable foes of the Cabinet, and of the rigid Calvinist at its head, who remained apart from all the social diversions of the rich landowners, whose frugal, modest mode of living contrasted unfavourably with that of the spendthrift nobles with whom he was surrounded. Tisza loved work; they loved idleness,

and those intrigues were spun around him whose victim he at last became.

Count Apponyi, Tisza's strongest opponent in the House, took part with the Kossuth group; the casinos sought adherents in the street; the opposition grew to the point of insult. Tisza was affronted; his personal safety was threatened; he was daily subjected to gibes and jeers; and he therefore sought for a pretext to resign the power whose attractions had so long held him captive. The patriotic disinterestedness which the reigning Prime Minister had shown at all times also characterised the departing Minister. On March 7, he laid before the Chamber the full reasons for his retirement; he explained that he had not been able to fulfil the promise he had given to Parliament with regard to the Kossuth question, and added that it was a personal promise, and that therefore his colleagues were in no wise bound by it, since he had given it without their knowledge. The leadership of the Liberal party which was offered him he declined in correct and loyal terms, explaining that in a Governmental party there must not be two leaders, because such an arrangement must conduce to splitting up the party into factions. The "General," as Tisza was popularly called by the people, retired entirely from public life to become a simple soldier in the ranks of his party. Never had he seemed greater or more dignified than at the moment of this self-imposed renunciation.

The new Minister-President is no *homo novus*; he had already been Finance Minister under Tisza, and afterwards Minister of Agriculture, and he represents in his person that which according to custom has to be represented in every Hungarian Cabinet, that is to say, the Magnate caste. Neither

COUNT JULIUS SZAPARY.
*(From a photograph by Ellinger Edr.)*

Szilagyi, a simple professor of jurisprudence, nor Weckerle, whose family has been Magyar for scarcely a generation, and who has behind him only a simple bureaucrat career,—neither Csaky nor Teleky, two noblemen it is true, but without any political past,—could pretend to the presidency. Szapary gives his name and the weight of his high social influence to the present Cabinet; and Szilagyi, Weckerle, and Baross, give their talents and their work. As at Vienna, in the times of Prince Auersperg, Szapary will be in a certain sense the representative man, and the others provide the ideas, the words, and the parliamentary force of this illustrious figure-head. It is, however, just to Szapary to note that if he may not perchance shine as Prime Minister, he certainly distinguished himself as Minister of Agriculture. To him in a large measure was due the economical regeneration of Hungary after the wars of liberation. In the eleven months that he filled the post he instituted some remarkable reforms, and if he had been allowed to continue in the office, it is probable that the agricultural condition of Hungary would have been greatly improved. In his place there is now the Transylvanian Count, Andreas Bethlen; this was the only change made in the last reconstructed Tisza Cabinet, all the other Ministers retained their portfolios.

Szapary's first public office had been one of some difficulty and delicacy; he had been chosen as Royal Commissioner to regulate affairs in the Heveser Comitat, that most Magyar bit of the whole Magyar land, the home of the fieriest Hungarian wine and of the loveliest Hungarian women; the most irreconcilable of all the districts which held by the doctrines of the Extreme Left, and refused to acknowledge a single Act passed by the Hungarian parliament. To Szapary fell the task of recalling them to their constitutional duties. He accomplished his enterprise with such tact that when he was afterwards chosen as Minister of the Interior the superintendence of the Comitat of the whole Monarchy was confided to him.

The most remarkable man in the present Cabinet is the Minister of Justice, Désiré Szilagyi, born in 1846, who before he took the portfolio as Minister of Justice had already distinguished himself as Professor of Juridic Science at the University of Buda-Pest. He is certainly a man of exceptional gifts, but he has certainly also been the person who must bear the chief responsibility of having disgusted Tisza with office-holding. Count Andrássy once described him as a wedge, who would split up any Cabinet or party into which he was introduced. In the eleven years in which he sat in the ranks of the opposition he was continually harassing Tisza with interpellations; and the members of the governing party looked upon him as their most dangerous, because their most able, opponent. Nevertheless, however bitterly and passionately the parliamentary battle was raging, he never opposed the Liberal party in any of those fundamental principles on which the very existence of this party is built up. He twice combated the terms under which the *Ausgleich* with Austria was renewed, but he never attempted to shake the firm foundation of the constitutional conditions of the two halves of the Empire. He never shared the common enthusiasm for an independent Hungarian Custom Domain, and he left it to Count Apponyi to coquet with those who were in favour of an

independent Hungarian army. In a number of internal questions he was opposed to the Liberal party and their leader, but in no single instance was the Liberal principle the cause of difference and of contention. Szilagyi sat on the same

DÉSIRÉ SZILAGYI.
*(From a photograph by Ellinger Edr.)*

opposition benches as Count Apponyi, but he never had anything to do with the conspiracies of the oligarchical aristocracy and of the clerical cliques; he remained apart from the machinations put in force against the law of mixed marriages, and as a firm Liberal he supported the demands for obligatory civil marriage. On this account, because he never was untrue to his Liberal principles, he has remained more closely allied to the Liberal party than the followers of Apponyi.

It was a great gain to the Tisza Cabinet when Désiré Szilagyi consented to take the Portfolio of Justice, for there was scarcely a domain which had been so neglected during the past eleven years as that of jurisprudence. His predecessors had been weak and impotent men. The election to this office of a man of science who united great special knowledge of his subject with wide general culture was hailed with joy. Szilagyi brought no increase of power with him into the Ministry; he led no party, and yet he did not enter the government with empty hands; he brought to the Tisza Cabinet a great spiritual potency and a strengthening of the old Deák element of which this Cabinet stood sorely in neeed. Tisza had never embraced Deák's ideas entirely. In Julius Szapary and Désiré Szilagyi, two out-and-out Deákists had entered the government, and to those who know how strongly the Deák traditions remain alive in Hungary it will be evident that this is a factor of the greatest importance. Above all, the government received in Szilagyi a firm, spirited, political personality, a man of great knowledge and ripe experience, a brilliant orator who boasts an honourable political past, a firm tradition, sure principles, and enlightened modes of thought as well as strength and love of work. These gifts have already borne their fruits. Thus he has raised the number of Courts of Appeal from two to eleven, and is now busy with the work of formulating a new code which will have important influences upon the Courts of Justice in Hungary.

Count Albin Csacky, the Minister of Public Instruction, conducts his office with firmness and a perfect knowledge of his objects. Most energetically he has taken under his protection the infant schools, the education of the people, and the claims of the elementary schoolmasters; these latter especially have to thank him for many improvements in their social position. Thanks to the initiative he took in the question of the Greek language, namely, that its study should no longer be obligatory but interchangeable with French, if desired by the parents, he realised the project of a uniform middle school, a scheme that attracted him from the first, and which has been entirely due to his active intervention. In the domain of higher education he is also showing himself a warm supporter of all modern reforms and requirements.

The Minister of Commerce, Gabriel Von Baross, displays in all domains regarding commercial and industrial life a perfectly astounding activity; it is solely due to him that Hungary has instituted that reform with regard to railway fares known as the zone tariffs, which is calculated to revolutionise the entire method of payment of railway fares throughout the whole Continent of Europe. It was an idea so luminous, so simple, and yet so audacious, that it was difficult to predict whether or not it

GABRIEL VON BAROSS.
*(From a photograph by Ellinger Edr.)*

would prove successful, and when it was once shown that it would be successful beyond the most ardent conceptions of its inaugurator, all Europe stood up and wondered why this very simple and useful project had never been invented before. The attention of outsiders who have never

looked to Hungary as a land whence any new ideas could arise, has been suddenly drawn to this quarter of the globe, thanks to Baross and his railway reforms, and it is much to be desired that his policy may be imitated as speedily as conveniently possible.

The regularisation of the Danube has been taken in hand with renewed energy by him; and he will ever be remembered in the records of Hungarian and Austrian transit as the man who caused the Iron Gates to be removed—those rocks which so fatally hindered the navigation of the Lower Danube. This act has been one of immense commercial importance to the kingdom, as it has favoured the utilisation of that great water highway, for Austria-Hungary finds in the south-east the chief market for its natural and manufactured products. To utilise this market against the serious competition which the other Powers are making, is for the whole monarchy, but especially for Hungary, a very question of vital existence. As compared to the free navigation of the Danube, the two great railway lines which connect Hungary with Roumania offered no compensation, for even at a low price of transport the trains cannot carry the voluminous and cheap raw products under the same favourable conditions. That immortal reformer, "the greatest Hungarian," as he was named, Count Stephen Szechenyi, pointed out irrefutably the necessity for this regularisation of the Danube, and his advice was endorsed by all those other men who, in Hungary, Austria, and Germany, occupy themselves with social, economic, industrial, and transport questions. Baross is also interested in the creation of a commercial fleet upon the Danube. The first of these ships, baptised with the name of "Szapary," was launched in the course of the last summer.

Dr. Alexander Weckerly, the youthful Minister of Finance, was the right hand of Szapary when that Minister held the portfolio of Finance. It is due in very large measure to the activity and perspicuity of this young financier that Hungarian economic conditions have greatly improved, and that the chronic deficit presented by the Budget has been considerably diminished.

General Baron Geza Fejervary, the Honvéd Minister of Hungary, is an authority on all military questions, and has won his spurs on that domain. The Honvéds, a species of national militia, have become an important factor in the military strength of the monarchy. Under his leadership, according to the highest authorities among foreign military critics, these Honvéds have proved themselves possessed of great skill and valour during recent international manœuvres.

It remains to be seen whether Szapary can maintain himself in power; certainly the man, if not of the immediate, still of the near, future of Hungary is beyond question Count Apponyi. Szapary, as compared to him, can but represent a period of transition which is necessary in order that the political public may adapt itself with resignation or prepare itself voluntarily for a shift of the governmental platform, which would be too sharp were it accomplished at once. Of Count Albert Apponyi the political world of Hungary speaks highly. Born in 1846, he entered on a political career when quite a young man, and distinguished himself by a varied and vast European culture, by boundless ambition, and by great parliamentary gifts and power of application. Long before he had arrived at the age of ripe manhood he was recognised as the leader of the moderate opposition. In the Hungarian parliament, where splendid orators are not uncommon, for the Magyar has a great facility of speech, Apponyi is recognised as the most brilliant and effective among the speakers. From the very outset he was an ardent opponent of Tisza, not from any mean, low motives, but from reasons of high political conviction. It would seem that this enmity did not proceed from personal rancour, but it is certain that

COUNT ALBERT APPONYI.
(*From a photograph by Koller Karoly.*)

every measure seemed good to Count Apponyi by which he might hope to bring down his opponent. He carried obstruction to the point of art, and did not shrink from making common cause with the worst scandal-mongers of the Reichstag and of the street if by these means he could obtain his purpose.

The same tenacity which Tisza showed all those years, first in creating the conditions which rendered him almost indispensable, and then in defending his own creations and himself, Apponyi put forth in opposition to him as the first among his adversaries, and hence as the most legitimately indicated of his heirs. Until within the last two years it seemed as if the figure of the old Protestant country nobleman grew ever more imposing, but at the same time there grew ever more imposing the figure of that Catholic magnate of ancient race, a convinced Parliamentarian, gifted with clever and fiery eloquence, cynically willing to accept any allies so long as they served him. Educated by Jesuits to a mixed

political creed of reactionary fears and socialistic audacities, he has not yet given a clear idea of what he really feels and desires, of what he would do or what he would bring about ; but whatever that may be, he will do it strongly and with audacity. For the present, Apponyi's day has not yet come, but he is young as age goes for public men, and the turn of fortune's wheel must inevitably bring upwards so able a man. It is already generally acknowledged that the maxims which he has laid down for the conduct of public affairs would be accounted valuable rules of parliamentary ethics in any country. When Szapary laid his programme before the House, Apponyi announced, to the great satisfaction of the Prime Minister, and amid the applause of his own party, that he was entirely at one with the Count on the subject of all proposed reforms and principles of government, and that he would lend him his entire support and that of his faction. It was difficult to understand after this why he did not retire from opposition and join the government party. But Apponyi has not been a pupil of the Jesuits for nothing ; he is a man whose words and deeds do not cover each other. In fact, in one of the first hot debates that divided the House, a question of sectarian baptism, he combated the Ministry with all his might and main. It is pretty evident that every government as such is a thorn in the eye of the noble Count, whose ideal consists in seeing in his own hands the reins of power.

Leader of the extreme left faction of the Hungarian Parliament is Daniel Iranyi. This party refuses to recognise the *Ausgleich* of 1867 with Austria. They like to screen themselves before their electors under the shadow of Kossuth's name, which also means the negation of everything now existent in the Hungarian constitution. When Szapary came to power, he cunningly drew the attention of these factions, which strenuously hold by the personal union with Austria, to the fact that agreement with Kossuth, who demanded nothing less than the deposition of the Emperor of Austria as King of Hungary, was absolutely incompatible. He went further and demanded that the men of this party should show their colours honestly to the country, and declare whether or no they were Kossuth's faction. This question fell like a bomb into the camp of the party of 1848 and led to a disintegrating civil war. The vice-president of the party, Gabriel Ugron, called together a large congress of electors to consider the reconstruction of the party and the promulgation of a new party programme. The discords between the two factions are still raging.

Szapary's first public act was to settle the Kossuth question. He solved it with the simplicity that distinguished the setting up on end of Columbus's egg. In yet a second question which deeply agitated the whole land, the Szapary Cabinet has given a proof of its strength and intention. This is on the subject of the baptism of children born of mixed marriages. It was the Hungarian law that the boys had to follow the religion of the father, and the girls that of the mother ; but of late the Catholic priests had obtained the upper hand, and, refusing to obey the law, claimed all children born of mixed marriages as belonging to their creed. This obliged Count Csaky to put forth an edict saying that if the law continued to be disobeyed, he should fine the clergy very heavily. The opposition, hoping to gain favour with the populace, tried to rouse fanatical ill-will ; but their efforts were vain ; Csaky, Szilagyi, and Szapary showed themselves true patriots of the Deák stamp ; they declared that if this opposition against the course of the laws was not dropped, they would take the offensive. And quite recently in the Chamber, the Minister of Justice has declared that he is busy with a law which will regulate these questions, and will put both marriage and the registration of children into the hands of the civil authorities. These declarations on the part of the Ministry proved a bitter disappointment to all those who hoped that, with the retirement of Tisza, liberalism in Hungary was laid in the grave for ever.

Hungary, which by territorial extension takes amid the States of Europe a sixth place, does not count amongst the first Powers when separated from Austria. It is certain, however, that since its reconstruction as a kingdom in 1867, Hungary has attained to a proud position which has not been hers for three hundred years. Certainly it is no easy land to rule. Its geographical position alone exposes it to great dangers ; it lies like an island amid a number of more or less inimical States ; and should it abandon its hold on Austria, would split up in itself, or be partitioned by enemies like a second Poland. This its statesmen must bear in mind, and not let themselves be so blinded by petty party questions as to ignore the well-being of the whole Monarchy. This inner policy must be neither uncertain nor hesitating. While in other countries the balance sways between a Liberal and a Conservative party, after the manner of the Whigs and Tories of England, a feature that distinguishes more or less every civilised land, whether it be ruled absolutely, constitutionally, or on republican lines, in Austria-Hungary the balance oscillates between various great races, and this in itself is a source of very real and constant danger. Hungary must strive to keep its different nationalities quiet and content, must try to be just to all and favour none.

# THE SNUFF-BOX IN LITERATURE.

I.

THE German Emperor has come and seen and been seen, and he has gone amid a cloud of good wishes and a shower of snuff-boxes. The philosopher about small things might very well turn his attention to the snuff-box as an example of brilliant emptiness. Like the vase, it has become purely decorative; but as the vase gained in gorgeousness with the departure of the flowers, so has it been with the snuff-box since the loss of the snuff.

"Does snuff injure the brain, Dr. Abernethy?" "No, no; for no man with an ounce of brain would dream of using it." And yet it is wonderful how many men of conspicuous ability indulged to excess in what we now practically taboo. When the Rise and Fall of Snuffing secures its competent historian, what an opportunity he will have, to be sure! Here is a habit which did not become a "second nature," and which once raged as few other fancies have raged owing to exceptional fortune.

Note the steps by which it rose to fashion. Given to a king, Charles IX of France, by a leading diplomatist, Nicot—whence nicotine—favoured by a reputedly beautiful queen, Catherine de Medicis, and adopted as a party sign by the orthodox; used as a disinfectant much as the modern out-of-work smokes his pipe to hide the evil odours of his dwelling; then condemned by a king and anathematised by a pope; then taxed, and cherished by the mode, and finally thrown within the reach of the multitude by a lucky capture from an enemy, when Sir George Rooke sacked Port St. Mary and brought home such thousands of barrels, and bags, and bales, and bison hides of it, that it was sold by the waggon-load in Portsmouth, Plymouth, and Chatham at fourpence per pound. Could any combination be found more likely to bring snuffing into vogue?

A fashionable practice, a pleasurable stimulant—

> "A delicate pinch! Oh, how it tingles up
> The titillated nose, and fills the eyes
> And breast, till in one comfortable sneeze
> The full collected pleasure bursts at last!'

—as the enthusiastic versewright informs us—an aid to conversation, a pretext for delay and courteous interruption, can we wonder that snuff counted its takers by the thousand? Truly, he who tells at length of its rise and fall will have many a chance of moralising!

But as to our men of ability, who ought to have known better. There was the author of the world's greatest "Rise and Fall" himself. Gibbon took snuff, and he gives us a glimpse of his mode of doing so: "I drew my snuff-box, rapped it, took snuff twice, and continued my discourse in my usual attitude of my body bent forwards and my forefinger stretched out"—where we will leave him, reminding us of

> "The lawyer so grave when he opens his case,
> In obscurity finds it is hid,
> Till the bright glow of knowledge illumines his face
> As he gives the three taps on the lid."

Who has not heard of "Glorious John" and the honour of a pinch from his snuff-box at Will's? Who has not heard of the snuff-boxes of the Queen Anne time? "Would it not employ a beau prettily enough, if, instead of playing eternally with a snuff-box, he spent some part of his time in making one?" asks Mr. Spectator, who would seem to have adopted the "do as I say, not as I do" policy very heartily. Pope, of course, could not write without mention of the snuff-box. He makes his Sir Plume "of amber snuff-box justly vain," as

> "With earnest eyes and round unthinking face,
> He first the snuffbox opened, then the case."

He makes his "wily virgin" throw "a charge of snuff"; and "snuff or the fan supply each pause of chat." The snuff-box on whose hinge the brilliants shine is conspicuous on the basset table, and in the "Key to the Lock" the Twickenham poet lets off a small joke concerning Prince Eugene: "'tis remarkable the General is a great taker of snuff as well as towns." But the Prince was not the only snuff-taking general. Frederick of Prussia used to take so much that he had his pockets lined with leather and made without corners, so that they served as snuff-pouches. Snuff-boxes to carry about with him he would not be bothered with, but on the mantelpieces of the palaces they found their proper place. One day Frederick saw a page helping himself to a pinch. "Good snuff, that?" said the King. "Excellent, sire!" said the page. "Nice box?" "Superb, sire!" "Then take it; it is too small for both of us!" There is another snuff story about Frederick in which the laugh is on the other side. Count Schwerin was presented by the King with a snuff-box which had a donkey's head painted underneath the lid. Next day at dinner the Count produced the box, and showed the lid to the Duchess of Brunswick. "What an excellent portrait of his Majesty!" said the Duchess. The King looked somewhat annoyed. The Duchess handed on the snuff-box to her neighbour. "Is it not a fine portrait?" "Such an excellent likeness!" said the neighbour. And so

on, and so on, until the King ordered the box to be handed to him. Judge of his feelings when he found that the artful Count had had the donkey's head cleaned off and a portrait of Frederick substituted, so as to be able to give the King a lesson in politeness.

Napoleon was another great snuff-taker, or rather snuff-waster, for it is calculated that only one per cent. ever reached his nose. There is a well-rounded story of his visiting the subterranean canal of St. Quentin with Marie Louise, and noticing among the decorations of a hamlet through which he passed on the tour a motto in rhyme:

> "Il n'a pas fait une sottise
> En épousant Marie Louise"—

the local dignitary was sent for. "Ah!" said the Emperor, "you cultivate the Muses in this district?" "Yes, sire, I do a little in that line." "Then you are the author of the 'n'a pas fait une sottise'?" The poet blushed. "Ah! do you take snuff?" and the Emperor held out a diamond-besprinkled box. "Help yourself—and take the box—and—and

> "Quand vous y prendrez une prise,
> Rappelez-vous Marie Louise!"

Even great generals in our own day take snuff. There was Von Moltke for example, who during the three weeks ending with the battle of Sedan is reported to have used one pound of snuff, for which he had to pay, as official book-keeping testifies. Talleyrand's idea was that all diplomatists should take snuff, owing to its giving time to think before an answer, and hiding the mouth and face as the pinch was taken. "A tell-tale feature is the mouth," said he. "It is the most difficult part of the face to keep under control. Now in snuff-taking it is hidden!"

It may be for this reason that kings have been so fond of snuff, and that literary kings have taken to the habit with such enthusiasm, for great men sitting in chairs of honour in coffee-house and club-room may sometimes, it is conceivable, be in want of a minute or so to prepare the volley of wisdom that is to annihilate the inquiring stranger!—or even require a pleasant interruption? We can understand then how welcome must be the fragrant dust that

> "Warms in the nose, refreshes like the breeze,
> Glows in the head, and tickles in the sneeze."

Some authors seem to find sneezing rather agreeable, much more agreeable than did the Hebrews of old, but there is no accounting for taste.

At one time physicians tried to cure diseases by means of sneezing mixtures, and in fact snuff came in, through Nicot, as "a sternutatory." The old mixtures were, however, nothing like so pleasant, though many of them had quite as much tobacco as some of the "fancy" snuffs. It cannot be said that snuff did not pass through the fire of persecution. Pope Urban actually "bulled" it, and excommunicated all who took it in church; but so unkind is fate that nearly every pope since has been a snuff-taker.

James I, whose taste in perfumes was peculiar—and not refined—did his best to choke off all tobacconists, whether men of smoke or men of snuff. His "Counterblaste" is familiar by name—the title was a stolen one by the way; and the mention of titles reminds us of that quaintest one of all the anti-tobacco books, "Tobacco battered and the Pipes shattered About their Eares that idlely Idolise so base and barbarous a Weed, or at leastwise ouer-loue so loathsome Vanitie; by A Volley of holy Shot Thundered from Mount Helicon;" from which it would appear that the Heliconian springs did not always run clear. James was not the only sovereign who waged war on tobacco. Amurath the Turk, whom James would not have considered desirable company, made snuffing and smoking capital offences. The Emperor Jehangir of Hindostan joined the league. And the Muscovite Czar actually cut the noses off all snuff-takers!

A more solemn attempt to put the practice down was made by the canton of Berne in 1661, when in the police regulations the Ten Commandments were increased by the one forbidding tobacco, which was probably present in Mr. Spurgeon's mind when he spoke of the non-existence of an eleventh as to smoking.

Eighteen years before the curious code of Berne, the compurgators of Dunfermline had ordered the bellman "to keep an eye on such as took sneezing tobacco in the more remote parts of the aisle where they thought they could not be seen;" and in 1648 there was a public admonishment "against sneezing instead of preaching and praying." But it was in vain that the theologians warred with snuff, and the medicine men met with no greater success. Some of the medicine men, it should be said, for, as usual, there was no doctor without another doctor to contradict him. Even within the last thirty years a doctor has written to show that snuff-takers never die of consumption, while on the other side it was declared long since that snuff-takers were simply tempting apoplexy! Some said it shortened life, but then there was old Jenkins who lived till he was 169, who took snuff! And every case of a life cut short was met by a quotation of longevity, until it became generally agreed to let snuffing die out if it would, or last if it could—and it went. Most people treated objectors with scorn, as did Calverley the anti-smokers who told such doleful tales:

> "How they who use fuzees
> All grow by slow degrees
> Brainless as chimpanzees,
> Meagre as lizards;
> Go mad, and beat their wives,
> Plunge (after shocking lives)
> Razors and carving knives
> Into their gizzards.
>
> "Cats may have had their goose
> Cooked by tobacco juice,
> Still, why deny its use,
> Thoughtfully taken?
> We're not as tabbies are.
> Smith, take a fresh cigar,
> Jones, the tobacco jar,
> Here's to thee, Bacon!"

And Bacon in these times naturally leads us on to Shakespeare, whose Hotspur's fop's pouncet-box must have held not the dust of tobacco, but a sternutatory, unless the taking "it in snuff" be an anachronism. For Hotspur could not have known of tobacco unless some of the stock of the old Norse colonists still remained on hand. Which suggestion, by the way, is not to be scouted with contempt, now that we have discovered a succession of Bishops of Greenland, *in partibus* perhaps, but in fact nevertheless, lasting from the days of our Henry I to those of our Richard II, and have fallen in addition on the 1300 map of the world in which the American coast line to Florida is laid down.

But that Eric the Red ever smoked the pipe of peace with the sachems of the eastern coast we can leave as a speculation. Let us follow the Columbian path, and assume that tobacco became first known to Europeans on that eventful day in the first week of November 1492, when the two sailors returned to Christopher's vessel from their first stroll in Cuba, and told him how they had seen the natives carrying a lighted firebrand, and puffing smoke from their mouths and noses. It is in Oviedo's "Historia General" that we first get the details of the process, and in its 1547 Salamanca edition we have the first engraving of a tobacco pipe A strange affair it is; a hollow forked cane shaped like a Y, the hole in the foot being held to the burning tobacco, the holes in the top being held to the nostrils for the smoke to be inhaled therefrom. This implement was called *tabaco* by the Indians, whence tobacco, not from the herb, but from the pipe, the herb's name being *cohiba*, *petun*, *piecelt*, or something else not in the least like tobacco. And it is from this forked pipe that the island of Tobago takes its name. "When the Admiral Christopher Columbus passed to the southward of this island, he judged the form of it to resemble that instrument, and thence it received its name."

Having discovered smoking tobacco on his first voyage, Columbus found snuff on his second. The good friar who accompanied him relates how the natives reduced the herb to powder which they take "through a cane half a cubit long: one end of this they place in the nose, and the other upon the powder, and so draw it up." This discovery was made in 1494.

In 1559 Jean Nicot was sent as ambassador to Portugal by the French king, and at Lisbon he bought some tobacco seed from a Fleming who had imported it from Florida. The Grand Prior of France raised a few plants from this seed, whence came the *herbe du Grand Prieur*, which was renamed *herbe de la Reine* when Nicot presented some of the plants to Queen Catherine; and finally it was scientifically recognised as Nicotiana after the lucky Sieur de Villemain. The Spanish name however took the popular ear, and tabac or tobacco it remained after it had gone through a course of Antarctic Bugloss, Antarctic Panacea, Peruvian Henbane, and similar absurdities.

When first introduced snuff was supposed to be a remedy for one disease in particular and for many in general. "The Faery Queen" is not a likely work in which to find mention of the weed, and yet Spenser allows Belphœbe to gather it for the healing of Timais.

> "There whether it divine tobacco were,
> Or panachea, or polygony,
> She found and brought it to her patient deare,
> Who all this while lay bleeding out his heart-blood
> neare."

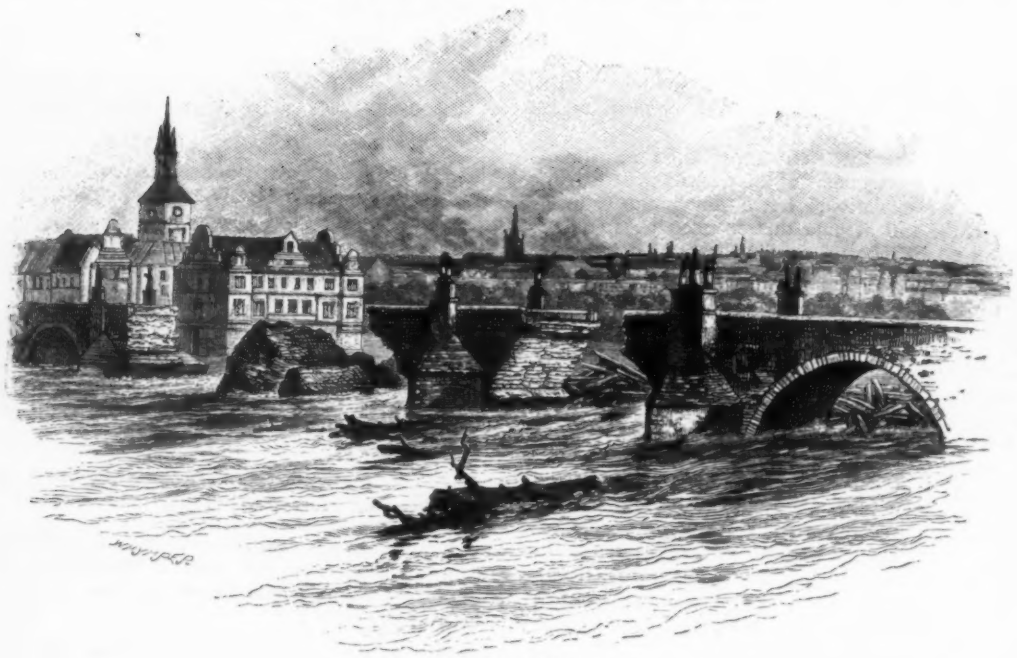
And John Lilly—a great smoker was the Euphuist—makes Pandora in "The Woman in the Moone" order her servant:

> "Gather me balme and cooling violets,
> And of our holy herb nicotian,
> And bring withall pure honey from the hive
> To heale the wound of my unhappy hand."

Which reminds us that one of the aliases of tobacco was the Holy Healing Herb. It was also used as a digestive. In 1599 the "Dyets Dry Dinner" informs us that

> "Fruit, herbs, flesh, fish, whitemeats, spice, sauce, all
> Concoct are by tobacco's cordiall."

Later on it was promoted from being a digestive to being the food itself, and even in these days we hear of a pipe as a hot dinner, an idea at least as old as 1623, *e.g.*:



> "Much victual serves for gluttony to fatten men like swine,
> But he's a frugal man, indeed, that on a leaf can dine,
> And needs no napkin for his hands his fingers' ends to wipe,
> But keeps his kitchen in a box, and roastmeat in a pipe."

It is said that Sir John Hawkins first brought tobacco to England in 1565, that Ralph Lane, in 1586, was the first to smoke it in this island, and that it was first smoked at the Pied Bull at Islington; and there is the Drake story, and the Raleigh story; but which is the truth we need not here stop to inquire.

When snuff reached us first is equally doubtful. In Dekker's "Gull's Horn-book," 1602, we read of the "ladle for the cold snuff into the nostril, the tongs, and priming iron." And of course the "Counterblaste" has something to say about it, "the Scottish Solomon" having waged war against the weed in all forms.

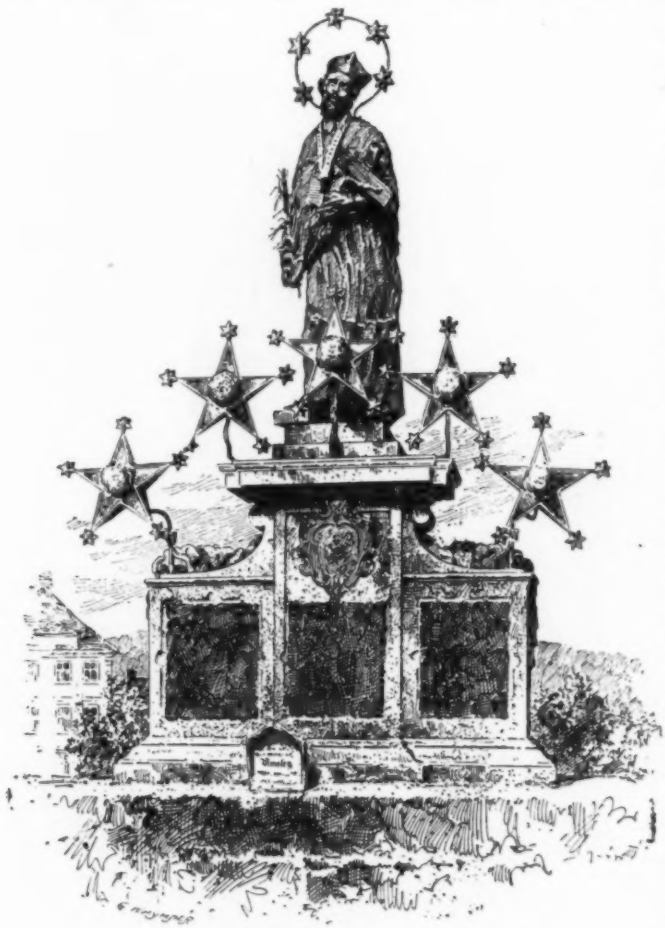
W. J. GORDON

# THE CARLS BRIDGE AT PRAGUE.

PRAGUE BRIDGE.

THERE are few bridges—nay, is there one more picturesque in itself, and in the quaint towers that form its gateways, than this same Carls Bridge that unites the Altstadt, or Old Town of Prague, with the Kleinseite, or Littleside, upon the opposite bank of the Moldaw.

And few bridges have so become a part of the life of the people as has this famous bridge. It is the Acropolis, the Forum of Bohemia. It has been the connecting link, or at times the dividing barrier, between rulers and the people for six centuries; and many of the momentous episodes in the stirring Bohemian history have been enacted in the presence of crowds who have thronged, beneath its towers and over its sixteen arches, to town or palace, citadel or cathedral.



A wooden bridge crossed the Moldaw at this spot in the twelfth century, and this was replaced by a stone structure; but the stone structure was swept away by floods and descending blocks of ice in 1342; and it was not until the famous Carl the Fourth was upon the throne of Bohemia, that the present bridge was founded, at a period when the histories of England and Bohemia were linked together by apparently slight, but yet by important ties, shortly after the father of Carl, the blind king Johann, had lost his life fighting against England's Black Prince upon the undulating, sunny plain of Creçy.

Carl himself had sought union with England by pleading for the hand of Edward's daughter, Isabelle, a union which Edward was not averse to, but to which the Papal Court objected; and as Carl was a man of prompt action he returned from his visit to the island of Tholin in Zeeland, whither he had gone to carry on the negotiations, and in the following month married Anna, daughter of the Count Palatinate of the Rhine.

But the bridge at this period was not the picturesque bridge we see it now—or, rather, did see it before the terrible catastrophe of September last swept away many of its statues and several of its arches; now one of the greatest charms of the bridge is the numerous groups of statues, and saints, and martyrs, and warriors. These have all been put up either in the eighteenth or in the first half of the present century, with one exception; and most interestingly effective they are, cutting the skyline with their irregular outlines, as we stand beneath the tall towers of the Old Town, with its high-pitched roof, and statuettes, and shields with coloured coats of arms upon them. There are no less than thirty of these statue groups, and in the centre are two great crosses, before which, as the busy crowds pass on, each individual of whatever rank or station respectfully crosses himself or doffs the hat. Now and then one sees a deflection from this custom, and perhaps these are increasing; but

still it is an interesting sight to stand near this crucifix and watch the reverence paid to the cross by men and women, gentle and simple.

There is another cross on the bridge, which would hardly be noticed by the stranger, that by the peasantry and simple folk has nearly as much reverence shown it. This cross is a small double-armed one, let flat into the stone of the coping of the bridge; and the stone around it is worn smooth and the brass of the cross kept bright by the constant touching and smoothing of the myriad hands that rest upon it, ere they cross themselves and

STATUE OF ST. JOHN ON THE BRIDGE OF PRAGUE.

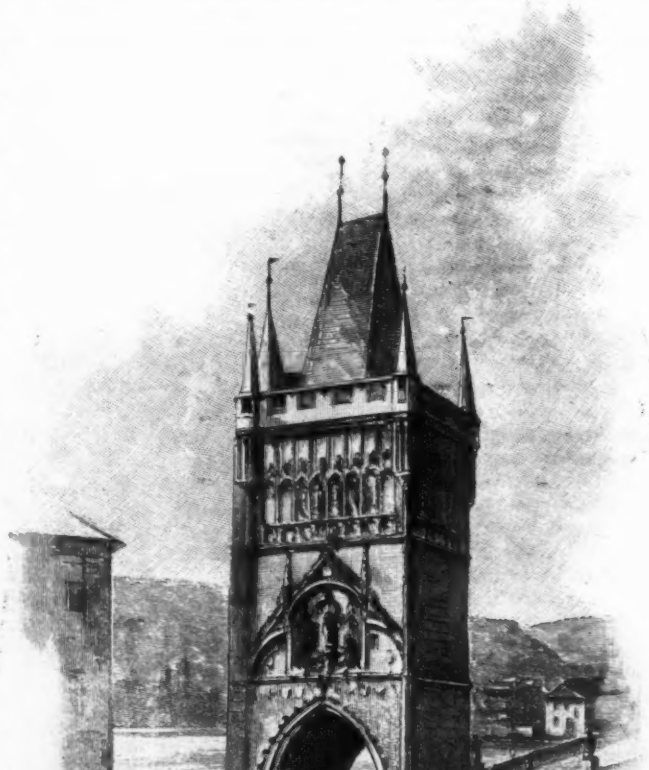
murmur a prayer to the now patron saint of Bohemia, St. John of Nepomuc. A little further on, towards the Kleinseite, rises the statue of this saint, with the mythical five stars around his head. This statue was raised in 1683, and is the oldest upon the bridge.

This brass cross is supposed to mark the spot over which the saint was thrown into the river, and beneath which his body floated, in spite of the incessant rush of the current, for many days, with these same five stars glittering round his head.

The incidents that led up to his murder, and the scenes that preceded it, are so characteristic of the tempestuous life in Bohemia in those days that they are worth recounting, especially as a different story is commonly current; and they allow a glimpse of the life that has surged around this spot for centuries, and that even now may be still seen on this St. John's Day in May, when the bridge is crowded with peasant worshippers in curious costume and brilliant colours.

King Wenzel, who in 1393 ruled Bohemia, was of a terribly passionate nature, and resented any attempt at interference from the Archbishop of Prague. He intended with his young bride to make a pilgrimage to Rome in this Prague Jubilee year of 1393; but the people were commanded for eight days to go to confession in procession to certain churches in the New Town, and to the Cathedral on the Hradschin, exactly as they do now during the St. John's week in May. The crowds were enormous, in spite of a quarrel which broke out between archbishop and king. One subject of quarrel led to another, but one matter that aroused the king's fury was the subtle action on the part of the Church in appointing most promptly a new abbot to the Abbey of Kladraw. The king had intended making a bishopric of this Benedictine monastery, building a cathedral there; but the monks were too quick for him; immediately upon the death of the Abbé Racek a new one was chosen, and the choice confirmed by the archbishop. The king was furious; for he received the news of the death and the new appointment simultaneously. He sent messenger after messenger to the archbishop, who fled to Raudnitz, a castle on the Elbe. At last the king's confessor persuaded him to return to Prague, in spite of as curt a letter as archbishop ever received. "Tu Archiepiscope! mihi castrum Rudnic et alia castra mea restituas, et recedas mihi de terra mea Boemiæ, et si aliquid contra me attentabis vel meos, volo te submergere, litesque sedare. Pragam veni." After some pourparleying the archbishop went with his train to meet the king, who also appeared with a great following in Prague; but on the king seeing the priestly following, he was so enraged, he tore up the compact that had been prepared, with oaths and curses, and commanded the archbishop, the general vicar, John of Nepomuc, and others to be seized and carried up to the Burg that dominates the town from near the Cathedral, and there to be questioned. The archbishop fell on his knees, and in turn the king sarcastically did the same, imitating his actions; the priests were taken and led up to the Hradschin, the archbishop fell back amongst his armed men, and retreated to his residence, and managed to escape from Prague.

At the examination of the priests, the king's rage knew no bounds; he wounded one with his own dagger, and commanded others to be led into the torture chamber that he might learn all he wished from them. Amongst those who withstood all torture—and the king himself applied the rack, says history—was John of Nepomuc; and at last the king ordered the half-dead priest to be carried out and thrown into the Moldaw. This happened on March 20, at nine o'clock in the evening.



There has been great strife in the Roman Catholic Church as to whether this general vicar, John of Pomuk or Nepomuc, is the same as the one who was canonised by Benedict XIII on March 19, 1729. There is a doubt if the wrong man was not canonised, but the holy "Jan" of Nepomuc now takes the place of the holy Jan Hus who so nobly carried on Wycliff's work; and the village of Nepomuc being close to the village of Husinetz, their saint comes from the same part of Bohemia.

But our subject at present is the Carls Bridge, and not as to whether the peasantry of Bohemia still reverence Jan Hus under another name. Scenes such as the one just described, of strife and pomp, of war and religion, have made this bridge a marked point in Bohemian history, and when at a later period the Wycliff movement spread and grew so vigorously in Bohemia, largely under the fostering care of Peter Payne, an Englishman,[1] many were the momentous scenes that occurred on this bridge. The towers on either side were frequently used as forts, and sometimes the Royal party were kept prisoners in the Kleinseite by the burghers of the Old and New Towns, all communications being cut off from the surrounding country. In the year 1520 there was a great conflict on the bridge between Hussites and Catholics, owing to some injury having been done to the crucifix.

In 1558, the Emperor Ferdinand I made his entry into Prague over this bridge, that was richly decorated in his honour. Down from the struggles for liberty of conscience in the middle ages to the seventeenth century, this bridge has played its important part; and when Protestantism was crushed out of Bohemia, from the bridge towers looked down the skulls of the leading Protestants for many years, reminding the burghers of how they had aided to give the world freedom of soul. Later on this same tower served as a fort against the Swedes, who had captured the Royal or Kleinseite.

[1] See articles on a "Great Forgotten Englishman," in the "Leisure Hour" for March, April, and May, 1890.

This slight sketch of the eventful history of this famous bridge will show how the hearts of all Praguers, and of all Bohemians, were moved when, on the morning of September 3, 1890, the cannon announced the terrible danger that was threatening Prague; but in spite of the awful roaring floods that raged around its piers and half-filled the town, so little did some dread any danger to the bridge that had stood for centuries, that they went on to

GATE ON PRAGUE BRIDGE.

it to watch the floods and masses of timber that thundered against its piers; but at half-past five on this morning, with a mighty crash, the fifth and sixth arches fell into the roaring flood. The statue of Ignatius Loyola, standing upon the globe, with other statues, went in with the arches; but, strangely enough, the statue of John of Nepomuc, the patron saint, remained erect, and withstood the flood that boiled and rushed between the broken arches on either side of it, though, seen from the Old Town tower, the arch on which it

stood seemed bent and twisted. It was but a few months before, on May 16, that the writer had seen this statue surmounted by a Greek temple-like canopy, and surrounded by kneeling, praying crowds of pilgrims from every part of the polyglottic dominion of Austria. The fact that his statue has been preserved will give them yet greater faith in the holy "Jan"; and when once more the bridge is restored, and his fête again celebrated upon the Carls Bridge, great will be the concourse of pilgrims. But already great loss of life has been caused in attempting to restore it, for some twenty have been drowned through the river destroying a dam erected to protect the workers. But the work will go on, and soon again strangers will be able to stroll over its piers and look out over the picturesque grouping of the towers and spires of Prague, that form so pleasant a picture when seen from the historic Carls Bridge.

JAMES BAKER, F.R.G.S.

## OUR NEIGHBOURS ON THE PRAIRIE.

OF course they despised us. We felt that from the outset, although, in our inmost hearts, we considered that we had the advantage of them in many respects. Our neighbours were all Americans, while we were foreigners; they therefore belonged to "the finest nation under the sun," while we sprang from a necessarily lower order of nationality. Yet they were very friendly withal, and very willing to help us. Living on the prairie promotes neighbourliness. It is impossible there for one to retire into the shell of self which civilisation, with newspapers and easy railway communication, has provided for the benefit of those who dwell in the older communities. In a crowded city you may live isolated and unknown; you cannot do that on the thinly peopled prairie. You and your cabin become an item in the daily life of those around you from the moment that you appear on the horizon, and nothing short of "moving West" can render you of no further interest to your neighbours.

Our nearest neighbours in Kansas were the Weddells. They were a large family, with a lazy, dark-eyed father, and a lazy mother from whose face dirt and smoke had long banished all characteristics except the negative one of no teeth. I must have seen Mrs. Weddell under many and various conditions during the four years we lived near them, but I can recollect her in only one position, namely, that of perpetually sitting beside the fire smoking her corncob pipe, enveloped in a cloud of wood smoke, which always brought tears to my eyes as I crossed the room to receive the nonchalant greeting "How d' ee, gal?" The Weddells were a type of the American nomad, which must now be rapidly disappearing as civilisation presses more and more strongly against the limits of savagery. The Weddells could not endure civilisation. They came from Kentucky, familiarly spoken of by them as "ole Kentuck," which they had abandoned because it was being settled up fast, and these nomads could not bear being hemmed in by many fences. They liked the free and open country best. Accordingly they set out in a great emigrant waggon, with all their children and all their belongings, and drove towards the setting sun. They crossed the Mississippi, and drove through Missouri, until finally they came to a halt upon a piece of good-looking prairie in eastern Kansas. Mr. Weddell "took up" his quarter section—that is, one hundred and sixty acres—built his one-roomed log cabin, set up his stake and rail fence, turned over the virgin sod, planted his corn, and began to farm. Then we came after a while, and took up the next quarter section, built our house, and began to farm. Then somebody came west of us, and so on. We were shutting out the Weddells' unlimited western prospect, and penning them in by our fences. They began to get uneasy; they talked of "moving West." They had no definite dissatisfaction with their present abode, and no clear expectation of finding anything better westward. They seem to have been inspired by an impulse somewhat similar to that which prompts sheep, when turned into a new field, to go rapidly across it, taking a bite here and there, until they reach the opposite limit of their walk, when, convinced that there is no further advantage to be gained by hurrying forward, they quietly retrace their steps, grazing methodically. The Weddells had not yet reached the western limit of their pasture, and could not content themselves. They had no more affection for the home in which they dwelt than gipsies feel for the thorn-tree under which they pitch their camp for the night.

The two elder Weddell girls conferred a great benefit upon us by successively becoming our servants. Not that they for one moment would have admitted the name as applying to themselves. In Western parlance they were our "hired girls." Of course, they were upon an absolute equality with us in all respects. They dined at our table, and sat with us of an evening, and we worked with them all day. There is little chance of maintaining artificial social distinctions, when everybody lives together in one kitchen, where the men's boots, and the horses' harness, and the milk-pails, and the flour-bags, are all assembled in one motley community.

Eliza Weddell, our "hired girl," lived, as I said, upon a perfect equality with us in the kitchen, but there was one faint line of distinction that Auntie endeavoured to draw. Opening off the kitchen and general living room was a small apartment, Auntie's bedroom, in fact, in which she and I slept, and in which she endeavoured to maintain a certain degree of privacy. There was a stove in it and a rocking-chair, and a table where I did lessons spasmodically, when not wanted to hunt for the cattle, or drive the waggon, or feed the chickens, or milk the cows, or plant the corn, or chop up kindling wood, or wash the dishes, or bake the bread. Into this room no one was to enter without first knocking at the door. Such was Auntie's rule, and not a very unreasonable one either when all the circumstances are viewed dispassionately. But Eliza Weddell kicked dreadfully against it. To her it seemed a sign of degrading subordination to ask permission to go into a room. And subordination is a thing not to be thought of in a free-born American as against a foreigner. The only way in which Auntie could enforce the rule on Eliza was by making me adhere rigorously to it. Therefore it often happened that I was obliged to knock loudly at my own bedroom door before entering, to find nobody inside.

Eliza's service came to an abrupt termination without warning. It happened in this wise.

My father's watch used to hang in the kitchen with the hunting-case open—for we had no clock—but everybody was under strict orders not to touch it for any purpose whatsoever. It was only upon that condition, rigidly enforced, that he could leave an open watch in a room where everybody was constantly coming and going. One fine day the watch was discovered with a large greasy thumb-mark upon the dial, and the hands broken. Who did it? There could be little room for doubt. I, who was eight years old, could not have made a *large* thumb mark, although eminently capable of making a very greasy one. Auntie had not touched the watch. There remained Eliza. My father asked her had she touched it.

"No," she answered shortly.

Not being satisfied with this answer, he again referred to the subject. He pointed out the thumb mark to Eliza, and touched upon the circumstantial evidence, which was strong.

"I won't say anything more about it, Eliza," remarked my father, "but you may as well tell me how it happened."

Eliza's dignity was hurt. American and free-born, she replied as became her twofold character:

"I h'aint agoin' to stay in no house to be axed questions twice, I can tell yer. I said no oncet, and now I'm agoin'."

She reached down her bonnet and went out of the house and walked home, and that was the end of her as a servant. One had to be more careful of the feelings of "hired girls" than we knew. Thus Auntie and I were left with the house and the cows and the chickens metaphorically on our shoulders. Auntie was an invalid, and my shoulders had only the width that belongs to eight years, so that we made haste to seek another "hired girl," and my father registered a vow never again to ask a question more than "*oncet*."

Quite a different type from the Weddells were the Hunts. They were people of ideas and sound common sense, in whom natural intellect supplied to some extent the deficiencies of a limited education. Mrs. Hunt was a pretty little gentle creature, fully occupied in caring for four children, minding her house, and smoothing over the roughness of her husband's character. Mr. Hunt was a short, broad-shouldered man, with piercing grey eyes looking keenly from under black brows. Whatever the expression of his mouth may have been, it is impossible to say, for it was hidden by a bushy black beard, through which there came occasional gleams of white teeth, which somehow always made me think of the snarl of a dog. Indeed, he was not altogether unlike a bull-dog in appearance, and his character had some of the traits usually attributed to that canine breed. He would have made a first-rate fighter. But of all the ill-fitting doctrines in the world, the one which this frontier bull-dog took up was that of non-resistance. He would argue with the greatest violence for his pet doctrine, and seemed ready to knock any one down if not ready to fiercely agree with him, that non-resistance under all and any circumstances was the only course to be pursued. This Mr. Hunt was certainly an anomaly in Kansas during the troubled times when a man's life pretty much depended on his skill with his revolver, and his readiness to resort to its decision in cases of dispute. Mr. Hunt came from Missouri, and a quaint story floated after him that illustrates how much easier it is to preach than practise non-resistance. The story runs that when he found Missouri, which was a slave State, too hot for him, a known abolitionist, he determined to cross over the border to Kansas, which was making a gallant stand for freedom. Accordingly, packing his valuables and his family into the huge waggon that every Western man possesses as a matter of course, he started towards the land of freedom. Amongst his valuables in this waggon, by some strange coincidence, Mr. Hunt had included a rifle and some ammunition. It was a singular item in the load of such a fierce non-resistant, but it was there nevertheless. They had just crossed a small river, when Mr. Hunt became aware that a couple of horsemen were following. As things then were in Missouri, it was generally very serious for a known abolitionist, who was flying towards Kansas, to be pursued by horsemen. The pursuers under these circumstances were invariably found never to be non-resistants, and many a time those they pursued had to fight desperately for their lives. Therefore, when Mr. Hunt, that eminent non-resistant, saw himself pursued, he got out his inconsistent rifle and to the confusion of all doctrines fired upon the foe. One of them fell, and Mr. Hunt continued his flight, reaching Kansas in safety, where he resumed his favourite theories in all their pristine energy, and vainly endeavoured to cram them down the throats of his neighbours.

Visiting on the plains was pursued on a totally

different system from that which obtains in populous centres. Instead of the half hour's interruption, known as a morning call, which has no definite object, and which usually serves as an active irritant to the minds of the two participators, the visit among prairie settlers became an all day's excursion, and one not to be undertaken lightly. Being desirous of seeing a neighbour, the Western matron inquires of her husband, for instance, when he is going to see about that yoke of oxen he is going to buy of "ole man Robinson," and says :—

"I 'llow I h'aint seen B'linder Jane Robinson this year. Wall, now, come to think on't, I h'aint bin nigh ole man Robinson's since last corn shuckin'. Me an' the childern go 'long when you're goin'!"

When the visiting day arrives, the children are scrubbed and dressed in their best, with shoes and stockings on their feet for the occasion. Immediately after breakfast, at six A.M., the horses are hitched to the waggon, and the family sets off across the prairie towards "ole man Robinson's." The "ole man" himself is probably off in some distant field at work, but youthful Robinsons running about bare-headed and bare-legged espy the waggon, and with whoops and yells announce the advent of neighbours. B'linder Jane with her apron over her head goes to the bars, which do duty as avenue gate, and welcomes her friends, and that right cordially too, for, as I said, visitors are rare, and women folks are kept on rather short commons of the food their souls love—gossip. The children hobnob together; the mothers go into the kitchen, where the visitor takes off "her things," puts on a big apron over her best dress, ties it up, and helps B'linder Jane in the preparation of the dinner. Visitors must do their full share in the extra work their presence entails, otherwise their coming would indeed be a doubtful pleasure in a house where every one is already overworked. Dinner is at twelve o'clock, and after the clearing up and washing there remain a couple of hours for talk, and then the visitors depart in time to be home "an' do the chores afore sundown." Every wise person is home before sunset, or he will be caught by the swift-coming night that follows the day so quickly, with none of that gradual melting away of light into darkness which forms the poetic twilight of the northern latitudes.

I remember two worthy women who once came to see us in the usual prairie fashion with their children. They particularly relished some toothsome dish which Auntie with her traditions of another civilisation had prepared for them.

"That thar is mighty good," observed one of the ladies with keen satisfaction.

"Do let me give you a little more," urged hospitable Auntie.

"I reckon I'm full," answered the visitor, who nevertheless continued to eye longingly the tempting dainty. "Maybe if I got up an' walked round a spell I might scrouge down another bit."

She forthwith began to take pedestrian exercise around the kitchen, at the end of which she succeeded in "scrouging down" another helping, to her evident satisfaction.

Our neighbours were in many respects comical. Their droll assumption of superiority coupled with the most stupendous ignorance was often diverting enough; as, for example, when a youthful neighbour who went hunting after his cattle stopped my father with this question :

"Have yer seen dad's male cow?"

"Seen what?" inquired my father in bewilderment.

"Dad's male cow, the black 'un with a star on his forehead?"

"Why, man alive, do you mean your father's black bull? Why didn't you say so?"

But the youth rode away much confused, blushing at the indelicate word, and no doubt he inwardly marvelled at the singular lack of polish observable in foreigners.

Yet even while we laughed at their oddities—and who could deny they were sometimes odd?—these neighbours of ours won our respect by their sterling good qualities, and gained our gratitude by their kindness.

There came a sickly year, a hot scorching summer followed by a tropical deluge of rain in the early autumn. The masses of decaying vegetable matter soon infected the air, and everybody was struck down by fever and ague. Pale, miserable wretches with blue finger-nails might be seen in every house sitting over the fire, shivering in deadly chill. Neighbours never went to see each other except upon urgent necessity, for each household, like an undermanned ship, was struggling with the work needful to keep body and soul together. In our own household every one was stricken down. Our man and our "hired girl" only left us when too ill to stand; they went back to their own sick homes to swell the invalid list there. We were very weak, but of the three who formed our family there was usually one out of his chills on each day. We had but one meal in the twenty-four hours, for before the time came for getting another meal ready, the wretch who had prepared the dinner was down with a chill, while the two wretches who had not prepared the dinner were feebly struggling back into a semblance of life after raging fever and delirium. And so it went on in weary round : chill, fever, dinner—dinner, fever, chill. Oh, it was a ghastly time!

In the midst of all our misery we became aware that our well of drinking water was being horribly infected by some fearful substance, which rendered the water almost undrinkable even to our fever-parched throats. We knew only too well what must be the matter, but we were too weak to draw off the water and clean the place. It was as much as we could accomplish to drag up a couple of buckets daily to quench our raging thirst.

One Sunday morning a neighbour came to our relief. He was a blacksmith who worked hard all the week, but he had heard of our distress and he came on the first day he could leave his work. He drew off all the water out of the well, toiling on steadily hour after hour, while we gazed from the windows at him, feebly marvelling over the strength of those tireless muscles. When he had emptied

the well he went down into it and fished up thirteen dead and decaying moles! No wonder the water had been too horrible for even the dogs to drink. It was only our desperate thirst combined with our utter weakness that had driven us to swallow the awful liquid. That good blacksmith was one of our neighbours, and he has earned our life-long gratitude for the hard day's work he did for us on that autumn Sunday so many years ago.

Notwithstanding all drawbacks, however, life on the prairie has a certain charm of its own, a charm too that appeals strongly to the most civilised of persons. I remember one of our friends who exemplified this fact very strikingly. She was a Boston lady; civilised was no word for her. She was particular, dainty, fastidious to the last degree. Her dresses were always fashionable, her collars of the snowiest, her gloves immaculate, and her boots made the reputation of the shop she patronised. Well, this elegant little lady came to see us. She arrived late one afternoon in the beginning of summer. Auntie and I flew to welcome her to our prairie home as the waggon stopped at "the bars." We kissed her ecstatically, but she seemed dumb with amazement, and stood gazing blankly at—our feet. Auntie and I were barefoot. Of course we were, so was everybody, and we had quite forgotten that it was customary for ladies to wear shoes and stockings. Our Boston visitor did not know this, and she said we looked like a pair of wild Irish beggars rather than civilised beings. Before a week had passed, her dainty Boston boots reposed permanently at the bottom of her trunk, and she barefooted it merrily with the rest of us through the black dust or mud of the high prairie. When her visit was ended and she was leaving she said regretfully:

"Oh dear! I am so sorry to go away! Now I shall never be able to go barefoot any more."

The boots of civilisation do indeed pinch in many ways, and it is a relief to mind and body to pitch them and all other trammels away for a time, and run wiid on the prairie.

## September.

SPRING, with her dower of leaf and bud and blossom,
Summer, with lavish wealth of scented hours,
Each held within her flower-laden bosom
The seed of these gold hours.

Gold with the wealth of harvest yet to gather,
Rich with the fruitage of the waxing year,
All seasons yearned to this—yet hold we rather
The Spring and Summer dear.

Because no harvest ever is as pleasant
As seed and flower time when they have fled fast;
Because we see all grey the golden present,
All golden the grey past.

And even this Autumn—though complete in seeming,
This holds new seeds, which time to fruit shall bring;
This lends sweet substance to our dearest dreaming;
From this shall grow the Spring.

And when Spring comes, in spite of all our reason's
Dull teaching, we shall yearn to harvest's hour;
Because, thank God, hope blooms through all the seasons,
Life's one immortal flower.

# REMINISCENCES OF ARY SCHEFFER AND HIS TIME.

ARY SCHEFFER, FROM A PORTRAIT BY HIMSELF.

## PART I.

### ARY SCHEFFER AND HIS MOTHER.

ARY SCHEFFER was born in the old capital of Holland, Dordrecht, at the fag end of the last century; his father held some high position there. There were four children: three boys, Ary, Arnold, and Henri, and one daughter. Later on, during the First Empire, he was made by Napoleon either Prefect or Intendant at Dordrecht, and he was held in high esteem by his fellow-townsmen; but when he died, he left Madame Scheffer with her four children and very limited means. These means she resolved to devote entirely to their education, and for that purpose she left Holland and established herself in Paris.

Of Ary Scheffer's childhood little is known. Madame Scheffer, who was herself highly educated and most refined, always attended with the greatest care to the education of her children, and they did her credit. All three became renowned men: the eldest, Ary, and his youngest brother Henri, as painters, and Arnold as a literary man, for a long time associated with the "National," under the editorship of Armand Carrel.

Another great misfortune befell Madame Scheffer in the death of her daughter, on whom she had heaped all her hopes of the future. She well knew that her sons would have to fight their battles in life, and, much as she loved them, she would not have kept them with her, but she would have had her daughter as an angel by her side. Now she was gone—how much she wept, how long she wept!

Once Ary was at his work, his desolate mother seated by his side; he turned round and saw her in tears. "Be consoled, *ma mère*," he said; "you have lost a daughter, but henceforth I will be to you a son and a daughter." And well he kept his promise from that day. When she grew old he tended her, even as a tender mother would have tended a child; he never left her but once.

### EARLY MANHOOD.

When Ary came to manhood he found himself involved in grave discussions. The fire of politics at that time (the Restoration) burnt into many a young brain. The three brothers affiliated themselves with the most ardent of the Republican party. A great conspiracy was afloat, that of Larochelles, which was to explode simultaneously in three different places: Larochelles, Marseilles, and Béfort in the east. The brothers Scheffer went to represent Paris, one to each place. Ary was to be at Marseilles, Arnold at Larochelles, and Henri at Béfort.

The evening came when they were to leave their poor, poor mother; they were as deeply affected as she was, but she had the spirit of the mother of the "Gracchi." "Mes enfants, allez où la Patrie vous appelle, et que Dieu vous garde." (My sons! go where your country calls you, and may God protect you.) They went, and the mother was left alone with her great sorrow. This was the first time Ary had ever left his mother, and it was the last, for he never left her again.

But before they could reach their posts the plot had exploded. Henri Scheffer only arrived at Béfort in time to hear of the abortion of the affair; all there was confusion. But as they travelled under assumed names, they were all three able to return without difficulty.

The four sergeants of Larochelles, at Marseilles Captain Vallé, and at Béfort Colonel Caron and Lieutenant Roger, were all executed. Thus ended the greatest conspiracy of the Restoration, known as "The Conspiracy of Larochelles, Marseilles, and Béfort."

. . . . .

I had written thus far when a friend lent me the "Histoire Populaire Contemporaine de la France." By it I found that my memory had been faithful. But in that history it states that Ary went to Béfort; that I am sure is an error, because I was present once when Henry related, before his brother Ary, his prowess at Béfort.

He said that when he and his comrade arrived there, they found the town in great turmoil; they were anxious enough, for, though they had fictitious passports, it was no time to ramble about the streets. They went to a small hotel, where they engaged rooms on the ground floor and began to think what was to be done. They had brought a damaging piece of evidence, a boxful of tricolor cockades. What to do with them? They knew next morning perquisition would be made, and if discovered, they knew what that meant—the scaffold, perhaps. Henri looked out of the window; he saw a bridge; there was their "salut." They knew that in small towns people go to bed early. They waited until everybody was fast asleep; that was their time. They opened the window, left it ajar, carried the box on to the bridge, placed it on the parapet; Henri gave a good kick, there was a splash, and all was over; they were safe.

### 1830 AND ITS INFLUENCE.

This was a peculiar time. Napoleon I had a military aristocracy, Louis XVIII had the old nobiliaire aristocracy, under Louis Philippe there came forth *l'aristocratie de l'intelligence. Les beaux-arts, la littérature* were the aristocracy. Louis Philippe was a *Roi bourgeois*. France became bourgeoise. The bourgeois made money and saved it, like true bourgeois. The aristocracy of intelligence was represented by Victor Hugo, Dumas, Lamartine, and others; by Ary Scheffer, Horace Vernet, Delaroche, in the world of art; by Auber, Meyerbeer, Halévy, and the rest in music. There were in those times no small *littérateurs*, no small painters, no small musicians. All were representatives of intelligence and liked due honour to be paid them as such; besides, as students, they had had a finger in the revolutionary pie; they had made the king, the king had not made them. On the whole the new aristocracy was not more amiable than that of the old *régime*, which was haughty but not proud. All that was not intelligence, according to the new idea, was contemptible; trade, commerce, money, what was all that to intelligence? Any rapin, any unknown poet (particularly a poet) ever so small counted as of more importance. To see these young men, with their dishevelled hair, pointed beards, shabby clothes, walking erect, as proud as Pride herself, looking down on all that was not "Intelligence," one would think their ways would have made them hateful. Not at all; they were looked at by the well-disposed bourgeois as something that might be great some day, and were in many ways much indulged. However, out of so many who thought they were called, very few were chosen.

### THE PALAIS ROYAL.

Ary Scheffer made his first appearance in the artistic world by exhibiting his first picture at the Salon of 1815; he was just twenty years old. His picture had a great success. I think it was "The Citizens of Calais in the English Camp before Edward III."

The young artist witnessed the downfall of the First Empire, with all its miseries and desolation. Louis XVIII entered Paris, and peace was restored. Up to that time he had given little thought to politics; he had studied, with all the energies he possessed, under Baron Guérin, about the last of the David school.

His fame grew every year higher and higher; he produced many pictures, much admired for their originality. He left far behind the academic school of David, he was the originator of the "Ecole romantique." His first companion was his beloved friend Géricault, a young man of great

genius, who, though very young, had painted that great masterpiece, "Le Naufrage de la Méduse." At the time of its production the people, who had not yet shaken off the academic tradition, did not understand that awfully grand representation of Nature in anger, with all its victims dead or dying, and the sullen, immobile despair so grandly depicted in the faces and attitudes of those wretched survivors. Poor Géricault! he died shortly after, before reaping a shred of the glory he so richly deserved. His friend, Ary Scheffer, was the main cause of a monument being raised to his memory.

During the Restoration Ary Scheffer painted many pictures, large and small, mostly from poets. His imagination was very versatile. His style at the time was what was afterwards called his first manner; German in sentiment and Dutch in touch, only the Dutch of Rubens, Vandyke, or Rembrandt.

Some time before 1830 Ary Scheffer became the master of the Duke of Orleans' children—he taught them all. Princess Marie was his favourite pupil. They all had talent, but she had genius. No doubt he studied sculpture to teach it to her, for he became a sculptor of great ability, as was shown by his beautiful *funéraire* statue of his mother after her death. Princess Marie's statue of Jeanne d'Arc is well known and very popular.

Ary Scheffer soon became a great favourite at the Palais Royal. The Palais Royal was then the rendezvous of all young geniuses in fine arts and literature, particularly fine arts. Literature sometimes said naughty things, fine arts never did. Scheffer was the greatest favourite at the Palais; and no wonder, for he was certainly the most accomplished man amongst all the artists: handsome, well developed, easy in manners. His face was rather stern in expression, it had something of a military look; but when his amiable smile broke out, then he was more than handsome. Highly educated, an historian and linguist, the best art critic of his time, courtly and kind in his manners, but always manly, frank, and open, always ready to oblige, particularly poor young artists, he was on all hands highly esteemed. His fidelity to his friends had no bounds. He had friends in every party; Legitimists, Orleanists, and Republicans, all seemed alike to him, and he cherished them all and always. Changes of government made no change in his friendship. By conviction he was a Republican, and an ardent and active one. No wonder then, with all these rich qualities, that the Orleans family formed a great attachment for him. He was very devoted to them, and his devotedness lasted as long as they lasted. The one he liked least was the head of the family; a man of his perspicacity could see the Duke of Orleans blindfolded.

There was a vast difference between the Tuileries and the Palais Royal. The Tuileries in 1780 was the abode of all that was beautiful, young, gay, witty, luxurious, and it had its tinge of philosophy—the philosophy of luxurious people. But the Tuileries of 1820 was very different; painters, writers of the Empire could not find themselves at home at the old Tuileries. All was so old *régime*. The king, who could no longer write madrigals to amuse himself, he was the king and that was all. His brother the Comte d'Artois' greatest amusement was to place half a franc-piece between the sole and upper leather of his shoe and shoot at it with a pistol; they said he never missed. There was also the Duc d'Angoulême, who amused himself by playing at war with Spain. There was the Duchesse his wife—Napoleon I said she was the only man in the Bourbon family—the widowed Duchesse du Berry with her little son. This was the Tuileries under the Restoration. What was there to attract a young generation with burning imagination, full of youthful activity, full of noble ambitions and generous inspirations, restless, wanting a place in the world? Would they go to the Tuileries when the gates of the Palais Royal were open to them to meet all that was great in every way, the greatest geniuses, the most eloquent among the députés, all in a medley. This was the centre in which Ary Scheffer mingled, though young yet, at the Palais Royal.

### THE REVOLUTION OF 1830.

Three days and all was over; the old *régime* was swept away. King, court, and courtiers, all gone out of sight, leaving behind sorrow and mourning. What bloodshed! brother fighting against brother, sons against fathers; and yet, in less than a week, Paris was Paris again, the streets repaved, the shops repainted, a new patriotic song by Casimir de Lavignée, set to music by Auber. One strophe contained the words:

> Qui conduit vos drapeaux sanglants
> C'est la liberté des deux mondes,
> C'est Lafayette en cheveux blancs.

Poor dear, good, honest Lafayette, once more he was made a hero; he was old in years, but young of heart, and for the second time he headed the Revolution, ignorant of what would follow. But who knew that?—no one. A provisional government was formed at the Hôtel de Ville; everybody, it was said, could join. Take a seat on a chair round the table, and you were a member of the Government; first come first served, only keep your seat. A friend of mine who was a member left his seat for a minute or two, and when he returned his seat was taken and he was no longer a member of the Government!

Something must be done, what shall it be? Republic! where are the republicans? Who shall be the President? Only two men were at hand, Lafayette and Odillon Barrot. Madame de Sévigné said justly: "Honesty is sufficient under a monarchy; but the Republic demands virtue." Lafayette had all the virtues and purity of heart, he was a man to lead a movement, his name alone was enough to do that; but he was no ruler. Odillon Barrot could not and would not be supreme, he was the most eloquent at the Chambre des Députés, he was very powerful in opposition; but in power he would have fallen, he knew that. It was too soon yet to propose a king; the blouse who had fought and bled to send away a king would not have taken

kindly to the idea of another king; yet something must be done. A mixed course was adopted; the Palais Royal and its friends, the forty-two deputies of the opposition and their friends, proposed that the Duke of Orleans, who had reached the height of his popularity, should be created "Lieutenant Général du Royaume:" they said Royaume, not France nor Patrie—perhaps it was because it sounded better, though Patrie was a big word then. However, fortunately, the blouse received with tremendous acclamation Orleans and his title; all was joy and happiness. Poor blouse! who thinks so little and forgets so soon; the deputies had made their speeches, but the blouse had won the battle, and yet the blouse was joyful and happy. Poor blouse! little thinking that soon it would be called upon to shed its blood once more.

As no one knew the functions of Lieutenant-General du Royaume, another title would have to be found. The Lieutenant-General was seen often and everywhere, shook hands with everybody. There were processions, illuminations, acclamations, singing Marseillaise and Parisienne; all were amused, elated to the verge of madness, but boundless madness was to come later on; in Paris events go fast.

All this time the heads of the Revolution were very thoughtful, even gloomy; they felt that this state of things was but ephemeral; a luminous idea shone. Charles x was absolute king of France. Why not create a constitutional king of the French, with the motto "Liberté, Egalité, Fraternité.' No sooner thought than done. The new king was presented to the people by General Lafayette with these words: "Voilà la République qu'il nous fallait." Poor Lafayette! always found when wanted.

For the accomplishment of this scheme a deputation was formed from the best of the party to offer the crown to the Lieutenant-General. Ary Scheffer was chosen one of the foremost, and when the Queen-elect, Marie Amelie, saw him, she took him apart, and with tears in her eyes she said: "Ah, Monsieur Scheffer, until this instant I had held you as a devoted friend of my family, and you come on this errand."

The scheme succeeded admirably. France had a king of her choice. Lafayette could not be left in the cold; the republican party wanted a security; so Lafayette was created General in chief of all the National Guards of France; he was considered the guardian of the liberties of the people. Ary Scheffer was made captain of the General's staff; he was a great friend of Lafayette, and remained faithful to him to the end; not all did that. All went on as merrily as a marriage feast, the enthusiasm was at its highest pitch. France was mad with joy. Those who witnessed these scenes can never forget them; processions and singing all day illuminations and singing all night; fraternisations all round; the Tricolor flags swayed at every window; the motto "Liberté, Egalité, Fraternité," was painted in front of every monument and public office. At last quiet came, and France began to set to work with a new heart and fresh hopes.

The influence of the revolution was less political than intellectual. Liberty often verges on licence. Many bad books were written, many bad pictures were painted: mad books and mad pictures. Every young man who could hold a pen or a brush thought he was a genius in the bud. It cannot be denied, however, that the great men produced their greatest work.

### GOETHE ILLUSTRATED.

At about that time Ary Scheffer began his great series of pictures from Goethe's "Faust." The two first were, though not large, very masterly; only two figures. There was first Faust; not the theatrical manager's Faust, but Goethe's real own Faust, the man who has spent his life in studies of every kind. His room is a laboratory as well as a library, surrounded with dusty books, dusty parchments, dusty instruments of science. The peasants, the labourers, the soldiers, the young girls, have passed under his window singing gay songs of love. There is Faust the metaphysician and philosopher, sad, disappointed in his hopes; his life seems to have been but a useless drudgery; he has heard songs of love, he who has never loved, he who has never been loved; oh that he could be young again! Mephistopheles is already there with his cynical smile, ready to begin his satanic work. Oh! how beautifully all this is painted. What a deep expression in the fine face of Faust, parchment-like, thin, haggard; what a rich, dull, and sad colouring, everything so deep in thought. If one had never thought before, he must begin to think before such a masterpiece of thought. Then appears fair Marguerite. What a poem of profound sentiment and colour; Marguerite, full of remorse and regret. What sad, limpid, tearful eyes—what sweetness in her delicate mouth. What strange and poetic sadness in the whole of the picture, so delicately painted; one side of the face seems lighted by a pale autumnal sun, the lights are pale, and the shadows are pale. What a sublime piece of colour words cannot convey; the effect like neither Vandyke nor Correggio, only like Scheffer. As a colourist he never excelled poor Marguerite. I had that picture before my eyes for more than a year, and day by day I could find fresh charms in it. These two pictures created a great sensation and much heightened his fame, already so great.

Ary Scheffer did not paint the Faust series methodically. The next picture he painted was Marguerite in the church; her prayer-book has fallen from her hands, her head is resting on her seat; she hears Mephistopheles' sardonic words:—"Too late, too late, Marguerite; you should have prayed before!" This is a sad and sombre picture, full of deep suggestions.

It was now that Scheffer began to change his manner, and this picture is more in the style of the old German painters, more carefully painted and more defined in drawing, but always full of refined sentiment.

He did not go on regularly with Marguerite, but painted only when he felt inspired.

Betweenwhiles he painted "Francesca di Rimini," a great conception which produced a thrilling sensation. It was the picture of the year;

few pictures lasted a year in Paris in those days. No description of this picture is needed, for it is as well known in England as it is in France, having been for a considerable time exhibited at the Bethnal Green Museum, in the collection belonging to Sir Richard Wallace. I heard him once say to a friend of his, a painter: "Some think the 'Christ Consolateur' is my best picture. I think myself 'Francesca di Rimini' far surpasses it; it is my nearest approach to the old masters, particularly to Correggio." That was his modest opinion of himself; he had neither vanity nor self-conceit, but he was too great a man not to estimate his power at its true value. The "Christ Consolateur" was, if not his greatest picture, certainly his greatest conception. Come unto Me, you who are heavily burdened. The figure of Christ appears full of love, noble and simple in attitude, severe in drawing and execution. On the canvas are represented in various guises all the afflictions of poor humanity.

All the figures are painted with deep emotion and sentiment. Several were portraits of friends he loved; his mother is represented in "The Widowed Mother," and is painted with filial love. This picture exhibits more than any other the tendencies of his mind and of his philosophical training.

He has painted very little that was joyful; he certainly was always thoughtful, *mélancolique*, if not sad. In uniform he looked a bright officer, in his studio he looked broken, sorrowful; he, too, was disappointed, and in his studio he bore the traces of his disappointment. Like Faust he had laboured all his life, worked hard and conscientiously, used all his energies; all his dreams were there, his heart, his mind, his life were there; but his productions were in his eyes so far off from what he had dreamed. He had acquired great fame and fortune, he enjoyed the friendship of kings and princes and all who were great in the land, and yet he was sad. He possessed the high appreciation of all that was intelligent, for his reputation was that of the élite of societies; but he had missed the high aim he had set himself, and for that he was sad.

Once as I was painting in his studio Ary Scheffer said: "Are you not sick of painting?"

"Not yet," I answered.

"Then I am," said he; "sick, sick, sick unto death!"

It sounded like despair, but, notwithstanding all this, as the brave and courageous man he was, he worked on, and indefatigably too.

Though extravagant in some ways, Ary Scheffer was a very free giver to works of charity (and the Queen had always plenty on hand); he was also very fond of horses (when younger he loved the chase). Personally he was very frugal; his house was very plainly kept. It was situated in Rue Chaptal, near Clichy, the then quarter of the modern school of which Ary Scheffer was the head. There was an iron gate and an avenue of acacias, at the end of which were two studios, one on each side, a courtyard with a large cedar in the middle, under which was the habitation of Turk. Turk was his master's faithful Newfoundland dog; he was the pet of everybody who went there, but particularly of the family; he was as strong as a lion and as gentle as a lamb; he was a great figure there, Turk was. There were the coach-house and stable, the home of his favourite horse Bombé. Bombé had stood fire many a time; he was the horse of *émeutes* and revolution, having witnessed at least two. The dwelling-house was behind the cedar tree; it was as simple as the master and mistress. It was inhabited by Ary Scheffer, his mother, and his daughter. Cornélie Scheffer was then about twelve years of age, a dark, handsome girl; she was already well educated. Her father and Madame Scheffer were both highly educated; the latter was very retiring and very little known. I used to think Queen Marie Amélie and Madame Scheffer were the two greatest women of that troubled reign; devotedness to duty was their distinguishing virtue. Mademoiselle Scheffer was married young to the son of the celebrated Dr. Marjollin; he did not live long. She afterwards married M. Renan, the well-known orientalist and author.

Ary Scheffer's bedroom was a sort of museum; all the presents he had received from kings and princes were there. Some of the presents were of gold, some of silver, and some of carved wood, all of exquisite workmanship. A small copy of Princess Marie's statue of Jeanne d'Arc stood there, with many other tokens of admiration and friendship. In a corner was a small tent bedstead with only one flat mattress; that was Ary Scheffer's bed.

A word on the great master's studios. His own was like him, simple; the modern painters would call it a hole. A lofty room (large) with a good light, the walls almost bare. On one side was a very large canvas, which was in time to represent a great subject for the Musée de Versailles. Its progress was very slow indeed; the reason was that his independent spirit could not brook the idea of painting a subject that was given, as it were, cut and dried; his imagination shrank from such work.

Once he had finished a great composition: "Charlemagne subjugating the Saxons." The king did not like it; it looked so monotonous and triste, and indeed it was so. The king wished Ary to retouch it and give it more light and life. So the picture was sent back, and there it stood for a long while, message after message asking for the picture; but the poor great man could not buckle to. One morning he came to the studio, looked at it, and heaved a deep sigh; he looked disgusted. He said, "The king has sent again for this. What am I to do?" All at once he brightened up, and looking at me he said, "You could do that for me, Laby."

"What?" said I.

"Retouch it, and brighten it."

I felt it was a great temptation for me.

"If you will show me how to do it," said I, "I will do it with pleasure." He took my palette and touched up a helmet in the foreground. "That is what it wants," said he.

"Very well," I answered, "I will try my very best."

He went away to his own studio, and I mounted up the steps and began on the principal group,—Charlemagne on horseback under a canopy, surrounded by bishops and the princes of his army. I worked hard, with energy and joy. In the evening he came to see how I was getting on; he said, "C'est très bien."

From that time I worked on the picture as if it were my own, and when I thought I had done enough, I told him so. He was pleased and thanked me. Some days after that I came into the studio and found the picture was gone. I ran to see him. I was rather affrighted, and he saw this, and asked me what was the matter. "Charlemagne is gone," I said; "and you did not retouch it."

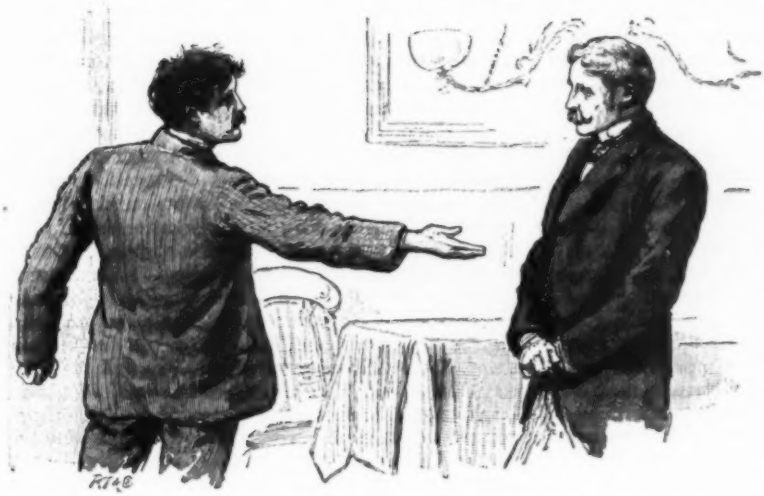
"You did," said he, "and I told you it would do."

I was very angry, and reproached him for not telling me, for I would have done better. I went away still angry, as I thought he had treated me very shabbily. I mention this to show another part of his character, his indifference, and I cannot help calling it carelessness, for what did not touch his heart.

He painted other large subjects for Versailles, all grand compositions, but far far below his Marguerites, and the other paintings, which were purely his own.

The other studio was far more interesting. There were paintings on the walls, perhaps his best portraits were hung there. First and foremost was his friend and brother-in-arms "Lafayette," one of the greatest personalities of the century; noble, and simply painted, Lafayette to life, looking like an agricultural gentleman, with a grey coat and trousers and gaiters. He was tall, broad-chested, erect like a soldier. Unfortunately he wore a wig; had he thrown it away, shown his white hair, what a noble and grand figure he would have made! The other portraits were those of Rossini, Odillon Barrot, Arago, and others: all painted with that deep observation which presented not only the features but also the inward character of each man. It was this that made Monsieur Scheffer superior to the other portrait painters of his time; they painted likenesses.

Though he did not like portrait-painting, circumstances often compelled him to undertake it. Queen Marie Amélie; Louise, Queen of the Belgians; Leopold I., her husband; the Duke of Orleans, Princesses Marie and Amélie, the Dukes of Wurtemberg and Saxe-Coburg, and many others, all worthy of him, he painted; but those for whom he had the greatest affection were far superior. They seemed to be painted with his affections; but the greatest of all his portraits was that of his mother. In colour it equalled the best of Velasquez, but in sentiment, in feeling, who could equal Ary Scheffer? There was Madame Scheffer, with her pale, transparent face, speaking all her virtues and high attainments. There was Ary Scheffer's mother, beautifully calm, the woman whose life was love and duty. She had loved but few, but how well she had loved those few! There is that great figure so little known to the world, and I suppose her portrait, a masterpiece of art, is as unknown as the lady was herself, for after it left the studio it was never seen again. Happy those who saw it!



In 1835 or 1836 an expedition was to leave France for Algeria to take the "Portes de fer." The Duc d'Orleans was to take the command of a corps d'armée. He had a great desire that Ary Scheffer should accompany him, both as aide-de-camp and artist; there were great difficulties. Would Madame Scheffer look kindly on the proposition? Her son placed before her all the advantages that would accrue from it. She at last acquiesced, and Ary, just like himself, had an outfit as if he were going on a voyage round the world twice over. All the preparations were made, all was ready. On the eve of departure, Scheffer could see that his mother was trying to be cheerful, but could not; at last she burst into tears. That was enough for her son. He immediately let the Prince know he could not leave his mother in sorrow. The Prince understood him.

When he had finished his celebrated picture of Marguerite coming out of church, Faust seeing her for the first time, he wished his mother to see it. She very seldom went so far as his studio. I saw them both: he, stalwart in the fulness of his manhood; she, his old mother, fair, fragile, like a pale shadow, leaning on his arm, walking slowly to the studio. On arriving there she sat down and gave the picture a long look. She did not speak for some time, and then said in a sorrowful tone: "Scheffer, ce n'est pas cela."

He accompanied her to her room, came back, took a razor, and began to actually erase his picture from top to bottom. Poor beautiful Marguerite was shaved off. It was hard work. He looked at me as if he wished me to help him; he did not ask me; but if he had, I would have answered very dramatically, "I am no Vandal, sir," for I was angry. I thought then that filial love had a bound, but not for Scheffer; his mother was his supreme judge, she had passed her judgment, and that was all for him. He was calm and tranquil; he was tired to be sure, but he had done his duty. I was there, mean and wretched, at seeing that great work fallen down. I thought, what a tremendous man that is. The next day he began again. This picture was about nine feet high, and had taken him many months to paint.

A. LABY.

# Under Discussion

THE COMMON CASE OF THE PROFESSIONAL PRODIGAL.

"I THINK we may have a visit from Horace Penrith to-night," I said, on the first evening after Pleasance and Penelope returned from their holiday. (Penelope was not to go back to her Mission House till next day.) "He has been here almost daily during your absence: for we have been trying to do a little piece of 'work' together!"

"And by the expression of your face, I imagine the 'work' is not a bright success," said Penelope.

"Indeed, it is not," I admitted; "but we have no right to be disappointed, for I, at least, thought we began at the wrong end!"

"Then aren't you ashamed of yourselves?" asked Pleasance.

"Not exactly," I answered. "Though, as I say, I feared we had begun at the wrong end, Horace did not think so then, and if he had proved to be right, I should have been only too delighted. And certainly it was the only end offered to us for any 'work' at all. Our other alternative would have been doing nothing but watching and waiting,—always so much harder!"

"You excite our interest!" said Penelope. "Please tell us all about it."

"Horace came here the first evening after your departure," I explained. "He rushed in late, while Mrs. Yeldham and I were taking our supper, and he could scarcely ask us how we did before he opened his errand. You know that Horace took his M.A. in a Northern University?"

"Where I made friends with him," interpolated Mrs. Yeldham.

"Well, while he was there, he numbered among his acquaintances a lad younger than himself, named Edwin Richardson."

"There is some marriage connection between the families of Penrith and Richardson," said Mrs. Yeldham. "That threw Edwin into Horace's notice, and Horace was always one of those responsible souls, with whom to be brought into any sort of connection means interest and duty."

"Edwin Richardson was a schoolboy while Horace was a student," I proceeded. "In those days, Edwin lived in his schoolhouse, and Horace boarded with an assistant professor. Edwin often spent his half-holidays with Horace, and seemed a bright, studious little lad, rather sickly: and as he was an orphan, Horace's regard towards him was specially kind and indulgent."

"Edwin Richardson was an interesting lad and had brains," said Mrs. Yeldham.

"Soon after Horace took his degree and came to London to study law, Edwin left school, and himself purposed to become a student," I went on. "Horace accordingly suggested that Edwin should fill the place he had left vacant in the assistant professor's house, and Edwin did this with apparent alacrity. It appeared afterwards that Edwin had left school very suddenly, not at the end of a term, and that some sort of evil mystery was involved. Horace knew nothing of this at the time, nor did the assistant professor, who thought of Edwin only as Horace's friend, and gladly made him welcome.

"By-and-by, however, there began what Horace calls 'ructions.' Edwin Richardson chafed at certain 'restraints' which he regarded as arbitrarily imposed on him by the assistant professor, whereas they were but the ordered ways of life necessary in a studious household, and which had naturally grown up therein. When this was explained to him, he illustrated his own superior wisdom and fitness for taking his own way, by verbal impertinences, mysterious absences, and by general behaviour like that of a very naughty 'little' boy or a lunatic!

He could not be brought to his senses, but began to instil his restlessness and folly into some of the other inmates, and consequently the connection between him and the assistant professor's household was severed rather decidedly. Horace, honourably aggrieved at the annoyance inflicted on old friends by one whom he had introduced, wrote Edwin a letter stating pretty plainly what he thought of his conduct. Horace got but an insolent reply. And here all communication between them ceased. For years Horace heard little of Edwin, except that some good folks—old ladies and young girls—who knew none of the facts of the case—pitied him as 'hardly dealt with,' and sought to 'influence him' by various social attentions. In time there came a few floating rumours, which Horace heartily hoped were as false as rumours generally are! The only readily ascertainable fact was that Edwin, who Horace believed had natural gifts which should have sent him to the very front, did not even make a show as a working student, and long after he should have taken his degree was lingering in the lowest ranks of what Horace calls 'chronics.'

"At last, there came to Horace a letter from a business man among the family connections common to him and Edwin. It mentioned incidentally that Edwin Richardson had just received the last instalment of his own little fortune, and as after his past history it was not possible he could be ready for independence by the time that trifle was exhausted, nobody could foresee what he meant to do.

"At that time, I remember, Horace often spoke regretfully of his old 'chum.' Once, when there was a rumour of illness, he got a friend in the University town to make inquiries on his behalf. The friend reported that the message given him was that Mr. Richardson had quite recovered. There was no further acknowledgment.

"At last Horace received a frantic letter from some poor female relative of young Richardson's—an aunt or cousin—she was a widow, living in an out-of-the-way place. Her tidings were that Edwin had disappeared from the University town. He had left heaps of debts behind him. His debtors had applied to his former guardians, and they had replied that they had no further concern with him, as he was over age, and they had paid him out the last of his funds. Horace's incoherent correspondent painted all sorts of horrors. Edwin was at the bottom of some river! Or lying in some wilderness with his throat cut, or roaming the streets begging his bread. Where was he? He had taken the train for 'London,' but why that? She had, however, one little clue—poor enough, it might even mean absolutely nothing—but she gave it to Horace and entreated him to follow it out.

"Horace accordingly worked himself up with kindly memories and fears of tragic possibilities. The clue seemed so remote, yet, after all, it led quite straight to the heart of the mystery. And on the day of your departure Horace's search was crowned with success.

"He had found Edwin—not in the river—not yet in a casual ward, but in a quiet little private hotel in Soho.

"When Horace was suddenly shown in to the bedroom Edwin occupied—for the waiter said the gentleman was not up—Edwin received his old friend with the air of one determined to play a part, but not quite sure what it should be, and he alternated between enactments of surprise, pleasure, and chilly civility. Horace said he felt quite sure that, if he had not known Edwin's terrible position, he would never have learned of it from him.

"For my own part, when I heard this, I did not feel so certain that he would not have let Horace know fast enough, but that he was quite sure Horace knew already, and that his silence was his most effective action. Indeed, I rather mistrusted his innocent unconsciousness of the clue which led to his discovery. But when I hinted these suspicions to Horace, he cried out that I was uncharitable, to which I could only meekly rejoin that my want of charity was due to sundry stern experiences of the manners and customs of the professional prodigal, but that practically I would do my best to keep this bitter wisdom in abeyance!

"When Horace had hesitatingly led up to the real object of his visit, Edwin would not give him the least help, but professed a blank inability to understand. Thus Horace was driven to speak plainly, and then Edwin flew into a blind fury. What had he done that he should be pursued? Could they not even let him perish in peace? Another day or two and it must all be over, and he would not trouble anybody more. What was the fuss about? He had not come to his last penny, not he! (and Horace said he took a florin from his pocket and said, 'There! he had that, and men had risen to fortune from less than that!') Hadn't passed his exams, no; but he could do them all in a run, if he chose to work, and people should repent of having despised him! He had been unfortunate from his birth, born so sickly, losing his parents so soon, knocked about among strangers, without a bed that he could really call his own all his life! Look how his guardians had treated him—they had never sent him his money regularly, how could one work with one's mind in an upset of uncertainty? Look how the Powells had behaved to him! (These were Horace's old friends.) They ought to have had patience with him, whatever he did, and to have let him remain in their house; they knew it was driving him to the dogs when they sent him away. Look at Horace, himself. He should never have introduced him into such a household as the Powells', he ought to have known it would not suit him; he was not Horace's style! fit to live in a convent or a parsonage. And what right had Horace to interfere or have opinions about any conduct of his? And then see how he deserted him! Took no notice of him, had no consideration for his loneliness. Horace need not trouble about him now: he knew Horace had a kind heart, and he had behaved worse to Horace than to anybody, and he had behaved badly to all! But it would soon be over. There wasn't anybody to miss him. Nobody had ever cared for him.

"'That is the way he went on,' Horace narrated. 'The ravings of desperation, you see,—each sentence contradicting the other. And he ended by laying his head on my knee—and—' Horace

choked, 'when I think what he might have been and see what he is,—it is terrible! And he is such a proud fiery nature, that it is awfully hard for him that he has just learned wisdom too late to save him from what he calls bitter degradation. Don't you think we must help him to get one more chance in life? Perhaps, after all, it may be his first real chance!'

"You know how persuasively Horace Penrith can speak, Pleasance! Still I could not help saying:

"'We cannot give him another chance, as you call it, Horace, if he does not want one. As long as he keeps his old self, the old life will go on!'

"'Ay, but I am sure he is sick of himself. This despair means that. Perhaps it's extra hard for such a clever fellow to own "I've been a fool!" and this may be his way of doing it,' pleaded Horace.

"Then Mrs. Yeldham put in gently, 'Sometimes I have wondered whether Edwin Richardson is really as clever as he seemed—or whether it was only the precocity of a weak constitution—the forced buds of a premature spring. But then he is only the more to be pitied.'

"'So I say!' cried Horace, not willing to gainsay anything that might win the pity he was pleading for. 'And some of Edwin's reproaches are really true. I do believe his guardians were irregular and unbusinesslike. He had nobody to govern him. He has had many things against him.'

"'We all have so, Horace,' I said.

"'Yes,' he retorted. 'And we all find help.'

"'True,' I answered. 'So what do you want me to do?'"

"Whereupon, of course," interjected Pleasance, "he fell to telling you you are the kindest and best woman he ever knew."

"Something of the sort," I assented. "However, the end of our deliberation was, that I was to go back at once with Horace to the hotel, and try to bring the prodigal to reason in the matter of food and self-preservation, for Horace seemed to think he was starving himself to spare increasing the hotel bill! Then I was also to persuade him to let us write to his former guardians (one of whom was an old friend of mine) to ask whether something could not be arranged for him, to enable him to make another effort to finish his studies. 'We can let them know that I am willing to help,' said Horace. 'And I will look after him. He shall either live with me or near me, and I'll cheer him on to his work, and win him again to his old literary recreations, and not let him get disheartened if he ever falls back a little. We all fall back into our natural failings sometimes, however hard we try—and yet we do improve—and why shouldn't he?'

"'We improve if we recognise our failings as such, and struggle against them,' I said. But all the while I could not help thinking that there was a world of difference between the story of the prodigal, who 'came to himself' and said 'I will arise and go to my Father, and say, Father, I have sinned, and am no more worthy to be called thy son, make me as one of thy hired servants,' and the picture of us, trotting off to entreat this prodigal to let us plead that, as he had been so sinned against, he might have another opportunity of fulfilling his original destiny! Yet I remembered also Who likened the Divine attitude towards erring humanity to that of a shepherd seeking his lost lamb or a house mistress searching for her missing coin; and I must say this was the remembrance which remained in my mind when I saw this miserable youth, with his well-developed brow, haggard face, and hollow voice. One seemed to hear something in him—something behind the bitter mockery of his speech—which appealed to one's most earnest help. And before we parted from him that night, we had seen him eat a good meal, for he seemed to have had scarcely any food for a day or two, and he had consented that we should write to his friends, and I had promised to do so. And Horace Penrith secretly added a powerful appeal.

"While the reply was awaited, we had Edwin up here once or twice, and Horace spent every leisure moment with him. We did not feel we made the least advance towards really knowing him. A 'guard' was on—the closeness of that guard was the only genuine self-revelation! But possibly that guard slipped aside when alone with Horace, for I think a little closer personal knowledge helped to dash some of our friend's most sanguine hopes. But they did not perish utterly. Nor did the ex-guardians reply directly—they wrote first to consult the alarmed female relative, and as soon as she got Edwin's address she sent him some money and promised him some more. The guardians also consulted Mr. Powell, who strongly urged another opportunity being conceded, provided a sound basis was laid for it. Horace's proffered supervision offered just such an opportunity. But lo! the prodigal rejected it. If he made up his mind to work, said he, he could do it without anybody's help—and they should see that he could do it. If they refused more furtherance on this score, then his ruin would be on their heads! My persuasions that all this was only false pride, and my assurance that we should all respect him the more for recognition of his own weakness, were less effectual than my original entreaties that he would let me apply for help for him! By this time, you see, he had ten pounds in his pocket, and plenty of weak, gushing assurances from his relative that she would continue to do something for him, though it could be but very, very little, as he knew how poor she was, and how many other claims she ought to meet! So last week he returned to his University town, and resumed his former position, though without any thought of paying his debts there, and now Horace finds he has also incurred bills in London at a tailor's and a trunk-maker's. He did not pledge Horace's credit—no!—he only took good care first to visit these shops, where Horace dealt, in Horace's company, and then to return there, and make his own orders! 'You should not have trusted a mere stranger,' says Horace to these tradespeople. 'Sir,' they answer, 'we thought he was a friend of yours, and if we had made any difficulty, then you might have been offended, and taken away your custom. There's loss either way, sir.' And doubtless that is true enough."

"Well," said Penelope, "I suppose for such as he to have to live on a very small income will be a punishment in itself. For getting in debt where he lives permanently is a thing that must have limits sooner or later."

I shook my head. "He has been returned now for more than a week," I said, "and in that interval we have heard from the ex-guardians, with sundry particulars concerning those years during which Horace had lost sight of him. He had evidently always lived at a rate far beyond the money he was known to have or the debts he openly contracted. He grudges himself nothing: there are hints of expensive vices, but also stories (possibly explanatory) of gaming. His history is made up of episodes of most sensational mystery, varied by these sentimental depressions of mood and circumstance, one of which was inflicted on us. Every landlady with whom he has lived has feared he would commit suicide, and in the end nearly every one of them has had reason to rue the day when he entered her house. The ex-guardians add that they now hear he has got into a smart lodging-house of indifferent character, and that he is very bitter on 'the way Horace treated him in London'—presuming to admit 'strangers' (that is I!) to his private affairs, and daring to take upon himself to 'preach' to him! It has been a great blow to Horace. Nothing gives a sharper shock to one's whole moral nature than to lavish help, with genuine kindness, and find it thrown back in one's face, with derision or contumely."

"Everybody who has lived long and intimately among the events of a University town must know many allied cases," remarked Mrs. Yeldham. "In some ways, this is a very typical instance of one sort of story."

"From your experience, what end would you foresee?" asked Penelope.

Mrs. Yeldham pondered. "In general," she said, "men of Edwin Richardson's stamp get into their profession at last, either in long lapse of time, or by some of those by-ways which tend to lower the professional standard. These men's deficiency, you see, is really on the moral side, and their mental powers, sometimes not inconsiderable, serve to supplement this after a halting fashion. But——"

Here Mrs. Yeldham was interrupted by the entrance of Horace Penrith. I saw he had some fresh news, and was in a highly combative state. As soon as he had greeted us all and made a few civil remarks to the home arrivals he turned to me with an "aside"

"I have some news."

"Tell us at once," I said. "I have already revealed the story of our adventures to the others."

"Well, I've had a letter about Richardson," he began. "It comes from an old gentleman, a Mr. Wentworth, whom I knew quite intimately in my college days. One of Richardson's female relatives, getting hold, somehow, of Mr. Wentworth's name (he is an influential townsman, and well known for good works), wrote to him to implore him to take some interest in her 'unfortunate kinsman.' This meant that the good old gentleman sought an immediate interview with our scamp, the result of which is the letter I have received, which censures me severely for my 'harshness' towards 'an erring brother,' as manifested by the treatment I gave Edwin while in London!—which might 'easily have driven an overburdened soul to seek refuge in despair.' It is not just—it is not fair!" cried Horace, in his wrath jumping up so dramatically that we all burst out laughing. "Mr. Wentworth knew me well for years, and I'm sure I gave him no reason to suspect me of being a brute! Why, then, should he thus accept, without any enquiry, the first statement of Richardson, of whom he knows nothing good?"

"Well, Horace, don't forget that you were quite ready to believe that Richardson did not exaggerate the unsatisfactoriness of his guardians in the first instance," I pleaded.

"But I knew of my own knowledge that they had not been too businesslike in their arrangements, and I did not know them personally," Horace asserted in self-defence. "Still, perhaps I was ready to put too much blame on them. Edwin is so specious."

"That is always a feature in this type of the professional prodigal," said Mrs. Yeldham, adopting my phrase. "Perhaps they never do more harm than by the misunderstandings and heart-burnings which they engender among more decent people."

"Professional prodigal!" echoed Horace, catching at the phrase, "that's capital! And it seems to be a paying 'profession.' I have been often struck by the way that parents and friends will let twice as much of their money be wasted by the idler and the reprobate, as they will spare for the aims and tastes of the industrious and honourable. There may be a clever, good son in a family; he knows there isn't much money to spare, and so he works twice as hard as he should, and grudges himself proper advantages in his work, and even a reasonable amount of recreation. Then the parents rarely think of suggesting these things, and pressing them upon him, but he may go crippled in his career, or perhaps lose health and die, for lack of them! Yet when the family prodigal comes on the scene, his bills must be paid over and over again, and the expenses of his delays defrayed, and new 'chances' given him, till at last these probably run into a permanent annuity for a confirmed dipsomaniac! And perhaps even that is a better ending than when an utterly unfit man is finally shouldered and driven into some over-crowded profession, for whose righteous exercise a sound moral character is quite as necessary as any mental qualification."

"I was saying something like this when you came in," said Mrs. Yeldham. "Has it ever struck you how often, in those great tragedies which from time to time thrill society, men of this type are to be observed, in the background, as it were, but probably exercising on the terrible drama an influence not less strong, because subtle and scarcely suspected?"

"As you and Horace, who know, both say that this type of men often manage to secure an end satisfactory to themselves, who are those who make the flagrant failures—the enlistments, the disappearances, sometimes even the suicides?" asked Pleasance.

"Those are the lads with small brain, or brain

unfit for abstract mental work, and physique ill-suited to sedentary occupation," said Mrs. Yeldham. "Some of them begin as capital fellows in their own way, shrewd enough, too, and excellent good company. But they've 'no head' for the lecture-room or the counting-house, and there is no lawful exercise there for their muscles. The worst kind of these loaf about, the better sort become the slaves of athleticism, and make what should be the play of their lives into its sole labour; when they find themselves left behind by their compeers, they are naturally disgusted and grow demoralised and coarse. These incline to be insolent rather than specious. They begin to drink and break out into strange and rough freaks, which speedily get them into bad repute and difficulty."

"These are young men of the style who drive out in breaks on Sunday and blow horns outside churches," explained Horace, evidently going back on some of his college experiences. "They loll out of their lodging windows, smoking pipes, or lean back with their slipper soles exposed on the sill. If a professor or teacher objects to their rowdiness and disorder, if a friend truthfully answers their guardians' repeated enquiries by saying he fears they are not doing much good, or if a tradesman refuses more credit, then these young gentlemen revenge themselves by damaging doors, rending away knockers and plates, and smashing windows."

"And some thoughtless people smile indulgently at what they consider 'the mere exuberance of animal spirits!'" observed Mrs. Yeldham; "whereas, if they looked deeper, they would often find but the vulgarest malignity venting itself in violence and theft, and in reckless lying to screen itself from detection. Where coarse recklessness rises to life's surface, one may well infer that all sorts of baseness and vice lurk beneath. Those who have reason to know have proved this so often that they feel a right to suspect it always! Of course there comes an end to these things, and the offenders vanish, sometimes in shame and misery, often to remote regions where they might have done some of the world's best work if they had gone there before their moral and physical nature had been corrupted by idleness and dissipation. Many a 'bar' in Australia or the Wild West could tell its sad story of such!"

"In the lists of these men," said Horace, "you occasionally find some of fair mental endowments, and a few of these finally straighten up more or less, some out of self-interest, some out of self-conviction. But I think one has only need to know intimately those who have 'sown their wild oats,' to be quite convinced of the fallacy of the lenient view often taken of that process. Sometimes the damage done shows in a warped moral vision which cannot keep right and wrong in true perspective, and sometimes in the cankered, unjust temper occasionally found in middle-aged men, which makes them a terror to everybody, yet which is constantly associated with a curious leniency and uncertainty of attitude towards evil-doing!"

"I noticed another effect on a young friend of mine," said Mrs. Yeldham. "I think he had no special tendencies towards evil, but had been rather carelessly brought up, and so speedily succumbed to the worst temptations of a great metropolis. After going to the lowest depths, he suddenly pulled up, and returned to a respectable life, helped to do this by a keen mind (which was able to grasp the soundness of arguments urged upon him), by a sense of humour which could see the contemptible side of vice, and by an innate love for the simple charms of Nature. Yet I found, as the years passed on, and the distance widened between then and now, that he grew ever more inclined to dwell on the mere surface of things, and to shrink from diving into the depths of reality. For therein lurked remorse—remorse for some with whom he had sinned, but who had not been saved with him, remorse for lost ideals and quenched ambitions! He dared not exercise his own powers of reflection and judgment. He feared his own memory. Yet in old age that has to be faced: and it is often the sole companion."

"It has seemed to me," said I, "that many men do not think out the rights and wrongs of circumstances in which they move. They do not 'consider.' They incline to drift, to do what comes easiest at the moment, without regard to its after effects on themselves or others. To give an instance, I know a gentleman, high in official life, who made negotiations for a daughter's residence and education in the private family of a clergyman's widow. He conducted these to what seemed a favourable conclusion, and then, owing to family circumstances, entirely altered his plans. But, instead of giving immediate intimation to the lady, he left her to buy fresh furniture and re-arrange her household, and to learn of his changed views only when she made enquiry when she was to expect the child! Nor did he dream of offering any compensation till it was demanded, as was certainly quite right, though in more shrinking and sensitive cases it would never have been done. I have known two young men actually planning together to leave a house, where they were believed to be perfectly at home, while they knew that they were allowing the unconscious owner to make costly structural alterations to suit their special convenience!"

"One wonders how much these things arise from want of heart, and how much from want of thought," observed Pleasance. "I strongly suspect these shade off into each other more delicately than is sometimes supposed! I wish people would reflect that what they are apt to excuse as 'only thoughtlessness' really means indifference. People think about what they care for! One often finds that a youth who is excused as 'merely thoughtless' when he disregards other people's rights or privileges, is keenly on the alert when his own are endangered! I think men, as a rule, are less grasping than women, and show less foresight in arranging to secure their own interest and advantage, just as they seldom wound by those skilful thrusts to which 'Punch' gives the name of 'feline amenities.' As you say, men's temptation is rather to let life drift and leave circumstances to shape themselves, so long as their own comfort (in whatever form they like it) is not interfered with. When at last this

happens, then they are too apt to strike about blindly, condemning and punishing whoever is at the point where annoyance reaches them, rather than whoever is at the root of the evil which causes it."

"I have noticed, too, that some men live in a sort of waking dream," I observed. "For instance, they seem to think that the household life in which they move, grows, without anybody's special effort or sustained endeavour. Therefore they fail to realise how little self-indulgent bad habits of their own, jar and block the working of the domestic machinery, and convert what is often an honest struggle into an almost hopeless strain. They wonder why there need be 'such a fuss' because somebody has to climb the stairs to knock two or three times at their bedroom door in the morning. 'Is it a deadly sin,' they ask, 'to keep breakfast waiting for half an hour?' 'What difference can it make, if they fail to tell when they do not mean to put in an appearance at a given meal?' 'Surely the dishes can wait a little while, can't they? or they can be cleared away; and if they should come in a little later, why, it is easy enough to bring them back again!' They are under the delusion that in the kitchen there is nothing worth calling work, and that household affairs 'go by clockwork.' The worst of it is, that the more willing and painstaking the servant, and the more patient and careful the mistress, the more does this delusion sometimes flourish! I have known men heap unnecessary burdens on women, ready to sink amid unavoidable drudgery of all kinds, and then express flattering sympathy for that other style of women who keep a home in a perpetual fuss and broil of 'house-keeping.'"

"Express flattering sympathy—yes," said Mrs. Yeldham. "That stamp of woman may be gratified by that very cheap form of succour. The others would be but the more annoyed! However, it is perfectly true that the men of a household might be—and sometimes are—the staunch allies of its mistress. They can save her from the worst tyranny of the capricious and overbearing 'service' in the kitchen, to which she is forced to submit, if the masculine forces will not allow their 'comforts' to be suspended for one moment, nor yet consent to put any shoulder of theirs to the domestic wheel."

Said Penelope: "I remember once having given as an illustration of 'what women can do,' a friend of mine, who ruled in a Texas farmhouse, herself the sole woman there, and who yet came home on a visit, strong and bright, well up to date in her mental interests, and not even oblivious of her old accomplishments. 'And that was a woman quite alone!' I cried. 'Considering the grumbling we hear among ourselves, how did she manage this?' 'I can tell you,' said a wise old gentleman, who had been himself a colonist. 'First, the men made as little work as they could; and second, they helped to do it!'"

"I have often noticed that men are very ready to give women aid in an oppression of household duties when the needs are real," said Mrs. Yeldham. "One can scarcely expect them to go out of the ways of use and wont, to set the ladies of the family free for paying or receiving rounds of calls and so forth, which is sometimes the sole 'occupation' that they complain about so bitterly as 'interrupted' by kitchen or nursery exigencies."

"But even when the 'good will' is very ready," said I, "it is sometimes little available, owing to the dreamy absent-mindedness to which I have alluded. Men who have lived among things without taking any part in them have not the least idea how they are done, and in some matters of order and cleanliness they do not even notice when they go awry."

"And this dreamy ignorance extends painfully to money matters," observed Penelope. "I believe many a boy, on leaving home, makes the first muddle in his accounts through absolute ignorance of prices, and of the relative proportions that should be assigned to different lines of expenditure. In this way, they often mistrust—or at least fail to appreciate—the thoroughly honest, and are led astray by the mercenary! I remember hearing an old servant say, 'There's no satisfaction in serving our gentlemen—they never know when they are well dealt by.'"

At this moment we suspended our discussion, because the housemaid entered with the supper tray. But I could see that Pleasance was ready to resume it.

# ORTHOGRAPHY BY HAPHAZARD,

## OR MISPLACED *n*'S.

MODERN philologists have pointed out that in ordinary speech we do not talk in single words, but in groups of words; so that if speech were written down as it is really uttered, we should have *Houdidoo?* instead of *How do you do?* and *Whatshalwe havfc dinatoday?* instead of *What shall we have for dinner to-day?* Professor Sweet has put into grouped phonetic form a number of everyday colloquies, with a result of which the following may serve as average samples:

Whenai trævlbai reilwei, ai laiktəhævə kæridʒ ɔltəmai self.
When I travel by railway I like to have a carriage all to myself.

Aiþiŋkailaikt drɔiŋbest; aiwəz veribædətə riþmetik.
I think I liked drawing best; I was very bad at arithmetic.

Hij hæstəbi ginəgenətðəbi giniŋ evri taim.
He has to begin again at the beginning every time.

The accented or emphasized syllables in such groups are the chief guides in determining the sense of the whole phrase; they catch the ear, and give the required effect. So that Max O'Rell bears witness, as the result of actual experiment, that it is by no means necessary to ask a fruitcrer for a "basket of strawberries" in full; he found "bask strawb" quite sufficient.

For the most part, however, it is only in conversational usage that words are thus strung together; in formal reading and in writing they are kept quite distinct. But in earlier English there were several instances in which this close linking of words was transferred from speech to writing, and their form or spelling was in consequence permanently changed. It was chiefly in connexion with the indefinite article, with its two forms *a* and *an*, that this took place; it is the letter *n* that has thus become misplaced.

It will readily be seen that when *a* precedes a word beginning with *n*, and when *an* precedes the same word shorn of its *n*, the two combinations are practically identical in sound, and only distinguishable as previous knowledge reminds us of the spelling; a foreigner writing from dictation would be as likely to put one as the other. If any one doubts this, let him try the following nonsense statement pieced together by way of illustration:—

Feeling that *an ice-house* is not *a nice house* to live in, he was glad to hear that *a negress* knew of *an egress*, and though he had *a notion* that it led into *an ocean*, darted like *an arrow* through *a narrow* opening, and in *an aimless* endeavour to escape found *a nameless* grave.

It is not astonishing that in the days when books were few, and reading a rare accomplishment, this confusion of sounds should take effect upon the writing, and in purely arbitrary fashion, and in defiance of etymology, add *n* to some words and destroy it in others.

The word *adder* is one example of the change; in Old English this was regularly *nadder*, *nedder*, corresponding to German *natter*, and used in the widest sense of any kind of snake or serpent. Thus the Anglo-Saxon version of the Gospels has in Matthew xxiii. 33: "Ye næddra and nædrenna kyn"; and in John iii. 14: "Swa swa Moises þa neddre up ahof." And this spelling was in force till Chaucer's time, who writes in his Canterbury Tales of "the naddre in bosom sly vntrewe." But by his time the confusion had already arisen, and in fourteenth century books we find one writer saying "Hi resemblep an eddre," while another who writes "Thei maken a maner of hissynge, as a neddre dothe," mentions on another page "An eddere righte hidous to see." In a fifteenth century Latin dictionary the two forms "eddyr or neddyr" are placed side by side as equally correct; one of the religious mystery-plays of the same period tells us that "Adam begyled was thrugh the edder"; and from about this time, though *nedder* was still found in the dialects, the corrupt form became prevalent, and *adder* is now the accepted English spelling.

For our second example we take a word found in the very earliest written records of our language. In glossaries that date nearly two hundred years before King Alfred there appears the word *næb-fogar*, *naboger*, or *nabogaar*, which is compounded of the two elements *nabu* or *nafu*, "nave, or hub of a wheel," and *gár* "piercer, borer," and is therefore in its primary signification a "nave-borer." Later glossaries show its development into the forms *nafogar*, *nafegar*, *navegar*, *naueger*, *nauger*; and an early mystery-play puts the word into the mouth of Joseph, the artisan of Nazareth. He has just heard the herald announce the "taxing," and makes a kind of grumbling protest against being deprived of any part of his livelihood, saying that he is no well-to-do landowner, but a hard-working carpenter:—

"With this axe that I beare
This perscer and this nagere,
A hamer all in feare (= *in fere* = together),
I have wonnen my meate;
Castill, tower ne manere
Had I never in my power,
But as a simple carpenter
With thes what I mighte gette."

Our readers will see, therefore, that we are speaking here of the common carpenter's tool now known as the *auger*. In inventories and similar documents of the sixteenth century the etymological spelling is preserved (*nagare*, *nauger*), a proof that

this was still the recognized form in household use; but just at the beginning of that century a glossary has the entry "an *augur* or a persour"; Fitzherbert, writing in 1523, uses indifferently *an augur* and *an nauger*; and from Shakspeare's time *auger* is fully accepted as the correct literary form of the word.

Our next instance is *apron*. This is derived from the early French *naperon*, a diminutive of *nape*, "table-cloth," the equivalent of Latin *mappa*. From the same root-word we get a differently formed diminutive in *napkin*, and *napery* is a collective term for table-linen of all descriptions. These latter have retained their initial *n*, but the more common household word has been doomed by capricious fate to lose it. This had not come about, however, in the Chaucerian age, when the Tale of Beryn, by some attributed to our first of English poets, tells us how "With hir napron feir. . She wypid sofft her eyen." "Napronnes" are mentioned too in the Paston Letters in 1466, and a north-country will, as late as 1569, has an entry of "a napron of worsted." But on the other hand, records of Edward IV's household contain a reference to "lynnen clothe for aprons"; and Coverdale's version of the Bible, in 1535, narrating the shame of our first parents and their recourse to fig-leaves to hide it (Gen. iii. 7), discards Wyclif's word "brechis," and says that they "made them apurns." And from 1600 onwards there is no trace of any *n*-spelling, nothing but *apron*.

The history of *aitch-bone* is more obscure, from lack of literary instances. But it is pretty clear that the *aitch* here is a corruption, arising in the same way, of *nache*, "the rump," a term borrowed from Old French *nache* or *nage*, which is itself the phonetic descendant of a Latin adjective *natica*, derived from *natis*, "buttock." So that the *aitch-bone* is the "rump-bone," and the joint of beef so named is the meat covering this bone, the cut which comes nearest to the juicier rump-steak. Evidence on the point is, as we have said, scanty. We can refer to a poem dated about 1300, which includes amongst the indignities offered by Englishmen to the Scots, that they "nakned their nages," reminding us of Hanun's similar treatment of David's ambassadors (2 Sam. x. 4); and Fitzherbert's noted treatise on husbandry, printed in 1523, refers to "the hucbone and the nache by the tayle." But in the earliest actual mention of the bone, the *n* has already disappeared; this is an instruction to huntsmen in the famous Book of St. Alban's, issued from Wynkyn de Worde's press in 1486, which bids them, when they have killed a deer and are cutting it up, to "kerue vp the flesh ther vp to the hach-boon." Nevertheless the *n*-form must have survived, at least dialectally; for Kitchiner in his "Cook's Oracle," published in 1822, after recounting the odd variations of the name as *haunch-bone*, *edge-bone*, *ische-bone*, *ach-bone*, *H-bone*, *hook-bone*, *each-bone*, *ridge-bone*, says that he has also heard it called *natch-bone*. But here, too, chance has triumphed; the etymological *n* is ousted, and *aitch-bone* has become the established spelling.

There are traces in the dialects of similar, but unsuccessful, attacks on the integrity of other words; in Wiltshire and Gloucestershire *ettle* is sometimes used for *nettle*; and in Cumberland *est* is occasionally found instead of *nest*.

The foregoing examples illustrate the haphazard loss of *n*; we pass on to see how the same letter has been in like manner capriciously acquired. We find our first instance in *newt*, the little English lizard. The Old English form of this name was *efeta*, which later became *evet* or *euet*, and is still represented by the modern *eft*, a form that *newt* has not wholly displaced. About 1175 in the Cotton Homilies we find "eueten" classed along with "naddren and snaken." Wyclif follows with a curious application of the word; for where our version of the Bible has a commendatory notice of the spider (Prov. xxx. 28), he makes it read, "An euete enforsith with hondis, and dwelleth in the housis of kingis"; (the translation, it may be noted, is justified by our modern Revisers, who call the creature a "lizard"). Here, however, is the dangerous conjunction of *an* with an initial vowel; a few years later, in Trevisa, this occurs again in "The lytyll beest Saura is as it were an ewte;" and in the same author we see the mischief commencing, in an obscure and jumbled form, in the statement, "Som crepynge beestys crepe on fete as enewtes." Early in the next century the misspelling is fully established; the translation of Palladius's treatise on husbandry contains the mysterious advice:

> "For rotyng of the croppe the galle is boote
> To touch hem with of neutes grene"—

which means that if the crop of apples on your trees shows signs of decaying, it is an advantage (a "boot") to touch them with the gall-bladder of a green newt—though how that could help the case it is not easy for this more matter-of-fact age to imagine. Thenceforward the two forms exist side by side, and are treated as different names of the same creature. Ben Jonson, indeed, makes a curious combination of the two, when he asks, in "Bartholomew Fair," "What? thou'lt poyson me with a neuft in a bottle of ale, will't thou?" but otherwise, from Plot's "evets or newts" in 1679, to the "newts or efts" of a modern book of science, they are taken as two equally available synonyms.

We turn next to an example that few would suspect of being one; to most of our readers it will probably come as a surprise to hear that *nickname* has borrowed and retained an *n* that did not belong to it. And yet *nickname* was originally only an *ekename*, that is, an additional name. The first element of the word is *eke*, representing Old English *éaca*, Old Norse *auki*, with the sense "a piece added on," which has only survived in technical uses, especially with the meaning "tag to a bell-rope." But in this too there was once some danger of an erroneous form; for in the old account-books of Rotherham, whilst one entry mentions "10 payre of bell ekes," another refers to "a neke to our gret Bell." And what failed in *eke* fully succeeded in *ekename*, and apparently with the greatest ease. If we go back to Robert de Brunne's poem on "Handlynge Synne," written in 1303, we get the uncorrupted form in the warning that "He ys to blame þat geueþ a man a vyle ekename." Fifteenth

century dictionaries are divided in opinion, one spelling "an ekname," and another "a nekename." From 1550 onwards the word is very common, both as noun and verb, but always appears in its modern dress, decked with its borrowed *n*.

Singularly enough, only the indefinite article has been able to compass such results as those we have been considering, though other words have had a partial and temporary success. *Mine* and *thine* in connexion with *aunt* have been the nearest to securing a changed spelling; for through several centuries it was an accepted usage to write *my naunt*, *thy naunt*; witness "His moder was þi naunt" from the "Cursor Mundi" of date 1300, and "My naunt of fairies," from one of Dryden's plays in 1678. And the definite article emulated the exploits of its indefinite brother by trying to rob words of their initial *e*; how this could be attempted will appear from the following examples :—

"How that this vice is for to drede
In thevangile it telleth pleine" (Gower, *Confessio*, III. 34).
"Laghe [= law] of godis mouth is þe vangel" (Hampole *Psalter*, cxix. 72)
"Als tellis luca þe wangeliste" (*Cursor Mundi*, 13977).
"Ye Sundaye next aftere the pyffanye" (*English Gilds*).

But these had no permanent effect; *a* and *an* alone have produced abiding results of orthography by haphazard.

ALFRED ERLEBACH, B.A.

## DR. MACKENZIE OF TIENTSIN.

OF the late Dr. John Kenneth Mackenzie, medical missionary in China, a sketch was given in the "Sunday at Home" for April 1889. A Memoir has since been published,[1] containing a detailed account of his labour and service, with extracts from his diary, fully justifying what was there said of him, and presenting not a few points of general interest. We can now better understand how he was spoken of by a competent judge, the Rev. Griffith John, as "an ideal medical missionary, thoroughly capable in the profession, but subordinating all to the spiritual interests of his work." We no longer wonder at the regret caused by his death, and the honours paid to his memory by the natives, as well as by all the representatives of foreign countries at Tientsin, where he died at Easter 1888. He had laboured there since 1879, having been previously for four years stationed at Hankow, where he went in the summer of 1875.

The objects and the operations of medical missions are now so well known, and the record of the labours of the missionaries is so much the same in all countries, that we are tempted to notice this book only on account of some special points of Chinese character and life illustrated by it, and also of some remarkable personages with whom Dr. Mackenzie came in contact.

The healing arts in China, notwithstanding the boasted civilisation and learning, are in most rude and barbarous condition. Disease is generally ascribed to the anger of heaven, or the visitation of evil spirits, as the priests teach for their own ends. Charms are commonly used to pacify the gods or expel the evil spirits. These charms are written out and pasted about the sick room, or they are burned, and the decoction of the ashes given as a drink. Astrologers, fortune-tellers, and other impostors are consulted, just as they would be among ignorant African tribes. While these superstitions pervade the populace, the *literati*, knowing almost nothing of science, attribute sickness to the influence of "the five elements." The most wonderful healing properties are attributed to a number of strange substances. But as similar medicines were used in old times even in England, we must not be too severe on their ignorance of the nature and use of remedies.

A Chinese doctor, for there are in the cities recognised professors of the healing art, does little beyond examining the pulse. The action of drugs, as well as the nature of disease, can be little known, and absurd theories are substituted. But it is in the art of surgery that the Western practitioner obtains instant and unquestioned authority. Except the use of the needle in acupuncture, nothing has ever been contributed by the Chinese to the art of surgery. Dr. Mackenzie was a skilful and accomplished operator. He said in a letter to his brother: "I am passionately fond of surgery, and never happier than when I am about to undertake some big operation." With this taste, and with much practice, it is not wonderful to find him saying, "the difficulty is not to get the people to believe in the foreign medical man, but rather for them to understand there is any limit to his healing power."

In provinces where medical missions have not yet penetrated, there is utter ignorance and mistrust of foreign skill, but the fame of Dr. Mackenzie's cures made his name known far from Hankow. During one year about 1,150 patients were treated in the wards of the hospital, besides nearly 12,000 attended to at the dispensary. Curious ways of publicity sometimes spread afar the fame of the foreign surgeon. One case was that of a young man, twenty-four years of age, who came from a distance with an enormous tumour, measuring forty-three inches round, dependent from his side. In a month he was cured, and he wrote the following

[1] "Memoir of John Kenneth Mackenzie," by Mrs. Bryson, of Tientsin (Hodder & Stoughton).

letter to a newspaper at Shanghai describing his own case :

"For ten years I, a native of T'Ming Chow, in Kiangse, suffered from a tumour in my back. At length it became so large that I could walk with difficulty, and I was much afraid it would kill me. I had engaged many doctors, but no one could do me any good. Fortunately, a friend named Dr. Mackenzie at Hankow. He, on inspection, said it could only be cured by cutting it off, and that I had nothing to fear from the cutting. He gave me a narcotic, and immediately with a knife cut off the tumour, which was twenty-five pounds in weight. As a return to the doctor, who took no money, I shall thank you to put this in your paper in order to celebrate his name.—Yours most respectfully,

"HU-TSZE-KOH."

Another simple but notable case was that of a Master of Arts, in the province of Kwe-chow, more than a thousand miles from Hankow. He was summoned to Peking to see the Emperor, and was much distressed by the fact that he had a hare-lip. Hearing of the wonders of Western surgery he journeyed to Hankow, and was greatly delighted by the cure effected on him.

A remarkable fact is stated : that upwards of 700 persons came in one year to be cured of opium-smoking. The great success in this treatment encourages those who advocate homes of restraint for drunkards in England, as well as for slaves to opium in the East. Many complete cures are here recorded.

In the spring of 1880 Dr. Mackenzie entered on his new field of labour in the northern city of Tien-tsin. Soon after his arrival he paid a visit to Peking, the most notable sights of which are described in his journal. The Manchu city is almost wholly separated from the Chinese city, where trade is carried on. The "Temple of Heaven," the greatest sight in China, covering vast spaces of ground, was explored.

"We were fortunate in gaining admission to the *hau-tien*, a building behind the covered altar, containing the tablet. This tablet is contained in a richly-carved cabinet, the door of which being removed, and curtains of silk drawn, revealed the inscription, four characters in gold on a plain black ground, Hwang Tien Shang-ti (The Supreme God of the Imperial Heavens). No idol is to be seen in any of the buildings of this temple. We saw the slaughter-house with its floor covered with hair, and the porcelain kiln for burning the sacrifices."

The great Lama Temple was also visited, which is said to have fifteen hundred priests in residence. The image of Buddha is ninety feet in height, a huge gilded monster, thirty-six feet broad. A lotus plant is growing out of its arm. There are ten thousand small images of Buddha in little niches round the gallery of the temple.

The Summer Palace—destroyed and looted by the French troops in the war—although protected by a wall, is hastening to decay, the Chinese tearing down fine masses of marble and stone for the sake of getting the pieces of iron used in fastening the building together. At a Confucian temple two drums were seen, said to be of the Chan dynasty, as ancient as the Moabite stone, nearly 3,000 years old, covered with poetry, in characters of the age.

Dr. Mackenzie's impression at Peking was, that if the Chinese had a little ambition, they could easily throw off the Manchu yoke. The conquering and reigning race are indolent and degenerated, in Peking most of them being privileged and pensioned, while the energy and business belong to the native Chinese ; but there is no organisation or combination among them, and the ancient system of graduation and literary promotion at present satisfies their ambition.

The most notable event of Dr. Mackenzie's career at Tientsin was his obtaining the patronage and the friendship of His Excellency Li Hung Chang, the well-known ruler of the metropolitan provinces, and the Chinese Minister for Foreign Affairs. "It is he," says the doctor, "who negotiates treaties with foreign Powers ; he orders ironclads from England and Krupp's guns from Germany. He has almost despotic power in the enormous region which he governs, and is looked upon as one of the most astute and enlightened of Chinese statesmen, as he is the most powerful ; and at the present moment is the hope of the party of progress." His wife was seriously ill, and was given up by the native doctors. A member of the English Legation, closeted with him for business, observed that he was very sad, and, being told the reason, advised him to send for an English doctor. It was hitherto regarded as impossible for a Chinese lady of rank to be attended by a foreigner, but he resolved to break through the custom of his nation, and sent a courier to summon aid. Dr. Irwin and Dr. Mackenzie received the message "just as our prayer-meeting was breaking up." "Here," they said, "is the answer to our prayers." They found the lady very ill, with little hope of recovery. They stayed all night, enabling the Viceroy to get some much-needed sleep. After six days, they told the Viceroy that there was at Peking, two days' journey off, an American lady-doctor ; had he any objection to send for her, to carry out their suggested treatment? "None whatever," was his reply ; and a special messenger was despatched for Miss Dr. Howard, the Viceroy sending his own steam-launch to convey her from Tung-chow. She remained for a month in the palace of the Viceroy, and the Lady Li made a good recovery. Nothing could exceed the gratitude of Li Hung Chang. Ascertaining that the medical mission, commenced some years before, was hampered by lack of space and by small means, he gave for the use of the mission the entire quadrangle of one of the finest temples in Tientsin, and a tablet was put up, with the governor's three titles, and the words "Free Hospital." He also handed a purse for the purchase of medicines, and appointed Dr. Mackenzie and Dr. Irwin medical attendants to his family. No salary was accepted, but any return would be gratefully received in help to the hospital. This was generously given, and all things thereafter prospered with the mission. Miss Howard was transferred to Tientsin, and took up the splendid opening for work among Chinese women which was patronised by Lady Li.

After a time a new hospital was built, which the Viceroy continued to help. He also urged the commencement of a vaccine establishment, of which native assistants efficiently took charge. He came, with his staff, to witness surgical operations,

and in many ways showed the utmost interest in the hospital and its work. There was no longer any prejudice against "foreign devils" shown in Tientsin.

"The Viceroy's appearance," says the doctor, "is that of a man born to rule: he is six feet two inches in height, with a truly commanding figure, and a calm, powerful face."

In the summer of 1880 there seemed every prospect of war with Russia. Sir Thomas Wade went to Tientsin, and had many interviews with the Viceroy. A banquet was given in his honour, six foreign gentlemen, and eight of the leading Chinese officials, being invited to meet the British Minister. Drs. Mackenzie and Irwin were among the guests. The Viceroy seems to have spoken with highest favour of the work of the medical foreigners, and showed marked attention to Dr. Mackenzie. Some of the English guests, as most Englishmen in China, had cared little for missionary work, and were surprised at the Viceroy's treatment of the doctors. But Sir Robert Hart, by the Viceroy's wish, had already invited to Tientsin Colonel Gordon, a man who had warmest sympathy with the work of the missionaries, and who would be delighted to find them in favour seldom shown by rulers like Li Hung Chang, his old friend and comrade in arms.

There is a record in the doctor's diary of his meeting with General (then Colonel) Gordon. "During his stay in Tientsin, Gordon was residing in our temple, in the quarters set apart for the guests of the Viceroy. It is very extensive, and has splendid accommodation after Chinese style. Gordon is a truly godly man, of the rare old Puritan type. I was greatly delighted and instructed by his genial conversation. He is a Christian soldier, reminding one of Havelock, and a man of men. He is looking strong and hearty, and has a very pleasing face. Evidently, judging from his conversation, he is a very earnest student of the Bible, which was lying on the table at his side. He spoke of his own spiritual experience, of his faith that God would not allow him to want, and therefore he felt that he had no right to store up money or give any anxious thought to the future. To strengthen my faith he informed me that when he left England he gave to his brothers all his money, reserving only £80 for his journey. When he arrived in India he had with him only £9 sterling. When he resigned his post as Secretary to the Marquis of Ripon, he had only £1. He might have remained at his post a while, until he received a portion of his salary, which would have tided him over; but, feeling it to be his duty to resign, he did so, and borrowed a few pounds to meet incidental expenses. The day after came a telegram from Peking, inviting him to come to China, and so the financial difficulty was removed."

Then follows the narrative of Gordon's intercourse with the Viceroy, from whom he received presents and money, but "he returned everything except two boxes of tea." And the interesting record thus ends: "He is such a bright, happy fellow, he makes everybody love him who comes near him. I was struck with one thing about him, and that was, that religion had become a part of his life. Not that he uses religious phrases: I fancy he has an abomination of cant, or anything approaching to it; but it is natural to him to refer to spiritual things."

It would be strange if, with such types of Christian character as the Viceroy knew in Gordon and in Mackenzie, as well as in the missionaries of various kinds, his own mind should not sometimes be turned to consider the faith which prompted these beneficent actions. Dr. Mackenzie, when asked if he saw any leaning towards Christianity on the part of officials and persons in high places with whom he was brought in contact, was always careful to explain that it was true now, as in days of old in Judea, that it would indeed be hard for the rich and the powerful in China to receive the religion of Jesus. But the Viceroy, to the end of Mackenzie's life, regarded him and treated him as a man of noble character and lofty aims, at the same time considering him as almost a fanatic with regard to religion. In a letter to a friend in England, in reference to the special commission sent from the United States to treat concerning the troubles about emigration of Chinese to California, after they had finished their work, Mackenzie tells that "a few days ago, when the Viceroy, who is also Grand Secretary of State, was handing the treaty, already signed, to the commissioners, his Excellency said, This treaty has been drawn up in the spirit of Christianity, and it reflects honour on both nations." A man speaking thus is not far from the kingdom of heaven.

The training of native physicians and surgeons in European medicine and surgery Dr. Mackenzie thought essential to improvement in the healing arts in China. He did what he could to establish such a school in Tientsin, but with only partial success. The number of natives combining natural and spiritual qualification is too limited to admit of many being engaged in medical mission work. The ordinary missionaries sent from England take a long time to become acquainted with the language. His rare professional skill as a surgeon gave him a position which few could attain. It is interesting to know that it was through reading the Life of William Burns (whose translation of "The Pilgrim's Progress" into Mandarin Chinese he highly praises) that he was himself led to choose China as the field of his labours, of which this Memoir contains a full and valuable record.

JAMES MACAULAY, M.D.

# THE HANDWRITING OF OUR KINGS AND QUEENS.

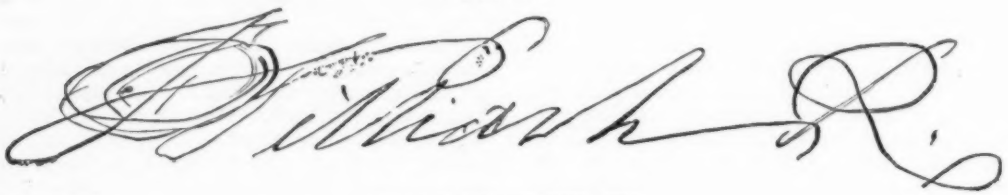
BY W. J. HARDY, F.S.A.

## WILLIAM IV AND QUEEN ADELAIDE.

The new prospect which, on the unhappy death of the Princess Charlotte, was opened to the Duke of Clarence gave him very little real satisfaction. He had for some time lived the life of an English gentleman at Bushey, where he could meditate over a splendid record of naval service, and he did not care for the thought of being King of England. The friends he liked best, and kept up with, were naval friends; so, no doubt, on his appointment as Lord High Admiral, he had plenty of applications for naval preferment, like that which, we see by the following answer (facsimile opposite), had been made to him by Nelson's widow.

*Holograph. Original at the British Museum. Additional MSS. 28,333, folio 7. See facsimile opposite.*

Admiralty
June 9th 1827
Late at Night.



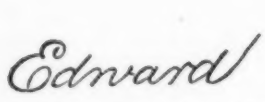
Madam,

In answer to Your Ladyship's letter of 15th May, I have to remark I cannot forget the many happy hours I spent at Paris with Your Ladyship and must ever feel anxious for any relation of the late Admiral Lord Nelson. At present I cannot promote Commander Blankley but shall have sincere pleasure in bringing forward this meritorious young officer the instant I can with propriety and ever remain,

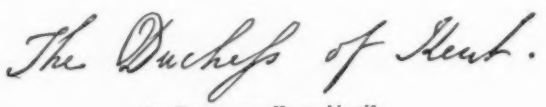
Madam,
Yours most truly,
WILLIAM.

His signature as King appears below.

*Facsimile V.*

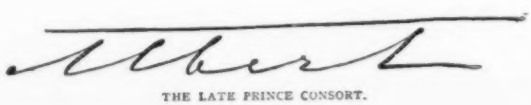


WILLIAM IV, FROM CORONATION ROLL.



William's altered prospects necessitated a separation from "Mrs. Jordan"—Dorothy Bland, the actress, with whom he lived so long—and a marriage was, with little delay, arranged and celebrated with the Princess Adelaide, daughter of the Duke of Saxe-Meiningen, who, when Queen Adelaide, became the *bête noire* of the Liberal party, and especially of Lord Brougham. Her usual form of signature appears below. She died in 1849.

QUEEN ADELAIDE.



EDWARD, DUKE OF KENT, 4th son of George III, born, 1767; died, 1820; married Victoria of Saxe-Coburg-Saalfeld.

THE DUCHESS OF KENT, his wife.

[THE FATHER AND MOTHER OF HER PRESENT MAJESTY.]

THE LATE PRINCE CONSORT.

Admiralty.
June 9th 1827.
Late at Night.

Madam.

In answer to Your Ladyship's letter of the 15th May I have to remark I cannot forget the many happy days I spent at Ditton with Your Ladyship & your most excellent husband, & to express my sincere congratulations on the late Admiral Lord Nelson.

At present I cannot promote Commander Blankley but shall have pleasure in doing so as soon as his merits & services may require. I am Madam,

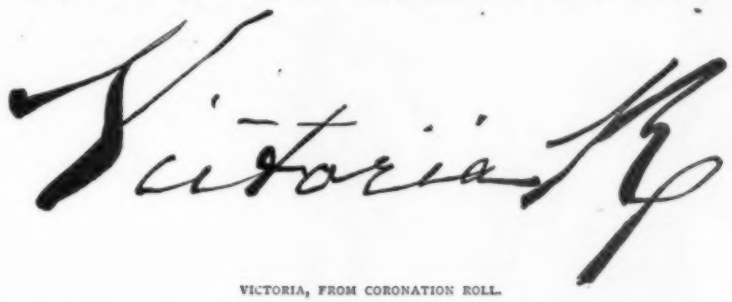
Your most humble

William R.

Windsor Castle.

June 22. 1887.

I am anxious
Deeply to ask the
Women of Great
Britain & Ireland
– how deeply touch-
ed & gratified
I am by their
Every Kind & dear
Wishes present. I
thank them all
most warmly for
it, & shall value
their gift as the token
of love beloved
Husband, very
highly – as a touching
remembrance of
this interesting &
Event & the joyful
day & of their great
loyalty & affection.



Victoria R.I.

The signature given in facsimile below is probably the earliest specimen of the handwriting of her present Majesty the Queen. It was penned when she was but four years old. Her first signature as Queen

SIGNATURE OF HER MAJESTY AT THE AGE OF FOUR.

is taken from the original appended to the Coronation oath. The signatures of the Prince Consort and of the Duke and Duchess of Kent, the Queen's father and mother, are given on page 776.

VICTORIA, FROM CORONATION ROLL.

As an example of her Majesty's writing at the present time, it would be impossible to find a more suitable and interesting example than the letter in which she expresses her gratitude to the "Women of Great Britain and Ireland" for their loyal offering on the occasion of her Jubilee. (*See facsimile opposite*).

Below, we give the signatures of the Prince and Princess of Wales, of their two sons, and also of the Queen's three sons—the Duke of Edinburgh, the Duke of Connaught, and the late Duke of Albany.

In concluding this series of papers, it is the author's agreeable duty to express his warmest thanks to Mr. H. C. Maxwell Lyte, C.B., Deputy Keeper of the Public Records, for allowing photographs and tracings of royal handwriting to be taken from documents in the Public Record Office, and to Mr. E. Maunde Thompson, C.B., Principal Librarian of the British Museum, for according a similar permission with regard to like documents preserved in the Museum. The author begs also to express his gratitude to the other gentlemen connected with the Record Office and the Museum who afforded him such ready and constant assistance.

# THE MONTYON PRIZE

## ITS HEROES AND HEROINES.

THE world-wide fame of M. Montyon as a philanthropist is due in a very large measure to the circumstance that his foundation for the reward of noble, self-sacrificing, and virtuous conduct has been and must always be administered by forty of the most eminent men of France—the members of the French Academy. The mocking spirit of the age has not spared even the Montyon Prize for virtue; but, however the witlings of the Paris press may air their shallow humour at the expense of the institution, the Academy continues to carry out its duty to M. Montyon in that discerning, far-reaching, and widely philanthropic spirit which is not one of the least imposing claims of this learned corporation to public usefulness. The story of several heroic and beautiful lives associated with the Prix Montyon has been told from time to time in the "Leisure Hour" by a valued contributor from whose hand the pen has dropped for ever. Their interest was heightened by the use of that imaginative grasp and delineation of the surroundings which is usually reserved for fiction. The aim of the present writer is less ambitious: it is to continue the work that was left undone so far as it seems desirable, that some further illustrations of the deeds of virtue rewarded by the French Academy in the name of M. Montyon, and in later times than those hitherto dealt with, should be added to the list. All the facts given in the narratives which follow have been gathered from the official archives.

Several cases are on record in which the Academy has awarded the Prix Montyon to servants who have made themselves noteworthy by their self-sacrificing attachment to their masters and mistresses under circumstances of singular trial and difficulty. This form of virtue, which used to be frequent, is now generally admitted in all civilised countries to be getting very rare, a fact that adds to the interest belonging to such cases as that of Annette Breuil, one of the recipients of the Prix Montyon in 1875. She was born at Clermont-Ferrand in 1814, and at the age of eighteen she entered the service of a Polish refugee and professor of music named Tarnowski. For twenty years things went fairly well, for the Pole had many pupils, but in 1854 he fell into bad health, and his pupils leaving him he became extremely poor. Annette, who had married and become a widow while in his service, increased her attentions towards her unfortunate master as the evil days darkened. Wages were now out of the question; but not only did she willingly forego these, but took 900 fr. which she had saved out of the bank, and placed the money at the musician's disposal. His condition became worse and worse. The 900 fr. having been spent, Annette sold two small vineyards which she owned in Auvergne, and used the sum realised, 1,500 fr., upon her master.

This was in the terrible year 1871, when nothing was heard but the cry of mental distress and physical suffering throughout the country. There was no worse time for selling land, consequently Annette must have parted with her small heritage

at a great sacrifice. She nursed Tarnowski all through his long illness, steadfast and faithful to the last. When he died, he could only show his gratitude by making her his universal legatee. The property he left her consisted of some classical music and two violins. The music sold for little or nothing, but the violins being regarded as curiosities fetched a rather high price. But even this sum the faithful Annette did not keep for her own use, but spent it upon her dead master. She recollected the horror he had so often expressed at the thought of being interred in the *fosse commune*, —literally the "common grave," but really the free burying ground in a French cemetery. To complete her work of charity and benevolence, the widow Breuil spent the money she obtained by the violins in purchasing for Tarnowski a tomb such as he would have desired.

The case of this admirable woman having been brought before the Academy, it awarded her the maximum amount of a Montyon prize, viz. 2,000 fr.

In 1884 the Academy made awards under the Montyon endowment to two other faithful domestics, Caroline Coles and the widow Briand, who for more than sixty years had been in the service of the same family, and for thirty years without wages. Coles had done still more; she had supported her mistress by obtaining work out of doors.

At Tavers, near Beaugency, on the high road from Paris to Bordeaux, lived, and may still be living, a small farmer named Lepage and his wife. The ideal that both pursued in perfect agreement with one another as to the means as well as the end was that of doing good to their fellow-creatures. Their hearts were especially touched by the hardships and sufferings of poor tramps — not worthless vagabonds, but artisans and labourers seeking employment, who so frequently passed along the high road, hot and dusty in summer, cold and wind-swept in winter. To such people they gave food and shelter, and their house became known throughout the district and far beyond as the *Hôtellerie de la Charité*. What more beautiful name than the Hostelry of Charity could have been given to such a refuge! The idea of providing a resting-place for wayworn, moneyless wanderers was probably due to Mme. Lepage, who ever seemed to hear afresh these words of her dying mother: "Turn away nobody. Charity has always obtained a blessing from Heaven. It never impoverishes the giver. Be charitable, and God will always give you a recompense." Not a day passed but some one received under this hospitable roof shelter, food, and kindly, encouraging words. And this went on for many years. One day a carriage and pair drew up in front of the Hostelry of Charity. A well-dressed man sprang to the ground, exclaiming as soon as he saw Lepage and his wife:—"Oh my dear benefactors! do you not know me?" He was once a workman who, like so many others, had tramped along the road weary and hungry, and who had found food and a night's lodging at the Hostelry. The next day, by the help of Lepage, he obtained work at Beaugency, and from this beginning came a complete change of circumstances. He did not remain in the district, but the fresh start that had been given him brought increasing success and eventually fortune. Now a rich man, he had returned to show his gratitude to those whose charity had rescued him from wretchedness, and to whom he attributed all his prosperity. Every year after the harvest Lepage set aside the "portion of the poor," and it often happened after bad seasons that the whole return of the previous year was spent in helping others. The Hostelry of Charity had existed twenty-six years when the splendid philanthropy of these unpretending, humble people was brought before the notice of the Academy, and their names were added to the list of those to whom the Prix Montyon had been awarded.

Here is another example of "virtue" such as M. Montyon intended his foundation to honour rather than to reward, and which the Academy has always been careful to recognise in this higher sense. In 1868 a violent epidemic of small-pox, exceptionally malignant in character, broke out at Pontèves in the department of the Var. The inhabitants were terror-stricken at what they termed the "black pest," and all who were not attacked, with a solitary exception, sought safety in flight, leaving the dead and dying uncared for. This exception was a woman named Merle, who had always been poor, for she was ready to share her bread with those who were worse off than herself. When indigent people in the district saw her approaching they said in their *patois* that Providence was coming: "Veïci veni la prouvidence." Instead of basely fleeing from danger and neglecting the duties of humanity, the woman Merle remained in the village, going about from house to house, attending to the sick, saving lives, and consoling the dying. Her charity even extended to the dead, for she carried bodies out of the pestilential rooms and buried them. This went on for several days, when her heroism becoming known in the district, the fugitives began to feel ashamed of themselves, and when they perceived that Merle did not fall a victim to the pest they slowly returned. She received the Prix Montyon in 1873.

The next case is that of a man who, although humble and ignorant, united such philanthropy of soul with such vigour and energy of purpose, that he founded in the face of apparently insurmountable difficulties an asylum for indigent and especially aged persons, which the Government several years ago classed with Establishments of Public Utility. Jean Abbadie was a native of Bordes in the Hautes Pyrénées. After some experience as a soldier, he became a servant in an institution that was at once a school and an asylum for infirm priests. There he was known as Frère Jean, although he was not a member of any religious order. In 1861 he became so convinced that it was within his power to help the poor and the forsaken—especially the aged —that he could not rest. He spoke to the Bishop of Tarbes about this strange longing, and was advised, inasmuch as he was completely without resources, to do nothing in haste. He remained two years

longer as a servant, but with his mind constantly fixed upon his ideal. Then one day, unable to bear this life any more, he sallied forth upon his mission, carrying little besides his stick, and trusting to Providence. All about the Pyrenean country he begged for the poor, and with immediate success. Some people gave him maize, others wheat, and others linen, wool, or potatoes; now and again he obtained a gift of money. He made a collection of all these things in the little town of Lannemezan, which he had fixed upon as the centre of his charitable work, and in a few months he had a community of poor people, chiefly old men, depending upon him. As Jean Abbadie became better known confidence in him increased, and at length somebody gave him 5,000 fr. towards the purchase of a very large but dilapidated house, which he thought might be turned into just the home for his poor that he had dreamt of. He bought the building, had it repaired, and in 1875, when Jean Abbadie's history was told in the Academy by the Baron de Viel-Castel, it contained eighty inmates. It had then obtained the official name of Jean Abbadie's Communanté Hospitalière. All the inmates were supported by the individual exertions of the founder, whose begging expeditions—for such they really were—made him a familiar figure from the Pyrenees to Bordeaux.

In 1880, the duty of addressing the Academy upon the Montyon laureates for that year devolving upon M. Victorien Sardou, he had to speak especially of persons who had merited the distinction by physical courage directed upon the most noble end to which "virtue," in the sense that the Romans understood it, could be put, namely, the saving of human life at the risk of losing one's own. Jean Mandement, of Auterive in the Haute Garonne, was the hero respecting whom M. Sardou gave the most ample details. A most astonishing chapter of heroic deeds done in comparative obscurity was that of this man Mandement. It would seem that certain people come into this world with a special mission to rescue others from death, and that every opportunity of doing so is thrown in their way. At the age of fifteen Mandement had saved the lives of seven children who were drowning in a canal. Being of a roving turn he began a little later to travel in various parts of France, and it appears that wherever he went accidents happened which provided him with occasions for showing his coolness, his courage, and his success in saving life. Upon his return to Auterive he married and settled down. Then one might have thought that his existence would have been uneventful. But no, the fatality that made him a hero pursued him. A boat containing two young men overturned in the river flooded by the melting of the snow, and Mandement, who happened to be on the bank, plunged into the fiercely rushing water and managed to save one of the drowning men. Inflammation of the lungs was the consequence of the chill he received, and for two months he was unable to work. His savings were exhausted, and nobody came to his assistance. But this cruel experience of the world's ingratitude did not spoil him; he remained the brave man that he was before. As soon as he was about again there was a fire in the town, and the desire to be upon the spot was to Mandement irresistible. He had no sooner reached the burning house than he saw a gendarme fall suffocated into the flames. Mandement did not hesitate a moment; he plunged into the fire and presently reappeared carrying the half-asphyxiated man upon his shoulders. But he was himself badly burnt by this fresh act of heroism. Not long afterwards a woman fell into a well, and by the efforts that she made to save herself she caused some of the masonry to fall upon her and injure her grievously. Drawn to the spot by her despairing cries, Mandement—although the stones were still dropping and the wall of the well threatened to fall in completely—descended in the face of appalling danger and brought the woman safely out in his arms. In 1870 he was ascending to the roof of a burning house, when the ladder broke and he fell to the ground, breaking his right leg. He had now to pass three months in bed, and again the world forgot him. He was lamed for the rest of his life; but the old spirit was as strong in him as ever. In 1875 there was a great flood at Auterive, and houses were nearly submerged. Several old people and children were in a dwelling surrounded by water and in imminent danger of being washed away. Mandement, armed with a crowbar, made an opening in the wall, through which, infirm as he now was and no longer young, he carried one after the other the terror-stricken prisoners to a place of safety. But the number of persons rescued from extreme peril by this extraordinary man would make a much longer list. When his merit was recognised by the Academy he was sixty-seven years of age, and one of his sons—evidently following in his father's footsteps—had received a medal for saving life.

Gratitude is a virtue which the Academy is always quick to recognise and encourage. In 1885 Marie Lexis, then sixty-one years of age, was awarded a Montyon prize for having devoted her life to the payment of a debt of gratitude, which many others in the same situation would not have considered one. An illegitimate child thrown upon the charity of the world, she was placed by the Hospice, where her first years were spent, in the charge of a couple named Valade, by whom she was treated with much kindness. The man Valade died, and Marie Lexis refused offers of marriage and good situations in order to stay with the widow and help her. All her earnings had been devoted for more than forty years to the support of her benefactress, who was eighty-five years old when the case was brought to the notice of the Academy. M. Maxime du Camp, in addressing his brother Academicians on this subject, said:—"We are happy in being able to award 1,000 fr. to this foundling, whose virtue may well be set up as an example to more than one person of legitimate birth."

No class of men in France work harder to earn meagre wages than rural postmen. One of these, Etienne Cuny, had for years been in the habit of walking some thirty miles a day in the mountainous and savage country of the Lozère to earn the 850 fr.

(34*l.*) a year, with which his services were paid by the Government.

From seven A.M. to ten P.M., summer and winter, he was out and about in all winds and weathers. During the great floods of 1866, he observed while upon his rounds in the mountains that a water-spout threatened the valley of Grandrieux. Using all possible speed he reached the little town in time to warn the inhabitants of the danger, and, thanks to him, they were able to save themselves and much of their property from a sudden and disastrous flood. In the terrible winter of 1870, finding a man lying in the snow unconscious, he carried him home upon his shoulders and thus saved his life. He rescued several children from drowning, and mastered a furious madman from whom all others fled in terror. For these and other public services he received a Montyon prize at the age of fifty-five.

In 1887 the chief hero on the Montyon list was Jean Adolphe Delannoy, a fisherman of Calais. The son of a pilot, he commenced seafaring at the age of ten. He seemed marked out by destiny to save lives at sea. He had already rescued several from a watery grave when quite a young man, and as time went on the collection of medals awarded him became most remarkable. His greatest exploit was in 1867. A vessel bound for Antwerp struck the rocks near the coast, and the crew had barely time to climb into the rigging before the ship settled down. The sea at the time was frightful, and it seemed impossible that any help could be afforded the mariners in their desperate situation before the tide turned. This was awaited with feverish anxiety. In the port was an English steamer, the crew of which had not the patience to wait. Twelve of them, reckless of the extreme danger, launched the lifeboat and pulled through the raging waves towards the wreck. They were hardly outside the piers when the boat capsized. Seven men were drowned, and five were saved with great difficulty. In spite of this catastrophe, Delannoy with six comrades came forward, determined to make a fresh attempt. Besides the feeling of humanity, the example of the Englishmen had filled them with patriotic emulation. The lifeboat was broken, so they jumped into an ordinary fishing-craft, and left for the wreck, cheered by the dense crowd collected on the shore. They had a terrible time battling with the furious sea, but they drew near to the sunken vessel. Then the mizen, to which most of the crew were clinging, was carried away by a mighty wave. Only two men who were clinging to the main-mast remained, and these were taken into the boat and brought to shore by Delannoy and his companions. On one occasion Delannoy's remarkable *sang froid* forsook him. He was about to leave the harbour in his boat when he saw a child fall into the sea. He immediately swam to the rescue. After diving and bringing the child to the surface he turned to look at the white face of the inanimate boy. He perceived that he was holding in his arms his own child, who had run down to the port to kiss his father on his way from school and had fallen into the sea. Delannoy received such a shock from this recognition that he too lost his senses, and but for timely aid both father and son would have been drowned. In 1875 Delannoy received from the Government the Cross of the Legion of Honour; but it was not until twelve years later and after further acts of heroism that a Montyon prize was awarded him.

Of all the examples of noble disinterestedness furnished by the Montyon records, none excites more wonder and admiration at the dauntless courage of charity in those with whom the love of their own kind and the pity which is only a phase of it are the ruling passion of life, than the case of Paul Emile Descombes and his wife. Descombes had been a soldier, and afterwards a railway pointsman. While engaged in the latter capacity he met with an accident by which he lost both his legs at the age of thirty-two. Eighteen months afterwards he was allowed to resume his occupation on the railway, although he had then two wooden legs. He was married, but, having no children, he and his wife agreed that it was their duty to give a home to poor orphans. They took three children upon their entire charge, and also an infirm old man. The six individuals lived in two small rooms, all existing upon the wages of a cripple and a woman who earned two francs a day. Descombes and his wife, continually denying themselves, succeeded in rearing their adopted children.

The grants provided for by M. Montyon are not the only "prizes of virtue" which the French Academy has annually to award. Several important bequests have been made to the learned corporation by persons who have followed the example set by M. Montyon. Of these foundations, the best known are those associated with the names of the Duchesse d'Otrante, Marie Lasne, De Sourian, De Gemond and Mlle. Camille Favre, who, in 1885, left the Academy a sum the revenue of which is sufficient for the annual award of several prizes of 500 fr. each, all exclusively distributed so as to encourage family feeling and domestic virtue. The annual revenue of M. Montyon's endowment for the encouragement of virtuous actions by French people is 20,000fr. (800*l.*). A second endowment, vested by this philanthropist in the hands of the Academy, is intended to reward the writers of books which are adjudged useful to public morals. The revenue from this fund is likewise 20,000 fr. a year.

The members of the Academy meet annually—there is no fixed date for the gathering—to hear a discourse by one of their number on the "Prizes of Virtue," and those whom the corporation after a careful examination of the cases brought before their notice have placed upon the latest list of laureates. The proceedings are held in private, but the discourse is published in the French papers, and included with the official records of the Academy's transactions.

EDWARD HARRISON BARKER.

# HOLIDAY SIDE.

IT was a house of but medium pretensions on the outskirts of a large town. Before it was the orthodox piece of garden allowing just one small flower-bed in the centre of the strip of green. The garden was enclosed by iron railings and iron gate, beyond which lay the dusty road, on the one hand leading up to the busy town, on the other past rows and terraces of like habitations to the country and open fields. But the house, though of commonplace type, bore signs of grace and refinement which gave it something of an air of superiority to the others, similar in plan and architecture, by which it was surrounded. It looked quiet and homelike in the soft evening light which was then falling alike over country and town. Then a figure came to the open doorway, a woman of middle life, with sweet and patient face. As she stood looking silently out, a boy of about fifteen stopped before the house and began unfastening the little iron gate, and at that moment another form appeared in the doorway, a young girl, who at sight of her brother ran lightly down the garden path to meet him.

"Ronald," she said, "I have such news for you. Father and mother, you and I, are all going out to-morrow for a whole day's holiday."

The boy looked up quickly. "You mean it, Nettie?"

"Yes, I mean it; there is mother, ask her."

The two came up to the house together. "Mother," said the lad, eagerly, "are we really going to have a long holiday to-morrow, father and all?"

She stooped and kissed him. "Yes, love."

The boy gave a half-suppressed whistle of delight, and ran forward on into the house, but the girl lingered by her mother's side. Despite the disparity of years between them, they were much alike, those two; there were the same delicate features and breadth of brow, the same soft hazel eyes. They were much alike, only the one stood on the very threshold of her being, looking out with softly expectant gaze on to her rose-tinted Eden of delights, but the other had crossed the boundary line, had passed through the glamour to the reality beyond. Time had left its inevitable record on her face, yet it was a face that with years had gathered also a beauty all its own; restlessness had given place to quiet strength, impetuosity to a sweet patience. Perhaps that evening she was a little tired, for her clasped hands hung listlessly before her, and when tired like this it was a habit of hers to steal to that doorway and stand thus looking silently out. Not much at first glance was there to rest the eye, not much to interest in looking upon rows of houses and patches of garden, all more or less monotonous and alike; but just a little lower there was a corner and a break in the houses, and through an open space there was a glimpse of the pleasant country, cool and green, lying beyond. It was not so very far to reach those same fields and country roads, still it was a walk long enough to demand an hour or two of actual leisure; and generally when she walked out it was business, not pleasure, that took her from home, and her feet turned invariably towards the town and its busy scenes. But of an evening when the day's work was over it was pleasant and restful to steal a few minutes' look at the quiet space beyond.

This evening a look half wistful half sad was in her eyes; her children's delight at the planned holiday had stirred old memories of a time when she too had been young, and holiday-making had not been quite so strange, quite so much of an event. Through the open space a golden sunset was visible, and the glory of its rays shone round her as she stood, the light of the past in her eyes. She was not thinking exactly, only borne back for a few minutes, while like a sweet chime of distant bells came the echo of her own past years. A sound of some one speaking quickly in the hall recalled her thoughts. It was her husband; he and Ronald were busy arranging some parcels that looked as if they might have reference to the coming day's outing

Mr. Dutton himself did not look like the sort of man with whom the idea of holiday might have easily originated. Instead, his face was suggestive of the desk, the ledger, bargains and business, and he was wont to carry his preoccupied expression into his home life. So immersed he became in that business in the town, he seemed gradually to drift away from home and its concerns; home matters belonged to his wife and children, and the business affairs were his, and the two seldom if ever mingled together. Thus unconsciously between the lives most closely united was a little chasm, on each side of which they walked apart, till to that social life which gives soft tone and colouring to the harder everyday duties, Mr. Dutton became almost a stranger.

If any one could make the rigid lines of his face soften, if any one could awaken him to interest in something beyond those all-absorbing affairs which engrossed his time, that person was Nettie; and it was Nettie who in this matter of holiday had won a small victory. The next day would be her birthday, and that morning, standing by her father's side, seizing opportunely at a moment of leisure on his part, knowing such moments to be rare, "To-morrow will be my birthday," she had said.

"Oh! your birthday, will it?"

"Yes, and you promised me I should have anything I asked—anything in reason."

"Yes, yes, anything in reason, so I did. Well, what is it to be; you have got beyond dolls and toys now. Why, you will be seventeen to-morrow, Nettie! But be quick; what is it, child—you've something, I see, on your mind?"

She looked at him with her clear hazel eyes, eyes that had a strangely softening influence on the face she looked into. "Take us—mother, and me, and Ronald—all for a long day's holiday to-morrow."

Mr. Dutton pushed back his chair. "Pshaw, child, pshaw, what do I want with holidays? You can go, you and your mother and Ronald, if that is what your heart is set on; but I, child, I never think about holidays."

"Then think about it now."

"No, no; you must go without me."

Nettie put her hands resolutely behind her. "We shall not go without you, you understand; and you promised me anything in reason, and this is reasonable."

Still he withstood the siege, though, after all, it being rather a leisure time with him, the thing was possible. Perhaps nobody but Nettie could have triumphed, but finally she won and came off victorious. The request was one that had not been easy to Mr. Dutton to grant. He was not a man of holiday turn; like the rest of the world, there came to him, as there came to others, days of prescribed leisure; he could not go to business then if he would; but he endured rather than enjoyed these seasons of enforced relaxation—life had for him no holiday side. Having, however, once yielded the point to Nettie, Mr. Dutton, turning his business instincts into another channel, prepared to carry the thing out properly. Sundry parcels and arrangements that evening were duly seen to, keeping Ronald in a state of activity which was as novel as it was pleasant to the lad.

The preparations ended, he looked triumphantly round at his wife, who was standing near. "There," he said, "I think things are ready now; but dear me, this holiday-going—why, I haven't done such a thing these last twenty years."

"All the more reason you should do so now," said Nettie, with an arm round his neck and a kiss on his lips that sealed further protest.

At that moment a fresh cause for diversion arose; there came faintly, and then nearer, the sound of music, military music. Ronald ran to the door. "The soldiers are coming," he said, and Nettie followed him, and Mr. Dutton also; and heads appeared from the houses opposite, and children ran to the gates to look. Then, a motley little crowd of boys and men preceding and surrounding them, the soldiers came, the evening sunshine flashing on their guns and bright coats, tramp, tramp, to the sound of the band; like a little glowing pageant they passed and were gone, up towards the town beyond.

Mr. Dutton turned from the doorway. His wife was standing a little back; she had not openly joined the onlookers, but had stood a little apart, yet where she could see the soldiers plainly; and as she looked, silently she laid her hand on her heart, and the wistful sadness deepened in her eyes. It was many years ago now, in the beginning of her young married life, that a brother, a favourite younger brother, had made his home with her and her husband. Mr. Dutton wanted to take him into his own business line; he meant, he said, to make a man of the lad. But Reginald had no aptitude, he and his brother-in-law no sympathies in common; perhaps Mr. Dutton pulled the cord a little too tightly, but all at once, Reginald threw the whole thing up, left home suddenly, sending word back he had gone away and enlisted. Such had always been his boyish desire, but his friends had objected; now he had taken the matter into his own hands. He wrote to his sister asking her to forgive him; and she did forgive him and loved him more than ever. Mr. Dutton was angry—justly so, perhaps; he sent one sharp letter after the culprit, and then Reginald died out of his life. That he lived ever, with increasing intensity of affection as the years went by, in the heart of his wife, was a fact he did not know or appreciate. A few letters came, but of late years there had been silence; yet Mrs. Dutton never ceased to think of him, to long for news of him; never saw a little scene like the one that had just passed before her eyes, without an aching sadness at her heart. But it was a pain of which she did not speak; her husband had only answered with preoccupied air the once or twice she had mentioned her brother's name; he had no time to concern himself further about Reginald. So that evening he did not notice anything different in his wife's look, as, turning, he said indifferently, "I wonder if these are any of the men home from India; they were expecting some now soon, I think."

The next morning was one of exceptional sunshine and fine weather, the sort of day to tempt the most prosaic-minded person to a little exuberance of joyful feeling; and as Mr. Dutton, his wife and children took their way to the station, something of the gladness of the morning infused itself even into his soul. But the whole proceeding was strange to him, and at first he felt half shy, and then grew intent on doing everything to his utmost.

His wife looked into a comfortable third-class carriage. "We can go in here," she said; but he in a moment of exaltation would have taken second-class tickets, till his wife said gently, "There is no real difference—look, dear!" and seeing she was correct he yielded to her judgment. And so it happened that their only fellow-travellers were a woman, evidently of the poorer rank, and two young children, one a baby, the other a child of two, who toddled about the carriage at the risk of falling every moment. He so nearly accomplished this just as the train was starting, that Mr. Dutton instinctively put out his hand to save the child, and the mother thanked him, and drew the child towards her. She was a young woman with neat dress and pleasant manners, but in her eyes was a sad, patient expression that told of shadow rather than sunshine in her life. Perhaps it was that look attracted them towards her, or the presence of the

child, who would recommence his toddling performances, and finding himself close to Mr. Dutton, stand holding on by his knee, looking up into his face with round, wondering blue eyes. "Are you going down to the sea too, young man, holidaying, eh?" said Mr. Dutton, saying the first thing that came into his mind. The mother answered for the child, not telling all at once, but by degrees, as Mrs. Dutton, her sympathy aroused, talked with her. They were going to the seaside, the same as the Duttons, but it was not for them a holiday exactly—the husband and father was there at the convalescent home, and they were going down to visit him. He wanted to see her and the children—the shadow in her eyes deepened—he might grow stronger, they hoped so, they must always hope, but the doctor said the cough had gone too long; still they hoped to find him better. Mr. Dutton listened with an interest that was new to him. When he went by train in general he had no time to consider those he travelled with, but to-day was holiday, and he had leisure for sympathy even with an entire stranger. It was a sympathy, too, that had practical results.

They had arrived at their journey's end, and exchanged the train for an open carriage to ride down to the beach, when, as they went along, they passed by their fellow-traveller, walking wearily, the baby in her arms, the other child clinging tightly on to her skirt. It was a long way down to the sea. Nettie laid her hand on her father's arm—couldn't they find room for them, they could have the box-seat anyhow? The request sounded so naturally from Nettie's lips, in another moment the mother and her two children were seated in safety and comfort. Arriving at the drive's end, she thanked Mr. Dutton with a tearful gratitude that made him feel hardly like himself.

At that moment a group of men with blackened faces and grotesque gestures and grimaces were singing a comic song. They stopped a moment to look and listen, and the woman stopped also. Mr. Dutton half wondered at her staying loitering there, with that visit to her husband in view. It seemed she read his thoughts, for, pointing to one of the performers, "I know him," she said; "his old mother lives alongside of me at home. I'm waiting to catch his eye; I must tell his mother I've seen him!" The next moment she achieved her wish; the instant the song was over the man drew round to her, the grimace and gesture all gone; he was listening attentively to what she had to say to him, then, feeling in his pocket, he put some coins in her hand; it was a gift to the old mother at home, for the woman in reply said, "I'll take it to her safely, I promise you." Then, with another word of thanks to Mr. Dutton, she turned away.

"Poor things," said Nettie, glancing towards the men, "I wonder if they get tired of that buffoonery all day long!"

"Ah!" said Mr. Dutton, "I never thought about them before; I suppose they like it, though, or they would not do it."

But as he spoke thus, the deeper thought within him was aroused—this sort of people might have been mere machines moving like marionettes at a show—but yet one of them at least had a mother, and something of a son's love and duty. He tossed the little band a coin, and then they went on together towards the glistening sea.

The day passed in a series of enjoyments and recreations peculiar to the seaside. It was afternoon, and Mr. and Mrs. Dutton had seated themselves on the beach in a shaded spot, a little tired, a little glad to rest. Ronald and Nettie were still enjoying the day with an enjoyment that did not admit of weariness, but the two elder people were content with their shady nook and a few minutes' quiet. They sat thus in a dreamy, happy silence—and then there was something so soothing in the sea air, in the splash, splash of the waves, in the feeling of harmonious happiness that surrounded her, that, leaning back against a portion of sheltering cliff, Mrs. Dutton closed her eyes, and before she knew it drifted off into a light sleep, and on into dreams. Sleep is to most faces a great beautifier, it was so to hers—all the lines wrought by time or sorrow seemed to vanish, and yet there was a half-wakeful look on her face as though through the closed eyelids shone something of the glad light of the soul within. It must be a happy dream she dreamed, for a light smile lay on her lips, and her husband looked at her and wondered what she dreamed, and wondered at the sweetness of her face. It was a light sleep; she had not put off far down tide to that mysterious silence where all speech, all knowledge seems to end—but she had launched only into the shallow waters, where flitting shadows came and went, and voices of the days gone and of those that were, mingled round her, and past and present strangely blended, as they only can blend in dreams. She was dreaming of a far-off time—before Reginald ran away to be a soldier, before she had known anything of town life and ways; she was back again in her country home—for it had been a country home from which her husband had married her—and voices out of the past seemed speaking to her. Her husband was foremost in her mind; he and she were walking together again in the little wooded glen where the nightingales used to make the whole air vibrate with their trill of song, and sweet wild roses fell in luxuriant festoons, and the ground was a soft carpet of moss; and there under the trees through which the summer winds went a-wooing all day long, they walked together again. It was as she dreamed thus, that that smile came curling lightly round her lips. Her husband sat and watched her. How peaceful and happy she looked. Memory seemed to suddenly awake and tell him that not of late years had she looked like that; and then, perhaps it was that communion of thought which is swifter than speech, but he, too, fell a-thinking of that past time; she had not looked to him fairer or sweeter in those days when he went into the country courting her, and that was more than twenty years ago. He bent nearer to her—perhaps his intent look aroused her—suddenly she opened her eyes and looked at him, but the light of the far past was in them still; she looked at him as though only partly conscious of the present time. Then as the light came

slowly back to her face, "You have been dreaming," he said.

"Yes." A little pink shell lay in her lap, and at that moment a blush, faint like the colouring of the tiny shell, came into her face. "Yes," she said, "I was dreaming of the time long ago, before we married, you and I."

He stooped towards her and kissed her. "I had been thinking of that time too," he said slowly. Then he took her hand in his, and they might have been lovers over again as they sat talking together with that heart and soul communion such as there had been no leisure for nor thought of for so many long days past. And everything around them seemed in tune with their happiness; the tide had turned, and there was that fresh brightness in the air that comes with the incoming tide, and the waves came each with a low murmur of delight on to the shining sands; and a little further on a group of children laughed and played, and the sound of their young voices came soft and clear, and on the pier close by a band was playing a rhythmical measure, which had in it a melodious swing and flow, and the boats tied to the pier seemed to rise and fall and keep happy time. The music, the waves, all seemed to unite and blend; and then over the sands came Nettie and Ronald, joy and gladness in their faces and their eyes.

But before the children joined them, Mr. Dutton, looking at his wife, said, "Janet, if holiday makes us thus happy, some people who have nothing but holiday must have a good time, I'm thinking."

The wife smiled, but did not answer, for at that moment two people were passing close by, a lady and a gentleman, who looked as if they might belong to the class Mr. Dutton had indicated. As they went by the lady said to her companion, "Really, we must get away from this place; I shall die of *ennui* if we stay much longer; it bores me to death!"

The answer was almost gloomily spoken. "All places are alike, there's nothing fresh anywhere. One gets tired of all pleasure, and no particular pleasure in it either."

Husband and wife looked at each other and smiled.

"No; we should get tired of it," said Mr. Dutton, with a shake of his head.

"We should soon tire of doing nothing," said his wife, slowly; "but yet, life should not be all work; it ought to have its holiday side."

"What, like to-day? Well, certainly for once we have had a bit of holiday side."

She looked straight at him and laughed, a little merry laugh like the laugh of the bygone days.

"Take that home with you," she said.

"Take what, my dear?"

"The holiday side." Then she added: "We have made holiday for one another to-day, we have had thought for and with each other. Couldn't the very busiest day have, too, a holiday side?"

He caught her meaning, they had come so close in soul during that day of thought for and with each other. "Yes," he said quite earnestly. "You are right, and we will take it home with us—the holiday side."

Just then Ronald and Nettie came up. Nettie seated herself at her father's feet. "This has been the happiest day I have ever known," she said, "just because you have been with us, father dear; and we haven't had a word about business things. I wish the day could last; to-morrow it will be all business again."

She laughed as she spoke, but Mr. Dutton did not reply. He and his wife looked at one another with a look that even Nettie could not quite read.

As Nettie said, the day was getting over, and they retraced their way to the station. On the platform was a band of soldiers; they were going by the same train. Nettie half wished they had not just then appeared; she knew something of that past history, and had seen sometimes the shadow deepen in her mother's eyes; but at that moment Mr. and Mrs. Dutton were engrossed with a large basket of strawberries a man was carrying for sale. Mr. Dutton's business instincts were for the first time that day apparent; he expressed his belief that the fruit was stale, left over from the morning's sale. "No, sir," said the man, "it's just freshly gathered. I find as good a sale this part of the day as in the morning sometimes."

Mr. Dutton was turning away, but his wife stood looking at the fruit with wistful eyes.

"You wish for some, don't you?" said her husband, noting her look.

She laid one hand on his arm. "I want to have the whole basketful just as they are," she said.

"Why, my dear, what could you do with them?"

She drew him a little aside; she made a quick movement with her hand towards the soldiers who at the end of the train were just entering compartments they were to have to themselves. "I want the basketful to give to those poor fellows; they look so hot and tired, I want to give them to them—for Reginald's sake!"

With the last three words the suppressed pathos of the long past years stole into her face. He understood at last. She was holding her little purse in her hand. "My gift," she said; "only just tell the man to take them." He put her hand gently aside. "No, no," he said, "but they shall go as your gift all the same;" and the next moment he had settled with the man, and the basket of fruit was conveyed to the soldiers' compartments. The deed once done, with instinctive shyness Mrs. Dutton was beating a retreat into the train.

Then from that part of it where the soldiers were came first a peal of laughter; they thought they were being hoaxed; but the laughter died into abashed silence as the man explained and deposited the fruit with them, then a long neck was stretched from the carriage window to catch sight of the lady who had sent the generous gift; but only Ronald, who was just entering the carriage, was visible.

When the train stopped at its final destination, a tall soldier, with bronzed but manly, pleasant face, stood looking about him, evidently watching for some one. Catching sight of Ronald, he came towards him. "I think," he said, "you belong to the lady who so kindly sent us the fruit; we didn't

understand at first, but I want to see her and thank her for myself and my fellows."

"Mother," said Ronald, turning, "he"—he hardly knew how to designate the tall officer before him—"he wants to thank you for——" but Ronald stopped short; there were two words only—"Janet!" "Reginald!" and the tall soldier had Mrs. Dutton in his arms.

A day or two later, Reginald was on a visit to his sister. Mr. Dutton, too, received him kindly, and gave him more of a welcome than Reginald himself had dared to expect. He fancied there was a difference in his brother-in-law.

He was not quite so engrossed, so preoccupied. He looked at him half furtively. "You stick to business still the same," he said.

"Yes, as close as ever—why?"

"Oh, I don't know; you were out holidaying the other day, weren't you?"

Mr. Dutton looked at his wife. "Yes, we were out holidaying, and we brought it home with us."

Reginald did not quite understand; he thought perhaps Mr. Dutton contemplated further absence. "Going out again?" he said.

"No, not that I know of. But that's hardly to the point. The fact is, we think we have found out a patent for holiday at home, so that even the busiest day shall have a little holiday side."

P. A. BLYTH.

# Varieties.

**Lake of Geneva.**—There was recently communicated to the Paris Academy of Sciences by M. Delebecque, a French engineer, an account of some researches on the Lakes of Geneva and Annecy, which have led to a more complete knowledge of their various features. Of the Lake of Geneva a map has been constructed on large scale. The lake is divided into two unequal parts by an elevation of its bed known as the bar of Nernier or Promenthoux, corresponding to the sudden contraction of width from east to west, which separates the Grand Lac, prolonged towards the Alps, from the Petit Lac, which runs in the direction of the Jura. The maximum depth of the Grand Lac, between Evian and Ouchy, is 1,017 feet, and its bed forms a large plain with very little slope. Over a surface of about 18 square miles the variation in level is not more than 16½ feet. The inclination of the lateral slopes is very variable, from between 1 degree and 2 degrees in the Bays of Rolle and Condrée, to 56 degrees at the Castle of Chillon. The Petit Lac consists of four small basins, with a maximum depth of 249 feet, separated by flattened bars. Opposite Bellerive and from a depth of 82 feet rises a little hill, the top of which is only 26 feet below the surface. Other peculiarities of the lake-bed which have been noticed by previous observers are the ravine of the Rhone and the delta of the Dranse, a characteristic type of torrential deltas. The ravine of the Rhone has been traced for nearly four miles from where the river enters the lake, and is from 300 feet to 500 feet in width. The surface of the lake is 224 square miles in extent; its mean depth 492 feet.

**Frederick Gale's Lecture on the History of Cricket.**—An interesting lecture was given at Westminister Town Hall this summer on the history of cricket, with personal recollections, by Mr. F. Gale. On the platform were various specimens of bats in use since an early date in the eighteenth century. Mr. Gale said that the germ of the game was to be found among the Greeks and the Romans. One of its earliest followers in this country was Oliver Cromwell. For some time after the accession of George I it was under a cloud; the Government were nervous in those Jacobite times about large crowds coming together, and the "Gentleman's Magazine" subsequently took up the cudgels against it. Of the hostility it encountered some indications might be found in "Waverley" and "Red Gauntlet." As though to illustrate one point in the national character, its laws had been pretty much the same for 120 years, and the wicket the same since 1817. The lecturer then gave a description of a village cricket match sixty years ago, of old Lord's in or about 1841, and of the changes he had witnessed in the art and science of bowling. Incidentally he mentioned that Mr. Richmond, R.A., now in his eighty-third year, had been present at no fewer than seventy-three matches between the Gentlemen and the Players.

**Take care what you sign.**—The editor of the New York "Journal of Commerce" vouches for the truth of the following. Forty years ago, a gentleman made a bet that he could get a hundred prominent Churchmen to sign a petition to have the Bishop of New York hanged. He had a long petition drawn up, beginning with the words, "Whereas the best interests of the Protestant Episcopal Church," &c., and going on, after a long preamble, to demand that the Bishop should be suspended by the neck. The petition was engrossed in proper style and sent round by a canvasser, who told no lies about it, simply representing it as a petition to the ecclesiastical authorities in a matter that would deeply affect the welfare of the Church. Once a few well-known names had been got at the head of the list, the bet was soon won; and the audacious petitioner said he could have got signatures by the thousand if he had kept on long enough.

**The English Language.**—In a conversation with Döllinger shortly before his last illness, Professor True, of Rochester University, New England, reports that the venerable doctor spoke with much anxiety about the tone of modern English literature. He explained his anxiety by expressing his belief that at no distant time the English tongue would be pre-eminently the language of all civilised nations. The greatest works of English literature were worthy of being ever popular. From a German this opinion about the spread of the English tongue was full of interest. It is computed that at the opening of the present century there were about 21,000,000 people who spoke the English tongue. The French-speaking people at that time numbered about 31,500,000, and the Germans exceeded 30,000,000. The Russian tongue was spoken by nearly 31,000,000, and the Spanish by more than 26,000,000. Even the Italian had three-fourths as large a constituency as the English, and the Portuguese three-eighths. Of the 162,000,000 people, or

thereabouts, who are estimated to have been using these seven languages in the year 1801, the English speakers were less than 13 per cent., while the Spanish were 16, the Germans 18·4, the Russians 18·9, and the French 19·6. This aggregate population has now grown to 400,000,000, of which the English-speaking people number close upon 125,000,000. From 13 per cent. we have advanced to 31 per cent. The French speech is now used by 50,000,000 people, the German by about 70,000,000, the Spanish by 40,000,000, the Russian by 70,000,000, the Italian by about 30,000,000, and the Portuguese by about 13,000,000. The English language is now used by nearly twice as many people as any of the others, and this relative growth is almost sure to continue. English has taken as its own the North American Continent, and nearly the whole of Australasia. North America alone will soon have 100,000,000 of English-speaking people, while there are 40,000,000 in Great Britain and Ireland. In South Africa and India also the language is vastly extending.

**A Minister of Labour and Labour Pensions.**—In his evidence before the Labour Commission, Mr. Ben Tillett said: "Soldiers were pensioned now, and the State ought to recognise that it directly profited more by the productive capacity of the worker than it profited by the destructive capacity of the soldier. The man worn out at the loom, the mill, or in the docks should be considered of as much value as the soldier. Then there should be a Ministry of Labour, and a State Board of Arbitration, whose settlements should be final. A Labour Bureau of Arbitration would promote a better understanding between employers and employed, and would remove half the problems which troubled the Legislature. Each district should have an authority for collecting *data* in regard to labour."

**The Little Stamp Collector.**

THREE months ago he did not know
His lessons in geography;
Though he could spell, and read quite well,
And cipher, too, he could not tell
The least thing in topography.

But what a change! How passing strange!
This stamp-collecting passion
Has roused his zeal, for woe or weal,
And lists of names he now can reel
Off in amazing fashion.

I hear him speak of Mozambique,
Heligoland, Bavaria,
Cashmere, Japan, Thibet, Soudan,
Sumatra, Spain, Waldeck, Kokan,
Ceylon, Siam, Bulgaria.

Schleswig-Holstein (Oh! boy of mine,
Genius without a teacher!)
Wales, Panama, Scinde, Bolivar,
Jellalabad, and Kandahar,
Cabul, Deccan, Helvetia.

And now he longs for more Hong Kongs,
A Fiji, a Mauritius,
Greece, Borneo, Fernando-Po,
And where he'll stop no one can know,
He's grown so avaricious!

**Opium as a Medium of Exchange.**—In parts of the Hankow district opium is used as a medium of exchange, and the Consul there explains the curious circumstance in this way. Commerce, except along the water routes, is in a primitive condition. The great weight of the copper coinage renders it unsuitable for exchange. Silver, which is used in the large towns, is used in bulk by weight. It is melted into lumps of varying purity and weight. The most generally used vary from sixty-eight to seventy ounces each. The inconvenience of dividing it is a serious drawback to its being used in the country, as is also the difficulty of testing its pureness. The credit of the native bankers is not widely enough established to give an extended currency to their notes. Under these conditions opium is found useful, in addition to pure barter, which still prevails to some extent, in facilitating the exchange of commodities. In this respect it has three advantages—it is almost universally in demand, it is light and portable, and it is easily divided into small quantities.

**Robben Island Lepers.**—The Queen sent two portraits of herself—photogravures—to the lepers at Robben Island, South Africa, and the ceremony of unveiling the pictures was performed by the Governor, Sir Henry Loch, in the presence of a large and distinguished company. The patients were, it is stated, delighted with the presents and with the attention shown them by her Majesty. They have expressed their gratitude to the Queen in a letter which was forwarded through the Rev. W. T. M'Cormick, vicar of St. Matthew's, Brighton, hon. sec. in England of the Sufferers' Aid Society.

**Sir George Grey, K.C.B., and the City of Auckland Library, New Zealand.**—Sir George Grey, K.C.B., lately presented to the city of Auckland, New Zealand, the whole of his valuable library. It is particularly rich in books and manuscripts relating to the islands of the Pacific. Very many of the volumes and pamphlets are in the various dialects reduced to Roman characters by missionaries. The Rev. Dr. Wyatt Gill, having given to him the original manuscript of his "Myths and Songs" and other literary curios whilst the late Federation Convention was sitting in Sydney, received the following note from that veteran statesman, and writer on New Zealand folk-lore:—

"Sydney: May 27, 1891.

"My dear Sir,—Until I read your letter I had no idea of the highly interesting nature of the documents which you have given me. They shall be carefully treasured with the collection of manuscripts at Auckland, and will, I feel sure, be considered very valuable. One of your manuscripts already rests there.

"My great object has been to collect a complete exemplification of the vast labours performed by Christian men in the nineteenth century. I wish I was young enough to write a history of this myself. You will have no mean companion. Livingstone's letters will lie by the side of yours.

"Faithfully yours,
"G. GREY."

**Channel Bottom.**—MM. Renaud and Hersen have made a number of soundings in the Channel to discover the geological nature of the bottom between Cape Gris-Nez and Folkestone, and the thickness of the layer of sand and mud which covers the bedrock. In parts of the bed where this covering of sand was thin they used a sounding-rod of iron having a tube at the lower end to enclose a specimen of the bottom. Where the sand was thicker they supported the rod vertically by a tripod lowered to the bottom and drove it into the sand. A third apparatus consisted of a tube into which water was pumped so as to displace the sand and mud of the bottom. Over 3,000 observations were made, and the submarine relief of the Pas de Calais has been ascertained. Their map shows the continuation of the Jurassic rocks of Boulogne, the rise of the Portland beds, which have originated the banks of Varne and Colbert, and the termination of the Wealden and green sand beds of Kent. The currents of the Channel have also been the subject of investigation, and it was found that they are the same at the bottom as they are at the surface.

**Vegetarian Cookery.**—A better dinner need not be asked by king or peasant than a bowl of thick lentil and barley soup, with a slice of bread and some potatoes. Try the following dinner for a family of two grown-up persons and five children—seven in all: 1 lb. lentils (split), 2*d.*; ½ lb. Scotch barley, 1*d.* or 1½*d.*; 1 lb. onions, 1*d.*; a few powdered or chopped herbs (mint or sage, etc.); pepper and salt, ½*d.* Put the barley into three quarts of boiling water, and let it boil for an hour. Then well wash the lentils and throw them into the pan, adding the onions sliced. Let the whole boil for two hours, the herbs and seasoning being added a quarter of an hour before serving.

Four lbs. of potatoes (boiled or roasted) would cost about 1½*d.* With a little bread this would make a good Sunday's dinner, leaving enough soup to warm up with a few more potatoes for Monday. Or take 1 lb. maizemeal, 1*d.*; 1 lb. dates, 2*d.*; ½ lb. sugar. 1*d.* The maize (or Indian meal) being boiled as a porridge for twenty minutes, then stir in the sugar and dates; after picking over the latter, turn into a dish and bake one hour, or, if without an oven, brown in front of the fire, or boil for half an hour longer. At a cost of 4*d.* this will provide more than enough for a good dinner for such a family. Oatmeal, maizemeal, barley-meal, and other porridges, for breakfast; lentils, haricot beans and peas (in soups or stews), macaroni soup, date pudding, stewed barley or rice, plum pudding, rice and raisins, treacle roly-poly, and a host of other cheap, and at the same time nice and good, dishes for dinner may appear in turn.—*Dietetic Reformer.*

**A Chivalrous Commander.**—A vessel, filled with soldiers, was wrecked on the shores of France. It sank so rapidly that the boats could not be lowered. The only hope was for the men to throw themselves into the sea and swim to the shore. The commander of the troops, the Chavalier de Lordat, did not know how to swim. A soldier, an excellent swimmer, offered to save him if possible. They jumped into the sea, and the Chevalier clung to the soldier. After swimming for a long time, the soldier became exhausted, and to the cheering words of his commander answered that they must both perish. "And if you were alone?" asked the Chevalier. "Perhaps I might still be able to save myself." Chevalier de Lordat instantly let go the man, and sank to the bottom of the sea.

**Locust Pest in 1891.**—There has been no such locust pest in Algeria since 1866, when it is estimated that 300,000 Arabs perished through want and pestilence. The ordinary locust is one with which the native peasant is able enough to deal, but the present invader, which has not been seen in Algeria since 1866, is a most formidable creature. It goes by the name of the pélerin, and comes from Morocco, *viâ* the Sahara. It differs from the ordinary locust chiefly in its greater strength, and the extraordinary rapidity with which it multiplies. The plague of locusts has also this year been reported from India. They have done much damage in various parts of the peninsula, and for the first time on record have invaded Bengal.

**All Languages spoken here.**—A hotel-keeper at Lyons had posted on the door this notice: "English, German, Italian, and Spanish spoken here." An Englishman arrived, and asked for the interpreter in as decent French as he could command. "Monsieur," replied the landlord, "there is none." "What! no interpreter? And yet you announce that all languages are spoken here." The reply was: "Yes, monsieur—by the travellers."

**Official Atheism.**—In the State-aided public elementary schools of Paris the following "Manual of Unsectarian Instruction" is in daily use:—

"Teacher.—What is God?

"Child.—We cannot tell.

"Teacher.—Do you acknowledge a Superior or controlling Being?

"Child.—Why should we? Prove to us the necessity, and show Him to us.

"Teacher.—It cannot be proved that such a Being is indispensable.

"Child.—Then it is waste of time to talk about the matter."

The catechism is summed up in these words:—"The term 'God' has no signification, it means nothing at all."

M. Napoléon Roussel, commenting on this, in a dialogue with an atheist, says: "We both see in the universe a thousand objects which excite our admiration: the regular course of the seasons on the earth; the unvarying cycle of the stars in the heavens; the direction impressed on all the planetary movements; we see, everywhere and always, order and harmony. So far we are agreed, but here is where we differ: this universal order I attribute to an Intelligent Cause, you ascribe it to—nothing! Then again, you and I are intelligent and free; moral also, if not always in fact, yet in the power of being so. My sense tells me that this liberty, this moral nature, constitutes our excellence, and that the Being who has implanted in us these sentiments must himself possess them in a superior degree. These faculties are not the properties of matter. Matter with will, matter with moral choice, is revolting to my mind. That the First Cause puts into a human being an intelligence to govern it, I believe. Not because I can explain it, but because I experience it; and as I am convinced that my inner sense is the same as yours, I declare to you this spiritual fact, without seeking to prove it. It is the fool who says there is no God!"

**City of London Day Census.**—The results of the Day Census in the City, so far as the grand totals are concerned, are given in a report of the Local Government and Taxation Committee of the Corporation. The Day Census was taken on April 27, and the four following days were occupied in collecting the papers. The census of vehicular traffic was taken on May 4, and on each occasion nearly 800 enumerators were employed. The total number of "employers and employed" in 1881 was 261,061, and in 1891 it was 301,381, an increase of 40,320. The number of women engaged in the City during the day was 50,416, against 44,179 in 1881, and the number of children under 15 years of age 21,305, against 19,235. The census of the street traffic taken on May 4 for a period of 24 hours shows that 1,121,708 persons entered the City at 80 different points on foot or in vehicles, against 797,563 in 1881. The number of vehicles entering the City during the same time was 92,488, against 71,893 in 1881. On the same date 52,413 persons came into the City through Liverpool Street Station, against 33,890 in 1881; through Broad Street there came 43,042 against 30,444 in 1881; and through the Metropolitan Railway at Bishopsgate 13,180, against 9,325 in 1881. In the taking of this census 36,568 forms were used, and the cost has been over £1,200. Another £150 was spent on the work of classification.

**John Locke on Toleration.**—"No private person has any right, in any manner, to prejudice another person in his civil enjoyments because he is of another Church or religion. All the rights and franchises that belong to him as a man or a citizen are to be preserved to him." And again: "Neither Pagan, nor Mohammedan, nor Jew, ought to be excluded from the *civil* rights of the Commonwealth because of his religion. The Gospel commands no such thing. The Church, which judgeth not those without, wants it not. And the Commonwealth, which embraces indifferently all men that are honest, peaceable, and industrious, requires it not."—*Locke on Civil Government.*

**Fruit Trees.**—At a large representative meeting of the Vegetarian Society in Manchester, a resolution was passed, "inviting the attention of all earnest patriots and politicians, and of all holders and occupiers of land, to the importance of the cultivation of fruit as an auxiliary food supply; and urging the planting of fruit trees in all gardens, hedgerows, and on waste lands as a suitable, profitable, productive, and healthful industry: and in these times of scarcity of food, diseases among cattle, and great national distress, especially commending to landed proprietors and public corporations—on the grounds of both utility and beauty—the systematic planting of fruit trees along railways, roadways, riverways, canalways, and wherever practicable." This resolution is rather vaguely expressed, the zealous Vegetarians not explaining whether the fruit trees, planted by roadsides and on waste places, are intended *pro bono publico*, to be gathered by youngsters at discretion; or to be private property, for sale, on a larger scale than garden fruit now is sold. All are agreed as to the utility of increasing the growth of fruit in England.

**Daniel Edward Young.**—The career of Mr. Young, till his retirement this year, has been a long course of remarkable service. He retired from the post of superintendent of the coastguard at Dungeness. Mr. Young has been in her Majesty's service for over forty years, and his name will be remembered as having been intimately associated with that of Livingstone and with the foundation of British influence on Lake Nyassa. He was a seaman on board one of her

Majesty's gunboats at the time of the great Zambesi expedition under the leadership of Livingstone. Mr. Young's unusual intelligence, his enthusiasm, and his interest in the objects of the expedition attracted the attention of Livingstone, Mr. Waller, and others. When, therefore, early in 1867, news reached England that Livingstone had been killed near Lake Nyassa just at the beginning of his last expedition, Mr. Young was selected, with the approval of the Government and of the Royal Geographical Society, to undertake a search expedition in order to discover the truth. Well equipped, with a steel vessel he navigated the Zambesi and the Shiré, and reached Lake Nyassa, returning to England early in 1868, with ample evidence to prove that the rumour of Livingstone's death was quite unfounded. Mr. Young was highly commended for his services. In 1875 Mr. Young was again on Lake Nyassa, leader of the expedition under the auspices of the Scotch Churches for the foundation of those missions which have done so much to promote civilization and advance British interests in a region now under the British Crown. Mr. Young was heartily supported by the Admiralty in this expedition, during which he navigated the whole of Lake Nyassa, and was thus the first to survey its whole contour, which has not been materially altered since. At the last meeting of the council of the Royal Geographical Society Mr. Young was made an honorary life member for his eminent services to geography.

**Omniscience and Omnipresence of God.**—God's eye is upon me every hour of my existence. His Spirit is intimately present with every thought of my heart. His presiding influence keeps by me through the whole current of my restless and ever-changing history. When I walk by the wayside, He is along with me. When I enter into company, amid all my forgetfulness of Him, He never forgets me. In the silent watches of the night, when my eyelids have closed, and my spirit has sunk into unconsciousness, the observant eye of Him who never slumbers is upon me. I cannot fly from His presence. Go where I will, He tends me, and watches me, and cares for me; and the same Being who is now at work in the remotest domains of Nature and of Providence, is also at my right hand to eke out to me every moment of my being, and to uphold me in the exercise of all my feelings and of all my faculties.—*Chalmers.*

**Fräulein Vacaresco of Roumania.**—Second only to the Queen of Roumania, the beautiful and accomplished "Carmen Sylva," is her companion and lady-in-waiting, Hélène Vacaresco, as a poetess and woman of letters. A volume by her, "Chants d'Aurore," has been awarded a prize by the French Academy. Daughter of the former prefect of police in Bucharest, her father is now Roumanian ambassador at Vienna. Some thousands of gipsies live on her father's estate in the Dimbovitza valley. By much industry and tact, Fräulein Vacaresco contrived to collect the music and songs of these gipsies; and with the Queen she translated them into German, under the title "Lieder aus dem Dimbovitzathode." To other collectors the gipsies had always refused to impart their treasured songs. There is a romance also in the life of Fräulein Vacaresco, Prince Ferdinand, brother of the King, being attached to her, and at present willing to renounce his title of successor to the Crown rather than part with his lady-love. Why should a sacrifice be called for? She is worthy in every way, except what is expected in the Almanach de Gotha, to be the successor of "Carmen Sylva."

**The German Emperor at the Crystal Palace.**—There is historical interest in the list of royal and imperial persons who have appeared at festivals at the Sydenham Crystal Palace. Since the occasion of the opening in June 1854, there have been thirteen great *fêtes*, in the course of which the Emperor and Empress of the French, the Sultan of Turkey, the Duke of Edinburgh, the Viceroy of Egypt, the Czar of Russia, the Sultan of Zanzibar, the King and Queen of Greece, and the Duke and Duchess of Connaught have been selected for honour. Three times have *fêtes* been held in honour of the Prince and Princess of Wales; twice have the delights of the Palace been unfolded to the Shah of Persia. Of all the displays the most memorable have been that made on the occasion of the opening, and that of April 1855, when the Queen and the Prince Consort accompanied the Emperor and Empress of the French. The formal inspection of the palace upon its inauguration, by Prince Albert, was also a memorable event, though witnessed by few. Many greater personages than the ordinary run of kings have been seen at the palace, including General Grant and many other Americans, and foreigners of every nation. No worthier visitor than the Emperor of Germany, in July 1891, has ever been entertained. His whole visit to London has been a wonderful thing, especially the reception by the Corporation of the City of London at Guildhall, and by the hundreds of thousands of people in the streets on July 17.

**Trustees.**—Mr. Walpole, when he was at the Home Office, said that there were at least 100,000 trustees. Considering the difficult and responsible duties that sometimes attach to the office, often lightly and inconsiderately undertaken, it is strange that no good book exists treating fully on the subject, and no corporation or society ready to advise or assist in doubtful and arduous affairs, not even a magazine in which questions might be asked, and authenticated replies given. The liabilities of trustees are little known, and may involve the interests of a trustee's family and estate, as well as causing personal anxiety and trouble. We cannot say "don't" to any one asked to be a trustee, but we do say, "think it well over, and take the best advice you can on the matter."

**Duleep Sing's Daughters.**—Two daughters of the Maharajah Duleep Sing, the Princess Catherine and the Princess Bamba, are studying at Somerville Hall, Oxford. Princess Catherine has passed the first examination for women with credit.

**Recovery of the Lost Standards of Measure.**—It has been discovered that the standard yard and certain other measures and weights supposed to have been lost when the Houses of Parliament were destroyed by fire in 1834 are still in existence. For over half a century they have lain in the Journal Office almost unnoticed among various lumber. It used to be the duty of the Speaker of the House to examine and attest the correctness of the standards. New weights and measures are now officially in custody at Westminster, but the recovery of the old ones is an interesting event. The most important of the standards thus rescued from oblivion are the yard measures constructed by Bird in 1758 and 1760. The former was copied from a bar in the possession of the Royal Society, which was itself a copy of a standard preserved in the Tower; and the second was constructed under the directions of a Committee of the House of Commons from the 1758 standard. "Each of these two standard yards consisted of a solid brass bar 1·05 in. square in section and 39·73 in. long. Near each end of the upper surface gold pins or studs 0·1 in. in diameter were inserted, and points or dots were marked upon the gold to determine the length of the yard." The other standards in the custody of the Journal Office are two brass rods answering the description of the old Exchequer yard, and four weights, supposed to be certain of the "copies, models, patterns, and multiples" ordered by the House on May 21, 1760, "to be locked up by the clerk and kept by him." The most important weight—the standard troy pound—is not amongst those now brought to light.

**Census in France.**—The returns of the census made in April have now been made up, and it is stated that the population of France, without its colonies, is 38,095,000, an increase of 208,000 since the last census in May 1886. The increase then was 565,000. The population of the large cities and towns has increased by 365,000, the largest increase being in Paris 167,000, in Marseilles 31,000, in Lyons 29,000, in Nice 20,000; and in fourteen other towns from 15,000 down to 4,000 in Rouen. Of the Departments 29 show an increase and 59 a decrease; the decrease is throughout the whole of the rural parts of France. At the census of 1886 foreigners in France numbered 1,126,000, an increase on the previous five years of 125,000. It may be assumed that the increase over all France is chiefly due to foreigners, the native population being nearly stationary.

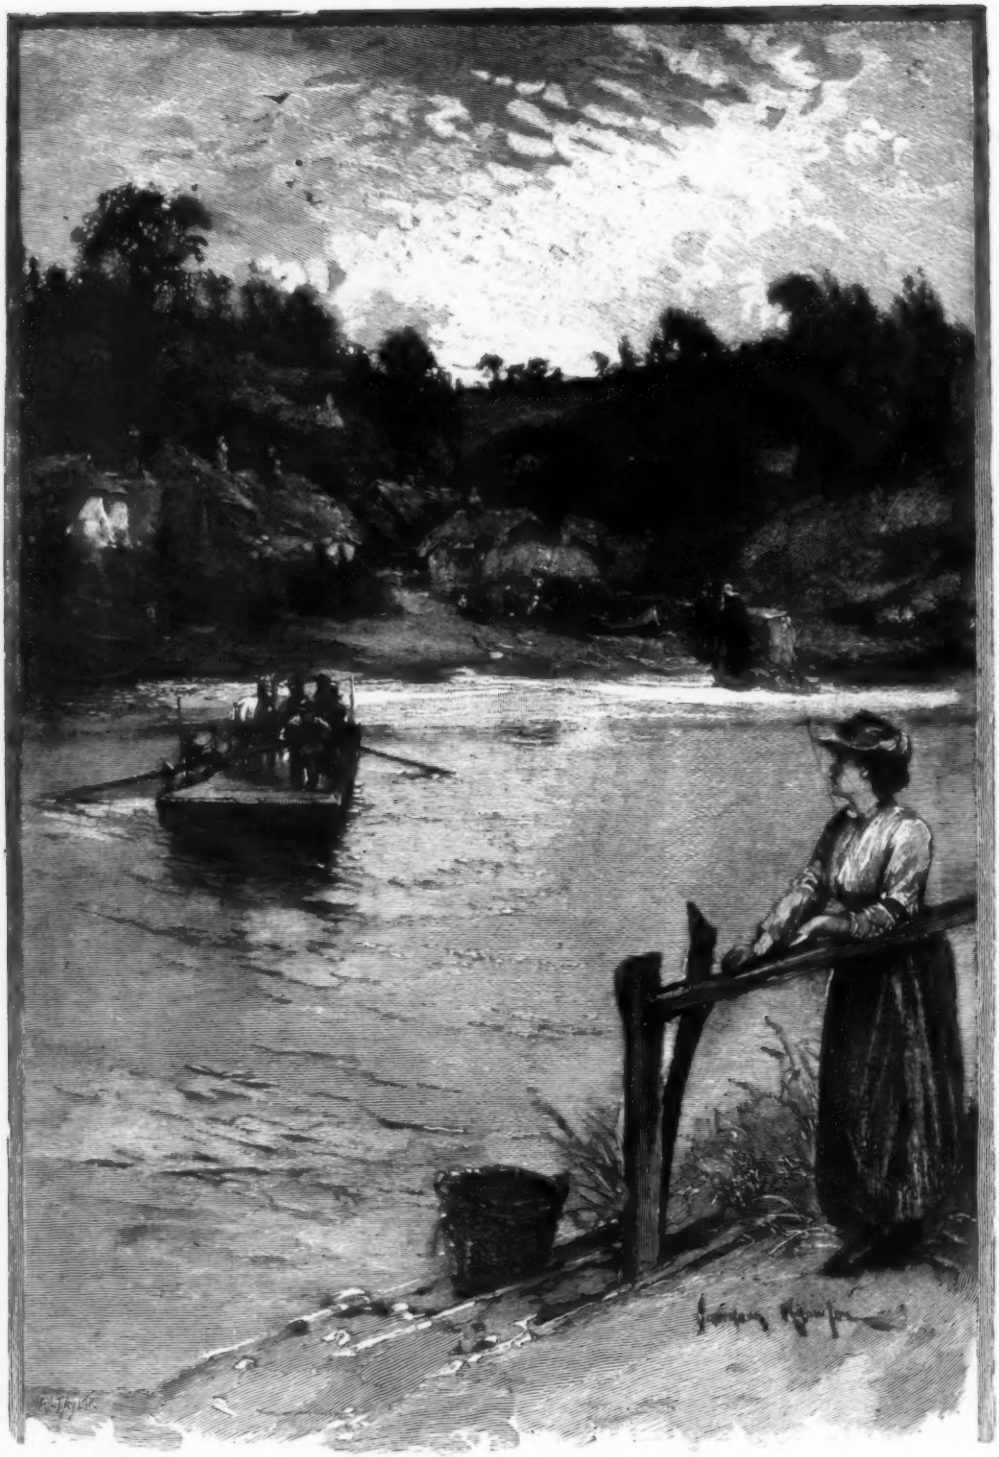
# Household Queries.

**Stains in Old Books.**—*Kindly say if there is any method of removing the brown stains from the leaves of old books? The books are valuable.*—We fear not. If any such method were known, it would surely be at the Library of the British Museum, but they are ignorant of any there. Damp is the principal cause of these disfigurements.

**Pot Pourri or Sweet Jar.**—*I should be obliged if you would tell me the best receipt for making "Pot Pourri."*—People differ as to "best." One way is to get half-a-peck of rose-leaves, gathered in fine weather, lay some salt in the bottom of a china-bowl, then a few handfuls of rose-leaves, then some more salt, then more leaves, till all is used up, sprinkling salt on the top, and pressing down with a plate. Stir about once a day, and in five or six days, when very moist, add three ounces allspice, and leave three or four days more; then add one ounce of bruised cloves, one of cinnamon, one of nutmeg, some unbroken allspice, six grains of musk, and a little lavender or orange water. When in season add from time to time flowers (no stalks or leaves) of clove pinks, violets, orange blossom, or any others, and stir or shake the mixture occasionally, freshening up every summer with some fresh rose-leaves, prepared also with allspice and salt. The jar should be often shaken, and kept as a rule closely shut down. A fair imitation, useful for little sachets to lay among linen, can be made by mixing half a pint of lavender flowers, half an ounce each of dried mint and thyme, a quarter of an ounce each of ground cloves and carraways, and one ounce of well-dried salt. This is pretty good for keeping away moths.

**Preserving Rowan or Ash Berries.**—In relation to this matter a correspondent writes: "Rowan berries may be preserved till Christmas and early spring, by gathering them dry and not over-ripe, and putting them in air-tight tins, such as vaseline cans, and keeping them in a cool, dry place. When holly berries are scarce, rowans are an excellent substitute."

**Porridge.**—*Would you kindly insert the best way of making good and wholesome porridge of the best and most wholesome kind for breakfast?*—The conditions of wholesomeness are simply that the porridge be perfectly boiled and free from lumps, and the faults are due generally to carelessness or laziness. The quantity of meal to the water is known by experience; generally being about one ounce to a quarter pint. The water should contain some salt, and be boiling, then the meal is to be added by gently straining it through the fingers of one hand, handful by handful; but still getting the whole of the meal in as quickly as possible, while the pot is continuously stirred with the other hand, the *handle* of a wooden spoon being the best implement. When properly made and well boiled, it cools into a sort of soft pudding when poured into a soup plate, in which it should always be served, with a little jug of cold milk.



**Irritation of Scalp.**—*Kindly inform me of a remedy for irritation of the skin of the head caused by dryness of hair and dry scurf accumulating, which causes irritation, and is difficult to remove?*—Do not wash the head with soap, but use the yolk of egg with bran-water; and try as pomade a little lanolin. If the symptoms do not improve with these simple remedies, the condition will have to be treated by medicated washes or pomades, which should, however, be decided on medical advice, and may be dangerous unless so ordered.

**Preserving Flowers.**—*Kindly oblige by telling me the best way for preserving and pressing flowers, so that they will neither drop to pieces nor lose their colour?*—There is no other or better way than simply laying them out and pressing them between sheets of blotting or filtering paper, removing them after a few hours to dry paper two or three times in succession; of course the damp paper answers again after drying. The colour of many cannot be prevented from fading more or less, the colouring matter being fugitive after life has departed. Coming to pieces is avoided by taking care not to choose over-ripe specimens; and the flowers should also be put into blotting-paper as soon as gathered, not hours afterwards, carrying a blotting-case for the purpose. In Spain they have another method of preserving flowers without pressing, sticking the plant in a lump of clay at the bottom of a jar large enough to contain it in natural habit, and then pouring in fine dry sand very slowly and carefully, so as not to disarrange the leaves or flowers. A flower so treated is said to preserve its shape and a great deal of its colour for some months, so as to be useful for winter decoration; but we have not tried the process in England, and are not sure that our damp climate would give equally good results.—The other question about icing cakes was answered in the June part.

**Sea Weeds.**—*Would you please tell me how to prepare and dry sea-weed?*—This is a very seasonable inquiry, as probably the very best month of the year for collecting is September. The weeds should be gathered plentifully in order to pick out good specimens: then the very first thing to do is to soak them thoroughly in several changes of cold water; unless the salt is thus soaked out of them, they *never* dry. While thus soaking, parasites and small pebbles and other foreign matters should be removed. After that, the preparation "depends" on the sort of collection intended, but the principle is the same. The weed will only properly extend *in the water*, and should be carefully teased out if necessary with a bone knitting-needle. Then, if only cards are meant, the card should be carefully got under the piece of weed and the whole very slowly lifted out, while the delicate sprays are extended in the water, so that they may settle down on the card as removed. The card and weed is then put between blotting-paper and pressed, changing the paper for dry once or twice as in pressing flowers. More serious "collections" may either be proceeded with at once, or the weed, after soaking, shaken out on to a folded cloth and left in a shady place to dry. They will keep thus till convenient to treat them. Get some foolscap paper and blotting or "botanical" drying paper. A sheet of foolscap, being well oiled or greased, is laid on the bottom of a shallow dish on which it lies flat: then fill the dish with water, and immerse the specimen to be treated. This will soon "float" out its branches, which are to be spread as described with a needle or camel-hair brush as necessary, taking care that knobs and redundant branches lie uppermost, to be seen and removed. It is well to lay a small weight on the centre, and from this to lay out the plant, and when a bit is got nicely arranged, another little weight may be laid on it. The principal time is spent in this laying out. When all is ready the water is cautiously removed with a syphon or small sponge, and the greased sheet with the specimen upon it slid out of the dish on to the blotting-paper, the weights being removed. Lay on it another sheet of oiled paper, rearranging any trifling matters that need it, and put under a board and weight to squeeze flat and dry. When dry the specimen is easily removed from the oiled sheets, which do over and over again, and placed between the leaves of a book with guards, at first loose, but to be fastened with a little gum at any time when its place in the collection is finally determined; or they may be gummed upon cards.

THE LAST FERRY

# THE BOOM IN BELLTOPPS.

## CHAPTER I.—THE LEGACY.

"NO, DEAR, THIS ISN'T FOR THE DRAWING-ROOM: THIS IS FOR THE DINING-ROOM."

THE 8.45 A.M. had gone. Savorin had never lost his train before, and there was no help for it. He turned up the collar of his overcoat, and sat down under shelter of the bookstall to wait for the next. It was in January of this year; there was fog, and there was snow; the fog thickening even at that hour of the morning; the snow so dense that it seemed to lighten the darkness of the fog.

The next train was due at 9.15. The 9.15 was the fashionable morning train for the City contingent of Brenton Heath. Brenton Heath was an ugly and rising suburb twenty-five minutes from town, on the main line from Brighton.

Savorin, huddling himself in his coarse tweed ulster, watched the arrivals for the 9.15. First came Quinland, the newest Queen's Counsel, who had taken silk in November, and was giving up his house at Brenton Heath at the quarter. Five minutes after him came Bord, the Editor of a financial daily, for whom the guard always reserved the same corner in the same first-class carriage, and who had to keep at arm's length the persons who pestered him for special information about the markets. Then came the American manager of the company which had just been floated to start a city of balloons (on the outskirts of Hammersmith), under the name of "London above the Fog." There were many others; well-dressed persons; first-class season tickets.

None of these were known to Savorin, who was rented at £35 per annum in a new "villa residence" on the outskirts of the Heath. He was the second clerk in the office of a South American

merchant in Great Winchester Street, rising £10 a year, with the chance of an annual £5 bonus.

The 9.15 was twenty minutes late; and no wonder. It was also very full; and Savorin, who held a second-class season, had no choice but to scramble into a first-class carriage. In the compartment immediately behind were Mr. Bord and a gentleman with him whom Savorin did not know by sight. In his own compartment there were no Brenton Heath people, with the exception of the American manager; a florid, handsome, and very tall man, with the merest indication of New York in his accent. He nodded to one or two of his fellow-travellers, acquaintances of the line; and then, as the train moved off, there was a general readjustment of wraps and rugs, and the newspapers were resumed.

On the line the snow lay in dirty masses, close up to the metals. From above, thick-coming flakes whirled against the windows, and even drifted beneath the doors of the carriage. The fog grew denser and darker as the express train rolled heavily towards town. The cold was painful; there was no resisting it, even in the well-protected first-class carriage. An elderly passenger, with a woollen shawl wrapped round the lower part of his face, who was studying the weather report, jerked out in muffled tones: "Weather report says six weeks more of it!" An abrupt and violent chorus of groans from all the other passengers.

Savorin alone, though he was not so warmly dressed as the other occupants of the carriage, and had only the corner of a foot-warmer for his share, seemed wholly indifferent to the weather. The truth is, his inner coat was lined in quite an unusual manner that morning. There was a Bank of England note for £50 in it. £50! It was thus, with a note of exclamation after the figures, that Savorin thought of his treasure. £50! It was equal to a third of his year's salary. With so much money in his pocket he felt not at all out of place in the first-class carriage; and he half hoped that tickets would be asked for at the next station, because he had placed his in the same compartment of his pocket-book with the bank-note.

This £50 was a windfall. It was the legacy of a great-aunt whom he had never seen, and whose name he had hardly known. He had not the least idea how or why he had come to be included in her will; and the lawyer's letter enclosing the £50 had been his first intimation of her death.

What talks they had had about it, Savorin and his wife! Several castles had already been built with it; built, and pulled down again. To such a couple as the merchant's clerk and his wife, who had more or less instant need of every shilling of Savorin's salary, it seemed possible to do almost anything with a lump sum of £50. But prudence had been allowed the last word in their counsels, and they had decided to put their treasure in the bank. Savorin had received a £10 bonus from his principal at Christmas, which was still intact; and he was to open an account at the City Bank during his luncheon hour that day.

The elderly passenger and the American, Colonel Higginson, were both intent on the money article. Presently Colonel Higginson laid down his paper, and stretched his big, well-nourished frame with a yawn of satisfaction. Savorin, sitting opposite to him, observed his ample fur coat, and wondered how much ready money he carried with him. Colonel Higginson took out a silver-bound cigar case and selected a cigar. Then he turned to the elderly passenger and said:

"What do you think of Belltopps?"

"They're still moving up, I see," replied the elderly passenger.

"They're going to boom!" said Colonel Higginson.

"H'm!" observed the elderly passenger.

"Yes, sir," continued the American; "Belltopps are going to be the biggest prize in the mining market. Buy 'em, is *my* advice."

"Do you mean as an investment or a speculation?" asked another passenger.

"I reckon they're good for both," said Colonel Higginson.

"An American silver mine, isn't it?" and the colonel nodded.

"Well, I've had enough of mines in my time," said the elderly passenger. "I'll sink no more money in the bowels of the earth, if *I* know it. With the best of mines something goes wrong sooner or later. The lode stops short, or the richest bit is too deep down for working, or there's a rush of water, or the mine caves in."

"I allow there's risk," said Colonel Higginson; "but if there's good stuff in it, it's bound to come out some time. It's coming out of Belltopp Hill all the while, and they've hardly begun on the main lode yet. You can take it from me, gentlemen, Belltopps are going to boom."

London Bridge was reached at length.

Hurrying out of the station, Savorin found himself immediately behind Mr. Bord and his friend, and heard the Editor say: "Yes, stick to the Belltopps. Don't sell on any account. Hold on to them for six months, and they'll be worth a little fortune to you."

"Belltopps, eh?" said Savorin to himself.

He glanced at his watch, turned up the collar of his ulster, and plunged into the cold confusion of the fog.

It was half-past ten; the street lamps made yellow dots upon the dun; there was no foothold in the black slime of London Bridge; the foot-passengers pushed each other against the parapet, to escape contact with the tangled traffic of the roadway.

"I'm certain of it; I've seen private reports from the manager in Australia. They'll be worth a little fortune to you."

The words came out of the fog to Savorin, at the City end of the Bridge. The Editor was just parting from his companion.

Savorin felt his way through Gracechurch Street and crept across Bishopsgate Street Without.

A little fortune!

What do you call a little fortune? Savorin, who was accustomed to take home a trifle under three pounds a week, had a bank-note for £50, and another for £10, in his pocket. The smaller sum

he had counted upon; the larger was a windfall. Should he lose the £50, he would be where he had been a week before; in no better, no worse a position: it was a fortune to the extent of £50. But these Belltopps? The Belltopps rather amused Savorin.

In the train in which he usually journeyed to town, the things of the Stock Exchange were not talked about: at least, not in the second-class compartments. No capitalist or speculator travelled second-class by the 8.45.

It tickled Savorin to think that he had all at once become a capitalist to the extent of £50.

He fell to wondering what another person would do with a casual £50, supposing him to have no immediate need of it. But speculation and the Stock Exchange had no interest, and scarcely any meaning, for Savorin. He had never in his life read the money article. Like the sporting article, and the political leader, it seemed a mere enigmatic embellishment of the morning paper; at any rate, it was not written for commercial clerks at three pounds a week. Savorin was still persuaded that it would be the part of the prudent man to lock up the legacy.

Passing through Austin Friars, he reached Great Winchester Street; and entering Great Winchester Street Buildings, he mounted to the offices of J. S Winton & Co., on the first floor. In the clerks' office the gas was burning, and an immense fire of coal and coke glowed in the capacious grate; but the fog drooped over all, and the flame of the gas and the glare of the fire only made the outer gloom more visible.

But the changeless routine of the office knew nothing of changes in the weather; and three stools had each its regular occupant; and the chief clerk was at his little sheltered desk, apart from the others, comfortably close to the fire. The glass doors of the case where the ledgers and invoice-books were kept stood open; the office-boy was at the copying-press: line for line, it was the same picture always.

Savorin, as he perceived, was the last to arrive. As he entered, his friend Balder, the chief clerk, looked round the screen of his desk.

"Morning, Sav! Snowed up, or been laying out that legacy again? Mr. Winton has called for you twice."

It was a sober and well-mannered firm; in the gossip of the clerks' office, the principal was never other than "Mr. Winton."

"Missed a train, and lost half an hour on the next," said Savorin, hurriedly putting off his ulster and wrap.

A nod to the other clerks, and he knocked at and opened the door of Mr. Winton's room.

Mr. Winton had finished the reading of his letters, and was sitting back in his padded chair: a tall, stout, heavy man, with a close-cut grey beard, a hand like a leg of mutton, and a perpetual cold in the head. His stolid good-nature had been proved upon occasion by all his clerks; but he was reticent and somewhat shy in his intercourse with them.

Savorin was the correspondence clerk of the firm. Every morning he was closeted with Mr Winton for an hour, discussing with him the letters received, and making notes of the replies to be written.

"Well, Edward"—Mr. Winton always addressed his elder clerks by their Christian names—"fog and snow, I suppose? No reliance on the services in these days. Take a seat. The mail's a small one to-day."

The letters lay open and sorted on Mr. Winton's desk, and there was another document beside them. Savorin's eye fell upon this immediately. It was a transfer to Mr. Winton of a thousand shares in the Belltopp Hill Silver Mines, Limited.

"What, Belltopps again!" was Savorin's inward comment, and he almost laughed. Mr. Winton had the character of a highly judicious speculator, and in fact he added to the profits of his legitimate business by an occasionally successful stroke on the Stock Exchange, being well advised in his ventures.

They discussed the correspondence, and Savorin rose to retire with his notes.

"One moment, Edward," said Mr. Winton, drawing the share transfer before him. "Be so kind as to witness my signature to this."

He put his name to the document, and handed it to Savorin, who did the same.

"Thank you," said Mr. Winton.

"Belltopp Hills, I see, sir," observed Savorin. "They were highly spoken of in the train this morning, and at London Bridge I overheard Mr. Bord of the 'Financial Gazette' say to some one with him that they would be worth a fortune to investors."

"Ah, indeed!" said Mr. Winton. "Yes, I believe them to be a good thing. Bad ventures, mines, though, as a rule. Never trust them except on the best information that can be had."

'They are not much in my way, sir," smiled Savorin.

"Well, better so; better so; only once in a way that they do good to anybody."

But the "once in a way" had usually been Mr. Winton's opportunity. Belltopp Hills loomed larger in Savorin's imagination. Mr. Winton was such a prudent man.

It seemed to Savorin that his luncheon hour came round very early that morning. While composedly writing the letters of the firm, his mind had been unwontedly active. It was the legacy which was the centre of the thoughts that busied and harried him. Would it, after all, be wisest to bury the legacy in the bank? Smaller sums than fifty pounds had been made to breed astonishingly, and sometimes in very short periods.

He was half inclined to ask the counsel of Mr. Winton, but thought it likely that his principal would bid him hoard his talents, as the safer part.

He was still cogitating, curiously, and with a novel sense of interest, when Balder asked if he were going out for lunch. They took their luncheon together three or four times in the week.

"I'll put it to Balder," concluded Savorin.

Your merchant's clerk seldom "dines" in the City; he "lunches." The luncheon of Balder and Savorin was in reality their frugal dinner. Balder,

as the chief clerk, was more highly salaried than Savorin; but he had three children to find for, while Savorin and his wife were alone. The two clerks sought variety for their midday meal by an occasional change of restaurant; but their favourite haunt was Bishopsgate Street Without, where prices ruled moderate.

Balder was a medium-sized, energetic fellow, with a fresh complexion, nose slightly tip-tilted, and an abundant moustache, which he tugged at with both hands when he laughed.

Savorin was taller and slimmer; dark-coloured, and with a normal expression which, while by no means unpleasing, was staid and somewhat tristful. Balder was about thirty-nine, Savorin was just thirty.

Said Savorin: "I'm going to stand lunch to-day."

"Good man," replied the other. "And I tell you, Sav, a fellow wants his grub a day like this; wants it hot and solid, my boy. It's beefsteak-pudding day at Crosby Hall, I fancy."

"Well, let's go there; but my time's rather short to-day; I'm thinking of doing a little business of my own at the bank this morning."

"Oh! Settled on banking it, eh? Well, that's the way to keep it, anyhow."

They hovered a moment on the edge of the pavement, and put forward warily into the blind unknown of the roadway; catching at the rail of a 'bus, sheltering at the tail of a van; seeming fairly lost when they had made, as they guessed, about half the passage; and greeting the opposite kerb-stone as the friendliest of shores.

"This is the day when a man likes to know that his life is insured," observed Balder, as they entered the gas-lit restaurant, where the steam and fume of the dishes compounded with the fog to produce an atmospheric hodge-podge.

"*My* life's not insured," said Savorin.

"Well, you can think about it now, you know. You might take a slice out of the legacy."

"The fact is," answered Savorin, "I'd like to feel certain what's just the best thing to do with that legacy. It isn't much, to be sure; but there it is. What do you say, old chap?"

"Ah! now you're asking me something," said Balder, sententiously. "Well, no harm could come to it in the bank; that's a safe move, at any rate."

"But that's about the end of it, eh? You see, Balder, I never expected this, and that's saying that I should have got along without it. Why shouldn't I play with it a bit?"

"A little game of speculation?" queried the chief clerk.

"There are fellows who roll in no end that way, aren't there?"

"Not many of them in our walk, though, Sav."

"Then you're against that?"

"Well, let me see, Sav. You're in luck's way at present. You've pocketed fifty pounds that you never expected; who knows but you may be in for a run of good turns? I don't see why, if you'll face the risk, you shouldn't try your chance. You might do a little bit of a deal with half of what you have in hand. But don't rush it; take your time. There are things to be picked up in a small way, if you get to know the markets."

"As how, for instance?"

"Why, Sav, I should have to teach you the A B C of speculation, I expect. Do you know stock from shares?"

"Aren't they the same?"

Balder clapped him on the arm, and laughed; and Savorin laughed, less hilariously.

"Put it in the bank, my boy; bank it, bank it! That's the ticket for *you*, Sav."

"But——" began Savorin.

"No, no. Three per cent. in the savings bank. That's the profit for you, Sav."

"I *should* like a shot at something more promising," said Savorin, half humorously, half yearningly.

"No. Speculation's not the sport for you. Don't think of it. You haven't a speculating face, Sav."

So that ended with a laugh; but Savorin was unconvinced and unsatisfied.

"Now," said Balder, when they had finished eating, "put yourself under my wing, Sav, and let me bring you to the bank. That's your haven; you know it, Sav."

"You wouldn't bank that fifty pound if it were yours?"

"H'm, well, I'm not so positive that I shouldn't. If I didn't know stock from shares, I'm dead sure I should. So, come along with me, my boy."

"No, no," said Savorin, irresolute; vaguely beckoned—whither, he scarcely knew, except that it was not towards the savings bank. "No; I'll go back, and think it over again. I could slip out to the bank, you know, before closing time."

"You're brooding something desperate. There's a temerarious flicker in your eye. You'll do a wanton thing before night, Sav."

Indeed, however, there was no precipitancy in his face; his expression was very unlively. He was as little disposed to a presumptuous or a reckless step as any prudent leader of horses in the dreadful street without.

As they returned to the office, through the bleak, black, sodden lanes, Savorin said: "What are these Belltopps that every one seems to be talking of and buying?"

"The newest boom in mines. Ah! that might be a chance for us, Sav, if we had our loose few thousands to throw into the market, like Mr. W."

"He has bought a thousand shares. I witnessed his signature to the transfer this morning."

"Then he reckons to make five times that number of pounds out of them by-and-by, at the very least. Think of that, my friend! Multiply your legacy by a hundred."

"Five thousand pounds—ah! But suppose it shouldn't come off?"

"Well, suppose that. It would pinch him less than the loss of a fiver would you or me."

"That's it!" exclaimed Savorin. "We must have capital, capital, capital!"

"Meanwhile," responded Balder the politic, "we must not do anything wanton before night."

At the entrance to Austin Friars, Savorin bought an evening paper—quite a piece of extravagance on his part.

They mounted to "J. S. Winton & Co.," and resumed work.

Savorin had fewer letters than usual to write that day, and it was early in the afternoon when he carried them into Mr. Winton's room, to lie for signature. Then he went back to his desk, and took up the evening paper. He looked at the money article, but the technical terms conveyed little meaning to him. He skimmed the article, until he saw the words "Belltopp Hills," then paused and read:

"In the mining market, once more, the chief consolation afforded was the business in American Belltopp Hills. The demand for shares was as brisk as ever, and the price closed ⅛ better. Nearly twenty thousand shares changed hands in the course of the day, and it was authoritatively stated that an exceptionally good report would be received almost immediately from the manager in America."

"Balder," called out Savorin, "what does 'an eighth better' mean?"

"A rise of two-and-six," said Balder.

Savorin made a calculation on his blotting-pad, and found that if he had bought fifty shares in Belltopp Hills the day before, he would have gained a profit in twenty-four hours equal in amount to more than two weeks' salary. He would have been six pounds five shillings in pocket.

He looked at his watch. There was still time to hurry to the bank. Once in the bank, the money would be secure. Yes, but it would not breed there at the rate of "an eighth better" in twenty-four hours. Savorin put his head between his hands, and thought strenuously; meditating what would be for him a great and daring stroke.

He passed his affairs in mental review. Such as he was then, he had been the year before, and the year before that; and in five years to come, it would be much the same with him. Five years hence there would still be the 8.45 train to catch in the morning, after a snatched breakfast; the day's round at the office would be unchanged; his pocket would be as light as usual—one-and-fourpence for luncheon, and a little for casual expenses; at home, they would still be hovering on the line of perceptible suburban respectability.

If their poverty were not grinding, it was because Savorin had painfully disciplined himself to have no tastes, desires, aspirations, requirements even, that needed money for their fulfilment; and this habitual tyrannous suppressing or ignoring of self just availed to keep him secure in house, and square with his paltry corner of the world.

A sudden greed of money rose in him; money, for the comfort of it; for the pleasure of his wife, who had so little pleasure, Savorin thought. He looked at his watch again; it was just past four—the banks were closed.

He went over to his peg behind the wooden screen, and took his hat and ulster.

"Steady, boy, steady!" said Balder, menacing him humorously. "Bank's closed now."

"I know that," answered Savorin, with a smile that ended in a twitching of the lips.

Outside the office, he trembled. He did not know where he was going, or what he intended to do. He wanted to do some big thing with his fifty pounds. He was hot and wild—the stoical, patient clerk, who kept all his desires dungeoned, under bolt and bar of the will. He looked for some stroke of magic by which, in mythland (or the Court of Chancery), the prize of fortune is secured by him who least expects it.

From Great Winchester Street it is a short, though tortuous, step to Throgmorton Street, which (while we are talking of fortune's gifts) is a much more romantic spot than any in mythland. The Stock Exchange was closed, but the sedulous members, driven from "The House," carry their benches outside, and some business is always done in "the street." Money, and love, and pure art, are the three occupations in which the workers will never accept a definite closing hour.

Savorin felt almost as though he had come out to do some wicked thing. He was stung by doubt, and utterly irresolute; the prey of whirling desires, which urged him on, but gave him never a notion whither he was being driven. It seemed to him that some sort of new birth were taking place in him, or that some foreign nature were violently dislodging his old one, and taking absolute possession in its place. He felt it quite impossible at that moment to go on doing the things that he had done contentedly or carelessly every day for years past; to take the same train home, to sit down to the same fare at supper, to pass the evening at home as usual, with no diversion from without, though he knew that he was always happy with his wife. Everything must be changed. The chance had come. They must make a tremendous effort to lift themselves. His wife—ah! that was it—his wife deserved so much more pleasure than he had ever been able to give her: dresses, money to spend, amusements, a better place in their wretched little social circle. He must get all these things for his wife.

And there he stood, not knowing how to get them; peering with excitement and a kind of fear into Throgmorton Street, where, sooty black and bitter cold as it was, there was still some bustle of business, and voices passing on the cries of the closing markets.

"Belltopps," "Belltopp Hills," "Belltopps." Several times Savorin heard these words distinctly, uttered by different voices, echoing up and down the street. Belltopp Hills were still booming.

All at once he caught sight of a friend, an acquaintance rather. His acquaintance was a young man, an authorised clerk in the firm of stockbrokers with whom Mr. Winton did most of his speculative business. Savorin called to him, and they exchanged greetings across the narrow street.

"I say, what are Belltopps?" called out Savorin.

"Close on a pound."

"I could buy fifty," thought Savorin.

His friend crossed the street to him. "Does your governor want another thousand?" he asked. "Sharp's the word. They're rising every hour; they'll be twenty-three or twenty-five shillings to-morrow, I expect."

"Could you buy at a pound to-night?" said Savorin

"Might do it at a fraction below."

"Buy me fifty," said Savorin.

"Do you mean for yourself?" asked his friend.

"That's it," said Savorin, no longer excited in the least.

"Good business for you, my boy!" responded the other. "You're going to make your fortune. But it must be done quickly, if it's to be done to-night:" and he vanished through the fog.

Savorin turned and went back to the office. He felt immensely relieved. He was convinced that he had been inspired to do the right thing at the right moment; that what he had done was of all possible things the best.

"Well?" queried Balder, looking up from his ledger as Savorin entered the office,

"I've bought fifty Belltopps," said Savorin, very contentedly.

"Then I believe you're right!" said Balder.

Savorin himself felt not a doubt of it.

Mr. Winton left the office early that evening, and his senior clerks were seldom long in following him. Savorin was on his way home soon after five o'clock. Snow was falling through the fog, there was not a breath of wind to purge the horrid opaque in which the City was all involved. Savorin cared even less for the miseries of the night than he had done for those of the morning. One brief moment of disquiet he had, when, putting his hand upon the pocket where the cheque was—for the ugliness of the night was almost alarming—he remembered that the fifty pounds had ceased to belong to him. But the next instant he felt quite comfortable again. He had put the money from him, only to receive it back with increase. He had already begun to make some gain without working for it. This is a queer sensation to the man who has been able to show his stroke of work for every shilling he has pocketed. He reflected that he might sell his shares on the following day, and take a profit even by that small transaction. His friend had told him that the shares were rising every hour.

He got to London Bridge sooner than usual, and found that he was just in time to catch the 5.30 train. The 5.30 completed the eight miles to Brenton Heath in an hour and three-quarters, and the half-mile up the hill from the station gave Savorin nearly half an hour's walk.

There was a line of light under the blind in the house in the middle of the row. The little gas lamp in the passage was unlighted; his wife had perhaps been taking tea somewhere. Savorin stamped the snow from his shoes, and let himself in with his latch-key.

A door that gave on the outer passage was jerked open a little way, and a pair of dark eyes—Savorin's twin stars—gleamed on him.

"Shut the door, dear! It's so cold as never was. You're like a snow-man! I won't touch you till you've taken off your ulster."

Savorin unbuttoned, and threw off his ulster; love glowing on his pinched dark face at the sight of her. She slipped from the door, shivering prettily, as he entered.

"Come to the fire and tell me what it is like in town."

"Ah! wait till you hear what I've done," said he.

"Is it about the legacy?" asked Mrs. Savorin, with a faint anxiety in her voice.

"Yes, the legacy."

"But suppose I've done something about it too?"

"Eh?" asked Savorin, alarmed.

"What have you done? Come in and say."

She pushed him before her into the little parlour, where her own chair was bestowed in front of a well-nourished fire. Savorin's slippers, however, were there also. The room, despite the littleness and the cheapness of everything it contained, was pretty; with evidences of taste, if of a superficial and imitative kind.

"Ah!" exclaimed Savorin, delightedly, covering his wife again with his eyes; "you've got something new on. You've got a wrapper, a real evening wrapper."

"A tea-gown, Ned. I thought——"

"Yes, dear, of course. I know you wanted one. I like it. It's lovely. It turns the parlour into a drawing-room. A kiss for the tea-gown, Annie!"

"It was really very cheap, Ned."

"Nobody would believe that, to see you wearing it!"

Indeed, Mrs. Savorin looked well in the rose-coloured tea-gown. It may have been as cheap as she said, but the lines of it blended beautifully with the light soft lines of her own figure. Her black hair, loose on her rounded neck, took a deeper lustre from it.

Mrs. Savorin was a buoyant and well-shaped young woman of six and twenty. She was of the conquering type of feminine beauty; that is to say, she was a brunette. In the modern marriage-market the brunette is favourite; her chances are ten to the nine chances of the blonde. Savorin delighted in his wife. She was extravagant, and of a variable temper; but her dominant mood was optimistic, and her gay vivacity was never long in eclipse. Savorin had a suspicion that she had sometimes pawned the silver medals of Trinity College, Dublin, which his father had bequeathed to him; but she always had something pretty in millinery afterwards, and somehow the medals found their way home again. Mrs. Savorin was not quite the equal of her husband in birth, but in their little commonplace suburban circle her distinction was rather more than his, and it was generally said that when her husband should be promoted to the first clerkship she would be quite capable of the social position. What this meant was, that the social equals of Mrs. Savorin, who were conscious of her natural superiority, had not occasion as yet to be jealous of her. It is not until the challenge of supremacy comes that the tongue of detraction begins to wag.

Savorin was set down to his supper; forgetting that he was not to eat supper any more.

Annie pushed her wicker chair close up to his.

"What have you done about the legacy?" she said. "Were you joking?"

"Quite serious."

"Go on; tell me. Haven't you put it in the bank?"

"No."

"Ned, what have you done?"

Savorin composed his face, and said, without looking at his wife,

"I've bought fifty Belltopps."

"Belltopps?" said Mrs. Savorin. "Belltopps? Why, those are a vulgar kind of trousers. Do you mean that you've bought fifty pairs of trousers?"

Savorin put his arm rather timorously about the shapely neck of his wife.

"Annie," he said, "I have taken a great step. I have risked the legacy to—to make us rich. I have bought shares in a silver mine."

"A silver mine," said Mrs. Savorin, "a silver mine; that's something to do with the Stock Exchange, isn't it? Do you mean that you've been speculating, Ned?"

"Investing, dear, not speculating," said her husband, who had the barest notion of the difference between those terms.

"That means you've spent the money, though;" and Mrs. Savorin looked open-eyed on her husband as she said it. "Well, but—I've spent the money too, Ned!"

Savorin turned upon his wife, not with anger, but with fear.

"*You've* spent it, love; why, that isn't possible!"

"But I have, Ned."

"But what have you spent it on, dear?"

"On the—on the house."

"The house?" muttered Savorin, surveying the room, but noting no change there. "What has happened to the house, dear?"

She edged closer to him, caressing his arm with plump, tremulous fingers. "Have you forgotten the drawing-room, which we wanted so much to furnish, Ned?"

"What, Annie, you've been spending the money that way!" exclaimed Savorin, almost afraid to grasp the meaning of her words. "But you couldn't, you had no money to spend."

"Ned, don't look like that; you frighten me. No, of course, I haven't really spent the money; I've only pledged it in a kind of way."

"Oh, well," added Savorin, brightening a little, "that's not so bad, dear. We can easily get out of that, I should think."

"Yes," assented Mrs. Savorin, but somewhat dubiously. "I suppose we could do that if we were obliged to, though it wouldn't look very well, dear, would it? You see, Ned, I thought it all over again after you had gone out this morning, and it did seem rather a pity to put all that money away from us in the bank when we really do want it. We always live within our income, you know, so we needn't save it for fear of debts. And it was really of you that I was thinking, Ned; as it is, we have scarcely what can be called a position, and we can't have one as long as we are without something in the shape of a drawing-room."

"Yes, dear, yes," said her husband, endeavouring to persuade himself that the furnished drawing-room must be useful in some way, and wondering how much fifty pounds would accomplish towards that end; "but I did not say anything about the drawing-room when the legacy came, because, after all, fifty pounds does not quite furnish a drawing-room."

"That's what I thought too, Ned; but the man was so kind about it. He said that with fifty pounds down he would furnish the drawing-room in any style we pleased; because the rest of the money might wait; he wouldn't press us for it at all."

"Why, then, we're in debt already," said Savorin. "Fifty pounds, and the rest to wait! My dear, what have you done? We have not even fifty pounds for furniture. We have nothing at all. Every penny of it is in the silver mine. We might have bought shares, or we might buy furniture; but we can't buy both. And then——"

There was a knock at the door, and a servant came in with a parcel.

"I was to say, ma'am," said the servant, "that you can change it, and welcome, to-morrow, if you don't like the pattern."

"Eh?" said Savorin, as the servant withdrew, "is the drawing-room furniture coming already?"

"Ah, now, Ned," cried Annie, springing from her chair, "this you'll like, I know. We've wanted this, as you've often said, ever since we married. No, dear, this isn't for the drawing-room; this is for the dining-room. I thought that, whatever we did with the legacy, we must anyhow make it save something in the washing of table-linen. You spill vinegar at supper at least three times a week, Ned;" and here Mrs. Savorin untied the parcel, "so I thought I really must buy you—that."

She unfolded and displayed a silver-plated cruet-stand.

"Beautiful, dear; but—but this is to be paid for too, I suppose."

"Oh, not immediately, Ned! We needn't pay before the end of the week. They know us at the shop. We had the kitchen lamp mended there the other day."

"Yes, dear, to be sure." He took the cruet-stand from his wife, and fingered it nervously. He felt miserably alarmed. He was no longer the capitalist, or the confident shareholder. He had ceased to own money. Much worse than that; for the first time in his life he had begun to be a debtor. There was something malignant about this legacy; it was working to his injury.

"Don't you like the pattern, dear?" said his wife.

Her voice sounded strangely in his ears. The pattern? He looked to see what the pattern was. It seemed a proper pattern enough, for persons in their position.

"You see, Annie," he said, "it's rather awkward. We can't very well do both. We must choose between this and the shares."

Mrs. Savorin had taken a fancy to the pattern; she thought it better than the one she had suggested to the shopman.

"Of course, we can change it if you don't like it, Ned," she said.

"I'm thinking how we are to fit in your plan with mine, Annie."

"Well, let's try, Ned. You've told me nothing about yours yet."

"To-morrow, dear. Perhaps we shall have to unmake mine. I want to think about it. Your tea-gown is beautiful; I like it better and better."

Savorin went to bed that night, resolved that he must sell out his shares on the following day.

He wearied for an hour or two before he slept, thinking of his wife. She had puzzled him that night! she had inspired him with a kind of fear. He had never known her act in this way before. Then he remembered how unlike his normal self he, too, had been throughout that day. The legacy must be in some way blameable for it all. His mind wandered back through the unstirred, even years of their married life. He could not recall a day of all those years when their poverty had irked him. This reflection brought a pang with it. Had he not been too selfish in his love of his wife? Had she been as happy as he in their little shabby existence? Should he not have tried before this to put her in a better place? Under all her timidity, how she had tingled with delight at the prospect of the furnished drawing-room. Savorin thought how beautiful she would look in the drawing-room. It was pleasanter to picture her beautiful in the drawing-room than to conjecture what might happen if, in this new expansion of her nature (so pleasant for her, Savorin thought), she were to go on fancying that the legacy were a Fortunatus' purse. Then the heart-sinking came again. Perhaps, if he sold out the shares, Annie might have her way about the drawing-room; but he must be a little strict with her as to the future. He must bring her to know that the legacy was already exhausted. But was it? His fancy swam into another orbit. What if the Belltopps should go on increasing? How much more he might do for her then than the little she had set her heart upon! Perhaps, though, he had better keep this to himself. He would see how the shares stood the next day. So he harassed himself into sleep, his wife sleeping lightly the while.

He awoke more confident. Come what might, they could take up the shares, or they could part with them and give Annie her drawing-room, and everything that the drawing-room would be to her. The legacy was still good for the one venture or for the other.

He wondered how the market had closed on the previous night. The morning paper was a luxury he did not permit himself; he read Balder's at the office. Then it occurred to him as quite a happy notion that he could buy one at the station.

He rose and dressed a quarter of an hour before his time, in order that he might be early at the station.

The drawing-room faded from his fancy; he could think only of Belltopp Hills.

Mrs. Savorin wondered why he was getting up so early.

"Mustn't lose the train every day, dear," was his excuse. "Could we manage breakfast ten minutes earlier?"

"Oh-h-h yes, why not, if you're in such a dreadful hurry," said Mrs. Savorin, contentedly. "You needn't trouble about mine, Ned; Mary can bring it to me this morning."

She pushed her thick black hair away from her low, white forehead, and yawned with a satisfied sense. Savorin looked quite jealous and out of humour.

"Mary shall do nothing of the sort," said he, in a tone which was intended to be very brusque. It was his chief pleasure on these winter mornings to carry up her breakfast to her. "Can't I make breakfast myself, dear, for once in a way?"

"No, you shall *not* do that, Ned," returned Annie, in a hurry of self-reproach, and she sprang at the bell over her head.

"I'll do it, I'll do it, dear," said Savorin; and he went to the door, and gave the necessary order in a shout.

"So good of you, dear," smiled Annie, a quarter of an hour later, when Savorin brought up her breakfast. "Is it all comfortable for you downstairs? Have you got any fire? And Ned, dear, what about the drawing-room?"

This last little question, shaped like a soft entreaty, moved Savorin, as anything so spoken by his wife must inevitably do; whilst it gave him yet another moment of uneasiness concerning that interesting chamber.

But he was bound to give his wife this one thing that she craved, now that for the first time in his life he could do it.

"Begin to furnish it," he said. "Mind, dear, you mustn't be rash. We can't do everything with fifty pounds. No more cruets, I think—though that's a very nice one; no more bills, dear. I shall call at the furniture place, coming home, and see them about it."

Annie's eyes sparkled. She could not hide her enjoyment of her little triumph.

"I know you'll say by-and-by that I've been very wise about it, Ned. It will be ever so helpful to us, you'll see. But I do think you ought to get rid of those horrid shares. What can people like us do with shares? Can't you make the person you got them from take them back?"

"I have no doubt, dear, I could get rid of them directly. Perhaps I might even be paid something for getting rid of them? What do you think of that?"

"Oh!" said Annie, a new glitter in her eyes at the mere notion of profit. "Are they really valuable? Don't be stupid, and sell them for nothing, Ned. I wish you knew something about these things, dear. Be sure you get all you can for them."

Savorin kissed her a sweet good-bye.

"Trust me to do all that is possible. And now, be prudent till I come back. No more surprises for me to-night! Perhaps I may have good news for you; but we have both got to be very careful, Annie dearest."

"Am I such a madcap, then? Am I going to swamp him in debts, and fill his house with bailiffs? Why, I haven't another wish in the world, Ned!"

It needed only words like these to renew all the loving confidence of Savorin in the wife whom he adored.

He kissed her again and left her; more than

ever determined at that moment that he *must* make a fortune out of Belltopps.

His own breakfast was cold, but he buttered a slice of bread, and swallowed a cup of pale tea unconcernedly, while getting on his boots.

## CHAPTER II.—WHAT THE LEGACY DID FOR THEM.

The weather was still arctic, but the comparative clearness of the air made it almost cheerful. Savorin went as fast as he could through the half-formed road, floundering now and then in drifts where the snow rose to mid-thigh. The sharp flakes were blown into his face; it was barely half-past eight, and nature was still niggard of her light. Most windows were curtained on either side of the road, even in that plebeian street. Savorin wondered how many shareholders in the Belltopp Hill Silver Mine were abroad at that severe hour. But the main thing was that he was in good time for the 8.45.

The book-stall boy did not offer to cut the paper for him; he was unknown as a customer. The Money Article, now—the Money Article! Yes, there was something about Belltopp Hills.

"In the Mining Market, business was as brisk as ever in American Belltopp Hills, which, indeed, were almost the only shares dealt in in the miscellaneous section. Early in the day the price rose ⅛; but, despite the large number of shares that were taken up, there was no improvement on this until the regular business hours were over. Transactions were continued in 'the Street,' however, notwithstanding the desperate weather; and at the very last moment there was another and a bigger rise. A cable was received from the manager in America, stating that a new and richer lode had been struck, and on the strength of this information the shares touched 1¼ at the close. It is to be wished that the outlook were as bright for other mining ventures."

"'One and a quarter,'" said Savorin to himself. "That's one pound five a share, I suppose. A big rise, I expect. But what were *my* shares bought at? Fenton said he might be able to get them at less than £1. If he bought them at £1, and they closed at £1 5*s*., I have made a profit of £12 10*s*. already. Yes, but if he had to pay the closing price for them, I am that much out of pocket, for my fifty shares must have cost £62 10*s*. Now have I gained or lost £12 10*s*.?"

He would run to Fenton's office, he thought, on the way up from London Bridge, and learn how he stood at once. This was a big matter; to be in or out of pocket to the amount of £12 10*s*. It was a month's salary. But, though there was little fog, the line was heavier than ever, and the train was late again. Mr. Winton's post might be a large one that morning, and a large post must be taken in hand at a good hour. Savorin had the clerkly instinct; he was always keen for the interests of the firm. It was matter of course with him to put his own affairs behind him. His biting anxiety to know at what price Fenton had bought the shares was not motive enough to take him ten minutes out of his way to Great Winchester Street.

Mr. Winton had not arrived, but Balder was just before Savorin at the office.

"I say," said Balder, "what price did you buy at last night?"

"I don't know. It was Fenton who bought for me. He said he might get them at a fraction under a pound."

"Lucky for you if he did, Sav. They closed five shillings better than that."

"Yes, I see they did. But suppose he bought at closing price?"

"Well, another rise of five shillings will make you up the difference; and according to all accounts, the shares are not going to stick at present prices for long. They may mount another quarter to-day. Look here, Sav; now you're in for this, be a little plucky. A downright good mine, when it's well at work, and buyers have got to believe in it, is the best speculation going. But at a slack time like this, when there's no particular confidence in anything, it's an up and down game with the best of ventures. Don't you get yourself in a fever about Belltopps. If the shares are a bit cheaper one day than they were the day before, keep cool. If they make a big jump another day, keep cool still. A good mine is bound to go right in the long run. See how quiet Mr. Winton keeps about his 'specs.' When he's made up his mind to put down his money, he puts it down, and then he bides his time. Do you think he's in a fever in the morning to know how prices closed the night before? Not a bit! You can bet that he has put Belltopps out of his head already. That's the attitude for you, my boy."

"But you're not going to compare my position with his, old chap?"

"You've turned speculator in a little way. Good luck to you, I say! I only quote Mr. W. as the model for any and every speculator. You know what I mean, Sav; you've got to keep cool about it. My notion is that you're in for a good thing, and that your fifty-pound legacy is going to be five or six legacies of the same size by-and-by. But let it alone for a bit, and keep cool."

This was spoken in an undertone behind the screen of Balder's desk. Mr. Winton came in shortly afterwards, and twenty minutes later Savorin was called into his room to discuss the correspondence with him. He looked somewhat closely at his principal. Mr. Winton must have bought his shares at something less than £1; so that, since Savorin had seen him on the previous day, he had made a probable profit of about £300. He was as phlegmatically good-natured as usual, his cold in the head was no better, and he said nothing whatever about Belltopp Hills.

When Savorin returned to his desk he carried with him the material for a good morning's work, and he did not shirk a stroke of his pen to save five minutes for an early move to luncheon.

Once in the street again, however, Balder's counsel was as nothing to him. He did not want to eat, and he could not eat, until he knew how he stood about his purchase. He went to Fenton's office; Mr. Fenton was at lunch they told him. Five minutes afterwards, Savorin met his friend in the street.

"Hullo! want to know about your shares?"

said Fenton, "we shall be posting the transfer to you to-night. I bought at one and one-eighth. That's £56 5s. for your fifty. Seen you ten minutes sooner last night, I could have bought at a pound, and saved you a fiver and a bit over. Never mind, it looks like a safe thing; an eighth more or less won't matter in a week. Like to take up a few more?"

"No more money to put on them at present," said Savorin, taking his loss of £6 5s. quietly. "What's the price this morning?"

"Eh? oh! they're not quite so strong this morning. That was rather a big rise last night, you know, as mining things are just now. But I dare say they'll recover this afternoon. I'll keep you in the know about them, as far as I can. You might do worse than take up a few more, if you've got another 'fifty' to risk."

"Ah! There you are!" said Savorin. "That fifty was just a little bit of ready-money I had."

"Well, you've done a smart thing with it, if you ask me," observed Fenton.

"You think the boom's going to last?"

"It'll last long enough to do *you* a good turn old man!"

"That's all I want," said Savorin.

"Well, you'll get that. So long!"

"So long, Fenton!"

Savorin had imagined that if he were out of pocket, ever so little, by his purchase, he would feel it keenly. But he was not disturbed in the least. There was no inlet for misgiving amid the universal confidence. Every one seemed to say or think that Belltopps were rioting to fortune. He was a speculator in Belltopps, and must keep cool. Balder was right; Mr. Winton was right; Belltopps were a winning hazard, the player had only to preserve his head. He ate his luncheon contentedly, and began to think that Annie had not been at all imprudent in her little venture about the drawing-room; which would no doubt help them on in a social way at Brenton Heath, where their position amongst their neighbours was certainly not quite what it might be. He thought how unselfish Annie had been all these years, to be content with their half-acknowledged place in the outer circle of the pretty suburbanism of their little neighbourhood.

"Heard anything?" said Balder, when Savorin returned to the office after luncheon.

"They're not quite so good this morning."

"Wish I had your fifty of them, all the same!"

"Well, yes; it doesn't look as though I ought to grumble. Fenton wanted me to buy some more. There seems to be a kind of belief in them. But, B., how long is it going to last?"

"What, the boom? Well, I don't know; but you've thrown in with one of Mr. Winton's ventures, and *he* doesn't often make a mistake."

"Then I'm safe for a while, you think?"

"I've a belief that way. I won't say more. You're an awful duffer at the game, Sav, you know; but you're the kind of chap who chances on a nice find now and then; and I have a notion that you've dropped on one now. That's all I'll say."

Savorin began to think that he had been a rather clever speculator without knowing it.

No; that is, perhaps, not quite the right way to put it. There was no tinge of egoism in him. He could not think that he had ever done anything in his life which gave him any right to believe in himself. He thought of himself, what most other people thought of him, that he was an inconsiderable, good-natured, dull fellow—poor company anywhere—who knew just enough to keep him plodding on in the safe track; pretty sure to be always in bread and cheese, and certain never to be in clover. He knew his own position well enough, and the utter barrenness of his prospects. He was one of the rank and file of commerce. He was skilled in his business; he was worth his scurvy pay; but there were a thousand others ready and able to take his place, if he should drop or be thrust from the ranks. But, for all this, Savorin often believed that he was one of the luckiest of men; and so he was, for he had a perpetual romance. He lived in his love for his wife. His love of his wife made him happy and unhappy in his changeless poverty. He was happy, because he wanted nothing in life except his wife; unhappy, because his poverty was also poverty for her. This it was that made him feel almost proud of himself in conjecturing the results of his little speculation. He had chanced upon the one and only means of lifting himself out of the ruck.

He began to feel the fascination of the game of speculation. He had found an opening in his ring-fence of perpetual indigence. This is the way the game is looked at by the multitude of unmoneyed money-seekers, when it is first revealed to them and they are lured into it by the hope it offers of making just a little gain that is not to be compassed by any other means. Its attraction is extraordinary before the nature of the game is fairly realised, and it never dazzles so much as when the player is just beginning it, and stakes the trifle that is his all, and is on the scent of profit, and knows nothing of "cutting his losses." There are tens of thousands of men and women, with little to lose, watching the rise or fall in quotations every day of the year. In January of this year, Savorin joined this anxious congregation.

He was rather late in the city that evening, which gave him opportunity and excuse to buy the last edition of an evening paper at London Bridge. It recorded the closing prices of the day, and Belltopp Hills had risen $\frac{1}{16}$. An increase of one-sixteenth (one shilling and threepence per share) meant that Savorin had already recovered one-half of his loss of £6 5s. This assurance sent him home in excellent heart.

Annie was waiting for him; affectionate and gay. The drawing-room furniture had begun to arrive.

It was so nice to have her edging up to him at his supper; and she had given him a sweetbread, an indulgence for which he must inevitably have scolded her, had he not remembered that it was her own favourite dish, and that she could share it with him. Indeed, he persuaded her to a fair half of the dish.

"Now," she said, "what have you done about those shares?"

"Kept them," said Savorin.

"Then they're really worth something, Ned?"

"They're worth more than I gave for them, dear."

"How much more, Ned? Ever so much?"

"No, dear, not that; but a few pounds at least. Why, fancy, dear, by buying those shares I have made more than seven pounds since yesterday, without doing a stroke of work!"

"Ned!" exclaimed Annie. "More than seven pounds in a day! Why, that's more than forty pounds a week. Do you mean to say that you're going to make more than forty pounds a week without working for it? You can leave the office, we can go away from this, we can——"

"How delightful all that seems to you, Annie, dear!" he said, tightening his hold on her waist; "you'd like a change very much? You'd like to get away from this?"

For a pretty young woman whose heart assured her that her zest of life had never been properly gratified, Mrs. Savorin was very politic.

"I won't have any insinuations, Ned," she said. "I am sure you think I'm never satisfied with anything at home. It's very unkind of you. You won't believe how much I'm trying to do for *you*."

All the common sense in Savorin melted when she talked to him like this. He believed nothing but that she was as sedulous for him as he for her.

He laughed at her, he felt so confident that night.

"I am going to do grand things for you, dear," he said.

"For yourself, Ned," she insisted.

"What do I want for myself? Don't let us be stupid with each other. You know for whom I bought those shares."

She turned up her soft dark face to him, and he never saw the avarice in her eyes.

"Are they going to make us very rich? Are we really going to move away from here, and live like people with money?"

Savorin felt no envy of the people with money; but he could not bring himself to reproach Annie for being less humdrum in her desires. But that wistful eye of hers seemed to hope too much.

"We are just going to wait and see what will happen, dearest," he answered. "No big plans at present. We must see how it goes with the shares; everything depends upon them. Sometimes, you know, shares behave badly, and don't bring in any profit at all. Sometimes they do much worse than that, and one loses everything by them."

Yes; Annie supposed so, she said; but as there was very little apprehension in her husband's tone, she felt none whatever herself. She knew his prudence, she could not possibly imagine him doing anything rash with money. All his fondness for her had never suffered him to loosen the purse-strings after their weekly or monthly limit had been reached. He had a terror of debt, and Annie began to think that this mine of his must be, not a silver, but a gold mine—a story-book gold mine—or he would never have consented to the drawing room; and now he was looking forward to something grander than that for them. It must be that his want of trust in her kept him from telling her everything; she half believed that he was already making his fortune. So Annie began to think that she might safely go on with her plans.

Savorin himself underwent a change from that day. He felt less care, and looked less careworn. It might be, he thought, that life, real life, the life that Annie had always pined for, was just beginning for them.

At the office the next morning he received the transfer—fifty shares at £1 2*s.* 6*d.*, and 12*s.* 6*d.* for broker's commission; in all, £56 17*s.* The £6 17*s.* must be taken out of the £10 bonus. With the transfer was a note from Fenton, saying that, as the fortnightly settlement on the Stock Exchange had begun, he should be glad to receive Savorin's cheque that day or the next.

Savorin got Balder to witness his signature to the transfer; and in the afternoon he took his two cheques to Fenton, and returned with three guineas in his pocket. That afternoon the shares rose ¼ (2*s.* 6*d.* per share), and Savorin's original loss of £6 5*s.* had become a profit of £3 2*s.* 6*d.* He read in his evening paper that "the prospects of Belltopp Hills were improving hourly," and that "the shareholders in this mine had certainly no reason to be afraid of the immediate outlook. Buyers were rushing in," and "there was a more than common eagerness to secure whatever shares were offered for sale. Several big purchases were made on good recommendation."

In his second-class carriage that evening, Savorin for the first time broached the topic of Belltopps amongst the little set with whom he occasionally travelled. Two of the party had never heard of Belltopps, and evidently thought that Savorin had laid out his legacy to poor advantage. The third was a junior clerk in a stockbroker's office, and knew all about "the prize of the mining market."

"That's what they call it—at present," he said. "Our people have had a lot of orders for them; bought about three thousand to-day. How many have you taken, Savorin?"

"Oh, only fifty. Bought at one-two-six. Made a bit of profit already."

"Fifty—ah! I don't know that I'd mind risking that much myself for a few weeks," observed the stockbroker's clerk.

"You don't seem very keen about them," said Savorin.

"Well, no, if you ask me, I'm not."

"Don't you think they're going to last?"

"Oh, they'll last a bit yet. I wouldn't hold on too long, though, if I were you. In my time, and that's not going far, I've known more than one 'prize of the mining market' that turned out a very queer prize for the shareholders. You want to be on the inside track to know how these mining games are worked. There's always a quiet little gang in the centre, who don't let out too much. What can small shareholders like you get to know of the inside game? You can't do it, they won't let you; you're in their hands, my boy."

"Look here, old chap, you make haste and clear out," said one of the other pair. "Don't you be 'had' by that Stock Exchange lot. You can't stand the racket, you know."

"No, that's a fact," answered Savorin. "But I rather like the look of Belltopps just yet. Our governor's in for them to a fair amount, and he's a weasel at this sort of thing."

"Yes," said the stockbroker's clerk, "yes; he's not often asleep at it, I believe. Mind you," he continued, addressing himself to the others, "I don't want to scare Savorin. It looks as though Belltopp Hills might turn out something altogether beyond the common—the biggest thing of the day, in fact. There's more belief than disbelief in them at present; and there's no denying that a real good mine is out-and-away the best 'spec' to be in. I only want to put him on his guard, so that he may get out at the right moment. There's no danger at present, that I *will* say."

"No," replied Savorin, "I don't think there is."

He was settled, pillar-like, in his confidence. He had passed into a state, very unusual with him, in which no thought of danger could assail him. The crisis of doubt had left him, for the first time in his life, a stalwart believer in himself and his good fortune.

In a week from that time, his shares were worth twenty-five pounds more than he had paid for them.

"Twenty-five pounds in a week, dear! Two months' salary—and without working for it!" he cried to Annie.

Annie thought the profit should have been forty pounds, and that perhaps that was really the amount.

But she was very delighted, and praised her husband for his cleverness, and was sweet and gay; and it seemed to Savorin as though the rest of their life were to be a renewal of the honeymoon.

In a few days more a dividend arrived. The dividend was only a shilling per share, but it was quite unexpected.

"Shall we get a dividend every week now, Ned?" asked Annie.

"Every week, dear? No, I fancy not. I'm not quite clear about dividends, but I thought they came about once a year."

"Oh, but not in our mine, I'm sure, Ned! No, you'll see; we shall get lots and lots of dividends."

"Well, sweetheart, the first of them shall be yours, at any rate," and he gave her the cheque for fifty shillings, to spend on herself. She bought a bonnet for herself, and a pair of gloves for Ned. He looked for nothing, and would not have liked it if she had spent more on him.

They were living at this time somewhat more expansively than their habit had been. The table was better furnished; Annie had callers in the evening, who stayed to supper. Savorin liked to see how bright she grew in company; it had not yet occurred to him to wonder how they were able to entertain in this rather liberal way, for he was giving his wife no more than usual for their weekly expenses: he had, in fact, no more than usual to give her.

The new drawing-room was greatly admired.

One morning a reminder came from the upholsterer to the effect that £50 had been promised on account of the furniture.

Annie asked whether he could not sell some of the shares. Savorin had before him the financial paper which he received now every morning; Belltopps were still mounting; it would be improvident to part with any of their holding. He settled the matter by calling on the upholsterer on his way to the station, and giving him some account of the situation. The upholsterer was complaisant; he had made some money on the Stock Exchange himself, and believed in speculation. The £50 could stand over for a month, he said. So Savorin felt at ease about the upholsterer; rather astonished at himself the while. Indeed, it would have been quite impossible for him to analyse his feelings at that period; his state of perfect satisfaction with the present, and unquestioning confidence in the future, passed his own belief. It is true, he no longer knew repose; the sort of cataleptic tranquillity, which had been his condition after the first few days of profit-making, had given place to a very different emotion, and he was now in perpetual, intense excitement. He enjoyed this excitement, and could not understand how people were impassive and cool when they were making great sums by speculation. He thought it would not be worth while to be a speculator at all if one could derive no thrill of delight from it; this intoxication and transport of the senses was, he fancied, something better even than would be the actual possession of the money. Mr. Winton, now,—apart from the solid satisfaction of winning and the pleasure of touching the spoils, what did his speculations bring into his life? He knew nothing of the mental exhilaration through which, as Savorin persuaded himself, the game must be purged of whatever was gross and greedy in it.

Mr. Winton had never alluded to Belltopp Hills since the morning when he had asked Savorin's signature to the transfer, and Savorin had not told him of his own investment.

In his chief's room one day, after they had been through the correspondence of the firm, Savorin said: "Belltopp Hills are doing well, sir."

"Y-yes," answered Mr. Winton. "It seems a fairly promising mine. Bad ventures mines, though, as a rule. Never put into one, Edward, except on the best information—and don't believe too much in that."

At this time Mr. Winton's profit on his shares must have amounted to more than a thousand pounds, and Savorin's fifty were worth a hundred.

It was Balder, good-natured Balder, with his stable common-sense, and inbred conviction that clerks were clerks, and must not grow hot in the pastimes of their masters, who saw first that Savorin's ebullient excitement—a good tonic medicine at the beginning—was taking too much from him; and a friendly premonition followed.

No; Savorin had never felt so well in his life.

"If you'd only keep cool," urged Balder. "Take it quietly, man."

"It's doing me good," insisted Savorin.

"No," answered Balder, emphatically; "I think what I thought at first, Sav,—that you're not the speculator at all. There's nothing of Mr. Winton

in you. You'd better not hold your Belltopps too long. Fix your selling price while they're rising. What do you think you're going to make out of them?"

"Fenton says the shares may be £30 apiece in a few months."

"They may be offered at sixpence apiece in six weeks," said Balder.

"Do you suppose I should wait for a fall like that?"

"Well, it's hard to sell shares when they're on the rise; but it's harder still to sell them on the fall. Anybody can hold on to shares that are improving every day, but it's only the safe speculator that knows when to 'cut his losses.'"

"What figure ought I to sell at?" asked Savorin.

"If they rise to £10 you'll make a profit of £450," answered Balder.

"Well, I'll sell at £10."

"You'd do wiser to sell at £5," said Balder.

In ten days from that, the shares stood at £4 apiece. The "boom" in Belltopps was talked of everywhere in the City. The sensation was the greater that there was so little activity then in any other shares. But for Belltopp Hills, the papers said, the Stock Exchange would be idle. The financial papers were divided in their opinions on this phenomenon. Some of them urged the shareholders, day by day, to sell, and take their profits; there was really nothing, they said, to justify these extravagant prices. Two or three papers were firm on the opposite side, and said that shareholders who sold at the current price were sacrificing a certainty of gain in the immediate future.

Savorin suggested to Annie that they should sell out half their shares, and speculate with the remainder. "That would give us £100, double the amount of the legacy; and we should still have twenty-five shares."

But Annie opposed this; she said it would be foolish to throw away half their shares for £100, when the prices were improving every day. Was there the least reason to expect a fall, seeing that the shares had been rising ever since they bought them? If there was a little fall—ever so little—they would sell at once.

Annie was more in earnest than her husband had cause to suspect. She knew better than he did how they stood at this time with the upholsterer, and certain other obliging tradespeople whose acquaintance Mrs. Savorin had made during the past few weeks.

Still, it seemed reasonable to Savorin that while the shares continued to rise they should retain their holding. They were still a long way from the limit of £10 which he had given himself, and the market had never fluctuated.

For several days the price remained steady at £4. A single day without a rise was a fret to Savorin; his daily profit, greater or less, had become as a dram to him. Then there was another slight advance; after which, another pause of a week. Belltopp Hills, however, were still in the forefront of the quotations, though the opposition papers threw out hints that the "boom" was "beginning to be arrested." But the market strengthened again, and Belltopps rose slowly till they stopped at a fraction below £5.

Annie was jubilant. "What did I say? What did I say?" she cried, dangling the paper before Savorin. He was less inclined than ever to sell.

Meanwhile, there were threats of trouble in the City. Belltopps alone excepted, nothing offered the ghost of an inducement for transactions. There was no speculation save in Belltopps; all the other markets were idle, or moved only in a downward direction. The Stock Exchange was in the blues; one of those periodical fits of depression—often quite unaccountable—in which confidence is lost in securities of every description, and in which the general feeling of disquietude and distrust may issue at any hour in panic. The wave of alarm crept up, there was bad news from the Continental Bourses, and the panic came with tidings of financial disaster in South America. The Stock Exchange was no longer in the blues, it was in collapse. Amid the general prostration Belltopp Hills stood firm. "It remains to be seen," said Savorin's financial paper, "how long American Belltopp Hills will maintain the steady front they are at present showing amid the temporary overthrow of most other markets in Throgmorton Street."

The crisis was acute for a week, and on the day on which there was a slight reanimation in several markets, Belltopp Hills fell an eighth.

At this time, in so far as he had attempted to resolve his feelings at all, Savorin had attuned himself thus: that, let the future of the mine be what it might, he could not possibly lose on his investment. The shares might spring to £10, £20, or £30; but they could not sink below a figure at which he would be unable to realise, by prompt selling, at least four times as much as he had risked.

Hot and eager as he was when the golden future of his dreams swam before him, he had such ease of mind concerning the shares themselves that he no longer hurried to the money article at breakfast time. He luxuriated in the contemplation of Savorin, the prosperous shareholder, who could walk into the market at any hour, and out of it again with £250 in his pocket. On the morning on which the first fall in Belltopps was recorded he put his paper into his pocket unopened. He had something else to think of that morning. Annie was to pay a visit in town that afternoon, and Savorin had coaxed her to lunch with him in the City. He was to take her through Throgmorton Street afterwards, and show her the entrance to the Stock Exchange, that wonderful place where sovereigns were minting for them every day. Annie had shown him a new jacket the evening before, and he was thinking how handsome she would look in it in the restaurant and in the street.

Everything conspired to make that day a happy one for Savorin. Balder, who would certainly have seen and told him of the fall in Belltopps, was at home with a cold. The mail was an unusually heavy one, and after a long interview with Mr. Winton he took to his desk the materials for a close morning's work. He had not a moment to think of the money article. Annie was to come to the

bank by 'bus, and he flew to meet her at three minutes to one. He felt ashamed that she should ride in an omnibus, she looked so handsome and stately stepping out of it in her new jacket. They lunched at P——, where Savorin had been only once before, when he was taken by his uncle from the country. It was very full, and everybody stared at Annie; and as for Annie, only one thing marred her enjoyment of the outing. She was indignant at seeing nothing whatever of the Stock Exchange. In vain Savorin assured her that it lay beyond that vulgar-looking passage which opens on Throgmorton Street. She had expected something palatial in marble, and brokers and jobbers screaming Belltopps on the steps.

Savorin was on his way home before he bethought

A HEAVY FALL IN THE SHARES. SAVORIN SLIPPED INTO A THIRD-CLASS CARRIAGE TO AVOID HIS FRIENDS.

him of looking to the state of the shares. He bought an evening paper at London Bridge, and turned to the day's prices.

"American Belltopp Hills $4\frac{1}{8}$—$4\frac{1}{4}$."

The shares had dropped from a fraction less than £5 to a selling price of £4 2*s.* 6*d.* In other words, his fifty shares had lost nearly forty pounds in value since the previous morning.

His first thought was that the figures must be a misprint, and he bought another paper. The quotation was the same in that. There could be no doubt about it, then; Belltopps were falling "heels over head."

He would have rushed back to the City, but what could he do there? Business was over, Fenton would not be found. Why had Fenton sent him no word during the day?

In a frenzy he took up his papers again, and sought an explanation. One of them merely noted, "another heavy drop in Belltopp Hills." The other said, "The feature of the day's business has been the decline of ¼ in American Belltopp Hills. After a swift upward career very remarkable in the recent exhaustion of business in almost every other department, these shares have at length given way. They may of course recover ground, but there is something significant in the rapidity of their relapse. The market for them was very weak to-day, and holders were eager to sell at the lowest price touched."

One drowning is said to see his past in a flash. Savorin, who felt for a moment like a sinking swimmer, had a vision of the weeks that were gone. He had lived on the fumes of fancy. All that wealth he had surrounded himself and Annie with was only the coinage of the brain. He looked at the image of himself as he had been through those weeks of sleep-walking, and saw only a foolish mad phantom.

But, if the past had been a trance, there was nothing ideal in the present. Belltopp Hills were falling like lead.

As the train was starting, he slipped into a third-class carriage, to avoid his friends. A boy passed with papers; Savorin stopped him and bought another. "The mining market was rather perturbed to-day," he read, "by another and heavier fall in American Belltopp Hills, which have been 'booming' continuously for weeks past. Timid shareholders hastened to sell, and a large number of shares were thrown on the market. It looks as though the sensation in Belltopp Hills were exhausted, but it is right to add that there are still many believers in the future of the mine." This was mere darkening of counsel; a thickening of the fog.

Savorin hurried home, muttering to himself,

wondering how he should tell their misfortune to Annie. But she would not be home till late, he remembered. That was as well; he would tell her nothing that night. He would say nothing till the following night, the shares might rise again next day.

He was quite glad to find that no supper had been prepared for him; a slice of cold meat and bread were more to his taste that night.

Annie came home with a store of gossip from her friend in town, and did not speak of the shares, except to say that she was to congratulate Ned upon the fortune he was making.

The next morning's paper told Savorin no more than he already knew, and he went in a grey mood to town, chill with suspense. It was a foul day, murky and raw, the streets a slough of mud and melting snow. Savorin, who had been living at high pressure, and who was at no time given to be careful of himself, was not in full vitality, and felt the cold in his bones that morning. Annie had meant to buy him a new ulster, but he was still wrapped in his old one.

At the entrance to Austin Friars, he ran against Fenton, and clutched him by the sleeve.

"What about Belltopps?" he asked.

"I went round to Winton's last night to ask if you were inclined to sell, but you'd just left," answered Fenton.

"Then you think I ought to sell?" asked Savorin, anxiously.

Fenton shrugged his shoulders

"But you must tell me," insisted Savorin. "Look here, you hold a hundred yourself; what are *you* going to do?"

"I'm not going to sell yet, anyhow. They've had a sharp drop; but so has everything. They're better than most mines to-day. I'm going to hold on."

"All right," said Savorin, "then I shan't sell to-day."

He wanted Balder's counsel. Balder, however, was still absent. He could not bring himself to do the wisest thing of all, to ask Mr. Winton. Mr. Winton did not approve of speculation for his clerks.

Belltopp Hills fell ten shillings per share that day, and Savorin knew it on his way home. He dared not tell Annie.

His evening paper said, "The fall seems too rapid. There is nothing to account for it, unless we are to suppose that the public have been misled from the outset, a notion which we are unwilling to entertain."

"They'll rise again, they'll rise again," said Savorin. "I can't let them go yet; I'm in debt."

It was this sense of debt that possessed him now. He had dropped from cloudland.

He got home with a feeling that he was ill; but Annie had invited a friend or two for the evening, and he made an effort to whip himself up.

She insisted that he must "dress"—not noticing his pallor, nor the strain and dullness in his voice—and asked where were his eyes, that he had not admired the new pin in her hair.

It all seemed so unreal to him now! He had no knack at playing the careless bankrupt. He was ashamed, and would have liked to expose his shame. He was sick, too; sick and ashamed together; but with Annie there before him, smiling and coquettish,—thinking only that he was dull and lumpish,—no, not a word could he fetch out.

Then, when she had made him dress, and before she took him to the drawing-room, she ran him downstairs again, and pushed him into the dining-room, to see how beautiful the supper-table looked. Years after that, he hated the sight of pheasants in a poulterer's window.

He touched her on the arm—bare from the elbow—as they went up to the drawing-room. She gave a little start. "What's the matter? You're as cold as I don't know what."

"We mustn't give these supper-parties, dear. Do you understand me, Annie? We mustn't give any more supper-parties. How much has it cost for to-night? Haven't you seen . . . ?"

"What's the matter, Ned?"

"Bah!" he said angrily under his breath. "Bah! I'm light-headed to-night—I'm a fool. There's nothing the matter. Let the shares drop—they'll rise again. We can't go back. She would hate me . . . she would say that I had deceived and ruined her."

He followed her in; he made the effort; there was a sense of luxury in the bright new drawing-room that soothed and cheered him. Annie looked so rich and happy in her evening gown; this was her natural life; return was impossible for both of them to the old sordid days. The shares would recover; they were going to be in wealth again.

But at bed-time he was thoroughly ill, and Annie was in a tremor of affectionate foreboding. He awoke in a low fever, and was a week in bed.

To the weakness and dejection of the disease were added his racking fears about the shares. Craving the sight of a paper, he endured in silence, hoping that Annie would see and hear nothing.

During three days she never looked into the paper; opened it carelessly on the morning of the fourth, and was near fainting over what she read. Then she sent a frantic telegram to Balder, asking what she should do. "Sell at once," was the reply.

Alas! she was afraid to sell; her lap was full of bills; the bills could not be met with the proceeds of the shares at that price. She added up the bills; she thought of tearing them in pieces and running away. With another ounce of courage she would have run, but she thought there would be a bigger scandal if she ran away than if she stayed at home; yes, and all the while she did not quite forget Ned. Did she not love Ned? Yes, of course she did; besides, what could she do without a husband?

There was a summons from below: "The person said you promised to see him to-day, ma'am."

She slipped down, trembling. She was sure that, after all the hopes that Ned had raised in her,

she had done nothing wrong; but never before had she been privileged to owe money that she could not pay, and she did not quite know what might be done to people in that situation.

"Please come the . . . the day after to-morrow . . if that will do as well. . . . Oh yes, Mr. Savorin likes the curtains. . . . Ill in bed the last three days. The doctor says he will be down the day after to-morrow. . . . No, I won't look at those patterns to-day, thank you."

So easy,' after all!

She went up smiling to Savorin, saying nothing to him of this, coaxing him to look brighter, sick with fright all the while.

At the end of a week, Savorin compelled himself to rise, allowed himself a two-days' convalescence, and returned to the office. On the way there he called at the upholsterer's, and wired to Fenton. Mr. Winton received him kindly, and insisted on his going home again for a week.

"By the way, Edward, you may just witness this for me, please," said Mr. Winton, as Savorin was going. "Your signature is all the work I shall ask of you this morning." He drew a document before him, and put his name to it. It was a transfer of shares in some company not known to Savorin.

"Belltopps are turning out rather badly, sir,' said Savorin.

"Yes; very bad ventures, mines, as a rule. People will hold on, you see, when they ought to sell. However, I sold at £4. Thank you, Edward. Now, go home, and be comfortable, and take every care of yourself."

The new drawing-room was stripped that night.

The shares realised £20; and the following week Savorin went back to the office, to begin the old round again, and to save money on his salary to wipe out his debts.

TIGHE HOPKINS.

## Unsuccessful.

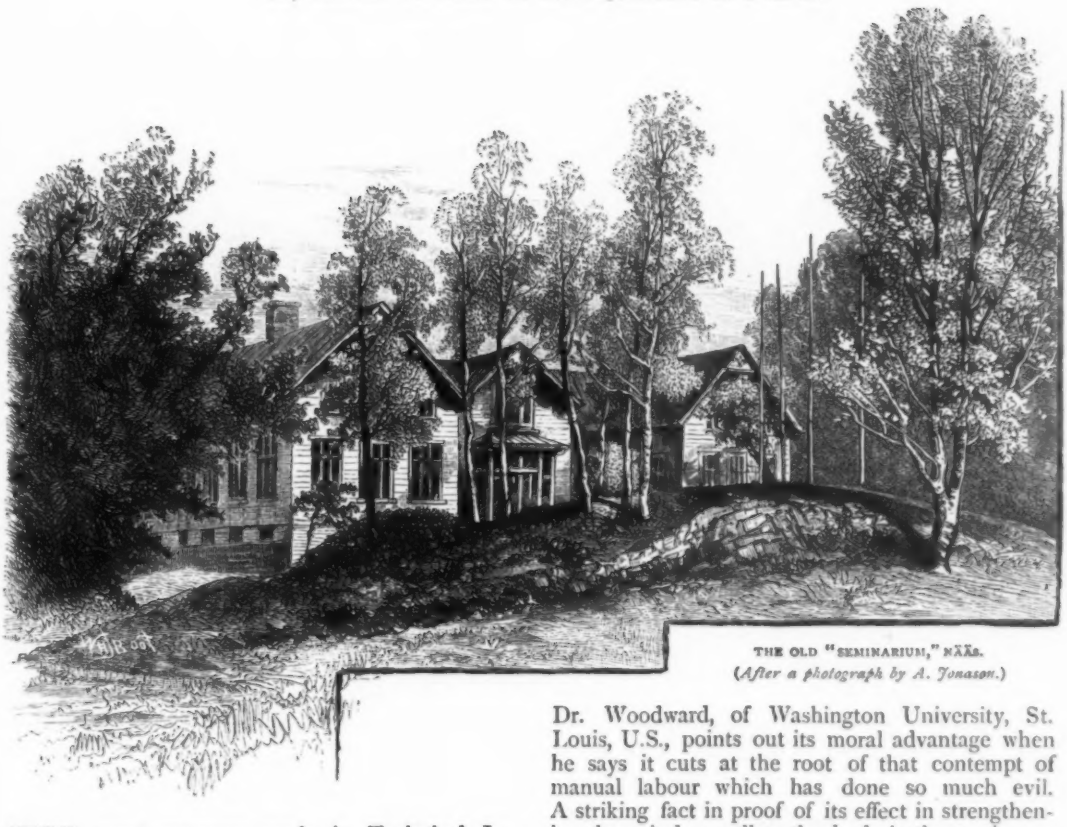
Now all is over; we have laid
  Our dead friend in his quiet bed;
October's leaves that flush and fade,
  Fall in their dying o'er the dead.
Above the freshly cover'd mound
  The autumn sky in silence weeps,
And clinging mists encurtain round
  The place where his worn body sleeps.

Now all is over; yet we frame
  Our secret thoughts about him still,
And in our prayers his well-loved name
  Glides in without our conscious will.
Our wistful eyes where'er they roam
  Find traces of his presence yet;
The empty room, the silent home,
  Can speak, and bid us not forget.

In hush'd remembrance, not in grief,
  We think upon our friend at rest;
Expected as the great relief,
  Death was to him a welcome guest.
The roughen'd way, the weary strife,
  Forced from his lips a bitter cry,
And loosen'd all his hold on life
  Before he laid him down to die.

A preacher of the heavenly truth
  In this discordant jarring time,
The fire and passion of his youth,
  The strength and vigour of his prime,
His hope and health, his day and night,
  His time, his toil, himself, he gave,
To change men's darkness into light,
  To help and cheer, to bless and save.

Strange seem'd the hidden ways of God,
  When, toiling soon and watching late,
An anxious way His servant trod,
  And only heard One saying "Wait."
'Twas his to cherish brightest hope,
  And see that hope grow slowly pale;
'Twas his with mighty foes to cope,
  To work, to fight, and then to fail.



For this we praise him, that through days
  Of doubt, distrust, suspicion, wrong,
In patient faith, with heavenward gaze,
  He labour'd steadfast, calm and strong;
Unmoved by failure or distress,
  By taunting foe or fickle friend,
Uncheer'd by promise of success,
  He pray'd and trusted to the end.

That end has come; he knows the rest;
  The sure repose, the great reward,
The blessedness of servants blest,
  Beloved and honour'd by their Lord;
And his that crown of glowing light
  Kept for the man who must prevail,
Who does not only dare to fight,
  But for his Master dares to fail.

C. J. BLAKE.

# SLÖJD;

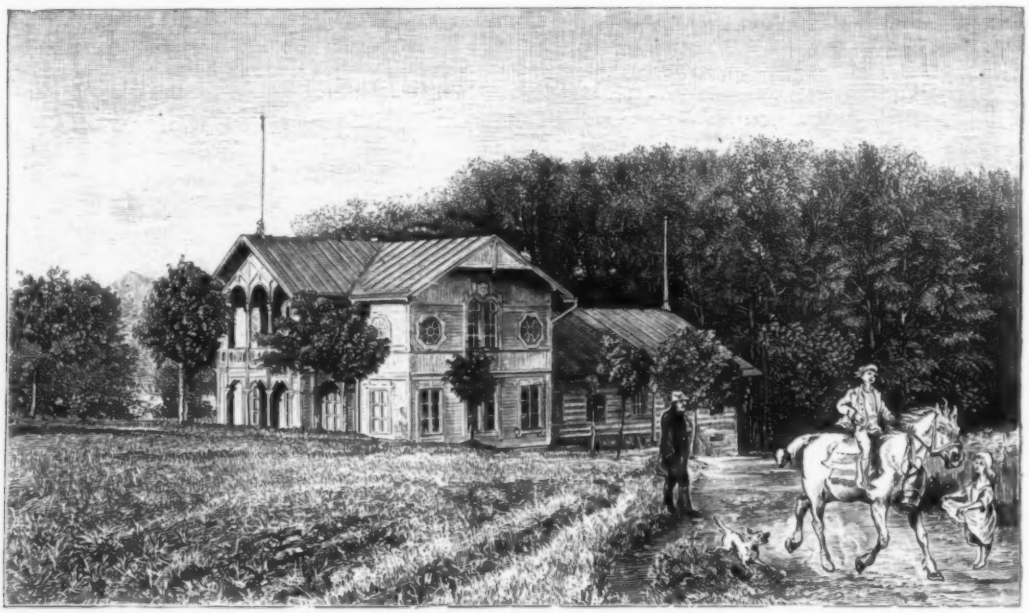
## OR, MANUAL TRAINING AT HEAD-QUARTERS IN SWEDEN.

THE OLD "SEMINARIUM," NÄÄS.
*(After a photograph by A. Jonason.)*

THE great progress made in Technical Instruction in various countries gives an ever-increasing interest to the question of introducing a certain amount of manual work into education from its earliest stages. Many educational authorities, both in past times as well as in the present, might be cited in favour of it. Luther, Zwingli, Comenius, John Locke, A. H. Francke, Rousseau, Basedow, Pestalozzi, and Froebel all gave to manual work an important place in education; and to-day quite a number among the foremost and most practical educationalists in all lands advocate it as of the highest value in effecting the object of a true education—that of training *all* the powers so that they may work harmoniously.

According to the observations of Dr. Belfield, the director of the Chicago Manual Training School, the manual work performed by his pupils greatly intensifies their power to concentrate their minds on mental work. And Sir P. Magnus, of the City and Guilds of London Central Institute, says, "Manual training increases mental strength, and creates habits of industry and good order." Dr. Woodward, of Washington University, St. Louis, U.S., points out its moral advantage when he says it cuts at the root of that contempt of manual labour which has done so much evil. A striking fact in proof of its effect in strengthening the mind as well as the body is the testimony of Mr. Swire Smith, late Commissioner on Technical Instruction, who stated that the half-time children of the town of Keighley, Yorks, numbering 1,500 to 2,000, although they received less than fourteen hours of instruction per week, and were required to attend the factory for twenty-eight hours per week in addition, yet obtained a higher percentage of passes than the average of children throughout the country receiving double the amount of schooling. And if such results occur when ordinary school instruction is carried on simultaneously with the ordinary labour of the factory, how much more may they be expected when the two forms of work are so organised as to have the education of the boy or girl solely in view.

It is somewhat curious that the first thorough effort to apply manual labour to education should have taken place in Russia, but for twenty years the experiment has been very thoroughly tested at the Moscow Technical Schools, with a success which has received world-wide testimonies. The Russian system aims at giving its pupils an education at once scientific and technical, with suffi-



cient skill to enable them to take their place among the world's wealth-producers. The United States has followed on the Russian lines, and by aid of the immense wealth and public spirit of some of its citizens, innumerable schools have been opened in connection with its various universities and other educational institutions.

The Russian and American system has made a beginning both in Great Britain and France;—in the former at the Gordon College, Aberdeen; in the latter at the École Diderot, Paris.

Attention has recently been directed to Sweden, where a system of manual training has taken root, adapted to the general education both of boys and girls, and eminently calculated to prepare them for any amount or kind of technical instruction they may hereafter obtain. The object of this Swedish system is not to teach any special trade, but simply to train the eye and the hand as a part of the education of every child, boy or girl. It is known under the name of Slöjd, an Icelandic word, signifying manual work used for educational purposes. There is no exact equivalent for the word in any other language, but probably some ancestral connection exists between it and the phrase "sleight of hand." It covers all the varieties of manual work used in the Scandinavian schools, but is peculiarly expressive of the one most commonly used in Sweden, and to the teaching of which the seminary at Nääs for educating Slöjd teachers is now strictly confined.

In 1876 there were eighty Swedish schools where Slöjd, in the larger acceptation of the word, was taught; in 1877, 100; in 1879, 200, and since then they have been increasing at the rate of nearly 100 a year, until in 1888 there were 1,000 such schools in Sweden. In Finland all the country schools are Slöjd schools. In Norway and Denmark the system is supported by small grants made by the national legislatures.

The director of the seminary at Nääs, Herr Otto Salomon, after considerable experience has come to the conclusion that carpentry or woodwork is the form of handiwork which best combines all the necessary requirements in manual training. He affirms that it is within the power of the young of both sexes, draws out their interest, trains to order, accuracy, cleanliness, and neatness, cultivates dexterity, develops a sense of form, strengthens the physical powers, is a counterpoise to sitting, allows of method and arrangement; and, moreover, the objects made are useful for home purposes.

KALL NÄÄS, THE NEW SCHOOL OR SEMINARIUM. (*After a photograph by A. Jonason.*)

The age at which pupils are instructed in Slöjd work is from eleven to fourteen. A simple model is placed before them, and it is easy to imagine how pleased they become as they find that they are producing something like it. The models being very carefully graduated, a child is rarely disheartened by failure or its patience unnecessarily taxed. It imperceptibly feels its way, and with increasing power comes increasing interest. Slöjd work by this stage-to-stage progress, by the necessity of taking care of the tools, and by the nature of the whole work, is an object lesson in the virtues of order, cleanliness, and neatness; and is, moreover, a means of developing those of perseverance, patience, and love of work for its own sake. This last effect of Slöjd work is very observable.

Again, Slöjd work cultivates the use of both hands, and not, as in writing and drawing, only the right. And it develops not only dexterity or handiness, but the power of accurate observation. This training of the hand and eye is claimed to be one of the most striking benefits of the system.

Nothing is more difficult than to secure the attention of children for any length of time; and here, again, Slöjd work is naturally very successful. It trains its pupils in several ways to the habit of concentrating their attention; for the little workers are obliged at once to attend to the model they are copying, to that they have in hand, to the character of the material they are at work upon, to the condition of their tools, and to the directions of their teacher. All these things combine to draw out the power of attention, so that in returning to mental work they are found to be more capable of concentrating their minds upon it.

Slöjd work tends, again, to develop practical common sense. A child has to choose a suitable piece of wood, to avoid knots, to understand what each tool can do, and, above all, to become self-reliant, as it is an important point in Slöjd training that a teacher shall never do any part of a child's model, but simply say what is to be done and how it is to be done.

The kind of training Slöjd gives distinctly cultivates a spirit at once artistic and practical. For while it produces a sense of form and a taste for graceful and finished work, there is the pleasure of having produced a really useful object.

Several of these results would accrue from other forms of manual work used for the same ends; but the advocates of the Slöjd system contend that no other form of manual work combines all these advantages and yet presents so few drawbacks.

Much, however, depends on the teacher; in fact, those who best understand the system deprecate

HERR ABRAHAMSON.

its being taught by an inefficient teacher, as in all probability leading to its doing more harm than good. They are also opposed to its being taught by artisans, it being the distinct experience resulting from long and careful trials at Nääs, that a trained educationalist is, even though far from perfect technically, a better Slöjd teacher than a skilled carpenter. Herr Salomon, the chief authority on Slöjd, asserts that it is much more important that a Slöjd teacher should be a good teacher of other things, should know exactly what the system intends to effect, and understand clearly its principles and methods, than that he or she should be a dexterous maker of its models.

But to understand both theory and practice, no better means can be adopted than to attend the course of instruction which is given at Nääs to teachers from all countries four times a year.

HERR OTTO SALOMON.

Nääs is the name of an estate belonging to Herr Abrahamson, an admirable example of the moralised capitalist. By his enlightened benevolence his picturesque estate has been converted into a kind of Manual Training University. Herr Abrahamson commenced the work in 1872 as a memorial of his wife, and it has been very successfully carried out by his nephew, Herr Otto Salomon.

It began in teaching the boys of the neighbourhood some four or five different methods of Slöjd. Then for seven years artisan-students were trained in courses of eleven months to become teachers. This experience proved two things—that artisans, even when trained, did not make the best teachers, and that carpentry was the best form of Slöjd. Since 1882, the training has accordingly been confined to this form alone, and the instruction in it to those who are actually engaged in the work of education.

Nääs is about twenty miles north-east of Göteborg, and is reached by a short railway journey through the picturesque valley of the Säfve to Floda Station, whence the rest of the journey is made in boats to one of the landing-places on Lake Säfvelängen, a piece of water about ten miles in length, surrounded by pine and birch woods. At one end is Floda Station, at the other some falls by which the water comes from Lake Mjörn, which is on a higher level. The country round Lake Säfvelängen is rocky and mountainous, a piece of bare granite appearing here and there, its bare sides rising precipitous, and its crest crowned with tall pines.

At Nääs, which is to be understood as the name of an estate and not of a collection of houses, everything is distinguished by perfect simplicity, order, freedom, and generosity. The buildings for lodging and instruction are a number of pretty

wooden chalets, scattered among the pine woods. Each has its proper name. Melan-Nääs is devoted to the lady students ; Lilla-Nääs and other chalets to the male students. Vanhem, a large building, is the common or general meeting-house. Its name suggests the hospitable nature of the whole institution, Vanhem meaning "*Friends' Home.*" It stands some 150 yards from the lake, the part between it and the water being somewhat precipitous and filled with tall pines, through which glimpses of the blue lake appear.

About 130 students gathered together here last autumn to a six weeks' session, natives of most European countries, as well as some from North and South America. Thirty-two came from the British Isles—twenty-four men and eight women. In one of the chalets eight different nationalities were represented, and it was accordingly known as "Babel." Germans and Frenchmen, Hungarians, Austrians, and Italians, Englishmen and Americans, Scotchmen and Spaniards, Norwegians, Danes, Welshmen, and people from the Argentine Republic and from Uruguay, gathered with the native Swedes in the class-rooms, in the workshop, and at Vanhem, and were, moreover, of both sexes.

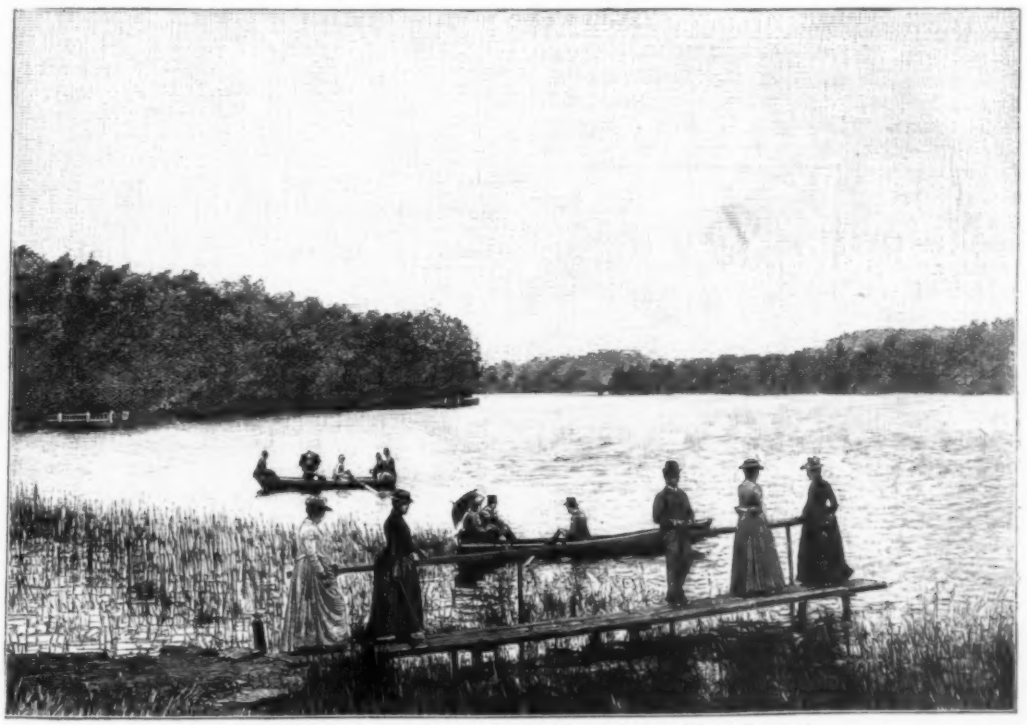
The actual Slöjd work—that is, the making of the series of models—occupies six or seven hours a day, and is carried on either at the Seminarium, a wooden building standing on a slight eminence formed by one of the granitic rocks which rise out of the soil, or at Kall Nääs, the New School or Seminarium. Lectures explanatory of the system, one or more every day, each lasting an hour, give an average of about seven hours a day devoted to study, except Saturday, which is a half-holiday.

The table for an ordinary day is as follows :—Breakfast, 7.30 ; prayers, 7.50 ; Slöjd, 8 to 11 ; lecture, 11 to 12 ; lunch, 12 to 12.30 ; Slöjd, 12.30 to 3.30 ; lecture on Slöjd, 3.30 to 4.30 ; dinner, 4.45 ; tea, 7.45.

The models, about fifty in number, are very simple, but each has to be made to perfection before going on to the next in the series, a given number having to be made absolutely satisfactory before passing. The first is a pointer, but they go on, becoming more and more difficult, until they reach a common table. An average student requires two courses to complete the series, which, however, cannot be taken two years in succession. The lectures on Slöjd are from three different points of view : systematical, historical, methodical. Sometimes there is a lecture from one of the students, who occasionally are men distinguished educationally in their own country.

VANHEM, OR FRIENDS' HOME. (*After a photograph by A. Jonason.*)

The gathering together of so many persons of different nationalities, for so excellent an object, gives a stimulus to progress and greatly intensifies the general enjoyment. Of course in such a society, and in such a place, and at such a time in the year, there is plenty of recreation in boating, football-playing, excursions and fêtes of all kinds.



The country round the lake is formed of gneiss rocks covered with heather and a few firs, the fields, where there are any, being filled with great boulders. A few miles' rowing leads to Lake Mjörn, a long stretch of water glistening in the sun, dotted with islands, some bare, some covered with pines,

with a rocky, mountainous country in the distance.

Schools in which Slöjd teaching is in full operation may be found in the neighbourhood of Nääs. One is at Hemsjo, a small place near the head of Lake Säfvelängen. Here the Slöjd-room, as described by a visitor in 1888, is in the upper part of the school-house, and is furnished with benches, a grindstone, a block, and a cupboard for the tools and models. A sharp boy, it was stated, would in thirty-five lessons of two hours get through twenty-one models; an average boy, seventeen; and the slowest boy, about fifteen.

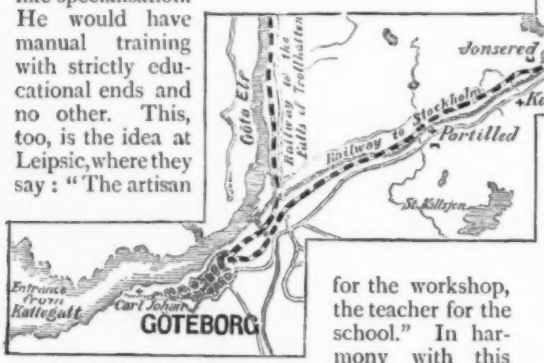
plished artisans, and six months later the schoolmasters thus taught began themselves to hold similar classes for boys. Until 1883 the numbers attending were somewhat small. But in that year Dr. Götze issued a stirring handbill, addressed to the boys of Leipsic; it was illustrated with a woodcut showing the boys planing, modelling, &c., and the teacher in the centre instructing them. The attendance soon rose from about 80 to 580.

Slöjd as taught in Leipsic consists of wood-carving, cardboard and metal-work, as well as carpentry. In the last some of the men get as far

LANDING PLACE ON LAKE SÄFVELÄNGEN. (*After a photograph by A. Jonason.*)

For Slöjd work is calculated wonderfully to help the last style of pupils mentioned, who under the ordinary curriculum of instruction are frequently neglected in sheer despair. But the minds of these apparently slow children are often of very high order, and later in life bear rich fruit, though at school they appear dunces and get little good. These children are just the ones to be helped by practical work used educationally, and under such training their minds seem to quicken.

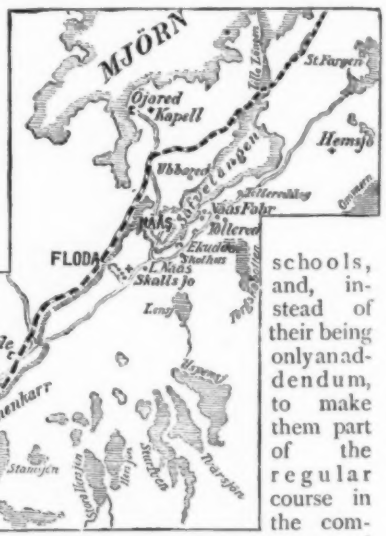
Slöjd is also taught in Leipsic by Dr. Götze; and a class for instructing teachers has been held at Bradford since last autumn, the movement in that town in favour of the system having been helped by a grant from the Town Council of £200.



Leipsic has for more than ten years been the chief centre of the manual training movement in Germany. In 1880 manual training classes were opened for schoolmasters, conducted by accom-

as making little chairs and tables, while some of the students who have been through two courses of card-work get as far as book-binding, and some even make album-covers in plush. The hours are much longer than at Nääs—from seven to twelve in the morning, and again from two to seven in the evening. This, with time allowed for breakfast and tea, makes nine hours a day, Wednesday and Saturday afternoons being devoted to visiting schools and watching the children at work. Clearly the Germans do not allow the grass to grow under their feet. Their female teachers, however, have no idea of entering into the work as Swedish and English women do. When one of our countrywomen applied to know if women might be admitted, the director was very much surprised. He consulted his teachers, and though they were disposed to let the Englishwomen try, they did not believe that they would be able to do the work. Four ladies

went, and many people came to look at them at work, and, to the surprise of the director, they kept up with the men and gained their certificates.



In Sweden, English views of what women can and may do prevail, and there is generally a fair number of female students at the autumnal course at Nääs, where a chalet is specially devoted to them.

But the chief advantage of going to Nääs is the inspiration obtained by coming directly in contact with Herr Salomon and listening to his lectures, which he delivers to his English-speaking students in their own tongue. His views are not always accepted at first, especially his making a theoretical knowledge of so much more importance to a teacher than the practice. But this, as well as his difference of view with the ideas of the founders of the Moscow and Chicago systems, is characteristic of his system. He objects, in brief, to anything like specialisation. He would have manual training with strictly educational ends and no other. This, too, is the idea at Leipsic, where they say: "The artisan for the workshop, the teacher for the school." In harmony with this view Herr Salomon particularly objects to the classes being conducted by artisans as in the Manual Training schools in Paris; he insists that none but trained teachers used to children and understanding them should be employed.[1]

RAILWAY FROM GOTEBORG TO FLODA STATION, FOR NÄÄS.

It is admitted, we believe, that this is best, and that the Paris system is the result of the necessity of economy in the first steps of the great reform being made there in public education. In 1888 there were ninety-five manual training schools in connection with the Paris communal schools, the results of which had been satisfactory enough to induce the Municipal Council to determine to extend them to all the

schools, and, instead of their being only an addendum, to make them part of the regular course in the communal schools. The particular form of manual training taught in ninety of the schools up to 1888 was carpentry, five only being devoted to metal-work, a testimony to the correctness of the choice made in Slöjd schools. Thus at Paris, both in its great technical school, the École Diderot, and in its smaller carpentry schools, a system is at work which touches both that of Russia and Sweden, preparatory as regards the younger pupils, larger, deeper, and technical as regards the older students.

Since the above was written the Slöjd movement has made considerable progress in England. This summer a Slöjd course was conducted at Ilkley College by Miss Andrén, a Swedish lady of great experience as a Slöjd teacher, both at Nääs and also in this country. It was attended by thirty-four students, several of whom had studied both at Nääs, Leipsic, and elsewhere.

R. H.

[1] Herr Salomon's work, "The Teachers' Handbook of Slöjd has been translated into English and lately published.

# THE MODERN DEVELOPMENT OF ATHLETICS.

IT is now almost a generation since Charles Kingsley first coined the word "Muscular Christianity," and with it inaugurated the Athletic Era. So much is at present being said for and against the great position since attained by outdoor exercises of all sorts, that it may be worth while spending a leisure hour in reviewing the various "pros" and "cons" connected with the subject.

### CHRISTIANITY AND BODILY EXERCISE.

However much in the eyes of many the seed so well sown by one muscular divine and others may seem to have borne a too luxuriant crop, one thing is certain, Christianity is entirely on the side of a due development and right care of the body, whereas most false systems, with Buddhism at the head and Æstheticism at the tail, are against it; many of them virtually urging neglect of the body and its claims, in various ways.

The much-misquoted text from St. Paul's letter to Timothy may here be invoked by that numerous and self-important class who are apt to quote isolated texts without the faintest idea of the context, and who never swerve from "the authorised version" of King James, however many "revised versions" Queen Victoria may give us. St. Paul in this passage is energetically attacking the Gnostics and others of his day akin to Buddhists, and showing that it *is* good to marry and good to eat meats, that every creature (or creation) of God is good and not evil, and then the apostle goes on to say, according to the two versions,

| | |
|---|---|
| "Bodily exercise profiteth little."—A.V. 1 Tim. iv. 8. | "Bodily exercise is profitable for a little."—R.V. |

Observe how different the meaning; the one apparently depreciating physical culture, the other a direct commendation of it; and yet our text-without-context-quoting friends stick so to the first that they will not even take the marginal reading of their own version, which instead of "little" substitutes "for a little time." That is to say, muscular development is good, but it is only for this life, and is neither "Christianity" nor "godliness." "Muscular Christianity" is therefore a misleading phrase unless accepted with qualifications. Let us put everything in its right place, and, because athletics are not Christianity, let us not say they are "profitless," when St. Paul says they are "profitable."

### IMPORTANCE TO THE RACE.

It is the undoubted duty of every man to see that, as far as possible, his *mens sana* is in a *corpore sano*; and it is beginning to be recognised that not only is the body imperilled by neglect, but that a stunted physique may result in a degenerate offspring. Athletics, rightly pursued, or their equivalent in exercise, become therefore a duty, binding in various measure on every man, woman, and child.

In the manufacturing districts, the general physique had so degenerated a few years ago, that the average stature and weight of a man was but 5 ft. 1½ in. and 106 lbs. weight; whereas in certain northern counties, in country districts where bodily exercise was the rule, the men averaged 5 ft. 11 in. and 199 lbs. weight. Possibly other circumstances favoured the difference. We may be sure it did not end here, but pervaded every part of the moral being, in spite of certain exceptions.

Our love of physical exercises comes from the Saxons rather than the Britons, and was increased by the Normans. In the colonies of the Anglo-Saxon race planted among Eastern or savage nations, nothing proves of more absorbing interest or excites greater surprise than the Englishman's athletic games. The violent energy, the great endurance, the disregard of pain, and the good temper shown, all in the pursuit of an unintelligible game, are entirely inexplicable to the natives.

### DEVELOPMENT OF ATHLETICS.

Even amongst ourselves, however, the development of athletics is of recent date. Thirty years ago our daily papers took no notice of any sport but horse-racing, which can hardly be included under athletics; there were no crowds at boat-races or at Lord's.

Even now, however, though it seems strange to say so, it is only an insignificant minority that engage in outdoor games; and, so far from their being overdone, the pressing need of to-day is still more and more outdoor exercises for our urban population. We will come to the abuses by-and-by; but the fact is, the outcry that has arisen against athletics is rather against the betting, the gossiping, the looking on, the reporting and reading and general puffing, than the actual playing.

### VALUE NOT YET UNDERSTOOD.

We distinctly say now in 1891, as Dr. Warre so well pointed out at the Health Congress in 1886, that the value of outdoor games is *not* yet understood, in spite of all the articles that are written, and all the money that is staked upon them.

The interest is great, but the players are few, and the value of the exercise is only experienced by those who play, not by those who look on. At Lord's, out of 2,375 members, only 118 played on the ground in one year. Probably in all London there are not above 4,000 football players out of a population of 800,000 men. Probably not more than 1 per cent. of men between twenty and forty

play games. And what shall we say about young women, whose physique is of such national importance to our race? They practically never play at all. Any one who has to physically examine the chests of the young women of the present day will bear me out as to the conspicuous want of development of lung power, solely from lack of physical exercise, that is constantly seen. So that we may say that the enormous majority of the population between fifteen and forty never play at all at any athletic outdoor game. It is true that among a few of the rich the love of outdoor exercise is carried to excess. But we are not concerned with these. When we observe the increasingly rapid massing of the population into towns, the tremendous straining and training of the mind that goes on, and the decreasing amount of manual labour, and even walking exercise, from the increase of trams, trains, buses, etc., we confess that we consider these outdoor games and exercises necessities of almost priceless value to the population. The proportionate provision of recreation grounds in all our great cities, and adjacent even to smaller towns, in which all classes may share, is becoming among the first of public duties.

### IMPROVED PHYSIQUE.

The general physique has undoubtedly improved, if we except those retrograde specimens whose physical exercises are neglected. We are said to be rising in stature, though it be at the rate only of $1\frac{1}{4}$ inch per 1,000 years, and it is certain that the knights' suits of armour in the Tower are far too small for the average Englishman of to-day. We are taller, heavier, healthier, live longer, can run faster, run further, jump higher and wider, endure longer than ever the race could before. Every authentic record of past feats of strength has been beaten in our day.

### SANITATION AND ATHLETICS.

It is, however, a fair question—How much of this improvement is due to increased sanitation and the spread of hygienic principles? Undoubtedly, with regard to actual disease and increased length of life, a great deal; but with regard to physique, feats of strength and endurance, and general development, very little. Honour to whom honour is due. Our sanitary laws have reduced the death-rate in old towns by one-third, and have raised the average duration of life in this kingdom from twenty years of age in the last century to thirty-six in this, and it is still increasing; but all the sanitation in the world will not make a healthy or a manly people if they live indoors and neglect physical exercise.

We will, however, look at the matter a little further, and consider as fairly as we can, first, the general advantages of athletics, and then the general evils connected with them.

### PHYSICAL BENEFITS OF ATHLETICS.

Athletics benefit both the body and the mind.

We need not say much about the body just now, save that every part of it, and every organ, is benefited by wise use. The chest, for instance, can be expanded three inches even after twenty years of age by physical training, and other parts strengthened in proportion, especially our most valued special organs, the eye and the ear. Indeed, it is impossible to over-rate the physical advantages of all-round exercises. And we must remember that walks are no substitute for games and sports. It is in the active and rapid exercise of the different muscles, in the constant change of movement, instead of monotonous repetition, that the value of games lies.

Lawn-tennis is undoubtedly one of the greatest boons ever bestowed upon our girl population. What this one game means to the future of the race in England—especially if we could get it more widely extended amongst our sedentary population, work-girls, dressmakers, governesses, clerks, etc.—we can never know. There is no sight that speaks more for the future welfare of England than a group of well-made English girls returning from a tennis lawn; their every movement instinct with healthy life and vigour. It is in vain, therefore, to set against this a sprained arm or ankle, or even a strained heart, as occasionally may occur among the weak.

### MORAL BENEFITS OF ATHLETICS.

But the mental value of athletics is also very well marked and quite undeniable. This is perhaps largely due to their increased social character in the present day.

Social athletics, and crowded pleasure-grounds and matches, are no doubt largely due to the increase of town populations, and the facilities of travel. Hence, clubs and recreation-grounds, and parks with gymnasia, and cricket-grounds are multiplied everywhere.

The playing of games together, in friendly competition, tends to develop self-control, firmness, manliness, unselfishness, and general good fellowship, while it lessens self-consciousness. It also develops nerve-force on the one hand, while it lessens nerve-strain and nervousness, which is really nerve-weakness, on the other.

Judge Chitty said not long since, speaking of the boat-race, "I feel when I have rowed with a man, that I know him from head to foot. If I had to lead a forlorn hope I should like best to have with me some of my old shipmates, some of the steady and trusty men who never failed in the supreme struggle of a University race."

Athletics, rightly used, develop patience, perseverance, self-restraint, friendship and humility, and they increase will-power.

### PHYSICAL EVILS OF ATHLETICS.

Lest, however, we should be accused of holding a brief for one side only, let us now consider what evils are connected with athletic exercise.

These, like the advantages, are two-fold, physical and mental or moral.

The former may arise from athletics directly or indirectly. Amongst the direct physical dangers

are sprains and strains of the muscles, accidents to life and limb, and internal injuries.

Sprains and strains are very common, and arise from overtaxing one's power, as in severe competition, from pure accident, from want of training, and from excessive violence.

Accidents to life and limb are still more serious; and we fear, in spite of what its apologists may say in its favour, a grave case can be made out against football, and particularly when played according to Rugby rules by men's clubs.

I have a record that, from September 1889 to the third week in January, the direct deaths from football were thirteen, the fractures of legs fifteen, of arms four, of collar-bones eleven, and severe internal injuries seven. This is one way of removing our surplus population, but it is not to be recommended, for it does not even select the unfit. A great deal might be made out of the fact that the mortality from football in three months is nearly double that of hydrophobia in England for three years, there being eight deaths from this cause in that period.

There can be no doubt, where men and professionals play, particularly in the northern counties, a great deal of unnecessary and often brutal violence takes place.

Other sports are, however, often surrounded with danger, such as swimming, skating, and even gymnastics. Many a man has been injured for life by attempting some silly feat in gymnastics. One of our best-known clergymen in London nearly lost his life when a boy from a fall at gymnastics, and remains injured for life.

Internal strain and injuries may arise from overexertion, or very commonly from want of training. Clergymen who go Swiss climbing in the autumn, young schoolgirls who take pedestrian tours, young men who undertake exhausting bicycling journeys, often suffer in this way. The heart, lungs, or any other organs may thus be severely injured.

### INDIRECT DANGERS.

The indirect dangers arise mainly from improper clothing or carelessness. The safe clothing for all athletics is flannel, and yet we see fashion requiring some of our public schools to play in linen shirts under a blazing sun.

It is only of recent years that the value of flannel has been clearly understood; twenty-five years ago it was very seldom worn. But chills are most often taken through carelessness, especially in the spring, standing about after or between games without an extra wrapper, sitting on damp grass or in a cutting east wind. After and between games a blazer or flannel coat of some sort should be thrown over the shoulders, and when home is reached all the flannel should be stripped off and the body well sponged or dry-rubbed from head to foot.

Another indirect cause of injury is when severe brain-work and very active games are indulged in together; sometimes the double strain is too much.

In the same way prolonged over-exertion, as in young boys running at hare and hounds till they drop, sometimes results in an obscure form of self blood-poisoning arising from constant muscle contraction, which may end in death.

Sudden severe exertion is often dangerous, as in throwing the hammer, putting the shot, lifting weights, etc. The quarter-mile race, too, has a bad reputation for its effect on weak boys.

### MORAL EVILS OF ATHLETICS.

Turning to the moral evils of athletics, we are bound to say they are all excrescences, and that from athletics themselves, rightly conducted, no moral evil can ensue.

The betting and gambling that disgrace so many of our grounds are beginning to be tabooed at some of those more recently opened, notably the Paddington recreation-ground.

Amateur contests are increasing, and amateurs can be trusted to win if they can. This is a change in the right direction. But there is great mental risk whenever men give themselves up to physical exercise and nothing else. This is especially seen in the case of prizefighters. Any exclusive training of any one part of a man is necessarily very injurious to the rest. It is here, perhaps, in the devotion of every spare hour to physical exercises, that to many young men the chief danger lies. There are other claims, other associations, that cannot be safely ignored. The most healthful life gives each duty its place, and looks for a wise proportion in all things.

### TRAINING.

We have spoken of training as being essential for some sports. The present system of training is the most healthy and natural imaginable. All the former fads of raw beefsteak diet, and other absurdities, have disappeared, and given place to a most sensible and regular mode of life. Without going into regular training, it would be well if those whose lives are sedentary, and who contemplate active exercise at any time or during the holidays, would make it a rule always to give themselves a little preliminary canter. For instance, in football, if a man is going to play who has not played for some time, it is astonishing what a help it is to take a little preliminary practice at kicking, stooping, running, and tumbling about.

No hard exercise should be taken without preparation. Before going to Switzerland the body should be hardened by prolonged walks and climbs at home.

### EXERCISE FOR OLD AGE.

All exercises are not, however, suited to all ages; nevertheless, it is at an age when a man has largely lost his love for violent games that physical exercise is of the greatest use to him. It is at this period that horse exercise and active pedestrianism is of such immense value, while at the same time a man should preserve as long as possible his interest in more active exercises. Lawn tennis, or golf, for instance, is of immense value to middle-aged men, and far better than a mere walk.

We may, in conclusion, just say a word or two about the special value of one or two particular forms of athletics.

### GYMNASTICS.

Gymnastics are principally of use when the weather is unfit for outdoor sports, and when, as in large towns, it is impossible to get space for these. They should always be practised under the guidance of an instructor. They tend unduly to develop the arms and shoulders at the expense of the legs, and, to maintain the balance, should therefore be combined with plenty of walking.

### CALISTHENICS.

Calisthenics are principally for girls, and as a means of developing the chest and correcting the figure, are simply invaluable. We are glad to know that every year they are becoming more and more widely practised, and to see that they are spreading throughout the school-board system, as the magnificent annual display at the Albert Hall, one of the prettiest sights in London, testifies.

A modified form of gymnastics or calisthenics is of great value for home use. Men who can only spare five or ten minutes at a time and have no leisure to go to a gymnasium need not neglect the body. Dumb-bells, Indian clubs, bar-bells, and free exercises, are all most suitable for any age between thirty-five and sixty-five. Moreover, we cannot quite see why ladies on their marriage should so generally lay aside every form of active exercise. Taken in a modified way, it is of the greatest use.

### BICYCLING.

Bicycling is another exercise that can be pursued at all ages. Setting aside all racing and competition, surely we may say that the exercise of bicycling has been productive of untold good, and has indeed opened up for the masses an entirely new field of innocent enjoyment. It strengthens all the muscles, including those of the back. It is, however, another question when young riders maintain an unnatural or contracted position over long periods, for the sake, as they think, of securing greater speed. By getting off and walking up some of the hills a fresh set of muscles is brought into play and the others rested. The exercise greatly develops nerve-force in the constant effort of maintaining an equilibrium. It takes men out into the country who would otherwise never go, and develops a love of home scenery that would otherwise be quite unknown. Then it is cheap and suits all pockets. And lastly, by aid of the tricycle, it is thoroughly suited to both sexes. What can be more enjoyable than for a well-matched party to start off on their iron steeds for a quiet run round England? How very much more healthy will such a tour prove than a hurried rush on a Swiss excursion, spending half the time in railway travel, and half the remainder in expensive hotels?

It is, however, with this as with every other sport, once it is taken up as a business for competition and racing it ceases to be a recreation.

### GAMES.

Cricket, football (with the exception of its violence), swimming, skating, rowing, sculling, tennis, bowls, golf, baseball, mountain-climbing, are all first-rate sports and exercises from the large amount of muscular exercise they involve.

Other games and sports, such as croquet, yachting, trout-fishing, etc., owe their value to the amount of open-air life they involve. Other exercises, though largely conducted under cover, are still of great value, such as boxing, fencing, and single-stick. Many of these act powerfully in developing both the brain and the many moral qualities at the same time.

### MENTAL ATHLETICS.

An interesting question suggests itself here which we have not time to answer, and that is, Are there not a corresponding series of mental athletics that are of as great service in developing the brain as athletics in developing the body; and might not an instructive parallel be drawn between the two? Surely many of the feats at examinations may well be called mental gymnastics. A vigorous argument is nothing more than intellectual boxing; while Parliament, with one side in and the other out, with the intellectual bowling, batting, catching, and stumping that goes on, is strongly suggestive of our national game.

But we have no space to pursue this subject, and we trust we have said enough about physical athletics to show that they are not yet cultivated to anything like the extent they should be, though talked and written about far too much; and that the good they do is far beyond any evil that may accompany them. Any moral evil, indeed, is never a part of the exercises themselves, but of their surroundings or abuse.

ALFRED T. SCHOFIELD, M.D.

# THE STORY OF FRANCIS CLUDDE.

BY STANLEY J. WEYMAN, AUTHOR OF "THE HOUSE OF THE WOLF," ETC.

SIR PHILIP TORE OPEN THE PACKET, AND FOUND IT TO BE AN AMNESTY.

### CHAPTER XXIV.—AWAITING THE BLOW.

A MOMENT later the servants in the hall heard a scream—a scream of such horror and fear that they scarcely recognised a human voice in the sound. They sprang to their feet scared and trembling, and for a few seconds looked into one another's faces. Then, as curiosity got the upper hand, the boldest took the lead and all hurried pell-mell to the door, issuing in a mob into the courtyard, where Ferdinand Cludde, who happened to be near and had also heard the cry, joined them. "Where was it, Baldwin?" he exclaimed.

"At the back, I think," the steward answered. He alone had had the coolness to bring out a lantern, and he now led the way towards the rear of the house. Sure enough, close to the edge of the moat, they found Martin, stooping with his hands on his knees, a great wound, half bruise half cut, upon his forehead. "What is it?" Ferdinand cried sharply. "Who did it, man?"

Baldwin had already thrown his light on the fool's face, and Martin, seeming to become conscious of their presence, looked at them, but in a dazed fashion. "What?" he muttered, "what is what?"

By this time nearly every one in the house had hurried to the spot; among them not only Petronilla, clinging to her father's arm, but Mistress Anne, her face pale and gloomy, and half a dozen womenfolk who clutched one another tightly, and screamed at regular intervals.

"What is it?" Baldwin repeated roughly, laying his hand on Martin's arm and slightly shaking him. "Come, who struck you, man?"

"I think," the fool answered slowly, gulping down something and turning a dull eye on the group; "a—a swallow flew by—and hit me!"

They shrank away from him instinctively, and some crossed themselves. "He is in one of his mad fits," Baldwin muttered. Still the steward showed no fear. "A swallow, man!" he cried

aloud. "Come, talk sense. There are no swallows flying at this time of year. And if there were, they do not fly by night, nor give men wounds like that. What was it? Out with it now. Do you not see, man," he added, giving Martin an impatient shake, "that Sir Anthony is waiting?"

The fool nodded stupidly. "A swallow," he muttered. "Ay, 'twas a swallow, a great big swallow. I—I nearly put my foot on him."

"And he flew up and hit you in the face?" Baldwin said, with huge contempt in his tone.

Martin accepted the suggestion placidly. "Ay, 'twas so. A great big swallow, and he flew in my face," he repeated.

Sir Anthony looked at him compassionately. "Poor fellow!" he said; "Baldwin, see to him. He has had one of his fits and hurt himself."

"I never knew him hurt *himself*," Baldwin muttered darkly.

"Let somebody see to him," the knight said, disregarding the interruption. "And now come, Petronilla. Why—where has the girl gone?"

Not far. Only round to the other side of him, that she might be a little nearer to Martin. The curiosity in the other women's faces was a small thing in comparison with the startled, earnest look in hers. She gazed at the man with eyes not of affright, but of eager, avid questioning, while through her parted lips her breath came in gasps. Her cheek was red and white by turns, and, for her heart—well, it had seemed to stand still a moment, and now was beating like the heart of some poor captured bird held in the hand. She did not seem to hear her father speak to her, and he had to touch her sleeve. Then she started as though she were awakening from a dream, and followed him sadly into the house.

Sadly, and yet there was a light in her eyes which had not been there five minutes before. A swallow? A great big swallow? And this was December, when the swallows were at the bottom of the horse-ponds. She only knew of one swallow whose return was possible in winter. But then that one swallow—ay, though the snow should lie inches deep in the chase, and the water should freeze in her room—would make a summer for her. Could it be that one? Could it be? Petronilla's heart was beating so loudly as she went upstairs after her father, that she wondered he did not hear it.

The group left round Martin gradually melted away. Baldwin was the only man who could deal with him in his mad fits, and the other servants, with a shudder and a backward glance, gladly left him to the steward. Mistress Anne had gone in some time. Only Ferdinand Cludde remained, and he stood a little apart, and seemed more deeply engaged in listening for any sound which might betoken the sheriff's approach than in hearkening to their conversation. Listen as he might he would have gained little from the latter, for it was made up entirely of scolding on one side and stupid reiteration on the other. Yet Ferdinand, ever suspicious and on his guard, must have felt some interest in it, for he presently called the steward to him. "Is he more fool or knave?" he muttered, pointing under hand at Martin, who stood in the gloom a few paces away.

Baldwin shrugged his shoulders, but remained silent. "What happened? What is the meaning of it all?" Ferdinand persisted, his keen eyes on the steward's face. "Did he do it himself? Or who did it?"

Baldwin turned slowly and nodded towards the moat. "I expect you will find him who did it there," he said grimly. "I never knew a man save Sir Anthony or Master Francis hit Martin yet, but he paid for it. And when his temper is up, he is mad, or as good as mad; and better than two sane men!"

"He is a dangerous fellow," Ferdinand said thoughtfully, shivering a little. It was unlike him

"DID HE DO IT HIMSELF?"

to shiver and shake. But the bravest have their moods.

"Dangerous?" the steward answered. "Ay, he is to some, and sometimes."

Ferdinand Cludde looked sharply at the speaker as if he suspected him of a covert sneer. But Baldwin's gloomy face betrayed no glint of intelligence or amusement, and the knight's brother, reassured and yet uneasy, turned on his heel and went into the house, meeting at the door a servant who came to tell him that Sir Anthony was calling for him. Baldwin Moor, left alone, stood a moment thinking, and then turned to speak to Martin. But Martin was gone, and was nowhere to be seen.

The lights in the hall windows twinkled cheerily, and the great fire cast its glow half way across the courtyard, as lights and fire had twinkled and glowed at Coton End on many a night before. But

neither in hall nor chamber was there any answering merriment. Baldwin, coming in, cursed the servants who were in his way, and the men moved meekly and without retort, taking his oaths for what they were—a man's tears. The women folk sat listening pale and frightened, and one or two of the grooms, those who had done least in the skirmish, had visions of a tree and a rope, and looked sickly. The rest scowled and blinked at the fire, or kicked up a dog if it barked in its sleep.

"Hasn't Martin come in?" Baldwin growled presently, setting his heavy wet boot on a glowing log, which hissed and sputtered under it. "Where is he?"

"Don't know!" one of the men took on himself to answer. "He did not come in here."

"I wonder what he is up to now?" Baldwin exclaimed, with gloomy irritation: for which, under the circumstances, he had ample excuse. He knew that resistance was utterly hopeless, and could only make matters worse, and twist the rope more tightly about his neck, to put the thought as he framed it. The suspicion therefore that this madman—for such in his worst fits the fool became—might be hanging round the place in dark corners, doing what deadly mischief he could to the attacking party, was not a pleasant one.

A grey-haired man in the warmest nook by the fire seemed to read his thoughts. "There is one in the house," he said slowly and oracularly, his eyes on Baldwin's boot, "whom he has just as good a mind to hurt, has our Martin, as any of them Clopton men. Ay, that has he, Master Baldwin."

"And who is that, gaffer?" Baldwin asked contemptuously.

But the old fellow turned shy. "Well, it is not Sir Anthony," he answered, nodding his head, and stooping forward to caress his toasting shins. "Be you very sure of that. Nor the young mistress, nor the young master as was, nor the new lady that came a month ago. No, nor it is not you, Master Baldwin."

"Then who is it?" cried the steward impatiently.

"He is shrewd, is Martin—when the saints have not got their backs to him," said the old fellow, slily.

"Who is it?" thundered the steward, well used to this rustic method of evasion. "Answer, you dolt!"

But no answer came, and Baldwin never got one; for at this moment a man who had been watching in front of the house ran in.

"They are here!" he cried, "a good hundred of them, and torches enough for St. Anthony's Eve. Get you to the gate, porter; Sir Anthony is calling for you. Do you hear?"

There was a great uprising, a great clattering of feet and barking of dogs, and some wailing among the women. As the messenger finished speaking, a harsh challenge which penetrated even the courtyard arose from many voices without, and was followed by the winding of a horn. This sufficed. All hurried with one accord into the court, where the porter looked to Baldwin for instructions.

"Hold a minute!" cried the steward, silencing the loudest hound by a sound kick, and disregarding Sir Anthony's voice, which came from the direction of the gateway. "Let us see if they are at the back too."

He ran through the passage, and emerging on the edge of the moat was at once saluted by a dozen voices warning him back. There were a score of dark figures standing in the little close where the fight had taken place. "Right," said Baldwin to himself. "Needs must when the old gentleman drives! Only I thought I would make sure."

He ran back at once, nearly knocking down Martin, who with a companion was making, but at a slower pace, for the front of the house.

"Well, old comrade!" cried the steward, smiting the fool on the back as he passed, "you are here, are you? I never thought that you and I would be in at our own deaths!"

He did not notice, in the wild humour which had seized him, who Martin's companion was, though probably at another time it would have struck him that there was no one in the house quite so tall. He sped on with scarcely a glance, and in a moment was under the gateway, where Sir Anthony was soundly rating everybody, and particularly the porter, who with his key in the door found, or affected to find, the task of turning it a difficult one. As the steward came up, however, the big doors, at some sign from him, creaked on their hinges, and the knight, his staff in his hand, and the servants clustering behind him with lanterns, walked forward a pace or two to the end of the bridge, bearing himself with some dignity.

"Who disturbs us at this hour?" he cried, peering across the moat, and signing to Baldwin to hold up his large lantern, since the others, uncertain of their reception, had put out their torches. By its light he and those behind him could make out a group of half a dozen figures a score of yards away, while in support of these there appeared a bowshot off, and still in the open ground, a clump of, it might be, a hundred men. Beyond all lay the dark line of trees, above which the moon, newrisen, was sailing through a watery wrack of clouds. "Who are ye?" the knight repeated.

"Are you Sir Anthony Cludde?" came the answer.

"I am."

"Then, in the Queen's name, Sir Anthony," the leader of the troop cried solemnly, "I call on you to surrender. I hold a warrant for your arrest, and also for the arrest of James Carey, a priest, and Baldwin Moor, who, I am told, is your steward. I am backed by forces which it will be vain to resist."

"Are you Sir Philip Clopton?" the knight asked. For at that distance and in that light it was impossible to be sure.

"I am," the sheriff answered earnestly. "And, as a friend, I beg you, Sir Anthony, to avoid useless bloodshed and further cause of offence. Sir Thomas Greville, the governor of Warwick Castle, and Colonel Bridgewater are with me. I implore you, my friend, to surrender, and I will do you what good offices I may."

The knight, as we know, had made up his mind. And yet for a second he hesitated. There were stern grim faces round him changed by the stress

of the moment into the semblance of dark Baldwin's: the faces of men who, though they numbered but a dozen, were his men, bound to him by every tie of instinct, and breeding, and custom. And he had been a soldier, and knew the fierce joy of a desperate struggle against odds. Might it not be better after all?

But then he remembered his womenkind; and, after all, why endanger these faithful men? He raised his voice and cried clearly, "I accept your good offices, Sir Philip, and I take your advice. I will have the drawbridge lowered, only I beg you will keep your men well in hand, and do my poor house as little damage as may be."

Giving Baldwin the order, and bidding him as soon as it was performed come to him, the knight walked steadily back into the courtyard and took his stand there. He despatched the women and some of the servants to lay out a meal in the hall. But it was noticeable that the men went reluctantly, and that all who could find any excuse to do so lingered round Sir Anthony as if they could not bear to abandon him; as if, even at the last moment, they had some vague notion of protecting their master at all hazards. A score of lanterns shed a gloomy, uncertain light—only in places reinforced by the glow from the hall windows—upon the group. Seldom had a Coton moon peeped over the gables at a scene stranger than that which met the sheriff's eyes, as with his two backers he passed under the gateway.

"I surrender to you, Sir Philip," the knight said with dignity, stepping forward a pace or two, "and call you to witness that I might have made resistance and have not. My tenants are quiet in their homes, and only my servants are present. Father Carey is not here, nor in the house. This is Baldwin Moor, my steward; but I beg for him your especial offices, since he has done nothing save by my command."

"Sir Anthony, believe me that I will do all I can," the sheriff responded gravely; "but——"

"But to set at naught the Queen's proclamation and order!" struck in a third voice harshly—it was Sir Thomas Greville's—"and she but a month on the throne! For shame, Sir Anthony! It smacks to me of high treason. And many a man has suffered for less, let me tell you."

"Had she been longer on the throne," the sheriff put in more gently, "and were the times quiet, the matter would have been of less moment, Sir Anthony, and might not have become a State matter. But just now——"

"Things are in a perilous condition," Greville said bluntly; "and you have done your little to make them worse!"

The knight by a great effort swallowed his rage and humiliation. "What will you do with me, gentlemen?" he asked, speaking with at least the appearance of calmness.

"That is to be seen," Greville said, roughly overriding his companion. "For to-night we must make ourselves and our men comfortable here."

"Certainly—with Sir Anthony's leave, Sir Thomas Greville," quoth a voice from behind. "But only so!"

More than one started violently, while the Cludde servants almost to a man spun round at the sound of the voice—my voice, Francis Cludde's, though in the darkness no one knew me. How shall I ever forget the joy and lively gratitude which filled my heart as I spoke; which turned the night into day, and that fantastic scene of shadows into a festival, as I felt that the ambition of the last four years was about to be gratified. Sir Anthony, who was one of the first to turn, peered among the servants. "Who spoke?" he cried, a sudden discomposure in his voice and manner. "Who spoke there?"

"Ay, Sir Anthony, who did?" Greville said haughtily. "Some one apparently who does not quite understand his place or the state of affairs here. Stand back, my men, and let me see him. Perhaps we may teach him a useful lesson."

The challenge was welcome, for I feared a scene, and to be left face to face with my uncle more than anything. Now, as the servants, with a loud murmur of surprise and recognition, fell back and disclosed me standing by Martin's side, I turned a little from Sir Anthony and faced Greville. "Not this time, I think, Sir Thomas," I said, giving him back glance for glance. "I have learned my lesson from some who have fared farther and seen more than you, from men who have stood by their cause in foul weather as well as fair; and were not for mass one day and a sermon the next."

"What is this?" he cried angrily. "Who are you?"

"Sir Anthony Cludde's dutiful and loving nephew," I answered, with a courteous bow. "Come back, I thank Heaven, in time to do him a service, Sir Thomas."

"Master Francis! Master Francis!" Clopton exclaimed in remonstrance. He had known me in old days. My uncle, meanwhile, gazed at me in the utmost astonishment, and into the servants' faces there flashed a strange light, while many of them hailed me in a tone which told me that I had but to give the word, and they would fall on the very sheriff himself. "Master Francis," Sir Philip Clopton repeated gravely, "if you would do your uncle a service, this is not the way to go about it. He has surrendered and is our prisoner. Brawling will not mend matters."

I laughed out loudly and merrily. "Do you know, Sir Philip," I said, with something of the old boyish ring in my voice, "I have been, since I saw you last, to Belgium and Germany—ay, and Poland and Hamburg! Do you think I have come back a fool?"

"I do not know what to think of you," he replied drily; "but you had best——"

"Keep a civil tongue in your head, my friend!" said Greville, with harshness, "and yourself out of this business."

"It is just this business I have come to get into, Sir Thomas," I answered, with increasing good humour. "Sir Anthony, show them that!" I continued, and I drew out a little packet of parchment with a great red seal hanging from it by a green ribbon; just such a packet as that which I had stolen from the Bishop's apparitor nearly four

years back. "A lantern here!" I cried. "Hold it steady, Martin, that Sir Anthony may read. Master Sheriff wants his rere-supper."

I gave the packet into the knight's hand, my own shaking. Ay, shaking, for was not this the fulfilment of that boyish vow I had made in my little room in the gable yonder, so many years ago? A fulfilment strange and timely, such as none but a boy in his teens could have hoped for, nor any but a man who had tried the chances and mishaps of the world could fully enjoy as I was enjoying it. I tingled with the rush through my veins of triumph and gratitude. Up to the last moment I had feared lest anything should go wrong, lest this crowning happiness should be withheld from me. Now I stood there smiling, watching Sir Anthony as, with trembling fingers, he fumbled with the paper. And there was only one thing, only one person, wanting to my joy. I looked, and looked again, but I could not anywhere see Petronilla.

"What is it?" Sir Anthony said feebly, turning the packet over and over. "It is for the sheriff—for the sheriff, is it not?"

"He had better open it then, sir," I answered gaily.

Sir Philip took the packet, and, after a glance at the address, tore it open. "It is an order from Sir William Cecil," he muttered. Then he ran his eye down the brief contents, while all save myself pricked their ears and pressed closer, and I looked swiftly from face to face, as the wavering light lit up now one and now another—old familiar faces for the most part.

"Well, Sir Philip, will you stop to supper?" I cried with a laugh, when he had had time, as I judged, to reach the signature.

"Go to!" he grunted, looking at me. "Nice fools you have made of us, young man!" He passed the letter to Greville. "Sir Anthony," he continued, a mixture of pleasure and chagrin in his voice, "you are free! I congratulate you on your luck. Your nephew has brought an amnesty for all things done up to the present time save for any life taken, in which case the matter is to be referred to the Secretary. Fortunately my dead horse is the worst of the mischief, so free you are, and amnestied, though nicely Master Cecil has befooled us!"

"We will give you another horse, Sir Philip," I answered.

But the words were wasted on the air. They were drowned in a great shout of joy and triumph which rang from a score of Cludde throats the moment the purport of the paper was understood: a shout which made the old house shake again, and scared the dogs so that they fled away into corners and gazed askance at us, their tails between their legs: a shout that was plainly heard a mile away in half a dozen homesteads where Cludde men lay gloomy in their beds.

By this time my uncle's hand was in mine. With his other he took off his hat. "Lads!" he cried huskily, rearing his tall form in our midst; "a cheer for the Queen! God keep her safe, and long may she reign!"

This was universally regarded as the end of what they still proudly call in those parts "the Coton Insurrection!" When silence came again, every dog, even the oldest and wisest, had bayed himself hoarse and fled to kennel, thinking the end of the world was come. My heart, as I joined roundly in, swelled high with pride, and there were tears in my eyes as well as in my uncle's. But there is no triumph after all without its drawback, no fruition equal to the anticipation. Where was Petronilla? I could see her nowhere. I looked from window to window, but she was at none. I scanned the knot of maids, but could not find her. Even the cheering had not brought her out.

It was wonderful, though, how the cheers cleared the air. Even Sir Thomas Greville regained good humour, and deigned to shake me by the hand and express himself pleased that the matter had ended so happily. Then the sheriff drew him and Bridgewater away, to look to their men's arrangements, seeing, I think, that my uncle and I would fain be alone awhile; and at last I asked with a trembling voice after Petronilla.

"To be sure," Sir Anthony answered, furtively wiping his eyes. "I had forgotten her, dear lad. I wish now that she had stayed. But tell me, Francis, how came you back to-night, and how did you manage this?"

Something of what he asked I told him hurriedly. But then—be sure I took advantage of the first opening—I asked again after Petronilla. "Where has she gone, sir?" I said, trying to conceal my impatience. "I thought that Martin told me she was here: indeed, that he had seen her after I arrived."

"I am not sure, do you know," Sir Anthony answered, eyeing me absently, "that I was wise, but I considered she was safer away, Francis. And she can be fetched back in the morning. I feared there might be some disturbance in the house—as indeed there well might have been—and though she begged very hard to stay with me, I sent her off."

"This evening, sir?" I stammered, suddenly chilled.

"Yes, an hour ago."

"But an hour ago every approach was guarded, Sir Anthony," I cried in surprise. "I had the greatest difficulty in slipping through from the outside myself, well as I know every field and tree. To escape from within, even for a man, much less a woman, would have been impossible. She will have been stopped."

"I think not," he said, with a smile at once sage and indulgent—which seemed to add, "You think yourself a clever lad, but you do not know everything yet."

"I sent her out by the secret passage to the mill house, you see," he explained, "as soon as I heard the sheriff's party outside. I could have given them the slip myself had I pleased."

"The mill house?" I answered. The mill stood nearly a quarter of a mile from Coton End, beyond the gardens, and in the direction of the village. I remembered vaguely that I had heard from the servants in old days some talk of a secret outlet leading from the house to it. But they

knew no particulars, and its existence was only darkly rumoured among them.

"You did not know of the passage," Sir Anthony said, chuckling at my astonishment. "No, I remember. But the girl did. Your father and his wife went with her. He quite agreed in the wisdom of sending her away, and indeed advised it. On reaching the mill, if they found all quiet they were to walk across to Watney's farm. There they could get horses, and might ride at their leisure to Stratford and wait the event. I thought it best for her; and Ferdinand agreed."

"And my father—went with her?" I muttered hoarsely, feeling myself growing chill to the heart. Hardly could I restrain my indignation at Sir Anthony's folly, or my own anger and disappointment. And fear. For though my head seemed on fire and there was a tumult in my brain, I was cool enough to trace clearly my father's motives, and discern with what a deliberate purpose he had acted. "He went with her?"

"Yes, he and his wife," the knight answered, noticing nothing in his obtuseness.

"You have been fooled, sir," I said bitterly. "My father you should have known; and for his wife, she is a bad, unscrupulous woman! Oh, the madness of it to put my cousin into their hands!"

"What do you mean?" the knight cried, beginning to tremble. "Your father is a changed man, lad. He has come back to the old faith, and in a dark hour too. He——"

"He is a hypocrite and a villain!" I retorted, stung almost to madness by this wound in my tenderest place—stung, indeed, beyond endurance. Why should I spare him, when to spare him was to sacrifice the innocent? Why should I pick my words when my love was in danger? He had had no mercy and no pity. Why should I shrink from exposing him? Heaven had dealt with him patiently and given him life: and he did but abuse it. I could keep silence no longer, and told Sir Anthony all, with a stinging tongue and in gibing words: even, at last, how my father had given me a hint of the very plan he had now carried out—of coming down to Coton, and goading his brother into some offence which might leave his estate at the mercy of the authorities.

"I did not think he meant it," I said bitterly. "But I might have known that the leopard does not change its spots. How you, who knew him years ago, and knew that he had plotted against you since, came to trust him again—to trust your daughter to him, passes my fancy!"

"He was my brother," the knight murmured, leaning white and stricken on my shoulder.

"And my father—Heaven help us!" I rejoined.

## CHAPTER XXV.—PETRONILLA'S RETREAT.

"WE must first help ourselves," Sir Anthony answered sharply; rousing himself with wonderful energy from the prostration into which my story had thrown him. "I will send after her. She shall be brought back. Ho! Baldwin! Martin!" he cried loudly. "Send Baldwin hither! Be quick there!"

Out of the ruck of servants in and about the hall, Baldwin came rushing presently, wiping his lips as he approached. A single glance at our faces sobered him. "Send Martin down to the mill!" Sir Anthony ordered curtly. "Bid him tell my daughter, if she be there, to come back. And do you saddle a couple of horses, and be ready to ride with Master Francis to Watney's farm, and on to Stratford, if it be necessary. Lose not a minute; my daughter is with Master Ferdinand. My order is that she return."

The fool had come up only a pace or two behind the steward. "Do you hear, Martin?" I added eagerly, turning to him. My thoughts, busy with the misery which might befal her in their hands, maddened me. "You will bring her back if you find her, mind you."

"YOU WILL BRING HER BACK IF YOU FIND HER."

He did not answer, but his eyes glittered as they met mine, and I knew that he understood. As he flitted silently across the court and disappeared under the gateway, I knew that no hound could be more sure; I knew that he would not leave the trail until he had found Petronilla, though he had to follow her for many a mile. We might have to pursue the fugitives to Stratford, but I felt sure that Martin's lean figure and keen dark face would be there to meet us.

Us? No. Sir Anthony indeed said to me, "You will go, of course?" speaking as if only one answer were possible.

But it was not to be so. "No," I said; "you had better go, sir. Or Baldwin can be trusted. He can take two or three of the grooms. They should be armed," I added in a lower tone.

My uncle looked hard at me, and then gave his assent, no longer wondering why I did not go. Instead, he bade Baldwin do as I had suggested.

In truth my heart was so hot with wrath and indignation that I dared not follow, lest my father, in his stern, mocking way, should refuse to let her go, and harm should happen between us. If I were right in my suspicions, and he had capped his intrigue by deliberately getting the girl I loved into his hands as a hostage, either as a surety that I would share with him if I succeeded to the estates, or as a means of extorting money from his brother, then I dared not trust myself face to face with him. If I could have mounted and ridden after my love, I could have borne it better. But the curse seemed to cling to me still. My worst foe was one against whom I could not lift my hand.

"But what," my uncle asked, his voice quavering, though his words seemed intended to combat my fears, "what can he do, lad? She is his niece."

"What?" I answered with a shudder. "I do not know, but I fear everything. If he should elude us and take her abroad with him—Heaven help her, sir! He will use her somehow to gain his ends—or kill her."

Sir Anthony wiped his brow with a trembling hand. "Baldwin will overtake them," he said.

"Let us hope so," I answered. Alas, how far fell fruition short of anticipation. This was my time of triumph! "You had better go in, sir," I said presently, gaining a little mastery over myself. "I see Sir Philip has returned from settling his men for the night. He and Greville will be wondering what has happened."

"And you?" he said.

"I cannot," I answered, shaking my head.

After he had gone I stood awhile in the shadow on the far side of the court, listening to the clatter of knives and dishes, the cheerful hum of the servants as they called to one another, the hurrying footsteps of the maids. A dog crept out, and licked my hand as it hung nerveless by my side. Surely Martin or Baldwin would overtake them. Or if not, it still was not so easy to take a girl abroad against her will.

But would that be his plan? He must have hiding-places in England to which he might take her, telling her any wild story of her father's death or flight, or even perhaps of her own danger if her whereabouts were known. I had had experience of his daring, his cunning, his plausibility. Had he not taken in all with whom he had come into contact, except, by some strange fate, myself? To be sure, Anne was not altogether without feeling or conscience. But she was his—his entirely, body and soul. Yes, if I could have followed, I could have borne it better. It was this dreadful inaction which was killing me.

The bustle and voices of the servants, who were in high spirits, so irritated me at last that I wandered away, going first to the dark silent gardens, where I walked up and down in a fever of doubt and fear; much as I had done on the last evening I had spent at Coton. Then a fancy seized me, and turning from the fish-pond I walked towards the house. Crossing the moat I made for the church-door and tried it. It was unlocked. I went in. Here at least in the sacred place I should find quietness, and, unable to help myself in this terrible crisis, might get help from One to Whom my extremity was but an opportunity.

I walked up the aisle, and finding all in darkness, the moon at the moment being obscured, felt my way as far as Sir Piers's flat monument, and sat down upon it. I had been there scarcely a minute when a faint sound, which seemed rather a sigh or an audible shudder than any articulate word, came out of the darkness in front of me. My great trouble had seemed to make superstitious fears for the time impossible; but at this sound I started and trembled, and, holding my breath, felt a cold shiver run down my back. Motionless I peered before me, and yet could see nothing. All was gloom, the only distinguishable feature being the east window.

What was that? A soft rustle as of ghostly garments moving in the aisle was succeeded by another

THE LIGHT DISCLOSED A KNEELING FORM.

sigh which made me rise from my seat, my hair stiffening. Then I saw the outline of the east window growing brighter and brighter, and I knew that the moon was about to shine clear of the clouds, and longed to turn and fly, yet did not dare to move.

Suddenly the light fell on the altar steps, and disclosed a kneeling form which seemed to be partly turned towards me as though watching me. The face I could not see—it was in shadow—and I stood transfixed, gazing at the figure, half in superstitious terror and half in wonder; until a voice I had not heard for years, and yet should have known among a thousand, said softly, "Francis!"

"Who calls me?" I muttered hoarsely, knowing and yet disbelieving—hoping, and yet with a terrible fear at heart.

"It is I—Petronilla!" said the same voice gently. And then the form rose and glided towards me through the moonlight. "It is I—Petronilla. Do you not know me?" said my love again: and fell upon my breast.

She had been firmly resolved all the time not to

quit her father, and on the first opportunity had given the slip to her company, while the horses were being saddled at Watney's farm. Stealing back through the darkness she had found the house full of uproar, and apparently occupied by strange troopers. Aghast, and not knowing what to do, she had bethought herself of the church and there taken refuge. On my first entrance she was horribly alarmed. But as I walked up the aisle, she recognised—so she has since told me a thousand times with pride—my footstep, though it had long been a stranger to her ear, and she had no thought at the moment of seeing me, or hearing the joyful news I brought.

And so my story is told. For what passed then between Petronilla and me lies between my wife and myself. And it is an old old story, and one which our children have no need to learn, for they have told it, many of them for themselves, and their children are growing up to tell it. I think, in some odd corner of the house, there may still be found a very ancient swallow's nest, which young girls bring out and look at tenderly; but for my sword-knot I fear it has been worn out these thirty years. What matter, even though it was velvet of Genoa? He that has the substance, lacks not the shadow.

I never saw my father again, nor learned accurately what passed at Watney's farm after Petronilla was missed by her two companions. But one man, whom I could ill spare, was also missing on that night, and his fate is still something of a mystery. This was Martin Luther. I have always believed that he fell in a desperate encounter with my father, but no traces of the struggle were ever found. The track between Watney's farm and Stratford, however, runs for a certain distance by the river side; and at some point on this road I think Martin must have come up with the refugees, and failing either to find Petronilla with them, or to get any satisfactory account of her, must have flung himself on my father and been foiled and killed. The exact truth I have said was never known, though Baldwin and I talked over it again and again; and there were even some who said that a servant much resembling Martin Luther was seen with my father in the Low Countries not a month before his death. I put no credence in this, however, having good reason to think that the poor fool—who was wiser in his sane moments than most men—would never have left my service while the breath remained in his body.

My father was killed in a skirmish in the Netherlands shortly before the peace of Château Cambrésis, and about three months after the events here related. I have no doubt that he died as he had lived, without fear of man or God. He held no communication with me or with any at Coton End later than that which I have here described; but would appear to have entered the service of Cardinal Granvelle, the governor of the Netherlands, for after his death word came to the Duchess of Suffolk that Mistress Anne Cludde had entered a nunnery at Bruges under the Cardinal's auspices. Doubtless she is long since dead.

And so are many others of whom I have spoken—Sir Anthony, the Duchess, Master Bertie, and Master Lindstrom. For forty years have passed since these things happened—years of peaceful happy life, which have gone by more swiftly, as it seems to me in the retrospect, than the four years of my wanderings. The Lindstroms sought refuge in England in the second year of the Queen, and settled in Lowestoft under the Duchess of Suffolk's protection, and did well and flourished as became them; nor indeed did they find, I trust, others ungrateful, though I experienced some difficulty in inducing Sir Anthony to treat the Dutch burgher as on an equality with himself. Lord Willoughby de Eresby, the Peregrine to whom I stood godfather in St. Willibrod's church at Wesel, is now a middle-aged man and my very good friend, the affection which his mother felt for me having descended to him in full measure. She was indeed such a woman as Her Majesty; large-hearted and free-tongued, of masculine courage and a wonderful tenderness. And of her husband, what can I say save that he was a brave Christian—and in peaceful times, a studious gentleman.

But it is not only in vacant seats and grey hairs that I trace the progress of forty years. They have done for England almost all that men hoped they might do in the first dawn of the reign. We have seen great foes defeated, and strong friends gained. We have seen the coinage amended, trade doubled, the exchequer filled, the roads made good, the poor provided for in a Christian manner, religion spread abroad; all this in these years. We have seen Holland rise and Spain decline, and well may say in the words of the old text, which my grandfather set up over the hall door at Coton, "*Frustra, nisi Dominus*"

# THE SNUFF-BOX IN LITERATURE.

II.

THE fashion of taking snuff, with its additions of scents and costly boxes, was first set by the courtiers of the Grand Monarque, who, though himself an anti-tobacconist, was powerless to check the use of the weed he disliked. Fagon, the royal physician, is reported to have delivered a very violent oration against snuff, which fell rather flat owing to the lecturer in his excitement refreshing his nose with a pinch. By the middle of the seventeenth century the snuff mania was in full glow. The "outfit" had become a very expensive affair. The tobacco was then reduced to a rough powder by rasping, whence the term *tabac râpé*, still surviving in *rappee*. The rasp or grater was of ivory, richly carved and ornamented. One of its sides was rounded and bore the design, the back had a grater of brass fitted into a groove, and a receptacle at each end for the grated tobacco which passed through into them; if the snuff-taker desired merely a pinch he used a little shell at the top as a spoon and placed the snuff in the palm of his hand. If he wanted a supply he grated the box full.

Snuff was in great demand during the plague in the time of Charles II. It is said that not a tobacconist lost his life in that dreadful visitation; and the doctors could be seen going about from house to house, some of them smoking and some taking snuff. When the plague was over, smoking and snuffing were introduced at the Lord Mayor's banquet—a somewhat startling innovation, which had the effect of increasing the spread of the weed both in roll and powder. Ireland had long had a reputation as a snuff-consuming country. Snuff was there taken at all seasons. In some parts an ounce of snuff was even placed on the coffin, that the mourners might help themselves. It was not till 1745 that the English found out the fondness of the Scotch for snuff, and then it was that there appeared at the tobacco shops the gorgeous Highlander with whose impossible tartans we are all familiar. Some of the snuff-shop signs were most appropriate. Fribourg and Treyer in the Haymarket had their well-known Crown and Rasp; Delvalle in Bury Street, St. Mary Axe, had a man pounding snuff in a mortar; Hullier in Little Newport Street had a man grating snuff on a flat grater. Others had the black Indian with the kilt of tobacco leaves, and some of the tobacconists sported three hands issuing from one coat cuff, one hand holding a pinch of snuff, another a clay pipe, the other a quid of tobacco, with the motto beneath:

> "We three are engaged in one cause;
> I snuffs, I smokes, I chaws!"

The reigns of the four Georges have been irreverently named the Snuff Period of our history, and it is rather an awkward fact for the abstainers that the immense development our country then took, the winning of our greatest battles on sea and land, and the founding of our colonies, were accomplished by a tobacco-smoking, tobacco-chewing, and more especially snuffing generation. Soldiers, sailors, inventors, engineers, poets, historians, romancists, nearly all took tobacco in one form or another.

In the collection of tobacco tools formed by Mr. Bragge of Birmingham, the compiler of the "Bibliotheca Nicotiana," there are hundreds of articles connected with snuff. There are snuff-mills and snuff-mulls, snuff-jars and snuff-bottles, snuff-rasps and snuff-spoons, and snuff-boxes of jade, chalcedony, amethyst, turquoise, lapis lazuli, carnelian, agate, jasper, amber, pearl, iron—snuff-boxes in every metal and almost in every wood, and not isolated specimens of these, but literally dozens; the wood and metal ones alone number over two hundred. And his was not the first collection. In Queen Anne's day Edward Wortley Montagu had "more boxes than would satisfy a hundred-nosed Chinese idol." Lord Petersham, too, had a box for every day in the year, and kept a stock of snuffs worth £3,000.

The most usual gift in those days was a snuff-box, "an elegant article of use and beauty," that could be made up to any value desired.

> "For females fair, and formal fops to please,
> The mines are robbed of ore, of shells the seas,
> With all that mother earth and beast afford
> To man, unworthy now, tho' once their lord;
> Which wrought into a box, with all the show
> Of art the greatest artist can bestow;
> Charming in shape, with polished rays of light,
> A joint so fine it shuns the sharpest sight;
> Must still be graced with all the radiant gems
> And precious stones that e'er arrived in Thames."

But the poet becomes severe when he leaves the boxes for their owners:

> "The church, more sacred once, is what we mean,
> Where now they flock to see and to be seen;
> The box is used, the book laid by, as dead,
> With snuff, not Scripture, there the soul is fed;
> For where to Heaven the hands by one of those
> Are lifted, twenty have them at the nose;
> And while some pray, to be from sudden death
> Delivered, others snuff to stop their breath."

Even now no mess-room or club-room is fully furnished without its snuff-box, and the custom of snuff-box giving lingers on with fitful revivals when it becomes official. At George IV's coronation Rundell and Bridge's bill "for snuff-boxes presented to Foreign Ministers" amounted to £8,205 15*s.* 5*d.*! and very beautiful some of these boxes

were. There are one or two of King George's boxes in the South Kensington Museum. People who care to see good work when they can find it may profitably look through the Mitchell bequest and the Matheson and Dunn-Gardner loan collections in those easily accessible galleries.

There were several noteworthy boxes in the Stuart and Guelph exhibitions, among them the one Montrose held in his hand before he went up the ladder. Monmouth's snuff-box, a gold one, was picked up by a labourer in a field of peas, and sold by him for £15, half its intrinsic value, to Mrs. Wealde of Horton. One of Burns's, given by him to a friend, was put up for auction with other effects, and the bidding began at a shilling; suddenly the auctioneer looked into the box and read on the lid, "Robert Burns, Officer of Excise," whereupon the bidding—the box was a common horn one—rose to £5. Congreve, Swift, Pope, Addison, Bolingbroke, all took snuff largely. Johnson's box was, like the great Frederick's, his pocket, his transactions being of the wholesale kind.

Archbishop Whately was another incorrigible snuff-taker. There is a graphic reminiscence of his way of entering the class-room. The students would be all seated waiting, when suddenly there would be a sound as of a rush of one, and Whately would dash into the passage, his waistcoat covered with snuff, and taking a huge pinch as he came and showering it in front of him, he would ask before he had well entered the room, "What is the third operation of the mind, Mr. Snooks?" And before Mr. Snooks had finished his reply in text-book phrase, Whately would have had another pinch and be ready to develop the book statement in so brilliant a manner as to be over the heads of more than half his audience.

The most gifted of latter-day snuff-takers was Charles Darwin, whose journeys to and from the box in the hall are recorded in his son's biography.

> "When vapours swim before the eyes,
> And cloud the dizzy brain,
> Snuff, to dispel the mist, applies
> Its quick, enlivening grain,"

as the record of the "Reasons for Snuff-taking" runs; though none of these worthies would have thought much of the sixth:

> "For every pinch of snuff we take
> Helps trade in some degree;
> As smallest drops of water make
> The vast unbounded sea."

Nor would they have appreciated the sarcastic "Praise of Snuff-taking" in the "European Magazine."

> "Science avaunt! What are thy powers to me,
> Whose whole delight is Scotch and Black Rappee?
> Newton and Euclid now no more can please,
> All knowledge shall be centred in a sneeze;
> Vain are the problems you may wish to draw,
> None, none, can please the sense like macabau"—

macabau being the Martinique snuff, which was the special delight of dowagers, a much simpler preparation than the rappee and bitter almonds scented with roses and green tea, the Violet Strasburg that proved so comforting to Queen Charlotte, who took more snuff than many a man.

It seems strange to us that women should take snuff largely; and yet they did, and they were very loth to abandon it. One of the last of the lady snuff-takers was Mary Lamb. There is a note of hers regarding herself and brother Charles sitting "like a literary Darby and Joan, I taking snuff, and he groaning all the while and saying he can make nothing of it, till he has finished, when he finds he has made something of it."

And here we are reminded of Maggie Lang's snuff-mill. Poor Maggie! She was burnt for witchcraft at the cross of Paisley, being one of the witches of Bargarren in Renfrew whose story is told in Sinclair's "Satan's Invisible World Discovered." Her box, in the possession of the Patons of Dunfermline, is a small wooden one, fitted with a solid cover, having a strong handle above and a conical iron-shod projection beneath which served to pound the tobacco in the box. Maggie liked her snuff "fresh and fresh."

The taste of the Scots for snuff is notorious. It has even been argued that the French got the peculiar twang into their language by stuffing snuff up their noses, and that the Scotch, who took almost as much snuff as the French, pronounced French better than did the English owing to the similar blocking of the nostrils! Some of the snuff experiences of the Scotch are not without humour. There was the minister—somehow most Scotch snuff stories have a minister in them—who set forth to kirk one very windy day, thinking over his discourse as he went; when he got half way, and had reached the thirdly in the sermon, his chain of thought missed a link; to regain it he took out his snuff-box and rapped it, but the wind was in his face, and as he could not take a pinch to windward he turned round, and enjoyed one, two, three; hah! the missing phrase came in, the sermon went on smoothly, and so did the minister, who had forgotten to turn again to face the wind, and by-and-by astonished his servant by walking into the house instead of into the kirk two miles away!

Snuff, of course, had some virtues. At Crathie Church to wit, it is reported that a stranger lady came one sabbath and sat in a large pew with certain farmers and their wives. Just before the sermon a big snuff-mull was handed round, which the lady passed without helping herself to. "Tak' the sneeshin, mem, tak' the sneeshin," said the mull-holder in a hoarse whisper. "Ye dinna ken oor meenister; ye'll need it afore he's dune."

Dean Ramsay has several strange stories to tell of snuff-taking among the Scots. "When the text had been given out," he says, "it was usual for the elder branches of the congregation to hand about their Bibles amongst the younger members, marking the place and calling their attention to the passage. During service another handing about was frequent amongst the seniors, and that was a circulation of the sneeshin-mull or snuff-box. Indeed, I have heard of the same practice in an Episcopal church, and particularly in one case of an ordination, where the bishop took his pinch of

snuff, and handed the mull to go round amongst the clergy assembled for the solemn occasion within the altar rails."

In another place the Dean tells us of the honest Highlander who saw at the hotel door a magnificent man in full tartans, and noticed with much admiration the wide dimensions of the nostrils in a fine up-turned nose. The Highlander, a genuine lover of "sneeshin," went to the stranger, and as his most complimentary act offered him his mull for a pinch; but the stranger drew himself up, and said rather haughtily, "I never take snuff." "Oh," said the other, "that's a peety, for there's grand accommodation!"

Another of Ramsay's reminiscences tells us how a severe snowstorm in the Highlands had lasted for several weeks and stopped all communication betwixt neighbouring hamlets, and reduced the snuff-boxes to their last pinch. Borrowing and begging from all the neighbours within reach were first resorted to; but when these failed, all were alike reduced to the longing which unwillingly abstinent snuff-takers alone know. The minister of the parish was amongst the unhappy number; the craving was so intense that study was out of the question, and he became quite restless. As a last resort the beadle was despatched through the snow to a neighbouring glen, in the hope of getting a supply, but he came back as unsuccessful as he went. "What's to be dune, John?" was the minister's pathetic inquiry. John shook his head, as much as to say that he could not tell; but immediately thereafter started up, as if a new idea had occurred to him. He came back in a few minutes, crying, "Hae!" The minister, too eager to be scrutinising, took a long deep pinch, and then said, "Whaur did you get it?" "I soupit the poupit," was John's expressive reply The minister's superfluous Sabbath snuff had not been swept up in vain.

Sometimes the superfluous snuff has served as a trail for the bloodhounds. There is the case of Cathelineau for instance. Cathelineau had openly taken the royalist side, and orders had come from Paris for his arrest. The Revolutionary officer went to the château at Beaupreau, but found the accused had disappeared. That he had got away was impossible, but the troops watched the château for three days without result. Suddenly the officer asked a peasant who was following him about, "Can you give me a pinch of snuff?" "I do not take snuff," said the man. "Who does?" asked the officer, pointing to some on the ground. The peasant looked confused; the officer kicked away the dust, and underneath was a loose board, which when lifted up disclosed Cathelineau and his companions ready with pistols in their hands to make a dash for life. Instantly the officer in self-defence shot Cathelineau, who had betrayed himself by that pinch of snuff.

The original snuff as used in America was ground fresh as required, and in many museums will be found the native rasps and mills, but when the Europeans took to the habit, such a simple process was soon "improved upon." In the early stage of improvement the leaves were ground and watered and mixed with scent, then "sauced" and fermented and made into "carrots," and rasped into rappee. Now—for snuff-taking is not yet extinct—the preparation is lengthy and elaborate, and, truth to tell, not very attractive. In the State factory at Paris the leaves are moistened with a fifth of their weight of salt and water, and made into blocks piled into heaps, say of fifty tons each. The leaves ferment, and their temperature sometimes reaches 170° F., but it has to be regulated or the mass would be charred in the long six months the ferment is allowed to go on. The next step is the grinding, and then the pale brown dry powder is mixed with another solution of salt and passed through sieves; then it is packed in open chests, some of which hold fifty tons, and in these chests the snuff remains and ferments for nine or ten months until it gets its dark colour and aroma. Shifted to another chest and mixed thoroughly, it is left for two months, and then again a great mixing takes place, sometimes of three hundred and fifty tons at a time, to get the needful uniformity in quality. This huge mass is left for six weeks to get thoroughly ripe, and then it is ready for market. It thus takes twenty months to make a pinch of snuff in these very go-ahead days in what Victor Hugo professed to believe was the centre of the universe.

Cowper's fop "dangling his cane about and taking snuff" is an extinct animal. Snuff has slipped out of poetry—there is no snuff in Tennyson—but its aroma hangs around many a good story. There is the familiar one of the minister who was accustomed to give a running commentary as he read the Scriptures. One day, so the story goes, he read, "I said in my haste all men are liars." A pause—a pinch of snuff. "Aweel, David"—another pinch—"had ye lived in this town"—another pinch—"ye might ha' said that at your leisure!"

But this is an ungracious sentiment to end with. Luckily it occurred to the present writer as he laid down his pen that, stowed away somewhere, he had a snuff-box which in days gone by he had converted into a clinometer case—for he is no "snuffer" himself, and has no inclination that way. On this snuff-box he remembered there was an inscription of some sort. Search was made and the box was found. The following is the inscription:—

> "May the bands of friendship tighten,
> At every pinch you take;
> Never dark misfortune light on,
> Nor follow in her wake.
> This trifling friendly token
> Accept with wishes kind,
> And as oft's the stock is broke on,
> Still the giver hold in mind."

W. J. GORDON.

# SIR WILLIAM ROWAN HAMILTON.

NEARLY a quarter of a century has passed since the death of Sir William Rowan Hamilton. The first half of this hundred years witnessed the careers of many men of genius, pioneers of human progress, and among their number he must assuredly be reckoned. A genius from his birth, he found agreeable recreation in studies, which many men call hard, and many shrink from altogether; in early manhood he was announced at Trinity College, Dublin, as "Hamilton the Prodigy"; in riper age he was among the foremost mathematicians of his time. Our business in this paper is to trace a verbal portrait of the man, touching but lightly on his studies—at any rate, the abstruser part of them.[1]

To begin with his physique: we read of him at nineteen as of middle height, somewhat broad; not exactly handsome, but with features that harmonised to produce a pleasing impression; light blue eyes, and hair a dark silky chestnut; well shaped mouth, chin, and cranium; strong of limb; hands not too refined, yet capable of clear writing and neatly traced diagrams. To this we may add two voices—one rich and sonorous when delivering a speech or reciting poetry; another high and sharp in uttering an explanation or giving vent to a burst of feeling.

At Trinity College he at once stepped into the place of honour. Though his bent was to mathematics, a leading classic of the day awarded him the grade of *optime*, an honour rarely conferred; public opinion continued to award it throughout his career, going so far as to suspect another examiner, who refused it, of extreme wrongheadedness. It was a matter of course that he should obtain the same rank in mathematics, and he was preparing to close his college career by winning both the gold medals given, the one for classics, the other for science, when he was suddenly lifted out of undergraduate ranks and appointed Professor of Astronomy, with the direction of the University Observatory.

When common men look upon men of genius from the outside, curiosity often prompts them to wish for a sight of what is going on in those busy brains. The subject of this notice gives us many glimpses of his mental occupations; indeed, his whole history from boyhood to manhood is written in his letters. For his childhood we must look to the letters of relatives, and this is how he is depicted: at the age of three reading handwriting, though nobody knew how he learnt to do it (a printed book he would read upside down); at four years reading Hebrew, and complaining bitterly of a lady who made a hash of it by attempting to read it without points; eager soon after to teach the maid Hebrew, and making known the nature of a simile by comparing her to a tree that brings forth bad fruit; by the time he is eight, he is translating Homer and Virgil, makes no difficulty of French and Italian, can express his own feelings in Latin, and shows by a translation that the Latin was his own, and the subject an address to Nature and Art. Before he is ten he has advanced to Persian, Arabic, and Sanskrit, and by way of proving that he is not mind and nothing else, he has learnt to swim in the waters of the Boyne.

At the age of eleven his school-time begins, and he speaks for himself in note-books and letters; he has "gone through what is necessary to be known for reading and writing Syriac"—indeed, has written a Syriac grammar; reads "Blackstone's Commentaries"; has made "a compendious treatise of algebra," and so on. These jottings indicate the earliest bent of his mind, namely, to the study of languages, which was carried to such a point that at fourteen he addressed the Persian Ambassador in a letter composed in that language and in true Oriental style. At a later period he records the enlarged knowledge he acquired by searching for words, forms of speech, and grammatical construction in order to make his composition perfect. And he succeeded, for the boy's letter was received with approval, while one written by a much older man was rejected as unintelligible. Nevertheless, the "Compendious Treatise on Algebra" was the first step in his life-work. The lighter studies which had occupied him hitherto resemble the early passages of musical composition. The prelude was now over and the main theme makes itself heard, at first in an undertone but decidedly, and then returns in fuller and fuller volume to the end of the performance. Following the algebra at no great interval is a casual note, "Begun Newton's 'Principia'"; then he is studying the oscillations of the pendulum; most enthusiastic in looking out for eclipses. He calculates their details, and looks forward with boyish pride to the probability of letting his relatives see how the reality verifies his calculations. Very early in his life there are traces of original work in mathematics.

A paper written at the age of seventeen contains the germ of the first work that made the author famous, an essay on the "Theory of Systems of Rays." Cast and recast, it did not see the light till the author was twenty-one, early enough, one may say, to produce a work hailed by Sir John Herschel and Professor Airy as a most important contribution to mathematical science. At this time Hamilton professes in his letters that the study of the classics was his serious business—and, indeed, it was essential to a distinguished career at college; but he was thoroughly conscious that his affection was for mathematics. He made them his recreation. At seventeen he acknowledges that

[1] Life of Sir William Rowan Hamilton. By R. P. Graves. (Longmans.)

mathematical reading had drawn away his attention, he might say his affection, from the classics. This was written from Trim, where, under his uncle's care, he spent the whole of his school-time.

Only a year or two before this a contemporary genius, Macaulay, sent forth from Cambridge a very different epistle. Writing down one of the mathematical formulæ which he was compelled to master, he complained bitterly of the crabbed studies he was bound down to, when longing to revel in the fields of history and literature. The contrast is sharp between the main works of these two men. Each was master in his own peculiar province ; yet there was a border-land in which they met where neither was a master—the region of poetry. The dramatic historian's poems were the more vigorous ; yet no one, not even himself, would claim for him the name of poet. So Hamilton knew that he could write poetry—poetry, too, that Wordsworth deigned to criticise, and read with emotion—but that it was not to be his *forte*. His poetry was to be the poetry of mathematics, if the expression may be allowed. Wordsworth, whom we have just mentioned, tells us in his prelude that "he admired," evidently at a distance, "that fair synthesis," Euclid's geometry ; Hamilton looked closely into it with a poet's eye, if he had not a poet's plastic power. Writing to his sister he says, "Geometry will lead us along her simple lines, her graceful circles. She will then resign us to the guidance of Analysis, her younger and stronger sister, who will be every day unfolding new charms, and continually winning on our esteem and love." It would be too long to quote the expanded and glowing terms in which he treats of the several parts of astronomy.

His biographer has interwoven with the narrative of his life many specimens of his verse. Of these we will only quote a few lines, and that because they tell in his own words a passage in his life which cannot be omitted :

> "His words
> Breathed only such respectful tenderness
> As if he were addressing a dear sister."

But he did *not* know that she whom he addressed had plighted her troth, and that a few months must bring her bridal day. The tidings when they burst upon him almost crushed him. Our mathematician, deep in the prescribed work at college, and working in secret at his own science, had at nineteen a wounded heart ; and the wound was, so to speak, of his own making. Too honourable to speak of a love which he thought could not be gratified, he had abstained from the avowal which must have revealed the truth much earlier.

A sympathetic reader of Hamilton's life cannot without pain observe that this early wound rankled for many long years. His history makes one reflect how many men there are, firm and bright without, who yet carry within a deadly weakness and dulness of spirit. This first attachment was one of ardent passion. It was succeeded at a few years' interval by a second, Platonic, as Hamilton says, in its beginning, but warming up his life as it went on, and reopening the flow of his poetic vein. Had its course run to completion, it might have sufficed to heal up for good the old wound. In his biographer's opinion, over-sensitiveness deprived him of a happiness within his reach. At length, when the somewhat mature age of twenty-eight was reached, he married, as many others have done, into a sober happiness.

Looking back in after years on these passages of his life, Hamilton acknowledges that it had been good for him to suffer. This acknowledgment serves rather to show the depth of his religious faith, than to indicate that he had escaped the full bitterness of disappointment.

We have noticed how boyish he was with all his early learning, and we respect him none the less because the development of scientific study had not warped his heart. In general society and in the company of ladies he carried himself with a frankness, and probably with a seriousness, beyond his age. If a lady was able to converse, he could find topics that would draw her out, and if he was charmed by her conversation, himself supplied the material out of which the charm arose. One or more such are mentioned in the narrative evidently his seniors, and we hear more particularly that he profited by association with the celebrated Miss Edgeworth, who noticed with pleasure the abilities of her young fellow-countryman. This notice had a fostering influence on Hamilton's opening mind. In the first stage of his intercourse with the gifted authoress, he stands in the attitude of one whose knowledge ripens, and whose convictions deepen by contact with another of wider and longer experience of the world. As years go on, he draws up to a level with his sympathising friend, and in a still later stage he has reached a point at which his transcendent position in the scientific world produces something like a reversal of the earlier relation, and Miss Edgeworth is content to regard at a distance studies which it was not given her to pursue. Nevertheless, Hamilton continued to offer his homage, presenting her with results which she was well able to appreciate.

Two other traits in his character must be noticed, if only to show that the intensity of his studies did not amount to absorption. He was in full sympathy with the course of public affairs. His interest in politics may be traced, in part at least, to his father's influence. At home he manifested the tenderest affection for his sisters. During his undergraduate career he resided with them for a considerable time, and previously, while still a boy, he was ever ready to assist them in their studies. We read of a series of letters giving instruction in Italian, at another time he invites them to send him their mathematical work, and when actually appointed to the Observatory, he prevailed upon two of them, Sydney and Eliza, to become at once his pupils and helpers in astronomical work. It is to the latter, a poetess born, that he addressed the letter above quoted, in which he sets forth the winning power of his favourite science.

To judge by the facts of Hamilton's life, there must have been strong attraction in him for those with whom he came in contact, especially his juniors. No sooner was he established at the Observatory than offers of pupils were made to him from various quarters. The Marquis of Anglesey when Lord Lieutenant of Ireland selected him as

tutor for his sons, and they remained for a time under his care. The most solid mark of Miss Edgeworth's regard was given in a request that he would take charge of her younger brother Francis, and direct his mathematical studies. The request was seconded by a letter from the young man himself, highly discriminative of Hamilton's worth. Yet compliance was refused, for Hamilton felt he could not do justice to the pupil and to the Board of Astronomy from whom he held his appointment. They had kindly arranged that, although director of their observatory, he was not bound down to practical astronomy, but was at liberty to follow his own special subject of pure mathematics. Such an arrangement was a sufficiently delicate one ; later, indeed, it produced a certain amount of friction, although Hamilton scrupulously adhered to his side of the agreement, and, in following mainly his own studies, gave a fair amount of attention to his practical work. He visited other observatories, and made himself master of the practice to be followed.

Subsequently in Viscount Adare he found a pupil to his mind. An enthusiast in study, he wanted only direction, not assiduous teaching. Combining fortune with a love of science, his tutor looked upon him as one likely to further the interests of astronomy, if not of pure mathematics. A young man of somewhat mature mind, he gave Hamilton something he could lean upon as well as train. Discussing with his pupil religion, metaphysics, and what not, he learnt while he taught. The two enjoyed together the beauties of nature, and while in each other's company laid up a store of common knowledge and sympathy which served as a basis for a correspondence that was in its own way equally delightful.

In similar fashion Hamilton opened his mind and heart to Aubrey de Vere. It is characteristic of him that, in the case of both these young men, he raised a junior to his own level, and did not hesitate to lay bare to them even his weaknesses and faults. The correspondence with both forms a large part of the material we have for forming a correct idea of the elder man's nature.

The precocity of Hamilton's youth was equalled, if not exceeded, by the early blossom of his reputation in manhood. He was only twenty-nine when the then Lord Lieutenant conferred upon him the distinction of knighthood. Three years later the scientific men of Ireland showed their sense of his merits by electing him President of the Royal Irish Academy against so formidable a competitor as Whately, the Archbishop of Dublin. At the age of thirty-eight, in the full strength of his manhood, he had earned the distinction of a Civil List pension, an honour and support usually bestowed when an eminent man is in his decline. In external honours there was little left for him to attain ; these, however, were but temporary, and he was at the same time preparing the work which will give his name a lasting place in the history of mathematical science. This was his discovery of Quaternions ; all that we need say about it here is that it is a new and advanced method of algebraical investigation. It was soon applied to a practical purpose. Railways were then beginning to be constructed, and often had to be carried on arches over roads or streams at angle sharper than a right. These arches, called "skew arches," presented problems to the engineers of which they could only conjecture the solution. On applying to Hamilton for aid, he brought his new method to bear, and made the solution complete.

In the very year that Sir Robert Peel conferred the pension upon him, the first germ of this method arose in his mind. Writing in 1858 he says, "Quaternions started into life, or light, full grown, on October 16, 1843, as I was walking with Lady Hamilton to Dublin, and came up to Brougham Bridge. . . I felt a problem to have been at that moment solved . . . which had haunted me for at least fifteen years before." This extract is a parallel to the story of Isaac Newton, brooding over the fall of an apple in his garden at Woolsthorpe, which current report connects with his discovery of gravitation. Hamilton further says that he felt it would be worth while to spend the labour of ten years in the full development of his discovery, and, as a matter of fact, ten years elapsed before his complete work was published.

So eminent a position naturally brought him into contact with men of various grades in scientific attainment, few of whom can have been said to equal him, while he towered far above the larger number. His dealings with his contemporaries furnish excellent illustrations of his own character. On the occasion of the election to the presidency of the Academy, Dr. Lloyd, the son of his predecessor, was put forward as a candidate, and was unable to prevent his supporters from contesting the election. The contest produced only feelings of the most amicable nature between the two candidates. When elected, Hamilton appointed Lloyd one of the vice-presidents, and prepared the way for his election as president when he himself vacated the chair.

There were some who claimed to have been beforehand with him in the discovery of Quaternions, especially the late Professor M'Cullagh. Hamilton, while acknowledging with the utmost generosity various subsidiary aids, could not allow that he had taken the discovery from another. He patiently proved to his opponent that it could not be so, and afterwards took every opportunity to show his appreciation of the professor's genuine merits.

As secretary to one of the sections of the British Association, he was on one occasion desired to report on a supposed mathematical discovery by Mr. Jerrard, of Bristol. His opinion was unfavourable ; but so painstaking was he in the matter, that he actually sent the author 124 pages of manuscript in which the question was exhaustively discussed.

With Sir John Herschel he carried on a long and brotherly correspondence, each of the distinguished men rejoicing in the other's achievements. It will be remembered that Hamilton's learning was comprehensive. He was a mathematician *par excellence*, but also an astronomer, a metaphysician, and a linguist. In one of his letters he ventures the statement that English men of science too often subordinate the reason to the understanding ; and

whether he was just in this judgment or not, there must be few even among specialists who would deny the advantages gained in pursuing a wider range of study.

Sir William Hamilton, of Edinburgh, great in metaphysics, despised mathematics. His namesake of Dublin did not despise metaphysics, and was able to say at the end of an evening spent at the Edinburgh professor's house: "Well, you see, we did not fight."

The latter years of Hamilton's life formed a period of severe labour. One or two instances of his persevering industry have already been given, but the full extent of his labours would hardly be credited were it not for memorandums in his own hand, recording twelve and thirteen hours of work at a stretch. In connection with this, his biographer has the pain of recording a serious defect in his life. Want of regular meals led to the use of stimulants by way of "support." This grew more or less into a habit, with consequences ever to be regretted. In a sketch like this, it is enough by way of warning to all under like temptation to allude to incidents with which his biographer deals as faithfully in the record as he did by personal representations at the time.

The object of his continued efforts was the perfecting of his great addition to mathematical science. He had published "Lectures on Quaternions" in 1853, and now was endeavouring to complete the theory and present it in methodical form in a work entitled "Elements of Quaternions." He was not working altogether alone; others were in communication with him on the subject, especially Professor Tait of Edinburgh. This gentleman was most anxious to turn the theory to practical purposes, and Hamilton felt obliged to restrain his impatience by desiring him to publish nothing till the theoretical work should appear in its entirety. That was not to happen in the author's lifetime. The work was approaching completion, when he was laid low by a complication of disorders, under which his constitution, never very strong, entirely broke down. He died in September 1865, a few weeks after completing his sixtieth year.

Very early in life, Hamilton had the conscious anticipation that he would do something in the course of his life that would meet with recognition in all lands. In this, at any rate, he was not disappointed. French, German, and Russian *savants* quoted him as a master in his favourite science; and, last of all, America placed his name *first* on the list of its new Academy of Sciences, rightly termed National, as it was founded soon after North and South were blended into one people.

## REMINISCENCES OF ARY SCHEFFER AND HIS TIME

### PART II.

### UNDER LOUIS PHILIPPE.

LOUIS PHILIPPE was not a Sybarite, far from it. His breakfast consisted of a roll and a glass of stout, and his dinner of "la soupe et le bouilli" and no more, though his guests were well entertained. He slept on a single mattress.

He was not generous, some said he was rather the reverse. The story goes that once, while Duke of Orleans, passing through Calais from England, as he was leaving the Hôtel Dessein, the proprietor perceived that there was a deficit of five francs on the settlement of the bill, and going to the carriage explained that the money was five francs short, when the Duke replied, "Never mind, give it to the waiters."

After the Revolution of July, Ary Scheffer and his brothers retired from political life. Men of such superior intelligence soon foresaw that the king would never realise their expectations—their aim was too high. Ary and Arnold, however, retained their positions, the former as captain of the general staff, and the latter as captain of infantry. Ary was always at his post at the yearly *émeutes* or riots, doing his duty; but the enthusiasm was dead and buried. Politics seemed to have no longer any interest for him; but, though not a friend of the king, his fidelity to the royal family remained unchanged.

His art took a stronger hold upon him. He painted Le Larmoyeur, from "The Count of Berlinchingen," and "The King of Thüle," both from Goethe's ballads; Augustine and Monica; "The Agony in the Garden"; "Mary at the foot of the Cross"; and also "Mary Magdalene." He seemed more than others to grasp the solemnity of these subjects. More and more he became interested in his second manner of painting, more anxious to chasten his drawing and general style. His first manner was bold, facile, rich in colour, and he used his colour thickly, which gave the appearance of roughness, full of evidence of great enthusiasm. The sweetness of his painting was the expression, which made you forget the ruggedness of the surface. His second style was more Italian. His great masters were at all times Raphael, Leonardo da Vinci, and Correggio. Then came two more subjects from Faust, "The Garden Scene" and the "Saba." This last gave him great trouble. The composition of the background was a great battle to conquer; one day it was beautiful, the next he spoilt it; begun over and over again, he finished it before he could be satisfied. One day he began an antique subject, the "Achilles and Priam." He would see Achilles, the slayer of Hector. The figure of Priam was very fine, his look at the eyes of the slayer of his sons was awfully pathetic; but Achilles, who, after all, was only a handsome slayer of men, had no sentiment that could touch Ary Scheffer. He

could not manage him, and soon abandoned the subject altogether.

Great and deep sorrows were gathering around the painter's heart. Madame Scheffer, who had always been delicate, was getting weaker and weaker. The doctors advised Scheffer to take her away from Paris. He found a house at Rueil called La Malmaison. I think it was the house where the Empress-Josephine lived after the divorce. It was a pretty habitation, with gardens round full of roses and choice flowers. Here Scheffer brought his mother; here he tended and nursed her day and night. Here was the fulfilment of his promise when a boy: "I shall be a son and a daughter to you." But all was in vain. Poor Madame Scheffer's time had come, and after a month or so, she passed away as she had lived, calm and peaceful. She had been a pious woman, a Protestant. What passed in the heart of that man, God alone knows! I saw him the next day; he wanted me to do something for him, I have forgotten what. I found him calm and great as always; he alone knew what he had lost; in his heart lay his mother's love, his mother's virtues, all that she was. His sorrow, deep as it was, did not break down his courage, for the next day we found him palette in hand, painting all that remained of his mother. The three sons laid her down in her last resting place; no one else was present at the burial.

MADAME SCHEFFER. (*From the painting by Ary Scheffer.*)

Ary Scheffer remained at "Malmaison" some time longer. He painted Madame Scheffer blessing her three grandchildren, Cornélie, Ary's daughter, and Henri's two children, a little boy and a little girl.

In 1842, shortly after Madame Scheffer's death, another great shock struck at his heart—the Duke of Orleans was killed. Ary had known the Duke from a youth, he had witnessed the high qualities which distinguished him when a man, developing themselves year by year; and a great attachment had been cemented between them by their intimate knowledge of one another. Their letters were those of intimate friends, totally independent of position. The artist was a man of good counsels, and the Prince a man who could value them. This calamity shook France from end to end. The consternation was universal in every rank; the court, the army, whose idol the Duke was, the bourgeoisie, ah! even the blouse, wept—and why? He was the hope of France. The king was only tolerated for his son's sake.

Ary Scheffer was the first outside the royal family who saw the Queen, drowned in grief, but resigned, as she said to him, to the will of God. Ary seemed wrought and angry against fate, and said to this sorrow-stricken mother: "Oh, Madame! this is enough to make one doubt of God." This was, no doubt, said in the exasperation of the moment, but the Queen rebuked him, though with that gentleness which characterised her towards one whose affection she trusted.

The exhibition of 1842, shortly before the death of the Prince, was the most successful for Ary Scheffer's reputation; he had there a fine array of pictures. There were: "Marguerite coming out of Church," finished at last to the satisfaction of Madame Scheffer; "Faust at the Saba"; "The Garden Scene," Faust and Marguerite in front, further back Mephistopheles, Martha—all three pictures hanging side by side. Under these were "The Two Mignons"; "The King of Thüle"; "The Agony in the Garden"; and the "Conversion of St. Augustine." A great crowd was always there; force had to be used to approach the pictures on the line, particularly "The King of Thüle," which created the greatest enthusiasm.

I never could get near, I never saw it there; but this I saw. An old model who had sat for the old King was so proud of the success that he spent his day at the exhibition; and every now and then

he would push himself through the crowd, and when in front of the King take off his hat, put himself into the proper position, and remain complacently as if to say, "Please to remember he did not do that alone; we did it between us." But *his* exhibition was a failure; the crowd could not see it.

Ary Scheffer bore his success with dignity, but there was not an atom of pride in his character. He acknowledged simply as due to his genius all the praise given to his pictures. All in him was true; he had no mock modesty, though he was very modest.

Two brief incidents will give an insight into his character. On the day of the private view of this exhibition he accidentally met Paul Delaroche, who had more pride than dignity, and said in a patronising way, "Scheffer, I congratulate you on your progress." This offended Scheffer, and he answered, "I regret not to be able to return the compliment, Delaroche;" and they separated. There had never been any love lost between the two. The other incident is this. Scheffer had laid in his first thought on canvas for "The King of Thüle." Studio No. 2, his pupils, anxious to see the result, as soon as they thought the ground was clear made an invasion, and were soon in front of the *chef d'œuvre*, all in admiration and exaltation. I said nothing. One of them turned round and admonished me for my silence. "Shall I say what I think?" said I. "Well, you are like the mouton de Panurge, where the head goes, the others blindly follow. The king's head is beautiful, and Ary Scheffer's genius will produce a *chef d'œuvre*; one can see that already; that is all every one will expect. After that, there remains but a bad composition, badly put together, false in perspective." I explained in details, and we made our exit so pleasantly, so charmingly, so like a Platonic Republic, acknowledging but one thing, superiority of talent. We had forgotten the Thüle incident, when the master came in and asked me if I was going out. Thinking he wanted me to do something for him I said, yes. It was only to order another canvas, the same size, for next morning, at six o'clock. Ary Scheffer was an early riser. At about five in the afternoon Monsieur Scheffer called me into his studio, and placed before me a new composition of "The King of Thüle," asking what I thought of it. I said only one word: "Perfect." Then he gave me a great moral lesson. "Yesterday I was in my little studio" (what he meant by his little studio was a small room in which he was then engaged finishing that fine funerary statue of his mother), "the door was open and I heard all you said. You see I have taken advantage of it. You may criticise me as much as you like and before anybody, but I claim, as your master, that in future, when you think I am at fault, you tell me as frankly as you told them. If you are wrong, then you will have received another lesson from me." I was so overcome that I knew not what to do, I could not say a word. I looked at him and admired that great man; he had taken a lesson from me, merely a boy, a young student yet in the A B C of art. He dismissed me, or else I would be there still. He had bound me to him; I loved him before, but after that I had for him the fidelity of a dog, though he never knew it. I have written this because it shows to a high degree the dignity and also the modesty of this great man.

### THE REVOLUTION OF 1848.

Madame Scheffer was dead, the Duke of Orleans was dead, Princess Marie also was dead; the great painter had also lost many of his old friends and made no new ones. Of all his friends at court, there remained only the Queen and the widowed Duchess. Sadness was there too. He was all alone, yet he remained firm to his vocation; he painted on and on. The picture "Christus Remunerator" saw the light, a companion to "Christus Consolator," as important a creation, full of majesty and sentiment. He also produced "Marguerite à la Fontaine."

The French school seemed to spring out of the Barricades of 1830. Liberty and intelligence grew like a giant; every man asserted himself, took his place, and fought valiantly to keep it. The school in Louis XV's time was all Watteau and Boucher, that of the Empire was all David and Gros. The school of 1830 had no leader; each painter, with or without genius, had his own individuality clearly marked out. The school was a school of individuality. Each painter fished on his own hook; each, ready to rise or fall on his own individuality, determined not to go back one step. Some suffered poverty. Ah! and what poverty! But they had brave hearts, and suffered bravely.

The old Academicians were adverse to the young school, and absolutely closed the door of the exposition to many a young genius. Rousseau, the greatest landscape painter, was like an outcast from them. How poor I have known him! Ary Scheffer was his great friend. How indignant he used to grow each time poor Rousseau was refused admittance at the Salon! They persevered, and conquered in time. Oh, what a school it was! Ary Scheffer, Ingres, Delacroix, Horace Vernet, Delaroche, Amaury Duval, Henri Scheffer.

Those were the historical painters. The cabinet painters were represented by Roqueplan, Decamps, Cabat, Meissonier, Jules Dupré, Dauzats, Corot.

All high in talent and fame, but each with his own individuality. There were no followers or imitators among them, even the smallest fry would assert his own; and no doubt in this lay the greatness of the school of 1830, and they called themselves men of 1830.

Some critics say they had no technical knowledge. I do not think they ever knew what that was. It could not be expected that men with such impetuous imaginations, such fervid enthusiasm for the art, could have bowed down before theories and technicalities. Besides, I am sure they did not know what these were; each painted with his own genius, and that was enough for them.

In 1846 and '47 began a conflict which soon brought on the Revolution of 1848. Louis Philippe for some time endeavoured to curtail the liberties of the people. The people who had fought and bled, had lost all confidence in the king. Guizot was hated and the king despised by *les*

*ouvriers*. The people had measured the strength of the king, the king had not measured the strength of the people ; the king thought himself secure, he was quiet, even indifferent ; but the people were getting very angry. Every one knew it but the king.

With some concessions the Revolution would have been averted, but the king, who had grown despotic, was obstinate. He would grant no reform ; on the contrary, more curtailment of liberties. The liberty of the press was in danger, public meetings were absolutely forbidden.

Revolutions in France ride at full gallop. The Revolution was at the gate of the Tuileries, yet the king would not see it. Thiers at last opened his eyes ; he saw, but it was too late ; and on the third day there was no hope, all was over, nothing was left to the king but flight. He fled, but with much less grandeur and dignity than Charles X, who was escorted from Paris to Cherbourg like a king by an army of 6,000 men. Poor Louis Philippe fled like a culprit, hiding here, hiding there, and with his noble queen, in the cold and rain, sometimes obliged to walk in the cross muddy roads. What a bitter journey for a king ! Who would not pity him ?

The Princes and Princesses were all scattered ; all were gone but the poor Duchess of Orleans. The noble woman would not go ; she would defend the right of her son. There she stood, in the Chambre des Députés, facing the enraged crowd, mad with fury, faces blackened with gunpowder, armed with loaded guns, spears, sabres, pistols ; guns were levelled at her and her children. She was dragged out of that pandemonium, through passages, pushed, crushed, fainting,—her children trodden underfoot.

In this Paris, enraged to madness by victory and wine, there is this noble princess, abandoned, alone, not a friend near to help her. But yes ! she has one. Ary Scheffer, the devoted friend of her husband, he will protect her. She and her children took refuge under his roof, and as soon as it was possible he accompanied her to Germany, where she remained for some time.

### THE SECOND REPUBLIC AND SECOND EMPIRE.

The Revolution is over. In 1830 Lafayette, the old soldier of liberty, was the great figure ; but in 1848 Lamartine was the conspicuous figure—Lamartine the poet. Not one soldier was in the provisional government.

Lamartine, by his indefatigable energy, aided by his genius, quelled the multitude and saved great bloodshed. But the calm of each day brought its political storm, its demonstration. Day after day there were troubles, fresh demands from the people. They had a Republic, but that was not enough. What they wanted was a Social Republic. They were ready to fight for it. At last came the fatal days of the 23rd, 24th, 25th, and 26th of June, 1848, when more generals fell than in any great battle of the Empire. Monseigneur Affre, Archbishop of Paris, was shot at the Barricade on June 25.

This must have been the last of Ary Scheffer's appearances on the Barricades. Prince Louis Napoleon, after he had been elected President of the Republic, offered him the Grand Cross of the Legion of Honour. This the great painter refused, stating that he had gained the grade of officer of the Legion of Honour by his genius, and would not lose it by accepting the Grand Cross for military services.

When Emperor, Napoleon might have rewarded him with the same honour which he deserved so well as an artist. He did not. The Scheffers hated Emperors and Empires.

Arnold Scheffer had died, and had bequeathed his charming residence at Lamarche to his brother Ary, and he remained there now. He occasionally paid a visit to the Orleans family at Claremont. He assisted at the funeral of the king, and also at that of his Queen Marie Amélie, that saintly woman who bore with such fortitude and resignation the great misfortunes which befel her beloved family.

After this Ary Scheffer once more visited Claremont. It was to assist at the funeral of one who was the last link of his devotion and affection. The noble Duchess of Orleans was dead. On his way back he caught a chill ; he arrived home, laid down, and passed away.

With Ary Scheffer passed away one of the finest men of his generation. Faithful to his principles, he remained a republican as long as he thought a Republic possible ; but when he saw, after the Revolution of 1830, that his old comrades were the men of *émeutes* and barricades, each working for himself, he left them.

As a painter he was not so popular as many, his subjects were of too high an order for the masses. His reputation shone only amongst the *élite* of the time. He never courted that popularity which was not intelligent. Some compared him to Paul Delaroche ; but there was a great difference. Scheffer was all true sentiment, Delaroche was sentimentality ; but not everybody could grasp that difference. True sentiment comes from the heart, sentimentality from the head ; there was an abyss between them.

Ary Scheffer was only known as a great painter, by his great artistic works, that is all the world saw of him ; his virtues were only seen in the privacy of his home, and in the very small circle of his beloved friends. The few who had the privilege of seeing him in the intimacy of his life can never forget. What a great example for them to follow !

A. LABY

## THE MANNERS AND CUSTOMS OF SOME MEN.

BY THE AUTHOR OF "VOICES FROM THE HIGHWAYS," ETC

AS soon as our domestic had spread our table and departed, Pleasance took up her parable, saying—

"We all know nowadays that it is good for girls of every rank to be trained in practical household ways. I cannot understand why boys should be withheld from a certain share in this training. It might be a most useful resource in those early years when one should not inflict too much brain work, and when there is plenty of superfluous bodily activity to be got rid of."

"I remember reading that Janet Hamilton, the peasant poetess of Western Scotland, accustomed her boys to share the domestic tasks of their sisters," observed Mrs. Yeldham.

"One could interest the most 'manly' boy in wood-chopping, water-carrying, bed-making, sweeping and cookery, and even a little simple needlework, by skilfully associating these with the necessities of pioneering in the colonies or exploring in savage countries," I assented.

"It is the misfortune of the present craze for athletic sports, with all its adjuncts of costly prizes and systematic newspaper reporting," said Pleasance, "that it tends to take these out of their proper place, and to make them the sole active interest, and indeed the chief occupation, of many who engage in them."

"Thus going flatly against the advice of the old Roman Seneca," observed Horace. "He probably noticed the same tendency in his day, for he distinctly recommends 'those kinds of exercise which are easy and short, which loosen and supple the body without great loss of time.' As for the publicity which you justly deprecate," Horace went on, "that generally means betting on the part of somebody. But we men are not the only sinners in that respect, since young ladies pander to the same bad taste when they 'go in' for public tennis tournaments and archery meetings. We could all find the same healthful enjoyment and development in more retired ways."

"I remember when bodily health and strength were too often sacrificed for mental acquirement," said Mrs. Yeldham. "So, when there came a time of violent revolt against this, like most violent revolts it went too far, and bodily exercise was preached up almost as if there was salvation in it. Sturdy muscles and stout frames were spoken of as if they were mere synonyms for pure lives and noble minds."

"Yet, if people would but look around," said Pleasance, "they would surely see some of those facts which are stubborn 'chiels' and which contradict this theory. One of the basest young men I ever knew was an ardent and successful cricketer, a leading spirit in his county eleven. Apart from this, his pleasures were those of the pothouse and the music-hall, his chosen associates were the lowest of people, and his hero-worship was reserved for the jockey and the pugilist. He hated work of every description, and idled away his time till it was too late to enter any profession, and whenever he was remonstrated with, asserted the independence that he (with good blood in his veins!) would not be above finding as a 'professional' devotee to his pet sport! He was a usurer, too, of the meanest type, lending out his little patrimony to needy people at exorbitant interest, and so utterly dead to all right feeling that he would not deny himself a single night's 'enjoyment' to spare disturbance to a brother's dying bed."

"Just so," answered Horace, "and so I have noted that while many most excellent students enjoy a fit proportion of boating or football, the 'stars' of university athletics are sometimes men who may be described as of long *standing* in their college, since often they have not taken a single *step* towards their proper goal! In many instances, this is because the young men are, as we were

saying earlier this evening, fitted by nature rather for physical than for intellectual pursuits. But in some cases it may be, as Seneca says, 'that the travail of exercise spendeth the spirit, and disableth it from application and deep study.' There are, of course, rare exceptions who can attain supreme excellence on both sides, but the distinguished prizeman who is also a famous athlete is, I fear, met with in fiction more often than in real life."

"Sometimes," said Mrs. Yeldham, "I have feared lest the craze for athletics should lure away from those walking exploits, in which—as Mr. Ruskin has told us, and anybody who knows concurs—are found the truest joys of travel. Quite lately, in an article written by one who has much influence with young men, I was pleased to note this sentence: 'Every youth should be a good pedestrian. It is at once the cheapest and most delightful of pleasures, and it is a pleasure which is in the power of every healthy person.'"

"I have known a lad who was always boasting of his prowess at football and cricket, who yet knew so little of true manliness as to be proud that he had never climbed a hill and had no desire to do so!" said Penelope. "Let me add that he was educated in Derbyshire, and had spent many holidays in Westmorland and Cumberland."

"And I had a classmate, a great sturdy fellow who spent hours practising with his dumb-bells," added Horace, "yet when he wanted a trunk carried down stairs, he walked off to fetch a porter to do the job!"

"One wonders sometimes for what these young men 'develop their muscles,'" said Pleasance, "for unless they do some service in the world, they will be only in the end the same 'food for worms' as those of the crippled and invalided! 'The glory of a young man is his strength,' not that he may exhibit it in the form of 'grand biceps,' but that he may set it to the easy accomplishment of necessary tasks which weigh hardly where it does not exist. I remember a vignette in some old periodical. It showed a broad staircase, up which a six-foot 'Jeames' carried a silver salver containing a calling card, while behind him toiled a slight girl bearing a heavy scuttle of coals. There was a whole philosophy of 'how things ought not to be' in that little sketch!"

"I don't think men would learn to value women's work less by knowing something about it," said Horace, thoughtfully. "I always notice the women who know something about our kinds of work are those who respect us the most!"

"The contemptuous regard which many men give to the womanly tasks they know nothing about, may have even had some influence in bringing such tasks into some disrepute among the weaker sort of women," said Pleasance. "I can sympathise with the man who declares he would rather his wife should be a good cook than a senior wrangler; but I hate to hear him say so, if I know it means that he regards 'the good cook' as branded inferior to the sex that is supposed 'not to be made for such work.'"

"Don't you remember the effect a little experience produced on the children in one of Mrs. Ewing's delightful rhymes?" observed Penelope. "They had thought that,

> 'A regular wash must be splendid fun, and everybody knows
> That anyone in the world can wash out a few dirty clothes.'

But after their experiment of the doll's wash, they came to the conclusion,

> 'It's a very odd thing that what looks so easy should be so difficult to do,'

and accordingly declared that now,

> 'We feel very sorry for Sally every week, and we don't mean to dirty our dresses so much any more.'"

"I have noticed," said Mrs. Yeldham, "that in families of boys only, where the mother is clever and sensible, the lads often grow up most useful and practically clever—neat and orderly and helpful—because they have naturally aided her in matters which are otherwise too often left wholly to the girls."

"And they haven't been mollycoddles either," asserted Horace. "I have heard the testimony of scores of mothers and sisters, that it is the romping rogue of a boy who is generally of 'ten times more use in a house' than his quieter and more sedentary brother; the latter, probably feeling that Nature has not been very determinate in her line between him and 'the girls,' is apt to do all he can to deepen it artificially."

"I can see that this commonly permitted withdrawal from the little interests and tasks of daily household life is likely to have its share in producing another trait I have noticed in some men," pondered Penelope—"I mean an ignoring of all duty in little kind attentions and considerations. Are they abroad, they know well enough that they like to hear from home, but they delay or entirely neglect the letter whose loving messages or simple explanations would bring new life and joy to longing hearts. Do they marry? Then such delegate all these tender little interests to their wives, as if the dry items of information, and the superficial courtesies—the carelessly chosen 'Christmas cards' and inconsidered gifts—of a slight new acquaintance can in any degree replace the precious freemasonry of years of common experience and mutual memory!"

"That is the wife's fault, generally," put in Pleasance. "Instead of keeping her husband up to his proper duties in this respect—making it easy and pleasant for him to do them, asking if they are done and saying straightforwardly that they ought to be done, she sometimes even throws obstacles in his way, and then volunteers to discharge them for him! This latter may be done in a sort of adoring slavery, but it is some women's method of making themselves indispensable and so increasing their own power. And thus a man's 'pleasant vices,' his absent-mindedness, his indifference, his idleness, become the chains which bind him into subjugation and drag him down from his lawful place as the master of his house."

"Ay," said Horace. "But I always say it

remains a man's own fault when a woman takes to 'managing' him. Why can he not be a reasonable being to whom she can plainly say, 'Ought not you to do this?' 'Should you do that?' 'I think this is wrong.' 'I am sure that is right,' just as men and women say among themselves. But no, certain men take up a notion which they express by the phrase, that they 'may be led, but not driven,' which really means that they must not be spoken with frankly, as friends speak, but that they must be hoodwinked after the fashion sometimes necessary with delirious patients or lunatics, and as inferior nurses deal with naughty children."

"Bravo, Horace," cried Pleasance. "I own I'm heartily disgusted with the twaddling tone so often taken about 'women influencing men for their good.' Has God divided His moral blessings according to sex? We have an equal right to expect men to influence us for good! And so they do. The first person who awoke my wider sense of right and wrong, and gave the first direction to my real mental interests, was a boy of seventeen, when I was a girl of ten. And it has been the same often since, even in the case of men much younger than myself, and who have been little aware when virtue went out of them!"

"I think," said Mrs. Yeldham, "that some men —especially young men—get into a morbid way of thinking that nobody really regards them, and that though kindness may be shown to them, nobody is hurt if they give no response; that, in short, response might possibly be regarded as a bore. I remember some friends of mine who showed great kindness to a stranger youth, opened their house freely to him at all times, and looked after him in sickness and trouble. He kept up some slight correspondence with them for a while when he went away, but, in later years, he actually returned to the town with a wife and children, and never even made his presence known to his old friends!"

"On the other hand," said Pleasance, "some excuse their sinking into habits of indolent negligence and silence, by assuring themselves not only that their own hearts remain as warm and true as they ever were, but that those who love them are fully aware of this! These demand a great deal of 'trust,' forgetful that 'trust' is a root which will not 'strike' save in a very rich soil of foregone satisfaction!"

"But it is a most unwholesome thing when men of any age take to regarding themselves as interesting cases, entitled to a secure claim on charitable constructions and persistent kindness that their actions do little to deserve," said I.

"I must quote Mrs. Ewing again," observed Penelope. "Don't you remember 'Master Fritz'?——

'If you make nice feasts every day for me and Nickel and never keep us waiting for our food,
And always do everything I want and attend to everything I say, I'm sure I shall almost always be good.
And if I am naughty now and then it'll most likely be your fault: and if it isn't, you mustn't mind;
For even if I seem to be cross, you ought to know that I mean to be kind!'"

"Ay," said Pleasance. "I fear that young man is not unknown to most of us. Who has not heard the asinine 'It is always my way,' which such think sufficient explanation for perpetually recurring faults of self-indulgence or peevishness or passion, or of that general pigheadedness which he glorifies by calling it 'my pride'? 'It is always my way,' he murmurs, as he puts aside your advice and follows his own will. 'It is just my luck,' he cries, when he comes to you to save him from some consequences he does not like! By these marks may you know him!"

"I wonder sometimes if there was not too much 'interest' shown in Edwin Richardson, in his first goings astray," mused Horace Penrith, returning to the subject rankling in his heart.

I could not help mischievously remarking, "Possibly too much 'interest' of a certain kind has been shown in him up to this very date!" And Horace, who took my hint, looked back at me reproachfully, and said:

"Well, I had been so much blamed for my youthful instincts of severity towards him, that at last I was ready to blame myself, and thought I would have my share of trying the other course!"

"In short, you felt like the old man with the donkey in the famous fable," I rejoined, wickedly. "I think that is how we are all tempted to feel. But we should resist—for the sake of the donkey!"

"I know an experienced instructor of youth, who used to say that there was seldom anything more salutary for naughtiness than a little wholesome neglect," said Penelope. "Moral maladies are apt to be hopelessly 'struck in,' by the time a child or a young person begins to regard himself (to quote Mrs. Ewing again) as

'A solemn charge, and a fair white page, and a tender bud, and a spotless nature of wax to be moulded:—and I think she called me a Privilege.'"

"It seems almost incredible that many boys or men should be in danger of such mental habits as these, doesn't it?" said Horace, simply.

I laughed. "Even Mr. Penrith," said I, "is not too enlightened to be inclined to relegate to our poor sex any weaknesses which strike him as utterly contemptible! But I am forced to say that just as there are male hypochondriacs, searching among physicians, wandering through hydropathic establishments, trying new drugs, and learned in chemical foods, so there are men who revel in the self-dissection of their own characters, are interested in their own moral deficiencies, and make capital out of qualities for which they should rather blush. Like those 'models' who haunt surgical lecture-rooms and offer themselves for experimental bandaging, so these go about the world, tendering their souls for treatment. They do not wish to reform, but they have a morbid taste for the process of being reformed! I can very well believe that Edwin Richardson took this direction when he turned downward."

"The important question being," said Pleasance, "what then might have been done to divert him upwards?"

"I incline to Penelope's wholesome neglect," answered Mrs. Yeldham, "by which I mean that

tutor for his sons, and they remained for a time under his care. The most solid mark of Miss Edgeworth's regard was given in a request that he would take charge of her younger brother Francis, and direct his mathematical studies. The request was seconded by a letter from the young man himself, highly discriminative of Hamilton's worth. Yet compliance was refused, for Hamilton felt he could not do justice to the pupil and to the Board of Astronomy from whom he held his appointment. They had kindly arranged that, although director of their observatory, he was not bound down to practical astronomy, but was at liberty to follow his own special subject of pure mathematics. Such an arrangement was a sufficiently delicate one ; later, indeed, it produced a certain amount of friction, although Hamilton scrupulously adhered to his side of the agreement, and, in following mainly his own studies, gave a fair amount of attention to his practical work. He visited other observatories, and made himself master of the practice to be followed.

Subsequently in Viscount Adare he found a pupil to his mind. An enthusiast in study, he wanted only direction, not assiduous teaching. Combining fortune with a love of science, his tutor looked upon him as one likely to further the interests of astronomy, if not of pure mathematics. A young man of somewhat mature mind, he gave Hamilton something he could lean upon as well as train. Discussing with his pupil religion, metaphysics, and what not, he learnt while he taught. The two enjoyed together the beauties of nature, and while in each other's company laid up a store of common knowledge and sympathy which served as a basis for a correspondence that was in its own way equally delightful.

In similar fashion Hamilton opened his mind and heart to Aubrey de Vere. It is characteristic of him that, in the case of both these young men, he raised a junior to his own level, and did not hesitate to lay bare to them even his weaknesses and faults. The correspondence with both forms a large part of the material we have for forming a correct idea of the elder man's nature.

The precocity of Hamilton's youth was equalled, if not exceeded, by the early blossom of his reputation in manhood. He was only twenty-nine when the then Lord Lieutenant conferred upon him the distinction of knighthood. Three years later the scientific men of Ireland showed their sense of his merits by electing him President of the Royal Irish Academy against so formidable a competitor as Whately, the Archbishop of Dublin. At the age of thirty-eight, in the full strength of his manhood, he had earned the distinction of a Civil List pension, an honour and support usually bestowed when an eminent man is in his decline. In external honours there was little left for him to attain ; these, however, were but temporary, and he was at the same time preparing the work which will give his name a lasting place in the history of mathematical science. This was his discovery of Quaternions ; all that we need say about it here is that it is a new and advanced method of algebraical investigation. It was soon applied to a practical purpose. Railways were then beginning to be constructed, and often had to be carried on arches over roads or streams at angle sharper than a right. These arches, called "skew arches," presented problems to the engineers of which they could only conjecture the solution. On applying to Hamilton for aid, he brought his new method to bear, and made the solution complete.

In the very year that Sir Robert Peel conferred the pension upon him, the first germ of this method arose in his mind. Writing in 1858 he says, "Quaternions started into life, or light, full grown, on October 16, 1843, as I was walking with Lady Hamilton to Dublin, and came up to Brougham Bridge. . . I felt a problem to have been at that moment solved . . . which had haunted me for at least fifteen years before." This extract is a parallel to the story of Isaac Newton, brooding over the fall of an apple in his garden at Woolsthorpe, which current report connects with his discovery of gravitation. Hamilton further says that he felt it would be worth while to spend the labour of ten years in the full development of his discovery, and, as a matter of fact, ten years elapsed before his complete work was published.

So eminent a position naturally brought him into contact with men of various grades in scientific attainment, few of whom can have been said to equal him, while he towered far above the larger number. His dealings with his contemporaries furnish excellent illustrations of his own character. On the occasion of the election to the presidency of the Academy, Dr. Lloyd, the son of his predecessor, was put forward as a candidate, and was unable to prevent his supporters from contesting the election. The contest produced only feelings of the most amicable nature between the two candidates. When elected, Hamilton appointed Lloyd one of the vice-presidents, and prepared the way for his election as president when he himself vacated the chair.

There were some who claimed to have been beforehand with him in the discovery of Quaternions, especially the late Professor M'Cullagh. Hamilton, while acknowledging with the utmost generosity various subsidiary aids, could not allow that he had taken the discovery from another. He patiently proved to his opponent that it could not be so, and afterwards took every opportunity to show his appreciation of the professor's genuine merits.

As secretary to one of the sections of the British Association, he was on one occasion desired to report on a supposed mathematical discovery by Mr. Jerrard, of Bristol. His opinion was unfavourable ; but so painstaking was he in the matter, that he actually sent the author 124 pages of manuscript in which the question was exhaustively discussed.

With Sir John Herschel he carried on a long and brotherly correspondence, each of the distinguished men rejoicing in the other's achievements. It will be remembered that Hamilton's learning was comprehensive. He was a mathematician *par excellence*, but also an astronomer, a metaphysician, and a linguist. In one of his letters he ventures the statement that English men of science too often subordinate the reason to the understanding ; and

whether he was just in this judgment or not, there must be few even among specialists who would deny the advantages gained in pursuing a wider range of study.

Sir William Hamilton, of Edinburgh, great in metaphysics, despised mathematics. His namesake of Dublin did not despise metaphysics, and was able to say at the end of an evening spent at the Edinburgh professor's house: "Well, you see, we did not fight."

The latter years of Hamilton's life formed a period of severe labour. One or two instances of his persevering industry have already been given, but the full extent of his labours would hardly be credited were it not for memorandums in his own hand, recording twelve and thirteen hours of work at a stretch. In connection with this, his biographer has the pain of recording a serious defect in his life. Want of regular meals led to the use of stimulants by way of "support." This grew more or less into a habit, with consequences ever to be regretted. In a sketch like this, it is enough by way of warning to all under like temptation to allude to incidents with which his biographer deals as faithfully in the record as he did by personal representations at the time.

The object of his continued efforts was the perfecting of his great addition to mathematical science. He had published "Lectures on Quaternions" in 1853, and now was endeavouring to complete the theory and present it in methodical form in a work entitled "Elements of Quaternions." He was not working altogether alone; others were in communication with him on the subject, especially Professor Tait of Edinburgh. This gentleman was most anxious to turn the theory to practical purposes, and Hamilton felt obliged to restrain his impatience by desiring him to publish nothing till the theoretical work should appear in its entirety. That was not to happen in the author's lifetime. The work was approaching completion, when he was laid low by a complication of disorders, under which his constitution, never very strong, entirely broke down. He died in September 1865, a few weeks after completing his sixtieth year.

Very early in life, Hamilton had the conscious anticipation that he would do something in the course of his life that would meet with recognition in all lands. In this, at any rate, he was not disappointed. French, German, and Russian *savants* quoted him as a master in his favourite science; and, last of all, America placed his name *first* on the list of its new Academy of Sciences, rightly termed National, as it was founded soon after North and South were blended into one people.

## REMINISCENCES OF ARY SCHEFFER AND HIS TIME

### PART II.

### UNDER LOUIS PHILIPPE.

LOUIS PHILIPPE was not a Sybarite, far from it. His breakfast consisted of a roll and a glass of stout, and his dinner of "la soupe et le bouilli" and no more, though his guests were well entertained. He slept on a single mattress.

He was not generous, some said he was rather the reverse. The story goes that once, while Duke of Orleans, passing through Calais from England, as he was leaving the Hôtel Dessein, the proprietor perceived that there was a deficit of five francs on the settlement of the bill, and going to the carriage explained that the money was five francs short, when the Duke replied, "Never mind, give it to the waiters."

After the Revolution of July, Ary Scheffer and his brothers retired from political life. Men of such superior intelligence soon foresaw that the king would never realise their expectations—their aim was too high. Ary and Arnold, however, retained their positions, the former as captain of the general staff, and the latter as captain of infantry. Ary was always at his post at the yearly *émeutes* or riots, doing his duty; but the enthusiasm was dead and buried. Politics seemed to have no longer any interest for him; but, though not a friend of the king, his fidelity to the royal family remained unchanged.

His art took a stronger hold upon him. He painted Le Larmoyeur, from "The Count of Berlinchingen," and "The King of Thüle," both from Goethe's ballads; Augustine and Monica; "The Agony in the Garden"; "Mary at the foot of the Cross"; and also "Mary Magdalene." He seemed more than others to grasp the solemnity of these subjects. More and more he became interested in his second manner of painting, more anxious to chasten his drawing and general style. His first manner was bold, facile, rich in colour, and he used his colour thickly, which gave the appearance of roughness, full of evidence of great enthusiasm. The sweetness of his painting was the expression, which made you forget the ruggedness of the surface. His second style was more Italian. His great masters were at all times Raphael, Leonardo da Vinci, and Correggio. Then came two more subjects from Faust, "The Garden Scene" and the "Saba." This last gave him great trouble. The composition of the background was a great battle to conquer; one day it was beautiful, the next he spoilt it; begun over and over again, he finished it before he could be satisfied. One day he began an antique subject, the "Achilles and Priam." He would see Achilles, the slayer of Hector. The figure of Priam was very fine, his look at the eyes of the slayer of his sons was awfully pathetic; but Achilles, who, after all, was only a handsome slayer of men, had no sentiment that could touch Ary Scheffer. He

could not manage him, and soon abandoned the subject altogether.

Great and deep sorrows were gathering around the painter's heart. Madame Scheffer, who had always been delicate, was getting weaker and weaker. The doctors advised Scheffer to take her away from Paris. He found a house at Rueil called La Malmaison. I think it was the house where the Empress Josephine lived after the divorce. It was a pretty habitation, with gardens round full of roses and choice flowers. Here Scheffer brought his mother; here he tended and nursed her day and night. Here was the fulfilment of his promise when a boy: "I shall be a son and a daughter to you." But all was in vain. Poor Madame Scheffer's time had come, and after a month or so, she passed away as she had lived, calm and peaceful. She had been a pious woman, a Protestant. What passed in the heart of that man, God alone knows! I saw him the next day; he wanted me to do something for him, I have forgotten what. I found him calm and great as always; he alone knew what he had lost; in his heart lay his mother's love, his mother's virtues, all that she was. His sorrow, deep as it was, did not break down his courage, for the next day we found him palette in hand, painting all that remained of his mother. The three sons laid her down in her last resting place; no one else was present at the burial.

MADAME SCHEFFER. (*From the painting by Ary Scheffer.*)

Ary Scheffer remained at "Malmaison" some time longer. He painted Madame Scheffer blessing her three grandchildren, Cornélie, Ary's daughter, and Henri's two children, a little boy and a little girl.

In 1842, shortly after Madame Scheffer's death, another great shock struck at his heart—the Duke of Orleans was killed. Ary had known the Duke from a youth, he had witnessed the high qualities which distinguished him when a man, developing themselves year by year; and a great attachment had been cemented between them by their intimate knowledge of one another. Their letters were those of intimate friends, totally independent of position. The artist was a man of good counsels, and the Prince a man who could value them. This calamity shook France from end to end. The consternation was universal in every rank; the court, the army, whose idol the Duke was, the bourgeoisie, ah! even the blouse, wept—and why? He was the hope of France. The king was only tolerated for his son's sake.

Ary Scheffer was the first outside the royal family who saw the Queen, drowned in grief, but resigned, as she said to him, to the will of God. Ary seemed wrought and angry against fate, and said to this sorrow-stricken mother: "Oh, Madame! this is enough to make one doubt of God." This was, no doubt, said in the exasperation of the moment, but the Queen rebuked him, though with that gentleness which characterised her towards one whose affection she trusted.

The exhibition of 1842, shortly before the death of the Prince, was the most successful for Ary Scheffer's reputation; he had there a fine array of pictures. There were: "Marguerite coming out of Church," finished at last to the satisfaction of Madame Scheffer; "Faust at the Saba"; "The Garden Scene," Faust and Marguerite in front, further back Mephistopheles, Martha—all three pictures hanging side by side. Under these were "The Two Mignons"; "The King of Thüle"; "The Agony in the Garden"; and the "Conversion of St. Augustine." A great crowd was always there; force had to be used to approach the pictures on the line, particularly "The King of Thüle," which created the greatest enthusiasm.

I never could get near, I never saw it there; but this I saw. An old model who had sat for the old King was so proud of the success that he spent his day at the exhibition; and every now and then

he would push himself through the crowd, and when in front of the King take off his hat, put himself into the proper position, and remain complacently as if to say, "Please to remember he did not do that alone; we did it between us." But *his* exhibition was a failure; the crowd could not see it.

Ary Scheffer bore his success with dignity, but there was not an atom of pride in his character. He acknowledged simply as due to his genius all the praise given to his pictures. All in him was true; he had no mock modesty, though he was very modest.

Two brief incidents will give an insight into his character. On the day of the private view of this exhibition he accidentally met Paul Delaroche, who had more pride than dignity, and said in a patronising way, "Scheffer, I congratulate you on your progress." This offended Scheffer, and he answered, "I regret not to be able to return the compliment, Delaroche;" and they separated. There had never been any love lost between the two. The other incident is this. Scheffer had laid in his first thought on canvas for "The King of Thüle." Studio No. 2, his pupils, anxious to see the result, as soon as they thought the ground was clear made an invasion, and were soon in front of the *chef d'œuvre*, all in admiration and exaltation. I said nothing. One of them turned round and admonished me for my silence. "Shall I say what I think?" said I. "Well, you are like the mouton de Panurge, where the head goes, the others blindly follow. The king's head is beautiful, and Ary Scheffer's genius will produce a *chef d'œuvre*; one can see that already; that is all every one will expect. After that, there remains but a bad composition, badly put together, false in perspective." I explained in details, and we made our exit so pleasantly, so charmingly, so like a Platonic Republic, acknowledging but one thing, superiority of talent. We had forgotten the Thüle incident, when the master came in and asked me if I was going out. Thinking he wanted me to do something for him I said, yes. It was only to order another canvas, the same size, for next morning, at six o'clock. Ary Scheffer was an early riser. At about five in the afternoon Monsieur Scheffer called me into his studio, and placed before me a new composition of "The King of Thüle," asking what I thought of it. I said only one word: "Perfect." Then he gave me a great moral lesson. "Yesterday I was in my little studio" (what he meant by his little studio was a small room in which he was then engaged finishing that fine funerary statue of his mother), "the door was open and I heard all you said. You see I have taken advantage of it. You may criticise me as much as you like and before anybody, but I claim, as your master, that in future, when you think I am at fault, you tell me as frankly as you told them. If you are wrong, then you will have received another lesson from me." I was so overcome that I knew not what to do, I could not say a word. I looked at him and admired that great man; he had taken a lesson from me, merely a boy, a young student yet in the A B C of art. He dismissed me, or else I would be there still. He had bound me to him; I loved him before, but after that I had for him the fidelity of a dog, though he never knew it. I have written this because it shows to a high degree the dignity and also the modesty of this great man.

### THE REVOLUTION OF 1848.

Madame Scheffer was dead, the Duke of Orleans was dead, Princess Marie also was dead; the great painter had also lost many of his old friends and made no new ones. Of all his friends at court, there remained only the Queen and the widowed Duchess. Sadness was there too. He was all alone, yet he remained firm to his vocation; he painted on and on. The picture "Christus Remunerator" saw the light, a companion to "Christus Consolator," as important a creation, full of majesty and sentiment. He also produced "Marguerite à la Fontaine."

The French school seemed to spring out of the Barricades of 1830. Liberty and intelligence grew like a giant; every man asserted himself, took his place, and fought valiantly to keep it. The school in Louis XV's time was all Watteau and Boucher, that of the Empire was all David and Gros. The school of 1830 had no leader; each painter, with or without genius, had his own individuality clearly marked out. The school was a school of individuality. Each painter fished on his own hook; each, ready to rise or fall on his own individuality, determined not to go back one step. Some suffered poverty. Ah! and what poverty! But they had brave hearts, and suffered bravely.

The old Academicians were adverse to the young school, and absolutely closed the door of the exposition to many a young genius. Rousseau, the greatest landscape painter, was like an outcast from them. How poor I have known him! Ary Scheffer was his great friend. How indignant he used to grow each time poor Rousseau was refused admittance at the Salon! They persevered, and conquered in time. Oh, what a school it was! Ary Scheffer, Ingres, Delacroix, Horace Vernet, Delaroche, Amaury Duval, Henri Scheffer.

Those were the historical painters. The cabinet painters were represented by Roqueplan, Decamps, Cabat, Meissonier, Jules Dupré, Dauzats, Corot.

All high in talent and fame, but each with his own individuality. There were no followers or imitators among them, even the smallest fry would assert his own; and no doubt in this lay the greatness of the school of 1830, and they called themselves men of 1830.

Some critics say they had no technical knowledge. I do not think they ever knew what that was. It could not be expected that men with such impetuous imaginations, such fervid enthusiasm for the art, could have bowed down before theories and technicalities. Besides, I am sure they did not know what these were; each painted with his own genius, and that was enough for them.

In 1846 and '47 began a conflict which soon brought on the Revolution of 1848. Louis Philippe for some time endeavoured to curtail the liberties of the people. The people who had fought and bled, had lost all confidence in the king. Guizot was hated and the king despised by *les*

*ouvriers*. The people had measured the strength of the king, the king had not measured the strength of the people ; the king thought himself secure, he was quiet, even indifferent ; but the people were getting very angry. Every one knew it but the king.

With some concessions the Revolution would have been averted, but the king, who had grown despotic, was obstinate. He would grant no reform; on the contrary, more curtailment of liberties. The liberty of the press was in danger, public meetings were absolutely forbidden.

Revolutions in France ride at full gallop. The Revolution was at the gate of the Tuileries, yet the king would not see it. Thiers at last opened his eyes ; he saw, but it was too late ; and on the third day there was no hope, all was over, nothing was left to the king but flight. He fled, but with much less grandeur and dignity than Charles X, who was escorted from Paris to Cherbourg like a king by an army of 6,000 men. Poor Louis Philippe fled like a culprit, hiding here, hiding there, and with his noble queen, in the cold and rain, sometimes obliged to walk in the cross muddy roads. What a bitter journey for a king ! Who would not pity him ?

The Princes and Princesses were all scattered ; all were gone but the poor Duchess of Orleans. The noble woman would not go ; she would defend the right of her son. There she stood, in the Chambre des Députés, facing the enraged crowd, mad with fury, faces blackened with gunpowder, armed with loaded guns, spears, sabres, pistols ; guns were levelled at her and her children. She was dragged out of that pandemonium, through passages, pushed, crushed, fainting,—her children trodden underfoot.

In this Paris, enraged to madness by victory and wine, there is this noble princess, abandoned, alone, not a friend near to help her. But yes ! she has one. Ary Scheffer, the devoted friend of her husband, he will protect her. She and her children took refuge under his roof, and as soon as it was possible he accompanied her to Germany, where she remained for some time.

### THE SECOND REPUBLIC AND SECOND EMPIRE.

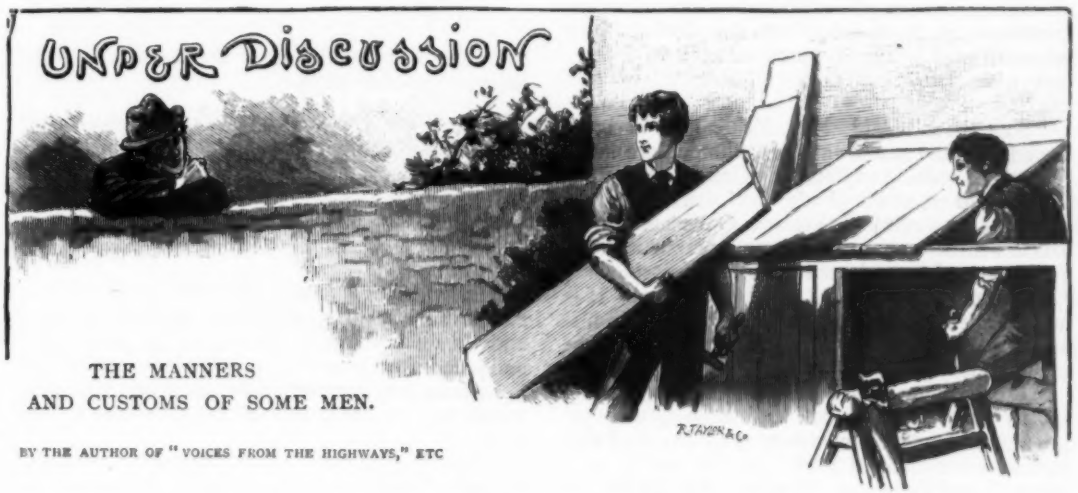
The Revolution is over. In 1830 Lafayette, the old soldier of liberty, was the great figure ; but in 1848 Lamartine was the conspicuous figure—Lamartine the poet. Not one soldier was in the provisional government.

Lamartine, by his indefatigable energy, aided by his genius, quelled the multitude and saved great bloodshed. But the calm of each day brought its political storm, its demonstration. Day after day there were troubles, fresh demands from the people. They had a Republic, but that was not enough. What they wanted was a Social Republic. They were ready to fight for it. At last came the fatal days of the 23rd, 24th, 25th, and 26th of June, 1848, when more generals fell than in any great battle of the Empire. Monseigneur Affre, Archbishop of Paris, was shot at the Barricade on June 25.

This must have been the last of Ary Scheffer's appearances on the Barricades. Prince Louis Napoleon, after he had been elected President of the Republic, offered him the Grand Cross of the Legion of Honour. This the great painter refused, stating that he had gained the grade of officer of the Legion of Honour by his genius, and would not lose it by accepting the Grand Cross for military services.

When Emperor, Napoleon might have rewarded him with the same honour which he deserved so well as an artist. He did not. The Scheffers hated Emperors and Empires.

Arnold Scheffer had died, and had bequeathed his charming residence at Lamarche to his brother Ary, and he remained there now. He occasionally paid a visit to the Orleans family at Claremont. He assisted at the funeral of the king, and also at that of his Queen Marie Amélie, that saintly woman who bore with such fortitude and resignation the great misfortunes which befel her beloved family.



After this Ary Scheffer once more visited Claremont. It was to assist at the funeral of one who was the last link of his devotion and affection. The noble Duchess of Orleans was dead. On his way back he caught a chill ; he arrived home, laid down, and passed away.

With Ary Scheffer passed away one of the finest men of his generation. Faithful to his principles, he remained a republican as long as he thought a Republic possible ; but when he saw, after the Revolution of 1830, that his old comrades were the men of *émeutes* and barricades, each working for himself, he left them.

As a painter he was not so popular as many, his subjects were of too high an order for the masses. His reputation shone only amongst the *élite* of the time. He never courted that popularity which was not intelligent. Some compared him to Paul Delaroche ; but there was a great difference. Scheffer was all true sentiment, Delaroche was sentimentality; but not everybody could grasp that difference. True sentiment comes from the heart, sentimentality from the head ; there was an abyss between them.

Ary Scheffer was only known as a great painter, by his great artistic works, that is all the world saw of him ; his virtues were only seen in the privacy of his home, and in the very small circle of his beloved friends. The few who had the privilege of seeing him in the intimacy of his life can never forget. What a great example for them to follow !

A. LABY

## THE MANNERS AND CUSTOMS OF SOME MEN.

BY THE AUTHOR OF "VOICES FROM THE HIGHWAYS," ETC

AS soon as our domestic had spread our table and departed, Pleasance took up her parable, saying—

"We all know nowadays that it is good for girls of every rank to be trained in practical household ways. I cannot understand why boys should be withheld from a certain share in this training. It might be a most useful resource in those early years when one should not inflict too much brain work, and when there is plenty of superfluous bodily activity to be got rid of."

"I remember reading that Janet Hamilton, the peasant poetess of Western Scotland, accustomed her boys to share the domestic tasks of their sisters," observed Mrs. Yeldham.

"One could interest the most 'manly' boy in wood-chopping, water-carrying, bed-making, sweeping and cookery, and even a little simple needlework, by skilfully associating these with the necessities of pioneering in the colonies or exploring in savage countries," I assented.

"It is the misfortune of the present craze for athletic sports, with all its adjuncts of costly prizes and systematic newspaper reporting," said Pleasance, "that it tends to take these out of their proper place, and to make them the sole active interest, and indeed the chief occupation, of many who engage in them."

"Thus going flatly against the advice of the old Roman Seneca," observed Horace. "He probably noticed the same tendency in his day, for he distinctly recommends 'those kinds of exercise which are easy and short, which loosen and supple the body without great loss of time.' As for the publicity which you justly deprecate," Horace went on, "that generally means betting on the part of somebody. But we men are not the only sinners in that respect, since young ladies pander to the same bad taste when they 'go in' for public tennis tournaments and archery meetings. We could all find the same healthful enjoyment and development in more retired ways."

"I remember when bodily health and strength were too often sacrificed for mental acquirement," said Mrs. Yeldham. "So, when there came a time of violent revolt against this, like most violent revolts it went too far, and bodily exercise was preached up almost as if there was salvation in it. Sturdy muscles and stout frames were spoken of as if they were mere synonyms for pure lives and noble minds."

"Yet, if people would but look around," said Pleasance, "they would surely see some of those facts which are stubborn 'chiels' and which contradict this theory. One of the basest young men I ever knew was an ardent and successful cricketer, a leading spirit in his county eleven. Apart from this, his pleasures were those of the pothouse and the music-hall, his chosen associates were the lowest of people, and his hero-worship was reserved for the jockey and the pugilist. He hated work of every description, and idled away his time till it was too late to enter any profession, and whenever he was remonstrated with, asserted the independence that he (with good blood in his veins!) would not be above finding as a 'professional' devotee to his pet sport! He was a usurer, too, of the meanest type, lending out his little patrimony to needy people at exorbitant interest, and so utterly dead to all right feeling that he would not deny himself a single night's 'enjoyment' to spare disturbance to a brother's dying bed."

"Just so," answered Horace, "and so I have noted that while many most excellent students enjoy a fit proportion of boating or football, the 'stars' of university athletics are sometimes men who may be described as of long *standing* in their college, since often they have not taken a single *step* towards their proper goal! In many instances, this is because the young men are, as we were

saying earlier this evening, fitted by nature rather for physical than for intellectual pursuits. But in some cases it may be, as Seneca says, 'that the travail of exercise spendeth the spirit, and disableth it from application and deep study.' There are, of course, rare exceptions who can attain supreme excellence on both sides, but the distinguished prizeman who is also a famous athlete is, I fear, met with in fiction more often than in real life."

"Sometimes," said Mrs. Yeldham, "I have feared lest the craze for athletics should lure away from those walking exploits, in which—as Mr. Ruskin has told us, and anybody who knows concurs—are found the truest joys of travel. Quite lately, in an article written by one who has much influence with young men, I was pleased to note this sentence: 'Every youth should be a good pedestrian. It is at once the cheapest and most delightful of pleasures, and it is a pleasure which is in the power of every healthy person.'"

"I have known a lad who was always boasting of his prowess at football and cricket, who yet knew so little of true manliness as to be proud that he had never climbed a hill and had no desire to do so!" said Penelope. "Let me add that he was educated in Derbyshire, and had spent many holidays in Westmorland and Cumberland."

"And I had a classmate, a great sturdy fellow who spent hours practising with his dumb-bells," added Horace, "yet when he wanted a trunk carried down stairs, he walked off to fetch a porter to do the job!"

"One wonders sometimes for what these young men 'develop their muscles,'" said Pleasance, "for unless they do some service in the world, they will be only in the end the same 'food for worms' as those of the crippled and invalided! 'The glory of a young man is his strength,' not that he may exhibit it in the form of 'grand biceps,' but that he may set it to the easy accomplishment of necessary tasks which weigh hardly where it does not exist. I remember a vignette in some old periodical. It showed a broad staircase, up which a six-foot 'Jeames' carried a silver salver containing a calling card, while behind him toiled a slight girl bearing a heavy scuttle of coals. There was a whole philosophy of 'how things ought not to be' in that little sketch!"

"I don't think men would learn to value women's work less by knowing something about it," said Horace, thoughtfully. "I always notice the women who know something about our kinds of work are those who respect us the most!"

"The contemptuous regard which many men give to the womanly tasks they know nothing about, may have even had some influence in bringing such tasks into some disrepute among the weaker sort of women," said Pleasance. "I can sympathise with the man who declares he would rather his wife should be a good cook than a senior wrangler; but I hate to hear him say so, if I know it means that he regards 'the good cook' as branded inferior to the sex that is supposed 'not to be made for such work.'"

"Don't you remember the effect a little experience produced on the children in one of Mrs. Ewing's delightful rhymes?" observed Penelope. "They had thought that,

> 'A regular wash must be splendid fun, and everybody knows
> That anyone in the world can wash out a few dirty clothes.'

But after their experiment of the doll's wash, they came to the conclusion,

> 'It's a very odd thing that what looks so easy should be so difficult to do,'

and accordingly declared that now,

> 'We feel very sorry for Sally every week, and we don't mean to dirty our dresses so much any more.'"

"I have noticed," said Mrs. Yeldham, "that in families of boys only, where the mother is clever and sensible, the lads often grow up most useful and practically clever—neat and orderly and helpful—because they have naturally aided her in matters which are otherwise too often left wholly to the girls."

"And they haven't been mollycoddles either," asserted Horace. "I have heard the testimony of scores of mothers and sisters, that it is the romping rogue of a boy who is generally of 'ten times more use in a house' than his quieter and more sedentary brother; the latter, probably feeling that Nature has not been very determinate in her line between him and 'the girls,' is apt to do all he can to deepen it artificially."

"I can see that this commonly permitted withdrawal from the little interests and tasks of daily household life is likely to have its share in producing another trait I have noticed in some men," pondered Penelope—"I mean an ignoring of all duty in little kind attentions and considerations. Are they abroad, they know well enough that they like to hear from home, but they delay or entirely neglect the letter whose loving messages or simple explanations would bring new life and joy to longing hearts. Do they marry? Then such delegate all these tender little interests to their wives, as if the dry items of information, and the superficial courtesies—the carelessly chosen 'Christmas cards' and inconsidered gifts—of a slight new acquaintance can in any degree replace the precious freemasonry of years of common experience and mutual memory!"

"That is the wife's fault, generally," put in Pleasance. "Instead of keeping her husband up to his proper duties in this respect—making it easy and pleasant for him to do them, asking if they are done and saying straightforwardly that they ought to be done, she sometimes even throws obstacles in his way, and then volunteers to discharge them for him! This latter may be done in a sort of adoring slavery, but it is some women's method of making themselves indispensable and so increasing their own power. And thus a man's 'pleasant vices,' his absent-mindedness, his indifference, his idleness, become the chains which bind him into subjugation and drag him down from his lawful place as the master of his house."

"Ay," said Horace. "But I always say it

remains a man's own fault when a woman takes to 'managing' him. Why can he not be a reasonable being to whom she can plainly say, 'Ought not you to do this?' 'Should you do that?' 'I think this is wrong.' 'I am sure that is right,' just as men and women say among themselves. But no, certain men take up a notion which they express by the phrase, that they 'may be led, but not driven,' which really means that they must not be spoken with frankly, as friends speak, but that they must be hoodwinked after the fashion sometimes necessary with delirious patients or lunatics, and as inferior nurses deal with naughty children."

"Bravo, Horace," cried Pleasance. "I own I'm heartily disgusted with the twaddling tone so often taken about 'women influencing men for their good.' Has God divided His moral blessings according to sex? We have an equal right to expect men to influence us for good! And so they do. The first person who awoke my wider sense of right and wrong, and gave the first direction to my real mental interests, was a boy of seventeen, when I was a girl of ten. And it has been the same often since, even in the case of men much younger than myself, and who have been little aware when virtue went out of them!"

"I think," said Mrs. Yeldham, "that some men —especially young men—get into a morbid way of thinking that nobody really regards them, and that though kindness may be shown to them, nobody is hurt if they give no response; that, in short, response might possibly be regarded as a bore. I remember some friends of mine who showed great kindness to a stranger youth, opened their house freely to him at all times, and looked after him in sickness and trouble. He kept up some slight correspondence with them for a while when he went away, but, in later years, he actually returned to the town with a wife and children, and never even made his presence known to his old friends!"

"On the other hand," said Pleasance, "some excuse their sinking into habits of indolent negligence and silence, by assuring themselves not only that their own hearts remain as warm and true as they ever were, but that those who love them are fully aware of this! These demand a great deal of 'trust,' forgetful that 'trust' is a root which will not 'strike' save in a very rich soil of foregone satisfaction!"

"But it is a most unwholesome thing when men of any age take to regarding themselves as interesting cases, entitled to a secure claim on charitable constructions and persistent kindness that their actions do little to deserve," said I.

"I must quote Mrs. Ewing again," observed Penelope. "Don't you remember 'Master Fritz'?——

'If you make nice feasts every day for me and Nickel and never keep us waiting for our food,
And always do everything I want and attend to everything I say, I'm sure I shall almost always be good.
And if I am naughty now and then it'll most likely be your fault: and if it isn't, you mustn't mind;
For even if I seem to be cross, you ought to know that I mean to be kind!'"

"Ay," said Pleasance. "I fear that young man is not unknown to most of us. Who has not heard the asinine 'It is always my way,' which such think sufficient explanation for perpetually recurring faults of self-indulgence or peevishness or passion, or of that general pigheadedness which he glorifies by calling it 'my pride'? 'It is always my way,' he murmurs, as he puts aside your advice and follows his own will. 'It is just my luck,' he cries, when he comes to you to save him from some consequences he does not like! By these marks may you know him!"

"I wonder sometimes if there was not too much 'interest' shown in Edwin Richardson, in his first goings astray," mused Horace Penrith, returning to the subject rankling in his heart.

I could not help mischievously remarking, "Possibly too much 'interest' of a certain kind has been shown in him up to this very date!" And Horace, who took my hint, looked back at me reproachfully, and said:

"Well, I had been so much blamed for my youthful instincts of severity towards him, that at last I was ready to blame myself, and thought I would have my share of trying the other course!"

"In short, you felt like the old man with the donkey in the famous fable," I rejoined, wickedly. "I think that is how we are all tempted to feel. But we should resist—for the sake of the donkey!"

"I know an experienced instructor of youth, who used to say that there was seldom anything more salutary for naughtiness than a little wholesome neglect," said Penelope. "Moral maladies are apt to be hopelessly 'struck in,' by the time a child or a young person begins to regard himself (to quote Mrs. Ewing again) as

'A solemn charge, and a fair white page, and a tender bud, and a spotless nature of wax to be moulded:—and I think she called me a Privilege.'"

"It seems almost incredible that many boys or men should be in danger of such mental habits as these, doesn't it?" said Horace, simply.

I laughed. "Even Mr. Penrith," said I, "is not too enlightened to be inclined to relegate to our poor sex any weaknesses which strike him as utterly contemptible! But I am forced to say that just as there are male hypochondriacs, searching among physicians, wandering through hydropathic establishments, trying new drugs, and learned in chemical foods, so there are men who revel in the self-dissection of their own characters, are interested in their own moral deficiencies, and make capital out of qualities for which they should rather blush. Like those 'models' who haunt surgical lecture-rooms and offer themselves for experimental bandaging, so these go about the world, tendering their souls for treatment. They do not wish to reform, but they have a morbid taste for the process of being reformed! I can very well believe that Edwin Richardson took this direction when he turned downward."

"The important question being," said Pleasance, "what then might have been done to divert him upwards?"

"I incline to Penelope's wholesome neglect," answered Mrs. Yeldham, "by which I mean that

a character in any such danger should have been led in every possible way to realise the overwhelming reality of personal responsibility. True kindness would lie, not in talking sentiment over such, nor in trying to avert suffering from them, but rather in doing everything possible to make manifest to them, speedily and therefore easily, the law that 'whatsoever a man sows that shall he also reap,' which always holds true however it may be deferred or denied, and whose sentence is but the more dire the longer it is delayed."

"And there is no better cure for dreaminess and morbid introspection than the constant play of little duties," I said. "They are equally wholesome for lofty ambition and honest aspiration; they bring us to the hard test of reality. When we measure ourselves with facts we soon find out our limits; while we lie supine we do not even know we have any, and dream of vaulting among the stars, while our tether is only two yards long."

"Ah," sighed Horace, "the world would be much farther forward if more of the good men stepped forward on those paths of progress and endeavour which they lay out for the future while they are young! If you only knew the plans I have heard laid in college lodgings, and the resolutions that are formed in graduation days! But first they don't begin to do what they can, because they want to do more; and then they wait for some better opportunity, which seems always ahead, till suddenly they find it is for ever behind them!"

"And I think the direction towards little duties and practical service might be equally useful for the rollicking possessors of a big share of animal strength and spirit, as for the dreamy idealists," said Penelope. "Why should there not be quite as much 'lark' in unexpectedly chopping up an old woman's wood, as in dropping stones down her chimney?—in clearing away the snow from a doorway as in pulling off the bell,—in mending a window as in smashing one?"

"Don't you remember," I asked, "that Mr. Ruskin once suggested that after a lad's strength had been developed by gymnastic, it might be better than squandering it in mere futile 'play,' if it were sometimes devoted to practical purposes that can scarcely be paid for, such as mending or making a road which may not be needed for traffic but leads to a beautiful view, or throwing a bridge over a stream, where its existence might spare a weary trudge for some poor women or little children?"

"That would tend, too, to give truer ideas of manual labour," said Horace. "It is all very fine for the upper classes to sneer at the lower class ambition to exchange the workman's cap and apron for the clerk's black coat and silk hat, in pursuit of what they call 'gentility.' They themselves are guilty of the same shallow vulgarity when they feel that there are only four or five callings in which 'a gentleman' may engage, and consequently force their sons into the learned professions, however plain-witted or low-toned they may be. People have begun to criticise the forcing of unfit men into the Churches, but nobody yet wonders at any dunce or scamp becoming a doctor or a lawyer, provided only that, at any cost, he can secure some necessary hall-mark!"

"A great many people never look at these things from the standpoint of Right or Wrong," said Mrs. Yeldham. "It does not seem to occur to them. Many of them might do differently if the matter was set before them thus."

"Many of them would not!" laughed Pleasance.

"Public opinion is a tide which rises very slowly," said Mrs. Yeldham.

"All we can do is to keep our habits and ways 'under discussion,'" observed Horace, "and endeavour to maintain open minds for whatever new truth advances towards us."

"Some people have minds very ready to welcome new ideas," remarked Pleasance; "but their wills are not equally prepared to run on new lines of action!"

"It's dangerous to know more than one puts in practice," said Penelope; "so it is high time I was back again at my work."

Mrs. Yeldham brings her visit to a close tomorrow, and returns to her Northern home. So as we bade each other good-night, we felt it was also "good-bye"—for we had had the last of our talks together.

# FIVE GENERATIONS.

*By permission, from a photograph taken by Hayman & Son, Church Street, Launceston.*

In a recent number of the "Leisure Hour" mention is made of a "wonderful old woman" who saw five generations. This allusion has brought us, from Launceston, a cabinet group which appears to be quite unique. Here are five generations: all born in the same parish, North Petherwyn, Cornwall, and all called Mary. The old lady on the left was about ninety-four when she was photographed, and the baby, in her mother's lap, about six months.

# DAVOS.

## FROM A HEALTH POINT OF VIEW.

DAVOS in the Grisons has for several years been well known to the medical profession as a valuable health-resort for the treatment of particular sorts of disease. The favourable impression first recorded by a German physician some years ago has only been strengthened and ratified by subsequent experience. It is not desirable in this brief paper to repeat what has been said in this magazine, and we therefore propose to deal with Davos now more from a medical than a picturesque point of view.[1] Let us inquire what benefit people may receive by residence there, and in what particular way the greatest good may be most easily obtained.

Many of our readers are doubtless already aware that for several years the treatment of pulmonary phthisis (consumption) by residence in certain high altitudes has been tried by the medical profession with highly gratifying results. Of these high altitude residences Davos stands out pre-eminently first; and it does so for several reasons; in addition to its altitude, it possesses an air which is at once dry and pure, that is, free from all deleterious organisms or matter of any kind, tonic in its action, and, above all things, still. Professor Tyndall has pointed out in his experiments at Bel Alp the marvellous purity of the atmosphere, and yet Bel Alp would not be suitable for the majority of phthisical patients, as it is far too much exposed. Davos enjoys a remarkable stillness of air, and, though the valley is a broad and expansive one, there is little or no wind. Now, it is believed by some medical men, including Dr. Clifford Allbutt, who has written very largely on this subject, that phthisical patients die as a result of self blood-poisoning; and as the lungs cannot be arrived at by surgical means in these cases, the best thing for the patient is to live in a so-called "aseptic" air—that is, an air free of all harmful matter.

Such an air is provided by Davos, but, in addition, the air there is a powerful tonic, a property of almost inestimable value. In fact, so marked are its tonic effects, that a new departure has been opened up in the treatment of certain nervous affections at Davos.

Of course, one of the greatest difficulties arises at the outset with reference to Davos, and that is, "What sorts of people ought to go to Davos?" This is a matter in the main for the medical man to decide in each individual case. And it is a matter of considerable difficulty for any medical man who has never been to Davos to say whether or not a certain case would be benefited by going there. Suspicious cases of lung affection occurring in otherwise vigorous subjects will in all probability receive great benefit from a sojourn in Davos. The great mistake is to send a person to Davos when it is too late, though one must admit that it is excessively difficult to say *when* it is too late. Truly marvellous results take place in apparently hopeless cases, but the efficacy of Davos in the relief of lung cases must not be doubted on the ground of failure in instances such as these.

Granted, then, that we have decided the physical conditions which indicate a stay at Davos, there follow two questions from the patient, "What will be the probable cost of going?" "For what length of time shall I have to stay?" The true answers to these questions must be unflinchingly given, and the phthisical patient must be made to understand that he suffers from a disease recovery from which means no niggard expenditure of time or money.

It is not sufficient to "just run over to the Engadine for a winter;" to obtain permanent good a patient will have to remain at Davos perhaps for three or four years, and during that time he will require the best attention from his medical man and the best food from his hotel-keeper. The former he can get at Davos for very low fees; the latter (including his room) will cost him from eight to ten francs a day. Those who have been to Davos may say that the thing can be done for much less than that. This may be so, but I do not think that it is desirable that the phthisical patient should go to the cheaper places at the risk of getting food which, though it may be intrinsically of good quality, may be less appetising in its mode of preparation and less extended in its variety. It must be remembered that the hotel proprietors of Davos have a great difficulty to contend with in the variation of diet, as Davos itself produces very little, and most of the greater delicacies have to come from a distance. Again, it requires delicacy in the treatment of food to reconcile the patient to a life led for some years away from home. Having assumed, then, that the physical condition of a patient imperatively demands his removal to some such place as Davos, and that he, having the desire and means to submit to it, wishes to start off, how and when can he best do so?

As to time, if the case be urgent there is no time like the present, whenever that present may be; if the time is one of election, he should go late in September or early in October for the winter season; and if he intends to spend any of the summer there, he may go in June. To go early in the summer is a mistake, as the snow is melting, and this is associated with many annoyances and great limitation to outdoor exercise.

As to the method of arriving at Davos, one of two ways may be chosen. If the patient can afford it, he will do well to start from Cannon Street at about 10 or 11 A.M. He will arrive at Calais at

[1] For descriptive paper see "Leisure Hour" 1888, p. 258.

about 2 P.M. Now, if sleeping accommodation is required—and most patients will require it—a telegram should be sent from Cannon Street to the Chef de Gare at Calais. The choice of sleeping accommodation lies between two courses : a single seat may be booked in the "Wagons-Lits," which are comfortable, and in which there are regular beds ; or a *coupé-lit — toilette* carriage — which holds three people, may be taken. The seats in the *coupé* form couches, but not regular beds, and single seats cannot, as a rule, be booked. Having decided the method of travelling, the patient will go *viâ* Amiens, and arrive at Tergnier at about 7.30 P.M. Here dinner is provided at four francs per head, wine included, and no time should be lost in taking a seat at table, as the time allowed is only twenty minutes. The train travels all night *viâ* Laon, and at about five in the morning arrives at Delle. Here coffee, bread, butter, and honey can be got for one franc per head. Bâle is reached at about 7 A.M. (Swiss time), and here breakfast may be taken. Luggage, which should have been registered at Cannon Street, has to be re-registered at Bâle (or Basel), and the patient should book for Ragatz *viâ* Zürich. The train for Ragatz starts at about half-past eight, and arrives at about 1.30 P.M. at Ragatz. Here the patient may stay for a day or so if he wishes. The best hotels are the "Hof Ragatz" and the "Quellenhof," which share between them very extensive and beautiful gardens.

A carriage can be obtained from Ragatz in which the patient may be driven to Davos *viâ* Landquart, Schiers, and Klosters. This, for those who can afford it, is the less fatiguing and more pleasant route. The alternative route is that by which the patient goes straight on by rail to Landquart, and then proceeds by "diligence" to Davos. The hotels at Landquart are not so good as those at Ragatz, so that staying there is not so pleasant. The "diligence," however, is much cheaper than the private carriage.

On arriving at Davos the patient will have to choose his hotel, and in this we would suggest that it may be wiser to avoid alike the larger English and German hotels. We cannot, of course, specify any particular hotel, but it will be as well to indicate what sorts of conditions are to be looked for as desirable in an hotel. The hotel should be so situated that its rooms look as much as possible north and south ; its promenades, covered and uncovered, should be as free from wind or draughts as possible. The patient will probably prefer an English hotel to a German Kurhaus, as English peculiarities are studied. A south room should be secured if possible, and, if the patient's means be equal to it, one with a balcony, for fresh air is one of the chief things for which the patient has come to Davos. Inquiry should also be made of the local medical attendant, or some other person competent to inform, as to the methods of warming and lighting adopted in the hotel. The method of heating with steam and hot air is adopted in most of the hotels, and in some the electric light has found its place. This last is a considerable boon to patients.

The patient having decided which hotel he shall stay at, it may be well to tell him something of the *régime* under which he will live, and of things to be sought and avoided.

In the first place, he will be expected to rise somewhat early, that is, if he is up and about. Breakfast, consisting of bread, butter, honey, and tea or coffee, he will take at about 7 A.M. If it be summer and the weather be warm, he can go out for a walk. This walk will probably be controlled by his medical adviser, as the Curverein has mapped out many walks by means of posts, so that the medical man can tell the patient exactly how far to walk. Too violent exercise, of course, is to be avoided ; and as a good deal of the day is to be spent in the open air, a book and a small chair among the pine-trees or in front of the hotel solves the difficulty with ease. At one o'clock lunch is served : this generally consists of three or four courses, beginning with soup or fish, and ending with a *compote* of fruits or cheese.

The taking of wine, of course, will be under the jurisdiction of the medical attendant.

The water of Davos, however, deserves especial mention for its marvellous excellence and purity ; it is clear as crystal and cold as ice, and, with its many sparkles as it is poured into the glass, seems like some heaven-sent wine rather than plain water.

After luncheon people generally sit out in the gardens of their hotel, or visit friends in their own or other hotels ; afternoon tea does *not* form part of the general pension, but it is very generally indulged in by the residents. Patients must, of course, exercise great care as to being out late ; half-past six in the summer and four in the afternoon in the winter are quite late enough.

Dinner is served at half-past six, and is always good and plentiful ; after this, patients may amuse themselves until bed-time, which, in most cases, is ten. All the lights of the hotel are turned out at eleven, though of course a candle may be kept burning in a private room till a late hour.

Such, then, is the skeleton of a stay at Davos. There are, however, many additional attractions, skating and tobogganning in winter, and excursions to neighbouring mountain passes and places in the summer ; and, if the patient have the taste, knowledge, or inclination, a very good collection of Alpine wild-flowers may be made with ease at Davos.

Photography, too, greatly interests and amuses many sufferers at all seasons, and the charming results that are seen speak well for the industry and application of the amateurs in this art.

Many of those who are musical in their inclinations have pianos in their rooms, and these are to be hired at very reasonable prices in the town.

And here a word as to evening entertainments will not be out of place. Of late, the amusements and life at Davos have become so attractive that many young people who are afflicted with no particular illness go there for the winter "for the fun of the thing ;" and even the ordinary patients, after a little while, in many instances, seeing themselves looking so well and getting a healthy-looking brown complexion instead of the pale colour with which they arrived, are found to forget that they *are* invalids, and to run into amusements demanding too much exertion, or necessitating their exposure to a vitiated atmosphere and sudden change of tem-

perature. Although it is part of the treatment at Davos that the patient should be out in the open air as much as possible, still it is highly injurious in most cases to indulge in much violent exercise. This is, however, a minor evil when compared with the evening entertainments; these last are so frequent that at each hotel there is an entertainment committee whose duty it is to manage the various amusements to be given at that hotel. These include dances, fancy-dress balls, *tableaux vivants*, concerts, etc.; and invitations are sent to the inhabitants of other hotels by each one as it gives its entertainment. Of course, to be present at such things at any hotel than his own entails the patient's going out in the night air; and although the omnibus of the hotel may be used for the transport of the guests, still it means exposure to cold. The room in which the entertainment takes place will in all probability be overcrowded and lighted by oil-lamps, the odour of which and the general vitiation of the air are alike unpleasant and unwholesome for the patient. In such hotels as are fortunate enough to possess the electric light, this part of the harm done is reduced to a minimum; still, the room will be heated artificially, and the return home through the cold night air is a source of very considerable danger. The exacerbation of the hectic flush and the short dry cough after these entertainments tell their own tale only too plainly, and many a serious hæmorrhage from the lungs owes its origin to an unwise indulgence in these evening parties as a determining circumstance.

Of course, when Davos was first advocated as a health resort, only really serious cases went there, and these people sat out in the open air until the coolness of the atmosphere drove them indoors, where they had little or nothing to do but eat, sleep, and read. Now all is changed, but with the change came the risk of running to extremes, and, instead of having too little diversion, the Davos patient of the present day rather runs the risk of having too much.

The sanitary arrangements of Davos leave nothing to be desired; the situation on the slopes of hills amidst mountain streams enables drainage to be carried on thoroughly with comparative ease. Typhoid fever is almost unknown at Davos. The same cannot, however, be said of scarlet fever, which seems to flourish in many parts of Switzerland.

Everything that can be desired in one's ordinary life is supplied by the most excellent shops at Davos, and it is really wonderful that in such an out-of-the-way place such a complete collection of good shops is to be found.

Clothing especially is well made, cheap, and suitable for the exigencies of the climate; and this remark especially applies to the flannel underclothing, which almost every phthisical patient in Davos wears. The medical attendance is most efficient, and the supervision exercised by the medical men most complete and praiseworthy, though it is to be feared that the absolute authority which till lately the doctors held is being gradually broken down by the healthier and more unruly spirits of the place. Very efficient nurses can be obtained for the more serious cases, so that no one need feel that he would have a better chance of recovery elsewhere as far as medical attendance and nursing are concerned.

Of late it has become the fashion to send nerve cases to Davos, and as far as our personal experience goes the treatment of such cases there is eminently satisfactory. Cases of this sort have for some time been treated at St. Moritz and Pontresina in the Engadine, but the great complaint of patients at these places is the inability to sleep. This is rarely the case at Davos, as the altitude is not so great as that of St. Moritz; again, St. Moritz is hardly so suitable as a winter resort as is Davos; only one hotel (the Kulm) being open in the winter. Provided the patient finds himself comfortable at St. Moritz, he may with advantage stay there for the summer season, and then descend to Davos for the winter. Such a course will often reinstate a wearied brain and tired nervous system in their normal tonicity and vigour, and this in a very short time indeed.

The means of arriving at Davos is now facilitated by the presence of a railway from Landquart to Davos *viâ* Schiers and Klosters. This journey from Landquart occupies about two hours. The carriages are of a most luxurious kind, carefully warmed, and so arranged that a good view of all the beautiful scenery on the way may be easily enjoyed. Although this will be a great help in reaching Davos, it is perhaps necessary to point out certain evils that may follow. Coal is at present worth about £4 a ton in Davos, and so it is little, if at all, burnt; the railway will bring coal to Davos at much cheaper rates than this. Now the stillness of the air at Davos has been particularly insisted on; if coal be burnt, it is to be feared that a cloud of coal-smoke will frequently hang over the town and will be injurious to the patients. Still, if this be the case, there are other places preparing for the reception of patients, such as Wiesen and Arosa, both of which are places worthy of note. The benefits to be gained at Davos, however, are manifold and likely to be permanent, and advantage should, if possible, be taken of its resources.

Great assistance is afforded to poor patients by the subscriptions raised for their maintenance, and there has now been for some years an organisation whereby patients are assisted to St. Moritz after passing a medical examination in London. "Men have the preference, as being the bread-winners of the families."

W. LAWRENCE LISTON.

# STORY OF THREE RUSSIAN LADIES OF THE LAST CENTURY.

IN the days of the famous Czar, Peter the Great, the most powerful, wealthy, and generally feared among his ministers and nobles was the Prince Menzikoff. There was no one above him in the Empire but the Czar himself; he was a prince and field-marshal of the Empire, possessed of enormous riches, and the master of 100,000 serfs or slaves of the soil, as all the Russian peasantry at the time were.

Menzikoff had two daughters, Marie and Alesandra; the elder, Marie, is the one of whom we have here to speak. Her christening was celebrated as if she had been a royal princess; the Emperor was her godfather, and the most splendid and costly surroundings accompanied the ceremonial; the babe was wrapped in the most sumptuous embroideries and laid in the most richly ornamented of cradles.

The little girl was brought up carefully as well as luxuriously. Till the time of Peter the Great, Russian ladies, even of high rank, scarcely knew how to read. But the Czar was determined to have all his subjects of both sexes well taught; and the little Marie had foreign governesses and masters, learned several languages, music, dancing, etc. She was a pretty, sweet-looking child, with soft intelligent brown eyes and graceful manners. The Emperor was very fond of his little godchild, and took an interest in the progress she made in all her studies. He little guessed what a different fate awaited her from anything for which her early training had prepared her!

At the Emperor's death, in 1725, he was succeeded by his widow, Catherine I, and this increased the power of Menzikoff, for, as he had been the Empress's first friend, she made him practically almost a joint sovereign with herself—a position he never could have held in the life of Peter, who was always determined to be master in his own realm.

This accession of power turned the head of the favourite. He had always been inclined to be haughty to his inferiors, but now his pride and insolence knew no bounds. He had before chosen for his daughter's future husband a young Polish noble, Count Sapieha. The young people were solemnly betrothed when Marie was only fifteen, and both the bride and her sister were presented with the Empress's portrait set in diamonds.

But the Prince's mind now began to change, and he thought he might look higher for his daughter: a Polish noble, however well born and well bred, was not high enough for Marie Menzikoff, the child of the greatest man in Russia. He wished to betroth her to the future heir of the Empire, the young Peter II, grandson of the great Czar, a boy of thirteen, and he easily obtained the consent of the Empress Catherine, who was quite under his influence. So the marriage with Count Sapieha was to be broken off, and the young count dismissed. The young people had been allowed to meet constantly during their two years' betrothal; he was amiable and attractive, and had completely won the heart of his bride; but what was the happiness of two lovers compared to Menzikoff's ambitious schemes!

He probably hardly suspected he was breaking his daughter's heart by the separation. Poor Marie wept and entreated in vain; her betrothal ring was taken from her, Sapieha sent back to Poland, where his indignant father soon made a new marriage for him, and Marie left to bear her sorrow as she might. Thus two young hearts were to be crushed, that Menzikoff might, as he hoped, be the father-in-law of the future Czar.

Poor Marie had no power of resisting her father's will; she could only mourn in secret, and try to hide her tears from others. The bloom and brightness were all gone; the joyous child was changed to a pale, serious girl, who moved sadly under the magnificent robes, the jewelled headdress and train of cloth of silver, the velvet and ermine, which doubtless made her the envy of many who looked at her. They little thought with what an aching heart she tried to find gracious answers for the congratulations of the courtiers and ladies who came to kiss her hand. They could not fathom the feeling with which she would even force a smile at the little Emperor who stood at her side.

He, poor boy, was in his way scarcely less unhappy. He hated Menzikoff, who had always treated him with haughtiness and disdain, because he had not been originally expected to be the heir to the Crown. Now the favourite had changed his policy, and showed him the utmost deference; but the youth instinctively felt it was false, shrank from everything connected with his old tyrant, and was little inclined to attach himself to the tall, grave maiden, four years older than himself, who had been forced on him by the man he most disliked and feared.

But Menzikoff could not attend to such trifles as the personal likings and dislikes of those he chose to rule. He thought himself on the pinnacle of human greatness; he little guessed that in a few short months his palace would be deserted, and he himself deprived of all he valued most in the world. And yet this actually took place.

A cunning courtier found opportunity to whisper in the ear of the boy-Czar, after the death of the Empress, that his crown was not a mere plaything, and that he was after all king and master, and could command. He woke up to a sense of his power, pronounced the decisive word, and was astonished to find himself so promptly obeyed. A "ukase," or decree, was passed in September 1727, declaring Menzikoff a deposed minister and an exile, and banishing him and his family to a small town in

the centre of Russia. Never had the little Emperor been so happy as when he signed the order which freed him from his tyrant; he felt taller by some feet, and began to think it was, after all, a fine thing to reign.

He was not an ill-disposed or hard-hearted lad. He had no idea of inflicting unnecessary suffering on the Menzikoffs; all he wished was to get rid of his old guardian. But he had really only changed one governor for another. Prince Ivan Dolgorouky, the courtier who had procured the dismissal of the old statesman, was now as much the little Czar's ruler as Menzikoff had been; he and his colleagues insisted on their plans being carried out in the minutest details, and they were determined to inflict the utmost humiliation on the disgraced favourite, in which his innocent wife and children must share.

A courier overtook them on their journey, deprived them of all the badges of distinction and costly gifts with which they had been loaded by the late Emperor and Empress, and even took the magnificent betrothal ring from the finger of the young princess. She wept less, however, than when she had been made to give up Count Sapieha's ring.

At first the exiled family were allowed to live in the little town of Ranenbourg in tolerable liberty. There were sentries stationed by night before the fortress where they lodged, but in the day they were free to come and go, and were treated with respect. But this was only for a time. Dolgorouky was determined not to spare them a drop of the bitter cup of disgrace. In the following spring a fresh decree confiscated all their property, and ordered them to be sent as common criminals to Siberia.

Menzikoff showed himself greater in adversity than he had done in prosperity; he uttered no complaint. A former enemy, whom he had himself exiled to Tobolsk, met the travellers on their way and flung mud, with a cowardly revenge, in the faces of the young princesses.

"What have these children done to you?" said the old minister. "Why do you not strike the real culprit! There is a great criminal here; but only one, and I am that one."

The Princess Daria, his wife, could not bear up so firmly. Her grief for the fate of her children and husband knew no bounds, and her tears flowed incessantly through the melancholy journey. At last she sank under the burden of sorrow and fatigue, and was buried on the banks of the Volga, near Kazan. It was only recently that her tomb was discovered—an obscure grave bearing the name of "Daria Arseinev" half effaced.

The father and children continued their long and weary journey till they reached the little town of Berezov, in the midst of one of the vast Siberian plains. Here the prince built with his own hands a wooden hut for himself and his family, adding a small chapel, where he passed long hours in meditation and prayer. We may hope that a ray of Divine light may have pierced the darkness and found its way to that poor weary soul, little as he had to help him in the way of Gospel and Bible teaching. Certain it is that he bore his afflictions with a patience and calmness which are more to his credit than any other part of his life. His daughters read to him in the long winter evenings—generally religious books—or wrote to his dictation, while he gave them interesting anecdotes and reminiscences of his past life. These memorials would have made a valuable addition to Russian history; but it appears they were either suppressed or destroyed by his heirs.

But consolation and even happiness were still in store for the young girl whose life his ambition had blighted. Soon after they were settled at Berezov, they were surprised by a visit from a former acquaintance. This was Prince Feodor, a cousin of the Dolgorouky who had caused Menzikoff's ruin. He had secretly loved Marie ever since he had first met her at court, but, being aware his suit would be hopeless, had never ventured to speak while she was in prosperity.

Now, however, when she was sharing her family's exile and disgrace, the generous Feodor threw up all his honours, sacrificed his brilliant prospects, and travelled to Siberia to tell the girl he loved that his whole heart was hers, and he only wished to live for her and console her for what she had lost.

Marie's affection as well as esteem were won by this unselfish devotion; she consented to give him her hand, and they were quietly married in the humble church of Berezov. Doubtless she remembered her betrothal to the boy-Czar, and felt how much she had gained in her exile in the love of a true heart.

But she was not to enjoy her new-found happiness long; her health had been shattered by sorrow and hardship, and at the end of a year the young wife was laid in her grave, with twin babes beside her who had only just survived their birth.

The old Prince had expired six weeks before, and was thus spared this last sorrow.

All that remains of the former betrothed bride of the Emperor is some needlework she did in her exile—two priestly robes worked in gold embroidery, still shown in the little church of Berezov—and a gold locket with a tress of her fair hair, kept by her husband through life as a loved relic, and left by him to the same church at his death.

So ended the short life whose happiness had been crushed by man's ambition and cruelty. We must hope she may have learned where to look for comfort in sorrow, and passed away to a better inheritance.

Meanwhile a great change was to come on the exiled family, and, soon after, to their enemies. The young Czar began to perceive that he had yielded too implicitly to Dolgorouky, and been led to commit the cruelty of punishing the innocent with the guilty. He seems to have been really anxious to remedy his fault, and he sent an order to recall the children of Menzikoff and restore them a part of their property. This may have brought happier days to the younger sister—for the elder it was too late.

But Prince Dolgorouky was to suffer literally the punishment he had meted out to another, and afterwards even more. He, like Menzikoff, had

been intoxicated with his newly acquired greatness, and wished to become the father-in-law of the young Czar. Like his predecessor, he broke off his daughter's intended marriage to betroth her to Peter II. Whether the lad of fifteen was more inclined to like the beautiful and proud Catherine Dolgorouky than the gentle Marie Menzikoff, we know not; but on her side it was quite as much a matter of compulsion as it had been with her predecessor. She had been betrothed to an Austrian nobleman, and they were mutually attached. She bore the separation, not sadly and submissively like Marie, but in calm and proud silence. The ceremonial was as splendid and the festivals and shows as brilliant as they had been ten years before. And yet, neither was this marriage to take place. A fête on the ice—it was mid-winter—gave the young Czar a chill, smallpox declared itself, and, under the ignorant treatment of the day, he expired after a very short illness.

His successor was his aunt, the Duchess of Courland, Anna Ivanovna, a weak-minded woman, wholly governed by her favourite minister, the Duke of Biren.

He was a bitter enemy to the Dolgorouky family, and soon found a pretext for banishing them all to the same town of Berezov where the Menzikoffs had lived out their sad exile.

In this case, an even larger number of innocent persons had to suffer with the supposed guilty one. The Prince's exile was shared by four sons and more than one daughter, how many is not exactly known. Catherine, the second betrothed of the boy-Czar, had, like her predecessor, to be deprived of all her honours and splendid presents, and to accompany her father to exile. But another member of the exiled party was one who had joined them of her own free will, for love of her betrothed husband. This was Nathalie Scheremetev, a young girl of but sixteen, daughter of a powerful nobleman, who had been on the point of marriage with Ivan, one of the Prince's sons when the decree of exile was published. Her father was dead, but the uncles—who were her guardians—her brothers, and all her family considered it was a blessing that the blow had fallen before the marriage had taken place. Of course, it must be broken off, and Nathalie would soon find a better match.

But the young girl was immovable. She and her betrothed loved each other, and she was ready to follow him into exile and disgrace. All the arguments, entreaties, and reproaches of her family could not shake her gentle firmness. She persuaded two old ladies, her cousins, to take her to the castle where the Dolgoroukys were awaiting the summons to start. There, in the village church, she and Ivan were married without pomp or festivals, and for their "wedding tour" they had to start together on their long journey to the land of their exile.

It was a most trying journey. No advantages were granted to them, no mitigations of hardship; they had to travel in a *kabitka*, a rough springless carriage, which is a real instrument of torture to any one less case-hardened than the Tartars. In this wretched conveyance they travelled through long dreary plains, often forced to camp out on the damp ground, exposed to cold and wet, so that at last, when they reached their journey's end, the poor huts assigned to them seemed a haven of rest.

Nathalie writes this account in the Memoirs which she afterwards drew up for her children. Her first babe was born soon after they reached Berezov; his only cradle was his mother's arms, his clothing had to be prepared by her and her sisters-in-law from their scanty stores, and washed by their own hands in the icy waters of a neighbouring torrent. She relates how for days together the snow was so heaped up round their dwelling that they were nearly deprived of air and light, and confined to their close and smoky rooms; how the fierce winds whistled round the huts, and how their hardships were aggravated by the rudeness and insolence of some of the officials. Catherine bore her share of trial in haughty silence; she set to work to complete a piece of church needlework poor Marie had begun, and made no complaint.

But Nathalie was bearing *her* sufferings for love's sake, and her sweet, cheerful patience made even the Siberian hut bright. For her husband she had always hopeful words; she brought her children to play with him, and reminded him that these best treasures were still his, and when his spirits failed him she was ever ready with her loving cares and tender smiles.

In this way a few years were passed. The time was to come when she would look back to them with sorrowful longing, for worse troubles were in store. The cruel and relentless Biren was not satisfied with the vengeance he had taken. On a frivolous pretext he contrived to have Dolgorouky and his four sons accused of treason; they were sent to the city of Novgorod, and there put to a death of most cruel torture.

The sisters-in-law were separated. Catherine was placed in a convent, where she was strictly secluded and treated with great rigour. Nathalie was left alone with her little ones at Berezov, there to learn the terrible details of all her beloved Ivan had been made to suffer. Her one consolation was the knowledge that he had not only borne it all with heroic courage and patience, but that he had been supported by a power, as we must believe, not of this world; his voice had been heard uplifted in earnest prayer all through his torture till it was silent in death.

This must have comforted her, but hers was a bitter lot. When first she heard the terrible news she fainted away, utterly prostrated by the blow; but for her children's sake she felt she must bear up, and, that their young lives might not be saddened, she learned to hide her tears from them, and even to smile at their childish play.

But a change was now at hand. The Empress Anna died, Biren was disgraced and exiled, and the new Empress, Elizabeth, Peter the Great's daughter, was kind and gentle and merciful, and only eager to make up to the poor exiles for what they had suffered as far as was in her power.

The Dolgorouky family were recalled and treated with marked kindness. Catherine was placed about her person, and soon afterwards the Empress found her a suitable marriage. Proud as she was,

she was not revengeful; she showed generous kindness to the abbess and nuns who had treated her so harshly. But her pride was shown in curious ways. It was said that just before her death, four years after her marriage, she sent for all her dresses and had them burned, that no one might wear anything she had worn!

Nathalie's was a different spirit. She came to the court at the Empress's invitation to plead for her children, who needed protection and suitable provision. But the sad, pale face and deep mourning robes were out of character with the court gaieties. She had herself no heart for such scenes, and when she had secured the Empress's care for her children, and seen them safely placed under the protection of their now powerful and prosperous relations, she retired to a convent to end her days there. To our eyes it would have seemed that her place was with her children; but she had been brought up in the belief that the monastic state was specially acceptable to God, and certainly she did not lead an idle or selfish life in her retreat. Her charity, piety, and sweetness won her the love and esteem of all. The hours that were not spent in devotion were chiefly occupied in writing her Memoirs for her children's sake, that they might know how their father had lived and died, and do justice to his memory.

The words with which she opens the history are very touching. "Twenty-six days of happiness," she says, "were followed by forty years of sorrow!" And the result was shown in her bent form and white hair, while still in what ought to have been the vigour of life. After some quiet years spent in these occupations, she passed calmly away, at the age of fifty-six; truly a "woman of a sorrowful spirit," though never regretting that she had given up home and prosperity for him she loved.

# FISH CULTURE.

## THE DOMESTIC TROUT.

THE rapid decrease of our rural and village population is admitted on all sides to be a serious evil, but the attempts to check the migration to the large towns have met with but little success at present. Perhaps the most promising among the remedies suggested[1] is that of encouraging such industries as can be carried on in country districts, and may be called "Peasant Industries." To a certain extent these have increased of late years, but there is much room for the development of the old and the introduction of new occupations, especially in such parts of our country as have been found unfit for profitable farming.

Some of these districts are favoured by nature with clear and abundant water, though the soil is stony and sterile. It is chiefly (though not only) in neighbourhoods of this description that the industry of which we have now to speak may be most advantageously attempted.

Much has already been done in the way of fish culture at home, and some of the pioneers of the industry are now reaping the reward of their enterprise and perseverance. Perhaps the most successful, commercially, are the establishments at Dumfries and at Guildford, both of which yield to their owners a good return on the capital invested. It is almost certain that there are many small estates containing springs, or with streams running through them, which could be made profitable to the peasant proprietors by means of an expenditure which a scientific farmer would consider trifling.

[1] See "Leisure Hour," April 1887, "Decayed Villages," by Solly. June 1887, "Peasant Industries," by F. M. Holmes.

In some cases fish culture of itself would be insufficient to yield a livelihood to the landowner and his family. But some other industry can be followed at the same time. In some districts basket-making, for instance, could easily be started, the materials being at hand in the shape of the osiers lining the stream.

In other cases watercress beds would flourish, while even the rushes, which are apt to be rather a nuisance in some streams, are not valueless.

The first essential in fish culture is a constant stream of fairly pure water (and not subject to heavy floods) running through the estate. If this condition is present, something else may be dispensed with, but it is desirable to have

(1) The soil, in part at least, gravel.
(2) Opportunity for placing gratings at each limit of the stream, in order to keep your trout in bounds.
(3) The absence of a miller, above or below you, who is determined to assert his rights—and wrongs.
(4) The presence of springs, to help in the formation of ponds (though these can be formed by means of sluices in the stream) is most desirable; but if a good supply of pure water is laid on it is often more convenient for hatching purposes than a spring.

We will suppose that pure water of some sort is available, and proceed to describe, from some seven or eight years' personal experience, one of the methods to be adopted.

First obtain from a professional fish-culturist a number of eyed ova (or trout eggs duly fertilised), which are within a week or two of hatching. From a dozen to 100,000 can be bought, at a rate averaging about 20*s.* for 1,000. If you have a

small number (less than 1,000) a little earthenware hatching-trough is enough, and should be ordered at the same time from the fish-culturist.

Then take a dozen slips of glass, or glass rods, about ¼ inch thick, and of the length that will reach across the tank, which will probably be about six inches.

A little wire frame can easily be made to form these rods into a sort of grill, with the bars ⅛ of an inch apart.

The eggs should be placed in rows between these rods, and just beneath the surface of the water.

The tank should be placed under a tap, which should, if possible, be always dripping.

This is all the apparatus required, as far as hatching is concerned; and if a large number of eggs are to be dealt with, the space available can easily be increased by using several tanks, either of earthenware or wood, and placing them on different levels, so that the water flows from one into another, and each tank should be kept covered.

Within a week or two it will be found, if proper care is taken, that ninety-eight per cent. of the eggs will have hatched into young trout, or alevins as they are called.

As the eggs hatch the fish will slip between the rods, and subside to the bottom of the tank, where they will remain quiet for some days, and require but little attention. If any of the eggs become white and opaque they should be removed. Also any alevins that may die.

At this stage of its existence the trout looks more like a tadpole than a fish, and is very awkward and helpless, for the "yolk-sac" or bag of food which is attached to it, and on which it feeds for some weeks, is larger than the fish itself, and prevents the trout from swimming about freely. At first each alevin lies on its side, looking as if it were ill, but occasionally it will rouse up and make spasmodic darts to the surface or along the edge of the tank.

Before the eggs are all hatched it is well to examine one under a strong magnifying glass, as it will be found very interesting. The form of the fish within can be seen like a tiny thread; and its two eyes looking like black specks. If nearly hatching it can often be seen to wriggle, and if placed on a warm hand will sometimes hatch out at once. At the Fisheries Exhibition one was hatched in the hand of the Princess of Wales.

A newly-hatched alevin is even more interesting under the glass than is the egg. The heart, which is close to the throat, can be seen to beat, and the blood to circulate through the yolk-sac. The gradual development of the fish, from the egg to its perfect form, can be watched with ease by placing one or two specimens in a small phial, and returning them after a short absence to the tank each time.

The eggs are much less tender than they appear, and can be dropped (if not about to hatch) from a foot or more upon a hard substance without apparent injury, and they will rebound almost like indiarubber.

As soon as the yolk-sac is nearly absorbed it will be necessary to prepare to feed the fish, or fry as they are called at this stage. It is at this point that the chief difficulty in fish-culture begins; for easy though it is to give the food to the fish, it is a different matter to get them to take it at first. Liver or mutton chopped or grated *very* fine is perhaps the best artificial food to use, though the yolk of hard-boiled eggs, in very tiny pieces, is sometimes more readily taken.

If practicable it is better to turn your fry out into a shallow part of your stream, carefully cleared of all enemies, such as large beetles, etc., and wired over the top to stop the attacks of birds.

Here the fry will find plenty of food among the weeds in the shape of minute shell-fish, such as fresh-water shrimps and snails, almost invisible to our eyes, and in fact will feed probably on many animalculæ which we cannot see at all. If there are troublesome fish, such as sticklebacks, in the water the fry must not be turned in when very young, but it will be necessary to begin by placing water weeds in your hatching tank, and then, after the fry have learnt to eat a little, to feed them on liver. Care must be taken to give very little at a time, and to increase the flow of water while feeding, as the nature of the trout is to eat living, or at least moving, things. Any food not eaten within an hour or two should be removed.

If you have some thousands of fry, and a small stream only, you will find it necessary, after a few weeks or months, to feed them regularly even after they are turned out, for they will have eaten up all the food.

At this juncture it may be desirable, rather than to spend much time or money on feeding, to sell a great part of your stock. "Feeding fry" will often fetch much more than they cost as eggs. But circumstances will decide this matter. If you are able to keep your fish till the following spring they will be worth, as yearlings, about ten times their cost: so that a large margin is available to cover the losses and expenses.

If your stream is suitable to rear the fish for one more year, they should with constant feeding become fit for the table, and worth for that purpose about 1*s.* each; but it is most likely that their value, as living fish, say from ½ lb. to 1 lb. each, would be still greater. These fish must be separated from the yearlings, or they will eat them.

Such fish are in great demand for stocking streams; and the difficulty and cost of transport has of late been much diminished. A large number of trout were taken by the night mail, from near London, to Totnes in Devon, not many months ago, and hardly any were lost.

Another possible source of profit to the landowner would be the use of his stream by anglers, who are always ready to pay a high price for good trout fishing, especially near London.

If the water available is not clear and rapid, it may be best to begin your trout culture at a later stage, and buy yearlings; for they will thrive under conditions which would not suit fry; and sometimes grow faster in water that contains some impurity. If the water is very muddy it will be best to rear carp or tench, though these fish in England will fetch much less than trout. On the Continent they

are in great demand, and are kept carefully alive till wanted for the table. One advantage is that they can be sent long distances alive in wet moss.

Other fish, such as perch, might be reared with advantage; for, though the demand for them as food is small, they are often saleable alive for stocking the lakes in gentlemen's parks, and in fisheries, etc.

But it is trout culture that is now being discussed chiefly; and a case has, we hope, been made out proving the pursuit to be worthy of a fair trial by many of our small farmers and peasant proprietors, who are now at a loss to find means to pay their rents and keep their families.

Among the collateral advantages of fish culture is the healthful occupation it would afford to the children in many a cottage home. Girls especially are sometimes most handy at feeding and looking after the interesting fish-families; and it certainly is a more wholesome occupation than working half-time in a noisome factory, in the sort of company usually found there.

This paper does not, of course, treat the subject exhaustively; but further information can be obtained from Francis's handbook, or more recent methods may be explained, at very moderate cost, by Mr. Andrews of Guildford, Mr. Armitage of Solway Fisheries, Dumfries, or other successful fish-culturists.

J. P. T.

## NOTES ON CURRENT SCIENCE, INVENTION, AND DISCOVERY.

### A LAKE RISING IN A DESERT.

THE sudden appearance of a lake in the Colorado desert, and the conversion, within a week or two, of an arid and tropical waste into an inland mere, some thirty miles in length by twelve in breadth (larger than all the English lakes combined), has naturally excited considerable attention.

Salton Lake, which has so suddenly and surprisingly come into existence, is situate in Southern California, in a low-lying district well known to travellers by the South Pacific Railroad through the east part of San Diego. It has been usual to speak of this depressed area as a "sink," descending, as it does at its deepest part, some 260 feet below sea-level. The heat is almost intolerable, and a few salt-works are the only industry carried on. In fact, the Colorado desert has often been spoken of by travellers as resembling the dried-up bed of a Dead Sea. Altogether, it has an area of some three thousand miles.

In the latter part of the month of June, and in the lower portion of this desert area, the first indications of rising water were observed, seeming to emanate from an unknown subterranean source. In some quarters it was surmised that earthquake shocks might have diverted the course of underground rivers, or that an immense natural geyser had suddenly come into action; and as the water continued to rise and threaten the railway, the mysterious phenomenon was looked upon as a portent of still greater natural changes. On the 1st of July a lake some thirty miles long by twelve miles wide had been formed. By this time the railway company's engineer had taken a survey of the situation, and it was soon discovered that there was a strong current in the lake from the south-east.

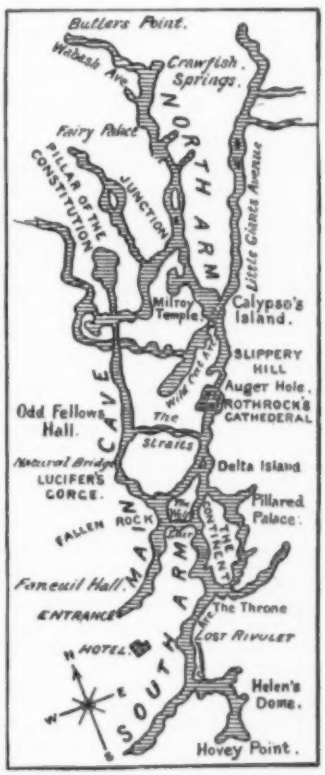
By persistently tracking the current in the direction of its source the problem was solved. Although the desert is fifty miles from the Colorado river, it was unmistakable that this river was the source of the water supply. In the first place leakages, and then open channels, had gradually made a way to the distant, low-lying, desert area. It was found that the water was leaving the river some eight miles from El Rio, opening up several channels from four to six feet deep and from thirty to forty feet wide. The route was then westward along the sand-hills, and on the line of the old stage route through the Alamo Locho Station. At this station the channels joined, making a stream about one hundred yards wide or more, and having a velocity of four miles per hour. The main channel passes Cook's Wells, Seven Wells, Gardner Station, or Butt Station, then on to Alamo Mucho, making a distance of fifty-two miles from the river. At this point it enters the desert for Salton. The old stage route, with the exception of five or six miles, was thus entirely under water.

The lake in the desert is therefore, from the point of view of the physical geographer, satisfactorily explained. The Colorado river, which is always at its highest level in June, has been unusually swollen this year by the melting of the winter snows on the mountains of Utah, Nevada, and Colorado, and the result has been the forming of new channels in the direction of the extremely low-lying Salton basin.

There is evidence that the same grand phenomenon has appeared at least once before during historic times. The traditions of the Indians to this effect are confirmed by observation of the sides of this great natural terraqueous basin. Along the sides of the enclosing hills there are found unmistakable shore marks, which indicate that at different times the basin has been flooded to various heights. Along these old beach lines fluviatile shells have been found of the kind which still inhabit the Colorado river. When the river on former occasions had spent its excess of water, and drew back into its old channel, evaporation, which goes on at an enormous rate under the terrible heat of these lower lands, rapidly changed the lake into a desert, a condition which the basin will again assume within a comparatively short period, probably within three or four years. Some notion of the rate of evaporation may be formed from the fact that if the basin were filled up to

the river level—and this would require a further rise of the lake up to at least another hundred feet—it would present a surface of 1,600 miles ; but even this extent and depth of water, on the cutting off of the river supply, would be entirely evaporated in a little more than forty-four years, so tremendous is the heat.

It has been already pointed out that Nature, unassisted by man, has thus accomplished a feat which has been for many years the ambition of American engineers. The late Mr. A. D. Wozencraft, of San Bernardino, for many years agitated the subject of turning the Colorado river into the desert, and endeavoured to get the assistance of capital and of Congress. The idea was to moderate the intolerable climate of the surrounding region, and make available some millions of acres of land at present almost worthless owing to their aridity and distance from water. But it must not be forgotten that the waters of the Colorado river, at this portion of its course, become saline, owing to its channel passing for some miles through beds of rock-salt.



## ANOTHER GREAT CAVE.

The discovery in the State of Oregon of another grand cavern of the same type as the great Mammoth Cave of Kentucky is naturally also exciting considerable interest. Subterranean marvels have always an attraction. It is a trite observation that the mere surface phenomena of the earth—the scenes which have an every-day familiarity—soon become uninteresting and commonplace. "All of us," says Professor Shaler, in a masterly paper on "Caverns and Cavern Life," "are familiar with glory of the starlit sky, and know that these points of light are planets and suns scattered through infinite space ; and yet this spectacle, which would overwhelm the soul were it disclosed only for a single hour in a lifetime, arrests but a momentary interest. It is the unseen which most attracts. Men have at all times speculated on the contents of the nether earth. Its crevices and caverns afford, in their dark recesses, a world which they can people at their will."

According to a San Francisco paper, the newly-discovered Oregon cavern is situated in Josephine county, at a point twelve miles north of California, and forty miles from the coast. It has two openings, and contains many passages and galleries of great beauty. There are numbers of semi-transparent stalactites, several giant milk-white pillars, and many streams, pools, and deserted water-channels. A week was spent in exploring the cavern, and innumerable passages and chambers were discovered. On penetrating one of these passages for a distance of several miles, the exploring party came across a large lake of clear water, and a waterfall thirty feet high. All kinds of weird strange figures, into which the limestone had been wrought by Nature's hand, were found in the various chambers. The only signs of animal life were discovered a short distance from the entrance, where a few bones were found, indicating that bears had carried their prey there.

So far as the phenomena of the interior are concerned, the Oregon cavern repeats on a larger or smaller scale the story of the limestone caverns and their mode of origin wherever they are found. But it is quite possible that it may yet have some interesting secrets to disclose to us. It may be that the dark and still under-world which has been so suddenly opened up to us will prove to have a fauna of its own ; the inner recesses may contain blind and wingless grasshoppers and other insects ; the silent, abysmal pools may be tenanted by blind and colourless crayfish and blind fishes, all adapted, like the similar denizens of the great Kentucky cave, to the subterranean regions in which their lives and those of their ancestors have been passed. This is even probable, and particulars may shortly be forthcoming. But that which is already ascertained is itself of permanent interest.

Caverns are found in every limestone country in stage of progress and decline. By comparing one interior with another, we may see the process of cavern-making in every stage and phase.

GREAT WYANDOTT CAVERN.

Incredible as it may seem, the process of cavern-making begins in nearly all cases with a mere crevice or crevices, or natural joints in the massive, solid rock. It is then only a question of time, and of favourable position in a line of drainage, how rapidly the process of enlargement will go on—from crevice to grotto, and from grotto, perhaps, to mammoth cavern. The streams which course along the floor to-day, and the old dry channels on higher levels which tell of former water-courses, disclose the more visible forces which have been and are still at work. But, strange to say, it is the invisible forces of Nature which achieve by far the larger share of the excavation. It is to the quiet chemical solution of the rock by the acidulated water, and its almost noiseless transport to distant lower levels, that we must look for the most potent agency in cavern-making. The feat is, in fact, accomplished almost solely by the solvent action of percolating water which has trickled down from above. The hundreds of thousands of tons of

solid rock which are missing from these great caverns, and have left such huge chambers behind, have really been carried away, not in the solid state, but in a state of invisible solution. There could not be a grander terrestrial example of the power of the invisible forces of Nature.

The amount of mineral matter which has been removed in solution by the acidulated waters, and has thus given rise to caves, almost passes belief. "In the Mammoth Cave of Kentucky," says Professor Shaler, "there are probably in the known and unknown galleries more than two hundred miles of ways large enough to permit the passage of a man, besides what is probably a greater length of smaller chambers. Nothing short of a visit to such grand caverns as this can give an adequate idea of the functions of chemical action on the underground rocks. Of the mineral matter thus dissolved, by far the larger part is discharged into rivers and ultimately finds its way to the sea, where the lime, silica, and organic matter are seized upon by marine plants and animals for building up their shells and other calcareous and silicious structures."

Long as is the time required for the action of the excavatory forces before the larger caverns attain their greatest dimensions, we are yet able to assign to caverns an anterior limit in geological time. No caverns of the Pliocene period are known to exist, and it is almost certain that caverns of such antiquity would have escaped denudation.

The illustration we give is a very good type of the larger limestone caverns. It serves to show that a cavern is mainly a series of parallel lines of drainage on which the solvent and excavatory forces have exerted themselves. It also indicates the gradient of the district in which the cavern is situate, and the outlet of the waters of the lower level. The cavern in question is known as the Great Wyandott Cavern in Indiana. The combined length of all the passages is sixteen miles.

## A FEW PERSONAL REMINISCENCES OF MR. LOWELL.

NOW that the world is made poorer by the loss of James Russell Lowell, it seems natural that we should call to mind little recollections of him—reminiscences trifling in themselves, no doubt, yet, all the same, reminiscences of his kindness, his gaiety, his interest in men and women.

I remember meeting him at Oxford when an honorary degree of D.C.L. was conferred upon Dr. Oliver Wendell Holmes and upon Mr. John Bright. Mr. Lowell was in the gayest of spirits, and the conversation between him, Mr. Robert Browning, and the Master of Balliol, our host, was brilliant. Two Spanish gentlemen came in the evening, and Mr. Lowell greeted them in their own tongue. He was master of many languages. His collection of old French writers was one of the best in the world. Nor was he less well acquainted with modern French authors. I remember well the care he took in recommending to me one of Balzac's novels that should give me an idea of the great writer's manner and should yet "be no shock" to me. And so upon his advice I read "Eugénie Grandet"—the most touching history of a jewel of purity and goodness in a mean and sordid setting. He told me that Thackeray had asked him once for his candid opinion of the novel "Henry Esmond," begging him to point out any mistake he might detect in the English of the reign of Queen Anne. Mr. Lowell answered that there was one thing he thought wrong: did anybody then ever use the phrase "different *to*" such a thing? "Hang it all!" cried Thackeray. "No; of course they didn't!"

I travelled back to London from Oxford under Mr. Lowell's escort. I remember his looking at the bean-fields as we flew by them in the train; they were then in blossom, and he said that the smell of them to him was one of the sweetest of scents, and that he wondered why it was mentioned by so few poets, whilst reference to the smell of lime-blossom is common enough. I fancy that Mr. Lowell himself has spoken of the scent of bean-fields in one of his poems. William Morris also mentions it, and one old poet of Elizabethan or Jacobean date; but these are all the instances I can call to mind.

The last time I saw Mr. Lowell was in August 1888. He was looking ill then, and I thought he seemed silent and depressed.

His letters were charming, written in a little delicate pointed hand that would formerly have been called feminine, but cannot be called so now that women write in great round strong characters. Three of his letters are lying open beside me—three only! Ah! why does one so often lose and waste letters that would be such treasures in the years to come, when "the hand that writ them is dust;' when they are "turned from a toy to a relic, and seen through the crystals of tears"?

From two of these letters I make extracts. The first refers to an Italian book which he sent me, having promised me two, one of which was, as it afterwards appeared, out of print.

"To keep one promise out of two, and to have tried to keep the other, is not precisely virtue, but at least does not add to the pavement which such as you will never tread.

"I have remembered to send off the Italian book of which I spoke, and hope it may be of some use to you. It starts Parcel Post to-morrow."

The other letter was written to a young lady about to be married. Mr. Lowell had been staying in the same house with her at the time that her marriage was settled, and she had fancied he must have noticed what was going on.

"It pleased me very much that you should have remembered me in your happiness and wished me to share in it. I do most heartily, and all the more because this tie you are making connects you (however remotely) with New England.

"And so you fancied that I had divined what was going on while we were at H—— together? That was very pretty and natural of you, and doesn't surprise me, since I have always found you so.

"Because you had entered into the great conspiracy of nature, you thought everybody must suspect; you feared each bush an officer. But no; I was blinder than a bat—for a bat is blind only at the behest of alliteration, and I was so through the whole alphabet impartially. No. You held your secret as tight as a rose-bud.

"I wish you joy with all my heart, and all the happiness which I am sure you deserve."

These are the fragments that I am able to contribute. At best they are but trifling fragments; but it may be that perhaps some lover of his books who never met him in that other world of men, may catch between the poor lines I have written a glimpse of what I can never express—the childlike gaiety, the brilliancy, and the charm of the man who has written his name in so many hearts here and across the sea.

A. F.

# COTTAGE COOKERY.

## A NOVEL PRIZE COMPETITION

BY MRS. PHILPS

WE hear much just now of the value of technical schools, and schools of cookery for the working classes. The one difficulty which always presents itself is that when the girls have homes of their own the lessons they have received are practically useless, because they do not possess the stoves and utensils, without which tasty dishes cannot be prepared in the time at their command. In cottage homes it is the practical service of imperfect means; and recent experience has shown some of us that, instead of offering to teach, we have still much to learn.

"One half of the world does not know how the other half lives." It might be better for both halves if they did know. It would beget mutual sympathy and respect in many cases, and we should be less prone to criticise. We who are of the middle class pride ourselves on our thrift and good management—and rightly, too—but it is comparatively easy to manage when you have plenty to do it with. It might take down our pride a little if we had to change places for a month or two with a labourer's wife who had to find rent and food and clothing for herself and husband and five or six little children out of twelve shillings a week. "Mine brings home every penny," says one such wife; "he's a teetotaller, else I shouldn't git along nohow." Another, whose husband and three sons work "on the land," and who has eleven to provide for out of their wages, says: "It costs me twelve shillings a week for bread and flour, and that doesn't leave much for other food, to say nothing of clothes and rent."

Unthrift there is, doubtless, and waste too amongst the dwellers in cottages; and is there none amongst those who are above them in education and opportunity?

Allowance must be made for the hearty appetite of men and boys coming in from the fields. A young farmer gave to one of his men a dozen cauliflowers as large as a quarter-peck measure. Next day he asked if they were good. "Yes, sir, I wish I had some more to-night." "Why, you've not finished them all, surely?" "Yes, sir; she biled 'em, and I ate 'em for my supper."

An instance of "shiftlessness" was mentioned to me lately by a grocer. A child comes to the shop for "a penn'orth of treacle, please, an' will you put it in a bit of paper? mother ain't got a basin." From such housekeeping, or money-wasting, may we be delivered!

One often hears the remark: "Mrs. So-and-so was such a clean, tidy servant and a good cook before she married; how is it that she is such a poor, draggled-looking wife and mother?" One reason may be that she misses the ample food, varied and nourishing, which she had in service, and that at a time when the strain that motherhood brings is most keenly felt. Her health is poor, and she lets things get untidy, hoping one day to overtake her work again; but as her family increases she becomes hopeless, and gives up the attempt. Not only is the food less nourishing, but the means of making the best of it is not at hand. Instead of a *batterie de cuisine*, more or less ample, there is but a saucepan and frying-pan, no oven, an open fire, often a smoky chimney, and coal scarce and dear. In some cottages there is a nice copper for the family washing, but in others one fire has to serve for boiling the clothes, cooking the food, and warming the house.

With three or four little children, too small to go to school, round the fire, her sewing-machine and "tailoring" claiming her time while daylight serves, if she is to earn a few shillings to help out the weekly wages, what wonder that the tired mother gets hopeless and gives up trying to cook, contenting herself with tea and bread and butter for the midday meal? Here in the country there is no "cook-shop" where, for a few pence, a savoury bit may be bought to give relish to the bread.

Feeling sure that much might be learned from the experience of some of the more capable women, we offered a prize to the members of the Mothers' Meeting for "the best dinner for four persons—father, mother, and two schoolboys—at the cost of one shilling, exclusive of fuel." About thirty answers were sent in, and they were so good that the prize was divided amongst five, so nearly equal were they in merit. Variety, ingenuity, and a minute knowledge of prices marked them all.

Some who did not compete said there was "too much money for only four people; if it had been for ten, now, we would have tried."

The favourite dish seems to be suet dumplings; two-thirds of the recipes include this item. One advises making the dumplings with the fat skimmed off after boiling two pennyworth of bones.

In eight cases a milk pudding is got for the shilling besides soup or stew. Not one mentions cheese or fish. Haricot beans or lentils, pea-flour or desiccated soup, besides fresh vegetables of all kinds, are used by nearly all. No one mentions tinned meat—evidently it is not popular. Only one used rice, and one oatmeal. A saucepan and a frying-pan would serve for all except one, which is to be "baked in little oven at home"—a luxury only found in the newer cottages.

One prize dinner is this:—

| | *d.* |
|---|---|
| Pigs' fry, 1 lb. | 4 |
| Onions and potatoes | 2 |
| Sago | 1½ |
| Sugar | ½ |
| Skimmed milk | 1 |
| Total | 9*d.* |

This makes a good dinner for four.

"I can make a good dinner for eight of us for sixpence," said one mother; adding, "I wish I always had sixpence to spend for it."

One recipe included six-pennyworth of meat, "because it strengthens the man."

The first prize was awarded to the following:—

| | *s.* | *d.* |
|---|---|---|
| Beef, skirt or shin, 1 lb. | 0 | 5 |
| Carrots and onions | 0 | ½ |
| Flour | 0 | 1½ |
| Potatoes | 0 | 1½ |
| Suet | 0 | 1 |
| Desiccated soup | 0 | 2 |
| Bread | 0 | ½ |
| Total. | 1 | 0 |

The second prize recipe included milk pudding, or (if no oven) rice boiled in water, and jam.

The method of preparing is given in most cases, and is certainly clearer than the following recipe from an old cookery book which went through fifteen editions. "How to prepare Calves' Feet.—Choose your feet in the rough state, and place them in a pan of water for ten minutes. Try if you can easily clean them. If not, put a spoonful of salt in the water. Boil them, and when your feet are tender place them on a dish. Take out the big bone, surround them with sausage meat, and form a heart with them. Or place your feet on a gridiron, let them gently broil, and when done eat them for breakfast; after which a brisk walk will give you an appetite for dinner."

It is proposed to offer a prize next Christmas for the best and cheapest hot dinner for six persons (four being school children), cost of fuel and seasoning (salt, sugar, &c.) not included. Anyone who is a *bonâ-fide* member of a Mothers' Meeting may compete. The exact cost and also mode of cooking must be given, and the recipes sent to me before December 1. I hope by this means to have a mutual interchange of experience which will be both interesting and useful. Doubtless local habits and opportunit'es of purchasing fish, &c., will influence the writers. A thrifty housewife in Perthshire, and one in Limehouse, and another in Limerick would differ widely in spending the daily allowance.

I shall be happy to give further information to any ladies who may communicate with me.

*Coggeshall, Essex.*

# CHESS.

## THE LONGEST END-GAME.

IN our January part we gave some historical notes (see p. 214) relating to an end-game in chess, which is supposed to be the longest known, and has for more than a century been before some of the greatest analysts. The following is the solution of the problem there given, with the modification proposed by the winner mentioned below. We repeat the position in the international notation.

Position: White, K g1; O d3, h3; Black, K h7; P h4.

A move of the King is indicated by the name of the square only, but of the Knight or O by letter and square. The † stands for "check," and the ‡ for "mate." The letters *a*, *b*, *c*, etc., refer to the variations, and A, B, C, etc., to the notes placed after the solution.

*Note A.*—The central position is now attained, particularly through moves 8 and 12, two moves of the O such as were never before played on the board. This position is such that the O plays to c3 or e3, and then pursues the K on the right or left.

*Note B.*—So far the moves by the composer (Meyer) and by the solver (Jahn) coincide. Meyer now followed Guretzky, playing 29, O b5 †, K b7; 30, O d4, K a6; 31, O c6, K b7; 32, O b4, K c7; 33, O a6 †, K d7; 34, K d5, K e7; 35, O c5, etc.; but Jahn plays 29, O e2, and thus arrives with the Θ on c5 at move 33, gaining 2 moves, and then the solution by Guretzky and Chapais is followed.

*Note C.*—These few moves show how the variations enter into the main play.

*Note D.*—Variations *j* and *n* require the full number of 73 moves, the other variations are completed in fewer moves. Variation *p* is given in full to show the mate on a8.

## REFERENCES

to this end-game can be seen in the "Schachzeitung" of 1862, pages 289 to 293, 356 to 359; 1863, pages 306 to 315; and 1864, page 387. Also in Berger's "Endspiele," Leipzig, 1890, pages 305 to 314. Short notices about it in the "Boy's Own Paper" (page 271), London, January 24, 1891; the "Illustrirte Zeitung," Leipzig, January 31, 1891; Lehner's "Lesehalle," Vienna, February, 1891, page 53; Preti's "La Strategie," Paris, March 15, 1891; the "Nottingham Guardian," May 2, 1891; the "Northern Figaro," May 9, 1891; ШАШЕЧНИЦА, page 34, Moscow, July 1891, etc. Chapais also gave:—White, K c6; O c2, f3; Black, K e6; P f4; White to move, to which a solution in forty-four moves is given in the seventh edition of Bilguer's "Handbuch."

## THE PRIZE WINNER.

Only one solution arrived, which was sent on March 31 by Paul Jahn, of Berne in Switzerland, who receives the prize of two guineas according to the conditions indicated. This solution contains 108 variations, and as already stated, in the note to move 28, shortens this end-game into a 73 mover (due to 29, O e2), and reduces Guretzky's 64 into a 62 mover.

P. Jahn is of opinion, that H. F. L. Meyer has arrived at the utmost limit of this end-game, and that his diagram cannot be surpassed.

## THE LIMITS OF THIS END-GAME.

BY H. F. L. MEYER.

The position on the diagram requires the black K to be on g4, h5, h6, h7, or h8 in order to attain the mate. It takes seventy-three moves with the K on h6 or h7; seventy-two moves on g4 or h8, and fewer moves on h5. With K h5 the first move would be O to e5. With K h8, thus—1: K f2, K g7; 2, K e3, K f7 (if K f6, K f4); 3, K d4 (not e4), K e7 (if K f6, K d5, and if 3,—K e6; 4, K e4); 4, K e5, K d7; 5, K d5, K c7 (or *x*); 6, K c5, K d7; 7, O d f4, K e7; 8, K d5, K f6 (or *y*); 9, O g2, etc.—(*x*) K e7; 6, O e5, K f6; 7, O g4 †, K e7; 8, O e3, etc.—(*y*) K d7; 9, O e6, K e7; 10, O c5, K f7; 11, K e4, etc.

If the black K be placed on any of the other forty-two available squares, then there is no solution at all; for instance, if on f8, g8 or g7, then 1, K f2, K f7; 2, K e3, K e7, and White cannot gain the opposition (see next paragraph). Again there is no solution when the white K is on any of the following seven squares:—a1, a2, a8, b1, b2, h1, h2; but this K may be on any of the remaining forty-seven squares where it can legitimately stand, and effect mate. Seventy-three moves are required with the white K on c1, d1, e1, f1, g1; and fewer moves with the K on the other forty-two squares. With K d2: 1, K e3, K g7; 2, K e4, K f6; 3, O c5, and wins. With K b2: 1, K c3, K g6; 2, K d4, K f5, and draws. With K b8 (or c2): 1, O e5, also K c2: O f4, wins. With K a7: 1, O d f2, K g6; 2, K a6, K f6 (if K g7 or h6; 3, K b5); 3, K b6, K f5; 4 K b5, K f6; 5, K c4, K e6; 6, K d4, etc. With K b3: 1 O d f2, K g6; 2, K b4, K f5; 3, K b5, etc., wins.

There is no mate with the K on b1, b2, etc., for 1, K c2, K g7; 2, K d2 (or *z*), K f6; 3, K e3, K e7, and the play is a draw, for White cannot gain the move (if 4, K f4, K d6; 5, K e4, K e6 or c6, and if 4, K e4, K e6; 5, O c5 †, K d6; 6, K d4, K c6, etc.)—(*z*) K c3, K f6; 3, K d4, K f5.—Drawn positions (with the O h3 stopping the P h4, and White having the move) are also these:—

| White. | Black. |
|---|---|
| K d5, O f2 | K f5 |
| K d4, O e3 | K e6 |
| K d4, O d3 | K d6 |
| K d4, O d5 | K d7 |
| K c4, O d1 | K c6 |
| K b3, O d3 | K a5 |

and other positions of a similar character.

This position: K f2; O d3, g1; K h5; P h4, requires seventy-three moves, beginning 1, O h3, K g4; 2, K g2, K f5; 3, K f3, etc. The white pieces might as well be K g2; O e1, f2, and other positions.

With O h3 and P h4, and placing the other two white men in advantageous positions, the mate can be attained when the black K is on the following thirty-three squares: a8 to h8, a7 to h7, a6 to h6, a5, b5, e5, f5, h5, a4, g4, h2, h1. In the solution the black K cannot be allowed to enter upon b5, but if originally standing there, with the white K on b3, and playing the O to e4, the mate can be accomplished thus: 1,—K a5; 2, O c3, K b6; 3, K c4, K c6; 4, O b5, etc., and if 1,—K b6; 2, K b4, K c6; 3, K c4, K b6; 4, O c3, K c6; 5, O b5, K b6; 6, O d4, K a5; 7, K b3, etc. On a4 as in variation *k*, or thus:—the white K on c4, the O on b4 or e1 moving to c2, K to a5; 2, O d4, K a4 (or *a*); 3, O b5, K a5; 4, O c3, K b6; 5, K d5, K c7; 6, O a4 (see main variation).—(*a*) K a6; 3, K c5, K a5; 4, O b5, K a6; 5, O c3, K a5; 6, K c4, K a6; 7, K d5, etc.

With P h4, and the three white men in advantageous positions, the black K may be on forty-five squares, namely, on any except these eighteen: c5, d5, b4 to f4, b3 to f3, c2 to f2, d1, e1. (The O d3 stands in the middle of these eighteen squares.) In every case the mate must take place in one of the four corners. The mate follows on h1, when the black K is on g3, h3, g2, h2, f1, g1, h1. On a1 when on a3, a2, b2, a1, b1, c1. On a8 or h8 when on any of the other thirty-two squares. (Thus a8 and h8 are for half the board, a4 and g4 making up for c5 and d5.) Some of these are:—The K on a4 and b5 are explained above, on g5 it requires the white K on f7 or g7, and the O's on e3 and g1. On a3 it needs the K on c3, and the O's on c5 and d4, and mate follows at the sixth move. On b2 it necessitates the K d2, and O c5, e3, mate in six moves. On g3, K e2, O e3, f6, ‡ in 6. On g2, K e2, O f3, h5, thus:—1, O e1 †, K g1; 2, O f4, P h3; 3, O f3 †, K h1; 4, O h2, K g1; 5, K e1, K h1; 6, K f1, K h2; 7, K f2, K h1; 8, O e2, K h2; 9, O c3, K h1; 10, O e4, K h2; 11, O d2, K h1; 12, O f1, P h2; 13, O g3 ‡.

When the P stands on h6, then the black K can march from a1 to a8 or h8, and be mated in either of these three corners. Having the P there, the K on a1, and the white pieces on d3, e2 and f1, the play is:—1, K c3, K a2; 2, O d2, K a3 (must, else the mate would follow in this corner); 3, O b1 †, K a4; 4, K c4, K a5; 5, O b c3, P h5; 6, O f4, P h4 (if K b6, then K d5); 7, O h3, etc. If the P does not move to h5, the O advances to h5.

This position, K f6; O c6, e3; K h6; P e4 shows that occasions can arise on which the O must move as many as eight times in succession: 1, O e5, K h7; 2, O d7, K h6; 3, O f8, K h5; 4, O g6, K h6; 5, O f4, K h7; 6, O e6, K h6; 7, O g7, K h7; 8, O g f5, and mate at move 14. (A succession of twelve moves is possible when there is a second black P on e5 and the O c6 be shifted to c2. This begins 1, O e1, and is a mate in twenty-one moves.)

K e6; O e7, g3; K e8; P g4, thus:—1, O c6, f8; 2, O e5, g7; 3, e7, g8; 4, f6, f8; 5, O f7, e8; 6, e6, f8; 7, O d6, g8; 8, f5, g7; 9, g5, g8; 10, g6, f8; 11, f6, g8; 12, O d f5, f8; 13, O g7, g8; 14, O e6, h7; 15, O f5, P g3; 16, f7, P g2; 17, O g5 †, h8; 18, O e7, P g1; 19, O g6 ‡.

Sometimes the mate is possible, when the P is one more square advanced; for instance, when the black K is on h8, the white K on g6, and one O on f4, then the P may be on d3, f3 or h3 stopped by the other O, and White will mate in five moves. The P may be on e3 with O e2, when the other O is on f5 or g8, the white K on f7, and the black K on h8; which is a mate in five moves. Short problems of this kind have been published by several composers. A mate in nine moves by H. Bolton is this:—K f5; O h1, h2; K h4; P h3. A mate in six moves by J. Kling and B. Horwitz:—K g3; O d2, f1; K h1; P f2.

Noteworthy is the similarity of moves 29 (O e2) and 58 (O c4), which occur at equal intervals, and also that this subtle move with the O appears in var. *m*, move 40 (O e3). The two most subtle moves are the white K to a6 and the O to d1 mentioned above in this position:—White, K a7; O d3, h3; Black, K h7; P h4; White to play and mate in seventy moves.

These moves show that the problem of the two O's against a P is not yet exhausted.

# Varieties.

**Letter of Mr. J. R. Lowell.**—Mr. Lowell was in England in the Jubilee year of Queen Victoria, when a memorial fountain and clock tower, the gift of an American citizen, Mr. Childs of Philadelphia, was presented to the town of Stratford-upon-Avon. It was uncertain whether the American minister, Mr. Phelps, being far off, in Scotland, could be present, and Mr. Lowell was asked to be one of the speakers when the fountain was opened by Mr. Henry Irving, October 17, 1887. Mr. Lowell wrote a letter to the Mayor of Stratford, Sir Arthur Hodgson, K.C.M.G., in which he said: "I should more deeply regret my inability to be present at the interesting ceremonial of the 17th, were it not that my countrymen will be more fitly and adequately represented there by our accomplished minister, Mr. Phelps. The occasion is certainly most interesting. The monument which you accept in behalf of your townsmen commemorates at once the most marvellous of Englishmen and the Jubilee year of the august lady whose name is honoured wherever the language is spoken of which he was the greatest master. It was Washington Irving who first embodied, in his delightful English, the emotion which Stratford-upon-Avon awakens in the heart of the pilgrim, and especially of the American pilgrim, who visits it. I am glad to think that this memorial should be the gift of an American, and thus serve to recall the kindred blood of two great nations, joint heirs of the same noble language and of the genius that has given it a cosmopolitan significance. I am glad of it because it is one of the multiplying signs that the two nations are beginning to think more and more of the things in which they sympathise, less and less of those in which they differ. . . . In old maps the line which outlined the British possessions in America included the greater part of what is now the territory of the United States. The possessions of the American in England are laid down on no map, yet he holds them of memory and imagination by a title such as no conquest ever established and no revolution can ever overthrow. The dust that is sacred to you is sacred to him. The annals which Shakespeare makes walk before us in flesh and blood are his no less than yours. These are the ties which we recognise, and are glad to recognise, on occasions like this. They will be yearly drawn closer as Science goes on with her work of abolishing time and space, and thus renders more easy that 'peaceful commerce 'twixt dividable shores,' which is so potent to clear away whatever is exclusive in nationality, or savours of barbarism in patriotism."

Subsequent speakers referred to the happy thought expressed in Mr. Lowell's letter, the memory of Shakespeare being one of those possessions, though laid down on no map, yet common to both nations and to English-speaking people

all over the world. During the meeting a telegram from the Queen at Balmoral expressed the pleasure she had in hearing of the gift of Mr. Childs to Stratford-upon-Avon.

**International Congresses.**—The year 1891 will be memorable for the number of congresses of an international character. The Hygienic and Demographical Congress in London, inaugurated by the Prince of Wales as President, was the most important, and most directly bearing on the welfare of the people. To prolong the average duration of human life, and to increase the health of the community, is an object of higher interest than any commercial or political object. Another important international congress was that of the Geographers, held at Berne about the same time. All nations of Europe were represented, as well as America. Dr. Gobat of Berne was President, and M. Numa Droz, Swiss Minister for Foreign Affairs, welcomed the delegates. French and German, Russian and Roumanian, English and Portuguese, Scandinavian and Dutch, met in peaceful conference. The opening up of Africa by Christian missionaries, as a means of civilisation, was the subject of one of the papers. The President's address was a masterly review of the progress of exploration, and statement of the pre-eminence of geography as a popular science.

**The Albert University.**—The long controversy about the "teaching university for the metropolis" has at last been settled, officially. It was necessary, on the appeal of the existing University of London, to abandon any use of the same term for the teaching and for the degree-giving corporation. Hence the choice of a name which the "Educational Times" says might be equally applicable to "a university in the moon." We believe that, in popular and common use, the official name will become little known, and that the London School (of arts, of medicine, and so on) will be the distinctive designation.

**Swiss Anniversary.**—The celebration of the 600th anniversary of the foundation of the Swiss Confederation was one of the historical events of 1891. It was held in August at Schwytz, the capital of the primitive Canton which gives its name to the whole Republic. The Federal Council voted £10,000 as a subscription, and delegates were appointed from every canton. One of the chief features of the fête was a series of *tableaux* representing all the chief events of the past six centuries, the actors being dressed in the costumes, and with the arms or other weapons, of each period. Although Morgarten, Sempach, Morat, and other battlefields were represented, the triumphs of peace were not forgotten. At night the whole country was illuminated. Beacons blazed from the mountain tops, the towns were all lit up with lamps, lanterns, and burning piles, and cannons roared out incessantly. Afterwards the delegates went over to the Rütli, a piece of historic ground on the shores of the Lake of Uri, now belonging to the Confederation, which is supposed to be the scene of the oath of three patriots, Walter Fürst of Uri, Werner Stauffacher of Schwytz, and Arnold von Melchtahl of Unterwalden, in 1307. The compact of the ancient cantons was signed August 1st, 1291, and this was the event celebrated by the Schwytz anniversary. At the Rütli, the scene of the oath, part of Schiller's *Wilhelm Tell*, set to music by Dr. Arnold, of Lucerne, was performed by a choir of 750 male voices. Three soloists represented the above-named patriots, and the choir was divided into three sections of 250 each to represent the three primitive cantons. Ten thousand persons assembled upon the Rütli, and the singing of choruses and the Swiss National Anthem at the close had a very fine and impressive effect.

**Statistics of Cook's Tourist Business.**—At the jubilee celebration of the firm of Cook, the tourist contractor, a large and representative gathering met Mr. John Cook, the son and successor of Mr. Thomas Cook of Leicester. A very few statistics suffice to show the magnitude of the business now done by the firm. In 1890 they had 30,348 series, giving facilities over 1,823,959 miles of railways, oceans, and rivers. In the same year they had issued 3,262,159 tickets. At the present time they had 4,830,365 tickets in stock, while the ledger accounts numbered 7,195. They had 45 bank accounts, 84 offices, and 85 agencies. Their staff numbered 2,692, and 978 of these were in Egypt and Palestine. It was his belief that the world would be a pleasanter place of habitation if all the dwellers on its surface were brought closer together, and that international travel was one of the best preservatives against international wars, since it dissipated absurd notions and dangerous prejudices. Success to Cook, and also to Gaze, and all other facilitators of travel! They are helping to fulfil the old prophecy, *multi pertransibunt et augebitur scientia.* Many shall go to and fro, and knowledge shall be increased.

**Religious Census of Ireland.**—The last census of Ireland shows that the Roman Catholics number 3,549,745, a decrease of 411,146 during the last decade. The Protestant Episcopalians number 600,830, a decrease of 38,744; the Presbyterians 446,687, a decrease of 24,047, and the Methodists 55,235, an increase of 6,396.

**Tasmanian Apples.**—During one month, June, of the present year there were imported into the United Kingdom no less than 64,034 bushels of apples, of the value of £37,854, as against 8,798 bushels, valued at £6,237, in the corresponding month of 1890. This remarkable increase is entirely due to the large shipments received from Tasmania and New Zealand, which, arriving at a time when the supplies from America are almost over, have met with an eager demand at remunerative rates. So satisfied are the Australasian growers with the results achieved, that preparations are being made for still larger supplies to be placed upon the English markets during the next season.

**Original Letter of Cromwell Discovered.**—The Historical Manuscript Commissioners have found among the muniments of the Duke of Athole, of Blair Castle, Blair Athole, a long and important letter of Oliver Cromwell, addressed to General David Leslie, about a month before the battle of Dunbar. It was in reply to a letter from the commander of the Scotch army. In his letter Cromwell protests friendship for the Scottish nation; but he says he cannot conceive how, "under pretence of the Solemn League and Covenant, a King should be taken and imposed upon us, although he is the very head of the malignants, and hath a popish party fighting under him in Ireland; and Prince Rupert (a man deep in the blood of many innocent people in England) now in ships stolen from us, with French and Irish, making depredations on our coasts, and raising armies against us." The whole letter is a just and indignant appeal to the General, and an argument against forcing *such* a covenanted King on them. It is a valuable historical document, and shows clearly the relative position and designs of the two parties during the second civil war.

**Postal Business in the House of Commons.**—The postal business transacted at the House of Commons last Session was exceptionally heavy, especially in the telegraph department. The number of messages despatched was 51,637; and no fewer than 17,258 telegrams were received. Since the establishment of the express messenger service in April, over 220 despatches have been forwarded. The number of money orders issued was 343, whilst 127 were paid. Of postal orders 7,429 were sold and 453 cashed; and as an evidence of the work in other departments, it may be stated that 1,390 letters were registered and 920 parcels were posted. In the early part of the Session the petitions were very numerous, the total number received exceeding 1,000 on more than one occasion. The *poste restante* business transacted every day at the House of Commons is also enormous, and the number of letters posted taxes the energies of the sorters to the utmost.

**Jewish Family Affection.**—Mr. Colin Young, editor of "Wild Olive Graft," tells of a young Jew, one of the many who are touched by the kindness of Christian well-wishers, who made an extraordinary journey last year. Having come to London for work, after some years he had a strong desire to see his parents and friends. When in Warsaw he was apprehended for not having a passport; he told the authorities that he wanted to go to Govno, where his parents lived in one of the Jewish villages. Instead of sending his photo for identification, they sent him in charge of two policemen, and before he reached the village where his parents were, he was lodged on his way in fourteen prisons. Sometimes he was manacled; other times kinder policemen

allowed him to walk beside them without the manacles. He saw his parents, spent a month with them; he is now again in London; came to us after walking from Hull, a shadow of his former self. He has regained his strength, but Russia and its officialism, and Talmudism with its trifling, are things of the past to him.

**Jews in New York.**—The Jewish colony in New York is of vast size; at least twice that of the Jewish residents in London. The only Jewish daily paper in existence, printed in a sort of Judæo-German tongue, is at New York. Street after street, with immense tenement houses, six stories high, are crowded from basement to garret with families of Jews, often ten or twelve or fourteen in each room. Tailoring, sewing, and peddling are the chief industries, but, being miserably paid, the workers are in extreme poverty. On the door-post of every tenement is a parchment scroll, with words from the Hebrew Scriptures. Few Jews pass without kissing this scroll. The wealthy Hebrews of New York feel alarm at the numbers of poor Jews, and favour the strict enforcement of the new pauper emigration law. It is high time that some scheme should be organised for transferring the outcast Jews, from Russia and elsewhere, to some place where life could be passed under more favourable conditions than in the slums of great cities.

**Census of the Sexes.**—On the night of April 5, 1891, there were enumerated 14,950,542 females, and 14,050,340 males, in England and Wales, showing a majority of the female sex to the number of 900,202. This is about equal to 106 females to 100 males. The disproportion is increasing every census. In 1851 the proportion was 104 to 100; in 1861, 105 to 100, and like increases gradually to the present numbers. If the increase at the same rate continues two per cent. every forty years, or five per cent. every century, the majority of females becomes a serious thing to consider. What if women get votes for parliament as well as for social agencies? How are the surplus 900,202 to be supported or provided for?

**Historical Portrait Gallery in Edinburgh.**—The recent death of Mr. Charles Elphinstone Dalrymple, younger brother of Sir Robert Elphinstone Dalrymple, Fellow of the Society of Antiquaries of Edinburgh, recalls a signal service rendered by him at the meeting of the British Association at Aberdeen in 1859. He procured, by loan, an exhibition of notable portraits of distinguished Scotchmen, nearly 200 in number, many of them of much historical interest. A similar display was made in Edinburgh during a meeting of the Association there, when there were seen more portraits by the Scottish painter, Sir Henry Raeburn, than were ever before collected. No public gallery can hope to rival the collections thus brought together by the permission of the owners from their private galleries.

**Last Pupil of Robert Raikes.**—The last of the pupils of Robert Raikes, founder of Sunday schools, passed away lately in the person of Mr. John Oakley Packer, registrar of births and deaths and clerk of the parish of St. Mary de Crypt, Gloucester. The deceased was buried at Hempstead after a full choral service at St. Mary de Crypt, which was attended by the principal inhabitants of the city. Wreaths were sent by the Rev. Canon Trotter, by the deceased's grand and great-grandchildren, and by many citizens. The favourite hymns and psalms of the deceased were sung both on Sunday and during the funeral service, the Dead March in "Saul" being played at the conclusion of each service. Mr. Packer was eighty-seven years of age, and had been a worshipper at St. Mary de Crypt for seventy-seven years. He died July 29, 1891.

**British Museum Library Report.**—The annual report of the British Museum announces many valuable additions. Among those of most popular interest are books of Caxton and of Bunyan. Last year the Keeper of Printed Books was able to announce that he had acquired the only known copy of Bunyan's "Books for Boys and Girls, or Country Rhimes for Children," published in 1686. This year a prize not less rare has been obtained—one of the only two known copies of Bunyan's metrical "Discourse of the Building of the House of God." Supposed to have been destroyed in the burning of Mr. Offor's library more than twenty years ago, it has recently been discovered, comparatively uninjured, in examining the salvage. There is a Caxton, hitherto unknown to bibliographers, a unique copy of the "Sex quam elegantissimæ Epistolæ," letters which passed between Pope Sextus IV and the Republic of Venice, and which were edited in England in 1483 by Petrus Carmelianus, an Italian ecclesiastic and man of letters domiciled here. The volume was purchased from the Hecht-Heine Library at Halberstadt, where it was discovered in 1874 by Dr. Könnecke, archivist of Marburg. The Keeper is now able to say that the number of Caxton's known publications not to be found in this country is reduced to two.

**Utilisation of Waste.**—A remarkable instance of the "utilisation of waste" is the extraction of the oil of grape-stones. It was first practised at Brescia, in Italy, in 1771, where there were several presses for the extraction of grape-seed oil, forming a large part of the commerce of the town. The same industry has recently been largely introduced in France. Last year above a million of pounds of oil were obtained. It is a limpid, pale green oil, burning with a clear flame, and without any disagreeable odour. It is used chiefly for making the finer sorts of soap, and is said to be of importance in domestic economy for the washing of fine linen. M. A. Chevalier, in his "Connaissances Utiles," gives full details of the various steps of the processes by which the oil is obtained and the soap manufactured. It is a clear white soap. A coarser kind of "soft soap" is also made, in treating the refuse of the grape seeds, also used in the cleaning of linen on a large scale.

**The Chair of Sir William Hamilton.**—On the resignation of Professor Campbell Fraser, a favourite pupil and successor of Sir William Hamilton in the chair of Logic and Mental Philosophy in Edinburgh, Professor Seth of St. Andrews has been unanimously elected by the Council of the University as successor to Professor Fraser.

**The Blue Peter.**—The Blue Peter has been long flying at my foremast, and at my age I must soon expect the signal for sail. It is a solemn voyage, but it does not disturb my tranquillity.—*Mrs. Somerville at* 90.

**An Old Inscription.**—It was the custom in former times to carve words of moral and religious sentiment over the doors and windows of houses. There are not a few to be seen in the old Scottish capital, and in other places where the Reformation had taken hold on the minds of the people. The inscriptions are sometimes Scriptural texts, and occasionally doctrinal statements. FAITH IN CHRIST ONLY SAVES is the legend carved on the doorway of one of the oldest houses in Edinburgh. The language is quaint, and somewhat ambiguous, but the sense is plain and unmistakeable, read in the light of the theology of the time, the date being 1567. The truth expressed is that salvation is found only in Christ through faith—a protest thus made in the spirit of the Reformed Churches as opposed to Popish error

---
